**Townsend Bros. Ferries, Ltd. Daily Ferry Service to the Continent.** — Townsend Bros. Ferries, Ltd., 101, Leadenhall Street, London, E.C.3, inform us that their daily ferry service to the Continent will be resumed on March 30th. The fast twin-screw car and passenger ferry steamer, "Forde," which has recently entered the service, has excellent passenger accommodation including boat deck and upper deck saloons and a ladies saloon under the charge of a stewardess as well as three private staterooms. There is a refreshment bar, a wireless telegraph service, and all the accessories of a first class passenger steamer. This year the Company are changing the berth at Dover to one which will result in considerable saving of time in the ship leaving port for Calais. There is a special tariff for cars, and special rates are quoted for heavy motor vehicles and motor coach parties. The Company are reverting to their original passenger fare of 10/- single (children between 3 and 12 years of age half fare).

**Italy. Duty on Motor Cars.**—A Rome message says that the Government notifies a decrease in the duty on imported motor cars accommodating not more than six passengers and weighing not more than 2,600 kgs. (5,720 lb.), providing the country of origin enjoys most-favoured-nation treatment. Cars coming within this category will now pay 95 (gold) lire per 100 kgs. instead of 440 (gold) lire. This reduction in duty opens up a much more favourable market for smaller British motor cars.

**Nippon Yusen Kaisha. Reduction in Fares.**—A Tokio message says that the Nippon Yusen Kaisha is reducing passenger fares for its different shipping lines by 25 to 35 per cent. this summer, believing that cheaper rates will eventually result in an increase in its total revenue.

**Brighter Steamers for the Clyde and Forth.** — The L.N.E.R. have placed a contract with Messrs. A. & J. Inglis, Ltd., Glasgow, for the painting of and repairs to their Clyde steamers, "Waverley," "Marmion," "Kenilworth," "Talisman," and "Lucy Ashton." The famous Firth of Forth Ferry Steamer, "William Muir," is also to be overhauled and re-painted for the coming season by the Grangemouth Dockyard Co., Ltd.

**Ferries Not Paying.**—The ferry boat between Jarrow and Howdon lost over £2,996 in the last 12 months; while in his annual report to the Tyne Improvement Commission, Mr. Francis Priestman (Chairman of the Finance Committee) spoke of the losses on the direct ferry and Whitehill Point ferry between North and South Shields, which have to be carried by the Market Place ferry, adding that the time was approaching when they might have to consider whether they could continue them.

**Tyne as Shipbuilding Centre.**—The gross tonnage of ships launched from the Tyne last year was 323,750, an increase of 52,000 tons on 1929. The Tyne's proportion of the total output of the United Kingdom increased from 18 per cent. in 1929 to 22 per cent. last year. The Tyne, indeed, occupied second place in the table of shipbuilding centres and had a larger increased output than any other such centre.

**Newcastle's Quay Extension.** — The contract for the proposed quay extension for the Newcastle Corporation has been secured by Sir Robert McAlpine and Sons, Ltd., of Pall Mall, London. Their order is for the piling and ferro-concrete main structure. The capital cost is estimated at £206,000 and the constructional period at about two years. The Unemployment Grants Committee is contributing about 27 per cent. of the total capital cost.

**Seahouses Harbour Extension.**—A further step has been taken in the Seahouses £25,000 harbour extension scheme at a conference of the authorities concerned in Newcastle. There was apparently agreement on the principle of the right of the County Council to levy precepts in respect to such schemes, but no definite decision was reached.

**Long Distance Call.**—Major J. A. Eckes, in his office at Langstaff Erembert and Co., Royal Liver Buildings, Liverpool, recently had a telephone conversation with Mr. Allen, of the firm of Messrs. Allen, Stark, Ltd., of Brisbane. The Brisbane call was received in Liverpool about 3.30 p.m., the Australian time being then about 2 a.m.

**Manchester S. & F.A. Conference.**—At the sixth annual meeting of the Manchester Shipping & Forwarding Agents' Conference, the following officers were elected:—Mr. A. Talbot (of Van Oppen & Co., Ltd.), chairman; Mr. N. N. Bird (of Herbert Watson & Co., Ltd.), vice-chairman; Mr. W. A. Reeves (of Schenkers, Ltd.), hon. treasurer; Mr. J. H. Allen (of Stockwell & Co., Ltd.), hon. secretary. Thanks were tendered to Mr. H. P. Lumb, the retiring chairman, for the valuable work he had rendered in the inauguration of the Conference, and as its chairman for the past six years. Mr. Lumb was unanimously elected to serve on the Committee. Owing, no doubt, to the general trade depression, the membership of the Conference had not increased to the extent desired. The Committee is of the opinion that if Forwarding Agents were aware of the value of the work of the Conference, affiliated as it is to the British Association of Shipping and Forwarding Agents, more firms would certainly join, because there are many point which can be more satisfactorily handled co-operatively than individually. We are asked to give an open invitation to Manchester shipping and forwarding agents who are not members to communicate with the Hon. Secretary, Mr. John H. Allen, at 17, China Lane, Manchester.

**Freight Charges.**—Recently there has been an investigation into rates of freight charged from Continental ports in comparison with those from British ports to the same destinations. This has led to the Transport Committee of the Liverpool Chamber of Commerce applying

Digitized by Google

to the Conference Lines concerned for a discussion of the issues raised with a view to securing adjustments.

**Liverpool Shipping and Forwarding Agents' Association.**—The Council of the Liverpool Shipping and Forwarding Agents' Association is still dealing with the question of unfair competition by shipping agents, some of whom are known to have used commissions received from their employers, to get traffic which ordinarily would have been handled by the shipping and forwarding agent. Arrangements are now being made by the Council to obtain an interview with the chairman of the Liverpool Steamship Owners' Association in order that the cause of grievance might be speedily removed.

**Manchester Ship Canal's 6,000,000 Tons.**—At the 73rd annual meeting of the Manchester Ship Canal Company, Mr. Alfred Watkin, the chairman, said the company's traffic was only down 249,286 tons out of a total of over 6,000,000 tons of sea borne traffic—a reduction of 3.9 per cent. on last year. The net revenue for the year 1930 amounted to £724,229, as compared with £801,994, a decrease of £77,765. It has been decided to close down five of the smaller stations on the Bridgewater Canal as the traffic has reached the point when their retention is no longer profitable. The monthly traffic return of the Manchester Ship Canal Company for January shows that revenue amounted to £106,706, or £9,714 less than for January, 1930, and £9,073 less than for January, 1929. Possibly the strike in the cotton trade has had something to do with the reduced receipts though January figures compare very favourably indeed with the preceding few months.

**Lower Dues would Help Trade.**—Messrs. Alfred Holt and Company are the largest individual payers of Suez Canal dues in Liverpool and one of the largest in the world. Capt. J. R. Hobhouse, of this firm, told the Liverpool Chamber of Commerce that if Europe was to continue to compete with Japan, India and China in the Far Eastern market, it would have to get down its transport costs as well as its manufacturing costs. If shipowners could get 20 per cent. off the Suez Canal dues, it would enable them to give advantages to shippers from Europe which might have very considerable effect in increasing their trade.

**New Shipping Services.**—Miss F. E. Harley, proprietress of the Irish Coast Shipping and Haulage Co., of 49, South Castle Street, Liverpool, intends to charter small cargo steamers for a new cargo service between Liverpool and Dublin, Belfast and three other Irish ports. The service will be a weekly one, and if sufficient business is not forthcoming for one vessel to run to each port, one boat will call at Cork and Waterford, a second at Belfast and Londonderry and a third at Dublin.

**Gulf Shipping Conference.** — Representations have recently been made to the Gulf Shipping Conference, New Orleans, concerning the rates of freight on hardwoods. The Conference has informed the Liverpool Chamber of Commerce that they cannot give an assurance that lower ocean freights on hardwood would not be given to Continental ports than those effective to United Kingdom.

**Clyde Navigation Trustees.**—In connection with the efforts of the Clyde Trust to develop trade at Glasgow Harbour and encourage direct shipment of supplies from dominions to this country, the High Commissioner for the Union of South Africa visited Scotland last month as the guest of the Clyde Navigation Trust. During his brief stay he investigated for himself local market facilities and also met traders interested in the products of his country. Speaking at a luncheon in Glasgow, held under the auspices of the Federation of British Industries, the Commissioner said he had undertaken to make representations to his Government, and to gain the support of public opinion, on the subject of direct shipments from South Africa to the Clyde. By reciprocity, Glasgow could help South Africa. Britain purchased about £15,000,000 worth of raw material from South Africa, which, in return, bought from Britain over £35,000,000 worth of goods. The result was that South Africa had to sell in foreign markets, and had therefore to buy there as well. In an interview, Mr. Harold M. Ford, commercial manager of the Clyde Trust, stated that the visit of the High Commissioner was the first tangible move that they had made in regard to South African trade. The visit, he thought, would produce evidence of the neglect by South Africa of the Scottish markets, so far as many of South Africa's primary industries were concerned.

**The Port of Drogheda.**—The number of vessels which entered the port of Drogheda, County Louth, during 1930 was 258, 14 less than in 1929. This decrease was due to reduced sailings of vessels belonging to the British and Irish Steampacket Co., who are the principal users of the port. As many as 159 tramp steamers arrived during 1930, and there were 21 vessels of foreign nationality, five of which had brought cargoes of sugar to Drogheda. There was a tonnage decrease during 1930 to the extent of 1,238 tons, as compared with 1929.

**Irish Free State Trade with the Mersey on the Increase.**—The volume of trade passing between ports in the Irish Free State is steadily on the increase so far as the Mersey is concerned. The Clyde Shipping Co., of Glasgow, has placed a new steamer, the "Rockabill," on the Waterford-Liverpool service, and this well-equipped vessel has superseded the steamer "Arklow," which was one of the very oldest ships plying between Free State ports and Great Britain. The "Arklow" was built in 1886 for the old Waterford Steamship Co., and she was taken over by the Clyde Shipping Co. in 1912. For upwards of 44 years past the "Arklow" had traded regularly and very successfully between Waterford and various British ports, carrying passengers and goods. She is now replaced by a modern and more powerful vessel.

**The Port of Waterford.**—The past year was a good and satisfactory one for the port of Waterford, and the annual report of the Waterford Chamber of Commerce gives details of increased trade and commerce. The report stated that the shipping trade of Waterford for the past twelve months showed all-round increases, both into and out of the port. Waterford had now become one of the most up-to-date ports for the handling of livestock, and was capable of dealing with all classes of traffic in a most advantageous manner. The Directors of the Chamber of Commerce have been unremitting in their endeavours to improve trading conditions. They have been in touch with a number of manufacturing firms in Great Britain in the hope that some of the convenient sites available at Waterford might be utilised for the starting of branch factories at Waterford.

**Dock and Harbour Authorities' Association.**—Members of the Belfast Harbour Board were delighted at the honour paid to their chairman, Mr. R. E. Herdman, D.L., who has been elected president of the Dock and Harbour Authorities' Association. He is the first Irish president. The annual meeting of the Association was held on February 18th last in London. Sir William C. Thorne is the Hon. Secretary of the Dock and Harbour Authorities' Association, and the offices are at 13, Victoria Street, London, S.W.1.

**Southampton Docks.**—The shipping tonnage entering Southampton Docks which, last year, in spite of abnormal depression in the shipping trade, registered the record total of over 17,000,000 tons, is still advancing. Passenger traffic is usually of very moderate proportions during the winter months and until the commencement of the North Atlantic season this month carryings by the restricted schedules are comparatively small. Interesting features of the March sailings lists affecting Southampton are the appearance of the new Rotterdam Lloyd motor liner, "Dempo," at the Docks on the 19th whence she sails on her maiden voyage to the Dutch East Indies on the 20th, and the inclusion in the North German Lloyd's sailings of the reconditioned "Munchen" under the new guise of the "General von Steuben." Extensive repair work carried out on the damaged "Munchen" has resulted in an entirely reconditioned ship which will figure in the German Company's intermediate service between Bremen and New York with calls at Southampton. The East Asiatic Company which for several years has maintained connection between this Port and Bangkok, and which last year doubled the number of sailings from Southampton will, this year, operate a three-weekly service to Bangkok. Early indications point to further records being set up during the present season in connection with imports of fresh fruit from South Africa. Although the season is yet in its infancy shipments of over 100,000 boxes of fruit, principally peaches and plums at this period, have been dealt with and these compare very favourably with the consignments handled during the corresponding weeks of last year, when the quantity of traffic passing during the "peak" period necessitated the chartering of extra vessels to cope with the huge volume of produce awaiting shipment.

**Complete Instructions for Shippers to the United States of America.**—Messrs. Radclyffe's, of 65, Victoria Street, London, S.W.1, have published this excellent booklet which cannot but be of considerable value to shippers to America. Shipping and Forwarding Agents interested in the American trade will also find that the 2s. 6d., the purchase price of the book, is money well spent. The guide has been revised to January 10th last.

*REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.*

# Port of London Authority.

**Thames Pleasure Services, 1931.** Arrangements in connection with London's river pleasure services next Summer have been considered by the Port of London Authority. The following services will operate from the piers mentioned:

| To. | From. | Steamer, Launch. | Owned by. |
|---|---|---|---|
| Richmond and the upper reaches of the Thames. | Westminster Pier. | Launches owned by Joseph Mears | Launches & Motors, Ltd. |
| | | "Emily Maud" Launches. | Messrs. Bowers, Phelps & Sons. |
| The Pool and reaches between London and Greenwich. | do. | "Daphne" / "Queen Boadicea" / "Vera" | Mrs. C. M. Smith. |
| | | "Maldon Annie" | Mr. H. C. Lamont. |
| | | "Empress" | Mr. W. H. Bowers. |
| | | "Ernest and Rose" | Mr. E. T. Crawley. |
| | | "Britannic" | Mr. E. Thompson. |
| Southend, Margate and Ramsgate. | Tower Pier. | p.s. "Crested Eagle" / p.s. "Golden Eagle" | The General Steam Navigation Co., Ltd. |
| Clacton. | do. | p.s. "Laguna Belle" | East Anglian Hotels, Ltd. (E. Kingsman). |
| Aberdeen. | Westminster Pier for embarking passengers and luggage for the Aberdeen Steam Navigation Co. steamers. | Tender "Ich Dien" | The Aberdeen Steam Navigation Co., Ltd. |

**Buenos Aires Exhibition.** Of the 900 British firms who are exhibiting at the Buenos Aires Exhibition over 40 per cent. represent industries whose headquarters are in London and its environs. London is the only Port having a pavilion there, and Mr. A. E. Wildey, Public Relations Officer of the Port of London Authority, who has recently returned from a lecturing tour in Canada in the interest of the overseas trade of London, will represent the Authority at Buenos Aires.

**Tilbury Passenger Landing Stage.** Up to the beginning of this month 224 vessels, representing 1,205,285 net register tons, have embarked or landed 32,250 passengers at the P.L.A. Passenger Landing Stage at Tilbury since the stage was officially opened by the Prime Minister in May, last.

**P.L.A. Monthly.** The P.L.A. Monthly, the Magazine of the Port of London Authority, for March, contains some very interesting articles and excellent illustrations. A contributor in the course of an article, on "The Grand Surrey Canal," says:—"Of the nineteen bridges which span the Canal, one is, perhaps, unique. This is a lift bridge which was built about eighty years ago to carry a branch of the Brighton Railway. It is lifted at each corner by weights attached to wire ropes passing over groved wheels, and thus held up while the barges pass underneath. An interesting feature of the Canterbury Road Bridge, by the old Toll House, is that from it can be seen both the Tower Bridge and the Crystal Palace." The Editor of the P.L.A. Monthly is Mr. A. G. Linney, and the office of publication is at 110-111, Strand, London, W.C.2.

# London Link with the Trent by Canal.

**Grand Union Company Buys Three More Waterways.**

THE Grand Union Canal Company—the canal combine which, two years ago, brought under unified control five canals operating between London and Birmingham—announced recently that it has made arrangements to buy three more canals at the northern end of its system. The arrangements are subject to ratification and Parliamentary sanction.

The canals to be acquired have a total length of 37 miles. They are:—The Leicester Navigation (16 miles long); The Loughborough Navigation (9 miles long): and The Erewash Canal (12 miles long).

The acquisition of these three Midland canals, which link up the London-Birmingham and Leicester-Birmingham system with the Trent Navigation, represents the most important canal development in this country since the formation of the Grand Union Canal Company by the amalgamation of the Regent's Canal & Dock Company, the Grand Junction Canal Company, the Warwick & Napton Canal Company, the Warwick & Birmingham Canal Company and the Birmingham and Warwick Junction Canal Company. It follows swiftly on the recent report of the Royal Commission on Transport commending the voluntary amalgamation which led to the formation of the G.U.C., and expressing the view that "a process of amalgamation is a necessary preliminary to any development programme."

The length of waterways under the control of the Grand Union Canal Company will, when the purchase is completed, total nearly 280 miles—easily the longest trunk route canal in the country. A £1,000,000 scheme for widening and deepening the canal between London and Birmingham has already been approved, and the latest purchase means that the entire length of waterway between London and Trent Lock and beyond—where the Loughborough Navigation joins the River Trent—will soon be available, under unified control, for 14-ft. wide boats, except at two points, namely, Foxton Locks in Leicestershire and Watford Locks in Northamptonshire, where there are two flights of narrow locks only 7 ft. wide.

The immediate result of the purchase will be to give the coal-fields of Nottinghamshire and Derbyshire and the famous Leicestershire quarries a direct waterway to London. Leicestershire granite is already in great demand for road construction and repairs in the Home Counties and the South of England.

The system will tap other important industrial areas, which embrace the iron works of the Erewash Valley, and the electrical engineering works of the Loughborough district.

# Air Mail from England to Central Africa.

AT 8.45 a.m. on Saturday morning, February 28th, an air-liner of Imperial Airways ascended from the London air-port, Croydon, carrying the first air-mail from England to Central Africa. From London the route lies across Europe and above the Mediterranean to Cairo. Thence the mails will be flown by land-plane to Khartoum and on by flying boat to Mwanza, on Lake Victoria in Tanganyika Territory, the temporary terminus of the Central-Africa section of the Cape air route. The flight of 5,114 miles from London to Mwanza is effected in 9 days, as compared with more than 20 by surface transport, the cost of a half-ounce letter by air from England to Tanganyika Territory—including the aerial surcharge as well as the ordinary postage being only 7d. The opening of this new Empire air-line not only provides a regular air-mail from Britain to the Sudan and Central and Eastern Africa, but, in addition, brings India, Persia, and Iraq into aerial communication with the North-eastern half of Africa. The machine inaugurating the England-Central Africa service from London, an Armstrong-Siddeley "Argosy," carried official greetings from Government Departments in London to Administrations along the route, together with more than 10,000 letters, consigned in special covers, by collectors desiring tangible mementoes of the first Post Office dispatch of air-mail from England to Africa. Among those witnessing the departure of the air-mail was Colonel W. H. Franklin, High Commissioner of the East African Dependencies. From now onwards there is to be a weekly air-mail in each direction between England and East and Central Africa. When, this summer, the air-mail is continued on from East Africa to South Africa, completing the trans-African route, passengers, mails, and urgent merchandise will be air-borne from London to Capetown, a total of approximately 8,000 miles, in not more than 11 days, as compared with 17 days by surface transport. The passenger air-fare from London to Capetown will be £130. Many passengers are expected to make the aerial journey above Africa on account of the magnificent natural scenery, and glimpses of wild life, which they will be able to obtain from their bird's eye point of view. The main halting-points, on the route southward from Tanganyika, will be at Nairobi, Broken Hill Salisbury, Bulawayo, Johannesburg, Kimberley, and Victoria West. The use throughout the route of large multi-engined aeroplanes and flying-boats will ensure a maximum of reliability under all conditions.

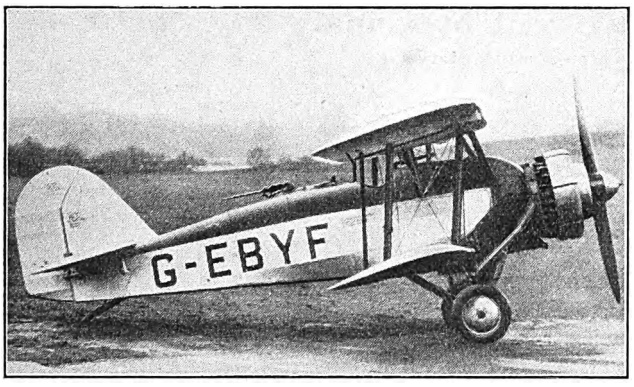
# Air Transport Notes.

**Aircraft and the Empire Exhibition.**—Almost every aircraft represented at the British Empire Trade Exhibition at Buenos Aires, which opened on March 14th, is fitted with the Handley Page slots. The machines actually at the exhibition, those used by the Prince of Wales for making his tours, those used for flying demonstrations and those on H.M. Aircraft Carrier "Eagle" are all slotted except the two types called the Flycatcher and the Nimrod, which are among those on H.M.S. "Eagle." These are not slotted because such types are awaiting the results of experiments now being done by the Air Ministry with the combined slot and interceptor. Of the slotted types on H.M. Aircraft Carrier, "Eagle," there are the Ripon torpedo carrier, and the Fairey III Fs. The Prince of Wales' personal machine is a slotted Puss Moth and the Gipsy Moth which is being exhibited is also slotted. The Westland Wapiti, which is doing a demonstration tour, is slotted as all other Wapitis. The number of Wapitis produced in series, all with the Handley Page slot incorporated, is now very great. The machine is a standard General Purpose aircraft of the Royal Air Force and has proved extremely well suited to the work, having performed notable services in India and elsewhere. The Avro 626 training aeroplane, which opens up novel possibilities in this type of machine, is also slotted.



THE ARMSTRONG WHITWORTH ATLAS 2-SEATER GENERAL PURPOSE AIRCRAFT.

**Armstrong Whitworth Aircraft and Armstrong Siddeley Aero Engines at the Buenos Aires Show.**—At the British Empire Trade Exhibition, now being held at Buenos Aires, Sir W. G. Armstrong Whitworth Aircraft Co., Ltd., Whitley, Coventry, will demonstrate a complete Atlas Army Co-operation aircraft at El Palomar aerodrome, and will exhibit, in an uncovered form, the front of the fuselage, the lower main plane and an aileron. In addition to this their proof loading test machine is shown and several cases containing sections of spars and ribs built on the Company's patented system of sheet construction are exhibited. The Atlas aircraft, with which demonstration flights will be carried out, is fitted with the Jaguar IV.C. engine and complete equipment, this being the machine of which large numbers have been supplied to the British Air Force for Army Co-operation duties. The Atlas has also been chosen by the British Air Force for advanced two-seater training. A complete range of Armstrong Siddeley air-cooled radial aero engines will be shown. The range comprises 10 engines varying from 80 to 800 h.p. and using 5, 7, 10 and 14 cylinders.

**Manchester Airport.**—To the Manchester Corporation Airport Committee, it has been reported that during 1930, there were 1,031 landings and 1,025 departures from the municipal aerodrome. Air taxis accounted for 108 landings and 113 departures; Imperial Airways, Ltd., for 78 landings and 78 departures; resident aircraft for 162 landings and 162 departures; and visiting aircraft for 208 landings and 209 departures.

**Air Service Training, Ltd.**—We have received a copy of the Preliminary Prospectus of Air Service Training, Ltd., Head Office, Aerodrome and Seaplane Base, Hamble, Southampton. The Directors are Air Marshal Sir John F. A. Higgins, K.C.B., K.B.E., D.S.O., A.F.C.; Mr. J. D. Siddeley, C.B.E.; Mr. S. W. Hiscocks; Mr. F. P. Scott and Group Capt. R. J. F. Barton, O.B.E. (School Commandant). The Prospectus points out that with the world-wide growth of aviation, the need for the formation of an International Training Establishment has become more and more apparent. An enterprise of this kind must be thorough in its methods, modern in its equipment and authoritative in its teaching. Such an organisation is now a reality for Air Service Training, Limited, is an undertaking formed with the full approval of the British Air Ministry to provide the most complete and up-to-date flying instruction on land and sea for pilots of British and Foreign nationality. The opening date is Tuesday, April 14th next. The object of the School is to promote and develop aviation generally and to give a training in flying and the allied ground subjects on similar lines to those employed in the British Air Force. The training given will appeal particularly to officers of foreign nationality who desire to be trained by the most modern methods and on aircraft such as are used by the Royal Air Force. The aerodrome is situated at Hamble, five miles from Southampton, and comprises 200 acres of level turf. It adjoins a fine stretch of Southampton Water where the seaplane training is carried out, so that its position as a land and sea training station is unique.

**Air Services in America.**—Air transport lines under the American flag experienced the heaviest traffic in their history during 1930, according to a report compiled by the Aeronautical Chamber of Commerce of America, Inc., for publication in the Aircraft Year Book for 1931. Thirty-four big air transport lines, operating regularly over more than 50,000 miles of airways in the United States, Southern Canada and a score of Latin American countries, carried 385,910 passengers during 1930, the report says, representing an increase in passenger traffic of 133 per cent. compared with 1929, the previous peak year. The 34 air lines flew 28,833,967 miles, a 42 per cent. increase in miles flown by scheduled operators. There was a marked increase in the safety and efficiency of the air transport passenger service on the scheduled air lines during 1930. An American aeroplane carrying ten passengers flew a distance equal to fifteen times the distance around the earth at the equator for each passenger fatality recorded. In other words, 3,900,000 passenger miles were flown for each passenger fatality. Less than seven per cent. of the 53,000 trips scheduled were cancelled or not completed. Bad flying weather accounted for 91 per cent. of the incompleted trips, and 6.44 per cent. of the cancelled schedules were due to insufficient traffic. Mechanical difficulties were responsible for only a minute fraction of the incompleted trips. Over 8,000,000 pounds of air mail were carried by these air lines in 1930, an increase of about 1,000,000 pounds on 1929, the previous highest year. Air express carried on scheduled air transport lines also showed an increase at 286,798 pounds compared with 197,538 pounds the previous year. This figure does not include about 2,000,000 pounds of freight carried by an exclusive freight service operated by a private company in the middle west.

**Swedish Air Services.**—The programme for Swedish air services in 1931 has been completed by Aktiebolaget Aerotransport and only awaits Government approval. The new features are as follows:—The flying season is extended by two months, double machines are to be used on the Continental lines, and communications with Holland, London and Paris are to be speeded up. The continental line, run by Aerotransport in co-operation with the Dutch company, resumes regular services on March 16th, which is about a month earlier than usual; in the autumn the services will also continue for a month longer. In future the planes on this line will not land immediately at Hamburg, and as other improvements will be made the time taken on the Sweden-London journey will be considerably shortened. Planes leaving London at 12.30 will arrive at Malmoe in time for the night express for Stockholm. On May 1st a French-Belgian air service to Malmoe will be inaugurated. Traffic on the Stockholm-Helsingfors line will also open on May 1st and continue until November 1st, a month longer than last year. According to the report of Aerotransport for 1930, night flying with mails was kept up during four months of the year. The company intends to increase this time every year until in a few years mail services will run all the year round.

# Railway Notes and News.

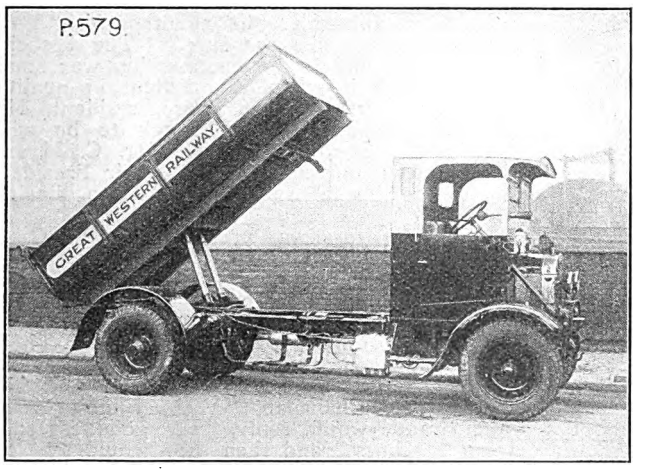
**The Railway Barometer.**—The railway traffic receipts of the four group railway companies have now been published for the first 8 weeks of 1931 compared with the same period in 1930 and 1929, and are as under:—

| | 1931 | 1930 | 1929 |
|---|---|---|---|
| | £ | £ | £ |
| Passenger ... ... | 8,790,000 | 9,349,000 | 9,167,000 |
| Merchandise, etc. | 8,248,000 | 9,818,000 | 9,571,000 |
| Coal, Coke, etc. ... | 5,481,000 | 6,024,000 | 6,144,000 |
| Total ... | 22,519,000 | 25,191,000 | 24,882,000 |

The comparison for weeks 5 to 8 of 1931 compared with 1930 reveals a considerable falling off in receipts for all classes of traffic. The dispute in the Lancashire Cotton Industry which finished on the 14th February last has adversely affected the 1931 receipts, also the period of 1930 with which comparison is made was prior to the present state of trade depression in the country.

**London & North Eastern Railway Holiday Handbook.**—The 1931 Edition of the L.N.E.R. Holiday Handbook has made its appearance on the bookstalls. This book, bound in brilliant green covers and containing 860 pages with 250 illustrations is packed with reliable information regarding holiday resorts from Southend to Lossiemouth; comprehensive lists of hotels, boarding houses, private houses and farms catering for visitors, cafés, restaurants, cinemas, etc., are given together with maps of England and Scotland and street plans of the principal resorts. The illustrations are mostly in photogravure of various tints. The book is on sale at 6d. per copy at all L.N.E.R. station bookstalls and the principal booksellers.

**London, Midland and Scottish Railway Summer Guide.**—A Summer Holiday Guide has made its appearance on the bookstalls. It is the 1931 issue of "Holidays by L.M.S." and is sold at the modest price of sixpence. 100,000 copies, weighing 170 tons, have been printed. Within the guide's 800 pages some 568 places are described and a list of over 6,000 hotels, boarding houses, etc., given. There are 262 photogravure illustrations. The guide is arranged in districts, covering Wales, English Lakes and Border Country, Lancashire Coast, West of England, The Midlands, London and Eastern England, Southern England and Island Holidays. Eleven small sectional maps and one large folding map are incorporated in the guide. In this book an effort has been made to produce a guide that is complete in itself. Every available scrap of information has been included that will help the holidaymaker to find a suitable location and, having found it, to get there with the minimum of inconvenience.

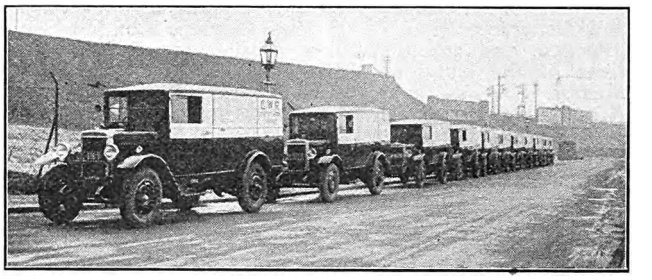


"EAGLE" OUTFIT FOR THE G.W.R. 5-TON HYDRAULICALLY OPERATED END-TIPPING BODY ON "THORNYCROFT" CHASSIS.

**An Eagle Outfit for G.W.R.**—We illustrate a recent outfit supplied by The Eagle Engineering Co., Ltd., Eagle Works, Warwick, to the G.W. Rly., showing a 5-ton hydraulically operated end tipping body mounted on a "J.J." Thornycroft forward steering chassis. The Eagle Engineering Co., Ltd., are at the present time engaged in building a fleet of twelve 10-ton steel end tipping bodies with Eagle hydraulic end tipping gear, to be mounted on Thornycroft chassis, for the same Railway.

**New Petrol Trollies for Newcastle Central Station.**—As the result of experiments carried out with petrol driven platform trollies the L.N.E.R. are substituting petrol trollies for electric parcels platform barrows at Newcastle Central Station.

**Morris-Commercials for the Great Western Railway.**—Our photograph shows part of a fleet of 18 Morris-Commercial vans supplied recently by Morris Commercial Cars, Ltd., Soho, Birmingham, to the Great Western Railway Company for express road service. Their load capacity is 35-40 cwt.



PART OF A FLEET OF 18 MORRIS-COMMERCIAL VANS JUST SUPPLIED TO THE G.W.R. LOAD CAPACITY 35/40 CWT.

**Cottage Homes for Retired Railwaymen.**—Under the admirable and entirely voluntary organisation, the L.N.E.R. Cottage Homes and Benefit Fund, a further group of cottages for retired railwaymen have been completed at Norton, near Malton, and were officially opened on March 7th by Major W. H. Carver, Director of the L.N.E.R. Mr. T. Hornsby, Divisional General Manager, York, presided at the ceremony. The objects of the Fund are to provide small groups of homes for railwaymen who retire from the services of the L.N.E.R., either through reaching the age limit or ill health, and to render help to members of the Fund suffering hardship due to long illness or other adverse circumstances.

**Great Western Railway Contracts.**—The placing of the following contracts, to the value of £50,000, is announced by the Great Western Railway:—Extension of engine shed, new stores and other works at Laira, Plymouth—Ernest C. Jordan & Son, Newport; shops and living accommodation at Oxford Road, Tilehurst, Reading—Wm. L. Nicholls, Ltd., Gloucester; 30 sets of engine tanks and bunkers for 30 2-6-2T engines—Ruston & Hornsby, Ltd., Lincoln; excavation, piling and concreting for foundations of hoists and gantrees at South and Prince of Wales Docks, Swansea—Christiani & Nielsen, London; supply of steel girders and other steel and ironwork—The Horsehay Bridge & Engineering Co., Ltd., Horsehay; supply and delivery of thirteen Venturi and one positial pressure water meters at South Wales Ports—Geo. Kent, Ltd., Luton, Bedfordshire; overhaul of the twin screw steamer, "St. Julien"—Cammell Laird & Co., Ltd., Birkenhead; overhaul of triple screw steamer, "St. Andrew"—C. H. Bailey Graham & Co., Ltd., Barry; combined plate binding and straightening rolls for new concentration yard, Swindon—J. Bennie & Sons, Glasgow; alterations to sheet shop for electrical maintenance stores at Paddington Goods Station—Wm. Brown & Sons (Builders), Ltd., London; overhaul of Ferry steamer, "The Mew"—Willoughby (Plymouth), Ltd.; running shed lathe for Oxford—Dean, Smith & Grace, Ltd., Keighley; steel girders and other steelwork—Braithewaite & Co. (Engineers), Ltd., London; supply of one Butler Crank Shaping Machine 20 in./22 in. stroke—Butler Machine Tool Co., Ltd., Halifax; new kiosk on No. 2 and 3 platforms, Paddington Station—Maple & Co., Ltd., London; supply and erection of two 1-ton transporter cranes for Park Royal Goods Shed—Wharton Crane & Hoist Co., Ltd., Reddish.

**New Station for Cardiff to Cost £820,000.**—Cardiff General Station and the adjacent Riverside Station are to be completely rebuilt by the Great Western Railway Company at a total cost of £820,000. As a result the two stations will virtually become one although the Riverside station will still retain its present name. The first stage of the work of rebuilding has commenced and it is anticipated will be completed early in 1934. The new scheme provides for additional, longer and wider platforms, increased running lines through the station, the provision of refreshment and waiting rooms on the principal platforms, convenient ample accommodation for stabling coaches and locomotives, and is designed to give greater convenience to the travelling public.

# Association of Railway and Forwarding Agents.

## Twenty-First Annual Dinner.

The twenty-first annual dinner of the Association of Railway and Forwarding Agents was held at the Connaught Rooms, London, on March 9th.

**Mr. James E. Thompson,** of G. Thompson, Ltd., the well-known firm of Railway and Shipping Agents, Carmen and Contractors, of 71, Hatton Garden, London, E.C.1, presided, and amongst those present were: Representatives of the London, Midland and Scottish Railway:—Messrs. J. A. Milligan, Wilson, Grant, Reed, Hosegood, Arnold, H. A. Norman (London Mineral Agent), and H. Thompson. Representatives of the London and North Eastern Railway:—Messrs. W. J. Pepper, A. Gregory, Statham, G. Lord, Robbins, Sutcliffe, Creasey, Owers, Leigh, Theobald, Woodhouse, Manning, Moore, Haywood, Plowman, Lofting, and Peacock; Representatives of the Great Western Railway:—Messrs. Tavener, Cope, Sealey, King, and Webster; Representatives of the Southern Railway:—Messrs. Wigley, Rendall, Dyne, Page, Harrison, and Sempers; Retired Officers, L.N.E.R.:—Messrs. T. Smith, G. Parsons and Ollier; L.M.S.:—Mr. W. Bratt; Southern:—Mr. Geesing.

Amongst the members of the Association present were:—Messrs. G. Thompson, A. Thompson, W. Boon, F. Gerner, R. Stevens, G. Hoare, E. C. Cooke, C. Myers, C. C. Harding, W. Lavington, M. Lavington, A. Hunt (representing R. England), and Messrs. Burke, Hubbard, McFarlan, Narracott, Needs, and Trotman (representing Van Oppen & Co., Ltd.).

**Mr. James E. Thompson** proposed the toast of the Railway Companies. He said that some of their railway friends were unable to be with them owing to illness but he knew they would be present in spirit.

Although that night witnessed their twenty-first Dinner the Association had existed for a longer period than that, as during the Great War their annual gathering was allowed to lapse.

The relations existing between the railway companies and the forwarding agents were, as always, most cordial and the companies assisted the agents in every possible way. Any little favours asked from the railways were granted, provided, of course, the favours were consistent with the duty of the companies.

For the past year or two the railways had been passing through a depressing time, passengers and merchandise being diverted to other forms of transport. The railways were striving to get that traffic back and the agents hoped earnestly that eventually they would succeed in recapturing, if not the whole, at least the major part of the traffic. Motor transport, however, had come to stay and the railways were associating themselves with it, and he believed that the companies holdings in road transport showed a return of something like 6½ per cent. If that were so, even the railway agent might think the road a better investment than the rail. (Laughter.)

**Mr. J. A. Milligan,** of the London, Midland and Scottish Railway, responding, said that the railways had been badly hit by the world-wide depression in trade which was causing havoc and disaster in many industries. But perhaps there was a little consolation in the reflection that railways abroad were faring even worse.

Sometimes the English railway officers were thought to be bits of mugs (laughter), but they knew what the position was; they knew they were losing money. The L.M.S. knew that the long-distance passenger was neither moving by rail nor road and he supposed that at present there was really nothing to move for that would justify his travelling expenses. Two Scottish lochs were full of shipping lying idle affecting thousands of pounds of capital. But the railways were making remarkable economies. The L.M.S. by economies had been able to recover something like forty per cent. of their reduced passenger receipts. (Applause.) The L.M.S. had economised, for instance, by installing new plant and machinery, but it must be remembered that passenger train schedules had to be maintained intact and so economies could not be found easily in that direction.

Railways, of course, were a national necessity and he was satisfied that when normal trading conditions returned they would recover much of the prosperity they had known in the past.

It had been reported that there were signs of a trade revival and they all hoped it was true, and then the railways might get back some of the money they were losing. No matter how bad times were the railways were keeping their undertakings up to first-class standard. There was no cheese-paring and the companies were spending a lot of money in new works and when trade revived the railways would be able to handle traffic efficiently.

Continuing, Mr. Milligan said the railways had a bright spot—they were doing an increased parcels business and in one case parcels traffic had been the means of recovering thirty-three per cent. of the losses incurred on other traffic—thanks for this were due largely to the Railway Agents and long might they continue to prosper. (Applause.)

**Mr. G. Lord,** of the London and North Eastern Railway, who also responded, said it was the very pleasing custom of the Association of Railway and Forwarding Agents to invite the London Parcels Agents to their annual dinner and to couple with the toast of the Railway Companies one of those Agents, and as a representative of the London Parcels Agents he was glad to have the honour of speaking to them.

They had been told what was the position of the railway companies to-day, and speaking for his colleagues as well as for himself he could say they were very pleased to be associated with a branch of the railway business which did show something of stability if not of prosperity. (Applause.)

In a reference to the past history of the Association, Mr. Lord reminded those present that the profession of the auxiliary booking office keeper and forwarding agent was very much older than that of the railway companies.

He remembered some of the grand old gentlemen connected with the forwarding business—Mr. George Thompson, father of their Chairman that night, Mr. William Boon, Mr. George Hoare and Mr. William Herd, who unhappily had passed over, but they still had with them Mr. Alfred Myers, the President of their Association.

The toast of "The Association" was proposed by **Mr. W. J. Pepper,** of the L.N.E.R. He said that the Association was founded in 1902 and whilst the railways were suffering a period of severe depression he was pleased to observe that members of the Association appeared to be prosperous. (Laughter.) He wished the Association long and continued prosperity. (Applause.)

**Mr. Walter Boon,** the Vice-Chairman, responded. He said he felt that members of the Association were very useful not only to the railway companies but to traders generally. The forwarding agents looked upon themselves as providing a link with these great interests and in no way were they in competition with the railways, and to the railway companies the agents said, "Your friends are ours, your enemies are ours." The Association believed in unity and if the membership was small it did not follow that it was not excellent in quality.

Members deeply regretted that their President, Mr. Alfred Myers, J.P., was not well enough to be with them that evening. Through his son, Mr. C. Myers, the members wanted a message taken to their President that they wished him a speedy return to health. (Applause.)

The toast of the visitors was proposed by Mr. C. C. Harding, the responses coming from Mr. H. Green and Mr. E. Line.

**Mr. Walter Boon** proposed the health of the Chairman, which he said was the toast of the evening.

Mr. James E. Thompson was a real hard worker. There had been occasions when, engrossed in his business, he (Mr. Boon) had hopped into Hatton Garden and had said to their worthy Chairman, "Well, Jimmie, what about it?" and Jimmie would reply, "For goodness sake go away, I am too busy," and then they would trot off round the corner. (Loud laughter.) Their Chairman was also the Hon. Secretary of the Association, but a little bird had told him that his brother Alfred did a lot of the work. (Laughter.)

The toast was drunk with great enthusiasm.

**The Chairman,** in the course of his reply, said it was the third occasion upon which he had had the honour of presiding at the annual dinner of the Association and he sincerely hoped it would not be the last. (Hear, hear.) Next year their Vice-Chairman would in all probability preside and he might then have an opportunity of saying something about Mr. Boon. (Laughter and applause.)

The programme of music arranged by Mr. Walter Boon was enjoyed thoroughly.

Mr. Walter E. Phillips very kindly acted as Master of Ceremonies.

# Law Cases.

## MOTOR COACHES IN LONDON.
## RULE NISI DISCHARGED IN FAVOUR OF THE MINISTER OF TRANSPORT.

THE challenge thrown out by the Skylark Motor Coach Co., Ltd., of Acton, against the legality of a Draft Order issued by the Minister of Transport (Mr. Morrison, M.P.), with regard to the proposed Regulations to ban motor coaches from the use of certain roads in the Metropolis in accordance with provisions of the London Traffic Act, 1924, was decided by a King's Bench Divisional Court, composed of Justices Avory, Horridge and Humphreys, on February 25th. The Court found in favour of the Minister. The matter came up on a rule obtained by Mr. Charles Dobbs, a director of the Skylark Co., which called on the Minister to show cause why he should not be prohibited from making those Regulations.

The regulations of which the Minister of Transport gave notice in December, propose to prohibit motor coaches from entering an inner area of Central London.

Streets that would be closed include the Strand, Charing Cross, Trafalgar Square, Piccadilly Circus, Regent Street, Whitehall, Pall Mall, Haymarket, Long Acre, Shaftesbury Avenue, Leicester Square and St. Martin's Lane.

A larger zone has been defined from which motor coaches would be banned between 3 a.m. and 7 p.m. on week-days, and between 3 a.m. and 3 p.m. on Saturdays. This zone extends to the Marylebone and Euston roads in the north, to Commercial Street in the east, Lambeth Palace Road in the south, and Park Lane and Grosvenor Gardens in the west.

The grounds on which the rule was obtained were, *inter alia;*

That the Skylark Co. hold unexpired licences to ply for hire without any limitation or condition; that the coaches, as omnibuses within the London Traffic Act, 1924, can only be restricted by regulations made under Section 7 of that Act; that the duty imposed on the Minister of receiving advice from the Advisory Committee had not been complied with; that the proposed Regulations are in excess of powers imposed on the Minister by Section 10 and Schedule III (2) of the Act as they did not purport to exclude a whole class of vehicles, but only certain vehicles as are not permitted to use exempted starting points; that there was illegal discrimination between vehicles of a similar class and that there was a preference of one operator to another of the same class.

Mr. Comyns Carr, K.C., and Mr. P. B. Showan (instructed by Mr. J. R. Cort Bathurst), were for the Skylark Co.; the Solicitor General (Sir Stafford Cripps, K.C.) and Mr. Colin Pearson (instructed by the Treasury Solicitor) were for the Minister of Transport.

Sir Stafford Cripps stated that the Minister purports to take his powers from Section 10 of the London Traffic Act, 1924. Quoting from the various sections of that Act he explained that the statute provided for the setting up of the "London and Home Counties Traffic Advisory Committee" to advise the Minister on matters "to facilitate the traffic of motor vehicles in, or near, London and to deal with the congestion of traffic in the area." He was given powers to make Regulations to remedy that congestion. He could prescribe the roads to be used by any class of traffic and could state the streets not to be used by vehicles of any class, either generally, or at any specific time. His powers extended to omnibuses and motor coaches.

Reading the affidavit of Mr. Charles Dobbs, on which the rule was obtained (this was reported fully in our issue of February 16th), Sir Stafford pointed out that the Company held licences for 19 coaches which plied for hire within the Metropolitan area, and outside, from a booking office in Upper Regent Street, within the outer zone, and just outside the inner one. Coaches of the Company passed through both areas. One of the great sources of complaint, said Sir Stafford, was that the Regulations purported to permit access by prescribed routes to three existing motor coach stations within the outer area; at Euston, King's Cross and Aldgate. Those stations the Skylark Co. had no right to use. It was said that they were owned by competitive companies, one of which was Green Line Coaches, Ltd., formed by the L.G.O. Co., Ltd., and that the coaches of that Company ran from a point within the zone from which it was intended to bar such vehicles.

Mr. Justice Horridge: But those coaches will be barred?

Sir Stafford: If the Minister thinks necessary, but the whole thing seemed founded on apprehension that the order would give illegal preference to those users or owners of the three coach stations. As a matter of fact the regulation stipulated that all motor coaches could use certain streets to get to those stations. Therefore, there was nothing to prevent Mr. Dobbs' company using them if they could negotiate with the owners for that permission. It was not for the Minister to consider who owned the garages. All he had to consider was, that there were those valuable storage places on the periphery of the area, and that they should not be sterilised by any order he made.

Mr. Justice Avory: But Mr. Dobbs' Company cannot use them.

Sir Stafford Cripps: If he pays, he can. One is owned by the L.G.O. Co., but the others are of the garage type and, no doubt, he could negotiate with the owners for the use of them.

Mr. Justice Avory: If they are for sale. (Laughter.) I don't see anything in the Regulations which prevents the use of those stations by any particular motor coach.

Sir Stafford: No. My friend seems to suggest that only the persons owning those stations would be allowed to use the roads leading to them.

Mr. Comyns Carr: It is not much use driving up the roads if you cannot enjoy the use of the garages at the ends of them.

Sir Stafford then dealt with the first ground, viz., that the Regulations, by restricting the use of the roads, curtailed the privileges enjoyed by the licence holders. In his submission, he said, that was founded on a misapprehension of the purposes for which the licence, given under the Metropolitan Stage Carriage Act, 1869, was granted. The licence was given for the safety of the public, that people should not be forced to use vehicles that were not fit for the work. It was a confusion of ideas to suggest that, because a vehicle was licensed, it had an unassailable right to ply wherever it liked without restriction.

Dealing with the second ground, Sir Stafford denied that omnibuses were only dealt with under Section 7 of the Act. Motor coaches were regarded as omnibuses for the purpose of the Regulations and could be covered by any order under Section 10. The third ground raised an interesting point, proceeded the Solicitor General, it appeared that, in addition to what were called "ordinary members" there were, on the Advisory Committee, "additional members" representing the interests of labour and persons concerned with the ownership of the transport. Bus proprietors were represented by two of those members, Mr. Pick and Mr. Mallinder. It would appear that those gentlemen appeared before a sub-committee, consisting wholly of "ordinary" members, to express their views as representing their interests that the committee might collect evidence to assist in the report that would be given to the Minister by the Advisory Committee. Later, they sat on the Advisory Committee to prepare that report. Such a thing was quite in accordance with the provisions of the Act, and the Committee had no power to alter its constitution *ad hoc*; its members were all appointed for three years. If there had been any question about the right of those members to sit there would have been ground for complaint but no such question could arise. After all, what objection could be made to the mere fact that they gave the Committee assistance?

Mr. Justice Avory: There is no provision which says the men should sit silent?

Sir Stafford: No.

Mr. Comyns Carr then readdressed the Court in support of the rule. If it had been desired to restrict the use of his clients' coaches to certain streets the Commissioner of Police could have issued a licence bearing that condition. But the licences granted to the coaches owned by Mr. Dobbs' company were definitely for one year without restriction as to the routes to be covered. And what was more, the licence was granted with full knowledge of the provisions of the Act of 1924.

Mr. Justice Avory: Do you dispute that the licence is given only to register the vehicle as fit for use?

Mr. Comyns Carr: I do dispute that. The fitness of the vehicle arises only after the licence has been provisionally granted, and the licence cannot be suspended or revoked unless for definite reasons that are plainly indicated. In the circumstances, no Regulation is valid which takes away from me my rights given by the licence.

Turning to the question whether the "additional" members could first advocate the claims of their different interests and then sit on the Advisory Committee to prepare a report for the assistance of the Minister, Mr. Carr suggested that the whole thing was wrong. It was the duty of the Minister to receive such a report, but one that bore a suggestion of bias was not a proper one to be accepted. An affidavit had been prepared to deal with that question, but his suggestion was

Digitized by Google

that nothing but the minutes would show exactly what happened.

Mr. Justice Horridge: I think you can take it that the report was made by a Committee that included the two "objectionable" members, as we will call them for the moment. You have to prove that they were biassed; that they were in a position where duty conflicted with interest and that they should not have sat on the Advisory Committee.

Mr. Carr: It cannot be denied that the "additional" members advocated the claims of their particular business interests.

Mr. Justice Avory: I see nothing in the Act which says that those people cannot advocate the claims of the class they represent.

Mr. Carr: But I cannot see how they can be Dr. Jekyll one moment and Mr. Hyde another. I might just as well argue a case and then sit on the Bench to give Judgment.

Mr. Justice Humphreys: I am sure you would give an impartial judgment.

Mr. Justice Avory: I havn't much doubt what your judgment would be. (Laughter.)

Mr. Carr: Your Lordship's observation adds weight to my contention that a man cannot be an advocate and a judge as well. Concluding, Counsel repeated his assertion that, when the Minister attempted to give exemption to any vehicles of a specified class he was acting illegally.

Mr. Justice Avory then gave judgment. "I think it right to say," he commenced, "that in my opinion we are clearly limited to considering the actual Draft Regulations as published in the *London Gazette,* on the 19th December, last. We are not at liberty to discuss any possible amended regulations which it is suggested the Minister may have power to make. We, therefore, cannot deal with any apprehensions the mover of the rule may have about the intention of the Minister to modify the regulations so as to include any station or garage in the exemption." Continuing, his Lordship dealt, one by one, with the grounds for the rule. With regard to the licences the Company held for their coaches and the suggestion that the effect of the Regulations would be to deprive the holders of a substantial part of the privileges they enjoyed, he was of opinion that the Regulations did not, in fact, cut down any specific privilege that had accrued to the licensees. It was not necessary to consider the point whether there was any need for the Minister to make any order under sub-section 2, of Section 10, of the Act of 1924 suspending either the Act of 1869 or any regulations made by the Commissioner of Police. When the purposes of the licence granted by the Commissioner of Police under the 1869 Act were considered it appeared to him (the Judge) that there was no grounds for saying that the licence conferred privileges which were taken away or destroyed by the proposed Regulations under the Act of 1924. The object of granting a licence was to ensure that the person holding it was a proper person to have it and that the vehicle was a fit subject for the licence, having regard to the public safety. When they dealt with Section 10 of the London Traffic Act, they found that it was for relieving the congestion and providing facilities for the traffic within the areas specified, and it might well be that regulations made under that section might appear at first sight to conflict with the privileges which the licence holder enjoyed.

The answer to the second ground, that the Regulations affecting buses could only be made under Section 7, appeared to be that the objects of Sections 7 and 10 were totally different and distinct. The object of Section 7 was to provide that a street, or part of a street, might be declared a street in which the plying for hire ought to be prohibited or restricted, and that an order could only be made where the Minister was of opinion that, because of the width of the street, or the existence of alternative routes, or the excessive use of the street by buses, such an order was necessary. That was limited to the City and the Metropolitan Police District. Section 10, however, had the totally different object of relieving congestion and facilitating traffic in, and near, London and for that purpose the Minister might make orders for the Traffic area which included, not only London, but the portions of the surrounding Counties extending 20 or 30 miles from London, e.g., as far as Guildford. For that purpose the Minister might regulate for any of the purposes mentioned in Schedule III of the Act. The difference between Sections 7 and 10 was, in his view, a sufficient answer to that ground.

The answer to the third ground was that there was evidence before the Court, that the Minister did receive advice and a report from the Advisory Committee and that the Statute had been complied with. But there was involved in the ground what might be called a separate ground; that two of the "additional" members of the Committee appeared before a sub-committee as representatives of interested parties to put forward their views. It was admitted that those two members did do that and Mr. Comyns Carr had argued that they vitiated their advice and the report. That objection would undoubtedly have required further consideration but for the express provision of this particular Act in Section 1 (3), viz., that interested parties should form part of the Advisory Committee. The "additional" members were to be representatives of labour and persons using and providing the transport, whether those members sat on the Committee and expressed the views of those they represented or appeared before the sub-committee to advocate those views seems immaterial.

The fourth ground, not having been argued, he would omit it and deal with grounds five and six, both of which raised the same point. The objection turned on the paragraph of the Draft Regulations which excepted public service vehicles proceeding by named routes to or from three specified motor coach stations near the edge of the outer area. The vehicles in question in the present case were public service vehicles as defined by the Road Transport Act, 1930, and it was said that this exception was one in favour of persons owning or occupying certain garages or stations, and that such exceptions was improper. He thought the provision of the second paragraph of Schedule III justified the Minister in making the proposed Regulations. He might make Regulations (2) for prescribing streets which are not to be used for traffic by vehicles of any specific class or classes, either generally or at specified times.

As his Lordship understood the submissions of Mr. Carr, it was contended that, "at specified times" were the controlling words and that no effect could be given to the word "generally" although it came first. In his opinion, the word "generally" justified the Regulation. The subject matter was public service vehicles, and it prescribed that certain streets were only to be used by a specified class of public service vehicle for the specified purpose of proceeding to and from those stations. That answered the several objections and the rule would, therefore, be discharged in favour of the Minister, with costs.

Justices Horridge and Humphreys concurred.

[An appeal has been lodged against this judgment and we understand that application may be made to expedite the hearing.—Editor].

## LICENCE EXPIRED TWO DAYS PREVIOUSLY.

A VEHICLE owner was summoned in Ellesmere Port Police Court for having used a motor lorry without the Road Fund licence. When the lorry, owned by defendant, but driven by a relative of his, was stopped by the police, it was laden with furniture going in the direction of Chester. The licence had expired two days previously.

Defendant said he had always understood he was allowed to work it for fourteen days when the licence was due. He was ordered to pay £2 2s. and 4s. costs.

# Personal Notes.

**Retirement of Mr. E. Ford, Chief Goods Manager, Great Western Railway.**—Mr. Ford, who will retire from the position of Chief Goods Manager of the Great Western Railway on March 29th, has been in the service of that railway since 1884, when he entered the railway service at Plymouth. Six years later he came to London filling a position in the Chief Goods Manager's department. After further experience in the department of the General Manager he was appointed Chief Clerk to the Worcester District Goods Manager in 1905, and in 1912 was promoted to the position of Assistant Goods Manager for the Cardiff district, attaining the position of District Goods Manager three years later. He returned to Paddington in 1918 having been selected to fill the position of Assistant Goods Manager becoming Deputy Chief Goods Manager in 1921 and Divisional Chief Goods Manager in 1924. In connection with his retirement he was presented with a wireless receiving set at a meeting of the Goods Managers' Conference held at the Railway Clearing House on February 19th. The presentation was made by the Chairman, Mr. P. Gibb, as a token of the esteem in which Mr. Ford is held by the members of the Conference, and with good wishes for his future welfare.

**Promotion for Mr. A. Maynard.** — Mr. Maynard, who has been appointed Chief Goods Manager of the Great Western Railway in succession to Mr. E. Ford, is well-known in transport circles and has taken a leading part in negotiations between the railway and the Furniture Warehousemen and Removers' Association in recent conferences. Mr. Maynard was born in 1882 and was educated abroad. He joined the service of the Great Western Railway as District Agent at Nantes, 1909, and lated was transferred to the Continental Department at Paddington. In 1914 he was appointed Goods Agent at Taunton and later at Birmingham. In 1918 he was promoted to the position of Goods Superintendent at Paddington. He was chosen to fill the new position of Development Agent in 1922 and in 1924 he became Assistant Chief Goods Manager and Development Agent. These two positions he will relinquish on taking up his new important position on March 30th.

**Impending Retirement of Mr. T. H. Shipley of the L.M.S.**—After 45 years service on the railway, Mr. T. H. Shipley, District Goods Manager for the Birmingham centre of the London, Midland and Scottish Railway Company, will retire on March 31st. Mr. Shipley has occupied his present position since 1914. On leaving school in 1886, he entered the service of the old L. & N.W.R. as junior clerk at Shenstone, Lichfield, and he served in every office and every section in the Birmingham district before being appointed Chief Clerk and Assistant Manager of the district in 1903. In January, 1914, he was promoted to the important position from which he will shortly retire at his own request. Mr. Shipley feels that, having reached the age limit fixed by the Company, the time has come for a younger man to have an opportunity.

MR. T. H. SHIPLEY.

During the War Mr. Shipley had charge of the transportation of the first batch of tanks which were made at Oldbury, and was also Liaison Officer in charge of German prisoners of war in the South Staffordshire district.

**L.M.S. District Goods Manager Promoted.**—Mr. J. B. Scattergood, District Goods Manager of the L.M.S. Railway Company, Sheffield, has been promoted to the position of District Goods Manager in the Birmingham area. Mr. Scattergood has had a wide experience in various parts of England, including Nottingham, Bristol, Birmingham, and Leicester, and in North Wales. He went to Sheffield in 1926 from Chester where he had been Assistant District Goods Manager. Mr. Cuthbert Jones, present Assistant at Sheffield, has been appointed to the position held by Mr. Scattergood.

**L.G.O.C. Operating Manager.** — The Directors of the London General Omnibus Company have appointed Lieut.-Colonel A. W. C. Richardson, D.S.O., to be Operating Manager of the Company as from 1st March last. Until a few months ago, Colonel Richardson was head of the Mechanical Warfare Experimental Establishment at Farnborough. A man of 43, he has been in command of the 4th Battalion of the Royal Tank Corps since the end of last summer. Lieut.-Colonel Richardson is at present a member of the Mechanical Warfare Board.

LIEUT.-COLONEL A. W. C. RICHARDSON, D.S.O.

**L.M.S. Appointments.** — The following appointments have been approved by the directors of the London, Midland and Scottish Railway:—Chief Goods Manager's Department: Mr. T. E. Argile, Goods Manager, Northern Division, Glasgow, to be Assistant Chief Goods Manager, Euston; Mr. W. Yeaman, Commercial Assistant to Chief Goods Manager, Euston, to be Goods Manager, Northern Division, Glasgow; Mr. D. C. K. McCulloch. Indoor Assistant to Chief Goods Manager, Euston, to be Commercial Assistant to Chief Goods Manager, Euston; Mr. J. M. Medcraft, Personal Assistant to Vice-President, Euston, to be Indoor Assistant to Chief Goods Manager, Euston.

**Port of Bristol. General Manager's Retirement.** — Mr. T. A. Peace, for many years Chief Engineer of the Port of Bristol and General Manager since the retirement of Mr. Ross Johnson, retired on March 10th after a period of service covering 38 years. Trained as a mechanical engineer, Mr. Peace first secured an appointment on the engineering staff of the Manchester Ship Canal Company. Later he spent six years in the engineering department of the London County Council leaving London to become Assistant Chief Engineer to the Port of Bristol.

MR. T. A. PEACE.

**London, Midland and Scottish Railway Appointment.**—Mr. T. E. Argile has been appointed Assistant Chief Goods Manager to the London, Midland and Scottish Railway. He entered the service of the old Midland Railway at Derby in 1896 in the Goods Manager's department. After serving also in the office of the General Manager he was transferred to Leicester returning to Derby to fill the position of Private Secretary to the Chief Goods Manager. In 1915 Mr. Argile was appointed Traffic Superintendent at Swansea. He was promoted to the position of District Goods Manager at Leeds in 1919

Digitized by Google

becoming Assistant to the Chief General Superintendent for goods operating work in 1923. He returned to Leeds in 1924 as District Goods Manager, moving to Liverpool in the following year on his appointment to a similar position in that city. In 1928 he was appointed Goods Manager of the northern division of the London, Midland and Scottish Railway.

**Traffic Assistant.** — Mr. Robert E. Mennie, who for twenty-five years was in the service of the Aberdeen Town Council Transport Department, has been appointed Traffic Assistant to the Road Transport Commissioner for the northern area of Scotland. Mr. Mennie has had considerable experience of transport matters.

**Tramways Appointment.**—Mr. James Harrison, who has been Assistant Traffic Superintendent to the Sunderland Tramways for 10 years, has been appointed Traffic Superintendent to the Wallasey Corporation Tramways. He was Chief Inspector of the tramways at Ashton-under-Lyme, where he won a Lancashire and Cheshire scholarship before going to Sunderland. Mr. Harrison was Chairman of the Sunderland Tramways Institute.

**Traffic Superintendent.**—Mr. J. Lomax has been appointed Traffic Superintendent to the Newcastle Co-operative Society. He has been with the Newcastle Society 10 years and is in charge of the coal and laundry departments.

**Mr. F. W. Hinde, of The Avon India Rubber Company, Ltd.**—Mr. F. W. Hinde, Joint Managing Director of The Avon India Rubber Company, Ltd., has now also undertaken the duties of Secretary to the Company. His dual appointment is consequent upon the death in December of Mr. F. E. Newton, who held the Secretaryship for very many years.

**Metropolitan Railway General Manager.** — Mr. J. S. Anderson has been appointed General Manager of the Metropolitan Railway. He will also act as chief legal adviser and solicitor.

**Railway Appointment for Mr. A. E. Edwards.** — Mr. Arthur Earle Edwards, who has taken an active part in the work of the Metropolitan Graduate and Students' Society of the Institute of Transport, has been appointed Assistant Divisional Superintendent (Western Division), Southern Railway, with headquarters at Exeter. Mr. Edwards joined the service of the South Eastern and Chatham Railway in December, 1917, and was attached to the office of the Superintendent of the line (military section) dealing with ambulance traffic. Subsequently, he became personal clerk to the Chief of the Passenger Train Section and in 1921 was transferred to the Passenger Rolling Stock Section. In 1923 he was transferred to the London East Divisional Operating Superintendent's Office, following the railway amalgamations. In February, 1927, Mr. Edwards was selected as a cadet for a four years course and trained in all departments of the Southern Railway, the curriculum including a period of four months with the Underground Railway group. Mr. Edwards is an Associate Member of the Institute of Transport by examination and holds five University of London (London School of Economics) certificates. He has visited France, Germany, Belgium, Switzerland, Austria and Hungary at various times to study the work conditions of continental railways and other forms of transport.

**The Commercial Motor Users' Association (Blackburn Area) and The East Lancashire Road Transport Association (Joint Organisation).**—Councillor Joseph Ainsworth, of the Blackburn Bus Co., Ltd., and J. Ainsworth & Co., Ltd., Motor Engineers, of Montague Street, Blackburn, has been appointed Chairman for the ensuing year of the Commercial Motor Users' Association (Blackburn Area) and The East Lancashire Road Transport Association (Joint Organisation) and also the National and Divisional Delegate to the Commercial Motor Users' Association. Mr. J. C. Hindle, the retiring Chairman, has held the position from 1915 with the exception of the two years, 1921 and 1922. He was also the Chairman of the Blackburn Horse Show and Parade Society. He has now retired from business and in appreciation of his services the Executive Committee have made him a Life President with a permanent seat on the Committee and expressed the wish, which Mr. Hindle as acquiesed in, that he will give the Association the benefit of his services on all matters relating to Transport Workers' wages and conditions. In this behalf he will still act as the delegate to all conferences necessary with the Unions of the Transport Workers. The Secretary of the Association is Mr. Thomas Fletcher, F. L. A. A., F.I.S.A., 2, Victoria Street, Blackburn.

MR. W. H. O. STEER.

**Mr. W. H. O. Steer's New Appointment.** — The Firestone Tyre and Rubber Company, Ltd., of Brentford, announce the appointment of Mr. W. H. O. Steer as Regional Manager in the South of England. Until recently Mr. Steer was connected with The Goodyear Tyre and Rubber Company.

**Goodyear Changes in Personnel.**—Mr. N. V. Clarke and Mr. D. G. C. Wakeham have been appointed Special Representatives of the Commercial Tyre Department of The Goodyear Tyre & Rubber Company (Great Britain), Ltd. Messrs. F. P. Morland, F. A. Oates (Southern Division); C. F. Nichol, E. Bird, E. Addis (Western Division); F. Roodhouse, S. Berry, and A. Allan (Northern Division), have joined the Company as General Line Salesmen.

**Tramways, Light Railways and Transport Association Annual Congress.** — The 25th Annual Congress of this Association will be held at Margate on May 28th and 29th. Included in the programme will be a reception by the Mayor of Margate at the Pavilion and Winter Gardens, where the business meetings will be held.

## Obituary.

**The Late Earl Russell.**—Earl Russell, whose sudden death at Marseilles at the age of 65 took place Tuesday, March 3rd, filled an important position in connection with transport for some time as the Parliamentary Secretary to the Ministry of Transport. During this time he was specially concerned with the Road Traffic Bill and afterwards took a leading part piloting this important measure through the House of Lords. He was afterwards made Under Secretary of State for India. Earl Russell was a pioneer motorist and one of the earliest members of the Royal Automobile Club. He was a man of great ability, a trained practical engineer as well as a barrister, and had done good work in many directions, including nine years service as a member of the London County Council. His sudden death is not only a serious loss to the Government, but a still greater loss to his many friends and to transport in general.

**Death of Mr. Curtis Gray, Divisional Road Engineer (Scotland), Ministry of Transport.**—Mr. Charles Curtis Gray, M.Inst.C.E., who died at his home at Colinton, Midlothian, on February 4th last, at the age of 60, will be greatly missed by his colleagues in the Ministry of Transport, and by the consultants and county and borough engineers of Scotland, who had come to rely so much on his cordial co-operation, in the engineering matters with which he was called upon to deal as the Divisional Road Engineer, Scotland, of the Ministry of Transport. Mr. Curtis Gray was born in 1870, and after completing his articles was appointed as an Engineering Assistant to the Margate Corporation, and was there for ten years. He was then appointed as Assistant Surveyor to the Malvern Urban District Council, and his chief at that time was Sir Henry Maybury. He was later appointed successively Engineer and Surveyor to the Urban District Councils of Hayes (Middlesex) and Scunthorpe. Early in 1914, Mr. Curtis Gray was appointed an Engineering Inspector in the Road Board, and later was transferred to Scotland to undertake road work in connection with H.M. Factory at Gretna Green. In 1919 he was transferred as an Engineering Inspector to the Ministry of Transport, and was appointed Divisional Road Engineer for Scotland in 1924, which appointment he was holding at the time of his death.

# National Safety Week Conference.

An important conference organised by the National Safety Week Council was held on Thursday, February 12th last in connection with the National Safety Week arranged to take place from May 11th to 16th inclusive to be held in Leeds. The conference proper was held in Guildhall presided over by the Lord Mayor of London (Sir W. Phene Neal) and the opening speech was made by H.R.H. The Duke of York who, before the meeting, received the Mayors and Provosts of those cities where branches of the National Safety First Association are in existence.

After the members of the conference had been welcomed by the Lord Mayor His Royal Highness delivered his address and said:—

"I am very glad to be here this afternoon and to welcome such a representative attendance of the chief citizens from all parts of the country. Your presence here shows that you realise the gravity of this accident problem, and your readiness to discuss any remedies. We appreciate this very much, and we thank you for sparing us so much of your valuable time. As patron of the National Safety Week Council, I am appealing to you, and through you to all Local Authorities throughout Great Britain, to help in our fight against unnecessary loss of human life. Those of you who were at this morning's proceedings at Chiswick heard all about accidents and the successful prevention methods which are used by the National Safety First Association, whose work the Royal Commission on Transport very strongly commended as worthy of far more support.

"Now, Gentlemen, there are two sets of figures which to my mind should alone make us determined to do all we can to help this work. The first is that the result of coroners' inquests shows that 87 out of every 100 fatal street accidents are due to failure of the human element, and could and should be prevented. Then again, we have this very sad feature, that out of 7,000 who were killed on our roads last year over 1,500 of them were children. Must we continue to sacrifice more than 100 young lives every month? The Home Secretary, who spoke to you at Luncheon, and the Minister of Transport, who will be speaking to you here later, will no doubt support me when I say the true remedy for this sad state of affairs is an educational campaign. It is not only for the children, but for the whole nation, not only in regard to street accidents, but also to accidents in industry and in the homes that we feel we must make the public realise that most of these accidents are preventable by the use of common sense. We hope to do this if we have the aid of Local Authorities. Many have already helped us, but we need them all.

"Last year we organised our first National Safety Week in order to focus attention upon our continuous campaign. We invited every Local Authority to co-operate, but I am afraid that only a few took a real and active part, and in those districts that did take part, reductions of 20 per cent. and more were reported in the number of accidents. Had their example been more generally followed those good results would have been obtained everywhere, and the effect upon the accident casualty list would have been much more marked.

"In a few days we shall be asking every Highway Authority for co-operation in our accident prevention work in general, and in the Safety Week in particular. I would ask you, Gentlemen, on your return to see that this appeal is given the sympathetic consideration which it so rightly deserves. Briefly, what we want is this:—As far as Safety Week is concerned, will you see that adequate steps are taken in your area to bring it to the notice of the local community, and will you try and get together a special Local Committee, unless you already have one, for there is good work to be done by such a Committee all the year round, and not only in Safety Week. I also hope very much that women will take up this work.

"Again, Gentlemen, I would ask you to send representatives to the National Safety Congress, which takes place in Leeds during Safety Week, when all the important aspects of accident prevention will be discussed. We need your counsel and experience for the benefit of all. And finally, Gentlemen, may I express the hope that you will look upon Safety Week as part of an unceasing campaign in which we want your very active assistance, so that in effect each week is a Safety Week throughout the year. In this way, and in this way only, can we hope to reduce the burden of grief, of pain and of expense, which accidents entail upon our people."

The Minister of Transport, Mr. Herbert Morrison, then spoke and in concluding his remarks said he hoped that the Local Authorities will co-operate not only with the Ministry of Transport, but with the voluntary bodies such as the Safety First Association, in spreading public knowledge as to the dangers from the point of view of traffic, in making the public want to do the right thing, not because they will get punished if they do not, but because it is right to do the right thing, as otherwise we are not only endangering our own lives, but the lives of other people, and if we could co-operate in that spirit with energy upon that basis, then I think the record of street accidents will not continue to increase as the number of vehicles has increased. I hope that under the new condition of things that the Road Traffic Act has brought about that we may see a reduction in the accidents and injuries, and if that is done we shall have rendered a great service to our country and to the people of our country.

Lord Brentford, the Chairman of the National Safety Week Council, then moved the following resolution:—

> "That this Conference, representative of Local Authorities in Great Britain assembled in Guildhall, London, on the 12th February, 1931, having heard with interest the speeches of H.R.H. The Duke of York and of the Minister of Transport, is agreed that an urgent necessity for reducing the serious and increasing toll of accidents of all kinds is a more extensive education campaign, including the holding of a National Safety Week, such as carried out by the National Safety First Association and the National Safety Week Council. This Conference is of the opinion that in the interests of economy, as well as of humanity, this campaign should be accorded the fullest measure of support by Local Authorities, and in particular during National Safety Week, which begins on May 11th next."

After some discussion this resolution was put to the meeting and carried unanimously.

# Automatic Traffic Signals.

## When to Turn to the Left.

The widespread employment of light signals for traffic control in all parts of the country has been followed by some misunderstanding amongst motorists as to whether or not it is permissible to turn left when the red or "stop" light is showing against them. For the information of drivers the Royal Automobile Club points out that the Ministry of Transport has already laid it down that generally both left and right turns should be prohibited when the red light is showing and permitted only when green is showing; but that in places where the volume of traffic is exceptionally heavy it may be necessary to permit turning to the left. In such cases, however, a green arrow, 15 inches long, visible only when the signal is illuminated, is affixed to the signal post. It now being an offence under Section 49 of the Road Traffic Act to fail to conform to the indications given by a traffic sign, the R.A.C. advises motorists to be particularly careful not to turn left at a road junction when the red light of an automatic traffic control is showing, unless the large green arrow referred to above is illuminated at the same time. It should be remembered, however, that under the Regulations the amber light means "prepare to go," or "prepare to stop," according as it is associated with the red or green light. It does not of itself mean "go," and therefore drivers would be well advised to consider the amber light as equivalent to the red light, when contemplating the left hand turn.

# The Army and Navy Co-operative Society, Ltd.

The Annual Dinner of the Removals and Warehousing Department of the Army and Navy Co-operative Society, Ltd., Victoria Street, Westminster, London, was held at The Comedy Restaurant, Haymarket, London, on February 21st last.

**Mr. R. J. Armstrong, A.M.Inst.T.,** manager of the Removal and Warehousing Department of the Society, presided, and at the conclusion of the dinner submitted the toast of "The King," which was honoured in the usual loyal manner.

**Mr. Wenham** proposed the toast "Removal and Warehousing Department, A. & N.C.S., Ltd.," and referred to its wonderful growth. He said he had had the pleasure of knowing Mr. Armstrong for many years and he was esteemed by all those who were engaged in the removal industry.

**Councillor R. J. Armstrong,** who was received with enthusiasm, responding, said that the past year had been a difficult one and he was sure that on this point all those engaged in industry would agree with him.

Since their last annual dinner two of their colleagues had passed away; one had served the Society for forty-four years and the other for thirty years.

The turnover of the Removals and Warehousing Department of the Society had been maintained and the work carried out during the year had been priced from as low as one shilling to £959 for one contract. Salaries paid in the Removals Department approximated £20,000 during last year, whilst their rates and taxes totalled thirty shillings for each working hour in a forty-eight hours week. He mentioned the question of rates because they had with them his friend, Mr. H. Johnson, J.P., who sat with him on the Brentford and Chiswick U.D.C., and it would be seen that he (Mr. Armstrong) had something at stake when he tried to keep as low as possible the rates of the district.

The Society in the course of its removal business last year had touched many countries, and their motor transport engaged on removals alone had covered 100,000 miles. That could not be done unless the management and staff worked hand in hand and pulled together. In every industry team work was more important to-day than it had ever been in the history of the world.

Difficult as had been the past year, in his opinion this year might prove to be much more difficult—at the same time there was no need for pessimism. If they became pessimistic not only would they lose such business as might be available but they would become a back number and instead of being a main stream in the removal and warehousing industry they would become a tributary, and that was not the intention of the Removals and Warehousing Department of the Army and Navy Co-operative Society. (Applause.)

The progress of the Removals Department of the Society had created a difficulty—they wanted more accommodation—but the present was not a good time to build so they must carry on as well as they could. They had taken over auxiliary premises in Westminster—certainly some distance from their seat of operations at Turnham Green, but it was not the intention of the Department to turn business away.

During the last few years the Removals and Warehousing Department of the Society had come rapidly to the fore as regards up-to-date methods, and there was nothing he was more keen about than that they should be in the front in their industry. Though the making of experiments might be an expensive process, still all the experiments so far made by the Department had proved successful, and whilst the Removals and Warehousing Department might not be the biggest Department in the stores, it was, he claimed, an important department. The Department, of course, came up against difficulties.

### Limiting Drivers' Hours.

One difficulty facing the removals and warehousing industry at the present time was how to work Section 19 of the Road Traffic Act, 1930, dealing with the limitation of time for which drivers of certain vehicles might remain continuously on duty. This Section would become operative on April 1st. Many of the sections of the Act were admirable and could be faithfully carried out, and were framed for the well-being and safety of the public. Section 19, however, was a most difficult section and as drawn up was practically impossible to work. The difficulties that members of the removal and warehousing industry would find in attempting to work the Section had been pointed out to the Minister of Transport, Mr. Herbert Morrison, M.P. The Minister quite appreciated the difficulties and they were advised to seek the co-operation of the Trades Unions with a view to seeing whether some agreement could be arrived at. He (Mr. Armstrong) was one of a technical committee of eight appointed to meet a technical committee of eight members of the Trades Unions, and for some time they had been considering this section of the Act. Negotiations were still proceeding and at the moment they were concentrating on arriving at the best way of dealing with the period of rest hours. As the Clause stood at present it would mean that no man would be able to start work at eight o'clock each morning, but one morning he would start at 8 o'clock and another morning at 10 o'clock. That would demoralise the industry, whereas at present the removal and warehousing industry was one of the best organised in the country.

Still they must keep steady and go forward and must not be down-hearted. What the country needed to-day was British courage, gameness, grit and commonsense, and if there was co-operation amongst all classes of the people in creating an atmosphere of confidence then surely the dawn of the day of prosperity and restoration of our trade would be hastened. (Loud applause.)

Other toasts which were honoured were "The Visitors" and "The Artists."

Mrs. R. J. Armstrong was the recipient during the evening of a handsome bouquet from the staff.

Mr. G. H. Wilson was as usual indefatigable in his efforts to make the evening enjoyable. We can testify to the succes of his work.

A word of praise is due to Mr. R. Stewart-Armstrong for his work as accompanist during the concert following the dinner.

# Round the Lancashire Associations.

**Liverpool C.M.U.A.**—Mr. A. C. Bloomer (of Messrs. Joseph Crosfield & Sons, Ltd., Warrington) presided at the thirteenth annual general meeting of the Liverpool Area Committee of the Commercial Motor Users' Association, held at Liverpool last month. Mr. F. Supplies (J. Webster & Co., Ltd.) and Colonel A. Jerrett (Lewis's, Ltd.) were elected to the Committee, to hold office for three years, and the following retiring members of the Committee were re-elected:—Colonel B. Fairclough, J.P. (James Fairclough & Sons, Ltd., Warrington); Messrs. P. McGetrick (McGetrick Bros., Birkenhead); D. E. Watson (Greenall Whitley & Co., Ltd., Warrington); J. T. Mount (Thomas Wilson, Liverpool); W. J. Harper (Wm. Harper & Sons, Ltd., Liverpool); A. Goulding (A. Goulding, Ltd., Wigan); T. Lawrenson (Bootle), and R. Walker (Pure Cane Molasses Co., Ltd., Liverpool). Mr. Wm. Ross, of Bootle, was elected Hon. Auditor for 1931. The accounts for the past year were adopted on the proposition of Mr. A. C. Bloomer, seconded by Mr. J. T. Mount.

**Manchester Transport (Owners') Association.**—Members of the Manchester Transport (Owners') Association have reduced the wages of the drivers by 2/- per week. This led to 200 men employed by seven firms withholding their labour from 21st February, and as they were not amenable to wiser counsels, their places were partly filled from the ranks of unemployed carters. Some of the strikers then saw that the fight was a forlorn hope and returned to work. The business of each firm, said Mr. Howard Robinson, was carried on in a normal way throughout the trouble without any serious inconvenience being felt. The rate for one-horse drivers is now 49/-. Wages are regulated through the Lancashire and Cheshire Joint Road Transport Council. Each man received a statement issued by the Team Owners' Association showing the reasons for the reduction:—"In December, 1922, when the cost of living was 80 points a wage of 53/- for a single horse driver was agreed with a proviso that there should be no further reduction until the cost of living came below 65 points. The figure of 65 points

Digitized by Google

was reached in April, 1927, and as the result of an arrangement that each move in wages should be at the rate of 1/- for each 5 points change in the cost of living, this change was necessitated in June, 1929, when the cost of living fell to 60 points. From August, 1929, the general rate for a one-horse driver in the district was 51/- per week of 48 hours and in the case of certain firms the reduction from 53/- to 51/- was not applied until August, 1930 (12 months after it was due). The cost of living has continued to fall and now in February, 1931, is at 52 points and necessitates a further reduction of 2/-. The Transport & General Workers' Union realises that as increases were given when the cost of living was on the rise so must reductions follow when the cost of living falls. The United Road Transport Workers' Association have been negotiated with by the Employers but they decline to agree to any reduction of wages although every possible means has been exhausted in endeavouring to find a settlement. The reduction of 2/- now to be made is on the basis of a cost of living figure at 55 points and with an increase in the cost of living figure at a later stage, this wage will be automatically increased at the rate of 1/- for each 5 points, so that the reduction may be only of a temporary nature and not permanent. It is, therefore, hoped that the Employees concerned will see that the reduction is one which the Employers must follow because it has been agreed to and made by the large majority of Employers throughout Lancashire and Cheshire. In the present depressed state of trade it is the duty of everyone engaged in the Transport Trade to assist in meeting the difficult circumstances, and just as the Employers have to meet considerable reduction of revenue, so the Workers should loyally take their share, although only small, in the effort to overcome the present difficult conditions. There is no question but that the wages, up or down, must follow the cost of living figure."

**Liverpool Cart and Motor Owners.**—At the first meeting of the Committee, since the annual meeting of the Liverpool Cart and Motor Owners' Association, Mr. Thomas Taylor, of Messrs. John Taylor and Son, was re-elected President; Mr. W. J. Harper (Messrs. William Harper and Sons, Ltd.), Vice-Chairman; and Mr. Frank Jones, Treasurer.

**Manchester Coach Owners.** — Members of the Motor Coach Section of the Manchester Transport (Owners') Association and the C.M.U.A. (Joint Organisation) held a meeting at Manchester on February 26th, to hear from the Secretary, Mr. H. Howard Robinson, an explanation of the provisions of the Road Traffic Act, and a report of an interview he has had with officials of the Ministry of Transport and the Traffic Commissioners for the North-West Area. The final details are now being worked out of the Manchester motor coach owners co-ordination scheme which was successfully launched last year. The object of this is to make more profitable use of vehicles, by pooling resources, eliminating wasted mileage and regulating the activities of booking agents. Owing to the number and extent of motor bus services, privately as well as municipally owned, running in and out of Manchester, there is naturally some apprehension as to how the interests of motor coach owners may be affected, and consequently there is keenness to introduce the most efficient methods.

**Liverpool Short Cart and Motor Owners.** — Several matters of importance to hirers of motor vehicles were discussed at the meeting of the Committee of the Liverpool and District Short Cart and Motor Owners' Association on March 3rd. One particularly knotty point was the subject of third party insurance for sub-contracting work and the insurance of owner-driven vehicles. The changes in transport law have been brought to the notice of members and have given rise to much discussion. Another item on the agenda was wages and working conditions. Conditions in the Liverpool short cart and motor haulage business remain quiet and there is not the same amount of building work in progress as a few months ago, to keep members' vehicles in full employment. Furthermore, the winding up of the Mersey Tunnel contract has also tended to make things quiet.

**Institute of Transport.** — Mr. Thomas Abbott, Past Chairman of the Manchester and Liverpool and District Section of the Institute of Transport, on March 6th gave an address to the Manchester members on the subject of "Canals and Waterways."

# Our Australian Letter.

## Problems of Transport.

THE major problems of transport in Australia divide themselves naturally into three groups. (1) Railways and their ever mounting deficits; (2) the growth of motor transport and its effect upon other forms, necessitating the creation of transport authorities for the purpose of co-ordination, and (3) the entry of private enterprise into fields of transport over which governments formerly held a jealously guarded monopoly.

For many years the seven railway systems of Australia, namely, those of the Commonwealth and the six States, each having their own gauges ranging from 3 ft. 6 ins. to 5 ft. 3 ins. have been a source of grave concern to the Governments which control them. Nor have their worries been lightened by the amazing growth of motor transport that has taken place in Australia in common with other countries of the world. On June 30th, last, there were 670,000 motor vehicles of all descriptions registered in Australia, an average of about one vehicle for every 9 persons, and of this number 119,237 were used for commercial purposes. Four years ago the total registrations numbered 550,000, and the commercial registrations 213,000. Contrast this growth, indicative of the success with which motor transport is meeting, with the fact that during the year ended on June 30th, last, the aggregate losses on the Australian railway systems amounted to £6,383,780 and a fair indication may be obtained of the problem of co-ordination that confronts transport authorities.

Naturally the reports of practically every Railway Commissioner in the Commonwealth complains of the unrestricted competition of motors, made possible by the construction of high class roads all over the country, as one reason for their decreased revenue with consequent losses. Coincident with these complaints, however, came the return to Australia of one of the N.S.W. Railway Commissioners (Mr. Forster), after having inspected the railways of Great Britain, Europe and America, Mr. Forster has commented publicly upon the growth of motor transport in other countries where railway companies were meeting competition by treating the motor as an indispensable aid to their systems by running them as feeders. This, it seems, is the policy for Australian railways to adopt in co-ordinating the conflict between seven great public utilities, the combined value of which amounts to £380,000,000, with an increasingly popular service rendering modern development. Much is hoped in New South Wales from the creation of a Transport Board, but so far it is too early to comment upon the accomplishments of that Board. It has already made some attempt at co-ordinating the conflicting forms of traffic in the city of Sydney, but has so far not tackled any of the broader problems.

### CHARCOAL AS MOTOR FUEL.

### TESTS IN AUSTRALIA.

Last year an investigation was undertaken by the Development and Migration Commission of Australia into the possibilities of using producer gas obtained from charcoal as a motive power for commercial motor vehicles.

The vehicle chosen for the tests was a Guy 2-ton producer gas motor lorry, equipped with the size of engine usually fitted in that type of three ton lorry, and having the compression ratio increased from 4½ to 1 up to 7¼ to 1. The gaseous fuel was obtained from a Tulloch-Reading plant incorporated in the vehicle. A total distance of about 2,800 miles was covered during the tests.

Fuel in the form of charcoal was carried in a hopper situated over the drivers cab, and was fed by gravity to the gas-producer by means of a rotating valve, which regulates the amount of charcoal supplied to the furnace.

A feature of the Tulloch-Reading producer attached to the Guy lorry is the mechanically operated grate which it is claimed prevents clinker formation in the furnace.

The gas, after leaving the producer passes through a cyclone scrubber, where most of the solid matter carried over from the furnace is removed, and the gas then passes through a battery of four tubes, where it is finally purified before passing to the engine.

The tests were operated mostly under metropolitan conditions, where traffic stops and other delays are not conducive to economical operation, under these conditions, however, the charcoal consumption worked out at 2.59 lb. per mile which at £3 per ton represents a cost of .83 pence per mile. Added to the cost of petrol used for starting purposes, the total cost of fuel works out at 1.1 pence per mile. It is estimated that the fuel consumption of a petrol driven vehicle doing similar work would be seven miles per gallon, which at 1s. 9d. per gallon gives a cost of 3d. pence per mile. It is therefore concluded that the fuel cost of the Guy producer gas lorry is approximately one-third that of a petrol lorry of similar capacity. The mileage run, however, has not allowed an opinion to be formed in regard to depreciation and maintenance costs, but indications are that these will not be excessive

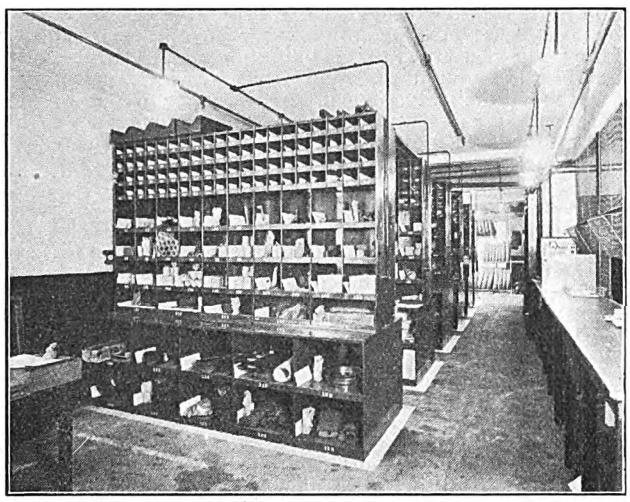
# An Up-to-date Service Station.

## Dagenham Motors West End Establishment.

Dagenham Motors, Ltd., Wholesale Distributors for Ford vehicles in the County of London have their headquarters and service station in Balderton Street, immediately opposite Selfridges, Oxford Street, W. The aim of the Company is to establish a really first class distribution and service station and our representative, who recently visited the



A BAY IN THE STORES DEPARTMENT.

premises, concluded that not only had they achieved their object, but were considerably ahead of the majority of service stations of this description.

The firm was formed to handle Ford cars and Ford commercial vehicles as from 1st January, and they have already appointed sub-dealers, retail sub-dealers, and limited dealers whose operations are gradually covering the County of London. We understand they are still open to make further appointments within the territory allotted to them by the Ford Motor Co.

Although Dagenham Motors do not handle retail sales, they make a point of backing up the retail dealer with a magnificently organised day and night service provided in their Balderton Street premises in the heart of the West End of London.

With regard to the connection between Dagenham's as wholesale distributors and the retail agent: we understand the agent may bring his customer to the Dagenham showrooms in which there are on view 40 or 50 Ford pleasure cars and commercial vehicles, the would-be purchaser can see these vehicles to their best advantage and make a selection from the range on view. After deciding on the vehicle he requires, the customer is taken to the ground floor where a full range of demonstration cars and commercial vehicles is at all times ready for trial runs. The customer may take a trial run if he so desires and he can also obtain an immediate delivery from the showrooms above referred to. It is in this way the company is able to assist the retail trader.

To our readers, no doubt, the service arrangements are of the greatest interest. Before describing each service it is well to understand that each service is available day and night so that the user does not have to stop aside for a day for the purpose.

There are four different services as follows:—

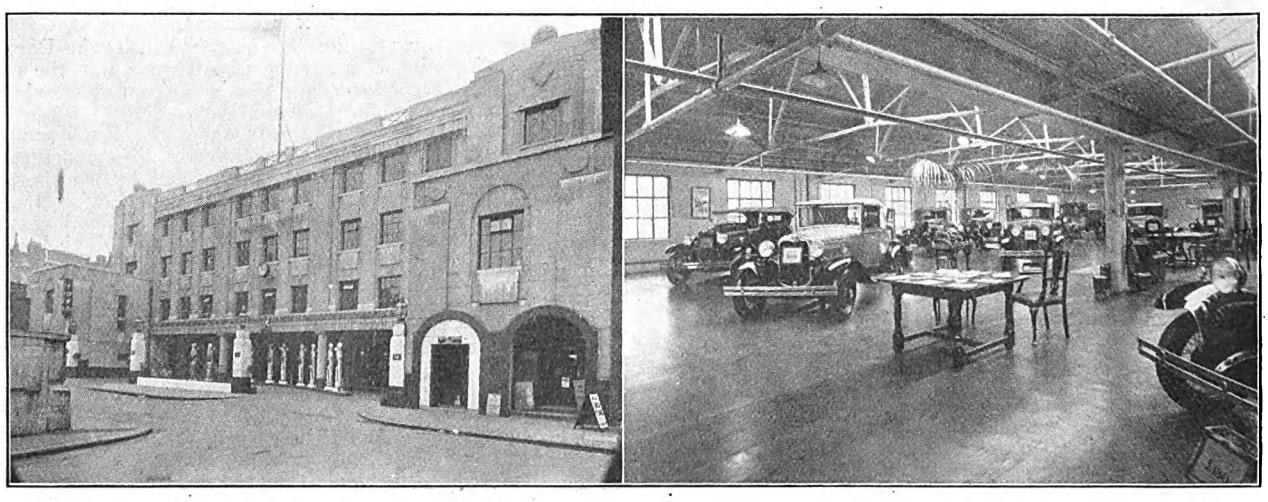
*Service (A).* Oiling and greasing all points of chassis and clutch withdrawal bearing—checking over lubricant levels of engine, gear box and rear axle—topping up battery, including lubricant and distilled water. Cost 3s. 6d.

*Service (B).* Washing and polishing car. Oiling and greasing all points of chassis and clutch withdrawal bearing—checking over lubricant levels of engine, gear box and rear axle—topping up battery, including lubricant and distilled water. Cost 8s. 6d.

*Service (C).* Oiling and greasing all points of chassis and clutch withdrawal bearing—changing gear box and differential lubricant. Removing front wheels, washing out, repacking and refitting. Topping up battery. All above operations include lubricant and distilled water. Cost 10s.

*Full Service.* Oil and grease all round, change engine oil—if necessary. Check oil in gear box and rear axle. Check battery—gravity and connections. Clean generator commutator and check charging rate. Check distributor breaker points and gap. Clean sparking plugs and adjust gap. Check all lights. Clean horn commutator, oil and adjust tone. Examine shock absorbers for glycerine and check adjustment. Check clutch pedal adjustment. Check tyre inflation pressures. Check steering, reporting on condition. Track up wheels. Remove carburetter and blow out jets only. Tighten body bolts. Tighten cylinder head nuts. Adjust and equalise brakes. Cost 15s.

In the case of fleets of vehicles the firm will enter into a contract for monthly services at more favourable rates than those quoted above.



THE DAGENHAM FORD SERVICE STATION—EXTERIOR AND INTERIOR VIEWS.

Our photographs show exterior and interior views of the Dagenham premises. The front view shows that there is a battery of ten petrol pumps, and at the side of the building (not shown) there is one of the most modern oil and greasing stations in England. At the top of the building there is the battery charging plant.

**Warrington Horse Parade.**—Warrington Horse Parade Committee intends to hold another show this year. At the annual meeting, Councillor Fairclough was re-elected chairman; Miss Parker, secretary; Captain Dunbar, assistant secretary; and Mr. J. Muskett, treasurer.

**Poster Art.**—The L.N.E.R. Ninth Annual Exhibition of Poster Art is now being held in the New Burlington Galleries, Burlington Gardens, W.1, and remains open until March 21st. One hundred subjects are included in the Exhibition.

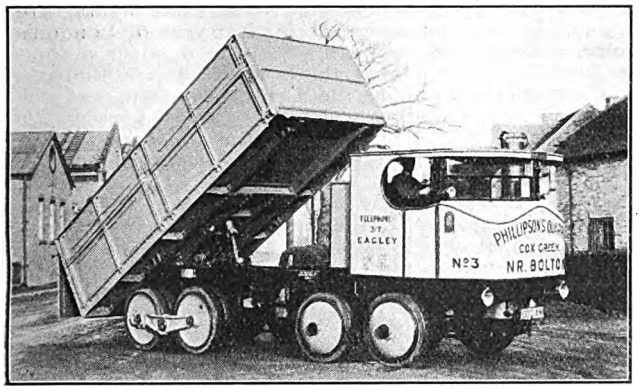
# News from all Parts.

**Warwickshire Transport Statistics.**—In his annual report, the County Surveyor of Warwickshire mentions that the quantity of material hauled by piecework from the various stations and wharves was 72,083 tons at a cost of £10,203 19s. 8d., or an average of 2s. 10d. per ton delivered to the roads where required, as compared with 2s. 8½d. per ton for the previous year. The cost of working the Council's ten steam wagons for the year was £6,063 5s. 5d., or an average cost of £2 13s. 10d. per working day. This includes the wages of drivers, two loaders, fuel, oil and repairs, but no amount for depreciation, interest on capital, etc. The tonnage of material hauled during the year was 54,539. This is a decrease on the previous year of nearly 6,000 tons, but as one of the wagons was worn out, and sold early in the year, the average tonnage hauled per vehicle was only slightly less. The haulage cost of material delivered on to the roads was 2s. 2½d. per ton, which is the same figure as in the previous year. The average cost per working day of petrol lorries was £1 2s. 2d., compared with £1 3s. 5d. for the previous year. These figures do not include any amount for depreciation, interest on capital, etc.



A "SENTINEL" D.G.8 RIGID EIGHT WHEELER FITTED WITH LARGE CAPACITY 3-WAY TIPPING BODY SUPPLIED RECENTLY TO A WELL-KNOWN LANCASHIRE FIRM OF QUARRY OWNERS.

**A "Sentinel" D.G.8 Rigid Eight-Wheeler for Quarry Transport.**—The "Sentinel" D.G.8 rigid eight wheeled wagon illustrated, was delivered recently by the "Sentinel" Waggon Works, Ltd., of Shrewsbury, to Phillipson's Quarries, of Cox Green, near Bolton. It is fitted with large capacity 3-way tipping body.

**Foreign Visitors to the United Kingdom.**—The Travel Association of Great Britain and Ireland states that the official return issued by the Home Office showing the numbers of foreigners landing at United Kingdom ports during 1930, reveal facts of great importance. The influence of world trade depression is shown by the fact that foreign visitors arriving on "business" declined by 5,063. On the other hand it is encouraging to note that foreign visitors classified at the ports as "tourists and visitors on holiday" increased during the year by 7,474. This, it is now generally recognised, may be ascribed to the activity of the Travel Association and its members in making known to the world the attractions of Great Britain as a holiday resort. The address of the Travel Association of Great Britain and Ireland is Kinnaird House, 1, Pall Mall East, London, S.W.1.

**Goodyear Staff Changes.**—Mr. W. H. O. Steer, Manager of the Southern Division of The Goodyear Tyre & Rubber Co. (Great Britain), Ltd., has now left the Company. Mr. S. Oxon, Manager of the Northern Division, has now been appointed Southern Divisional Manager. Mr. S. Kershaw, Manager of the Western Division, has been appointed Manager of the Northern Division. Mr. N. Marsden, former General Line Salesman on the Warwickshire and Worcestershire territory, has been promoted to Branch Manager of the Western Division, with headquarters at 358,360, Bellbarn Road, Birmingham.

**Institute of Transport. Metropolitan Graduate and Student Society.**—Mr. A. G. Course (Associate Member) has been elected Chairman and Mr. J. L. Harrington (Graduate) Vice-Chairman of the Metropolitan Graduate and Student Society of the Institute of Transport for the remainder of the Session, vice Messrs. A. F. E. Belcher and A. Earle Edwards, respectively, who have left London following promotion in the undertakings in which they are engaged.

**Institute of Transport. Forthcoming Meetings.**—There will be an ordinary meeting of the Institute of Transport on April 13th next at 5.30 p.m. at the Institution of Electrical Engineers, London, at which a debate on the Final Report of the Royal Commission on Transport will take place. At the same place on April 21st at 6 p.m. Mr. R. Bell, C.B.E., (a Vice-President) will give a lecture for Graduates and Students on "Transport Developments in 1930." Mr. H. Howard Robinson (Associate Member) will address the Manchester-Liverpool and District Section at the Victoria Hotel, Manchester, on March 25th, at 6.45 p.m. and will take for his subject "Problems of Road Passenger Transport under Modern Conditions."

**Army & Navy Co-operative Society, Ltd. Removals and Warehousing Department.**—We are informed that Mr. J. Davidson, late of the Removals Department of John Walsh, Ltd., of Sheffield, and Mr. A. S. Knowles, of Waring & Gillow, Ltd., Manchester, have joined the Removals and Warehousing Staff of the Army & Navy Co-operative Society, Ltd., Westminster, London, S.W.1.

**The Noise of London's Traffic. 32 Vibrations a Second.**—A New York message says that the noise of London traffic produces a note almost as deep as that of Niagara Falls, according to Dr. William Braidwhite, the American acoustics expert. He has just recorded the note of Niagara on his sound camera and he estimates that it has 30 vibrations per second. Hitherto, the deepest note he had measured was the roar of London traffic with 32 vibrations per second.

**Motor Cars Kill 86 Persons a Day in United States.**—Eighty-six persons are killed in motor car accidents in the United States every day and 2,739 more are injured, according to the American Research Foundation, says Reuter's New York correspondent. "Every sixteen minutes the year round a person is killed in an automobile crash somewhere in America," the Foundation bulletin says. "Every hour of the day and night an average of 114 people receive injuries of a major or minor character from this cause. With about 25 automobile fatalities per 100,000 population, the United States is far ahead of the other countries of the world. Australia, with a record of 12.1 automobile deaths per 100,000 population, holds second place; New Zealand with an average of 9.2 is third, and Canada with 9.1 per 100,000 is fourth."

**Jubilee of Service.**—Mr. R. J. English, J.P., of Beamish, will early in April complete 50 years as Traffic Manager to the Lambton, Hetton, and Joicey Collieries, Ltd.'s Stanley Nos. 1 and 2 and Air Pits.

**Super Suspension.**—We are informed by Super Suspension, Ltd., the suspension specialists of 20/26, Lonsdale Road, London, N.W.6, that their Director, Mr. W. D. Cavendish, who recently took over the sales for Commercial Vehicles in the United Kingdom, is forming a new sales company to handle the entire sales. In the meantime, all sales orders are being dealt with by Mr. Cavendish from new offices located at 25, Victoria Street, Westminster, London, S.W.1. Telephone number Victoria 4422/4423.

**The G.P.O. and Reflex Discs**—As a result of a number of accidents, the attention of The Automobile Association was recently drawn to a dangerous double bend on the road between Floore and Weedon, where both sides of the road are flanked by steep banks. With the approval of the Postmaster-General, the Association has recently erected nine Reflex Discs on telegraph poles at the corner to assist motorists driving at night, and when weather conditions create poor visibility. These A.A. Reflex Discs were introduced last year to supplement A.A. Safety Posts, and over a thousand have been erected in many parts of the country.

**Fraser & Fraser, Ltd.**—We regret to record the death of Mr. Henry Whyte, Managing Director of Messrs. Fraser & Fraser, Ltd., Bromley-by-Row, E.3, who passed away during January. We are informed that Mr. C. J. Bennett, who has been Secretary for the Company for many years, has been appointed as Managing Director of the Company in succession to Mr. Whyte and will continue also to be the Secretary. Messrs. Fraser & Fraser

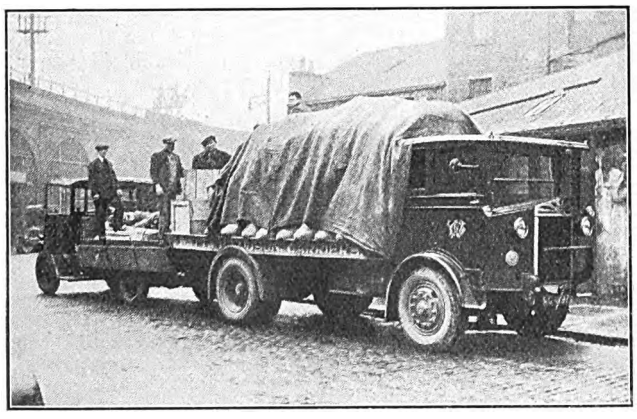
Digitized by Google

are specialists in boiler repairs and also undertake welding work by either the oxy-acetylene or electric processes.

**Motor Transport in Middlesex.**—The 1930 report of the Middlesex County Council states that some indication of the rapid increase of motor transport in the County may be gathered from the fact that at the 31st March, 1922, shortly after the operation of the Roads Act, 1920, there were only 25,000 vehicles of all classes kept in the County, whereas at the 31st March, 1930, this figure had increased to 120,000—an increase of 95,000 in a period of eight years. The County Council still continues to licence and register all mechanically propelled vehicles kept and used by the Admiralty, War Office, Air Ministry, and Ministry of Labour, notwithstanding the fact that the vehicles may be kept and used in other counties. No duty is chargeable in respect of vehicles the property of the Crown.

35/55 H.P. 4-TON ALBION OVERTYPE VAN BELONGING TO MESSRS. CARTER, PATERSON & CO., LTD., LONDON.

**Recent "Albion" Deliveries.** — We illustrate a 4-ton overtype van in the service of Carter, Paterson & Co., Ltd., the well-known carriers who run a considerable number of "Albion" vehicles. This "Albion" 4-ton overtype is very useful for operating in narrow streets where the small turning circle is a valuable feature. Our other photograph shows a 35-55 h.p. 4-ton "Albion" overtype lorry supplied by the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, to Messrs. Watt & Davidson, a firm of Aberdeen carriers who run a daily service between Aberdeen and Glasgow. The machine does the return journey once in every twenty-four hours, three drivers working in shifts.



35/55 H.P. 4-TON ALBION LORRY BELONGING TO MESSRS. WATT & DAVIDSON, CARRIERS, ABERDEEN.

**A Modern Map.**—The tenth and final sheet of the new R.A.C. touring map of England and Wales has now been published for the Club by Messrs. George Philip and Son. All Ministry of Transport roads under the headings of A and B roads are marked with their official numbers, the former being shown in red and the latter in green. R.A.C. main through routes are indicated by broader red and green lines. A large number of roads outside the Ministry of Transport classification, but suitable for motoring, have been inserted for the use of motorists who prefer the by-ways to the highways. Distances between all road junctions are given in red, dangerous hills and level crossings being also clearly indicated. All railways and railway stations are marked. The scale is approximately three miles to the inch, which whilst sufficiently large to give all the detail that the ordinary motorist requires, does not render the map in any way ungainly or difficult to use on long journeys. The price of each sheet is 3s. 6d., and single sheets or the complete map are obtainable from the Secretary, R.A.C. Touring Department, Pall Mall, S.W.1.

**Change of Address.**—Van Oppen & Co., Ltd., the well-known international transport, shipping, insurance and freight brokers, have removed their Manchester office to more commodious premises at 68, Major Street, Manchester, and the firm will be in a position to offer excellent storage accommodation for ordinary merchandise and packing at competitive rates, and their organisation is at the disposal of their friends for the transport of goods, and passengers, to and from all parts of the world, also for packing, insurance, and in fact, anything incidental to transport.

**League of Nations. Advisory and Technical Committee for Communications and Transit** — The Report issued from Geneva on the Seventh Session of the Advisory and Technical Committee for Communications and Transit, League of Nations, held at The Hague at the end of May last shows that many questions were examined. Taxation of Motor Vehicles and Road Signalling were considered, and on the subject of the establishment of First-Aid Stations on Roads the Committee thinks it expedient to follow up the development of first-aid stations on roads, a question of great importance owing to the considerable increase in road traffic.

**London's Underground.**—Some remarkable figures are contained in the annual returns for last year of London's electric underground railways. Associated under a common fund, the Metropolitan, the London Electric Railway, the City and S. London, the Central London, and the London General Omnibus Companies carried 1,959,894,236 passengers 264,012,694 miles. This was an increase over the previous year of over 116,000,000 passengers and over 11,000,000 miles.

**Lift Jacks Wanted.**—At the Fire Brigade Committee of the Coulsdon U.D.C., the Chief Officer referred to a serious accident which occurred at Sanderstead Village when a woman was pinned underneath a motor coach, and reported upon the difficulties experienced in releasing the person from under the vehicle and suggested that a quick double lift jack be purchased at a cost of approximately £7, to form part of the equipment of the ambulance. The Committee recommended instructing the Chief Officer to obtain full particulars regarding the type of jack reported upon, also of any suitable hydraulic jacks.

**Regulation of Traffic at Tram Stops.**—At the Transport Committee of the Manchester Corporation, a report was presented by the General Manager on the question of a bye-law for the protection of tramway passengers when boarding and alighting from tramcars at stopping places, and it was decided that the Parliamentary Committee be requested to make formal application under the powers of the Road Traffic Act, 1930, Section 46, to the Ministry of Transport for an order for the regulation of traffic at tramway stopping places in the city.

## MERSEYSIDE.

**Livestock Transport.**—Concerning the Transit of Animals (Amendment) Order, 1930, Messrs. H. Rigby and Co. (Liverpool), Ltd., who operate a fleet of vehicles engaged in the transport of livestock, wrote to the Commercial Motor Users' Association (Liverpool Area) to inquire whether it is obligatory on carriers using double decked vehicles, to have ramps fitted to the top decks. Mr. C. Dudley Whitnall, the secretary, has replied that the Ministry of Agriculture and Fisheries points out that under the Order, "it will be necessary for each deck of every motor vehicle used in the conveyance of animals to be provided with facilities for the loading and unloading of the animals, as specified in article 5 of the Order."

**Liverpool Rail Cartage Rates.**—Cartage rates for heavy articles transported by railway companies have been modified in certain details. L.M.S., L.N.E.R., C.L.C., and G.W.R. have withdrawn the additions to the ordinary cartage charges, which hitherto have been made for articles weighing between five and ten tons, and for articles above ten tons they have reduced the charges to the figures shown below for cartage between the railway stations and the docks or town premises at Liverpool and Birkenhead Cartage charges for heavy articles (exclusive of loading or unloading at sender's or consignee's premises) are:—above ten tons but under 15 tons, 4s. 6d. per ton; above 15 tons but under 20 tons, 6s. 6d. In the case of transformers over 6 ft. 6 in. in height and

Digitized by Google

exceeding five tons but not over ten tons the rate is 5s. per ton; above ten tons and under 15 tons, 6s.; 15-20 tons, 7s. 6d. Where the consignments (except transformers) are carried at "Free alongside Ship" rates or rates ordinarily including collection or delivery, no charge for cartage will be made on articles up to 10 tons in weight. Where the conveyance rates do not include collection or delivery, the ordinary cartage charges apply on pieces weighing ten tons and under.

**Liverpool Horse Parade.**—In connection with the forthcoming Liverpool May Parade of Horses, the Corporation health authority has decided to allow one day's additional wages to carters, stablemen and mechanics whose conduct has been satisfactory. Usually the health authority enters close on 100 horses in the May Parade. The Lord Mayor of Liverpool, who presided at the February meeting of the Committee, said that some people wondered why in these days of motors, Liverpool should continue to have a parade of horses. The fact that horses on the streets were becoming fewer was all the more reason why the May processioin should continue to be held. The procession made horse owners take a real pride in their animals and to that extent it was good for the horses. This year certain features of the May parade will be amalgamated with the Royal Lancashire Agricultural Show at Wavertree Playground. The date of the street procession is Saturday, May 30th. Officers appointed: President, Ald. Muirhead; vice-president, Councillor J. R. Hall; hon. treasurer, Councillor W. T. Roberts; hon. auditor, Mr. G. Bowler; hon. secretary, Mr. T. Eaton Jones; chief steward, Mr. R. B. Neilson.

**Re-elected.**—Mr. P. M'Getrick, cartage and haulage contractor of Birkenhead, has been re-elected a director of the Birkenhead Chamber of Commerce.

## MANCHESTER.

**A New Facility.**—The posting of letters in receptacles provided on late buses serving thinly populated districts where there are infrequent postal collections, is likely to prove a much appreciated convenience. On the Bolton to Warrington bus service this facility is now provided. This bus, which leaves Bolton at 8 p.m., carries a box into which are deposited letters collected en route and this is cleared by the postman at the Warrington end. Immediately on the arrival of the bus, the letters can thus be cleared by the night mail.

**Lorries Take Traffic from Canals.**—Speaking at the annual meeting of the Rochdale Canal Company, Mr. Amos Mitchell, the chairman, said the proximity of the undertaking to the large transport centres renders it particularly susceptible to competition from road transport, and this, together with the depression in trade, continued to affect adversely the earnings of the company.

**Big Motor Bus Orders.**—It was announced at the annual meeting of Crossley Motors, Ltd., held in Manchester on February 26th, that orders amounting to nearly £250,000 had been obtained by the motor bus department. Sir Kenneth I. Crossley, Bart., said particular attention had been given to the development of a Diesel engine for passenger and goods transport. The Crossley Diesel had now reached an advanced stage and would shortly be marketed. A new type of six cylinder double deck bus had been introduced for which a large number of orders had been received.

## NORTH-EAST COAST.

**Inter-Travel Facilities.**—Over 151,500 passengers had taken advantage up to January of the facilities for inter-available travel by train and bus introduced in the North-East area by the L.N.E.R. and its associated bus companies. These figures are considered by the L.N.E.R. to be satisfactory in view of the depressed state of trade, and more important developments will probably take place when stable conditions return.

**Traffic Controls for Gateshead.**—Automatic traffic signals are being installed at six busy crossings in Gateshead. These are being manufactured by Messrs. J. H. Holmes & Co., Ltd., of Hebburn-on-Tyne, and a grant of 60 per cent. has been made by the Ministry of Transport towards the expenditure of between £800 and £900.

**New Showrooms.**—New motor showrooms have been opened in Newcastle by Messrs. R. H. Patterson & Co., Ltd., the Ford dealers, at St. Nicholas's Buildings; and at the Motordrome (Northumberland Street and Haymarket) by its new proprietors, Auto Garages (Northern). Ltd. The staff of the latter held an enjoyable dance in the Grand Assembly Rooms.

**Depot Staffs' Social.**—The Northern General Transport Co.'s Sports Club held a whist drive and dance at Gateshead recently, which was attended by Mr. H. H. Stagg, resident director, Mr. R. H. Maxwell, assistant manager, Major Hayter, chief engineer, Mr. James, assistant engineer, and Mr. E. C. Sears, chief traffic superintendent. Mrs. Stagg presented the prizes. The M.C.'s for the dance were Messrs. G. Miles and H. Watson, and for whist Messrs. R. Madden and J. Pattinson.

**Almost Noiseless Tramcar.**—What is claimed to be the country's most luxurious double-deck tram car, possessing many unique features, has been put into commission at South Shields. Designed by Mr. James Austin Baker (manager of the Corporation Tramways) and constructed locally, the new car has the speed of a motor bus in street traffic; luxurious fittings, with electric heaters under the seats; special provision for noise elimination, improved ventilation, and devices indicating to motorists when the car is stationary or slowing down. The interior framing is of mahogany and English oak panelling and illumination is provided by 26 60-watt lamps. The seats are of rattan cane, fitted with special springs. Instead of the usual gong an electric horn is provided; and gutters allow rain water to pass down the sides of the car through lead pipes.

**Newcastle Invention.**—A Novocastrian, Mr. George Wilson, has, it is reported, brought to perfection an invention that prevents motor vehicles from running backwards downhill, regardless whether the brakes are used or not. It is claimed that no matter how steep a gradient may be, a car fitted with this device, a form of sprag, cannot possibly move backwards unless first placed in reverse gear. The sprag, which can be fitted easily and compactly to the transmission of any make of car, consists of a wheel equipped with a number of pawls, which is fitted to the carden shaft of the transmission and revolves inside a fixed sprag wheel. The stopping action is obtained by the pawls engaging in the teeth of the sprag wheel. The device is silent, and only when the speed drops to three miles an hour can a faint whirring sound be heard.

## HULL.

**Tender Accepted.**—Hull Tramways Committee have accepted the tender of Messrs. Mayor & Co., Hull, for No. 1 petrol at 1s. net per gallon delivered to the various bus depots in 40/50 gallon drums and 2 gallon cans. The contract is for six months with the option of extending it to twelve months.

**Humber Bridge Bill.**—Final preparations are now being made for the Parliamentary fight on this Bill. The opposition of the Humber Conservancy Board, the Aire and Calder Navigation and other important bodies has not abated in the least. Under-rated at first its seriousness is now fully realised by the promoters of whom the Hull Corporation are the chief, with the result that they have briefed a more prominent leader of the Parliamentary bar as their chief counsel and have retained an additional number of witnesses. The hearing is expected to extend over three weeks. Altogether twenty-two petitions have been deposited against the Bill. The Ministry of Transport asked the Humber Conservancy Board to submit clauses which would be acceptable to them and were informed, in reply, that their opposition was against the Bill as a whole and that no clauses would satisfy them.

## NORTHERN IRELAND.

**Traffic Manager of G.N.R. (Ireland).**—Mr. J. Lockhart has taken up the appointment of Traffic Manager of the Great Northern Railway (Ireland) in succession to Mr. W. J. Bailie, retired. Mr. Lockhart, who is a native of Dumfries-shire, entered the service of the Caledonian Railway in 1896, and in 1909 joined the service of the Pekin-Mukden Railway, transferring, after nine years, to the Ministry of Communications, as Chief Accountant, and later Manager, of the railway clearing house. He was Secretary to the Chinese traffic and accounts conferences, and a delegate representing the Chinese railways at conferences on international traffic held in the Far East. When the Peking Government collapsed in 1928, Mr. Lockhart went to Nanking as adviser to the through traffic administration of the Ministry of Communications of the new Government, and when a Ministry of Railways was established he was transferred to the department. Then he took charge of the traffic division of the Ministry. He organised a bureau of Chinese railway statistics, and was appointed adviser to the Ministry of Railways, the post he held when he accepted his new post in Ireland.

**Railway Receipts Down.**—The year 1930 was one of the worst in the history of the Great Northern Railway (Ireland) according to the reports at the annual meeting. Gross receipts were down by £86,734, and passenger traffic by £32,205, the number of passengers being

Digitized by Google

307,000 less than in 1930. Merchandise was down by £39,830, and the tonnage by 42,400 tons. The deficit on the bus services was £13,000, but the motor lorry service revenue more than covered the working cost. Salaries and wages made up more than two-thirds of the total expenditure, and were 2½ times more than in 1913. There must, said the Chairman (Sir George Clark, Bart., D.L.) be some relief from that burden. In spite of the reports he refused to be despondent. Private motor cars, he added, were an even greater factor in diverting traffic from the railways than bus transport.

**Belfast and County Down Railway.** — Mr. Thomas Richardson, Chairman of the Belfast and County Down Railway Company, in pre-war days one of the best paying concerns of the kind in these islands, was pessimistic in his speech at the annual meeting. There was little hope for recovery in the position of the railway in 1931. Receipts already showed a marked decline, and they must be prepared for a similar and perhaps a more marked falling-off. The gross receipts, £236,692, were £627 less than in the previous year. Passenger traffic showed an increase in number and receipts over 1929, but goods traffic was down by £6,000. Mr. Richardson suggested that the Northern Ireland Government should take steps to restrict the conveyance by road of very heavy traffic for distances of over, say, ten miles, where there was an alternative route by rail.

**IRISH FREE STATE.**

**Dublin Tramways Company's Services.**—From the report of the Dublin United Tramways Co., Ltd., for the year 1930, it appeared that the total number of passengers carried last year was 88,959,247, a number which showed an increase of 10,423,628 over 1929, but then during 1929 there was a strike period during which the service was suspended for 36 days. The total receipts from passenger traffic in 1930 were £518,722, as compared with £462,105 in 1929. In the omnibus section the gross receipts for last year were £138,424, and the working expenses were £145,683, showing a deficit of £7,259. The receipts from omnibus services in 1929 were £127,226, and the expenses, £130,095, giving a deficit of £2,869.

**Imports of Motor Vehicles into the Irish Free State During 1930.**—From the trade returns of the Irish Free State for the year 1930, it appeared that the number of commercial motor vehicles imported into the Free State last year was 1,285, valued at £210,632, as compared with 1,088 vehicles valued at £186,102, in 1929, and motor tractor parts were imported to the value of £796,372 as against £794,852 in 1929. Touring motor cars to the extent of 7,569, and to the value of £1,055,852 were imported during 1930, as compared with 7,627 of the value of £1,174,142 in 1929. The export of tractors from the Free State showed a substantial increase during 1930, the value of the tractors exported last year being £1,682,897, as against £919,151 during 1929. The export trade of the Free State in tractor parts also showed an increase last year the value of the exports being £903,742, as compared with £888,126 during 1929. The tractor industry of the Free State in this way showed an export trade amounting in value to over £2,580,000 for the year ended 31st December, 1930.

## Answers to Inquiries.

Storage of Petrol and Name on Vehicles.

**Questions:**—Can you tell me please how much petrol can be kept in a shop for use in connection with a delivery vehicle without obtaining a licence or special permission? Where can I obtain a copy of the Regulations or Act of Parliament governing the question? Is there a law stipulating that the Secretary's name, in the case of a Limited Company must be shown, on all that Company's vehicles.

**Answers:**—We attach a copy of an editorial note appearing in The World's Carriers, July 15th, 1930, which gives you all the information you require concerning the storage of petrol under the conditions you mention. If you require a copy of Statutory Rules and Orders, 1929, No. 952, it can be obtained from H.M. Stationery Office or through any bookseller. As to the Secretary's name being painted on motor vehicles, this was required by Section 76 of the Highways Act, 1835, which has been repealed by the Road Traffic Act, 1930. The new Regulations, The Motor Vehicles (Construction and Use) Regulations, 1931, dated January 10th, contain no such regulation. As the new regulations are making their appearance almost daily, the requirement may be included in one of them at a later date, but at the moment there is no necessity to have the owner's or secretary's name and address on the vehicle.

Door Hinges.

**Question:**—Will you be good enough to give us the name and address of the makers of "Monarch" Door Hinges used in connection with the Ramp on Motor Horse Boxes?

**Answer:**—The Monarch Door Controller Co., 7, Victoria Street, London, S.W.1.

Conversion from Solids to Pneumatics.

**Question:**—Can you supply us with details of a unit for converting a steel tyred horse-drawn furniture van to pneumatic tyred wheels.

**Answer:**—We recommend you to write to Messrs. R. A. Dyson & Co., Ltd., who have brought out a special conversion arrangement for using pneumatic tyres on vehicles in place of solids.

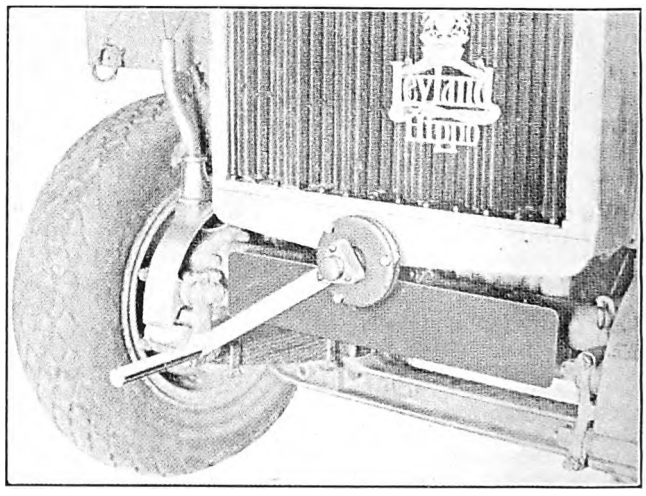
First-aid Outfits.

**Question:**—We believe that according to Regulations issued by the Ministry of Transport a first-aid outfit will have to be carried on every express carriage, and I am anxious to get a sample outfit to submit to the Commissioners in this area for approval. I am anxious to get in touch with a firm who can supply a sample?

**Answer:**—We send you some catalogues which cover a number of such first-aid outfits you mention, but we think it would be as well to wait until the regulations are issued before making any definite move, as such regulations may specify clearly the kind of outfit required. The regulations are still under consideration by the Ministry of Transport, and at present no indication has been given when they are likely to be put into operation.

## The Hepworth Safety Starting Handle.

The back fire danger, when starting a motor engine with the ordinary starter handle, is well-known to all motorists and therefore a safety device which does in fact eliminate all danger from the operation, is something which will no doubt be welcomed by all motorists as indeed it should be. A very important point in the design of this starter safety device, is its simplicity. The description is as follows:—The usual starter shaft bearing bracket is formed with a housing, either attached or integral, to hold the mechanism. Fixed to the starter shaft is a quick pitched thread disc in mesh with a nut. The nut is allowed to revolve clockwise



THE HEPWORTH SAFETY STARTER ON LEYLAND LORRY.

(the appropriate direction for starting), but not anticlockwise. Therefore, in the event of a "back fire" or anticlockwise movement of the crankshaft, the starter shaft is driven in that direction also, but, seeing that the nut is now locked, the shaft is spiralled out of mesh with the crankshaft dogs. The starting handle moves through an arc of about 5 deg. but this is not felt by the operator. Its application to mechanical starters, obviates shearing the driving pins in the event of a backfire. The illustration shows the device fitted to a Leyland "Hippo." We understand that Leyland Motors, Ltd., have decided to fit the device as standard very shortly. The inventor is Mr. N. J. Hepworth, and the manufacturers Messrs. T. S. Harrison & Sons, Ltd., Heckmondwike, Yorks.

# More Traffic Rules for London.

In February, 1930, the Minister, following the receipt of a report from the London and Home Counties Traffic Advisory Committee, made the London Traffic (Waiting, Loading and Unloading of Vehicles) Regulations, 1930, which apply in three small areas comprising Piccadilly Circus, Marble Arch and St. Giles' Circus and short lengths of the thoroughfares leading into these areas.

The Committee have reviewed these Regulations in the light of the experience gained during the past year and have advised the Minister that further steps should be taken to reduce the inconvenience caused to traffic by vehicles waiting for the purpose of loading and unloading or for picking up or setting down persons. After considering the Committee's recommendations the Minister has now given notice of his intention to make fresh Regulations under Section 10 of the London Traffic Act, 1924 (superseding those referred to above). The proposed Regulations provide, as regards the streets named in a First Schedule thereto, that between the hours of 12 noon and 7 p.m. on Mondays to Fridays and between 12 noon and 3 p.m. on Saturdays:—

(i) vehicles may not wait in any scheduled street for a longer time than is necessary for persons to board or alight therefrom;

(ii) loading or unloading of vehicles shall not be done in a scheduled street, where it can be undertaken in a neighbouring street;

(iii) vehicles shall not stand for a longer period than 15 minutes where the loading or unloading must be performed in the scheduled street.

The foregoing restrictions would also apply to the streets named in the Second Schedule to the Draft Regulations except that there would be no time limit upon vehicles loading or unloading in a scheduled street.

No vehicle will be permitted to wait for any other purpose than loading or unloading, e.g., waiting whilst the driver is taking refreshment, canvassing for orders, etc., will be prohibited.

A specific exception is made in the Regulations in respect of vehicles employed on building operations and exceptions are also provided in favour of vehicles in use in connection with the removal of obstruction to traffic or urgent repairs to pipes, mains or underground conveniences.

The First Schedule to the Regulations comprises the streets and parts of streets converging upon the following areas:—(i) Piccadilly Circus; (ii) Hammersmith Broadway; (iii) Seven Sisters Road near its junction with Holloway Road; (iv) Finsbury Park Station; (v) Junction of Walworth Road with Hampton Street and Deacon Street; (vi) Junction of Pentonville Road and St. John Street; (vii) Westminster Bridge Road (between Belvedere Road and Oakley Street); (viii) Brixton Road (between Acre Lane and Stockwell Road).

[**Note.**—The areas at Marble Arch and St. Giles' Circus covered by the existing Regulations will be provided for under the Regulations proposed to be made in connection with the traffic signalling scheme in Oxford Street referred to in another part of this issue].

The undermentioned streets or parts of streets comprise the Second Schedule:—

Kensington High Street, between Kensington Gardens and Hornton Street; Charing Cross Road, between Denmark Street and St. Martin's Lane; Shaftesbury Avenue, between Great Windmill Street and New Oxford Street; Regent Street, between Princes Street and Air Street and between Great Castle Street and Langham Place; Mortimer Street; Strand; Piccadilly, between Air Street and Stratton Street; Wigmore Street; Great Portland Street, between Market Place and Euston Road; New Bond Street, between Blenheim Street and Old Bond Street; Old Bond Street; Theobalds Road; High Street, Notting Hill, between Johnson Street and The Mall.

Any person acting in contravention of any of the provisions of the Regulations will be liable on summary conviction, in the case of a first offence to a fine not exceeding £5, or in the case of a second or subsequent offence to a fine not exceeding £10.

Copies of the Draft Regulations are obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, either directly or through any bookseller at a cost of 2d. per copy.

Any person who desires to make representations in regard to the Draft Regulations should make them in writing to the Secretary, Ministry of Transport, 7, Whitehall Gardens, London, S.W.1, not later than April, 1931.

# Machinery as Hard Cash.

## A Morris Engineer on Plant Depreciation.

An interesting paper on the subject of plant depreciation and replacement problems was recently read by Mr. F. G. Woollard, General Manager of the Engines Branch of Morris Motors, Ltd., before the Institution of Automobile Engineers.

Mr. Woollard is of opinion that failure to appreciate the importance of plant depreciation as a factor in production cost has been at the back of many troubles which beset automobile and other engineering firms in this country. He reminds us that in the early days of motoring, many motor car manufacturers began well, paying thirty or forty per cent. for a brief period of years, and then collapsed utterly, simply because their balance sheet depreciation figures for their plant were all wrong.

Generally speaking, the amount of depreciation is much larger than is usually recognised, for the simple reason that the figures involved spread over a number of years. It is suggested that current balance sheet methods of estimating the value of plant suffer from the following three evils:—

(a) Too rapid depreciation in early life.

(b) Too slow depreciation in later life.

(c) An unduly high anticipated value when the time comes to dispose of the asset.

Things move very rapidly in the machinery world of to-day and, moreover, plant has to be worked to the utmost capacity of its production. The up-to-date manufacturer must buy new stock at much shorter intervals than formerly, knowing that it will become all but valueless when it has to be sold in a few year's time.

The suggested remedy is a costing charge upon every article produced in the Works to form a replacement fund. In the case of motor cars, for instance, it is suggested that this charge might be £5.

This question of plant depreciation is one which must increasingly engage the attention of company directors, engineers, manufacturers and the investing public. Almost every industry is dependent in some measure upon expensive machinery which has to be accounted for satisfactorily in the balance sheet.

# Publications Received.

The Anglo-American Year Book, 1931. (American Chamber of Commerce in London, Aldwych House, Aldwych, London, W.C.2. Price 15s. net.) The 1931 Anglo-American Year Book is the ninth edition, and contains as usual a very considerable amount of useful and interesting information. On the business side the Commercial Directory of 8,500 names and addresses of principal firms together with their agents, representatives or affiliated houses in Great Britain and the United States, will be found of much value as a reference list to firms engaged in Anglo-American trade. The Residential Directory and the "Anglo-American Who's Who" cover the Social side. The Anglo-American Institutions and Clubs, such as the Pilgrims, the English-Speaking Union, the American Society, the American Chamber of Commerce, etc., are listed and a short resume of their activities during 1930 is given. Their officers for the present year are also included. A series of instructive articles dealing with a variety of subjects is included, "Opening up an American Business in Britain," "English Law for Americans," "English Inheritance Taxes as Affecting American Citizens," "United States Income Tax Affecting British Companies," "British Business in the U.S.A." "American Law for Britons." The book has been thoroughly revised and brought up-to-date, and the whole forms an extremely valuable compendium on Anglo-American affairs. Through the courtesy of the American Consulate General a complete statistical record of British American Trade during 1930 is included.

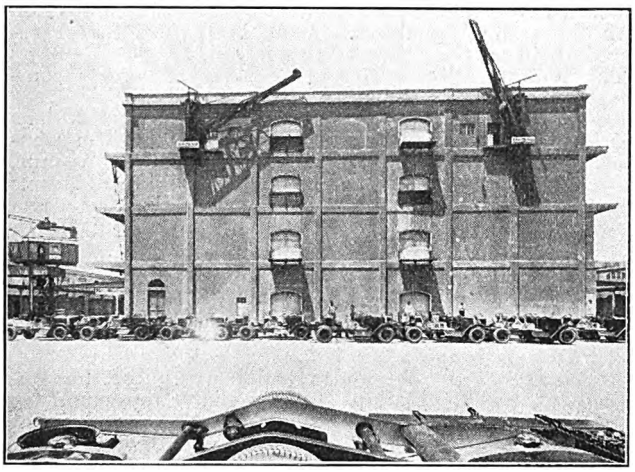
# Motor Notes.

**Morris Commercial Trucks for Buenos Aires.** — Our photograph shows over sixty Morris Commercial trucks on the quayside at Buenos Aires, these being the largest shipment of British vehicles ever seen in the Argentine. The order for these vehicles was given on December 16th by the first direct circuit public telephone between Buenos Aires and Great Britain. Such demand for British vehicles in the Argentine is interesting in view of the activities in connection with the British Empire Trade Exhibiton which was opened in Buenos Aires on Saturday by H.R.H. the Prince of Wales.



OVER 60 MORRIS-COMMERCIAL VEHICLES ON THE QUAYSIDE AT BUENOS AIRES.

**Transport Extraordinary.**—It is curious that the possibilities of the motor vehicle for transport over rough country has begun to be developed only during recent years. We imagine our photograph of a Guy 8-wheeler here reproduced, shows an extreme development for the present at least. It is stated that this vehicle will easily negotiate trenches 6 feet wide and practically of any depth, as the front wheels do not sink into the trench but carry on straight across a 6 foot gap with a drop

THE GUY 8-WHEEL DRIVE VEHICLE.

which is only proportionate to the flexibility of the road springs. Also the suspension of this vehicle is practically perfect as the weight is distributed over eight wheels. The rear wheel suspension is a normal bogie arrangement but a different type of spring is employed for the front wheels, all four of which steer. The wheelbase of the vehicle measured from the first front hub to the centre of the rear bogie, is 13 feet and a body space of 11 feet is available. The drive is taken through all the eight wheels. The vehicle is fitted with a winch which gives a maximum pull of 7 tons with a capacity of 250 feet of cable. The whole of the available four speeds in the main gear box can be utilised for winding, and arrangements are made for the pull to be taken from the rear or either side of the chassis.

**Vulcan Successes.**—In a very keen competitive market, and after the most gruelling tests were made of competitive makes of vehicles, the Vulcan Motor & Engineering Co. (1906), Ltd., of Southport, have been favoured with orders for ten 3-ton refuse collectors from Plymouth Corporation and six 35/40 cwt. refuse collectors from the St. Marylebone Council.

**A Commer Service Station for the Midlands.**—Commer Cars, Ltd., Luton, have recently opened premises in Great Hampton Street, Birmingham, for the sale and service of Commer commercial vehicles. The workshop is 150 feet in length and has been equipped with the latest machinery and plant for the service of vehicles. Full range of spare parts is stocked.

**Willys Overland Crossley Price Reductions.** — Willys Overland Crossley, Ltd., Heaton Chapel, Stockport, announce that as from the 3rd March the price of the Willys express van is reduced from £178 to £155 and that the price of the commerce saloon has been reduced to £168. Early delivery of both models can be given.

**With a Pound of Tea!**—Black & Green have recently taken delivery of the vehicle shown in the photograph, the display body of which is mounted on a Dennis G.L. type passenger chassis, which they have placed on the road to tour towns and villages showing to the public the gifts which they may obtain by collecting labels from their

BLACK AND GREEN'S GIFT DISPLAY CAR. DENNIS G.L. TYPE PASSENGER CHASSIS.

tea packets. The car contains a sufficient quantity of stock, in addition to that displayed in the windows, to enable members of the public to hand their labels to the attendant in charge and receive their gifts in exchange.

**F.W.D. Now to be Known as Hardy Motors, Ltd.**—In a new brochure just issued by Hardy Motors, Ltd., 12, Whitehall, London, S.W.1, there is the following important notice:—

> "When Four Wheel Drive Motors, Ltd., became allied with the Associated Equipment Co., Ltd., it was decided that the former Company's products be redesigned to utilise standard A.E.C. units. In order that these "all-British" vehicles may not be confused with the American made F.W.D. they will be marketed under the name 'Hardy' by Hardy Motors, Ltd."

With regard to the brochure: this is a well illustrated production containing full particulars of the "Hardy" four and six wheel drive vehicles, and it is pointed out that the majority of units used in their construction are interchangeable with those on A.E.C. vehicles of similar carrying capacity. The first page of the brochure explains the advantages of the four wheel drive when travelling over soft or uneven ground. The Hardy vehicles are designed so that the front wheel drive can be disengaged automatically when travelling on good roads. The vehicles are fitted with A.E.C. engines, four and six cylinder models, which engines are fully described and illustrated as are also the details of the transmission, frames and springs. Specifications and illustrations are given of models 4/3, 4/4, 6/6, 6/8, and 6-T, R/6/8 and

Digitized by Google

R/6/T, the T models being tractors. In addition particulars of Hardy rail motors are given.

**Wheel Conversion—Solids to Pneumatics.** — We have received a leaflet from R. A. Dyson & Co., Ltd., Grafton Street, Liverpool, illustrating their method of converting cast steel spoke wheels, constructed for solid tyres, to wheels suitable for pneumatic tyres. The firm has installed special plant for this work and are in a position to execute conversions at a price very attractive as compared to the hub and disc wheel conversion. The advantage of their proposition is the retention of the original wheels, and in nearly every instance the brake gear, etc.

**Leyland Deliveries.**—The two vehicles shown in the photograph have recently been supplied by Leyland Motors, Ltd., Leyland, to Messrs. E. D. Robinson & Son, of Chorley. The larger of the two is a Buffalo 6-tonner

A LEYLAND BUFFALO 6-TONNER AND A BADGER 50-CWT. LORRY.

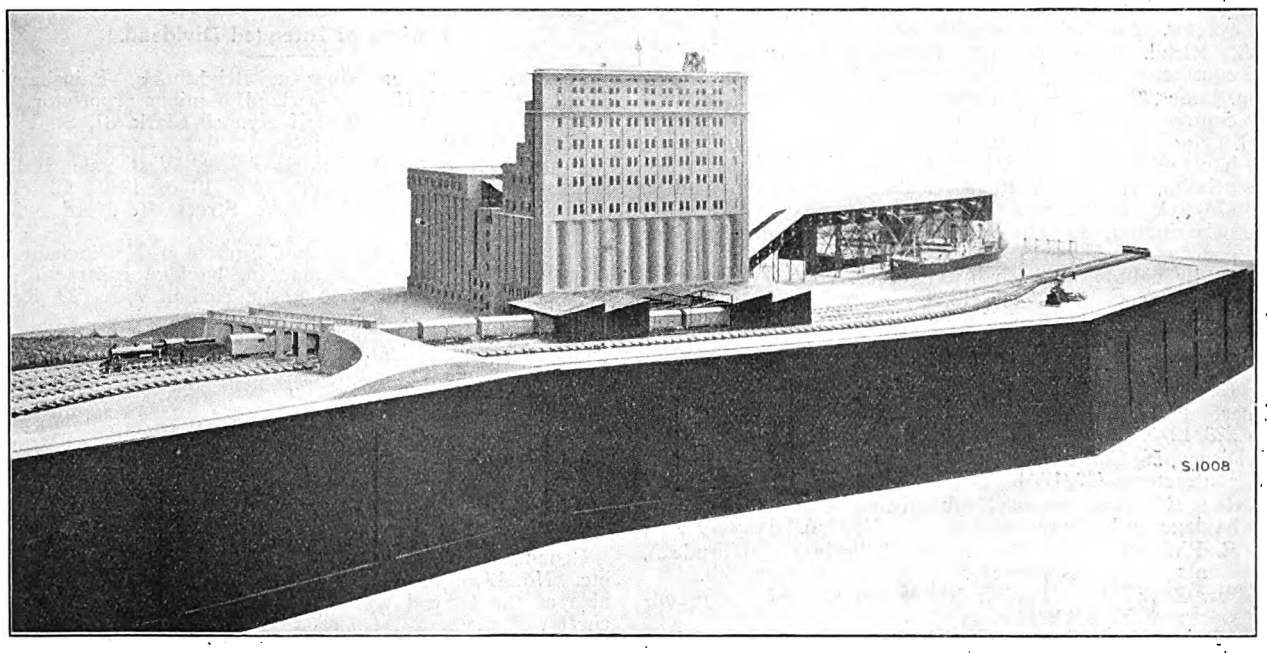
and the smaller one a long wheelbase Badger 50 cwt. They are to be used for the transport of corn, hay and straw and will cover about 100 to 120 miles per day.

**The British Grain Elevator for the Argentine.**—Our photograph is of a model of a 80,000 ton grain elevator system made by Henry Simon, Ltd., Engineers, Cheadle Heath, Stockport, to the order of the Argentine Railway Companies, for exhibition at the British Empire Trade Exhibition opened on Saturday at Buenos Aires. The model demonstrates the most modern methods of handling and storing grain and delivering it to ships for transport. The whole system of dealing with the grain from the wheat field to the ship is shown by means of working models which are exact replicas in miniature of the actual plant and buildings used at different points in the system. It is shown how the wheat is cut by mechanical harvesters, threshed and transported to the camp silos in motor vehicles and there stored until required. The grain is automatically delivered from the silo to bulk railway wagons for transport to the port where again it is stored until the ships are ready to receive it. For delivery to the ships the grain is transferred by elevators and conveyors to the gantry on the quay alongside the vessel waiting. The gantries are provided with a series of conveyor belts from which the grain is discharged through numerous spouts direct into the holds of the ships. By this system thousands of tons of wheat can be handled every hour.

**Albion Orders.**—George Farmiloe & Sons, Ltd., lead product manufacturers, have recently purchased from the

A 30/60 H.P. ALBION ON LOW-LOAD LINE CHASSIS.

Albion Motor Car Co., Ltd., Glasgow, a 4-ton bonnet type lorry fitted with a timber gantry behind the cab, for the transport of long rolls or tubes. The illustration shows a van mounted on a low load line overtype chassis, supplied to the Crown Bedding Co., of Birmingham. The machine has a capacity of approximately 1,250 cubic feet and the painting is carried out in such a striking manner that it cannot be but an excellent advertisement for its owners.



MODEL OF THE TERMINAL GRAIN ELEVATOR NOW BEING BUILT AND EQUIPPED BY HENRY SIMON, LTD., AT THE PORT OF INGENIERO WHITE BAHIA BLANCA, ARGENTINE.

**The Bean 50-60-cwt. Empire Chassis.**—Bean Motors, Ltd., Tipton, Staffs, have sent us their leaflet dealing with the latest type 50-60-cwt. Bean commercial Empire chassis. Reduction in prices has been made and twin rear tyre equipment is now supplied without extra charge. The model has been on the market for about eighteen months and is, we understand, giving highly satisfactory service. The price of the short wheelbase chassis is £540 and the long wheelbase chassis £560; a charge of £30 extra is made for four wheel brakes and £20 for a self-starter.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

# New Companies.

**Scott Haulage Company, Ltd.** (253,951).—Private company. Registered February 4th. Capital £500 in £1 shares. Objects: To acquire the business of motor carriers and haulage contractors carried on by W. J. Scott and H. Smith at Sheffield. The first directors (to number not less than 2 nor more than 5) are: H. Smith, W. J. Scott (both permanent). Registered office: 35, Cruise Road, Sheffield.

**W. E. Moore & Co., Ltd.** (253,952).—Private company. Registered February 4th. Capital £1,000 in £1 shares. Objects: To carry on the business of ship and insurance brokers and agents, shipping and forwarding agents, etc. The first directors (to number not less than 2 nor more than 7) are: W. E. Moore, L. E. Lassam.

**Fairfield Haulage Company, Ltd.** (254,025).—Private company. Registered February 7th. Capital £500 in £1 shares. Objects: To acquire the business of a motor haulage contractor carried on at 5, Lingfield Road, Broadgreen, Liverpool, by E. W. Sampson, Helen C. Sampson and Winifred J. Sampson as "The Fairfield Haulage Co." The directors are: E. W. Sampson (permanent chairman), Mary E. Sampson. Secretary: G. Smith.

**Bristol Roadway Services, Ltd.** (254,019). — Private company. Registered February 7th. Capital £2,500 in £1 shares (1,500 ordinary and 1,000 7 per cent. cumulative preference). Objects: To acquire the business of Bristol Roadway Services, carried on by H. G. Edmonds at Portwall Lane, Temple, Bristol, and to carry on the business of haulage contractors, char-a-banc proprietors, taxi-cab owners, etc. The permanent directors are: H. G. Edmonds, Mrs. D. Edmonds. Registered office: Portwall Lane, Temple, Bristol.

**Bath Roadway Services, Ltd.** (254,049).—Private company. Registered February 9th. Capital £2,000 in £1 shares (1,500 ordinary and 500 7 per cent. cumulative preference). Objects: To acquire the business of Whiteline Char-a-banc Company, now carried on by Harold G. Edmonds, at Upper Bristol Road, Bath, and to carry on the same and the business of haulage contractors, char-a-banc proprietors, taxi-cab owners, etc. The directors are: H. G. Edmonds (permanent managing director), Mrs. D. Edmonds. Registered office: Albion House, Upper Bristol Road, Bath.

**Northern Motor Users' Association, Ltd.** (254,087).—Registered February 10th, as a company limited by guarantee, without share capital, with 1,000 members, each liable for £1 in the event of winding up. Objects: To establish and maintain an efficient organisation for the purpose of defending, protecting and enforcing the rights of motorists and persons interested in or associated with the motor and allied industries, etc. The provisional directors are: T. E. Mason, T. Marsden, A. F. Porritt, W. Shepherd, F. Sugden, J. H. Sutcliffe, T. A. Spencer.

**Andrew Bracey & Son, Ltd.** (254,096).—Private company. Registered February 11th. Capital £4,000 in £1 shares. Objects: To acquire the business of a house furnisher, cabinet maker and upholsterer carried on by A. Bracey at 148/149, Windsor Road, Neath, Glam., and to carry on the same and the business of depository proprietors, haulage contractors, general carriers, etc. The permanent directors are: A. Bracey (chairman), Mrs. Mary J. Bracey, A. C. Bracey. Registered office: 148/149, Windsor Road, Neath.

**H. Evers, Ltd.** (254,105).—Private company. Registered February 11th. Capital £10,000 in £1 shares. Objects: To acquire the business of a haulage and carting contractor and dealer in sand, gravel and ballast and other building materials now carried on by H. M. Evers at 2, Sebastopol Street, Manchester, as "H. Evers." The directors are: H. M. Evers, Mrs. Mary Evers. H. M. Evers shall be permanent governing director and chairman so long as he holds £1,000 shares.

**Thames St. Garage Co., Ltd.** (254,144).—Private company. Registered February 12th. Capital £500 in £1 shares. Objects: To carry on the business of haulage, cartage and transport contractors, carriers of passengers and goods, furniture removers and warehousemen, etc. The first directors are to be appointed by the subscribers. Secretary: J. C. C. Braint. Registered office: Co-operative Chambers, Carts Lane, Leicester.

**Barber & Halliday, Ltd.** (254,152).—Private company. Registered February 13th. Capital £1,000 in £1 shares. Objects: To carry on the business of packers, makers up, balers, case makers, calenderers, finishers, carriers, general agents, warehousemen, forwarding and shipping agents, etc. The directors are: J. Barber, R. Halliday. Registered office: 52, Granby Row, Manchester.

**H. G. Browne, Ltd.** (254,187). — Private company. Registered February 14th. Capital £1,000 in £1 shares. Objects: To acquire the business of a motor haulage and transport contractor and garage proprietor now carried on by H. G. Browne at 1, New Buildings, Rupert Street, Nechells, Birmingham. The directors are: H. G. Browne, Mrs. Florrie Browne. Registered office: 1, New Buildings, Rupert Street, Nechells, Birmingham.

**Sittingbourne and District Motors, Ltd.** (254,254).—Private company. Registered February 17th. Capital £4,000 in £1 shares. Objects: To carry on the business of omnibus, taxi-cab, fly and other public or private conveyance, and garage proprietors, etc. The first directors are to be appointed by the subscribers. Registered office: Crescent Street, Sittingbourne, Kent.

**Tresham Transport Company, Limited.** (254,307).—Private company. Registered February 19th. Capital £500 in £1 shares. Objects: To carry on the business of general haulage contractors, carriers, railway and forwarding agents, warehousemen, etc. The first directors (to number not less than 2 nor more than 5) are: R. Hammond, I. R. Preston. Registered office: 48, High Street, Homerton, E.9.

**Manchester Motorways, Ltd.** (254,296).—Private company. Registered February 19th. Capital £2,500 in £1 shares. Objects: To acquire from E. Prince and Harriet E. J. Morton certain chattels, the benefit of certain agreements concerning the purchase of motor omnibuses, and the benefit of certain hackney carriage licences for the running of such motor omnibuses, and to carry on the business of garage proprietors, motor omnibus and char-a-banc proprietors, etc. The directors are: E. Prince, Mrs. Harriet E. J. Morton. Registered office: 41a, Piccadilly, Manchester.

**W. B. G. Coaches, Ltd.** (254,309).—Private company. Registered February 19th. Capital £500 in £1 shares. Objects: To carry on business as proprietors of motor coaches, omnibuses, lorries and cars, carriers of passengers and goods, garage proprietors, etc. The directors are: W. W. Grew, Mrs. H. O. Winwood.

**Phillips' Tug and Lighterage Company, Ltd.** (254,333). Private company. Registered February 20th. Capital £38,000 in £1 shares (8,000 6 per cent. cumulative preference and 30,000 ordinary). Objects: To carry on the business of ship, tug, barge, lighter and boat owners, etc. The first directors are: E. S. Phillips (permanent director and chairman), and J. Davis. Registered office: Bridge Wharf, 16, Wellington Road, Battersea, S.W.11.

**Devon Motors (Exeter), Ltd.** (254,358).—Private company. Registered February 21st. Capital £500 in £1 shares. Objects: To carry on the business of garage proprietors, motor engineers, motor dealers, motor car, omnibus, char-a-banc, coach and taxi-cab proprietors, etc. The permanent directors are: W. R. Exley, E. M. Holme.

**James Smith & Co. (Wigan), Ltd.** (254,416).—Private company. Registered February 25th. Capital £8,000 in £1 shares. Objects: To carry on the business of proprietors, manufacturers and repairers of and dealers in omnibuses, chars-a-banc, motor coaches, cars, wagons and cycles, general carriers of passengers and goods, railway and forwarding agents, coach builders and painters, garage proprietors, etc. The first directors (to number not less than 2 nor more than 6) are: E. C. Witter (per manent governing director), J. Smith, R. N. Witter. Secretary: R. N. Witter. Registered office: 61, Standishgate, Wigan.

**F. B. Wilks, Ltd.** (254,461).—Private company. Registered February 27th. Capital £500 in £1 shares. Objects: To carry on business as railway rates and shipping charges specialists and accountants, railway, road and air transport agents and contractors, etc. The first directors are: F. B. Wilks, R. Matthews (both permanent). Registered office: Lincoln House, Fore Street, E.C.2.

**R. B. Syndicate, Ltd.** (254,473). — Private company. Registered February 27th. Capital £1,000 in 995 ordinary and 5 5 per cent non-cumulative preference shares of £1 each. Objects: To carry on the business of proprietors of motor and other coaches, taxi-cabs, motor and other omnibuses, lorries and other vehicles of all kinds, etc. The directors are: P. D. Roe, J. J. Baker. Registered office: Eldon Street House, Eldon Street, E.C.2.

**Wharf Transport Company, Ltd.** (254,507). — Private company. Registered February 28th. Capital £1,000 in £1 shares. Objects: To adopt an agreement with H. A. Coghlan and A. L. Coghlan, and to carry on the business of quarry masters and stone merchants, haulage contractors, carmen, general carriers, railway and forwarding agents, etc. The first directors (to number not less than 2 nor more than 5) are: H. A. Coghlan, A. L. Coghlan. Secretary: H. A. Coghlan. Registered office: 2, Wharf Street, Lancashire Hill, Stockport.

## Mortgages and Charges.

**H. R. Adkins and Company, Ltd.**—Debenture dated January 13th, 1931, to secure £1,670, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Capt. H. E. Adkins, The Tapestries, Riverside, Twickenham.

**Eastward Coaches, Ltd.**—Mortgage debenture dated January 15th, 1931, to secure £100, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. B. Davis, 32, Norwich Road, E.7.

**Motor Express Services, Ltd.**—First mortgage debenture dated January 20th, 1931, securing £550, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Dr. S. Caplan, 164, Cromwell Road, S.W.7.

**Miller Traction Company, Ltd.**—Debenture dated January 20th, 1931, to secure £3,800, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Christopher Dobson (1930), Ltd., Cobbold Road, Willesden, N.W.10.

**James Straughan & Sons, Ltd.**—Deed of indemnity dated January 21st, 1931, to secure all moneys not exceeding £300, for which the chargee (J. Bates, Wooperton Lodge, of Wooperton, Northumberland) may become liable by virtue of a guarantee to company's bankers. Property charged: The company's undertaking and property, present and future.

**Cox, Fallas, Eves & Co., Ltd.**—Debenture charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, dated January 31st, 1931, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

**Lock, Hoskins & Company, Ltd.**—Debenture dated February 2nd, 1931, to secure £500, charged on the company's property, present and future, including uncalled capital. Holder: A. Lock, 75, Alma Road, Clifton, Bristol.

**Modern Super Coaches, Ltd.**—Deposit on February 11th, 1931, of deeds of 31, Lancaster Road, Enfield, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

**Tally Ho Coaches, Ltd.**—Debenture dated February 12th, 1931, to secure all moneys not exceeding £1,500 which the debenture holder (L. Eston, of "Gorsehaven," Sandbanks, Dorset) may be called upon to pay to Lloyds Bank, Ltd., under a guarantee charged on the company's undertaking and property, present and future.

**L. Manny, Ltd.**—Debenture dated February 13th, 1931, to secure £258, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. G. Morse, 73a, King Henry's Road, N.W.

**Highways, Ltd. (formerly Overington, Harris & Ash, Ltd.)**—Particulars filed of debentures for sums not exceeding in the aggregate at any one time £10,000, authorised February 23rd, 1931, charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, the amount of the present issue being £2,500.

## Satisfactions.

*Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.*

**Kingfisher Services, Ltd.**—Satisfaction (1) to the extent of £350 on November 27th, 1930, of debenture dated December 2nd, 1927, and registered December 13th, 1927, and (2) to the extent of £300 on November 28th, 1930, of debenture dated September 27th, 1929, and registered October 1st, 1929.

**Furlongs, Ltd.**—Satisfaction to the full extent of £8,000 on December 20th, 1930, of instrument of charge in favour of the Westminster Bank, Ltd., dated April 3rd, 1930, and registered April 7th, 1930. (According to the register of mortgages, the charge registered April 7th, 1930, originally secured all moneys due or to become due from the company to the bank not exceeding £8,000.)

**Samuelson New Transport Company, Ltd.**—Satisfaction to the extent of £1,000 on December 29th, 1930, of debenture dated August 23rd, 1928, and registered August 28th, 1928.

**Elvys' Transport, Ltd.**—Satisfaction in full on December 31st, 1930, of mortgage dated June 28th, 1923, and registered July 10th, 1923. (According to the register of mortgages, the mortgage registered July 10th, 1923, originally secured all moneys due or to become due from the company to the Bank of Liverpool and Martins, Ltd., not exceeding £750.)

**City of Oxford Motor Services, Ltd.**—Satisfaction to the extent of £2,300 on December 31st, 1930, of trust deed dated February 20th, 1914, and registered February 25th, 1914, securing £46,000 debentures.

**Elvy's Transport, Ltd.** (formerly London & Provincial Produce Transport, Ltd.—Satisfaction in full on January 1st, 1931, of debenture dated June 8th, 1923, and registered June 14th, 1923, securing £1,200.

**Direct Haulage Co., Ltd.**—Satisfaction on April 30th, 1927, to the extent of £1,700 (balance of £300 having been cancelled) of debentures authorised by resolutions dated November 26th, 1924, and January 29th, 1925, and registered February 18th, 1925, securing £2,000. (Notice filed January 12th, 1931.)

**J. R. Fox & Sons, Ltd.**—Satisfaction in full on January 14th, 1931, of debenture dated October 15th, 1930, and registered October 20th, 1930. (According to the register of mortgages, the debenture registered October 20th, 1930, originally secured £2,500.)

**Smith's Safeway Services, Ltd.**—Satisfaction to the extent of £453 9s. 3d. on January 19th, 1931, of debenture dated October 15th, 1930, and registered October 17th, 1930.

**Freight Express, Ltd.**—Satisfaction to the extent of £500 on January 27th, 1931, of debenture dated March 15th, 1929, and registered March 18th, 1929. (According to the register of mortgages, the debenture registered March 18th, 1929, originally secured £1,000.)

## Receiverships (Appointment or Release).

**Sharland, Ltd.**—N. E. Hunt, of Normanhurst, Carbery Avenue, Bournemouth, ceased to act as Receiver and Manager on December 19th, 1930.

**Express Deliveries, Ltd.**—W. G. Frazer, of 271/273, Oxford Street, W.1, was appointed Receiver on February 4th, 1931, under powers contained in debenture dated January 4th, 1931.

**W. Turner and Company (Export Packers), Ltd.**—A. E. Middleton, of 18, Essex Street, Strand, W.C.2, was appointed Receiver and Manager on February 5th, 1931, under powers contained in debenture dated December 12th, 1928.

# The Transport Robot.

LIFE at the present time is so strenuous and the need for devoting every energy to one's business is so imperative, that it is almost impossible for most of us to spare time to consider the transport situation as a whole. It is all the more important therefore, for a trade journal which has devoted more than twenty-six years of its life to the service of transport, to draw attention to the most serious position in which the industry is being placed. A careful study of the London Passenger Transport Bill, and of the debate in the House of Commons, when the second reading was moved by Mr. Herbert Morrison, Minister of Transport, and after an interesting and instructive debate was carried by a majority of 47, give serious food for thought to all who are concerned with the well-being and prosperity of the trade of this country. Transport is the life-blood of industry and anything which seriously affects its prosperity, must react with a cumulative effect on trade and commerce generally.

The Ministry of Transport is rapidly becoming a machine which threatens to crush all initiative, all individual progress and all private enterprise, qualities which have brought transport to such a high pitch of efficiency. The Ministry is turning out unceasingly a stream of regulations, amending regulations, regulations postponing regulations, regulations altering the dates of previous regulations, until the Passenger Vehicle Operator and the Road Transport Contractor is becoming bewildered, and does not know when he is acting legally, or when he is innocently and unconsciously breaking the law.

The London Passenger Transport Bill proposes to carry the powers of the Minister of Transport to a still higher degree, and while nominally the control of London Passenger Transport will be in the hands of a Board consisting of five business men, actually the Minister of Transport will be the final court of appeal and will be the autocrat whose will will be law, should any disagreement or divergence of opinion take place.

One of the difficulties in looking at the problem squarely is in the personality of the present Minister of Transport. Mr. Herbert Morrison has won the wholehearted admiration of all with whom he has come in contact and all parties have joined in congratulations upon his promotion to a seat in the Cabinet of the present Government. We have listened from time to time to his speeches on transport matters, and like many others have been carried away by the frank, easy way in which he handles his subject, and the charm of manner with which he gets over any difficult questions which arise. He is, in fact, so reasonable and so ready to hear what others have to say, that it is not easy always to remember that he is pretty sure to go his own way in the end. He has surpassed any previous Minister of Transport in his enthusiasm for his job, his genius for work and not least, in his supreme self-confidence in himself and in the rightness of any decision which he may reach, and it is this last attribute which makes the present position so dangerous. After all, Mr. Morrison is a politician, and cannot treat his office as a business man would, but must be guided, and in certain events, over-ruled by his colleagues in the Government. It is therefore, of the utmost importance, that any scheme for the co-ordination of London Passenger Transport, should be absolutely free from the domination of the Minister of Transport, and should be controlled by an Authority, whose sole duty shall be to work in the best interests of the whole of London Transport, for the good of the entire community.

The discussion on the second reading of the Bill, made it clear that Mr. Morrison has not even reached an agreement with the various bodies, whose interests are to be taken over by the new Board. Lord Ashfield, speaking on behalf of the London Underground Railways and the London General Omnibus Company, has made it clear that they will expect considerable alterations to be made in the Bill, in Committee, to meet their views. Lord Ashfield is in a position, when his first duty is towards his shareholders, and the Minister of Transport can be sure of his support on terms, but not otherwise. The

Digitized by Google

London County Council is in a different position, and it is strongly opposed to the Bill, contending that it is unjust to the tramways which are under its control. We must all accept the position, even if we do so reluctantly, that some form of co-ordination must be reached, if the traffic of this great city is not to become more and more congested, with every year that passes. The time has gone by when we can be allowed to carry on our business in our own way, and at our own sweet will, without some form of control and Government regulation, but we trust that every Association interested in Road Transport will fight against the increasing power of the Minister of Transport, which threatens to strangle all enterprise, and which if allowed to proceed on its course, must inevitably lead to nationalisation, not only of Road Transport, but of other forms of Transport, and of trade and industry as well.

It is for these reasons, and not from any feeling of antagonism to Mr. Morrison that we write this note of warning to our readers, and urge upon them the importance of opposing the ever-growing power of the Minister, believing as we do that this is against the best interests of the Country, and of the Transport Industry which serves it.

## Dropping the Motor Coach Ban.

"The man who makes no mistakes does not usually make anything" said Mr. Edward J. Phelps an American Statesman in 1889. We suggest that Mr. Herbert Morrison, M.P., the Minister of Transport, made a mistake when he proposed to ban motor coaches from the central area of London. He has proved himself a strong man by acknowledging his mistake in the announcement of his decision not to proceed with the making of the regulations but to adopt the alternative course of giving general directions in the matter to the Traffic Commissioner for the Metropolitan Traffic Area. But if the Minister did make a mistake in this instance he has, on the other hand, made no mistake in many other directions. By the Road Traffic Act of 1930 he has revised the whole of the transport legislation of this country; a piece of constructive work long overdue. There are, and perhaps it was inevitable, some sections of the Act that we contemplate with mixed feelings, but Mr. Morrison's keenest critic, ought, we feel, to admit that he has at any rate done a difficult job of work, and it is with great pleasure that we congratulate Mr. Morrison upon attaining Cabinet rank. The general directions issued by the Minister of Transport to the London Traffic Commissioner are dealt with in another part of this issue. They point out that the number of motor coaches operating in the London area has very greatly increased during the past year, and the position thus created must be regarded both from the point of view of relieving existing congestion and from that of preventing further congestion. Further, in view of the extensive facilities provided in the central area for transport by railway, tube, tram and short stage omnibus, and the general congestion of traffic in this area, the provision of other services should be limited to a minimum consistent with the avoidance of serious inconvenience or hardship to the public. It is pointed out that express carriages which are engaged in taking sightseers round places of interest in the central area, and which do not pick up or set down passengers *en route* stand in a category by themselves, and this exceptional circumstance should have due weight with the Commissioner in dealing with applications for road service licences for services of this nature, where it is clear that a legitimate public demand exists which could not otherwise be met. We think it is doubtful whether the threat to ban motor coaches from Central London would ever have been made had it not been for the large increase in the number of vehicles running into the area during recent months in spite of the warnings given by the Minister of Transport from time to time that Traffic Commissioners could not be bound by the action of the licensing authorities or of operators in the past, and particularly as regards services established during the time between the introduction of the Road Traffic Bill and the operation of Part IV of the Act, and the Commissioner will no doubt consider this point in dealing with any application from an operator for a road service licence. Motor coach operators prefer that the question of the suitability of a route to be followed in Central London should be one entirely for the Commissioner to decide, and his decisions are now awaited with keen interest. Those operators who have pioneered the now well established regular services between London and provincial towns should certainly be permitted to continue to ply their legitimate business without undue restriction. A ban such as that proposed would have dealt a severe blow at an industry which has only reached its present position because the service it has to sell is required by the public. The motor coach industry, although young, has invested in it over £10,000,000 of British capital, and gives employment to thousands of men. The desire of the Minister of Transport to relieve the congestion on the streets of the Metropolis is of course laudable, and no one will for a moment suggest that Mr. Morrison does not at all times act in perfect good faith, but it has yet to be proved that motor coaches are the sinners they are sometimes thought to be, and an impartial onlooker might well come to the conclusion that the number of omnibuses on the streets is causing the trouble. In any event there is really no justification for differentiating between one type of vehicle and another to the extent of annihilating the one whilst prospering the other. In the Directions issued to the Metropolitan Traffic Commissioner it is stated that with a view to avoiding wasteful competition the Commissioner should consider the extent to which it would be desirable to attach to road service licences the condition that a minimum single fare of not less than one shilling should be charged for every stage, any part of which lies in the Metropolitan Traffic Area. We do not think that operators will view this with dislike. Speaking at a meeting held at Olympia in 1929, Mr. M. Logette, Chairman of the Motor Hirers' and Coach Services' Association, said that in the case of express carriages the Association had made strong recommendations to the Minister that the minimum fare should be one shilling. The motor coach operators do not wish to compete with the omnibus interests by carrying short distance travellers. A limiting fare of one shilling will widen the difference between a stage carriage and an express carriage. The motor coach operators, through the Motor Hirers' and Coach Services' Association, after putting up strenuous opposition have achieved a great and well deserved success. Naturally considerable expense has been incurred and it is the duty of all hirers to support this body. Opposition to suggested legislation and regulations can only be effective when it has the backing of all engaged in the industry threatened. Surely it is not playing the game to leave the chestnuts to be pulled out of the fire by the few when the livelihood of all is at stake. All motor coach owners should join the Association, the members of which, as a trade, whilst only too anxious to assist in any efforts to regulate road motor traffic in order to meet modern conditions, fail to see why the passenger road vehicle should not receive the full consideration that its development merits.

## Civil Aviation.

Mr. Frederick Montague, M.P., Under-Secretary of State for Air, laid the Air estimates before the House of Commons on March 17th. His speech was concerned chiefly with the activities and development of the Royal Air Force, and he mentioned that this country stands fifth, as regards first line strength, among the Air Powers

Digitized by Google

of the world. "I have no desire," said Mr. Montague, "to strike a note of alarm in referring to First Line strengths of other countries, but rather to emphasise the point that this country, whilst it insists upon maintaining a Force of high quality and technical efficiency of the first order, has no desire—even if it were otherwise practicable—to indulge in a race of air armaments, but looks for substantial results to that international understanding which every friend of humanity and progress hopes will be the outcome of the Disarmament Conference." With regard to civil aviation we wish the Minister could have indicated greater progress. True, as the Minister pointed out, it is a matter for congratulation that within the last few weeks 2,675 miles of the 5,700 miles air route from Cairo to Cape Town has been opened, and before the end of the year the whole of the route will be in operation, and, since the Minister spoke, the first Imperial Airways mail from Mwanza, Tanganyika, reached Croydon carrying over 50,000 letters—another triumph of British energy and initiative. But will not the machines on this route be used chiefly for the carriage of passengers and mails. More must be done to popularise the use of aircraft for the carriage of merchandise. We are not aware of any suggestion, so far, for the development of a purely commercial service. No doubt the first goal to aim for is the making of existing services a paying proposition and so to do away with the subsidies now paid. What must be done is to educate the public to look upon air transport as an ordinary means of carriage. It is still considered somewhat of a novelty to receive a letter marked "air mail" in spite of the fact that air mail post boxes are now dotted about our main thoroughfares. Civil aviation will undoubtedly become a commercial proposition in time and the first country to achieve this result will be well on the way to capturing a huge part of the world's trade. At present there are only limited funds at disposal for the development of civil aviation and it is the Air Ministry's policy to concentrate primarily on Imperial routes rather than on short services to the Continent as it is considered that these long distance lines offer a prospect of ultimately becoming remunerative. Imperial Airways are making excellent progress with the limited resources available. Their standards of safety are high and their record one that should inspire confidence in the heart of the most timid. It is not too much to say that the degree of safety which the Company gives to the travelling public is unequalled by any other line operating civil aircraft. Anything that will make the population more air-minded and will convince the business community that the air offers a means of quick transit for certain kinds of merchandise will help to bring down the cost of such transport. This country has been the pioneer in all other forms of transport and can lead in the air. Air propaganda of the right kind will result, in the not far distant future, in civil aviation in this country being established on a commercial basis.

## Alcohol and Motor Transport.

A Report issued from Scotland Yard shows that during the three months ended December, 1930, 376 persons were killed in street accidents in the Metropolitan Police District and 13,323 persons were injured. What will be the numbers for the whole country? Dr. Courtenay C. Weeks delivered recently at Derby, the Mary Shuttleworth Boden lecture and his subject was "Alcohol in relation to motor transport." Dr. Weeks said that while he could not claim that drink was responsible for all accidents, he could say that many were due to errors of judgment. A pint of beer, he contended, would make a man feel more efficient than he really was, and that alcohol even in the strictest moderation before or during motor driving constituted a menace to society and well-being. This subject might easily have proved a very controversial one, but the doctor was addressing a branch meeting of the British Women's Total Abstinence Union. Everyone is averse to interfering with the liberty of the subject, but with the present heavy toll of the road it will perhaps be conceded that the doctor could well have chosen a less important topic upon which to expound his views. A driver of a motor vehicle whilst at the wheel needs to have his wits at their keenest, and if, as the doctor contends, a pint of beer will make him feel more efficient than he really is then it is his duty towards the community and to himself to let the pint remain "in the wood" until such time as a miscalculation of his efficiency may not be attended with disastrous results. "When the wine is in, the wit is out" runs the proverb. If ever there was a time when the wit should be in, not on the road alone but in every sphere of activity, it is now. All may not agree with the conclusions of the worthy doctor, still if it is necessary to prove him wrong our congested streets are hardly suited for a try out.

## Keeping in Touch with the Regulations.

A Metropolitan Magistrate is reported to have said recently "How on earth omnibus owners can possibly keep in touch with all these regulations I cannot conceive." Hardly a day passed, the learned magistrate continued, without fresh regulations under the Traffic Act being put upon his desk—they were overwhelming and he put them into the wastepaper basket. We doubt whether such a useful receptacle really is fed so assiduously by the Stipendiary in question. Yet if one trained to assimilate such indigestible fare feels tempted to consign these fleshy morsels to the wastepaper basket, what about the long-suffering individual whose existence really depends upon a correct interpretation of the various enactments. We fancy that if any of our readers commit a breach of the law and hope to get away with it because the Bench will be unable to interpret the regulations they will find that even if the regulations were first deposited in the wastepaper basket they will have been retrieved in time to enable the Bench to impose a fine. As a matter of fact we believe that the new traffic regulations are only just commencing to flow from the printing presses. In our endeavour to fulfil our function as the road transport trade paper, we are doing our best to clarify and publish all the regulations which affect our readers as and when they are issued, and considerable space in this journal has been and will continue to be given as the need arises. We also have a wastepaper basket, but by no means does it receive our first consideration. If our readers are in doubt regarding any of the Regulations our Enquiry Department will be very happy to give their aid.

## When Cheapest is Dearest.

A firm of upholsterers sued a carman and contractor in a London County Court to recover £60, the value of furniture entrusted to the defendant as a common carrier and which was destroyed when the lorry caught fire. It transpired that the furniture was not insured, neither was the lorry. The Judge held that obviously there had been a breach of contract on the part of the carrier and gave judgment for the plaintiffs. Many know to their cost that to attempt to recover under a judgment in a case such as this merely means that good money is thrown after bad. Yet how many there are who, requiring transport service, hunt round to find the cheapest man and having, they think, found him, never dream of enquiring what qualifications he has to carry out the service he holds himself out to supply. We feel that in the case we refer to we are justified in assuming that the carrier is in the habit of taking on jobs at cut rates. Unfortunately a case of this nature does not receive the publicity it should from the point of view of the legitimate contractor who has built up his business on sound and safe

Digitized by Google

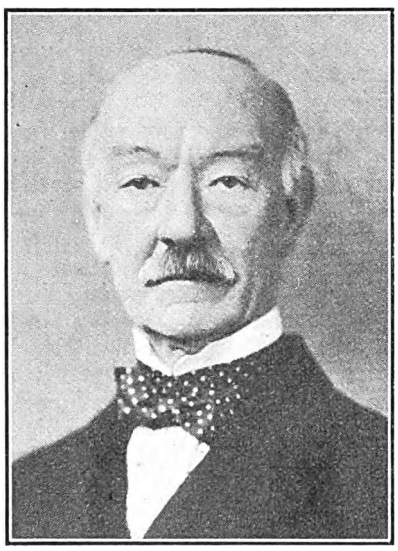
service, and who is suffering to-day from uneconomical competition. It is extraordinary that there are still business people who seem to think that transport is any man's job and the slogan "Removing is an expert's job" still needs a lot of ramming home. No doubt for one man who is bitten through employing an unqualified contractor there are many risking a bite. It might be argued that the work placed with unqualified contractors is but a small percentage of the whole, but in the present hard times "many mickles make a muckle," and the contractor who is qualified to handle the smallest job in the expert way, insured as he is in the interests of his client against all reasonable contingencies, should have the business, large or small, that is on offer.

## Commercial Motor Users' Association.

### New Officers.

Major-General S. S. Long, C.B., M.Inst.T., is the new President of the Commercial Motor Users' Association and Chairman of the National Council in succession to Mr. C. le M. Gosselin, M.I.A.E., M.Inst.T., whose term of office has now expired. Mr. Gosselin, as President of the Association, presided at the annual luncheon of the C.M.U.A. reported in another part of this issue.

Alderman Frank H. Wort, J.P., of Messrs. Wort & Way, general and Government contractors, Castle Street, Salisbury, is the new President-Elect and Deputy-Chairman.



MAJOR-GEN. S. S. LONG, C.B., M.INST.T., THE NEW PRESIDENT OF THE C.M.U.A.

Major-General Long is Director of Transport of Lever Brothers, Limited. He has had a distinguished career. In 1884 he was gazetted to the 2nd Battalion Durham Light Infantry. In 1889 he joined the Army Service Corps and three years later became Assistant Instructor at the A.S.C. School of Instruction. In 1896 he went to Hong Kong as Deputy-Assistant Adjutant-General on the Staff. With the outbreak of the South African War he was sent to that country and was appointed Senior Transport Officer of the 9th Division, and at the beginning of 1901 he became Assistant Adjutant-General for Transport for the Orange River Colony. In January, 1908, he became Commandant to the A.S.C. Training Establishment at Aldershot and re-organised the whole system of transport training. He attained the rank of Colonel in 1909 and became Assistant-Director of Supplies, Woolwich Arsenal, and whilst there completely re-organised the whole of the supply system of the Expeditionary Force. He went to the War Office as Director of Supplies in January, 1913, and later became Director of Supplies and Quarterings. Then came the Great War and General Long was appointed a Director of Transport as well as retaining his position as Director of Supplies. He re-organised the Army transport system and was responsible for the expansion of the small peace-time Army Service Corps into a corps of some 20,000 officers and 250,000 N.C.O.'s and men. General Long has written numerous papers on Army Transport.

**L.N.E.R. Appointment.** — We are informed by the L.N.E.R. that, as part of their Advertising Manager's organisation, Mr. H. F. Sanderson has been appointed Commercial Advertising Agent to the Company, with headquarters at Marylebone Station, in succession to the late Major J. C. Farmer. Mr. Sanderson acted for some time as Assistant to the Company's Industrial Agent, and has latterly held the position of Assistant District Goods Manager at Newcastle-upon-Tyne.

## Personal Notes.

**Ministry of Transport.**—Mr. J. Allen Parkinson, C.B.E., M.P., Parliamentary Secretary to the Ministry of Transport, has appointed Mr. S. S. Wilson to be his Private Secretary.

**Mr. John Spencer Wills.**—Mr. John Spencer Wills, who has been appointed a Director of East Midland Motor Services, Ltd., East Yorkshire Motor Services, Ltd., and Lincolnshire Road Car Co., Ltd., will be moving to London (88, Kingsway) shortly. Educated at Cleobury Mortimer School, Shropshire, and Merchant Taylors' School, London, Mr. Wills, at the end of 1926, was nominated for the position of Secretary to the newly formed East Yorkshire Motor Services, Ltd., by the chief shareholders, resigning from the following positions on moving to Hull:—Secretary to Wrexham & District Transport Co., Ltd.; Assistant Secretary to Greenock & Port Glasgow Tramways Co.; Assistant Secretary to Rothesay Tramways Co., Ltd.; Assistant Secretary to Scottish General Transport Co., Ltd. Among other activities he is Chairman of the Hull & Grimsby District Centre of the Incorporated Secretaries Association and a Member of the Hull & District Safety First Council and of the Hull Rotary Club.

MR. JOHN S. WILLS.

**Port of Bristol.**—Mr. R. H. Jones who has been appointed Acting General Manager, Port of Bristol Authority, became a junior clerk in the service of the Authority towards the end of 1893, and after gaining experience in various departments was appointed Committee Clerk in 1899. On the resignation of Mr. Girdlestone, the General Manager, and the appointment of Mr. Ross-Johnson as his successor in 1911, Mr. Jones was appointed Assistant to the General Manager, subsequently Assistant Manager, and about three years ago Commercial Manager, and now on the retirement of the General Manager, Mr. Peace, he has been appointed Acting General Manager. During this time he has seen the construction of the Royal Edward Dock with its Extensions — the Oil Basin and the Eastern Arm, which was opened in 1923 by the Prince of Wales — and considerable developments and extensions at the City Docks and at Portishead. He has served on numerous joint boards dealing with wages and conditions affecting various classes of men employed at the Port, and was a member of the Advisory Committee of the Road Board for the south-western area, also of several committees dealing with the diversion of shipping and the distribution of trade. He was made an O.B.E. in 1920 for special services rendered to the Ministry of Shipping.

MR. R. H[illegible]NES.

# Appointment of Mr. A. Maynard as Chief Goods Manager, Great Western Railway.

MR. ALEXANDER MAYNARD, whose appointment by the Directors as Chief Goods Manager of the Great Western Railway in succession to Mr. E. Ford was announced in our last issue, has had a career which in many respects is unique.

Born in 1882 it is interesting to observe that Mr. Maynard is the first of London birth to attain this office. Educated on the Continent—principally at Dolhain and Leige—Mr. Maynard started his commercial life with Messrs. Matthews & Luff—a firm of London Shipbrokers —who amongst other activities operated a service between London and Cardiff, Swansea and Llanelly. He thus established an early contact with the trade and transport requirements of South Wales.

MR. ALEXANDER MAYNARD.

During the South African War it is interesting to recall that Mr. Maynard was one of the volunteers of the Special Service Company of the Essex Regiment. In the period that he was in South Africa this Regiment formed part of the main column, and with the Volunteer Company Mr. Maynard performed the march from Bloemfontein to Komati Poort. By a coincidence, it became the turn of the Special Service Company to lead the advance into Johannesburg. Mr. Maynard recalls that the crowd on the main square at the hoisting of the British Flag over the Municipal Buildings was so dense that only a very small number of the men were able to get through, he being one of about the only 50 who were able to take up position behind the late Lord Kitchener when the ceremony took place.

On his return Mr. Maynard joined the staff of C. Shaw Lovell & Sons, Shipping and Forwarding Agents, on whose behalf and from various centres, including Birmingham, Sheffield and Leeds, his activities ranged over the whole of Great Britain. Subsequently he travelled extensively in France, Belgium, Holland, Scandinavia and Central Europe. His knowledge of Continental trade and transport conditions, his many business connections and his fluent linguistic abilities have proved of considerable value, both to himself and to the Great Western Company in later years.

Mr. Maynard's direct association with the Great Western Railway commenced in 1909, when he accepted an appointment as the Company's Agent at Nantes. At that time the Great Western Railway operated their own steamship services between Weymouth and Brest, and Plymouth and Nantes. Two years later he was brought to Paddington to take charge of the Company's Continental Department, a position he continued to occupy until 1914.

Marked out by his abilities for bigger tasks ahead, he was transferred in 1914 to Taunton as Goods Agent. Towards the end of 1915 he was appointed Assistant Goods Superintendent at Birmingham, subsequently becoming Superintendent.

In 1918 he returned to Paddington as Goods Superintendent, a position he held for four years. During this period, after a close study of [illegible] traffic problems, Mr. Maynard conceived the idea of a [illegible]ate "empties" shed, which not only had beneficial result[illegible] the working of this traffic, but effected an improvement in [illegible]pect of the whole of the business dealt with through the sta[illegible].

During his period of eight years at important Goods Agencies Mr. M[illegible]nard applied himself assiduously, and not only himself acquired a fundamental knowledge of Goods Departmental work and station management in all its branches, but left his impress upon each of the posts he occupied.

In September, 1922, Mr. Maynard was called to Headquarters as Assistant to the Chief Goods Manager and Development Agent—then a newly created post. The establishment in 1923 by the Irish Free State of an independent system of Customs and Excise duties necessitated a special organisation by the British Railways having through connections, to enable goods forwarded by their respective routes to comply with the altered conditions without involving delays at the Ports. These arrangements, necessarily of a complicated nature in their inception, were completed jointly by the English Companies concerned, and the fact that there was no interruption in the flow of traffic consequent upon the change over is a tribute to the success of the undertaking. Mr. Maynard was responsible for the conduct of these negotiations so far as the Great Western Company is concerned.

On the retirement of Mr. Lowther, and the accession of Mr. Ford to the Chief Goods Managership in 1924, Mr. Maynard became Assistant Chief Goods Manager and Development Agent, an office he now relinquishes to take up the senior appointment of the Goods Department.

In his special capacity as Development Agent, Mr. Maynard has taken a close interest in all branches of the Goods Department activities specially devised for increasing the Company's business and for combating Road Motor Competition, including Freight Advertising; Sites for Factories; Containers; Railhead Distribution Schemes. In the development of these projects, Mr. Maynard has displayed both enterprise and energy, characteristics which have gone far to assist in maintaining the position of the Goods Department in the difficult times through which the railways are passing. Concurrently Mr. Maynard has, both through the medium of the Company's New York Agency and that of the Continental Department, been enabled to attract and develop additional business.

In October, 1925, Mr. Maynard travelled to America where he undertook the re-organisation of the system of the Company's representation both in the States and in Canada. Mr. Maynard has always taken a special interest in the development of the Company's business with the Channel Islands; and principally the seasonal traffics of Potatoes, Tomatoes, etc. At one period he spent some time on the Islands studying the requirements and arranging for co-ordination of the forwardings by the Company's cross-Channel Services. This phase of the Company's activities has remained under his special jurisdiction as Development Agent. As a member of the International Railway Congress and also as a representative of the British Railways on the Rail Transport Committee of the International Chamber of Commerce, Mr. Maynard's unique knowledge of British and Continental Trade and transport conditions has enabled him to further the interests of British Trade, of British Railways in general and of the Great Western Railway in particular.

Mr. Maynard is also the Company's delegate on the International Traffic Committee of the Internationl Union of Railways, with headquarters in Paris, dealing with problems affecting the standardisation of railway practices generally throughout Europe.

During the past four years Mr. Maynard has been responsible under Mr. Ford for staff matters concerning the whole of the personnel of the Goods Department. A shrewd judge of men, his confidence has seldom been misplaced. He is a member of the Railway Clearing House Goods Managers' Conference and he succeeds Mr. Ford as Chairman of the G.W.R. Goods Managers' Conference. He is also an Associate Member of the American Chamber of Commerce in London.

Through the medium of his staff of specialist representatives and by direct personal contact, Mr. Maynard is closely in touch with all the movements of Trade; and he brings to his new office a mind widely experienced and of broad outlook.

In the successful prosecution of the high office he now takes up, Mr. Maynard is assured of the continued co-operation and best wishes of the whole of the staff and of his many friends amongst the business community.

## Cost of Administering the Road Traffic Act.

THE Civil estimates recently published show that the officials appointed to administer the Road Traffic Act will cost £111,060. The estimated staff is 390. The principal costs are:

| | |
|---|---|
| 13 Traffic Commissioners | £14,700 |
| 85 temporary clerks | £13,776 |
| 120 public service vehicle examiners | £29,640 |
| Additional and casual staff | £6,000 |

# Motor Coaches in London.

The Minister of Transport makes the following announcement:—

"On March 18th, in answer to a question in the House of Commons, the Minister of Transport announced his decision not to proceed with the making of the regulations of which he gave notice on December 19th, restricting the operation of motor coaches within the central area of London, and to adopt the alternative course of giving general directions to the Traffic Commissioner for the Metropolitan Traffic Area in the matter.

"In arriving at this decision the Minister has been particularly impressed by the representations made to him by bodies representing trading and other interests that the regulations did not provide sufficient elasticity to permit the operation of sight-seeing tours in the central area of London."

The following general directions have been issued by the Minister to the Traffic Commissioner for the Metropolitan Traffic Area in pursuance of Sub-section (1) of Section 63 of the Road Traffic Act, 1930:—

(1) In the exercise of his discretion in granting road service licences, the Commissioner should have special regard to the desirability of restricting the operation of motor coach services in the central area of London. For this purpose he should regard the area bounded by the streets named in the Appendix to this Note as one in which special limitations on the operation of motor coach services are required in the public interest, though the need for strict regulation and control must be considered as applying to a wider area extending to six miles or more from Charing Cross.

The number of motor coaches operating in the London area has very greatly increased during the past year, and the position thus created must be regarded both from the point of view of relieving existing congestion and from that of preventing further congestion in the immediate future. It is further desirable in the public interest that motor coaches should not make an unjustifiable use of the public highway for the purpose of waiting, and for picking up and setting down passengers, with resulting congestion and inconvenience to other users of the highway.

(2) The Commissioner in considering the merits of each application for a road service licence is required by Section 72 of the Road Traffic Act, 1930, to have regard to the needs of the area as a whole in relation to traffic, the elimination of unnecessary services and the prevention of wasteful competition with alternative forms of transport. In view of the extensive facilities provided in the central area for transport by railway, tube, tram and short stage omnibus, and the general congestion of traffic in this area, the provision of other services should be limited to the minimum consistent with the avoidance of serious inconvenience or hardship to the public. From this point of view express carriages which are engaged in taking sightseers round places of interest in the central area, and which do not pick up or set down passengers en route, stand in a category by themselves, and this exceptional circumstance should have due weight with the Commissioner in dealing with applications for road service licences to permit of services of this nature, where it is clear that a legitimate public demand exists which could not otherwise be met.

(3) In dealing with any application from an operator who represents that he has run motor coach services in the past in the Metropolitan Traffic Area, the Commissioner will consider the extent to which such a claim for consideration should be discounted on the ground that these services may have been carried out in contravention of the London Traffic (Restricted Streets) Regulations made under Section 7 of the London Traffic Act, 1924. The Commissioner will also consider the extent to which these services have been started or developed after the warnings given by the Minister from time to time that Traffic Commissioners could not be bound by the action of licensing authorities or of operators of public service vehicles in the past, and least of all as regards licences to ply for hire which had been issued or services which had been established during the months elapsing between the introduction of the Bill and the date on which Part IV of the Act becomes fully operative. The first of these warnings was given in the Minister's speech on the Third Reading of the Bill in the House of Commons on July 23rd, 1930, and was repeated in a speech at the Annual Conference of the Municipal Tramways and Transport Association at Harrogate on September 24th, 1930. After the second speech the Minister caused a notice to be sent to the Press emphasising this point.

(4) It will fall to the Commissioner to deal with applications for road service licences for all types of services, other than short stage omnibus services, i.e., other than services on which no fare stage exceeds twopence. With a view to avoiding wasteful competition the Commissioner should consider the extent to which it would be desirable to attach to road service licences the condition that a minimum single fare of not less than one shilling should be charged for every stage any part of which lies in the Metropolitan Traffic Area.

(5) Under the provisions of Sub-section (5) of Section 99 of the Road Traffic Act, 1930, the Commissioner is placed under the obligation to consult with the Commissioner of Police with regard to any conditions as to routes, stopping places or terminal points, to be attached to road service licences. The Minister is advised that vehicles operating under a road service licence will need to conform with the provisions of the London Traffic (Restricted Streets) Regulations which he has made from time to time under Section 7 of the London Traffic Act, 1924, and that any public service vehicle on which members of the public are invited to travel at separate fares and which picks up passengers on a restricted street is plying for hire on that street within the meaning of the Regulations.

The Commissioner will, therefore, need to arrange that terminal points and stopping places for vehicles operating under road service licences (in so far as the provision of such facilities on the public streets is unavoidable) shall not be fixed on restricted streets. This can in many cases be done by authorising short diversions from the main route so as to provide in suitable side streets any stopping places that are necessary. Stopping places in the central area should in any case be as few as possible and should not coincide with tramcar or omnibus stopping places. The selection of routes should aim at securing as wide a dispersal of the traffic as possible so as to avoid congestion on particular streets.

Should the Commissioner, in consultation with the Commissioner of Police, reach the conclusion that certain services which are necessary in the public interest cannot be operated unless terminal points or stopping places are provided on streets which are restricted under the Regulations, the Minister on receiving an application from the Commissioner will consider whether the Regulations can be modified so as to allow for the operation of any such service, without detriment to the necessary degree of control which is exercised by means of the Regulations over short stage omnibuses.

(6) The use of the streets as a means of providing facilities for picking up and setting down passengers at the terminal points of services is a fruitful cause of congestion.

The Minister would desire the Commissioner, in the exercise of his discretion in the grant of road service licences to consider the extent to which the two following principles should be applied:—(a) That no service be allowed to operate to or from a motor coach station within the area bounded by the streets named in the Appendix to this Note, other than a station which though within the area abuts on the streets named; and (b) that due notice should be given to operators that after a period of (say) one year, road service licences will not be issued unless terminal facilities have been provided off the public highway.

The Commissioner should also draw the attention of operators to the importance of suitable approaches and proper means of ingress and egress to motor coach stations so that they can be used without undue obstruction to other traffic.

### Appendix.

The following is the definition of the Area referred to in paragraphs (1) and (6):—

Euston Road (from Upper Woburn Place to Marylebone Road), Marylebone Road, Edgware Road, Marble Arch, Park Lane, Hamilton Place, Piccadilly, Hyde Park Corner, Grosvenor Place, Grosvenor Gardens, Buckingham Palace Road, Eccleston Bridge, Belgrave Road, Gillingham Street, Vauxhall Bridge Road, Vauxhall Bridge, Albert Embankment, Lambeth Road, St. George's Circus, Borough Road, Borough High Street, Trinity Street, Great Dover Street, Old Kent Road, Tower Bridge Road, Tower Bridge, Tower Bridge Approach, Tower Hill, Minories, Aldgate High Street, Whitechapel High Street, Commercial Street, Great Eastern Street, Old Street, Clerkenwell Road, Gray's Inn Road, Guildford Street, Russell Square, Woburn Place, Tavistock Square, Upper Woburn Place.

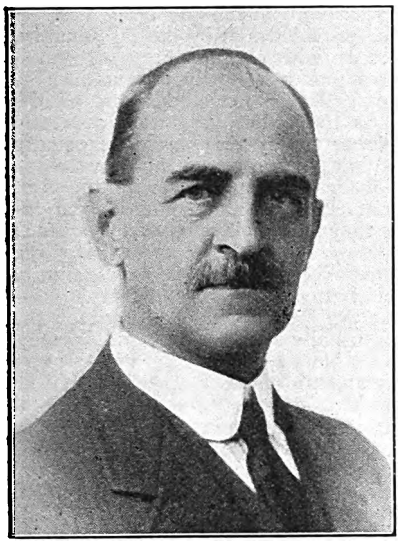
# Commercial Motor Users' Association.

## Annual Luncheon.

THE Annual Luncheon of the Commercial Motor Users' Association (Inc.), was held at the Savoy Hotel, London, on March 25th.

**Mr. C. Le M. GOSSELIN, M.I.A.E., M.Inst.T.,** President of the C.M.U.A., was in the Chair, and a large and distinguished company included members of the Government, heads of many societies, and leaders of organisations connected with motor transport.



MR. C. LE M. GOSSELIN, M.I.A.E., M.INST.T., PRESIDENT.

Amongst those present were:—

Capt. the Rt. Hon. Earl Howe, P.C., C.B.E., The Rt. Hon. Sir Eric Geddes, P.C., G.C.B., G.B.E., The Rt. Hon. J. R. Clynes, P.C., M.P. (Secretary of State for Home Affairs), Mr. Ben Smith, M.P. (Treasurer of His Majesty's Household), The Hon. Sir Arthur Stanley, G.B.E., C.B. (Chairman, Royal Automobile Club), Capt. J. F. C. Bennett, J.P. (His Worship the Mayor of the City of Westminster), The Rt. Hon. Herbert S. Morrison, P.C., M.P. (Minister of Transport), Mons. Chas. Blum (President, Union des Vehicules Industriels, Paris), Col. the Master of Sempill, A.F.C. (Past-President, Royal Aeronautical Society), Sir Cyril W. Hurcomb, K.B.E., C.B. (Permanent Secretary, Ministry of Transport), Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B. (Chairman, London and Home Counties Traffic Advisory Committee), Major-General the Hon. Sir Newton J. Moore, K.C.M.G., M.P., Major-General C. D. R. Watts, C.B., C.M.G. (Director of Ordnance Services, War Office), Major-General Evan Gibb, C.B., C.M.G., C.B.E. (Director of Supplies and Transport, War Office), Mr. W. H. Gaunt, O.B.E. (President, Mansion House Association on Railway and Canal Traffic), Mr. Otho W. Nicholson, M.P., Sir Francis W. Goodenough, C.B.E., Sir Basil E. Peto, Bart., K.B.E., M.P., Mr. W. Lawton Goodman (Master of the Worshipful Company of Coach Makers and Coach Harness Makers), Mr. Geo. Monro, C.B.E. (Immediate Past-President of the C.M.U.A.), Captain Sir Malcolm Campbell, Major-General S. S. Long, C.B. (President-Elect, C.M.U.A.), Mr. F. G. Bristow, F.C.I.S. (General Secretary, Commercial Motor Users' Association), Major G. W. G. Allen, M.C. (Chairman, National Traction Engine Owners' and Users' Association), Alderman A. R. Atkey, J.P. (President, Motor Agents' Association), Mr. R. P. Bailey (Secretary, National Road Transport Employers' Federation), Mr. C. H. Bressey, C.B., C.B.E. (Chief Engineer, Roads Department, Ministry of Transport), Mr. Albert E. Cave, J.P. (Secretary, Motor Legislation Committee), Superintendent Thomas Claro (Traffic Department, New Scotland Yard), Mr. Stenson Cooke (Secretary, Automobile Association), Mr. Edwin C. Cox, C.B.E., M.V.O., Colonel R. E. Crompton, C.B., R.E., Mr. A. D. Currie, M.C., Mr. Ashton Davies, M.B.E., Mr. William Edwards (Chairman, Standing Joint Committee of Mechanical Road Transport Associations), Mr. T. Peirson Frank (Chief Engineer and County Surveyor, London County Council), Mr. E. W. Garnon, F.I.S.A. (Secretary, Motor Agents' Association), Mr. Geo. E. Gilbey (President, Wakefield and District Chamber of Trade), Mr. J. S. Pool Godsell, O.B.E. (Assistant Secretary, Roads Department, Ministry of Transport), Mr. A. Winter Gray (Secretary, Institute of Transport), Mr. E. Graham Guest, M.A., B.Sc., J.P. (President, Scottish C.M.U.A.), Lieut.-Colonel A. Hacking, D.S.O., M.C. (Director, British Manufacturers Section, Society of Motor Manufacturers and Traders), Mr. Rowand Harker, K.C. (Chairman of the Traffic Commissioners, South Eastern Traffic Area), Sir Maxwell Hicks, C.B.E., Mr. Basil H. Joy (Secretary, Institution of Automobile Engineers), Mr. H. L. Kenward (President, Institute of the Motor Trade), Mr. Frank Lanchester (President, Motor Trade Association), Alderman Sir William G. Lobjoit, O.B.E., J.P. (Vice-President, C.M.U.A.), Mr. John M. Logette (Chairman, General Management Committee, Motor Hirers and Coach Services Association), Sir Lynden Macassey, K.B.E., K.C., M.A., LL.D., D.Sc., Lieut.-Colonel D. C. McLagan, D.S.O. (General Secretary, Society of Motor Manufacturers and Traders), Mr. J. Maughfling, Brig.-General Magnus Mowat, C.B.E. (Secretary, Institution of Mechanical Engineers), Mr. L. G. Oldfield, F.C.A. (Secretary, Omnibus Owners' Association), Mr. Alfred C. Osborn (President, Furniture Warehousemen and Removers' Association), Mr. James B. Osler, O.B.E. (Chairman, Electric Vehicle Committee of Great Britain), Mr. Frank Pick, LL.B. (Chairman, Omnibus Owners' Association), Sir Henry H. Piggott, K.B.E., C.B. (Deputy Secretary, Ministry of Transport), Mr. Henry Riches, O.B.E. (Chairman of the Traffic Commissioners, Northern Traffic Area), Mr. G. E. Robinson, M.C., LL.D. (Traffic Commissioner for the Metropolitan Traffic Area), Lieut.-Colonel A. G. Scammell, D.S.O., Mr. Geo. J. Shave (Vice-Chairman, C.M.U.A.), Mr. W. R. Shephard, Mr. Edward S. Shrapnell-Smith, C.B.E. (Past-President, C.M.U.A.), Mr. P. G. Somerville (Secretary, National Benzole Association), Mr. John H. Stirk, J.P. (Chairman of the Traffic Commissioners, East Midland Area), Mr. Tom Thornycroft, Mr. J. H. Turner (President, Metropolitan and Home Counties Road Transport Contractors' Association), Mr. P. R. Turner (President, London Cartage and Haulage Contractors' Association), Mr. A. J. Wells, Mr. J. Woodman-Smith, B.A. (Clerk to the Worshipful Company of Carmen), Alderman Frank H. Wort, J.P. (Vice-Chairman, C.M.U.A.) and Mr. George M. Young, B.Sc. (Chairman, Commercial Vehicle Section, Society of Motor Manufacturers and Traders).

**THE PRESIDENT** read the following loyal message which had been sent to His Majesty The King:—

"Members and guests of the Commercial Motor Users' Association of which organisation Your Majesty has been Patron since 1920, now assembled at the Annual Luncheon of the Association, present their humble and loyal duty, and thank Your Majesty for the gracious interest which Your Majesty has at all times taken in the progress of the road transport industry."

The following reply from His Majesty The King was received:—

"Please convey to the members and guests of the Commercial Motor Users' Association His Majesty's sincere thanks for their message of loyalty." (Applause.)

**Mr. GEO. MONRO, C.B.E., M.Inst.T.** (Immediate Past-President of the C.M.U.A.), proposed the toast of "His Majesty's Ministers." He said he was not sure whether he ought not to attach to it a vote of sympathy with the Ministers of the Crown in view of the extremely difficult times they had to face. At home, trade and unemployment was causing a great deal of anxiety. It was difficult to provide the necessities of life for the unemployed man without taking from him some of the desire to work which they knew was in the heart of the British workman. The warning given by the Chancellor of the Exchequer a few weeks ago with regard to the danger of increasing the heavy taxation on industry, was a welcome reminder that we must cut out coat according to our cloth. Might they hope also that the spirit of compromise would prevail and so avoid the damage always done by strikes.

He congratulated the Government on the assistance they had given in bringing two great nations into the naval pact which gave renewed hope of the continuance of peace in our time. (Loud applause.)

They were delighted to have with them Mr. J. R. Clynes, the Home Secretary, Mr. Herbert Morrison, the Minister of Transport, and Mr. Ben Smith, the Treasurer of His Majesty's Household, together with a considerable number of permanent officials of Government Departments. He thought that Mr. Morrison had had perhaps the happiest time of any Minister, judging by the smile that was always on his face, and he would like to think that the smile was caused by the easiness of his work owing to the assistance which the C.M.U.A. and similar bodies had given him, but he was a little afraid that sometimes the smile was caused because the Minister had got the better of an argument. (Laughter.)

THE RT. HON. HERBERT S. MORRISON, P.C., M.P. MINISTER OF TRANSPORT.

The Minister of Transport always did his utmost in any task to which he set his hand. Mr. Morrison had had a big job and had done it well, and they were delighted that the Minister's work received recognition in the New Year's Honours List and they congratulated him and the country, as they congratulated themselves, upon the fact that the importance of transport had been sufficiently recognised that Mr. Morrison had now become a member of the Cabinet. (Loud applause.)

The final report of the Royal Commission on Transport had been published. Whilst the C.M.U.A. and the industry it represented would welcome co-operation between the various forms of transport which would enable all of them,

after eliminating wasteful competition, free to function to the maximum extent, they would be strongly averse to any attempt which might be made either to limit the freedom and development of road transport or to endeavour to harness it to other forms of transport under conditions of subservience. Might they hope that the Government would not deal hastily with such a serious problem, but before taking any action would give consideration to all possible consequences.

If in the course of time the political wheel took another turn and Mr. Morrison turned himself into a permanent official and then attached himself to the Ministry of Transport, he would not only be able to see the good results of his two years hard and very sound work, but he would be able to assist the road transport industry to squash some of the clauses of the Road Traffic Act, with which they did not agree. (Laughter and applause.)

THE RT. HON. SIR ERIC GEDDES, P.C., G.C.B., G.B.E.

**THE RT. HON. HERBERT S. MORRISON, P.C., M.P.** (Minister of Transport) responded.

He thanked Mr. Monro very sincerely on behalf of His Majesty's Government for proposing the toast and the company for the very friendly way in which it had been received. He said he could not promise that if through the turning of the wheel of political fortune we suffered the great misfortune of losing the present Government, that he could attach himself to the Civil Service and continue to run the Ministry of Transport. (Laughter.) Moreover, he did not belong to the Civil Service Union, and in any case he could not take a smaller job than that occupied by Sir Cyril Hurcomb, and anybody who tried to replace the Permanent Secretary to the Ministry of Transport would be taking on a big job. (Applause.) As the members of the Commercial Motor Users' Association and other motoring organisations were always good enough to say they were appreciative of the work done by the Minister of Transport, the only thing he could suggest was that they should be determined that when the next election came the Labour Party should be triumphant. If they did that there was a sporting chance that they might retain him as the political representative of their great industry. (Laughter and applause.)

At a time when most industries were suffering severely from the effects of world-wide depression it was a pleasant and refreshing task for a Minister of the Crown to address such a gathering, representative of the great industry of commercial motor transport, whose progress continued from year to year, apparently with undiminshed vigour.

From small beginnings a few years before the War the transport of goods by motor road vehicles had attained immense proportions, each succeeding year showing considerable increases in the numbers of commercial motor vehicles registered.

It was interesting to note that the increase in 1930 had shewn itself entirely in the lighter classes of vehicle, and vehicles over two tons showed a decrease. In addition, vehicles over two tons showed a decrease in the proportion of those fitted with solid tyres.

These tendencies were particularly gratifying as unfortunately the heavier types of goods vehicles, particularly those which were equipped with solid tyres, effected a very considerable wear and tear upon the roads in this country, and although motor users made a considerable contribution to the costs of maintenance and improvement of roads, there was still a very big balance to be found by the general ratepayer. It was therefore desirable to do whatever was possible to reduce road costs without at the same time allowing our magnificent road system to deteriorate.

The problem was he thought, approaching solution. The development of the giant pneumatic tyre in recent years had enabled heavy motor vehicles fitted with those tyres to be economically operated.

The speed limits laid down in the First Schedule to the Road Traffic Act gave an effective preference to pneumatic tyred vehicles.

In addition to the inducements of lower taxation and higher speed limits, operators had found that the use of pneumatic tyres prolonged considerably the life of their vehicles. The change over from solid tyres to pneumatic tyres, except in the case of locomotives, tractors and certain special goods vehicles, could in his opinion now be made compulsory without inflicting any injustice upon the trade.

He had recently made the Motor Vehicles (Construction and Use) Regulations, 1931. These Regulations covered the whole field of the construction of motor vehicles but an important feature was the provision that, with certain exceptions, all new motor cars and heavy motor cars put on the road on or after the 1st January, 1933, should be equipped with pneumatic tyres, and that all motor cars and heavy motor cars with certain specified exceptions should by the 1st January, 1940, be equipped with pneumatic tyres.

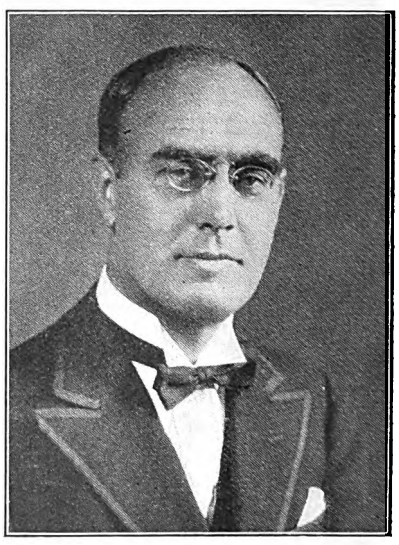
The new Regulations also provided that by the 1st January, 1933, locomotives and tractors, with certain exceptions, must be fitted with resilient tyres (not necessarily pneumatics).

With regard to the Road Traffic Act, the worst of the road transport industry was that what they were perfectly sure they were right in doing to-day they could be equally sure they were wrong in doing to-morrow, and it was one of the glories of the Ministry in connection with the Act, that they were elastic and adaptable and could always to-morrow undo the damage they did to-day. (Loud laughter.) If it could be shown that any Regulation was not working successfully they need never feel that his personal dignity would be offended—he would alter it. (Loud laughter.)

It might be thought that the Regulations came out of the heads of the Civil Servants, usually known as the bureaucracy, at the Ministry of Transport, but the commercial motor users had had a real hand in the making of the Regulations and he regarded gentlemen like Mr. Bristow, the able General Secretary of the C.M.U.A., and other representatives of their Association as, in a sense, outside unattached Civil Servants—he hoped they were honoured by the comparison. (Laughter.)

He wished to express his thanks for the assistance which they had rendered in the drafting of the regulations. The advice and criticism of representative organisations such as theirs had been invaluable in ensuring that the regulations were made only after full consideration had been given to the difficulties and pitfalls which abounded in the motor transport industry.

Might he also refer to the fact that a former member of the Council of the C.M.U.A. was present that day in another capacity, Mr. J. H. Stirk, who was now Chairman of the Traffic Commissioners for the East Midland Area. (Loud applause.) The Ministry of Transport was very glad to welcome Mr. Stirk into the service of the community. (Applause.)



MR. F. G. BRISTOW, F.C.I.S., GENERAL SECRETARY, C.M.U.A.

The final report of the Royal Commission on Transport dealing with the co-ordination and development of transport, raised questions of policy of first class importance and would receive the most careful consideration of His Majesty's Government. The field of enquiry covered by the final report was of such vital importance to the various transport interests as to render undesirable anything in the nature of hasty action.

The grave state of disorganisation which the evidence before the Commission revealed as existing in the road haulage section of the industry would necessitate considerable weight being attached to the recommendation of the Commission that some system of control by licensing should be introduced. The arguments put forward by the C.M.U.A. against further control must, however, be borne in mind.

He could not be the Minister of any particular form of transport. All forms of transport were his children in the political sense and he must love them all, and think of the problem as a whole.

Digitized by Google

He liked the atmosphere of the motor industry—it was progressive—it was not a stick in the mud. He could not stand anybody who was stuck in the mud and standing still. One could not stand still either in industry or in politics, and anybody who tried to would be run over, and they deserved it. (Laughter.)

He wanted them to regard the Ministry of Transport not as an official, rigid, red tape State department, but as an Institution that existed to serve and to do for industry those things that industry could not do for itself. They should regard those at the Ministry as friends—not as people outside, but inside the industry. They should think of him not as a politician but as a transport man for nearly all his jobs were business, not politics, and had to be settled by common sense, and then their relations in the future, he believed would be as pleasant, cordial and helpful as they had been in the past. (Loud applause.)

The Association.

**THE RT. HON. SIR ERIC GEDDES, P.C., G.C.B., G.B.E.,** proposed the toast of the Association.

He said that the Commercial Motor Users' Association was now approaching its 30th birthday, and had steadily grown in strength, scope and usefulness during the last 28 years.

During the first year of its life its Members owned less than 300 vehicles. To-day, they owned more than 100,000 motor vehicles. The Membership included great haulage contractors, omnibus and coach proprietors, and traders who owned their own lorries and vans, but it was to him rather significant that whereas in 1903, there were less than 1,000 motor vehicles on the highways, there were to-day 400,000, and knowing as he did the live activities of the C.M.U.A., he felt that there was ahead of them a great educative work to bring into their Organisation a large number of the owners of the 300,000 vehicles not represented by the C.M.U.A. It was so clearly in their interest to join the Association that he hoped to see their Membership much increased.

The C.M.U.A. ranked as one of the most active Trade Associations of this Country and represented one of the very newest of our commercial activities, and honoured as it was by the patronage of His Majesty the King, it should appeal to every qualified owner of Commercial Motor vehicles.

Penal Taxation and Restrictions.

It was one of the most amazing things in industrial life to-day, that the great industry of commercial road traction in common with its twin brother, non-commercial road traction, should appear to have been singled out for penal taxation and restrictions by Parliament. Apparently, great benefactor as it was, and great aid to Industry, it was the butt and the target of every successive Government. He doubted whether history could show any Industry which had been so badly treated by the Legislators of the Country.

When last he was their guest and speaking as an Ex-Minister of Transport, he drew attention to a pledge which he gave with Cabinet authority, to the effect that if the proceeds of the special tax on motor transport gave a yield in excess of the specific requirements for which that tax was levied, the industry as a whole could look to a diminution of taxation. That pledge had not been kept, and no one party was blameless in the matter. The motor industry being a new and active industry without hampering tradition, and with modern-minded control, had appeared in the hard times through which this Country was passing, as an Industry of outstanding prosperity and had therefore been very attractive to the gentlemen who devised means of placing the burden of excessive taxation upon the shoulders which they considered capable of bearing it.

Road Transport, had in addition suffered from two arguments which could be used against it in favour of increased taxation. The roads had to be largely rebuilt, and new methods of maintenance had to be adopted. Road Transport was competing with Railways, and the argument was advanced that it was unfair competition because Road Transport got its permanent way free.

He saw that the Royal Commission on Transport in its final report, deprecated raids on the Road Fund, and said that they presented no redeeming feature. With that, they would all agree.

How penal the taxation had become was shown by some figures which he asked their excellent General Secretary to prepare for him.

A Crushing Burden.

The motor vehicle tax and petrol tax was equivalent to 13.5 per cent. on the operating cost of vehicles—11.5 per cent. on the total cost of the business and 45.5 per cent. upon wages paid in the business. When they considered that this was special taxation levied over and above the ordinary Imperial and local taxation, it was truly penal. Since 1926, and estimating only for the year 1930-31, but taking actuals for the previous years, no less than £83,800,000 had been taken out of motor taxation into the general finance of the Country, and not devoted to road purposes.

It would appear almost as if successive Governments had determined to kill commercial motor users in this country.

With the crushing burden of special taxation on the Industry, could the charge now be levied against them that the motor vehicle did not pay for its permanent way? The total taxation of a special kind in the year 1929-30, was £42,800,000, or 71 per cent. of the total estimated road expenditure. The estimated total road expenditure was £60,000,000. That £60,000,000 was a very interesting figure when they compared it with railroads. There were roughly 26,000 miles of first class roads in the Country in 1929-30, and the length of railroad in the Country, i.e., route miles, was 20,000 miles. In the case of roads, he was not including second class and unclassified roads, and in the case of railroads, he was not taking into account lengths of sidings or double track.

The total cost of the track of railroads in 1930, was about £800,000,000 but this included the cost of stations, bridges and signalling. The maintenance cost of the track was about £12,000,000 but the maintenance cost of the capital works included in the £800,000,000 was £22,000,000.

If from the £60,000,000 spent on roads in 1929-30 they made an arbitrary deduction of £12,000,000 to equate the railroad track maintenance charge, they had £48,000,000 left which capitalised on a 5 per cent. basis again represented a capital expenditure of £960,000,000 against the railway companies £800,000,000.

He agreed that they were very rough and ready figures, but they were sufficiently significant to enable them to make the claim that at any rate, road users of all classes, were now paying so very substantially that the charge that they got free permanent way was no longer justified; and of course they contributed as rate-payers in addition to their enormous special contribution of nearly £43,000,000 a year as motor vehicle owners. They also contributed in taxation, income tax and indirect taxation with the rest of the community.

He repeated that he could find no parallel to such penal taxation against any industry, a taxation which had been imposed upon them, he ventured to think, without realisation of its severity.

It was not only in taxation that they seemed to be singled out for obstructive legislation and regulations. None of them could object to vehicles being debarred from using roads, where the safety of bridges and similar objections would arise, but that His Majesty's subjects using roads for which they paid to such an overwhelming extent, should be debarred from using those roads in common with their fellow subjects appeared to him to be going far further than was reasonable and fair. He referred to certain areas in great cities being closed to motor vehicles of a particular stamp or activity.

However, just as the motor road transport industry had overcome every handicap which had been imposed against it, and stood up against every burden which had been placed upon it, so he felt sure that it would emerge triumphant in the end, or perhaps he should say continue in its triumphant progress.

He had been asked to couple the name of the President of their Association, with the toast. Mr. Gosselin's name was one which had been for a quarter of a century so closely associated with the development of the road motor industry, that to mention one was almost to mention the other. Their President had been an Office bearer since 1913, in connection with the C.M.U.A., and he was a Vice-President of the International Federation of Commercial Motor Users. Mr. Gosselin had given unstintingly of his time, experience and ability to the interests of the members of the Association, and he felt sure that everyone present would delight with him that they should have that opportunity of wishing him well, and of drinking his health. (Loud applause.)

Reply by the President.

**MR. C. le M. GOSSELIN, M.I.A.E., M.Inst.T.,** the President of the Association was enthusiastically received when he rose to respond.

He thanked Sir Eric Geddes for proposing the toast of the Association in such a very striking speech. They realised that the opinions expressed by Sir Eric were backed by an absolutely unique experience, part of which was gained whilst he held one of the highest positions which either State or industry could offer him in the world of transport, a position which he held with great distinction. (Loud applause.)

Those engaged in road transport realised that business opinions were rather at a discount at the moment. The politician had been scolding the business man lately, and had been inclined to tell him that he did not know his business and sometimes gave bad advice. Business men might not be quite the people they used to be—they were now rather poverty-stricken and it was no uncommon thing that when poverty came in at the door love

Digitized by Google

flew out of the window. But sometimes it might be as well if the business man reminded the politician that he too was not always above criticism. Mr. Punch pointed out recently that he noted the politician had been endeavouring to achieve national economy by travelling third-class, but had apparently overlooked the fact that he might have effected further economy had he stayed at home altogether. (Loud laughter.)

Damaging as was the raid on the Road Fund to the road transport industry he was convinced that it had been far more damaging to the reputation of Parliament, and he looked forward to the day when some one would have the courage to repair that damage. (Applause.)

### Vicious Taxation and what it means!

Sir Eric Geddes had given them some striking figures in regard to the viciousness of the present scale of taxation to which the road transport industry was subject. The figure that struck him (Mr. Gosselin), very forcibly was the 45.5 per cent. upon wages paid in the business. That was to say for every pound they paid their workpeople the vehicle owner had to hand to the Chancellor of the Exchequer something like 9s. to 9s. 6d. He doubted whether such taxation had ever been imposed upon any industry in the world. In regard to the textile trade of Lancashire it meant that the road transport industry was taxed to the extent of 1s. 6d. on every ton they carried for that industry, the nature of which necessitated a ton of goods making six journeys between entry at Liverpool as raw material and leaving that port again as the exported finished article. It meant that every ton carried by road in Lancashire for the textile industry had, on the whole, to pay a tax to the Chancellor of the Exchequer of 9s., simply because the cotton trade desired to use that form of transport which they found more beneficial than any other at their disposal.

### Increasing the Cost of Transport.

There were other things looming ahead.

Under the Road Traffic Act with its limitation of the working hours of drivers and other restrictive conditions, there was not the slightest doubt but that the cost of road transport would increase very considerably. Then there was the Final Report of the Royal Commission on Transport containing a suggestion that road vehicles should be limited to a tare weight of four tons, and that vehicles exceeding that weight should be taxed so steeply as to make their use almost a luxury. They must forgive him for again referring to the cotton industry of Lancashire, but that happened to be the county where he lived. The cotton industry used vehicles exceeding four tons tare weight to the extent of considerably over 90 per cent. What would be the effect upon the industry in the way of increased cost if the suggestion of the Royal Commission on Transport was adopted, it was impossible to estimate. There were certain things they knew would happen.

For instance, if in place of two ten-ton vehicles they had to substitute six three-ton vehicles (3-tons would be about the capacity if vehicles were not to exceed four tons), they would have to employ twelve men instead of four to do exactly the same amount of work, the roads would be much more congested, and there would be chaos at the mills. What the position would be at the docks he hesitated to try and picture. Such recommendations as some of those made by the Royal Commission needed to be gone into most carefully. It was only by adopting the very best methods that science could place in the hands of commerce that we, as a nation, could hope to work our way back, and it would be a weary journey, to comparative prosperity to which we all looked forward. (Applause.)

He pleaded with the Government to curb their enthusiasm for trying to make this country fit only for heroes to live in. He thought at one time that he knew something about the Road Traffic Act but to-day he was lost in the maze of regulations and orders, which the Minister of Transport had confessed he was now issuing with such rapidity. The trouble was that in practice many of the Regulations proved to be something very different to what they appeared to be on paper. Only the previous week his firm was hauled before a Magistrate because a certain police constable who inspected one of their certificates of insurance did not trust it too well. With every confidence his Company presented the Certificate to the Stipendiary but he too was inclined to be a disbelieving fellow, and in the result it cost his Company something between £15 and £20 to convince that worthy gentleman that they were really carrying on their business in accordance with the Road Traffic Act, and so far as he could see there was no earthly reason why they should not be put to the same expense every time they happened to come across a police constable who thought fit to question the validity of the certificate of insurance. He was sure the Minister of Transport never intended such a position to arise but as he said, in practice things worked out very differently.

He pleaded with the authorities to show the road transport industry the greatest consideration in the administration of the new Act until its effect had been fully appreciated.

In conclusion the President thanked the guests for their presence, and mentioned particularly His Worship the Mayor of the City of Westminster and his colleagues amongst whom the members of the C.M.U.A. were very proud indeed to feel that they could now number their General Secretary, Mr. F. G. Bristow. (Applause.) If Mr. Bristow served the City of Westminster as well as he had served the C.M.U.A. they would find him a great acquisition to the Board. (Applause.)

He thanked particularly Sir Arthur Stanley for his presence that day. The C.M.U.A. regarded the R.A.C. as their Godfather, and he could only hope that the Godfather was fairly well satisfied with the growth of the child. He extended a very cordial welcome to Mons. Chas. Blum, who was President of the French C.M.U.A. and whom he asked to convey to his members the very best wishes of the British C.M.U.A.

If during his term of office as President of the C.M.U.A. concluded Mr. Gosselin, he had been fortunate enough not to make any extravagant mistakes it was due to the careful watch kept over him by their General Secretary, Mr. F. G. Bristow, whose watchfulness had never been relaxed. Also, he thanked his colleagues the Immediate Past-President, Mr. Monro, and their President elect Major-General S. S. Long for the valuable help and assistance they had rendered to him, and once again he thanked Sir Eric Geddes for the way in which he had proposed the toast. If only the thoughts Sir Eric had conveyed to them would sink into the minds of those responsible for road transport legislation in this country, then the time spent in holding the annual luncheon of the C.M.U.A. would have been well worth while. (Loud applause.)

# Institute of Transport.

## Italian Tour and Congress.

**May 30th to June 14th.**

In view of the satisfactory response to the preliminary announcement made by the Institute of Transport, the tour of inspection of certain Italian transport undertakings and places of transport interest in Italy, arranged by the Institute, will, unless any unforeseen circumstances arise, commence on Saturday, May 30th.

The party will leave Victoria Station, London, on Saturday, May 30th, at 4 p.m., arriving at Como on Sunday, May 31st. On Monday, June 1st, motor coaches will leave Como at 9 a.m. and proceed via the Auto Strada to Milan where the proceedings will probably include discussion of a paper by Signor Marco Semenza, a member of the Institute. There will be a tour of the City and inspections of the new Railway Station, the North Milan Railway electrification, and the works of the Milan Tramways.

The party will leave Milan at 1.35 p.m. on June 2nd, arriving in Venice the same evening. Wednesday, June 3rd, will be spent at Venice, when there will be optional morning visits to places of interest and an opportunity given for a tour by gondola. Leaving Venice at 9.40 a.m. on Thursday, June 4th, Florence will be reached at 4.31 p.m. the same day. Friday, June 5th, will be spent in touring Florence and on Saturday, June 6th, at 1.35 p.m. the party will leave Florence for Rome which City will be reached at 7 p.m. Sunday, Monday and Tuesday, June 7th-9th, will be spent in Rome where a paper will probably be discussed, and there will be visits paid to places of transport interest and sight-seeing tours will be arranged.

Rome will be left at 9.40 p.m. on Wednesday, June 10th, the party arriving at Genoa on Thursday morning June 11th. A visit will probably be paid to the Port of Genoa, and then on Friday, June 12th, the company will move on to Turin which place will be reached at 2.15 p.m. On Saturday, June 13th, the Fiat Motor Works at Turin will be visited and at 6.40 p.m. the party will leave Turin arriving in Paris at 9.15 a.m. on Sunday, June 14th. Three-quarters of an hour later the party will leave for home arriving at Victoria at 5.15 p.m. on Sunday, June 14th.

The above are the provisional arrangements and complete details will be issued later.

Further details may be obtained from Mr. A. Winter Gray, Secretary, Institute of Transport, 15, Savoy Street, London, W.C.2.

# The Worshipful Company of Carmen.

## Livery Dinner.

A dinner of the Livery of the Worshipful Company of Carmen was held on Thursday, March 12th last at Carpenters Hall to meet the Lord Mayor of London (Sir W. Phené Neal) and the Sheriffs, Mr. Alderman Maurice Jenks and Mr. Deputy D. G. Collins.

Amongst other distinguished guests were:—

Mr. Herbert Morrison, M.P. (Minister of Transport), Mr. Ben Smith, M.P. (Treasurer of H.M. Household), Sir Herbert Walker, K.C.B. (General Manager, Southern Railway), Mr. C. le M. Gosselin (President of the Commercial Motor Users' Association), Sir Gervaise S. C. Rentoul, K.C., M.P., Mr. H. C. Rickett (High Sheriff of Surrey), Mr. Alderman H. E. A. Twyford, J.P., Sir Stanley Machin, J.P., and Mr. F. H. Willis (Secretary, Southern Railway).

The Master (Mr. G. H. Lloyd), presided, and was supported by Mr. E. E. Coxhead, Senior Warden, Mr. W. Austin Balls, Junior Warden, and the Clerk, Mr. J. Woodman-Smith.

Amongst the members present were Mr. George Lavington, C.C. (Past Master), Mr. H. A. Jager (Past Master), Mr. G. F. Hedge, O.B.E. (Past Master), Mr. H. A. Easton, C.C. (Past Master), Alderman Sir William Burton, J.P. (Assistant), Mr. F. J. C. Pollitzer, C.C. (Assistant), Major Sir William Coxon, C.C. (Assistant), Mr. H. W. Carter (Assistant), Mr. A. J. Laker (Assistant), Mr. C. J. H. McRea, C.C. (Assistant), Sir Arthur Holmes, K.B.E., C.C. (Assistant), Mr. V. H. Parker (Assistant).

Following the dinner, the loving cup was passed round and during this proceeding the entire company joined in singing three well-known and appropriate songs.

The Master then proposed the usual loyal toasts. These were received with the enthusiasm which is a feature of all Civic gatherings.

MR. G. H. LLOYD,
MASTER,
THE WORSHIPFUL COMPANY
OF CARMEN.

### The Civic Toast.

This was proposed by Mr. Ben Smith, Treasurer of H.M. Household, who paid a fine tribute to the work of the Corporation of London. If, he said, the City was feudal in its origin, it was democratic in its action. The Lord Mayor, in responding, said that the Corporation was the Mother of all municipalities, and old and unreformed as it was, it was the admiration of the whole world. Its history went back 896 years. In 1276 the Livery of the City chose forty members to represent them for the better protection of the City and its property. The City was democratic and every member of the Common Council of the Corporation went out of office and offered himself for re-election each year. Only the aldermen were elected for life. Mr. Deputy and Sheriff D. George Collins also replied and spoke as a member of the Worshipful Company as well as a Sheriff.

### The Guests.

This toast was proposed in a humorous speech by Mr. C. J. H. McRea, C.C., an Assistant of the Court. After referring to Roman times and mentioning Appius Claudius as a predecessor of the present Minister of Transport, directing the traffic in Watling Street, he gave instances of the early regulations of the Company in connection with traffic control. In a serious vein at the end of his speech he suggested that the Minister of Transport's scheme for traffic co-ordination savoured too much of Government control.

The Minister of Transport (Mr. Herbert Morrison, M.P.), in replying, said that free competition among the various elements that made up the transport industry would not do at the present day. They must realise that an empty seat in a passenger vehicle or a train or cart that carried only 25 per cent. of its full load was not economic. They could not run the transport industry on the basis of everybody doing as he liked and all being free to run each other. He was working for co-ordination and whoever stood in the way would be unlucky They must think in terms of transport as a whole.

Sir Stanley Machin, J.P., also responded.

### The Worshipful Company of Carmen.

This toast was proposed by Sir G. S. C. Rentoul, K.C., M.P. Referring to the Master he said that the name of Lloyd had been in the Livery of the Company for more than 100 years, and at the present time there were four Lloyds members of the Company.

The Master (Mr. G. H. Lloyd), in responding to the toast, mentioned that Mr. Deputy and Sheriff Collins was a member of the Livery and they were all delighted to be able to claim him as one of their number. The Carmen's Company was founded in the reign of Henry VIII and for a time exercised great influence over the craft. About thirty years ago it fell on evil days and almost into a moribund condition, but a revival took place and now it was advancing by leaps and bounds and was in a more flourishing condition than ever before, possessing a Livery of 150.

City companies were very anxious to represent the trades whose names they bore, and they were proud that a very large proportion of their members were engaged in the trade.

In the year 1606 they were associated as a Company with the Woodmongers, whose lineal descendants were the coal merchants of to-day. They had recently added a number of members of the coal trade to their Livery and two had been elected to the Court of Assistants. It was most essential that they should have men of high standing as representatives of their trade, and they were glad to welcome Mr. P. R. Turner, who occupied an important position in the road transport industry, as a new member of the Livery.

In conclusion, the Master said he considered it a great honour that he had been elected to that high position for the second time in his life. The Court of Assistants had now been increased and it was not so likely that a member would be asked to serve as Master a second time.

The health of the Clerk was received most heartily and Mr. Woodman-Smith, in responding, said that the attendance was the largest on record and that the Court would soon have to consider applying for an extension of the Livery.

# Furniture Warehousemen and Removers' Association.

## Annual Conference.

The Annual Conference of the Furniture Warehousemen and Removers' Association will be held at Southsea on Thursday and Friday, May 21st and 22nd.

The following is the Provisional Programme:—

Thursday, May 21st.

Reception by the Lord Mayor at the Guildhall, Portsmouth.

Conference—Annual General Meeting. Morning and afternoon sessions will be held in the Banqueting Room, Guildhall, Portsmouth.

Evening—Dinner and Dance at Messrs. Kimbell's Cafe, Osborne Road, Southsea.

Friday, May 22nd.

Morning—A steamer will leave Southsea and proceed to Southampton, arriving at approximately 11.35 a.m. A visit will be paid to Southampton Docks and the s.s. "Berengaria" will be inspected.

1.30 p.m. Lunch at South Western Hotel, Southampton.

Return by steamer from Southampton at 5.30 p.m.

Members are urged to make this Conference a great success and a cordial invitation is extended to all members to bring their ladies with them.

# Motor Taxation.

## Memorandum to the Chancellor of the Exchequer.

Twenty-one motor organisations, constituting the Conference of Motor Organisations, have presented to the Chancellor of the Exchequer a Memorandum on motor taxation, for consideration in view of the forthcoming Budget. The representative Organisations are:—Royal Automobile Club, Royal Scottish Automobile Club, Automobile Association, Commercial Motor Users' Association (Incorporated), Scottish Commercial Motor Users' Association (Incorporated), Omnibus Owners' Association (Incorporated), National Road Transport Employers Federation (Incorporated), Society of Motor Manufacturers and Traders, Ltd., British Cycle and Motor Cycle Manufacturers and Traders Union, Ltd., Institute of British Carriage and Automobile Manufacturers (Incorporated), Motor Agents' Association, Ltd., Motor Trade Association, Scottish Motor Trade Association, Ltd., Auto-Cycle Union, National Traction Engine Owners' and Users' Association (Incorporated), Agricultural Engineers' Association, Electric Vehicle Committee of Great Britain, Steam Cultivation Development Association, Furniture Warehousemen and Removers' Association, Ltd., Mansion House Association on Railway and Canal Traffic for the United Kingdom (Incorporated), Showmen's Guild of Great Britain and Ireland.

The Memorandum, which is signed by Sir Arthur Stanley, Chairman of the Conference, and Albert E. Cave (Hon. Secretary), is supplementary to that addressed to Mr. Snowden 12 months ago, prior to the introduction of the 1930 Budget. In that Memorandum attention was directed to the national importance of the motor industry and of road transport, and to the evil effects of heavy and special taxation. It was shown that motor taxation was considerably heavier in Great Britain than in important competitive countries, and that the burdens upon British motor transport were restricting the development of the industry.

In the new Memorandum the Conference points out that since last year a decrease in the sales and usage of motor vehicles has taken place. The burden of taxation was a substantial factor in these reactions, which restricted normal expansion of the manufacturing, distributing and service trades, and rendered those trades less able to contribute to national revenue, besides inevitably adding to the volume of unemployment.

The Conference submits that there is an economic limit beyond which the taxation of industry is injurious not only to industry itself, but to the State and the community. That limit has been reached in the case of mechanical road transport.

The road transport tax is a direct tax on the production costs of British-made articles. A commodity worked up from British raw materials in this country, and going through many stages of road transport until it becomes a finished article, is more heavily taxed than an imported article coming from a country where the tax on road transport is lower. As an example of the injurious effects of high taxation on road transport, it is stated that in some British industries, notably the cotton industry, motor taxation imposes the equivalent of a tax of from 10 per cent. to 15 per cent. on the transport cost of the goods on each journey.

It is represented that whilst a substantial reduction in motor taxation might temporarily reduce the annual revenue, any decrease in yield would be more than compensated by increased receipts due to stimulation of new vehicle sales, greater employment in the British motor and allied industries, increased usage of vehicles now unlicensed for one or more quarters, greater sales of second-hand vehicles, and improved export trade, as well as increased national and local revenue from taxes, and from rates on factories, etc.

On the subject of the Horse-Power tax the Conference endorses the view of the British motor manufacturers, that it is the amount of the taxation, rather than the method, which precludes it from suggesting any alteration in Horse-Power formula. Designers should not be influenced by artificial considerations in the design and production of motor vehicles.

The Conference directs attention to a number of important points bearing on the situation. Amongst these are:—

No less than 47 per cent. of motor taxation, or £19,900,000, was taken by the Exchequer during 1929-30 for purposes other than roads. The total motor taxation for that year was £42,400,000.

It is estimated that the total number of persons directly or indirectly employed in the motor industry and road transport and allied industries approximates to 1,000,000. In the Government Statement on Unemployment, 1930, it is stated that a commonly accepted basis is that £1,000,000 provides work for one year for 4,000 men, and on this basis a decrease in taxation on mechanical road transport would be converted into increased employment more than once on such a scale.

In the four quarters of 1930 the total number of licences not renewed for a quarterly period represented 500,000 cars and 600,000 motor cycles. Since 1926 annual and part year licences of cars increased by only 29 per cent., whilst quarterly licences increased by 145 per cent. The Conference represents that high taxation is the main reason why cars are taken out of use in increasing numbers. In this connection the figures relating to quarterly licences are highly significant. Lower taxation would encourage all-the-year-round usage, which would result in greater revenue from vehicle taxation and petrol duty, and more business and employment for the motor service trades.

It is the view of the Conference that, given fair conditions, there is every reason to anticipate that the British motor industry will become one of the great staple industries of the country, and will take the place of, or supplement, other staple industries whose revival is problematical. But the Conference is quite definitely of the opinion that such development is already retarded by over-taxation. A long and wide view of the situation is urged if the prosperity of the motor industry is to be maintained, and it is indicated that a substantial reduction in taxation would be the best means of attaining that desirable object.

# Meat Transport Problems.

Why it has not been possible to employ refrigerating plant in motor lorries engaged in the transport of meat and fish, was explained by Mr. F. H. Paul, M.I.A.E., A.M.I.M.E., of Messrs. Garlick, Burrell and Edwards, Ltd., motor haulage contractors of Liverpool, in an address he gave to one of the local technical associations last month.

Extensive experiments he said had been carried out by the road transport companies to evolve improved types of meat and fish vans. A few years ago endeavours were made to produce an efficient ammonia plant working in conjunction with a large refrigerator van for fish transport, but unfortunately this was far from a success. The van was constructed with the usual cork lining and then this was covered with white tiles, in order to give it a clean appearance. The usual piping was installed and a freezer worked off the main engine. The disadvantage of this system was that in order to reduce the temperature of the van, and owing to the small capacity of the freezer, the lorry engine had to be run for some hours before the interior was in anything like a reasonable temperature and then when the van was placed in position for the loading and long before the load was installed, the internal temperature had risen to normal. One could easily see that this method was very unsatisfactory. Even if the vehicle system could have been coupled up with the large store installation and the temperatures reduced before loading, it was not possible to retain same during the loading process. Another great disadvantage of this system was the fact that owing to the bad state of some roads and also the camber of others, pipe joints were continually breaking and leaking, and this caused damage to the commodities carried. Coupled with this, was also the problem of the immense amount of water to be carried for cooling purposes and unless an air cooled condenser was used, made on the line of motor car radiators, the system would be of very great weight. In any case, cooling by air is never so effective as by water.

This refrigerator van body fitted with a freezer plant, weighed in all well over three tons, and the most one could carry in same was roughly three tons of goods. The construction of a double compartment was also considered, in order to retain the temperatures, but one could easily see that the whole thing resolved itself into a refrigerator plant with no capacity for carrying goods, which, after all, is the sole purpose for which transport is worked. Had this been successful, it was intended to adopt same on a larger principle for the carrying of fish from such ports as Hull and Grimsby to the large industrial centres of England.

Mr. Paul replying to the points raised in the discussion, said he agreed that carriers were not warranted in installing costly mechanical contrivances in insulated road hauled vans. At the present time when goods had to be conveyed for next to nothing one could not afford to introduce frills into road transport. There was a move by the Minister of Transport to restrict all road locomotives to four tons unladen weight, otherwise there would be a prohibitive tax on them. Loads of twelve tons were now carried by road, eight tons being on the rear axle and four tons on the front axle. In the unladen weight had to be included an insulated lift van probably weighing 35 cwts. but more likely two tons. With such a restriction on the unladen weight of the vehicle what was there left for a paying load? It would certainly be impossible to carry extras. In unladen weight the Ministry was endeavouring to include the van because, they argued, that was used to carry the load.

# London Cartage and Haulage Contractors' Association.

## Annual General Meeting.

The Annual General Meeting of the London Cartage and Haulage Contractors' Association was held at the offices of The Rubber Growers' Association, 2, Idol Lane, Eastcheap, London, on March 31st last.

The President of the Association, **MR. PHILIP R. TURNER, M.Inst.T.**, presided.

The Minutes of the last Annual General Meeting, as well as those of an Extraordinary General Meeting, held on December 15th last, were taken as read and signed.

The Balance Sheet for the year ended December 31st, 1930, was placed before the meeting and passed unanimously. The accounts showed a good surplus of income over expenditure.

MR. PHILIP R. TURNER, M.INST.T., PRESIDENT.

### The President Reviews the Year's Work.

**MR. PHILIP R. TURNER, M.Inst.T.**, the President, was received with applause upon rising to review the work done during the past year. He said:

Gentlemen, — I think it is not necessary for me in making my annual report to you, to go into the amount of detail which it has been my custom to do in past years, in view of the fact that as recently as December last we held an extraordinary general meeting when I dealt fully with the provisions of the Road Traffic Act and the Regulations which the Minister of Transport proposed to make under that Act. Therefore, I propose to deal only with one or two points which at the time when I last addressed you had not been definitely decided upon.

I think that perhaps no one will disagree with me when I say that the past year has been very bad from the point of view of trade. There has been an appalling slump in trade throughout the world, and its effect must be felt by practically everybody. The depression is universal and it must be obvious to all that only a very few can hope to escape the effects of it.

### The Burden of Taxation.

In this country we have suffered and are suffering from the excessive weight of taxation. You and I have said this until we are almost tired of repeating it, but it does not alter the fact and I do not think it can be too strongly stressed. We have had what I think I might call a disease of politicians. We have people who have their own little political axe to grind and one restriction after another is imposed upon us which hampers and hinders us in our struggle for existence.

While one would think that it is of the utmost importance that national expenditure should be cut down in order that the burden of taxation could be eased, one finds that apparently little attention is paid to this all important matter, and it seems to me that the trend of events in the House of Commons has been merely to endeavour to improve conditions by one means or another without paying due regard as to how the Bill is going to be met.

### Limitation of Drivers' Hours.

So we find that under the Road Traffic Act there is imposed upon us a clause under the guise of a measure to provide a certain amount of protection for the public but which is in fact a clause which definitely restricts the hours a man may work in our industry. As you know, the Association has given much thought and attention to this section of the Act. It was felt that the clause would seriously impede the growth of our industry. With some twenty kindred associations and the trades unions we have taken part in discussions at the Ministry of Transport in an endeavour to get some variation of section 19. They were lengthy conferences, and at times the difference of opinion between the trades unions and ourselves was very wide, but eventually we did come to a tentative agreement, the terms of which I think are known to you all. Put briefly, we were going to ask for an eight-hour working period to replace the five and a half hours limitation laid down by the section, provided a man was not employed for more than eight hours in a day. Further, we asked that the limit of eleven hours of driving per day should be increased to twelve. If we succeeded in getting this we were prepared to agree to a reduction to five hours of the five and a half hours and to increase the rest period from ten hours to ten and a half hours.

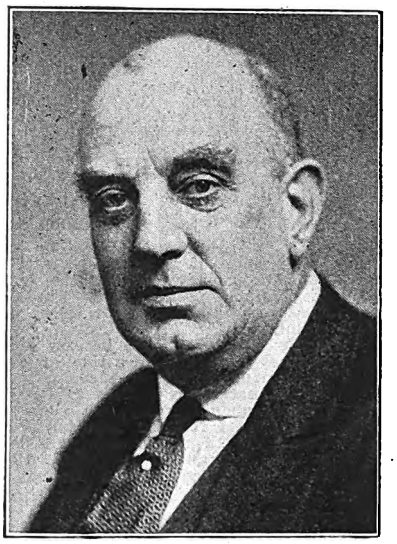
Last Tuesday the matter came before the Industrial Court. Our proposals were strenuously opposed by the Railway Staff Conference and by the National Union of Railwaymen. The railways made it quite clear that they did not wish any latitude of any description to be given to us. As a result of the application to the Industrial Court, and I think rather because of certain unfortunate interjections that were made, we now have a regulation which is not at all to our liking. I should like to say that the employers case was stated by Mr. W. Edwards, the President of the National Road Transport Employers' Federation, and he stated it extremely well. (Applause.) I think that if others on the employers side had been content and had let their case rest upon what Mr. Edwards had to say we should have had a different regulation to the one we have to-day.

The Minister of Transport has now issued a regulation which reads as follows:—

**Variation of Provisions of Section 19 so far as it relates to motor vehicles referred to in Section 19 (1) (b) and (c) of the Act (Locomotives, Tractors and Goods Carrying Vehicles).**

In the case of heavy locomotives, light locomotives, motor tractors and motor vehicles constructed to carry goods other than the effects of passengers.

(a) Paragraph (i) of sub-section (1) of Section 19 of the Act shall be varied so as to provide that where in any period of 24 hours one period of duty only is worked not exceeding 8 hours in length then the limit of 8 hours may be substituted for the limit of 5½ hours imposed by the said paragraph in respect of a continuous period of driving if the driver of the vehicle is allowed intervals of rest and time for refreshment of not less than 40 minutes in the aggregate, and if one such interval is of not less than 20 minutes to be taken not earlier than 2 hours after the beginning nor later than 5 hours after the beginning of the 8 hours' period of duty: and



MR. J. H. TURNER, WHO REPRESENTS THE ASSOCIATION ON THE LONDON AND HOME COUNTIES TRAFFIC ADVISORY COMMITTEE.

(b) Paragraph (ii) of sub-section (1) of Section 19 of the Act shall be varied so as to provide that where a driver is employed by the week and receives at least one complete day's rest of 24 hours in each week on not more than 2 days in any week the limit of 12 hours may be substituted for the limit of 11 hours imposed by the said paragraph in respect of the aggregate of continuous periods of driving, provided that some part of the said 12 hours is occupied by the driver in waiting or on work in connection with the loading or unloading of the vehicle.

Digitized by Google

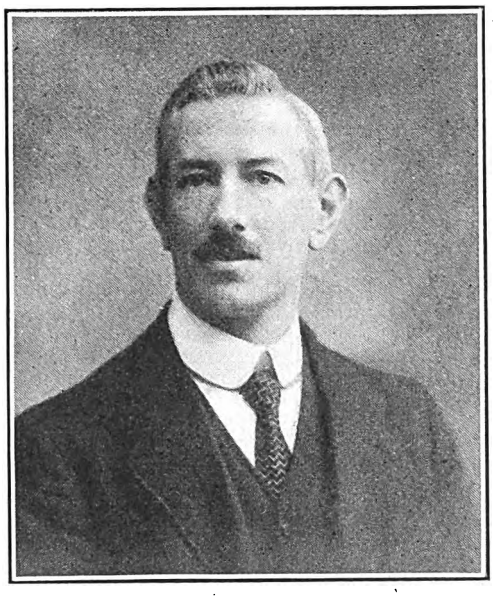
The Order will remain in force unless previously revoked until the 31st day of March, 1933.

In substance, this regulation means that on not more than two days in any week one additional hour may be worked, that is twelve hours instead of eleven hours, but it contains a proviso that a man shall be a weekly servant and a further proviso, not contained in the Act itself, that a driver should receive one full day's rest of twenty-four hours in each week.

I have no hesitation in saying that this regulation will be no advantage to us whatever. A further conference is being held between the employers organisations and the trades unions a fortnight hence, and this matter will again come up for discussion, but in the meantime you can take it that this regulation is law. The regulations come into force to-morrow, April 1st.

### Motor Taxation.

You will remember that a year ago I referred to a memorandum on motor taxation which a conference of motor organisations representing twenty-one kindred organisations had forwarded to the Chancellor of the Exchequer on the question of motor taxation. On February 13th last I attended a conference of these motor organisations which cover practically the whole of the industry, when the advisability of again approaching the Chancellor was under consideration. But it so happened that a day or two previously in the House of Commons the Chancellor in dealing with National economy made a rather important statement. He said:



MR. R. P. BAILEY,
SECRETARY.

**"In spite of what I have said now, having pointed out the difficulties, I say with all the seriousness I can command that the national position is so grave that drastic and disagreeable measures will have to be taken if Budget equilibrium is to be maintained and if industrial progress is to be made. An expenditure which may be easy and tolerable in prosperous times becomes intolerable in a time of grave industrial depression. The right hon. Gentleman made a quotation from my last Budget speech that I was anxious to avoid the imposition of any further imposts upon industry. In view of the deeper depression since that time, I feel the importance of that statement to-day more than I did 12 months ago. I believe, if I may put it so bluntly as this, that an increase of taxation in present conditions which fell on industry would be the last straw."**

In view of this it was felt that it would be better not to approach him by deputation but to send in a further memorandum.

This memorandum shows that in the year 1929/30 the total motor taxation—motor vehicle taxation and petrol duty—amounted to no less than £42,400,000, of which sum £19,900,000 were diverted to purposes other than roads, £15,000,000 was applied to derating and £4,900,000 was retained by the Exchequer for general purposes. It seems a monstrous injustice that no less than 47 per cent. of a tax which was originally earmarked for the definite purpose of road construction and maintenance should have been diverted to general taxation. This is in fact a sumptuary tax on transport which has been very strongly condemned by the Royal Commission on Transport.

### Truly Penal Taxation.

Here I should like to emphasise a few figures which were given by Sir Eric Geddes, the first Minister of Transport, at a luncheon held in London recently. Sir Eric said:

**"When last I was your guest and speaking as an Ex-Minister of Transport, I drew attention to a pledge which I gave with Cabinet authority, to the effect that if the proceeds of the special tax on Motor Transport gave a yield in excess of the specific requirements for which that tax was levied, the Industry as a whole could look to a diminution of taxation."**

Sir Eric Geddes went on to say:

**"I see that the Royal Commission on Transport in its final report, deprecates raids on the Road Fund, and says that they present no redeeming feature. With that, we will all agree. The Report of the Royal Commission on Road Transport appears to me, however, to be like the Curate's egg, good only in parts . . . The Motor Vehicle Tax and Petrol Tax is equivalent to 13.5 per cent. on the operating cost of vehicles—11.5 per cent. on the total cost of the business and 45.5 per cent. upon wages paid in the business. When we consider that this is special taxation levied over and above the ordinary Imperial and local taxation, it is truly penal. Since 1926, and estimating only for the year 1930-1931, but taking actuals for the previous years, no less than £83,800,000 has been taken out of Motor Taxation into the general finance of the Country, and not devoted to Road purposes. It would appear almost as if successive Governments had determined to kill Commercial Motor users in this country. With the crushing burden of special taxation on this Industry, of which I and my interests are a component part, can the charge now be levied against us that the Motor vehicle does not pay for its permanent way? The total taxation of a special kind in the year 1929-1930 was £42,800,000 or 71 per cent. of the total estimated road expenditure."**

These figures, I think you will agree, speak for themselves.

There are one or two other matters I want to refer to: You will remember that I have already reported to you that we objected very strongly to the regulation the Minister proposed to make that a four-wheeled vehicle should be limited to a maximum weight of twelve tons. In spite of the fact that the strongest representations were made against it, the Regulation has now been made. We have since approached the Minister again and have pressed the point that a four-wheeler should be allowed a maximum weight of fourteen tons in the case of existing steam wagons. On our visit to the Minister we had with us representatives of the Mining Association and the Society of Motor Manufacturers and Traders and I think that the Minister was impressed with the case we were able to put before him. We pointed out that there are some 9,000 to 10,000 of these vehicles on the road and that they consume annually about 1,500,000 tons of British coal in the getting of which about 4,000 men are employed. As a result of that deputation we hope that the Minister will make some concession with regard to existing vehicles.

Another matter upon which I was not able to report finally when we last met is that relating to the articulated vehicle. I am now able to report that we have been successful in getting the second man dispensed with but we have only been partially successful in the case of motor tractors. A motor tractor and trailer will require to have two men in attendance unless the tractor is hauling a trailer with an insulated van for carrying meat and then within certain limits.

During the year Mr. J. H. Turner has continued his arduous work on our behalf as our representative on the London and Home Counties Traffic Advisory Committee. (Applause.) I will ask Mr. Turner to speak to you later with regard to one or two matters which are of special importance to members of the Association. We are all deeply indebted to him for the work which he so unselfishly performs on our behalf. (Applause.)

### Final Report of the Royal Commission on Transport.

The last point I wish to refer to is the final report of the Royal Commission on Transport. From our point of view one of the most important points in that report is the definite recommendation to discourage the use of motor vehicles of more than four tons tare. The Commissioners define a road haulier as a person or company who hold themselves out as willing to carry the goods of others for hire or reward, and they recommend that in due course road hauliers should be licensed and placed under a system of licensing to be administered by the Area Traffic Commissioners, and that the Commissioners in considering applications for hauliers licences should have regard only to (a) the fitness of the vehicle; (b) the wages and conditions of service of persons employed in connection therewith. Further, they recommend that Section 93 of the Road Traffic Act providing for the application of the "Fair wages clause" to persons employed in connection with the operation of public service vehicles should be extended to include persons employed in connection with the licensed vehicles of road hauliers. The Commissioners do give us a little grain of comfort as they suggest that the fees for licences issued to road hauliers should be £1 per vehicle. We understand that

Digitized by Google

the Government will not be in a hurry with regard to the final report of the Royal Commission and that nothing will be done with regard to the various recommendations made until they have received most careful consideration.

In conclusion I wish to thank Mr. R. P. Bailey for the very excellent services he has rendered us during the past year. (Applause). I also wish to thank the Council for their very great assistance and for their co-operation with me at all times. (Applause.)

Election of President.

**MR. J. H. TURNER** proposed the re-election of Mr. P. R. Turner as President for the ensuing year. He said that for several years now Mr. Turner had given them most ungrudging service which the members valued most highly, and the brains of their President were badly needed at the present time. He had tried to work out the time their President had devoted to their interests during the past year, and he had ascertained that it approximated between six and seven weeks. Certainly Mr. Turner had attended over fifty conferences during the year and each one had occupied practically a whole day. It was wonderful to think that they had in Mr. P. R. Turner a gentleman who was willing to devote such a large amount of time in their interests. On behalf of the members, as well as on his own behalf, he did assure their President that they valued his services most highly and they asked him to accept the Presidency for another year. Their President had referred at some length to Section 19 of the Road Traffic Act. No one was satisfied with the regulations dealing with the question of drivers hours but members would be quite safe in leaving the matter in the hands of Mr. P. R. Turner. The regulations issued on this point were unworkable and ought not to be made statutory, but having regard to Mr. Turner's sound knowledge obtained in all parts of the country members would be quite safe in his hands. (Applause.)

**MR. D. J. MAILE** seconded the proposition which was carried with enthusiasm.

**MR. PHILIP R. TURNER,** acknowledging his re-election to the Presidential chair, said he felt that the members had honoured him, but perhaps at the present time he had no option but to accept their kind invitation, because matters were in such a state of flux and there were so many questions of importance now happening or likely to happen shortly, that a break in representation would be detrimental to the industry as a whole. He could only say that he very much appreciated the honour conferred on him and he would do his best to discharge his duties as faithfully as possible.

**Election of Vice-Presidents.** The President announced the receipt of a letter from Mr. Herbert Paterson, a Vice-President of the Association, to the effect that as some while ago he resigned his position as Managing Director of his Company he felt the time had arrived when he should give up his Vice-Presidency of the Association, a position he had held for some years past. His long association with the Council and members of the Association, Mr. Paterson continued, had been most pleasant and he would continue to follow with great interest the work done by the Association.

The Meeting accepted Mr. Paterson's resignation with great regret as they realised that it was breaking a very long association with him. It was decided that Mr. R. P. Bailey should write to Mr. Paterson expressing the great regret of the members at his resignation.

**MR. N. F. WENTWORTH** and **MR. F. HOAR** were re-elected Vice-Presidents.

**MR. G. H. LLOYD** was unanimously re-elected Treasurer for the ensuing year.

**Election of Council.** The following gentlemen were re-elected to the Council for the ensuing year:—Mr. H. H. Crow (Crow Carrying Co., Ltd.), Mr. Guy Fairclough, Mr. T. Feast, Mr. W. F. French (United Service Transport), Mr. W. H. Hixson (Metropolitan Transport Supply Co.), Mr. W. H. Kinner (Tingle Jacobs & Co.), Mr. D. J. Maile (R. Cornell, Ltd.), Mr. A. H. Park (Chas. Poulter, Ltd.), Mr. T. B. Pettitt (Pickfords, Ltd.), Mr. A. E. Prior, Mr. G. L. Polkinhorn (Carter, Paterson & Co.), Mr. J. Pollitzer (Beck & Pollitzer), Mr. A. Rickards (Chas. Rickards, Ltd.), Mr. J. Spurling, Mr. J. Sullivan, Mr. L. A. Taylor (Samuel Taylor & Sons, Ltd.), Mr. J. H. Turner, Mr. John Wells (E. Wells & Son, Ltd.).

London Traffic.

**MR. J. H. TURNER,** who represents the Association on the London Traffic Advisory Committee, referred to the attempts made by the Minister of Transport to deal with the congestion of London traffic. He said it was proposed to make regulations to deal with vehicles in Oxford Street by means of light signals as an experiment. The Ministry of Transport had suggested originally that horse vehicles should be totally prohibited from the Oxford Street area, and that no mechanically propelled vehicle which under the Road Traffic Act was not permitted to travel at more than five miles an hour, should be permitted in the area, and, further, that the delivery of goods in the area should be totally prohibited between the hours of twelve noon and seven p.m. Members would readily see what effect such a regulation would have upon the trade of the West End, particularly the enormous trade done between, say, St. Giles Circus and Marble Arch. Although the proposed regulation was viewed with favour by the London and Home Counties Traffic Advisory Committee he had not been content to let it go through unchallenged. In his efforts in this connection he received great assistance from their President and Vice-Presidents whom he met and they discussed the position for three or four hours. He then solicited the sympathy of the Chairman of the Advisory Committee, Sir Henry Maybury, who had at all times been very friendly disposed towards their industry and had been a real friend of the trade, although his task as Chairman of the Committee was naturally a very difficult one. As the result of the efforts that had been made an order would now issue to the effect that horse vehicles would be allowed to deliver goods in the Oxford Street area provided they did not wait for more than ten minutes. Further, mechanical vehicles would be allowed in the area provided they were not restricted to less than eight miles an hour under the Road Traffic Act. Through traffic, not having business to do in the area, would have to use roads not restricted, and he did not think they had cause of complaint under this head. It had been a big fight because it necessitated the rescission of the previous resolution carried by the London Traffic Committee in favour of the original proposals of the Minister.

The London Traffic Committee were doing their best to speed up traffic and to do away with congestion as far as possible. He was afraid that in some quarters the tendency was to try and find cures for congestion without paying due regard to the causes of that congestion. Speaking generally, he thought that much had been achieved by the regulations already made. (Applause.)

The President said how much they were all indebted to Mr. J. H. Turner for the excellent work he had done.

The meeting then terminated.

## Morris Motors, Ltd.

The Annual Meeting of Morris Motors, Ltd., Cowley, Oxford, has been fixed for April 18th, in order that Sir William R. Morris, Bt., who has been abroad attending the British Exhibition in Buenos Aires, may be present to take the Chair. The Report and Statement of Accounts for the year ending December 31st, 1930, show that the net profit on trading and interest received for the year amounted together to £1,303,308 10s. 4d. after making full provision for Depreciation of Assets and all contingencies. The reserve for contingencies amounts to £517,020 18s. 9d., in which there is included a sum of £114,382 8s. 7d., representing the Appreciation arising from the valuation of market value of the Government Securities at the date of the Balance Sheet. The Directors consider that the results of the year are very satisfactory, inasmuch as the trading conditions both at Home and Overseas have been extremely difficult owing to the depressed state of industry. After meeting the Dividends on the Preference Shares and Income Tax, there is a balance of Profit of £820,994 12s. 10d., to which must be added the balance brought forward from last year, £118,753 3s. 4d., and the Profit realised on Investments sold of £9,407 5s. 1d., thus giving a total Profit available for distribution of £949,155 1s. 3d. The Directors propose again to strengthen the position of the Company by writing down still further the Balance Sheet value of the Goodwill, Patent Rights and Trade Marks to £600,000, and by increasing the amount to be carried forward to next year. The Directors consequently recommend that the undivided Profits be dealt with in the following manner:—By payment of a Dividend of 10 per cent., free of Income Tax, on the Ordinary Shares £200,000. By writing down Goodwill, Patents and Trade Marks by the sum of £391,043 4s. 1d. By Transfer to Reserve for Income Tax £100,000. And by carrying forward to next year the balance of £258,111 17s. 2d.

# The "New Era" Truck.

## Visit to Bean Cars, Ltd., Tipton.

On Tuesday, March 31st, a party of "Bean" distributors, dealers and members of the Press visited Tipton, Staffs., at the invitation of the directors of Bean Cars, Ltd., to celebrate the launching of the new all British 20-25 cwt. truck the "New Era." The slogan of the campaign is "Buy Beans and be British."

Mr. P. B. Brown, Chairman of the Company presided at luncheon in which about 100 guests took part. Mr. Brown who is also Deputy-Chairman and Managing director of Hadfields, Ltd., Sheffield, occupies this year the high position of Master Cutler of Sheffield.

After luncheon the Chairman welcomed the guests in a genial and encouraging speech. He then called on Mr. Noel Martin, the managing director to speak.

Mr. Noel Martin in addressing the Company said:—

Our reason for interrupting your business just now is that we want you to see for yourselves what we are doing, to what an advanced stage we have developed the production of our "New Era" Chassis and Truck.

It is no unknown thing for manufacturers, British and otherwise, to announce a new model, get everybody keen, and then, as soon as orders are placed, announce that owing to quite unforeseen circumstances delivery cannot be given for so many weeks, months or years. That is not our way. As you will see to-day, we have 50 chassis or trucks on the floor, ready for delivery, and we are safe in saying that we can deliver 50 chassis and/or trucks per week, from now forward. You need, therefore, not consider our feelings in the least. You can order now, in any reasonable numbers, knowing that you are going to get what you want.

I am pleased to welcome representatives of the Press to this Luncheon. They, like everyone else, have been curious as to the source of the series of "hidden" advertisements which have been appearing for the past few weeks.

This novel, although not new, method of advertising, has not only created a wide interest throughout the Trade, but has also provided the Press with matter for editorial comment.

We all know how helpful the Press can be in such matters as these, and we are very grateful to them for the added publicity they have given us by expressing their curiosity through the medium of their Journals.

Our "New Era" Model is not the cheapest thing of its kind. It is not even the lowest-priced of its kind. But if you want a really honestly, 100 per cent. British truck, want to feel safe about material, as well as design, want to feel safe about workmanship, I don't know where to send you to find something better than our "New Era" Model. We have given it much more of road-testing than has been given to a majority of new models, commercial or otherwise. We have tried in every way to get to the bottom of it, but have failed, because it is a really sound job, every inch of it; and in all the years that I have been interested in motor vehicles I have never seen anything offering sounder value, or more generally attractive.

As most of you know, I have been intimately associated with the launching of one or two motor vehicles made by other Companies, but never have I felt so confident of success as I do now with the "New Era."

It is not going to sell automatically. You know, and I know, that nothing in the World sells itself nowadays. My Board and I appreciate that we could not stir a hand without the energetic, intelligent, loyal co-operation of Bean Dealers, just as much Overseas as at home.

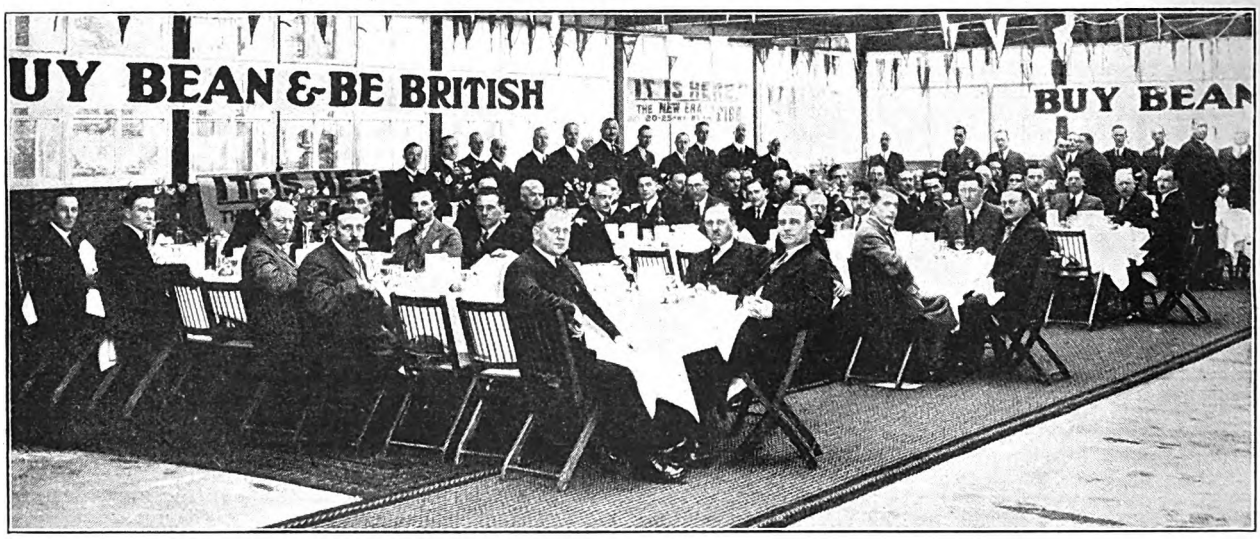
But as we have always endeavoured to treat Bean Dealers in such a fashion as to deserve their loyalty, as well as their energy, we have no misgivings on that score; and, therefore, at a time when so many people are still wasting breath asking one another when the slump is going to end, we are full of fight, full of faith, relying on a good job and sound business policy to make 1931 a much better year than 1930.

That is not asking much, I admit. Things have been very bad, all round: but we have kept pleasantly busy all the while and I can show you in our Sales Department figures and facts suggesting that we have, even with things at their quietest, been much more fortunate than have a majority of British Firms, perhaps because we make so very many of our components (In fact all of them but accessories and tyres), ourselves. We have thus been able to put into our Products a degree of material-quality denied to less fortunate firms, and so our service charges, our after-sales service charges, have been absolutely infinitesimal. We need hardly say that Hadfields steels are used throughout.

This has reacted favourably on our sales, because we all know that no other form of publicity is anything like as valuable as is owner-to-owner, and dealer-to-dealer, recommendation.

When you come to look round, after lunch, you will see how well we are equipped to manufacture under ideal conditions. Drop forgings, stampings, castings, machine shop work—all these things which cost so very much money when they are "put out" are done in our own plant, under our own roof, under our own supervision.

There will be many of you who will notice a great deal of work going through our shops which you will not find in Bean vehicles. We consider it a great compliment that Companies like the "Midland Red" Bus Company place sufficient confidence in our workmanship as to entrust us with the casting and machining of parts for practically all their engines. This might be thought immaterial, irrelevant, but it is not. I regard this business as the greatest possible commendation, not only to our material and experience, but also to our integrity. We try to live up, in every respect to the traditions established by firms like that of Hadfields, Limited (our Associate Company), whose Deputy-Chairman, Mr. Peter B. Brown, we are very glad to have with us to-day. It is also a great honour to have amongst us the Present Master Cutler of Sheffield.



LUNCHEON TO CELEBRATE THE LAUNCHING OF THE "NEW ERA" CAMPAIGN.

Digitized by Google

The party then divided up into groups and under the guidance of members of the staff made a tour of the works. This arrangement enabled all the guests to see at first hand the splendid up-to-date machinery and plant ready for producing the "New Era" truck in large quantities. The tour concluded with a visit to the foundry where castings are made for many well-known Motor and Engineering firms throughout the Country as well as municipal undertakings.

Every effort has been made to launch the new truck with the greatest possible chance of success and we offer to Bean Cars, Ltd., Tipton, Staffs., our best wishes for prosperity with the "New Era."

# The Bean "New Era" 20/25-cwt. Chassis.

The 20/25 cwt. "New Era" chassis just recently placed on the market by Bean Cars, Ltd., of Tipton, near Birmingham, is a substantial business-like production as may be judged from the accompanying photographs. Its price also is attractive being £198 only or, with a truck body and totally enclosed cab, £235, or as a van £250. The following is a brief specification of the chassis:—It has a four-cylinder monobloc engine with detachable cylinder head. Bore and stroke 75 mm. by 130 mm. respectively, developing 40 b.h.p. The crankshaft is carried on three white metal bronze backed bearings. The pistons are aluminium of a special type. Lubrication is by pump submerged in sump. Coil ignition is used with automatic control. The carburetter is the Solex. Cooling is thermo-syphon, fan assisted. The radiator is of the gilled tube type of original and attractive design. Power is transmitted through a single dry plate clutch to a three-speed gear box which is unit with the engine. The gear ratios are 1st, 30.22 to 1; 2nd, 13.13 to 1; top, direct; reverse 30.22 to 1. Transmission from the gear box is through an open type tubular propeller shaft with a universal joint at each end. The rear axle is three-quarter floating with spiral bevel drive. Rear axle ratio is 6.7 to 1. Foot and hand internal expanding brakes operate in rear wheel drums. The wheels are the artillery type fitted with 30 in. by 5 in. tyres. Steering is the worm and sector type and chassis lubrication is by grease gun throughout. The chassis equipment includes a 12-volt five-lamp, lighting set, with large capacity battery; driving mirror and speedometer. A self-starter may be fitted for £7 10s. extra.

# London Transport.

Mr. Herbert Morrison, the Minister of Transport, speaking at the Dinner of the London County Council Tramways Staff in London, on March 28th, said that under Mr. J. K. Bruce and Mr. T. E. Thomas, as General Managers, the efficiency and comfort of the L.C.C. tramways had been vastly improved during recent years, whilst the stations on the Kingsway Subway were now models of cheerfulness, brightness and comfort. Under the London Passenger Transport Bill the Council's tramways, in common with thirteen other local authority tramway undertakings, would pass to the London Passenger Transport Board. This Board would be primarily a business Board and he was being very careful to remove its management from party political influence and from political controversy. He believed that whilst the staffs would regret terminating their old-time associations they would, nevertheless, welcome such a change for they would have the satisfaction of becoming part of the greatest and, he believed, the most efficient local passenger transport system in the whole world.

The London Passenger Transport Board, unlike the Council, would not be restricted in its operating problems to the tube, bus or tramway outlook, but would be able to view the London passenger transport problem as a whole. It would, therefore, be much freer to work out a development policy and would be the first London transport concern which could really look at every traffic problem upon the sheer transport merits of the case. The elimination of wasteful competition would free resources for much needed development of travelling facilities, and, of course, there were great possibilities in the way of the issue of through bookings and tickets which could be available on any of the varied means of transport provided by the Board. He believed that there was a bright future for London passenger transport in the new conditions and that changes, improvements and the development of facilities in the interests of the travelling public which were now impossible would become practicable at last.

# Answers to Inquiries.

Commercial Vehicles.

**Question:**—Can you give us the names and addresses in this country of the Makers or Distributing Agents of the following commercial vehicles:—Berna, Burford, Clyde, Federal, G.M.C., Liberty, Low-Loader, S.L.M. and W. & G.'s. These names are included in The World's Carriers Year Book and Diary, 1931, under the heading of "Industrial Vehicle Chassis for 1931."

**Answer:**—S.L.M.—Modern Wheel Drive, Ltd., 17, Victoria Street, London, S.W.1. Burford—C. H. Gray, H. G. Burford & Co. (1926), Ltd., South Row, North Kensington, London, W.10. G.M.C.—General Motors, Ltd., The Hyde, Hendon, London, N.W.9. Berna—Lawson Pigott Motors, 320, King Street, London, W.6. Low-Loaders—J. M. Roberts, Cathnor Motor Works, Cathnor Road, Shepherd's Bush, London, W.12. Federal—United Motors, Ltd., 23-24, Walnut Tree Walk, Kennington, London, S.E.11. Clyde—Mackay & Jardine, West Cross, Wishaw. Liberty—Automotive Spares, Ltd., 164a, Kings Road, Chelsea, London, S.W. W. & G.—W. & G. Du Cros, Ltd., Acton, London, W.3.

Wanted—Address of Association.

**Question:**—Can you give us the address of the Ballast, Sand and Allied Trades' Association.

**Answer:**—124, Tottenham Court Road, London, W.C.1.

Map of Road Traffic Areas.

**Question:**—Do you know of a map showing the traffic areas under the Road Traffic Act?

**Answer:**—Messrs. Edward Stanford, Ltd., 12, Long Acre, London, W.C., have published such a map. It shows in colours the traffic areas in England, Wales and Scotland created by the Road Traffic Act, each area being clearly defined. The headquarters of the Traffic Commissioners are also marked. The scale is about 23 miles to one inch, and the price for paper copies is 3s. 6d., slightly higher prices being charged for cloth or rollers.

# Limitation of Drivers' Hours.

## Important Order.

Section 19 of the Road Traffic Act, 1930, which limits the time for which drivers of certain vehicles may remain continuously on duty came into force on April 1st.

Under Sub-Section (3) of this Section the Minister of Transport is empowered on the receipt of a joint application from organisations representative of employers and workpeople in the industry and after referring the matter to the Industrial Court for advice, to vary by Order the periods of time prescribed in the Section. In pursuance of these provisions the Minister has made an Order the effect of which is as follows:—

Part I of the Order deals only with public service vehicles (stage carriages, express carriages and contract carriages as defined in the Act). It provides in the case of stage carriages that where one period of duty only in a period of 24 hours is worked not exceeding 8½ hours in length then the limit of 8½ hours may be substituted for the limit of 5½ hours imposed by paragraph (i) of sub-section (1) of the Section in respect of a continuous period of driving if the driver of the vehicle is allowed intervals of time for signing on and off and for looking over the vehicle before the vehicle leaves and after the vehicle returns to the garage and for lay over, to an extent which in the aggregate is not less than 45 minutes provided that where the continuous period of duty does not exceed 8 hours the allowed interval of time need not exceed 40 minutes.

Part I of the Order also provides that paragraph (iii) of sub-section (1) of Section 19 of the Act, shall be varied so as to provide that if between any two periods of driving an express carriage or a contract carriage there is an interval of not less than four consecutive hours at a destination during which the driver of the vehicle is able to obtain rest and refreshment, the period of eight consecutive hours may be substituted for the period of ten consecutive hours of rest on one day in any period of seven consecutive days, or on two days in any period of seven consecutive days if the said period includes a Bank Holiday.

It is further provided in Part I of the Order that the proviso to sub-section (1) of Section 19 of the Act, shall be varied so as to provide that in the case of a stage carriage the period of 8 consecutive hours may on one day in any period of 7 consecutive days be substituted for the period of 9 consecutive hours for rest.

Part II of the Order varies the provisions of the Section so far as it relates to the classes of motor vehicles referred to in sub-section (1) (b) and (c) of the Section, i.e., heavy locomotives, light locomotives, motor tractors, and motor vehicles constructed to carry goods other than the effects of passengers. This Part of the Order varies the provisions of the Section as regards the above mentioned classes of vehicle to the following effect:—

(a) paragraph (i) of sub-section (1) of Section 19 of the Act shall be varied so as to provide that where in any period of 24 hours one period of duty only is worked not exceeding 8 hours in length then the limit of 8 hours may be substituted for the limit of 5½ hours imposed by the said paragraph in respect of a continuous period of driving if the driver of the vehicle is allowed intervals of rest and time for refreshment of not less than 40 minutes in the aggregate, and if one such interval is of not less than 20 minutes to be taken not earlier than 2 hours after the beginning of the 8 hours' period of duty; and

(b) paragraph (ii) of sub-section (i) of Section 19 of the Act shall be varied so as to provide that where a driver is employed by the week and receives at least one complete day's rest of 24 hours in each week on not more than 2 days in any week the limit of 12 hours may be substituted for the limit of 11 hours imposed by the said paragraph in respect of the aggregate of continuous periods of driving, provided that some part of the said 12 hours is occupied by the driver in waiting or on work in connection with the loading or unloading of the vehicle.

The Order is to remain in force unless previously revoked until March 31st, 1933.

* * * *

The above Order was made after application had been made to the Minister of Transport by the Road Traffic Act Conference (Goods Carrying Vehicles), and the Railways Staff Conference and the National Union of Railwaymen for certain variations in the periods of time set forth in the Section, and the Minister referred the matter to the Industrial Court for advice. The Court sat on March 24th, to hear the parties to both applications.

The Road Traffic Act Conference (Goods Carrying Vehicles) is composed of:—*Employers' Associations*: Association of British Chemical Manufacturers, Association of British Chambers of Commerce, Commercial Motor Users' Association, Cotton and Allied Trades Transport Committee, Drapers' Chamber of Trade of the United Kingdom, Electric Vehicle Committee of Great Britain, Federation of Grocers' Associations of the United Kingdom, Furniture, Warehousemen and Removers' Association, Incorporated Association of Retail Distributors, London Employers' Association, Mansion House Association on Railway and Canal Traffic, National Chamber of Trade, National Federation of Fruit and Potato Trades' Association, National Road Transport Employers' Federation, National Traction Engine Owners' and Users' Association, National Union of Mineral Waters Manufacturers' Association, Sausage Manufacturers' Association, Scottish Commercial Motor Users' Association, Showmen's Guild of Great Britain and Ireland, Steam Cultivation Development Association, Traders Traffic Conference, Wholesale Distributors' Association, Wholesale Produce Merchants' Association; *Trade Unions*: Transport and General Workers' Union, North of England Commercial Section of the Transport and General Workers' Union, Liverpool and District Carters' and Motormen's Union.

The Railways Staff Conference is representative of the four amalgamated Railway Companies (namely the London and North Eastern Railway Company, London, Midland and Scottish Railway Company, Great Western Railway Company and Southern Railway Company) and the National Union of Railwaymen.

The Court also had before it proposals for variations of the Section submitted by the following two parties: Party—Employers' Associations, The Amalgamated Horse and Motor Owners' Association, Limited, The Lancashire Federation of Road Transport Associations, The Sheffield Horse and Motor Owners' Association, The Bradford and District Commercial Vehicle Owners' Federation, The Leicestershire and District Horse and Motor Owners' Transport Association; and Party—The United Road Transport Workers' Association of England.

# National Horse Association of Great Britain.

Lieut.-Col. Sir Archibald Weigall, K.C.M.G., took the Chair at a meeting of the Council of the National Horse Association of Great Britain held on March 31st.

The Report of the General Purposes Committee dealt with the proposed ban on horses in Oxford Street, and pointed out that the Association had protested to the Minister of Transport. The Council felt that the restriction would not only be extremely detrimental to the hundreds of firms who still utilise horses for transport but would especially hit the poor trader with slender financial resources. They considered that elimination of horse drawn transport invariably used for the haulage of goods in favour of vehicles largely engaged in pleasure was very detrimental to trade.

It was reported that many accidents had occurred to horses and live stock generally owing to lorries proceeding at night along country roads with inadequate lights. The Secretary was instructed to write to the Minister of Transport and invite him to ask that the Secretary of State for Home Affairs should draw the attention of the County Chief Constables to the fact that at night many lorries travelled at excessive speeds contrary to the regulations for heavy motor vehicles as laid down in the Road Traffic Act, with consequent accidents.

At the Annual General Meeting of the Association Sir Archibald Weigall occupied the Chair and proposed the adoption of the Report of the Council and Statement of Accounts. He remarked that the Association had had a most active year noteworthy by the fact that H.R.H. The Prince of Wales had honoured them with his Patronage. There had also been a large increase in membership.

The Report and Accounts were adopted.

*President for* 1931. The Chairman formally moved the election of Major-Gen. Geoffrey, H. A. White as President of the Association for the ensuing year, which proposal was adopted with acclamation.

*Council.* It was proposed that the following gentlemen should be invited to fill vacancies on the Council, viz., Lord Daresbury, Major Gordon B. Foster, Mr. James Forshaw, Mr. Claud F. Goddard, Lord Middleton, Hon. Alexander Parker, Brig.-Gen. Leslie Romse (Director of Remounts), and Mr. Pocock of Messrs. United Dairies (London), Ltd.

# A Short History of Thomas Tilling, Limited.*

In the history of the London Omnibus two names stand out above all others—Shillibeer and Tilling. Shillibeer, whose pioneer work is so well-known, has long since gone, but in the strongly established Company of Thomas Tilling, Limited, the descendants of Thomas Tilling still take an active part. Tilling started in a very modest way with only £30 capital, but by hard work and honest endeavour built up a business which grew larger and more successful with each succeeding year.

MR. THOMAS TILLING, THE FOUNDER OF THE BUSINESS.

Thomas Tilling was born on February 3rd, 1825. His father, James Tilling, was a descendant of the Tilling family who were prominent farmers in Gloucestershire. The Hendon farm was a very successful one, and to dispose of a portion of the produce James Tilling established shops in the West End of London. From these shops milk was delivered. Hay from the farm was also sold. Before he was 20 years of age Thomas Tilling started on his own account when he purchased a Dairy business at Walworth. This was in 1845. Shortly afterwards he bought a grey mare and a carriage and with this stock-in-trade he founded the transport business of Thomas Tilling. It is well known that when Thomas Tilling had five horses, they all died suddenly. Difficulties such as this, however, only spurred him on, and the horses were replaced so quickly that the business did not suffer. The purchase of new stock left him practically penniless, but sheer will and determination enabled him to carry on. Thoroughly straightforward in every way, Thomas Tilling expected a straight deal from others, and his business was built up on honest and unassailable lines. Early in 1850 the business was removed to Peckham, and here the Omnibus branch of the business was gradually developed. One of the omnibus proprietors who bought hay from Tilling's farm at Hendon was named Stevens, and Thomas Tilling became acquainted with him. Stevens found himself in financial difficulties and arranged to sell his bus to Thomas Tilling. This bus was driven by Thomas Tilling on the first journey between Peckham and Oxford Circus. The fare was eighteen pence and four journeys per day were worked. Many clients were picked up at their homes, and this, combined with a stop at the "Father Red Cap" at Camberwell Green for refreshment, frequently made the journey a long and tedious one. This did not fit in with Thomas Tilling's progressive ideas, and he decided to start his bus from a fixed point at a fixed time, so that passengers would have to come to the bus instead of the bus going for the passengers. He thus became pioneer of the system upon which the Omnibus industry is to-day based.

It is not generally known that when Thomas Tilling bought the "Times" bus he was part owner of another bus, but this vehicle was not worked in his name. It was a profitable venture whilst it served the Great Exhibition, but, in common with others it suffered in the slump which followed. The bus was then bought outright by Thomas Tilling, who later worked it in his own name on the "Times" route. After some time another bus was started from Rye Lane to Gracechurch Street via Camberwell, Walworth and the Boro. The fare was sixpence and this venture was also a success. Indeed, Gracechurch Street seems to have been a popular terminus, for in the course of time Tilling routes from Camberwell, Rotherhithe, Bermondsey, Lewisham, Clapham and Wandsworth ended there. There is an interesting story to be told in connection with the Rotherhithe to City route. This had previously been worked by the L.G.O.C. who took their buses off because they could not make it pay. Tilling then covered the route and in a short time made a success of it.

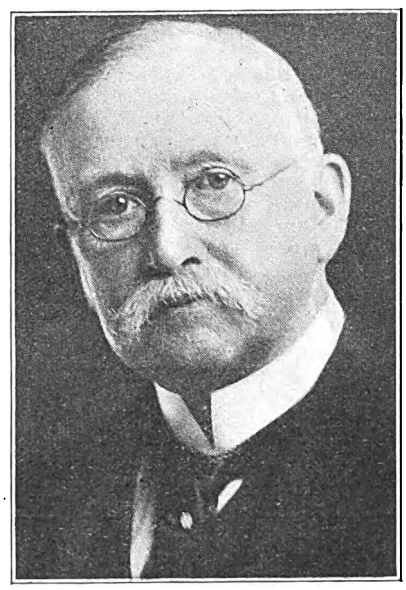
The L.G.O.C. established their business in London by purchasing the stock and times of many of the existing proprietors, but Thomas Tilling refused to sell. When Mr. Church superseded Mr. Macnamara with the L.G.O.C., further attempts were made to secure Tillings business, but without success. Realising that they had a clever and determined man to deal with, a friendly arrangement was made for their mutual protection. A friendship was thus formed which has continued to the present day.

Ten years after his modest start with one horse, Thomas Tilling's stud had grown to 70 horses, and this number increased each year until the peak year of 1905, when some 7,000 horses owned were standing in about 500 different stables. Amongst them there was over 1,000 greys. Since 1905 the horse stock has diminished considerably, but concurrently the stock of motor vehicles has increased. On 1st January this year Tilling's still owned 562 horses, and to-day they have over 80 horses on one important contract.

In 1866 Richard Stephen Tilling, eldest son of Thomas Tilling, entered his father's business.

Madam Adelina Patti, the famous singer commenced hiring a carriage and pair in 1866. Christine Neilson, Sims Reeves, and Edward Lloyd also became customers, as did Blondin, the tight-rope walker, and the famous Tom Thumb. This little man had a big equipage and hired six horses—all greys. In 1866 Thomas Tilling also took over the stables of Mr. Scudd at Blackheath, and bought a bus from him, which worked between Blackheath and Eltham. In 1867 eight horses were supplied for the use of the Sultan of Turkey. Tilling's Fire Brigade horses became known all over the world. In 1870 many Depots were opened, and thereafter the progress of the business became more rapid. In 1871 two hundred horses, 100 men and 100 vans were supplied, for the use of Her Majesty's Troops. In 1872 Mr. E. W. Tilling, youngest son of Thomas Tilling, entered his father's business.

In the year 1887, Queen Victoria's Jubilee, Tillings took a very active part, providing 25 landaus, each with a pair of grey horses, for the Corporation of London, horses and carriages for the Crown Prince of Germany, the Chinese and American Ambassadors, two Rajahs and all the Colonial Premiers, horses for the Honorable Artillery Company and the Bucks Yeomanry. In 1890 Tillings started the first service of buses between Clapham Road and Clapham Junction via Clapham Common, and in 1891 was started the first bus service between Rye Land and "Lord Nelson," Old Kent Road. In the year 1892 the Princess of Wales (afterwards Queen Alexandra) whilst out driving was much struck with a sprightly grey horse she saw drawing a Salvage Corps vehicle. She asked Lord Suffield to find out who was the owner, as she would like to buy the horse. Needless to say the horse belonged to Thomas Tilling. Negotiations were carried out by Mr. Edward Tilling, who, with characteristic straightforwardness pointed out that the horse had one fault, it was rather too small. He told Lord Suffield that the Company had an exceptionally fine bay horse, which



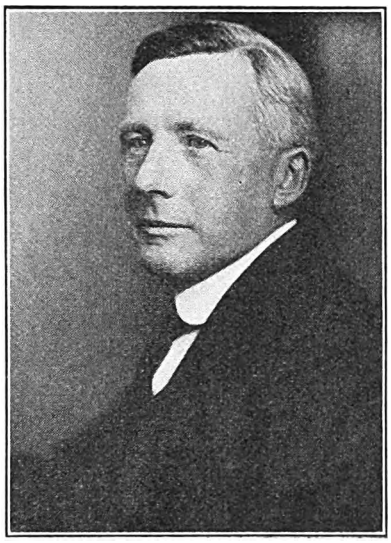
THE LATE MR. R. S. TILLING, FIRST CHAIRMAN OF THE COMPANY.

* Abstract of a paper read by Mr. H. Webb, Traffic Superintendent, Thomas Tilling, Ltd., at a meeting of the Omnibus Society held in London.

Digitized by Google

he would like the Princess to see. The colour, however, did not suit Her Highness, but Lord Suffield bought the horse for the Prince. Later, when the Prince of Wales became King Edward VII, Tillings supplied horses and carriages for the Royal Family and met the requirements of the Royal Stables in other ways. Thus they became Royal Warrant Holders. On 8th January, 1893, Thomas Tilling died, aged 67, leaving behind him a business which he had built up from one horse to 2,500.

Thomas Tilling was an outstanding personality. His character cannot be too strongly emphasised. He was a determined, strong-minded and very self-reliant man, yet modest, and was greatly respected by all who knew him. He had worked so hard all his life that when approaching 60 years of age he had a serious breakdown in health. The business was then managed by his two sons, Richard and Edward, and by Mr. Walter Wolsey, Senior.



MR. WALTER WOLSEY, SECOND CHAIRMAN OF THE COMPANY.

Two prominent cousins of Thomas Tilling were the Bishop of Salisbury and Mr. Moberly Bell, for many years Editor of *The Times*.

In 1897 the business was turned into a Limited Company.

In 1903 Tilling's Riding School was opened. Many young officers received riding lessons there during the Great War. 1904 was a notable year for Tillings, who placed their first double-deck motor bus into service. In 1905, notwithstanding the advent of the motor, Tillings owned a record number of horses. 6,460 on 1st January grew to over 7,000 at one time during the year.

At the proclamation of King George V, Tillings were called upon to provide no less than 85 pair-horsed landaus, with coachmen and footmen, at one time, and at the Coronation of King George V every available unit of the Firm was in service for the conveyance of Kings, Princes and others.

At 6.30 p.m. on August 4th, 1914 (the outbreak of the Great War), when practically all the staff had gone home, the Army Authorities asked for a number of horses with harness and drivers to be at Waterloo Station by 8 p.m. Notwithstanding the difficulties in the way, the job was done to time. Within 3 days 500 draught horses and 100 riding horses had been supplied, and this number quickly exceeded a thousand. Despite this drain upon the Company's resources they carried on business as usual. The Company's last horse bus was withdrawn from service on this day.

During the War the number of horses owned gradually diminished, and the horse stock has become smaller each year, with the exception of the year 1920, when there was an increase of some two hundred. It was in 1920 that the headquarters of the Company were removed from Peckham to Victoria Street, London.

Winchester House holds many pleasant associations for the older members of the business, and the late Mr. Richard Tilling worked in the "parlour" for over 50 years. In the year 1926 the Pageant of Road Transport in the Lord Mayor's Show was organised by Tillings.

On June 5th, 1929, Mr. R. S. Tilling, Chairman and Senior Director of the Company died after a short illness. He had proved himself to be a worthy successor of a noble father. The best description one can give of him is "a typical English gentleman."

### Motor Section.

As might have been expected with a progressive firm like Tillings, the development of the motor vehicle had their early attention, and they were the first of the established Omnibus Companies to adopt the motor bus. In September, 1904, a Milnes-Daimler bus, with a London built body was working in regular service on the "Times" route. Seating capacity was provided for 34 passengers—16 on longitudinal seats inside and 18 on garden seats outside. Solid rubber tyres, acetylene lighting and curtains to the windows were also important features. A few single deck or adapted vehicles had previously made their appearance, but this was the first double-deck motor bus to be built for regular public service, and it set a standard that was but little improved upon for several years. Its success prompted the Company to place an order for 24 similar vehicles.

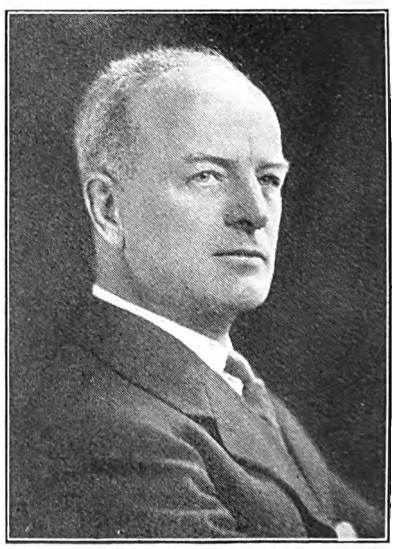
In 1905 a Dennis vehicle was obtained and worked experimentally, whilst an order was also placed for 6 Straker-Squire buses. This was a great year of development for Tillings, and much pioneer work was done. In 1905 6 Panhard-Lavassor Landaulettes were purchased, which gave extremely useful service in the private hire section of the business. Later on Tillings invested in a number of Dennis Landaulettes, and these in turn were replaced by a fleet of Austins. To-day the Company have a large fleet of up-to-date Armstrong-Siddeley Landaulettes, which are much in demand during the season. Messrs. Geo. Vickers, Ltd., were the first people in the Newspaper Distributing trade to run motor vans, which they hired from Tillings in 1911. They are still customers of the Firm for both horses and motors. By 1913 Tillings owned some 300 motor vehicles,

Much useful service was rendered during the War in the transportation of soldiers and sailors and the conveyance of sick men to and from military hospitals or for drives.

The conveyance of passengers and luggage by road for Imperial Airways is still in the hands of this Company. Tillings figure largely in catering for transport for all those functions that take place annually. Apart from Bank Holidays, annual outings and important race meetings such as Epsom and Ascot, there is the Oxford and Cambridge Boat Race, Football Cup Final, Harrow Schoolboys to Aldershot, the Aldershot Tattoo, Stock Exchange Brighton Walk, servants and luggage or equipment to and from London and country or seaside, conveyance of passengers on "Seeing London" or "Seeing Britain" tours, in addition to regular seasonal tours to such places as Hampton Court and Windsor. They also attend to transport requirements at the Guildhall. Last, but not least, there is the Lord Mayor's Show. In connection with this event Tillings have provided transport for over 50 years.

Many important business houses to-day hire their vans on contract from Tillings.

The motor bus fleet at the end of 1906 consisted of 29 Milnes-Daimlers, 6 Straker-Squires and 1 Dennis. 6 Dennis vehicles, with worm-drive axles and Tylor engines were on order. The operation of different types of vehicles proved that several had good points, but there were also many bad features. It was apparent that a more economical and reliable vehicle, simple to drive, would have to be devised. After a number of experiments, a petrol-electric bus was built and placed into service early in 1908. The inventors were Percy Frost-Smith, Engineer and Manager of Tillings Motor Department, Frank Brown, Chairman of David Brown & Sons, Huddersfield, and W. A. Stevens, Managing Director of W. A. Stevens, Ltd., of Maidstone. Officially it was known as the S.B. & S. type, but the men called it "Queenie" because it ran so smoothly and was "well-behaved." An improved type of P.E. vehicle was afterwards marketed under the name of "Hallford-Stevens." After extensive tests in actual service extending over 3 years, Tillings decided to concentrate on the petrol-electric vehicle. A re-modelled vehicle known as the T.T.A.1. type, was built in the Bull Yard workshops, the electrical equipment being made by W. A. Stevens, Ltd. Although the first T.T.A.1. vehicles were built at Bull Yard, the remainder were built at Maidstone by the



MR. J. F. HEATON, PRESENT CHAIRMAN OF THE COMPANY.

Digitized by Google

new Company, Tilling Stevens, Ltd., formed when Tillings assumed control of W. A. Stevens, Ltd., in 1912. Tillings association with this Company continued until the end of 1925, when as a matter of general policy they disposed of their interests. It is worthy of note that Tillings actually designed and manufactured vehicles to suit particular requirements.

A sharing arrangement was made with the L.G.O.C. in 1909, and in the years that followed the Companies co-operated in all route changes made in the Tilling area. Here we may say that Tillings old horse bus routes formed the nucleus of many of the best motor services of the present day. In 1913 an Agreement limiting Tillings London bus operations, was made with the L.G.O.C. This was, no doubt, a good agreement at that time, but as the years passed by Tillings found they would have to develop elsewhere, in order to increase their business. Whilst negotiations were being carried on in certain districts, they established a branch business at Folkestone early in 1914. At first much opposition was encountered, but the Folkestone and District Road Car Company flourished, and expansion was rapid after a new Garage had been built at Cheriton. In the middle of 1916 Tillings, in association with the British Automobile Traction Company, formed the East Kent Road Car Company, and the area of operations was thereby increased. Thus started a connection between two Companies which had far-reaching effects. A verbal working arrangement led to Tillings acquiring an interest in the B.A.T. and this in turn led to a merger of all the provincial interests of these Companies, except Brighton. To-day the Tilling and British Automobile Traction Company control over 30 Companies, operating between them several thousand vehicles, and their activities extend to all parts of the country.

1921 saw the introduction of a larger and more powerful type of petrol-electric vehicle, and the T.S.3 A model, carrying 48 passengers was placed into service. Two years later the T.S.7, a modified form with forward steering, was introduced. Both types gave very satisfactory service, but they are now being rapidly replaced by covered-top A.E.C. Regents, embodying all the latest improvements.

Tillings to-day have nearly a thousand vehicles in their London and Brighton businesses, whilst last year 145½ millions of passengers were carried in London alone. This constitutes a record for the Company. To touch on recent events. In 1923 a new Agreement was made with the L.G.O.C. and this enabled Tillings to double their London bus operations. It had been felt for some time that Tillings had not been able to participate in the growth and development of London's traffic, and this, with the subsequent Agreement in 1929, placed matters on a more equitable basis. London's oldest Omnibus concern was thus enabled to take the place it was morally entitled to, in the business of transporting the teeming millions of this great town. The co-ordination of bus and rail interests is one of the most striking features of modern transport. It opens up great possibilities, for economy with efficiency is much better than wasteful competition. Here again Tillings have played no mean part. So far as London is concerned the fate of the transport companies is in the lap of the Gods, but whatever happens here you may be sure that Tillings will develop elsewhere, and the slogan, "Tilling for Transport," will hold a greater significance than it has ever done.

# A.H. and M.O.A. and C.M.U.A.

## Annual Meetings at Manchester.

This being the coming of age year of the Amalgamated Horse and Motor Owners' Association, of Manchester, efforts are being made to persuade one of the founder members to accept the Presidency for this year. Of the eight horse and vehicle owners who, in August, 1910, signed the draft memorandum of the articles of association, only three are alive to-day—Messrs. Isaac Smith, Ellis G. Buckley and William Shaw Bardsley. During the whole of this time, Mr. John S. Howarth has been Secretary of the Association.

The twenty-first annual general meeting of the Association, which was held at Manchester on 28th March, was preceded by the quarterly conference. The General Council reported that the various clauses of the Road Traffic Act had received a good deal of consideration and took up a large amount of time of the Council. In respect to Clause 19 which limits the working hours of motor drivers, it has been decided to send in a Joint Application to the Minister of Transport for an extension of working hours to 14 hours per day inclusive of meal times. The question of axle weights under the Act is one of vital importance especially in regard to four-wheeled vehicles owing to the activity of the police in certain districts. Efforts are being made with a view to getting the maximum weight of vehicle and load of a four-wheeled vehicle increased from 12 to 14 tons.

The position of motor coach owners under the Act will want careful watching and the position, it is thought, will be very complicated owing to the vast amount of information it is intended to ask for on the various forms which will have to be filled up to obtain the necessary licences.

**Lancashire and Cheshire Joint Road Transport Council.** Following on the resolution passed at the last conference recommending that the General Council should withdraw from the Lancashire and Cheshire Joint Road Transport Council, the whole matter has been considered and it was felt that in consequence of the position created by Clause 19 of the Road Traffic Act it would be unwise to give notice of withdrawal as it would possibly prejudice the position of the Association in any negotiations which may have to take place in respect of any application to the Minister of Transport for a variation in respect to the limitation of working hours in Clause 19 of the Act. It was, therefore, decided that the question of withdrawing from the Joint Council be left over.

**Wages.** Since the Arbitration on the reduction in wages, which took place last October, the representatives of the Transport and General Workers' Union have accepted the position without demur.

**Legal Defence.** Thirty-three summonses have been dealt with during the Quarter.

In the annual report of the General Council of the Amalgamated Horse and Motor Owners' Association for the year, it was stated that a great deal of useful work had been done. The Committee regretted the loss to the Association of its President, Mr. Charles Lissett, who had been a member since its inception and of Mr. Joseph Walker, of Radcliffe, Vice-chairman. Twenty-four new members had been enrolled. The present membership is 424. As this is the 21st anniversary of the foundation of the Association, the Council of the Amalgamated Horse and Motor Owners' Association appeals to all members to make the year 1931 a record one in every respect.

**C.M.U.A. (S.E. Lancs.).**—Councillor W. Farnorth and Mr. J. S. Howarth, as Chairman and Secretary respectively of the South East Lancashire Area Committee of the C.M.U.A., reported that four meetings had been held during the year to deal principally with matters arising from the Road Traffic Act. In addition a joint meeting had been held with the General Council of the Amalgamated Horse and Motor Owners' Association when the question of co-ordination or rationalisation of transport was considered. Twenty-four new members had been enrolled during the year. The membership at the end of the year was 258.

Election of Committees:—The following were elected to serve on the committees of the two sections. **Amalgamated Horse and Motor Owners' Association:**—Messrs. J. Bramall, Coun. J. Eastham, G. W. Leggott, S. Kay, J. G. Thompson, I. Smith, S. Berry, T. Raynor, J. Clegg, W. Gee, A. Oldfield, W. R. Butterworth, M. C. Wilson, W. Mitchell, Coun. W. Farnorth, Coun. Kershaw, E. G. Buckley, J. Grindrod, W. H. Knott, with power to co-opt. **Commercial Motor Users' Association:**—Messrs. J. R. Etheridge, J. Jagger, W. Patton, W. Mitchell, J. Grindrod, Coun. W. Farnorth, S. Kay, V. L. Morton, G. W. Leggott, H. Burrill, Coun. Kershaw, H. Jay.

**Institution of Petroleum Technologists.**—There will be a general meeting of the Institution of Petroleum Technologists at the House of the Royal Society of Arts, John Street, Adelphi, London, at 5.30 p.m., on May 12th. The offices of the Institution are at Aldine House, Bedford Street, Strand, London, W.C.2.

**Buy British Holidays.**—The Great Western Railway appeals to all British holiday makers to Buy British Holidays this year and so create employment not only at resorts but in the industrial and manufacturing centres also. A holiday spent at home is a contribution to Britain's prosperity.

# London Van Horse Parade.

In spite of the great development of motor transport the horse still held his own, and for delivery work in local areas, involving frequent stops, he was unquestionably the more economical. This opinion was expressed by the Lord Mayor of London, Sir W. Phené Neal, at the London Van Horse Parade Society's luncheon held subsequent to the Annual Easter Monday parade of London's van horses held as usual in the Inner Circle, Regent's Park. Despite the motor competition the number of horses entered for the Parade has increased each year since the War. This year no less than 634 horses were exhibited comprising 471 single-horsed turnouts, 80 pair-horsed, and 3 led horses, including among the latter "Jack," the well-known trace horse of Wimbledon Hill. During the past four years this horse has journeyed 17,000 times up and down the hill, a distance of 1¼ miles each way.

The owner driven class was again well represented. The number of entries show a steady increase year by year, due no doubt to the fact that small trades people realise that all exhibits are judged on their own merits, and that they have an equal chance with the exhibits of the larger London firms. Prominent again in this section was Mr. Arthur Green (Carrier), of 29, Felsham Road, Putney, who again received 3 firsts, making a total of over 80 prizes in six years in various shows. Thirty-one certificates of merit were awarded to foremen who had nominated four turnouts each of which must receive first-class awards. Prominent among these was Mr. Walter Watts, of the Metropolitan Railway. He is 67 years of age, and has been connected with horses for 59 years, 15 of which have been as stable foreman to the Company. Although over the retiring age he is still retained owing to his exceptional knowledge of horses.

Among the drivers with long service records was A. Clayton, of Messrs. Nickolls & Baker, Ltd., with 45 years service. C. H. Burden, of W. H. Smith & Son, Ltd., who has appeared at every parade held by the Society since its inception, has secured a first on each occasion —a total of 23 in all. As usual the carrying trades were well represented, these included:—Carter, Paterson & Co., Ltd.; A. F. Arney; James Beasley; George Ell; John Finch; Ford, Ltd.; N. Francis & Co.; A. E. Gains & Sons; Arthur Green & Co.; T. S. Harman; Herd & Gerner, Ltd.; G. Hooper; L.N.E.R.; Metropolitan Railway; J. Phillips; Pickfords & Hays Wharf & Cartage Co.; A. Plumb; Thos. Tilling, Ltd.; C. A. Wells; W. Wells, etc.; whilst on the retail distributing side the Army & Navy Co-operative Stores, Ltd., and Selfridge & Co., Ltd., were represented with 20 and 12 entries respectively.

As an Easter Monday event the Parade is always popular. In spite of the dull weather many thousands of the public witnessed the judging and parade of prize winners.

Before being judged each horse must pass a severe veterinary inspection. This was carried out by the following:—Messrs. W. F. Anderson, M.R.C.V.S.; C. Cunningham, M.R.C.V.S.; W. J. Hatton, M.R.C.V.S.; R. C. Irving, F.R.C.V.S.; Major-Gen. Sir John Moore, K.C.M.G., C.B., F.R.C.V.S.; and Capt. W. K. Townson, M.R.C.V.S. The judging was carried out by the following gentlemen:—Lord Daresbury, C.V.O.; Major Sir William Acland, Bart.; Mr. James Ellis; Sir George Hastings; Mr. Percy Hamilton Hughes, J.P.; Lieut.-Col. Percy Laurie, C.M.G., D.S.O.; Mr. F. J. Rawle; Mr. Henry Tilling; Major-Gen. Geoffrey H. A. White, C.B., C.M.G., D.S.O.; and Major C. B. Toms.

Major James Paterson, M.C., acted as referee whilst Mr. Egerton Hensley acted as judge of merit certificates for foremen.

The Lord Mayor of London and the Lady Mayoress, who were accompanied by Alderman and Sheriff M. H. Jenks and Mrs. Jenks, awarded the Society's prizes and N.S.P.C.A. merit badges to the successful drivers at the march past held immediately after the Parade.

Since its inauguration in 1904 the Society has awarded approximately £8,000 in prize money. This year no less than £650 was awarded. Since its inauguration the Society has done much to improve the general improvement and condition of London's van horses, and to encourage those in charge of the animals to an intelligent and humane interest in their charges. Each year shows a marked improvement in the condition of the animals. Lord Daresbury, Chairman of the Society, said that this year the quality of the turnouts had reached a very high standard.

# Obituary.

THE LATE MR. W. J. PARSONS.

### W. J. Parsons.

We regret to record the death of Mr. William James Parsons, a Director of the Atlas Express Co., Ltd., which took place after a short illness on February 25th. It was known to his friends that Mr. Parsons had not been in his usual good health for nearly two years but his death was quite unexpected. The funeral took place from his residence, 48, Mid Stocket Road, Aberdeen, to Springbank Cemetery, on February 28th. Mr. Parsons was very popular with his employees and had made a host of friends for himself in Aberdeen. This was testified by the many wreaths that were sent and the large number of mourners who were present to show their respect for him. Mr. Parsons had been connected with the Atlas Express Company, Ltd., for many years, he served in Glasgow until 24 years ago when he came north as Manager to open the local branch of the business. Beginning in a small way, with one horse and van, the business gradually increased until it is now a flourishing concern. An enthusiastic Church worker, he was connected with St. Mark's Episcopal Church since it was dedicated in 1908. As a harrier, he had gained many prizes in his younger days, one prize being a handsome silver rose bowl. During the War Mr. Parsons entered the service of the Special Constabulary in Aberdeen and had been connected with the force until his death. He is survived by Mrs. Parsons and a family of two daughters.

* * * *

### Willis Holt.

We regret to record the death, on March 20th, at the age of 62, of Mr. Willis Holt, who had been Traffic Manager of the Metropolitan Railway since January, 1909. Mr. Holt began his railway career in the booking office of the Great Western Railway at Chirk, in 1883, and was transferred, in 1888, to the office of the Divisional Superintendent at Paddington, subsequently becoming London District Relief Stationmaster, then Stationmaster at Marlow, and, in 1893, Assistant Stationmaster at Paddington. In 1907 he became Station Superintendent at Perth General Station, removing to the Metropolitan Railway two years later. Mr. Holt was very popular with all grades, and took a keen interest in the welfare of the staff and of the Metropolitan Railway Athletic Association, of which he was Chairman. In 1927 he was Chairman of the Superintendents' Conference, and on the death of Mr. R. H. Selbie, he became a member of the General Management Committee, which was then set up.

* * * *

### André Michelin.

We regret to record the death of M. André Michelin, Director of the Société Michelin et Cie, and the Michelin Tyre Company, Limited, which took place at his house, 43, Rue Ampère on April 4th at the age of 78.

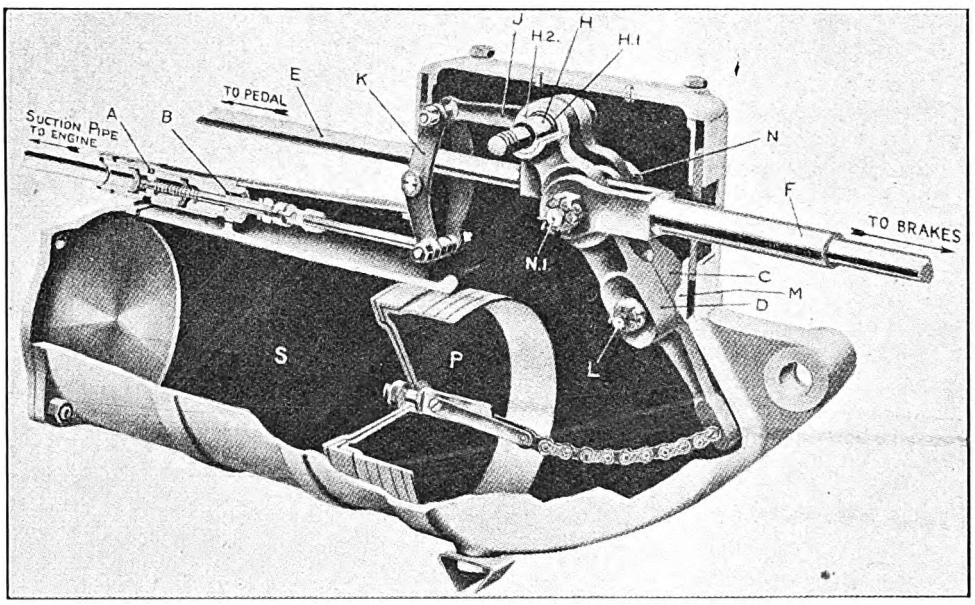
# Speciality Brakes.

## Their Details explained and Maintenance described.

An increasing number of industrial vehicles and passenger service vehicles are being fitted with either independent power brakes or with servo-assisted foot or hand brakes. The following notes will deal briefly with the points of the leading types. The list includes three vacuum servo brakes, viz., the Dewandre (Clayton-Dewandre, in Gt. Britain), the Westinghouse, and the Marelli. In the independent or self-contained power category of brakes the leading makes are the Lockheed (hydraulic) and the Westinghouse (pneumatic) brakes. There are besides some varieties of the momentum-servo type, but these will not be included in this series.



SECTION OF THE CLAYTON-DEWANDRE VACUUM-SERVO VEHICLE BRAKE UNIT.

### "Servo" v. "Self-energising."

The term "servo" is applied to braking systems in which some external power is added to the initial impulse given by the driver. For instance, some brakes are applied by vacuum or pressure obtained from the engine. In others, some revolving part of the mechanism is utilised, and its momentum transformed into a progressive braking action. The Dewandre and Westinghouse (vacuum type) are examples of the vacuum or negative-assisted pressure operated brake. The Westinghouse air pressure brake in one of its two forms is an example of the positive pressure power-applied brake operated by explosion pressure from the cylinders of the engine. In the other form it has a power driven external compressor. The Lockheed is not a servo brake.

The term "self-energising" refers to that type where the friction of the brake itself increases the force exerted by the driver to apply it, e.g., that class of brake, like the Perrot-Bendix, where the shoes are hinged together in such a way that the hinge can float, and also to brakes in which a modified form of flexible internal band is employed, by means of which the brake develops power from the friction between shoes and drum, e.g., the Rolls, Sunbeam, etc., cars.

## (1) The Clayton-Dewandre Vacuum-Servo Brake.

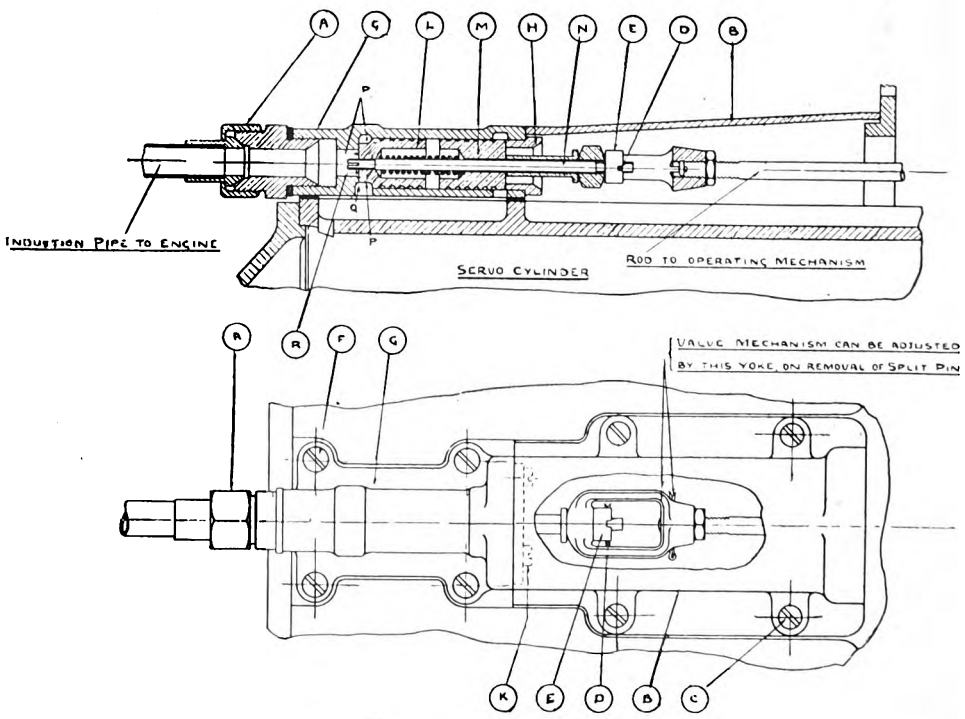
### How it Functions.

Referring to the section picture (Fig. 1), when the brake pedal is depressed a pull is exerted on rod E, and causes lever G to be pulled forward (to the extent of the clearance at H1). This pushes on the rod J and opens (through the rocking lever K) the valve A, which puts the suction cylinder S into communication with the suction pipe of the engine.

The suction, acting on the piston P exerts a pull on the lower end of lever G, which, using N as its fulcrum point, carries with it the lever D and augments (or supplements) the pull on rod F in the ratio of 4-5 on the part of the servo to one applied by the driver.

When the fulcrum point N becomes stationary (that is, when no further movement of the brake pedal takes place) the pull of the piston causes the lever G to turn on this fulcrum and releases the push on the rod J until the valve A closes and arrests any increase of the pull of the piston.

Any further forward movement of the pedal (carrying the fulcrum N with it) will immediately re-open the valve and so produce the corresponding pull of the piston until the point N again becomes stationary. When, however, the pressure on the brake pedal is released or relaxed the top end of the lever G is carried back by the pull of the piston to the extent of the clearance H2, this time exerting a pull on the rod J and opening the atmospheric valve B, which releases the suction in the cylinder.



SECTION THROUGH VALVE MECHANISM.

### Maintenance Hints.

In the event of trouble or sluggish functioning of the brake the following tests should be made:—

Digitized by Google

First, check over all the brake mechanism, i.e., the linkage, cranks and pivots, to discover if (a) there is any undue stiffness; (b) if the faces of the brake shoes are free from oil and do not need renewing; (c) if all the cranks and levers have the correct angular relations so that they can function correctly, and (d) if the "pull off" springs have not lost tension. Examination of these at the outset will often give an inkling to cause of sluggishness in operation.

Second, apply the following tests to the servo unit:—(a) Depress the brake pedal bar with the engine *stopped*; (b) On starting the engine there should be a further pull on the pedal caused by the servo's action; (c) While the engine is running, if the brake pedal be depressed hard and the throttle opened, there should be a kick back on the pedal, caused by the destruction of the vacuum pull on the servo, and (d) While the engine is running, if the brake pedal be depressed, it (the engine) should accelerate slightly, but settle down at once: if it continues to run faster, it is a sign of an *air leak*.

**Sources of Air Leak or Vacuum Failure.**

There are three possible sources of air leak:—(a) dirt in the distributor, which interferes with the functioning of the valves (this is often caused by carbon deposit from the engine if or when requiring to be decarbonised); (b) a leak past the vacuum piston, and (c) an air leak in the vacuum pipe between the engine and the servo. For reason (a) the use of solvent carbon remover or use of blow-pipe to burn out the carbon (without removing the cylinder head) is not to be recommended.

The following hints cover the chief points for normal maintenance. Fuller details will be found in the Dewandre Servo Manual. (a) The brake pedal rod should be so adjusted for length that when the pedal is in the "off" position the levers in the servo are against the stop. The brake pedal and rod must be perfectly free, both in the interests of the driver's foot pressure and to facilitate the release action. Pull off springs should be fitted to the brake gear *behind* the servo and *not* on the pedal; (b) There should be no tampering with the rod connecting the rocking levers and distributor of the servo; (c) The vacuum pipe washers and connections must be air tight; (d) If the servo unit has to be removed from the chassis, care should be taken not to strain it when bolting it to the chassis, and the rear coupling up should be made first; (e) When setting the valves (this will not be necessary if care be taken when dismantling the valves for cleaning not to alter the length of the rod between the levers and distributor), see that the rocking movement (viz., the enlarged hole in the reaction lever) has equal clearance on each side of the spindle when both valves are closed. Any necessary adjustment can be effected by lengthening or shortening the yoke rod between the levers and the distributor; (f) The brass coil spring in the cylinder should maintain the pressure on the cup leather of the piston against the walls, and the cylinder should be kept free from grit; (g) The rear end of the servo cylinder should be kept about a third filled only with a light grade of commercial *castor oil* (not mineral oil). This should be changed once a month. A drain plug is provided for the purpose. The breather, or air release cap, at the top of the casing should be kept clean and open. The oil cup for the servo should be refilled after about every 500 miles of service.

Referring to composite Fig. 2, following is the order of the operations for removing the servo valves:—(a) unscrew nut A to disconnect valves from the induction pipe; (b) withdraw set screw C and remove dust cover B, then remove split pin D and nut E; (c) withdraw the four set screws F and lift the valve body G from the cylinder; (d) remove the two set screws K and remove the valve and cover H. The two valves L and M can then be lifted out of the line by rod N.

Cleaning or decarbonising the valves is effected as follows: Having removed valve L, clean the carbon from points such as P, and carefully remove all deposit from the ports in the valve body; then give the valve at R a few turns on its seat and note that it seats properly. Then smear it with graphite to re-fit. A paste metal polish only (no abrasive) should be used for seating the valves. When reassembling the distributor leave a slight clearance between the two valves and the operating lever or yoke, to ensure that both valves will be on their seat.

Our next article will feature **The Westinghouse Vacuum-Servo Brake.**

# In Parliament.

**First-Aid Outfits for Motor Coaches?**—Asked whether he would consider compelling proprietors of motor coaches to have first-aid outfits carried on their vehicles? **The Minister of Transport** (Mr. Herbert Morrison) said he had the point under consideration in connection with the further Regulations which would shortly be made dealing with the use and equipment of public service vehicles.

**Weighing Road Vehicles.—Mr. Arthur Michael Samuel** asked the Minister of Transport what steps were being taken by his Department and/or by the local authorities to make effective the existing regulations designed to prevent the overloading of motor and steam-driven vehicles using public roads? **The Minister of Transport** (Mr. Herbert Morrison), replying, said that in a circular letter he had sent to highway authorities it was pointed out that grants from the Road Fund were now available towards the expenses incurred by them in erecting machines for weighing vehicles or in securing the use of such machines belonging to any other authority or person, and the hope was expressed that this provision would encourage and assist highway authorities in the exercise of their powers under Section 27 of the Road Traffic Act, 1930, with regard to the weighing of vehicles.

**Agricultural Vehicles.—Lieut.-Colonel Heneage** asked the Minister of Transport if he would specify the classes of vehicles concerned in the instructions he had issued that certain classes of agricultural vehicles were to be shod with rubber when being used on roads? **Mr. Herbert Morrison,** replying, said he had made no regulations requiring agricultural vehicles, as such, to be equipped with rubber tyres. The Motor Vehicles (Construction and Use) Regulations, 1931, required locomotives and trailers generally to be so equipped as from January 1st, 1933, but in the interests of agriculture exemption had been made in respect of land locomotives and land tractors which were defined as locomotives and tractors designed and used primarily for work on the land in connection with agriculture, forestry, land levelling, dredging and similar operations which were driven on a road only when proceeding to and from the site of such operations, and which, when so driven, hauled nothing other than land implements and (in the case of land tractors) agricultural trailers.

**Traffic Regulations in Oxford Street.—Sir R. Gower** asked the Minister of Transport whether he was aware that the traffic congestion in Oxford Street, London, was materially contributed to by the number of half-empty omnibuses which traversed the street; and whether he would consider the advisability of exploring other methods of traffic control before restricting the use of horse transport in Oxford Street? **Mr. Herbert Morrison** said it had not been found practicable under existing conditions to make any substantial reduction in the number of omnibuses in Oxford Street. The London Traffic Advisory Committee carefully considered in all its aspects that traffic problem presented by that street before advising him to make the Regulations of which notice had been given, and he did not think that any useful purpose would be served by reviewing the problem afresh.

**Taxation of Heavy Motor Vehicles. — Mr. Granville** asked the Chancellor of the Exchequer whether, in view of the pressure of the present system of taxation on owners of omnibuses and other heavy motor vehicles he would consider altering the rates at present in force? **Mr. Pethick-Lawrence,** replying, said that due account would be taken of all relevant considerations in the preparation of the Budget.

**Motor Omnibuses.—Major Colfox** (for Major Edmondson) asked the Minister of Transport whether he was aware that anxiety existed among certain public conveyance proprietors, particularly in rural areas, with regard to the new regulations in connection with the design and construction of motor omnibuses; and would he take steps to ensure that the regulations were applied in such a manner as to entail the least possible hardship upon the small owner? **Mr. Thurtle,** who replied for Mr. Morrison, said that the Minister of Transport had already amended the original regulations with a view to meeting the case of owners of existing vehicles in certain particulars, but he was bound to retain requirements, which he considered essential in the interests of public safety. He might add that the requirements generally were based on recommendations of the Departmental Committee on the licensing and regulation of public service vehicles which reported in 1925, and it had long been known both to manufacturers and to operators that requirements of this nature would be imposed as soon as the legislation necessary to enforce them was passed.

# Round the Lancashire Associations.

**Liverpool C.M.U.A.**—Mr. J. T. Mount presided at the first meeting of the general committee of the C.M.U.A. (Liverpool Area) since the annual meeting. The following officers were elected:—Chairman, Mr. A. C. Bloomer (Jas. Crosfield and Sons, Ltd.); vice-chairman, Mr. J. T. Mount (Thos. Wilson); hon. treasurer, Mr. F. G. Birch (Tate and Lyle, Ltd.). The following sub-committees were appointed:—Emergency Committee.—Messrs. A. C. Bloomer, F. G. Birch, P. McGetrick, J. T. Mount, R. W. G. Barnett, J. F. Supplies, D. E. Watson, T. Lawrenson, A. E. Masheder, R. Walker. Rates Committee.—Messrs. A. C. Bloomer, R. W. G. Barnett, J. T. Mount, T. Lawrenson, J. F. Supplies, F. G. Birch, P. McGetrick. Traffic and Motor Parade Committee.—All Members of General Committee. Divisional and National Council Representatives.—Messrs. A. C. Bloomer, R. W. G. Barnett, Col. B. Fairclough, J.P., Thomas Lawrenson. Representative on Chamber of Commerce.—Mr. R. W. G. Barnett.

**Manchester Traffic Club.**—This club, of which Mr. Auty, 8, Chapel Road, Swinton, Manchester, is secretary, is the newest of the local transport organisations, having been formed for the dissemination of knowledge on transport matters. At a recent meeting, Mr. S. L. Jude, secretary of the Liverpool Shipping and Forwarding Agents' Association, gave an address to members on shipping and forwarding conditions in the port of Liverpool.

**Liverpool Traffic Club.**—Members of this club, together with a number of representative members of the transport industry, on Monday, 23rd March, were escorted by Mr. Hewitt, one of the principal engineers of the Mersey Tunnel, through the tunnel workings, and were agreeably surprised at the great progress made towards the completion of the contracts. It was a particularly interesting excursion, especially as the tunnel can now be seen in something like its final form.

**Amalgamated Horse and Motor Owners' Association.**—The Amalgamated Horse and Motor Owners' Association, Manchester, of which Mr. J. S. Howarth is secretary, has just attained its coming of age which was duly celebrated at the annual dinner of the Association held on Saturday, March 28th, at the Victoria Hotel, Deansgate, Manchester. The quarterly conference of members of the A.H.M.O.A. and the C.M.U.A. (South-East Lancashire area) joint organisation, was followed by the 21st annual meeting of the former association and the proceedings finished up with a dinner.

**Institute of Transport.**—The next meeting of the Manchester, Liverpool and District Section of the Institute of Transport promises to be a particularly interesting one. The speaker will be Mr. Harry Gaunt, managing director of the Liverpool Warehousing Company, who will speak on the necessity for warehouses in connection with transport. The meeting will be held on Friday, April 24th, at the Adelphi Hotel, Liverpool. Mr. Thomas Abbott, a past chairman of the Manchester, Liverpool and District Section of the Institute of Transport, addressed the members at the March meeting, which was held in Manchester, on "Canals and Inland Waterways." One suggestion he made was that a scheme of improvement of canals and inland waterways would serve the double purpose of increasing transport facilities and provide work for the unemployed. There now appeared to be a possibility that canal transport would be an effective weapon to prevent an increase in transport charges by rail. It seemed strange that in Manchester business firms had in the past left the banks of the waterways and trekked up hill into the centre of the city and beyond, and there erected colossal shipping and packing warehouses, incidentally increasing cost of transport and adding further congestion to the traffic in the street. When one could load on the water and discharge on the water, there was nothing so cheap.

**A.H. & M.O.A. Motor Coach Section.**—The operation of the Road Traffic Act or rather that section of it that specifically applies to motor coaches plying for hire, is certain to result in more stabilised conditions, since under the terms of the licences owners who have adopted excursion fares, must adhere to them for the season. We have received the schedules which have been compiled by the Amalgamated Horse and Motor Owners' Association and the C.M.U.A. (South-East Lancashire area), joint organisation, being a list of excursions and tours with return fares for the year 1931. The Oldham list comprises 19 tours in the North Western traffic area, the highest fare being to Llandudno, 12s. 6d. day return and 16s. 6d. long date return; the only tour in the North Western and Northern traffic areas is that to Windermere, 12s. return; North Western and Yorkshire traffic areas, seven tours, the principal one, Scarborough, 12s. day return and 18s. long date return; North Western Yorkshire and East Midland traffic areas, one tour, Dukeries, 10s. 6d. day return; North Western and East Midland traffic area, three tours; North Western and West Midland traffic areas, four tours; North Western, West Midland, Southern and Metropolitan traffic areas, one tour, London, special event excursions 20s. Four schedules have been drawn up for Rochdale, there being 22 tours in the North Western traffic area, fares being compiled at rates which seem uniform with those of Oldham. In the North Western and Northern traffic areas, three tours are mentioned; North Western, Northern and Southern (Scotland) traffic areas, one tour; North Western, Yorkshire and Northern traffic areas, two tours; North Western and Yorkshire traffic areas, 15 tours; North Western Yorkshire and East Midland traffic areas, four tours; North Western and East Midland traffic areas, three tours; North Western and West Midland traffic areas, four tours; North Western, West Midland and South Wales traffic areas, one tour. Altogether there are ten fare lists for Rochdale. Concerning the Bury area which has seven lists of fares classified according to areas, 28 tours are scheduled in the North Western area only and 16 in the North Western and Yorkshire traffic areas, fares being tabulated according to whether the journey is started from (a) Bury; (b) Ramsbottom; and (c) Haslingden, Rawtenstall and Waterfoot. Ashton-under-Lyne list is a comparatively short one, 17 of the 27 tours being within the North Western traffic area only.

**Manchester Transport Owners' Association.**—The motor coach section of the Manchester Transport Owners' Association and the Commercial Motor Users' Association (Manchester area), joint organisation, has been devoting the whole of its attention during the last few weeks to evolving an efficient organisation for the conduct of the business during the ensuing season. With the exception of two or three, all the motor coach owners in Manchester and Salford are members of the association and their efforts have been closely co-ordinated with a view to them individually carrying out their season's plans with the fullest efficiency. Modest amendments have been made in the list of booking offices and this is now before the local authority. The applications for the licences required by the local operators have already been submitted to the Traffic Commissioner, and are due to be heard towards the end of the current month. A list of fares has been drawn up and day excursion prices are detailed in respect of close on 50 destinations. The principal rates for ordinary week days (excluding holidays and Saturdays) are:—Beeston Castle and Tarporley, 4s.; Blackpool, 5s.; Buxton (direct), 4s.; Chester, 5s.; Llangollen (direct), 8s.; Llandudno, 11s. 6d.; Morecambe (direct), 6s.; Rhyl, 9s.; Southport, 5s.; Matlock (direct), 7s. 6d.; Harrogate, 9s.; Ilkley (direct), 10s.; York, 9s.; Windermere, 10s. 6d.

## Tyres in the Making.

The evolution of the motor tyre from the raw rubber blocks which arrive at the factory to the finished tyre is interestingly described in a booklet published by the Dunlop Rubber Company. Each of the main operations is illustrated by photographs and explained in non-technical language. It is stated that the total rubber mixing capacity at Fort Dunlop exceeds two million pounds a week. In order to make absolutely certain that the inner tube rubber is entirely free from grit, it is forced through a fine metal mesh filter with 2,500 orifices per square inch. A patent system of joining tubes without a seam is described, and motorists will learn how the familiar three stud tread is made. Copies of the booklet may be obtained from the General Service Manager, Fort Dunlop.

## Electric Railways.

Mr. Herbert Morrison, Minister of Transport, in a recent speech, said that the Ministry had received a very important report the publication of which was under consideration. "You must remember," he said, "there was appointed soon after I went to the Ministry of Transport, with the authority of the Prime Minister, a Committee on the electrification of the railways. The report of the Committee has now been received by me on behalf of the Government, and it will raise very important issues on transport policy. I cannot tell you what the report contains—much as you would like to know—but it raises very big issues of policy.

# Motor Coach and Bus Notes.

**"Regals" for East Anglian Service.**—Messrs. Bush & Twiddy, the well-known operators of passenger services between Norwich and London, lately ordered another three A.E.C. "Regal" chassis to meet the expansion of their traffic. The Company was established in the latter half of last century, and at one time owned sixty horse drawn waggonettes. They have available for pleasure purposes no less than 52 itineraries of day and half day tours around Norwich. They are perhaps unique in that they have never employed solid tyred motor vehicles for passenger carrying. All-the-year-round long-distance services were started last Whitsuntide and operate twice daily, each way, during the winter and four times a day during the summer. At the latter period Gt. Yarmouth is also added to the time-table. Last summer Bush & Twiddy services attracted so many passengers that on some days eight coaches were employed on the route. The record was achieved one Saturday when the Company succeeded in transporting no fewer than 900 people each way between London and East Anglian towns. The mid-week passengers now number as many in the winter as in the summer months. The number of vehicles employed for operating the route are two A.E.C. 95 h.p. "Regal" chassis fitted with thirty-seater sunshine saloon bodies.

THE LONDON BOUND COACH PICKING UP PASSENGERS AT ONE OF THE NORWICH CALLING POINTS.

**Bus Service Purchased.**—The Watch Committee of the Chorley Corporation has received letters from The Yarrow Motor Co., Ltd., and Messrs. M. Ellison and Sons respectively, intimating that the bus services until recently operated by the latter firm had been purchased by The Yarrow Motor Co., Ltd.

**Buses or Trams?**—The Watch Committee of the Tynemouth Corporation has referred a letter received from the Tynemouth Traction Co., with regard to the substitution of buses in lieu of trams, to a Sub-Committee for consideration and has authorised the chairman and town clerk to arrange for a further conference with representatives of the Whitley and Monkseaton U.D.C. to consider the reports of the borough surveyor and the surveyor of the Whitley and Monkseaton U.D.C. with regard to the re-instatement of the tramway tracks.

**London-Bexhill-Hastings Service.**—At the Highways Committee of the Bexhill Corporation, a letter was received from the United Service Transport Co., Ltd., stating its intention to apply for road service licences to operate a London-Bexhill-Hastings service through Battle, Catsfield, Ninfield and Bexhill into Hastings, using the latter point as a base, and asking the Council to define the place in the borough which would be officially approved for the purpose of picking up and setting down passengers. The Committee recommends that the company be informed that without prejudice to the Council's right of submitting representations on any application which may come before the commissioners, the Council is of the opinion that the appropriate stopping place should be the Town Hall Square.

**Proposed London Transport Board.**—The L.C.C. has adopted a report of the Finance Committee in regard to the proposed London Transport Board in which the view was expressed that the proposed terms were without precedent and so far as the municipal tramways were concerned, inequitable and called for the strongest opposition. The voting was 64 against the proposed Transport Board and 34 in favour, those in favour being the Labour members of the council. Mr. Morrison, the Transport Minister, who is an alderman of the council, was not present.

**Coaching Interests Amalgamate.**—We are officially informed that, as from April 1st last, the interests of the London Terminal Station and Coach Travels, Ltd., of Clapham Road, S.W., have been amalgamated with those of the Central London Coaching Station, of Cartwright Gardens, W.C.1. Mr. E. F. Lyne, managing director of the Central London (Road Transport) Station, Ltd., will be managing director of both companies. Mr. Lyne, to whose initiative this amalgamation is due, was, it will be remembered, the originator of the covered-in coaching station when he established the Central London Station in the spring of 1928.

**Coach Owners' Bright Idea.**—The Merseyside Touring Co., Ltd., of 30, Islington, Liverpool, which operates a fleet of about 60 motor buses and 30 motor coaches, are this season issuing an attractive handbook, "The Silent Courier." The places of interest indicated on a map will be numbered in respect of each town, and the happy idea has suggested itself of displaying in the coaches the number relating to the town or district through which the coach is passing, thus enabling passengers to refer to the letterpress description contained in the "Courier." The company has worked out details of 57 day tours as part of this season's programme. Thirty motor coaches, fully loaded, were sent to the Grand National on 27th March, the fare being 23/6d. per passenger, including luncheon and tea.

**Old-Established Firm Fight for Licences.**—A protest against monopoly in public passenger transport services was made at the Ministry of Transport inquiry at Bangor, arising from the appeal of Messrs. James Pearson and Son, motor coach proprietors, of Liverpool, against the refusal of the Caernarvon and Bangor Corporations to grant them licences for a through service between Liverpool, Bangor and Caernarvon. Messrs. Pearson have been engaged in passenger transport for the last 60 years and they secured 3,000 signatures to a petition in support of their application, which was opposed on the ground that the route was adequately served by the services of Crosville (Chester), Maxways (Birkenhead), and two Bethesda companies. On behalf of the Crosville Company, which holds 43 licences in Caernarvon and 49 in Bangor, it was stated that it was doubtful whether the existing companies could make the Liverpool service pay.

**Lancaster-Morecambe Joint Services.**—Lancaster Corporation Omnibus Committee, along with a sub-committee of the Morecambe and Heysham Corporation, has considered the question of bus routes in the event of arrangements being made for inter-running. It has been decided to take preliminary steps with a view to the operation of Corporation omnibus services along a number of routes. The sub-committee is to meet representatives of the L.M.S. and the Ribble Motor Services, Ltd., to discuss the question of co-ordinated transport.

**Trolley Vehicles Next Year.**—The South Lancashire Power and Transport Company, whose headquarters are at Atherton, expect to convert the section of their tramway system between Leigh and Atherton to the trolley vehicle system some time in 1932.

**New Joint Service Proposed.**—Consideration is being given by Ribble Motor Services and the Bolton Corporation to the merging of the Egerton and Tonge Moor services, to provide a joint service with one time-table and return tickets inter-available.

**Licences Granted.**

The General Purposes Committee of the Eston U.D.C. has granted the application of the Tees-side Railless Traction Board for permission to run buses between Normanby and Queen's Square, Middlesbrough, via the New Trunk Road and North Ormesby.

The General Purposes Committee of the Lowestoft Corporation has granted an application from Messrs. Sid. Page, Ltd., of Gorleston, for licences for seven 26-seater Thornycroft coaches to ply for hire on services between Great Yarmouth and London.

The Watch Committee of the Sheffield Corporation has granted licences to the Yorkshire Traction Co., Ltd., of Barnsley, for a service to Bridlington and Scarborough.

# Public Service Vehicles.

## Conditions of Fitness.

Since we published in our March issue details of the Public Service Vehicles (Conditions of Fitness) Regulations, 1931, the Minister of Transport has issued The Public Service Vehicles (Conditions of Fitness) Provisional Regulations, 1931.

Briefly, the variations from the original Order are as follow:—

The following will not now apply to vehicles registered before January 1st, 1932.

**Steering.** The ball and socket joints of steering connections when such are used, shall not be pendant.

**Hub Projection.** No portion of any road wheel or any fittings thereof shall project more than 3½ inches beyond the extreme outer face of the tyre.

**Transmission Shafts.** Where open or exposed transmission shafts having an unsupported length of more than 2 ft. are fitted a bar or bars having an eye or bridle to surround such shafts shall be fitted in such manner as to reduce the risk of damage being caused to other parts of the vehicle in the event of the transmission shaft breaking.

**Entrances and Exits.** Direct access to the driver's seat from the offside shall be provided when there are seats for passengers on his left side. A vehicle with a seating capacity for not more than 14 passengers if it has one means of entrance and exit in rear of the rear wheels will be deemed to comply with the regulation calling for two means of entrance and exit.

**Gangways.** In the case of a single-decked vehicle without a permanent top when extended or raised, the height of the hood from the floor shall be not less than 5 feet at the centre line of the vehicle, except over the driver's seat.

**Seats.** The backs of all seats shall be so closed or otherwise constructed as to prevent, as far as possible, the pockets of passengers being picked.

**The following will not now come into force until April 1st, 1932** (see page 241, March issue, The World's Carriers, under heading "The following Regulations will come into Force on January 1st, 1932):—Guard Rails; Fuel Tanks, etc.; Steps, Platforms and Stairs; Ventilation.

In addition the operation of the regulation that the width of every gangway shall be not less than 12 inches up to a height of 2 ft. 6 ins. from the floor level and above that height not less than 14 ins., is postponed to April 1st, 1932.

Laden Weight.

This regulation has been altered. In the case of a four-wheeler the sum of the weights transmitted to the road surface by all the wheels shall not exceed 10 tons in the case of a double-decker or 9 tons in the case of a single-decker; and the weight so transmitted by any two wheels of the vehicle in line transversely shall not exceed 6⅔ *tons in the case of a double-decker or* 6 *tons in the case of a single-decker.*

**Stability.** (See page 240, March issue of The World's Carriers). This regulation will not now apply in the case of a vehicle registered under the Roads Act, 1920, on or before July 1st, 1931.

# Road Traffic Act, 1930.

## Public Service Vehicles.

On March 31st, the Minister of Transport made the Public Service Vehicles (Licences and Certificates) (Amendment) Provisional Regulations, 1931, which amend in certain particulars the Regulations made on the 9th February, as to the procedure on applications for licences and certificates in respect of public service vehicles and road services.

The amendments are as follows:—

(1) A new Regulation is added to deal with the question of the public service vehicle licence in the case of a vehicle hired by one operator from another. The Minister's attention was drawn to difficulties which might arise in this respect, and his intention to deal with this point by way of amendment to the Regulations was announced on the 3rd March.

(2) Provision is made for a fee of £5 for the approval of a type vehicle the chassis and body of which conform to a chassis and a body which have each formed part of different vehicles already approved as type vehicles.

(3) Verbal amendments are made in the prescribed forms for declarations and certificates of conformity to a type vehicle.

# Public Service Vehicles.

## Drivers' and Conductors' Licences.

Provisional Regulations have been made by the Minister of Transport dealing with Public Service Vehicle Drivers' and Conductors' Licences.

The Regulations do not apply to the City of London and the Metropolitan Police District, and men living in this special area must apply to Scotland Yard for temporary licences.

Every application for a licence must be made to the Traffic Commissioners on a form to be obtained from them on demand and must be signed by the person requiring the licence.

The Commissioners may require the applicant to provide: (i) evidence that he fulfils the requirements of the Act as to age; (ii) evidence that he can read and write; (iii) a certificate from his present or last employer or a sufficient reason for failure to supply such a certificate; (iv) a certificate of character signed by two householders or ratepayers who have known the applicant personally for the past three years; (v) in the case of an applicant for a licence to drive:—(*a*) evidence that he is the holder of a licence to drive granted under Part I of the Act which shall be produced for examination by the Commissioners if required; (*b*) a medical certificate that he is not suffering from any disease or physical disability likely to interfere with the efficient discharge of his duties as a driver or to cause the driving by him of a public service vehicle to be a source of danger to the public; and (*c*) facilities for a practical test of his ability to drive a public service vehicle or any specified type or types of such vehicles; and (vi) in the case of an applicant for a licence to act as conductor, a medical certificate that he is not suffering from any disease or physical disability likely to interfere with the efficient discharge of his duties as a conductor or to be prejudicial to the health or comfort of passengers.

The requirements of paragraphs (ii), (iii), (iv), (v) and (vi) shall not, unless the Commissioners otherwise determine, apply in the case of any person who at the time of his application is duly licensed under any Act or bye-law to drive or act as conductor as the case may be of a public service vehicle.

The fee for a licence will be 1s. and immediately upon its receipt the licensee must sign it with his ordinary signature.

Changes of address must be notified to the Commissioners by whom the licence was granted within seven days of such change, and the licence must be sent to the Commissioners for endorsement with the new address.

The licensee must inform the Commissioners of the name and address of every person by whom he is employed within seven days of becoming so employed.

On being required to do so by any police constable, public service vehicle examiner or by any person authorised by the Commissioners a licensee shall produce his licence for examination or shall state the address at which the licence will be available for examination.

If a licence has been lost, destroyed or defaced, the Commissioners must be notified, who, if satisfied, will on payment of 1s., issue a duplicate.

In the event of the suspension or revocation of a licence the licensee must within five days after a notice to that effect has been delivered to him, send the licence to the Commissioners for retention during suspension or for cancellation, as the case may be.

On the issue of a licence to an applicant the Commissioners will, unless the licensee is already in possession of a badge issued by them, issue to the licensee a badge (which will remain the property of the Minister) bearing a distinguishing letter and number, to be worn in a conspicuous position when on duty.

No badge will be issued until the applicant has deposited 2s. 6d. with the Commissioners in respect thereof. On the licensee surrendering the badge to the Commissioners, except in the case of a temporary surrender, the deposit will be returned to him.

The licensee must retain in his possession the badge issued to him, and must not permit it to be worn by any other person.

If any person acts in contravention of or fails to comply with any of the requirements of the Regulations he shall be guilty of an offence and liable on summary conviction to a fine not exceeding £5.

**Automatic Traffic Signals Increasing.**—The Automobile Association states that the Corporations of Bolton, Eastbourne, Hereford, Leamington and Shrewsbury have decided to instal automatic traffic signals. This will bring the total number of cities and towns where these signals are operative to 91. A list of the cities and towns affected may be obtained from the Automobile Association, Fanum House, New Coventry Street, London, W.1.

# National Advisory Council of Independent Public Service Vehicle Owners' Associations.

The first meeting of the National Advisory Council of Independent Public Service Vehicle Owners' Associations, under the auspices of the Motor Hirers' and Coach Services' Association, was held in London on March 10th last.

There were present:—Messrs. M. Logette, G. Nowell, C. Dobbs, F. A. Flin and A. E. Tapper, representing The Motor Hirers' and Coach Services' Association, London; Messrs. D. H. Kerslake and A. C. Stewart representing the Mansfield and District Omnibus Owners' Assoc., Nottingham; Messrs. W. E. Gough and C. Thomas representing The Motor Omnibus Proprietors Association, S. Wales; and Messrs. F. Pownall and W. G. Waugh representing the Brighton and District Coach Owners' Association, Brighton.

Apologies for absence were received from:—Mr. J. H. Lowe (The Motor Hirers' and Coach Services' Association); The Blackpool & District Motor Coach Owners' Assoc., Blackpool, and The Northern Road Transport Owners' Association, Ltd., Newcastle-on-Tyne.

The setting up of this National Advisory Council is the result of deliberations which have taken place at three preliminary conferences attended by many engaged in the industry. These meetings have been reported in our columns.

The following Associations of Independent Operators of Public Service Vehicles at present constitute the Council:—The Motor Hirers' and Coach Services' Association, London; The Northern Road Transport Owners' Association, Ltd., Newcastle-on-Tyne; The Mansfield & District Omnibus Owners' Association, Nottingham; The Medway & District Bus Owners' Association, Strood, Kent; The Motor Omnibus Proprietors' Association, Argoed, S. Wales; The Blackpool & District Motor Coach Owners' Association, Blackpool; The Brighton & District Coach Owners' Association, Brighton.

It is hoped that the near future will witness the organisation of every independent operator of public service vehicles under the protection of the one body.

**Election of Officers.** Mr. Kerslake proposed and Mr. Dobbs seconded that Mr. M. Logette be elected Chairman for the ensuing year ending 31st January, 1932. This proposal was carried unanimously.

Mr. Logette expressed his thanks for the confidence shown in him.

**Vice-Chairman.** Mr. Dobbs proposed and Mr. Nowell seconded that Mr. C. Thomas be elected Vice-Chairman. Carried.

**Secretary and Treasurer.** Mr. D. Piercy, Secretary of The Motor Hirers' and Coach Services' Association, was invited to accept these offices in an Honorary capacity and he agreed to do so.

The offices of the National Advisory Council are at 72, Great Portland Street, London, W.1.

# London Passenger Transport.

## L.G.O.C. Staff Dinner.

Mr. Herbert Morrison, Minister of Transport, spoke at the Annual Staff Dinner of the L.G.O.C. at the Café Royal, on March 26th. During the course of his speech Mr. Morrison said those present might have heard that there was a Bill before Parliament, called the London Passenger Transport Bill.

He had been gratified at the favourable reception which, generally speaking, had been accorded to the Bill. A pleasing aspect of the reception of the Bill had been that notwithstanding the fact that he was proposing to transfer big private transport undertakings to the management of a public board, the owners of those various undertakings, and the municipal tramway concerns as well, had maintained personal goodwill towards himself. Even though they might disagree on important matters in connection with the proposals their personal relationships were good. He was glad that this should be so, for, after all, the proposals were either a business proposition or they were not, and it was upon that basis that politicians and industrialists alike should examine them.

"The point of criticism most prominently in the discussions is the fact that the Minister of Transport, after consultation with the Treasury, will appoint the London Passenger Transport Board, and secondly the alleged excessive powers of the Minister under the Bill. I understand these fears, but on the other hand I am a little disappointed by criticism on this point because I have taken enormous pains to free this Board, in broad questions of management, from interference by politicians like myself.

"We have stipulated in the Bill that in appointing the Board, the Minister is bound to appoint 'persons who have had wide experience, and have shown capacity, in industry, commerce or finance, or in the conduct of public affairs.' Transport may be regarded as included in industry and commerce in which it is no small factor. It will be observed that party politics is not a qualification. Any Minister, Labour or Conservative, who tried to pack the Board with his political friends or for the purpose of trying to find somebody a job, would be defying the statutory direction, would be politically if not legally discredited, and Parliament would find its own ways of bringing about his downfall. No one would be stronger in condemnation of conduct of this kind than myself. It is true that wide experience and capacity in the conduct of public affairs is one of the possible qualifications and is thus provided in order that we shall not artificially exclude people of real capacity in the conduct of public business and that the Minister may be free to consider suitable people of big experience in London local government. For myself I can say that in all my local government work, my Parliamentary work and my work as a Minister I have never used my public position to get anybody a job."

Dealing with the relationship between the Board and the Minister of Transport, Mr. Morrison said the Passenger Transport Board would have their statutory directions. The Act would confer upon them the entire responsibility for management, subject only to certain safeguards which were in the public interests and in the interests of the undertakings which were committed to the charge of the Board. No Board would allow the Minister to dictate how they were to discharge their duties. In the whole range of normal managerial functions the Board would be free. It must be free, because it was of the essence of the whole scheme that the Board must feel itself directly responsible to the public for the success of the undertaking and their own reputations must be bound up in that success. Obviously when it came to big questions of policy and finance where the public interest was involved, then the public must have its rights and machinery must be established for the direction and ventilation of those rights. Thus it was that fares and charges could always be argued by any local authority or group of local authorities before the Railway Rates Tribunal.

The London Traffic Advisory Committee was to be revolutionised in its position and would in substance become a municipal joint committee maintaining steady friendly contact with the Board and acting as a liaison between the travelling public of London and the Board.

Everybody would be bound by the direction that the new undertaking must pay its way.

There must be a channel in Parliament for questions to be put and even discussion to take place on the work of the Board in a general way, and the function of the Minister would be to convey information to Parliament as to the work of the Board. The Board itself would desire to keep right with public opinion and if the Board was uncertain in a matter of policy as to what would be the best thing to do, they would be free but in no way bound or committed, informally to discuss the problem at issue with the Minister.

The Board would be a business body conducting a great business for public ends, and from his knowledge of the working of similar institutions he had not the smallest doubt that whatever political views, if any, the members of the Board might have, they would conduct the business in a public spirit and with every desire for success.

# Public Service Vehicles.

## City of London and Metropolitan Areas.

Regulations have been published for the adaptation of Part IV of the Road Traffic Act to the area consisting of the City of London and the Metropolitan Police District. Within this special area Scotland Yard are made responsible for the grant, refusal, suspension and revocation of public-service vehicle licences and the issue and revocation of certificates of fitness and certificates that a vehicle conforms to a type of vehicle approved by the Minister of Transport. Scotland Yard will also in respect of persons residing in the special area licence drivers and conductors of public service vehicles.

## Blackpool Motor Coach Owners' Association.

Officials of the Blackpool and District Motor Coach Owners' Association for the ensuing year are:—President, Mr. E. V. Standerwick; president-elect, Mr. J. Mann (Armitages, Ltd.); vice-presidents, Messrs. J. W. Horsfall, Councillor J. F. R. Hill, R. W. Marshall and J. W. Dewhurst; hon. treasurer, Mr. J. H. Jackson; hon. secretary, Mr. H. Hardman; committee, Messrs. A. Meadows, G. Wolstenholme, A. Leavesley, E. T. Butterworth, Councillor W. Salisbury, L. Stephenson, E. Taylor, F. Briggs, E. Seed, and N. Waddington.

The Association has decided to join the National Advisory Council of Independent Public Service Vehicle Owners' Association in order to protect the interests of individual private owners outside the motor bus combines. The Committee, in their annual report, make particular reference to the effect of the Road Traffic Act. The statistical returns already called for by the Minister of Transport, they state, require accurate and precise information regarding fares, indicating that the Minister will not tolerate a system of price cutting; rather will he insist on operators charging reasonable fares as agreed by the majority of members, based on the actual mileage run.

Commenting on this, Mr. H. Hardman, secretary of the Association, stated that the new Act creates some revolutionary changes in the motor coach industry, particularly so far as licensing is concerned. This had led to the Association approaching the Chairman of the Traffic Commissioners for the North Western Area, Mr. W. Chamberlain, to discuss with him several difficult points which have arisen. The licensing and certification of coaches would cost £6 per vehicle, plus £1 for the area road service licences. As there were in Blackpool and district about 230 coaches, the additional burden necessitated the reconsideration of fares. Most of the members of the Blackpool Association for their normal services would require permission to go into 13 other areas, and that permission cost 10s. for each area, meaning a further addition of £6 10s. a year to the cost of running a single coach. In the old days when the licences were granted by local authorities a certain amount of sentiment entered into the business, but this was all finished. One Blackpool firm operating 24 coaches would be required to complete over 200 forms, some in quadruplicate, some in triplicate and some in duplicate. The difficulties of owners in a town like Blackpool were intensified by the fact that when applying for licences they had to include in their applications the routes of all their tours, which extended in the case of long distance tours from John o'Groats to Land's End. It was a very difficult matter to identify properly each road over which the coach travels on such a long journey. Returns for January and February had already been sent in, giving the number of passengers carried, the amount of fares collected and the mileage run, on the different services, this information being apparently needed to find out what fares are really operating in Blackpool, as well as elsewhere. Fares, no doubt, would tend to be more or less standardised throughout the country. The Act would put the motor coaching industry on a business basis and for this reason would be welcomed by all the business people in the industry. One good thing about the Act was that it abolished the by-laws created by scores of authorities throughout the country.

No decision has yet been reached as to the 1931 season's fares. Those which operated last year were:—Morecambe, 4s.; Southport, 4s.; Windermere, 7s.; Keswick, 9s.; Gretna Green, 12s. 6d.

During March, Blackpool owners have been quoting the following fares for journeys:—London, single, 15s.; return, 20s. Birmingham, single, 10s.; return, 15s. Manchester, Bolton and Chorley, 2s. 6d. single, 3s. return, 4s. 6d. extended.

## Limiting Buses in London.

The Minister of Transport has given notice that he proposes to make an Order under Section 7 of the London Traffic Act, 1924, declaring certain streets, specified in the Schedule to the notice to be restricted streets, that is to say, streets in which the plying for hire by omnibuses ought to be prohibited or restricted either generally or during particular hours.

The Minister also proposes to make Regulations under the same Section restricting the plying for hire by omnibuses in such streets so that it shall not be lawful for any person to use or allow to be used at any time upon any day (other than Good Friday, the day following Good Friday, Bank Holidays and days appointed by proclamation to be Bank Holidays), in any restricted street or part thereof for the purpose of plying for hire any greater number of omnibuses than might, under and in accordance with Section 6 of the above Act, and a Schedule or Schedules deposited by him under that Section with the licensing authority and in force on March 19th, 1931, have been so used by him at that time, for the purpose of maintaining along that street or part thereof the regular service or services which were shown in such Schedule or Schedules.

Most of the streets affected are in the suburbs of London, with the exception of a few such as Baker Street, Park Lane, and Wandsworth Bridge Road.

The Minister of Transport states that the object of the proposed Order and Regulations is to prevent any further increase in the number of omnibuses plying for hire on such of the streets as are at present used by omnibuses, and to prohibit the operation of omnibuses on the remainder of the streets named in the Schedule to the Notice, until such time as the Minister is satisfied that additional omnibuses or new services are necessary to meet the requirements of the public. The proposed Regulations will not involve any reduction in existing services.

## Certifying Officers and Public Service Vehicle Examiners.

The following appointments have been made by the Minister of Transport under the Road Traffic Act, 1930:—

**East Midland Area.**

Public Service Vehicle Examiners.

Mr. T. L. Lane (Senior Examiner), at Nottingham; Mr. J. Saville, at Nottingham; Mr. G. Bradford, at Peterborough; Mr. J. E. Sharp, at Leicester; Mr. H. Dobney, at Bedford; Mr. T. C. Welch, A.M.I.A.E., at Lincoln; Mr. J. Brown, at Grantham; Mr. A. Vickerman, at Huntingdon; Mr. W. Wakelam, A.M.I.A.E., at Derby; Mr. W. Whitehead, at Northampton.

**North-Western Area.**

Public Service Vehicle Examiners.

Mr. Arthur Leyland (Senior Examiner), Mr. A. Brereton, Mr. D. C. Brookes, Mr. John Connolly, Mr. W. Fallon, Mr. S. Hollinrake, Mr. W. Lee, Mr. C. M. Matthews, Mr. O. Owen, Mr. R. G. Storey, Mr. W. B. Vose.

**Northern Area, Scotland.**

Public Service Vehicle Examiners.

Mr. John Myles (Senior Examiner), Northern Scotland Area Traffic Commissioners' Office, 17, Broad Street, Aberdeen. Mr. A. Cradock (Dundee), Mr. D. M. Robertson (Kirkcaldy), Mr. J. G. I. Thomson (Aberdeen), Mr. D. Cameron (Inverness), Mr. A. B. Robb (Elgin), Mr. B. T. Wood (Perth).

**Eastern Area.**

Mr. T. F. Turton (Certifying Officer), A.M.I.M.E., A.M.I.A.E., M.S.A.E.

Mr. J. F. Browing, A.M.I.A.E., Mr. E. L. Wilson, M.I.M.T., A.M.I.Mech.E. (Temporary Certifying Officers).

Public Service Vehicle Examiners.

Mr. J. F. Bruce, Mr. A. G. Prest, Mr. G. W. Thyng, Mr. T. Barrett, Mr. R. S. D. Hail, Mr. F. W. Woods, Mr. A. G. Merritt.

**Newcastle's Bus Stations.**—The Watch Committee of Newcastle Corporation is desirous of reorganising the bus traffic to and from the Haymarket by providing loading platforms and other equipment necessary to the efficient working of what is probably one of the busiest bus centres in the country. The various interests concerned have been moving actively in the matter, and early developments are expected.

**New Bus Service Wanted.**—At the Watch Committee of the Glossop Corporation, a resolution was submitted from the Whitfield residents to the effect that they thought it desirable that a bus service should be inaugurated in that area and the Committee decided, subject to the Highways Committee raising no objection, to request the North Western Road Car Co. to run buses along the route between the Town Hall and Whitfield Cross.

# Transport in Scotland.

**Kirkaldy Trams to Go.**—At a recent meeting of the Kirkaldy Town Council it was decided to accept the offer of Messrs. W. Alexander & Sons, Ltd., Falkirk, to provide the whole of the public passenger transport services required within the burgh. Negotiations have been proceeding for some considerable time, and the terms of the agreement which have been arrived at provide for the cash payment by Messrs. Alexander of £27,000 and an additional payment of £2,000 per annum for 21 years. Under the agreement the present Corporation tramway system will be discontinued on May 15th next.

**Augmentation of Touring Fleet.**—Messrs. W. Alexander and Sons, Ltd., Falkirk, are augmenting their present fleet of touring coaches with 30 additional new Leyland all-weather saloons which are to be used during the ensuing touring season and will operate from Glasgow. The bodies, which have a seating accommodation ranging from 14 to 28, are at present in course of construction at the firm's body-building works at Camelon. It is stated that one reason for this increase is that there is every indication that this year will eclipse all previous touring records.

**Road Bridge over the Forth.**—At a recent sitting of the Provisional Order Commissioners in Parliament House, Edinburgh, the preamble of the Provisional Order promoted by the County Councils of Fife, Stirling and Clackmannan to construct a road bridge over the Forth at Kincardine-on-Forth was found proved subject to the adjustment of certain clauses. The estimated cost of the bridge is £369,000 and about 600 men will be employed on its construction.

**L.M.S. Railway Workshops, Inverness.**—Some time ago Inverness Town Council was asked by the Inverness No. 2 Branch of the N.U.R. to intervene in the depletion of the railway workshops, and the results of the Town Council efforts were made known recently to representatives of the Branch at a private meeting with Provost MacEwan and members of the Council. It is learned, however, that the Provost who had had an interview with the L.M.S. authorities in London, informed the representatives of the Branch that owing to the severe loss which the railway company had sustained they had been compelled to make drastic economies in all departments. It was the intention, however, of the railway company to keep Inverness open as a line repair workshop.

**Railhead Distribution of Goods.**—Mention was made in our December issue of the efforts being put forward by the London, Midland and Scottish Railway Company towards the establishment of efficient railhead distribution services throughout the populous country districts in Scotland. It is now learned that considerable progress has been made during the past four months and arrangements have been completed with local carriers and carting contractors in several districts for the distribution of goods and parcels between the local station and all parts within a certain radius from it. Full details are not yet to hand but according to an official of the railway company the system is working most satisfactory and the scheme is being pushed forward with all speed. It is hoped that by the end of the present year the company will have in operation a rail-road goods carrying organisation catering for the whole of the populous parts of Scotland.

**Rail Shopmen Decide Against Strike Action.** — At a meeting of the Glasgow railway shopmen employed in the northern district, held in Glasgow on March 24th, is was decided to accept the wages reduction intimated recently by the National Wages Board and the Shopmen's Council. After hearing several speakers a resolution was moved to the effect that strike action at the present time was inadvisable and that the two branches, No. 12 and No. 18, therefore instruct their representatives to the delegate conference to vote in favour of accepting the findings of the National Wages Board and Shopmen's Council. The motion for acceptance was carried by a large majority. Grade workers in the railway service throughout Lanarkshire have had meetings to discuss the award. In Mid-Lanark district the graded staffs decided on acceptance by a majority. The shopmen in the repair and fitting shops at Hamilton West, Motherwell, and Carstairs have also discussed the situation. In some centres the "cuts" were regarded as too drastic, and there was a disposition to offer resistance. Generally speaking, however, the view of railwaymen in Lanarkshire is that the time is not opportune for a strike.

# Civil Aviation.

Mr. F. Montague, M.P., Under Secretary of State for Air, in the course of the Air Estimates Speech in the House of Commons on March 17th, said, referring to civil aviation, that it was a matter for congratulation that within the last few days 2,675 miles of the 5,700 mile air route from Cairo to Cape Town had been opened. Before the end of the year, the whole of the route would be in operation.

As an example of the difficulties that had had to be overcome, he might mention that where aerodromes had been laid down in the higher altitudes along the line of the journey, the comparative rarity of the air reduced the commercial load of an aeroplane, so that the cost of operation was seriously increased. But for all the difficulties, there was high hope of the success of the venture and of great subsidiary developments in the future.

The South African service now partly an achievement, would, it was hoped, be ultimately linked by feeder lines, bringing into air communication with the central air line many enormous and wealthy territories.

In connection with this service and the service to India, which were both fed by the service from London to Egypt, he was very happy to announce that the terms of a draft Anglo-Italian Convention had now been agreed between representatives of the two countries. Under the terms of this convention, Imperial Airways were granted permission to operate with land planes via Milan, Rimini and Brindisi.

For a period of one year, Imperial Airways were also permitted to resume operation of the Genoa-Naples-Corfu route with seaplanes, and the permission might be extended for a further period of twelve months.

In return an Italian company nominated by the Italian Government might operate services to the United Kingdom, Gibraltar, Malta, Cyprus or Aden. The Convention required ratification, but it was proposed that it would remain in force for 10 years; pending ratification the services could be operated by agreement.

The draft of an Anglo-Greek Air Convention had also been agreed, which would permit of operation by Imperial Airways either by the Italy-Corfu-Athens-Alexandria route or by the Mid-Europe route through Salonica to Athens.

It was expected, assuming that the London-Egypt service reverted to the Italian route, that the journey between London and Cape Town would ultimately take 10½ days.

A tentative scheme had been prepared for a weekly air mail service between Calcutta and Australia to link up with the existing passenger and mail service between England and India. The scheme had been worked out on the assumption that the stage between Karachi and Calcutta would be operated as an Indian State Service in conjunction with Imperial Airways, Ltd. These proposals were now under consideration by the Governments concerned.

The position with regard to the proposed British air services in the West Indies and between the West Indies and Canada was not in as complete a state as they should like to see. The original proposals had now, in view of financial difficulties, been divided into two sections, the first covering West Indian Islands and penetrating into British Guiana, and the second a weekly service between Trinidad and Montreal by way of Bermuda. The present scheme depended upon the co-operation of Canada in view of their interest in the second section of the project; negotiations were proceeding and it was hoped that a practical result would ensue.

**A Hundred and Fifty Thousand Employees of General Motors Insured.**—A New York message says that the General Motors Corporation have become the holders of the first five hundred million dollar insurance policy which has ever been taken out. Under the agreement 150,000 dealers and employees in the United States of General Motors will become eligible for life insurance benefits.

**Hundred Thousand Accident Deaths. Annual Toll in America.**—A New York message says that the American death toll from accidents, now approximately 100,000 annually, is constantly increasing, mainly due to careless use of motor cars, according to Dr. Louis I. Dublin, statistician for the Metropolitan Life Insurance Company.

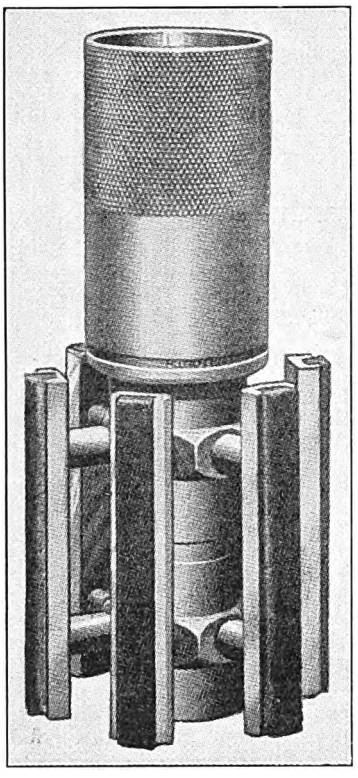
# The "Hutto" Cylinder Grinder.

We were recently invited by Harvey Frost & Co., Ltd., 148-150, Great Portland Street, W.1, to witness an improved method of cylinder grinding by the "Hutto" equipment. The demonstration was carried out under the critical observation of Mr. H. Kerr Thomas, M.I.M.E., M.I.A.E., whose report we give below.



THE LATEST IMPROVED "TWIN-THREE" HUTTO GRINDER (MODELS AT AND KT) HAS A POSITIVE MECHANICAL ADJUSTMENT THAT EXPANDS THE HONE BY A KNOWN AMOUNT FOR EVERY PART TURN OF THE ADJUSTING SLEEVE.

The "Hutto" cylinder grinder is made in several models but all constructed on much the same principle. The purpose of the grinder is to provide an economical and efficient means of grinding the cylinder *in situ* thus doing away with the necessity for removing the engine from the chassis and despatching it to an outside firm for regrinding. The model we saw demonstrated was we understand the "Twin-Three." It has six grinder bearing surfaces. Its form is that of an expanding segmental wheel with positive setting. There are no expanding springs. The accuracy of the grinding is not affected by soft or hard spots in the cylinder walls. It is self-centering and easily adjusted. It is ordinarily operated by an electric drill, which drill is also available for use in the repair shop both for ordinary drilling and for use in various operations with the necessary adjustments. If electric current is not available the "Hutto" grinder can be used on the ordinary drilling machine, in which case double universal drive shaft and taper shank adapter can be supplied for this purpose.

**Details of Construction.** The "Hutto" "Twin Three" cylinder grinders are constructed as shown by the cross sectional diagram. One end of the driving spindle fits the chuck of the electric drill, the other end being attached to the body of the grinder by means of a ball-and-pin type universal joint, which permits of accurate work when the grinder is out of line during operation. This type of "universal" with bayonet connection to the upper end of the grinder body also provides for easy access to the stone adjusting mechanism.

Underneath the driving spindle is the adjusting screw for drawing the upper and lower adjusting cones together, forcing the stones outwards against the wall of the cylinder. The lower cone is slotted on one side to receive the end of a pin which prevents it from turning when the adjusting screw is rotated

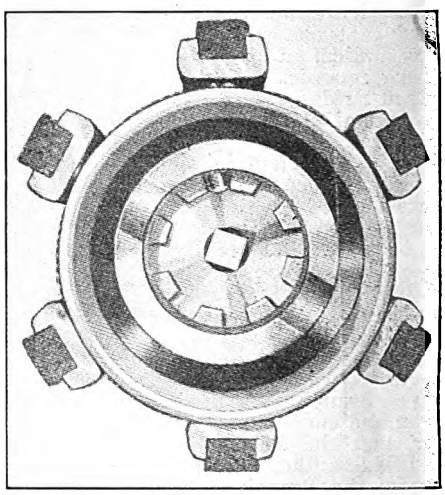
When the adjusting screw is eased back the adjusting cones are forced apart by the action of a coiled spring. The stones are then drawn inwards by means of springs which hold the jaws against the cones, thus relieving the pressure on the cylinder wall and allowing the grinder to be withdrawn without scratching the bore. It will be seen that as the jaws holding the stones are always held in contact with the adjusting cones, there is a positive movement outwards or inwards every time the adjusting screw is turned. The speed of grinding depends upon the manipulation of the adjusting screw, a quarter-turn of which equals approximately 1/1000 in. bore diameter.

Neither of the two adjusting cones is rigidly attached to the grinder body. They are free to "float" to an extent sufficient not only to prevent binding of the parts, but to ensure equalization of seating area and pin pressure on the two cones, thus making the stones self-aligning as well as self-centering.

**Mr. H. Kerr Thomas's Report.** I witnessed a test of the "Hutto" Cylinder Grinding Head at your works on the 20th March, 1931.

A cylinder bore was selected from a worn block, there was a bad ridge about 1.5 in. from the bottom, the top was oval to the extent of 7.5 thousandths, and the bore had a mean taper from bottom to top of 13.7 thousandths.

The dimensions I took twice over with a new Starrett micrometer, and I am satisfied the readings are correct to plus and minus one half thousandth inch.



END VIEW SHOWING HOW THE ADJUSTMENT IS SECURED BY MEANS OF INTERLOCKING STOPS. EVERY ONE-SECTION TURN EXPANDS THE HONE ONE HALF-THOUSANDTH OF AN INCH.

| Before grinding. | Crankshaft direction. | Transverse. |
|---|---|---|
| Top | 3.1685 | 3.161 |
| Bottom | 3.151 | 3.151 |
| After grinding. | | |
| Top | 3.172 | 3.172 |
| Bottom | 3.1715 | 3.1715 |

After grinding, the conditions were verified with a Three point dial Indicator, and it is seen that the bore was finished truly cylindrical, and parallel within one half thousandth inch, this being well within ordinary manufacturing limits for a new cylinder.

The ground surface was excellent, at least equal to work turned out by ordinary shop methods.

The time occupied was 24 minutes, but operations were suspended to allow of examination while the work was in progress, and to change the grinding blocks from coarse to fine grade.

Yours faithfully,
H. Kerr Thomas, M.I.Mech.E., M.I.A.E., M.A.S.M.E.
21st March, 1931.

# Ball Races for Vehicle Springs.

Improvements making for greater comfort and safety of road vehicles are always welcomed. We have recently received brief particulars of a device of this description which certainly should appeal particularly to motor coach proprietors and manufacturers. This has been placed on the market by Super Suspension Sales, Ltd., 25, Victoria Street, S.W.1, of which Mr. W. D. Cavendish is a director. It takes the form of ball bearing plates which are inserted between the spring leaves at the outer ends, by which means the springs are relieved of much friction and are able to move freely and thus the flexibility is much improved. The device has, we understand, been successfully applied to ordinary cars and the fitment is now being manufactured in suitable sizes for public service passenger vehicles and goods vehicles. The fitment consists of a retaining plate in which numbers of balls are loosely mounted. The plate is provided with lugs for attachment to the spring leaf. The balls extrude a little above the surface of the plate, and upon these the spring leaf above rides freely and thus any shock sustained is not transferred through the springs to the body of the vehicle, or to the tyres. The retaining plate is built up of two pieces of rustless steel, drilled and countersunk on one side. The countersunk sides when placed face to face form spherical recesses in which the balls are placed. The plates are then riveted together thus forming a housing for the balls, forming a flat ball bearing surface. On light vehicles these races are placed between the ends of the first and second and the second and third leaves of both front and rear springs, making sixteen races in all. On heavier vehicles additional races are fixed between the first and fourth leaves making eighteen races in all. A set suitable for vehicles up to 30 cwt. cost 35s. and for weights above that, up to 50s. for a 5-ton vehicle. The claims made as a result of using these ball races include light steering, reduction of skidding because the wheels hold the road better, greater riding comfort and, in the case of goods vehicles, less damage to the goods carried.

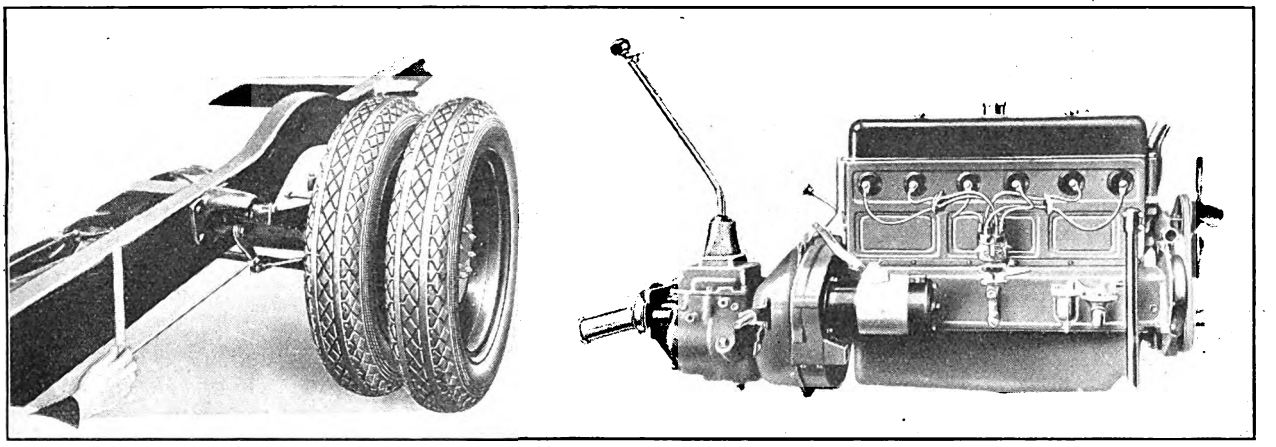
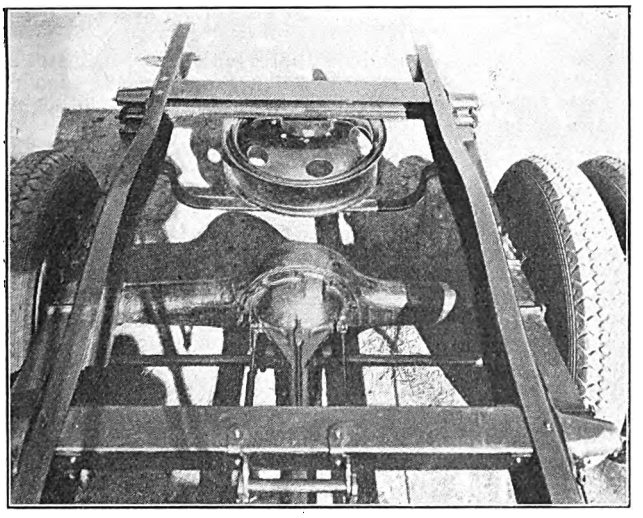
# A New 2-Ton 6-Cylinder Chassis.

General Motors, Ltd., Edgware Road, The Hyde, London, N.W.9, announce the production of an addition to their range of Chevrolet trucks. The new chassis is to be known as the "Bedford" and is produced by Vauxhall Motors, Ltd., of Luton, and distributed by General Motors, Ltd. The vehicle is manufactured in both short and long wheelbase sizes.



LEFT: SHOWING THE SUBSTANTIAL FRAME OF THE BEDFORD 2-TON CHASSIS. RIGHT: THE 6-CYLINDER BEDFORD ENGINE.



THE FULL FLOATING BEDFORD REAR AXLE.

The engine has six cylinders and is of the overhead valve type with detachable head. The bore and stroke are 3 5/16 in. and 3¾ in. respectively, and the R.A.C. rating is 26.33. The crankshaft is carried on four bearings.

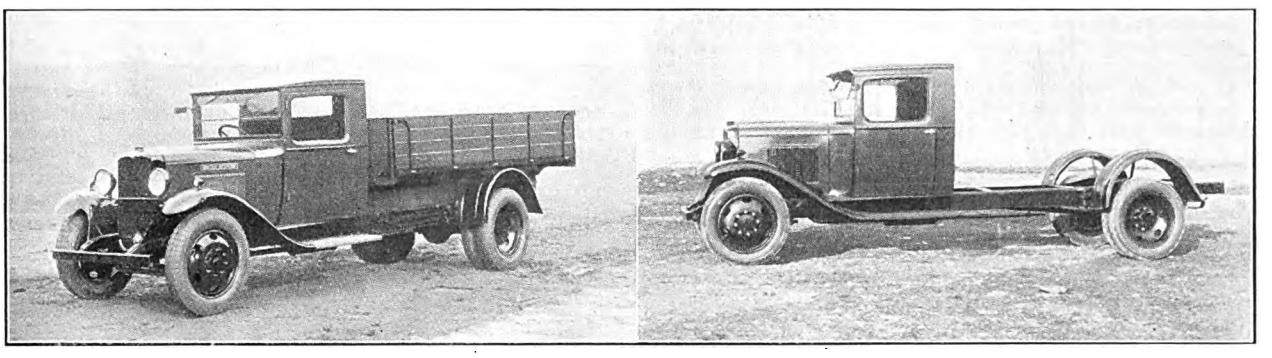
There is forced feed lubrication to the main bearings, big ends, camshaft bearings, timing chain and overhead valve gear and other parts are lubricated by splash. Lucas separate unit ignition is used. The carburetter is a Zenith, model 30 U. Petrol feed is by positive drive pump and an air cleaner is fitted.

Cooling is by pump and large capacity radiator assisted by fan. Power is transmitted through a single dry plate clutch to a four speed gear box, the gear ratios being 1st, 33.46 to 1; 2nd, 18.86 to 1; 3rd, 9.48 to 1; 4th, 5.42 to 1: and reverse, 34.35 to 1. The frame is of channel section 6⅛ ins. by 2¼ ins. with five cross members in the short wheelbase model and 7 ins. by 2¼ ins. with six cross members in the long wheelbase model.

The front axle is an extra heavy drop forged, heat treated I beam, reversed Elliott type with taper roller bearings to stub axles. The rear axle is fully floating with cast steel banjo type housing, with spiral bevel gears. The shafts can be drawn without dismantling the axle. The foot brake is internal expanding on both front and rear wheels and the hand brake internal expanding on rear wheels only. The wheels are the pierced steel disc type interchangeable, twin rear. Tyres are 30 ins. by 5 ins. all round.

The springs are semi-elliptic front and rear, the front being 36 ins. long by 1¾ ins. wide, with 8 leaves, and the rear 45 ins. long by 2½ ins. wide, with 17 leaves. Steering is of the worm and gear type, adjustable for wear.

The equipment includes the Lucas 6 volt, two-unit electric lighting and starter. Complete lamp equipment including head lamps with dipping beam, a speedometer, electric horn, and extra wheel and tyre carrier and complete tool equipment. The short wheelbase is 131 ins., and the long wheelbase 157 ins. The prices are as follows:—Short wheelbase model: Chassis £198; Chassis with cab £223; dropside lorry, £240; end-tipping lorry, £251; boarded tilt van, £261; Luton type van, £263; Box van, £268. Long wheelbase model: Chassis, £210; Chassis with cab, £235; dropside lorry, £260; Boarded tilt van, £280; Luton type van, £285; Box van, £290.



LEFT: THE BEDFORD 2-TON 6-CYLINDER DROP-SIDE LORRY. RIGHT: THE BEDFORD 2-TON 6-CYLINDER LONG WHEELBASE CHASSIS.

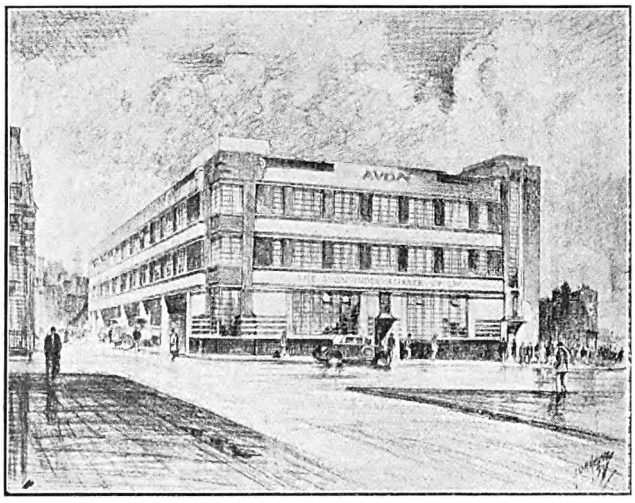
## Avon's New London Home.

The London address of the Avon India Rubber Company, Ltd., is now Mabledon Place, St. Pancras, W.C.1, where larger and more convenient premises have been built. The old telephone numbers (Museum 4420, etc.) have been retained. Avon built and occupied their handsome premises at 343/5, Euston Road, in 1921 and, although growth was provided for by the addition of a floor not then required, the site has not proven sufficiently adaptable from the viewpoint of tyre fitting and servicing, the ground-floor area being restricted to about 3,000 feet. Consequently, the Directors did not hesitate to seize the opportunity, just before Christmas, of acquiring a valuable freehold site of 10,000 feet with frontages on Mabledon Place and Flaxman Terrace, near St. Pancras Church and two minutes from Euston and St. Pancras Stations. Messrs. Wallis, Gilbert & Partners, the well-known industrial architects, were commissioned to design a building of the most modern type and the work is being done in record time. The "first sod" was only cut on December 29th.

The new premises provide an ideal three-floor layout, which makes possible cohesion of the three main activities —offices, stores, service. The ground-floor is a lofty,



AVON'S NEW LONDON HOME.

roomy garage with plenty of open space for big lorries and coaches, fully equipped with solid tyre press, air-compressor service, lifting tackle, etc. Some solid and giant tyres will also be stored there and the trade sales department has a convenient section entered from Mabledon Place. The first floor is to be devoted entirely to the Company's varied stocks of tyres, repair sundries and accessories, golf balls and sports rubbers, footwear, etc., while the Reception Room and Sales Offices are to be located on the second floor, which will be serviced by a fast passenger lift. Heating, lighting and all subsidiary equipment is of the most up-to-date type and, while efficiency is the dominant note, the amenities of life have been carefully studied. Vita glass, for instance, is being fitted in the main office windows, the interior decoration of the main entrance tower and the public offices is to be most artistic with a strong note of modernity, and the principal elevation is extremely handsome and imposing.

"Avon is moving—forward and up" is the fitting slogan for an enterprising step which undoubtedly means bigger and better service facilities for the Company's London and Export customers.

**The Mussolini Touch.**—What is surely a record in high-speed engineering has been established at Orte, on the Rome-Florence Railway Line, says Reuter's Rome correspondent. Precisely forty minutes after the Milan express had passed over an old bridge built in 1878 the bridge was replaced by a new all-steel structure. The change-over was completed without the slightest interruption of the service, and the new bridge was inaugurated immediately after by a Florence-Rome train which cut a tricolour ribbon across the track as it passed. Hundreds of people from the surrounding villages watched the ceremony and sang the Italian National Anthem.

## Correspondence.

### BUSES IN SUNDERLAND.

*To the Editor of* The World's Carriers.

Sir,—I am in receipt of your March issue, and note your paragraph on page 251, "Buses Gaining Favour."

The way this paragraph is worded is very misleading, and not in accordance with the actual facts.

Buses are not gaining favour here. On the contrary all the bus services are showing a big drop in revenue, as are the tramcar routes, due entirely to the lamentable state of the shipbuilding trade, which is Sunderland's staple industry.

The reason for the increase in the bus figures is that more routes are running now than at the corresponding period of last year. The bus routes which were operating last year are showing a drop in receipts varying from 1d. per mile to 4d.

There are actually two tram routes which, in spite of the deplorable state of trade, show substantial increases over last year.

Yours faithfully,
Charles Hopkins,
General Manager.

County Borough of Sunderland,
Tramways and Motors Department,
Monkwearmouth, Sunderland.
21st March, 1931.

### A PLEA FOR CANALS.

*To the Editor of* The World's Carriers.

Sir,—The Secretary of the Incorporated Association of Architects and Surveyors pleads for the more extended use of canals as a means of removing the burden of heavy traffic from our roads.

It may be only a coincidence, but I notice that the Association has been running a competition for a model design of a petrol filling and service station, with the idea of doing away with hideous wayside pumps and garages.

There is a distinct connection between the canals plea and the Association's competition. I know of no hideous petrol stations alongside canals, while the picturesque appearance of lock-keepers' cottages is proverbial. If it be argued that petrol stations are not in evidence alongside canals, I may reply that not so long ago there were none at all alongside our roads.

Traffic on the roads is increasing to such a degree that some such diversion of traffic as the canals afford is inevitable in the near future. The canal's beauties are not yet ruined, and the principle of the Association's Competition should be applied to them before it is too late. It is much to be hoped that not only canal owners but those worthy societies whose aim is the preservation of the country's natural beauties will exercise some foresight.

Yours faithfully,
P. B. Stirling.

2, Milner Street, Cadogan Gardens,
London, S.W.3.
26th March, 1931.

## London Cart Horse Parade.

On Whit Monday, May 25th, the 41st Annual Parade of Cart Horses will again be held, by permission of His Majesty's First Commissioner of Works, in the Inner Circle, Regent's Park. The Parade is open to all drivers of heavy cart horses within the Metropolitan Police area, and Brass Merit Badges will be awarded to horses gaining a red rosette. In addition to the cash prizes offered by the Society, the Shire Horse Society will present premiums for the best horses irrespective of breed, and the Suffolk Horse Society will donate premiums for horses of the Suffolk breed. Long Service prizes are again being offered to drivers who have been not less than 25 years in the continuous employ of the same firm, and Certificates of Merit will be awarded to managers or horse foremen whose horses have gained not less than four first prizes in the Parade. Entries at single fees will close on May 4th and with double fees until May 11th. Entry forms and full particulars may be obtained on application to the Secretary, Mr. Robert F. Ling, The London Cart Horse Parade Society, 12, Hanover Square, W.1.

# Goods Shipped "On" or "Under" Deck.

## Damage by Sea Water and Contracts.

## Discharging into a Buyers' Craft.

By a Barrister-at-Law.

### Goods Damaged by Sea Water.

A matter of considerable interest to those concerned in shipping goods for carriage by sea recently engaged the attention of the High Court. In this particular instance the litigation arose over the method employed in carrying the goods on board, by which it was alleged that damage ensued owing to the goods being injuriously affected by the sea water which reached them on the ship. The question came before the Court upon an award in the form of a special case, in which the umpire had awarded, subject to the opinion of the High Court, that under deck shipment was part of the specification, and that the goods were carried on deck and were damaged by the sea water, but that this fact was not sufficient to entitle the Buyers to reject the goods. The submitted question, therefore, for the High Court was whether such rejection was justified on the ground that the words "under deck" formed part of the description of the Goods, or because the term in the contract which related to shipment under deck was a condition precedent to the actual agreement.

### The Contract and Bill of Lading.

To enable the matter to be appreciated it should be stated that the Contract itself was in a well recognised form, adopted by a Trade Federation in this Country and by a Foreign Exporters' Association, and that the material parts of this c.i.f. Contract set out the specification, among other things, relating to the Goods to be shipped with the words "under deck" mentioned in two places, and that part of a further clause provided that the Buyers should not reject the Goods specified, but should accept or pay for them in terms of the Contract against Shipping documents. The Sellers proceeded to ship the Goods under a Bill of Lading, but this did not state whether the Goods, which consisted of timber, was on deck or under deck, although the Sellers apparently believed they were under deck. On the arrival of the Goods it was discovered by the Buyers that only a very small proportion of the Goods had been placed under deck and that the greater part had been carried on deck and had been wetted and damaged by the sea water. Thereupon, the Buyers refused to accept the goods on the ground that they were not the goods specified in the Contract between the Consignors, the Sellers, and themselves, as Consignees, the Buyers in the Case. When the dispute went to arbitration, in which the Sellers claimed damages for wrongful rejection, and the Buyers counter-claimed for loss of profits, the umpire gave his award as previously indicated and stated the Special case.

### Passing of Property on Discharge into Buyers' Craft.

It would seem from the facts put forward that the Goods were actually discharged from the ship into the Buyers' craft upon arriving in this Country, and that it was not till then that the Buyers said they would not accept the Goods because they had been carried on deck. This fact was, of course, used to show that the property in the Goods had then accordingly passed, and that, even if there had been a right before to reject the Goods, that right was lost immediately the Goods had been placed in the craft of the Buyers. If the point had been taken and proved before the umpire it might certainly have had a very important bearing upon the case, but if taken and proved it is difficult to understand why the Special case said nothing about it. At all events it left the learned High Court Judge unable to deal with that particular aspect, for he was restricted to the facts appearing and set out in the Special case itself. But his Lordship was careful to observe that for all he knew there might be answers to such a point, and, he added, the Parties had chosen their own Tribunal, and, in the absence of any suggestion of misconduct on the part of the umpire, the court could not deal with anything but the particular questions left to it.

### Contentions raised by the Parties.

For the Sellers it was further argued that the question, therefore, was whether the words "under deck" were a condition of the Contract, or simply a Warranty, and that under the Sale of Goods Act, they were only a Warranty, the breach of which would be satisfied by damages. Moreover, it was contended, the further clause, already mentioned, was specially inserted to prevent rejection in such cases as the present, and that while it might be that the Buyers might have a right of action against the ship for carrying the Goods on deck this had nothing to do with the case itself. The Buyers, on the other hand, submitted that the words "under deck," being repeated, were words evidently considered of importance, intended to be a condition, and that all the terms in the specification were conditions. The particular Clause referred to, the Buyers contended, only applied where the Goods complied with the specification, and did not apply in this instance, as the Goods were not Goods specified, while the words "under deck" were part of the description of the Goods.

### A material term of the Contract.

The learned Judge in the course of his judgment, held the words "under deck" in this case to be a condition of the Contract, and he thought that, "generally speaking, the question whether Goods were to be carried on deck or under deck went to the whole performance of such a Contract, just like provisions as to the time and place of shipment. It was a material term of the Contract." His Lordship also remarked that "where provisions were set out in a Specification, those provisions became the description of the thing which was the subject of the sale, and if the Goods did not comply with the Specification they did not comply with the Contract description." The learned Judge therefore, answered the question raised by the Special case in favour of the Buyers, and decided that the award must be for them accordingly.

## Southampton Docks.

An extensive dredging contract has been entered into by the Southampton Harbour Board in respect of further deepening and widening of the approaches to the Docks. £240,000 is to be expended on the fulfilment of the scheme, and work will extend over a period of five years. Part of the proposed dredging is to be undertaken in an area outside the Board's jurisdiction and towards the cost of this particular portion of the work the Southern Railway Company, as dock owners, have agreed to contribute a moiety (£30,000). The new Canadian Pacific liner "Empress of Britain," 42,500 tons, which is at present nearing completion on Clydebank, is expected to reach Southampton towards the end of April and she will then be placed on the Company's express service between this port and Quebec commencing her maiden voyage from Southampton on May 27th. Substantial headway is being made with work on the new docks extension and the advanced stage reached in connection with the construction of the new deep water quay wall over a length of 3,800 feet has allowed the reclamation of mudland area behind the new wall to be proceeded with.

# The National Federation of Forwarding Agents of Belgium.

## Annual Report.

Through the courtesy of Mons. Jos. Albert De Ryckere, President, we have received a copy of the Annual Report for 1930 of the Fédération Nationale des Entrepreneurs de Transports de Belgique, which was presented at the General Meeting held in Brussels on March 18th last.

The officers of the Federation are:—

President:—Mr. Jos. Albert De Ryckere (Antwerp).

Vice-Presidents:—Mr. Arthur Basse (Liége), Mr. Louis Ghémar (Brussels), Mr. Gustave Reyniers (Ghent).

General Secretary:—Mr. Marcel Raskin (Liége).

Treasurer:—Mr. Charles J. Lambert (Brussels).

Directors:—Mr. H. Creten (Ghent), Mr. Ch. de Lausnay (Antwerp), Mr. J. Driessen (Verviers), Mr. C. Ducoffre (Antwerp), Mr. V. A. Freyman (Brussels), Mr. Ph. Maxime (Erquelinnes), Mr. H. Menkès (Brussels), Mr. H. Servais (Verviers).

The following are extracts from the report:—

**Membership.**

The membership increases steadily and no resignations have been registered.

**International Congress of Forwarding Agents held in Antwerp, June 5th, 1930.**

The majority of the members took part in this event, the success of which was due to the splendid services of the local organising committee, comprising well-known Antwerp representatives, at the head of whom were Messrs. De Ryckere and Patry.

[A special report of this Congress appeared in our issue for July, 1930.—Editor.]

**Workmen's Holidays.**

A bill has been introduced to allow workmen holidays with pay. The Federation of Belgium Chambers of Commerce brought the matter up for discussion.

This Association is quite prepared to admit the justice of certain claims of the workmen, but when a crisis prevails it is not the right moment to pass new laws which impose further burdens on industry and commerce. Events have proved that we were right. The present crisis shows sufficiently clearly that any increase of the burden borne by employers should for the present be avoided.

**Traffic Police.**

Revision of article 6 of Acts of August 1st, 1899 and 1924. Employer's liability for fines imposed on drivers. Steps in this matter have been undertaken with the Ministries and great organisations, particularly by our General Secretary, Mr. M. Raskin, on the occasion of the Road Congress. We are at present in receipt of several applications from motorists' and truck owners' associations asking us to draw up the basis for joint action to ensure an amendment of the law.

**Refund of Customs Duty.**

The Office notified all members by circular letter of the wording of the judgment given in favour of one of our members. The Customs Authorities must refund the duties charged in consequence of a mistaken declaration of weight made by the declarant. The principle of this judgment is of extreme importance for our business.

**Conclusion.**

We apologize for repeating the same remarks with which our annual report concludes every year: the resumé which has just been given of the principal questions studied by this Board during the business year of 1930 omits mention of many matters, disputes and others, which have been submitted for its consideration.

Answers have been given to many fiscal questions, to questions of liability in railway and insurance matters, liability for accidents, pilferage on dock, etc.

It is obviously impossible to go in detail into these questions which the Board hopes have been settled to the satisfaction of the parties concerned. The Administration of this Federation is, as always, entirely at the disposal of the members, to receive their suggestions and/or criticisms on questions of a general nature. It is likewise at their disposal for supplying them, so far as it possibly can, with data on any special transportation questions.

We also desire most particularly to thank the Ministers, Members of Parliament and Public Administration Officials of all ranks who, with their accustomed kindness, have always received our delegates in the most friendly way whenever we desired to put before them the different view points of our field of activity.

Allow us, in conclusion, to appeal to all of you for assistance in bringing into this Association all those colleagues who do not yet belong to it, by calling their attention to the necessity for uniting all efforts in the defence of our interests.

# Port of London Authority.

### Lord Ritchie Re-Elected Chairman.

The first meeting of the new Board of the Port of London Authority was held on April 1st. The Rt. Hon. Lord Ritchie of Dundee was re-elected Chairman and Mr. C. F. Leach, Vice-Chairman. Lord Ritchie and Mr. Leach have been Chairman and Vice-Chairman of the Authority respectively since 1925.

The London County Council has appointed Mr. A. Baker, J.P., and Mr. H. J. Greenwood, D.L., J.P. (Members of the Council) and Mr. W. Devenay, J.P. and Vice-Admiral A. G. Hotham, C.B., C.M.G. (not Members of the Council) to represent the Council on the Board of the Authority. All these Members, with the exception of Mr. Baker, have previously represented the London County Council on the Board.

* * * *

At the Head Office of the Port of London Authority on March 23rd, the Returning Officer, Mr. J. D. Ritchie, M.C., announced the result of the poll taken for the election of eight Members whose principal business is or has been mainly connected with "Goods." The following gentlemen were declared elected: Mr. Owen Hugh Smith, Sir A. Cory Cory-Wright, Mr. A. C. Davis, Mr. C. S. S. Guthrie, Capt. Sir Ion Hamilton Benn, The Rt. Hon. T. Wiles, Sir Charles C. McLeod, Mr. C. W. Hodge.

In accordance with the provisions of the Statutory Regulations governing the election of Members the following 18 persons have been declared to be Elected Members of the Port of London Authority for three years from the 1st April, 1931: *Election by Wharfingers*—Mr. F. W. Bellamy; *Election by payers of rates, wharfingers and owners of river craft*—Vessels other than river craft: Mr. F. C. Allen, Mr. L. H. Bolton, Mr. D. Jones, J.P., Mr. C. F. Leach, Mr. E. A. Lloyd, Mr. W. J. McAlister, Mr. A. Maclean, Sir Montagu C. Turner; River craft: Mr. W. L. Wrightson; Goods: Capt. Sir Ion H. Benn, Bart., C.B., D.S.O., T.D., Sir Arthur C. Cory-Wright, Bart., J.P., Mr. A. C. Davis, J.P., Mr. C. S. S. Guthrie, Mr. C. W. Hodge, Sir Charles C. McLeod, Mr. Owen H. Smith, The Rt. Hon. T. Wiles, P.C.

* * * *

### Lord Ritchie's Survey of Work during Three Progressive Years.

At the last meeting of the old Board of the Port of London Authority held on March 19th, Lord Ritchie of Dundee took the opportuntiy to survey in some detail the progress of the Port of London and the work of the Authority since the constitution of the Board in 1928.

After quoting figures showing an increase of 10.5 per cent. over that of 1927 in the net registered tonnage of vessels using the whole of the Port of London during 1930, and giving details of the Authority's financial position as well as of new works and improvements, Lord Ritchie referred to the trade depression.

"The business of the whole country is now in a critical condition, and this is bound to be reflected in the trade of the Port of London. From the figures I have quoted it will be seen that we have managed to maintain our position very well, but statistics more recent than those I have mentioned indicate a downward tendency, and although we have accomplished a great deal in the direction of economising in the working expenses of our undertaking, it will be necessary for the new board to consider what further steps should be taken."

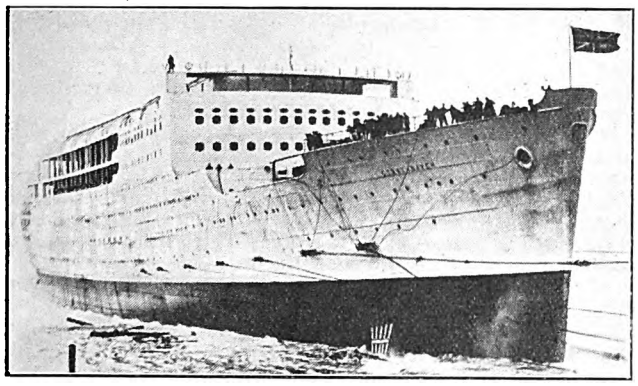
# News from the Ports.

**Liverpool Shipping and Forwarding Agents' Association.**—At their last meeting, the Council of the Liverpool Shipping and Forwarding Agents' Association gave further consideration to the question of unfair competition by agents of steamship companies. Representatives of the Association have had an interview with the Liverpool Steamship Owners' Association which, although sympathetic to the point of view put forward by the shipping and forwarding agents, felt it was not within their province to intervene in the affairs of its individual members. Consequently the Shipping and Forwarding Agents' Association intends to take up the matter with individual members of the Steamship Owners' Association. At the same meeting of the Council, an interesting discussion took place with reference to the insurance of members against clerical errors in consular documents, it being pointed out that members incurred the risk of serious losses through errors that might possibly be made by members of their office staffs. It is understood that a policy providing coverage against such losses is available in Germany. The Association is, therefore, making inquiries from Lloyds to ascertain if a similar policy can be drawn up for the use of shipping and forwarding agents. It has been decided by the Association to send a donation of five guineas to the Y.M.C.A. Dock Canteen Fund. Workmen in the service of shipping and forwarding agents benefit from this fund. Further legal advice is being taken by the Council on the important question of rights of lien.



LAUNCH OF THE S.S. "STRATHNAVER."

**Launch of the "Strathnaver."**—Our photograph shows the launch of the P. & O. turbo-electric liner "Strathnaver" which, with her sister ship "Strathaird," represents the highest point so far reached with the development of the electrically driven merchant ship.

**Welcome Freight Reduction.**—Shippers of cotton goods to Port Okha, India, have been advised that the rate of freight has been reduced to 47s. 6d. per ton following representations which have been made to the steamship companies. This should have a very helpful effect on trade, as Baroda, where Port Okha is situated, has been entirely free from the recent unfortunate political disturbances which have been so widespread in India.

**Australian Shipowners' Offer to Renew Contracts. Existing Freights to Stand.**—The Australian shipowners have informed the producers and exporters that they are prepared to renew for a year contracts expiring on June 30th at the existing freights for all classes of cargo shipped overseas from Australia. They will, however, require reconsideration of the exchange surcharge on refrigerated cargo which was fixed at three per cent. before the recent rapid rise in the exchange.

**Shipping Activity in 1930.**—According to the Board of Trade Journal, the total of the entrances in the foreign trade at ports of the United Kingdom during 1930 was 97,543,000 tons, an increase of 0.97 per cent., as compared with the total of the entrances in 1929. Entrances with cargo increased by 1.62 per cent., while the entrances in ballast decreased by 0.23 per cent. The clearances with cargoes and in ballast during 1930 aggregated 97,593,000 tons, an increase of 0.41 per cent. on 1929. In spite of the great reduction in our export trade, and the less marked reduction in imports, the volume of shipping at United Kingdom ports in 1930 was at a somewhat higher level than that of 1929.

**Shipping Merger.**—An Osaka message says that two of the largest Japanese shipping companies, the Nippon Yusen Kaisha and the Osaka Shosen Kaisha, controlling more than 260 steamers aggregating almost 1,500,000 tons, have issued a statement that they have jointly entered into an agreement with the object of minimising competition on overseas trade routes.

**Royal Society of Arts. Thomas Gray Memorial Trust prizes offered in 1931 for the Improvement and Encouragement of Navigation.**—Under the will of the late Thomas L. Gray, the Royal Society of Arts has been appointed residuary legatee of his estate for the purpose of founding a memorial to his father, the late Thomas Gray, C.B., who was for many years Assistant Secretary to the Board of Trade (Marine Department). The objects of the Trust are "The advancement of the Science of Navigation and the Scientific and Educational interests of the British Mercantile Marine." The Council now offer the following prizes:—1. Prize for an Invention.—A Prize of £100 to any person who may bring to their notice a valuable improvement in the Science or Practice of Navigation proposed or invented by himself in the years 1930 and 1931. In the event of more than one such improvement being approved, the Council reserve the right of dividing the amount into two or more prizes at their discretion. Competitors must forward their proofs of claim on or before December 31st, 1931, to the Secretary, Royal Society of Arts, John Street, Adelphi, W.C.2. 2. Prize for an Essay.—A Prize of £100 for an essay on the following subject:—"The stability of Ships, with special reference to the particulars which should be supplied by Shipbuilders, and also the value of any mechanical devices for ascertaining the M.G., with which you are acquainted." Competitors must send in their essays not later than December 31st 1931, to the Secretary, Royal Society of Arts, at the above address. The essays must be typed. They must be sent in under a motto, accompanied by a sealed envelope enclosing the author's name, which must on no account be written on the essay. A breach of this regulation will result in disqualification. The Judges will be appointed by the Council. The Council reserve the right of withholding the Prize or of awarding a smaller Prize or Prizes, if in the opinion of the Judges no suitable invention or essay is submitted. The Council also reserve an option on the copyright of the successful essay.

**Argentine. Improvements to the Port of Rosario.**—The Commercial Counsellor to His Majesty's Embassy at Buenos Aires has furnished, in connection with the proposed improvements to the Port of Rosario, the name and address of the concessionnaires. British manufacturers of plant and machinery desirous of receiving the information furnished by the Commercial Counsellor should communicate with the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. Reference number G.X.10233 should be quoted.

**Manchester Ship Canal. New Coal Conveyor.**—An indication of the efficiency of the new coal conveyor plant erected by the Manchester Ship Canal Company at Ellesmere Port was given recently when the steamer "Egyptian Prince" loaded and trimmed 2,864 tons of coal in 6½ hours, an average of 441 tons an hour. The loading was into five separate hatches and necessitated the manipulation of 300 wagons.

**United States Lines Promotions.**—Captain E. F. Mitchell, formerly captain of the American Merchant Lines s.s "American Merchant," has been appointed to command the United States liner "Republic," vice Captain H. C. Fish, resigned. Captain G. C. Stedman, formerly first officer of the "Leviathan," has been appointed to command the s.s. "American Merchant" in the London/New York service of the American Merchant Lines. Captain H. Manning has been appointed to command the American Merchant Lines s.s. "American Trader."

**The Port of Galway.**—At the annual meeting of the Galway Chamber of Commerce, it was reported that the gross tonnage dealt with at the port and harbour of Galway, had increased from 217,678 tons in 1928 to 1,191,584 tons in 1930. Transatlantic liner calls, outward and inward, at Galway had increased from 34 in 1929 to 70 in 1930. The Galway County Council, the Urban Council, and the Harbour Board, had jointly guaranteed interest and sinking fund on a loan of £200,000 for the development of the docks at Galway, and the complete scheme would involve an expenditure of £335,000. Galway has become one of the most up-to-date and progressive towns in the Irish Free State, and was one of

Digitized by Google

the few towns whose population was on the increase, and its trade expanding.

**The Port of Dublin.**—During 1930 increased shipping trade was done at the port of Dublin. The accounts of the Dublin Port & Docks Board for that year showed a gross revenue of £214,401, a total expenditure of £186,888, and a revenue surplus of £27,512. According to the Board's report dealing with accounts, the total register tonnage which had entered the port of Dublin during 1930, upon which dues were collected, was 2,464,003 tons, which showed an increase of 97,773 tons, as compared with 1929. The Board's loans outstanding at 31st December last amounted to £1,219,190, the balance to the credit of the various sinking funds at that date being £161,944.

**Port of Glasgow and Shipping.**—Despite the fact that in 1930 cargo rates have been even lower than in 1929, due to the prevailing industrial depression and keener competition resulting in rate cutting, shipping movement at the Port of Glasgow shows no sign of improvement. Some forty cargo vessels are still laid up in various parts of the river and as things are it is doubtful whether their number will be reduced before the Spring is out. The present low ebb of shipping movement on the Clyde coincides with the reduced output from the shipyards. The output during March is the lowest for many years past. Five of the yards are without a single vessel on the stocks, and at least a like number have only one each under construction. One firm is employing only 20 per cent. of its normal number. No contracts were announced during the month, except in the case of boatbuilders. Overtures have taken place with official representatives of the Soviet Government during the past few weeks and the question of long-term credits were discussed with several firms, but nothing has materialised yet in the shape of orders. The output figure for March of 6,521 tons represents nine vessels, the largest of which was 2,500 tons gross. The total for the first quarter of the year amounts to 53,243 tons, compared with 115,571 tons for the corresponding period of last year. Every effort is being made by the Clyde Navigation Trustees to foster trade between Scotland and the Dominions, but some time must elapse before the fruits of their efforts can be enjoyed. So far exports in all directions are down and March will probably go down as one of the worst months on the Clyde for many years.

**New Vessel for West Islands Service.**—The launching of the M.V. "Lochfyne," built to the order of Messrs. David MacBrayne (1928), Ltd., took place on March 20th, at the Leven Shipyard, Dumbarton. This represents the fifth new steamer built by Messrs. MacBrayne since the firm came under the joint control of the Coast Lines and the L.M.S. The boat is the first Diesel-electric ship turned out by the builders and is for service between Greenock and Ardrishaig in the winter and other parts of the Western Isles in the summer. The launching ceremony was performed by Lady Stamp.

**L.M.S. New Vessel.**—Trials have been carried through on the Firth of Clyde by the new L.M.S. passenger steamer, "Princess Margaret," which was built by Messrs. Denny Brothers, Dumbarton. The new vessel, which has accommodation for 1,200 passengers, is expected to take up service on the Stranraer-Larne route early in April.

**Belfast Harbour Board.**—On 27th March an election of seven members of the Belfast Harbour Board took place. There were six retiring members among the candidates. All but one of the six were returned. The following were returned in the order named:—Mr. William Strachan (new member), Sir Thomas M'Mullan, Mr. S. Berkeley, Mr. J. F. M'Cue, Mr. John M'Caughey, Mr. A. S. Davidson, and Mr. Hugh Murphy (new member). Mr. Strachan is head of the firm of Workman, Clark (1928), Ltd., the Belfast shipbuilders, and Mr. Murphy is head of a local firm of brick manufacturers.

**New Liners.**—The two new liners now under construction for the United States Lines trans-Atlantic service in 1932, are in no way affected by the United States Shipping Board's decision not to build two additional super liners, according to a statement made at the Company's London office. The monster ships which the Shipping Board announced would not be built, were contemplated for the future, following completion of the two liners now on the ways. They were included in the original plan to build four ships.

**Double Deck Barges for Delivering Automobiles in United States.**—A New York message says that the Ford Motor Company is considering the construction of a fleet of double-deck barges for use in delivering automobiles to distributing points on the Illinois and Mississippi rivers. The barges would measure about 300 by 40 feet and be capable of carrying 150 cars each.

**Forwarding Agents ask for Relief.**—The Council of the Liverpool Shipping and Forwarding Agents' Association has sent a resolution to the Board of Trade pointing out that the high level of the dues charged by the Suez Canal Company is operating seriously to the disadvantage of British trade with the East, and to the advantage of inter-Asian trade and other competitive trades which are free from the heavy burden of the dues. They urge the Government, as the largest individual shareholder in the Canal Company, to use their influence to secure a reduction to frs. 5 per ton in the case of loaded ships and frs. 2.50 per ton in the case of ships in ballast.

**Ship Canal Traffic Down.**—Traffic returns for the Manchester Ship Canal show that during February receipts were approximately £81,097, a decline from 1930 of £19,328. The total for the first two months of the year was £187,803, a decline of £29,042. The reduction in tolls must be mainly attributable to the increased depression in trade.

**New Mersey Dock.**—Friday, April 17th, has been fixed as the date of the opening of Messrs. Lever Bros. new million pound dock at Bromborough.

**Obituary.**—Mr. William M'Calla, principal of Messrs. William M'Calla and Co., Ltd., the well known Belfast firm of shipping and forwarding agents, died on the C.P.R. liner "Duchess of Richmond" on her homeward journey from West Indies to Liverpool. Mr. M'Calla was in his sixty-eighth year. Sir Alexander Bicket, who died recently at the age of 77 years, was chairman of the Kyle Transport Company and a director of the Alexandra Towing Company, Liverpool.

**Liverpool Steamship Owners' Association.**—Members of the Liverpool Steamship Owners' Association have elected Mr. E. Enfield Fletcher, director of the Booth Steamship Company, Ltd., and of Messrs. Alfred Booth and Co., Ltd., to the position of chairman. The vice-chairman is Mr. A. B. Hughes, director and general manager of Messrs. T. and J. Brocklebank, Ltd.

**Plea for Reciprocity.**—At the luncheon given by the South and Central American Trade Section of the Liverpool Chamber of Commerce to the Consuls of South and Central America, Major J. A. Eckes said traffic between South America and England, to be paying, must be two-ways traffic, fair trade both ways. There was little sign of trade depression lifting but he thought this was a matter of reviving confidence. We were suffering from difficulties peculiarly our own, but he felt certain we would solve those difficulties, and in doing that would go a long way towards solving the difficulties of the world. Exporters and importers would always find Liverpool well provided with all facilities for trade. Liverpool was better known to South America than the large towns of South America were known to Liverpool.

**Agency Appointment.**—Messrs. R. W. Stewart and Co., Ltd., shipping and forwarding agents, of 11/13, Victoria Street, Liverpool, have been appointed official passenger and freight agents for Imperial Airways, Ltd.

**River Tyne Crossing Schemes.**—The Minister of Transport has written giving his views as to the proposed bridge or tunnel to connect North and South Shields and stating definitely that it appears to him a tunnel presents the only practical solution. The lowest estimate submitted by the consulting engineers for a tunnel reaches, as he points out, the very substantial figure of £1,240,000, to which there would doubtless have to be added a considerable sum for road widening. The proposed bridge was estimated to cost £2,300,000; but, without substantial aid from the Government, the prospect of even a tunnel crossing seems remote if the main part of the burden has to be shouldered by the Corporations of Tynemouth and South Shields.

**Cosulich Company to Build Two Liners.**—A New York message says that the Cosulich Steamship Company announces that it will shortly build two ships for the Trieste-South America service, which will enable the fleet to reduce the time of the run between these places by about five days. Construction of the ships will begin as soon as possible, and it is intended to have one in operation by August, 1932, the second being completed in 1933. Both will be built at the company's yard at Monfalcone, Cantieri Riuniti dell'Adriatico. The ships will have a gross tonnage of 20,000 tons and a speed of 21 knots.

**Eleven New U.S. Cargo Ships.**—A San Francisco message says that plans are in preparation for the construction of eleven freight ships to cost 15,000,000 dollars (£3,000,000) for the McCormick Steamship Line and the Ocean and Orient Line.

*REUTERS TRADE SERVICE.—By special arrangement with Reuters Trade Service we are publishing news items from all parts of the world dealing with transport matters.*

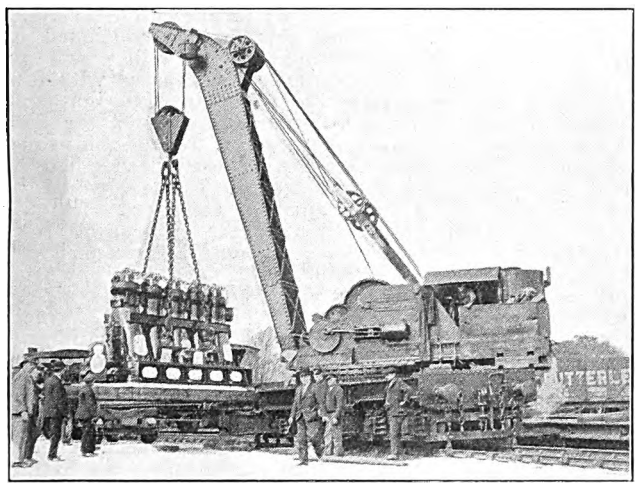
# Railway Notes and News.

**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 12 weeks of 1931, compared with the same period in 1930 and 1929, and are as under:—

| | 1931 £ | 1930 £ | 1929 £ |
|---|---|---|---|
| Passenger ... ... | 13,094,000 | 14,031,000 | 13,992,000 |
| Merchandise, etc. | 12,591,000 | 14,985,000 | 14,778,000 |
| Coal, Coke, etc. | 8,230,000 | 8,994,000 | 9,496,000 |
| Total | 33,915,000 | 38,010,000 | 38,266,000 |

**Enterprise of the Southern Railway.**—In order to provide for motorists who desire to visit the Continent in their cars the Southern Railway have placed on the Dover-Calais route a newly constructed and specially adapted steamship named the "Autocarrier." This vessel has accommodation for 35 cars, which can be housed under cover, and 120 passengers. The new vessel is equipped with refreshment bar and bathrooms, and every accommodation which a motorist can desire. Earl Howe shipped the first car on the "Autocarrier" and thus gave a send-off to a service that is predestined to be extremely popular.

**A Lifting Feat at Hythe.**—Our photograph shows loading work in progress at Hythe (Colchester) station, on the Clacton-on-Sea branch of the London & North Eastern Railway. The engine, weighing 35 tons, is the largest ever lifted in one piece at Colchester, and was built by Messrs. Davey Paxman and Co., Ltd., Standard



A LIFTING FEAT ON THE L.N.E.R.

Iron Works, Colchester; it is one of two 800 h.p. Diesel engines which are to be installed in the motor vessel "Lochfayne" launched by Lady Stamp recently. The engines will be coupled to dynamos which will generate current to drive electric motors on the propeller shafts.

**Great Western Activities.**—Sixty-two thousand steel sleepers of home manufacture are to be laid this year by the G.W.R. in half to one mile lengths in various parts of the system. The Company already have over 136,000 steel sleepers laid in the permanent way and this year's programme will bring the total mileage laid with steel sleepers up to 94 miles. Orders for the sleepers have been placed with the following firms and delivery is now being effected:—Messrs. Guest, Keen & Nettlefold; Messrs. Workington Steel Co.; Messrs. United Steel Company; Messrs. Dorman Long; Messrs. Ebbw Vale Company. The G.W.R. is one of the biggest users of steel in the country. During this year alone it is anticipated that some 90,000 tons of steel of home manufacture will be used in connection with the big £8,500,000 rebuilding plans, locomotive, engineering, constructional, renewal, permanent way, and other works. As each ton of British steel requires some 5 to 6 times its weight in iron ore, limestone and coal necessary for its manufacture, it will be seen that the basic industries will benefit.

**South African Railways.**—A message from Cape Town says that Mr. C. W. Malan, Minister of Railways, introducing the Estimates for his Department, said there had been a deficit last year, he foreshadowed a deficit this year and he thought that rock-bottom had not yet been reached. Railways revenue had decreased nearly £2,000,000 in 1930, as compared with 1929. Road motor services during 1930 had developed considerably, and were now important feeders for the railways.

**Rail and Coach. London and the Golden West of England.**—Interavailability arrangements have been introduced by the Southern and G.W.R. Railway Companies, in connection with the long-distance coach services operated between London and certain places in the West of England, by the "National" Omnibus & Transport Company. The return portions of road tickets from London issued for these services, by London Coastal Coaches, Ltd., also return portions of road tickets issued by the Western National and Southern National Omnibus Companies from these places to London will be available for the return journey (third class) by the ordinary express train services of the Southern and G.W.R. Companies, upon surrender at the Railway Booking Office of the return portion of the road ticket, and payment of a supplement before the rail journey is commenced. Rail exchange tickets will be issued for the rail journey.

**Railway Returns, 1930.**—A preliminary statement containing summarised particulars of the financial accounts and statistical returns of the Railways in Great Britain for the year 1930, compared with the years 1928 and 1929, has been published, and copies (price 6d.) can be obtained from H.M. Stationery Office. In addition to totals for Great Britain the statement shows separately the figures for the four amalgamated companies constituted under the Railways Act, 1921. The tables show the capital expenditure and receipts, the revenue receipts and expenditure from railway working, the total net receipts, the net revenue and appropriation and a summarised balance sheet. They also show the number of passengers carried, the tonnage conveyed, the average receipt per ton, and per ton-mile, and the leading operating statistics. The complete railway returns will be issued later in the year.

**L.N.E.R. Containers.**—The L.N.E.R. announce that 300 small covered and 250 large open containers are to be built to supplement those already in use on their goods services. The present L.N.E.R. stock consists of 710 containers of four types. Traffic in containers has steadily increased since their introduction owing to the fact that this means of transport avoids the necessity of packing and enables door to door conveyance to be given. Containers have also found favour on the Continent and a large traffic is now passing via the Harwich routes.

**New Chairman for Canadian Railway Commissioners.**—An Ottawa message says that Mr. Justice Fullerton, of the Supreme Court of Manitoba, has been appointed Chairman of the Dominion Board of Railway Commissioners. He succeeds Judge H. A. Mckeown, who has retired.

**L.M.S. to Open New Hotel at Stratford-upon-Avon.**—The L.M.S. Railway announce that they have completed the purchase of a large and historic country mansion at Stratford-upon-Avon which they intend to open as an hotel on July 1st next. "Welcombe Hotel" stands in an estate of 50 acres, situated on the Warwick Road, less than a mile from Stratford. The hotel, which will be fully licensed, has at present accommodation for 45 guests, but early in 1932 a new wing will be added giving ultimately accommodation for 80 in all. Provision is also to be made for garages for 32 cars. The mansion is being entirely redecorated, hot and cold water brought to every bedroom and central heating installed. Although all the amenities of a modern hotel will be available the characteristics of an English mansion will be preserved, it being the intention to keep the hotel as one of the old type of English guest houses. The grounds, which are truly magnificent, include an Italian garden, rose garden, lawns and shrubberies, a sunken rock garden and a lake of nearly two acres in extent. A hard lawn tennis court is being laid down and golf (18 holes) is available at the nearby Stratford-upon-Avon Golf Course. A boat-house is to be erected in the hotel grounds on the banks of the Avon, and facilities provided for boating and fishing. "Welcombe Hotel" is in the heart of the Shakespeare Country. Until purchased by the L.M.S. Railway the estate was in danger of being cut up for building purposes.

**Orders for Airvacs.**—An order for 216 Airvacs type R. has been received by Airvac Ventilators, Honeypot Works, Darlington, from the Metropolitan Railway. These are to be fitted to their 1931 rolling stock now under construction by the Birmingham Railway Carriage and Wagon Company, Ltd. Three years ago the Metropolitan Railway conducted a series of comparative tests of ventilators of various makes. As the result of these tests the Metropolitan Railway took delivery of 510 Airvacs in 1928 and the new order just received proves the entire satisfaction Airvacs have given.

# Air Transport Notes.

**Armstrong Siddeley at the Stockholm Aero Exhibition, May 15th—31st, 1931.**—Armstrong Siddeley Motors, Ltd., are exhibiting on Stand No. 1 at the Stockholm Exhibition, where their Jaguar Major or Panther, Lynx and Double Mongoose engines will be on view. The Jaguar Major or Panther engine is a more powerful edition of the Jaguar and is rated at 500 h.p. It is standardised with reduction gear and either with geared fan or supercharger. It is of such compact design that although the bore of the 14 cylinders is ¼ in. greater than that in the Jaguar, the weight and overall diameter are very little greater. This engine is being fitted to a number of the latest type British aircraft and is also fitted to the Fairey 3F now being demonstrated by the Fleet Air Army at Buenos Aires. The Lynx engine is a seven cylinder radial of 215 h.p. Probably one of the most interesting engines is the new Double Mongoose which is a 10-cylinder unit of 340 h.p.

**Royal Aeronautical Society.**—The lecture by Dr. A. H. Davis, of the Physics Department of the National Physical Laboratory on Noise, is one of great interest to all who travel by air, as well as to designers and constructors. Dr. Davis, after dealing with the general characteristics of sound and noise, and with measurements of noise, will give results of measurements of aircraft noises and show to what causes these noises are due as the results of tests on aeroplanes in flight, and he will proceed to suggest ways in which noise, as far as the passenger is concerned, may be reduced. The lecture will be given at 6.30 p.m. on April 16th, at the Royal Society of Arts, 18, John Street, Adelphi, W.C.2, and will be illustrated. Dr. Davis will probably give a number of experiments at the lecture to demonstrate the subject of his Paper. The address of the Royal Aeronautical Society is 7, Albemarle Street, Piccadilly, London, W.1.

**Progress in Air Service Schemes.** — Tyneside is apparently on the verge of big aerial developments. Mr. J. Orange, of Messrs. Orange Bros., the Bedlington bus owners, who started the London-Newcastle service, is (as already mentioned in THE WORLD'S CARRIERS) fostering an air service from Glasgow to London, calling at Newcastle. He says it will be in operation next year, the run from Newcastle to London occupying less than three hours. Another ambitious project is a Tyne-Scandinavian air service, by which a passenger could leave Newcastle in the early morning, lunch at Oslo, and be home again comfortably the same evening. Flying-boats would be used, the proposed landing place being in the Tyne's harbour mouth, with shed and slipway at Tynemouth. This latter service may start in June, and run twice weekly.

**Air-Mail Speed-Up. England-India in Five Days.**—As a result of permanent agreements with Italy and Greece, which are about to be ratified, and the introduction of new and faster flying boats in the Mediterranean, Imperial Airways have arranged to speed-up both their England-India, and the newly opened Central-African air-mail services. Beginning on May 16th, it is hoped that the present route across Central Europe will be discontinued, and passengers and mail will instead travel via Switzerland, Italy and Greece, to Egypt. A triple-screw Armstrong Siddeley air liner carrying the combined India-Africa air-mail, will leave London each Saturday, from that date, for Basle where passengers and mails will be transferred to a new night train to Genoa. Here they will be placed on board one of the new four-engined Short flying-boats for the flight across the Mediterranean, and will reach Corfu via Naples on the evening of the second day, and Alexandria (Egypt) via Athens, at 2.30 p.m. Greenwich Time on the following day, only 2 days 7 hours after leaving London. After a short train journey to Cairo, which is the junction of the Indian and African air routes, the Indian air-mail will travel by land plane via Baghdad and the Persian Gulf to Karachi and Delhi. A speed-up is also to be made on this section by the introduction of partial night flying, and passengers and mails will arrive at Karachi 5 days 2 hours 35 minutes after leaving London. The African mail will travel from Cairo by air liner and flying boat, via Khartoum, to Central Africa, Kenya Colony, being reached from England in a few hours over 6 days. The incoming Empire air-mails will, beginning on May 18th, leave Delhi (India) each Monday, and Mwanza (Tanganyika Territory) each Sunday. These two air-mails will join at Cairo and will reach London on the following Sunday. New all-metal Short flying boats, with hulls of stainless steel, and each driven by 4 Bristol Jupiter engines totalling 2,000 horse-power, have been specially built for the Mediterranean section of this route, and will be put into commission in the Mediterranean during May. These new flying ships are larger than any yet in use on regular air routes, and will accommodate 17 passenger, in addition to 1½ tons of mail. During the summer it is hoped to extend the Central African route through to Capetown, bringing the total length of Imperial Airways Empire air-mail routes to 13,000 miles.

**Air-Rail Speed-Up for Urgent Freight.**—Operating between 140 railway stations in this country, and any of the airway stations of Imperial Airways in Europe, Egypt, Iraq, India, and Central Africa, a new high-speed air-rail service was inaugurated on April 1st. By this arrangement, just completed between Imperial Airways and the Great Western, London & North Eastern, London, Midland & Scottish, Metropolitan, and Southern Railway companies, air-rail savings of time of more than a month between England and India, and England and South Africa, will become possible as compared with ordinary surface transport. Urgent frieght, handed in at railway stations for rail-and-air despatch, will be marked with a special label and forwarded to London by the next express train. On arrival it will be collected from the railway terminus by one of the Imperial Airways motor vans and taken to the London air station, where it will be placed at once on the next air liner ascending, for the destination indicated. As an instance of the cost of the new system the charge for a 14 lb. parcel by air-rail, from Leeds to Cologne, will be 9/6d. and from Birmingham to Prague 13/10d., while as an indication of time-saving it may be mentioned that freight consigned by train and plane from Plymouth to Marseilles will accomplish its journey in two days, as compared with four days by surface transport. In the case of freight sent by air-rail from England to destinations along the Empire air lines of Imperial Airways, remarkable time-savings will become possible. A load despatched by train and boat from Manchester to Karachi would be approximately 45 days in transit, as compared with only 7½ days by air-rail; while in the case of a parcel from Glasgow to Kisumu, on the new Central African airway, the air-rail transit time will be 11 days, as contrasted with well over 20 by surface transport. This air-rail system will work also in the reverse direction. Parcels, that is to say, will be accepted at any of the stations of Imperial Airways for despatch by train to London, continuing on from London to destinations on any of the railways already mentioned, by the next express train.

**New Imperial Airways Jupiter-Engined Flying-Boats.**—Successful trial flights were made from the Rochester seaplane base, Kent, with the Short "Scipio," the first of three new metal flying-boats, each weighing 14 tons, and driven by four "Bristol" Jupiter Series X.F.BM. geared and supercharged engines developing a total of 2,400 horse power, which have been ordered by Imperial Airways, Limited. When they pass into service these new flying-boats, which will be the largest British marine-type passenger aircraft yet constructed, will be placed on the Mediterranean sections of the Imperial Airways routes to India and Africa. Capable of attaining a top speed of 130 miles an hour, and cruising at 100 miles an hour, the new 4-engined boats will carry a paying load of 7,500 lbs. as compared with a pay-load of 4,429 lbs. in the 3-engined "Calcuttas." A feature of the new craft, and one devised to cope with growing mail-loads on Empire air routes, is that in addition to seating fifteen passengers in a large and most luxuriously equipped saloon —which will have conveniently-placed tables between the armchair seats, and shaded electric lights above each passenger's head—they will have a large compartment in which there will be space for more than 1½ tons of urgent mails.

**Wing Slots and the Air Estimates.**—The British Air Minister in a White Paper accompanying the 1931 Air Estimates states: Slotted wings are now fitted to 15 types throughout the service, the fitting of 4 more types is on the point of completion and the principle is being still further extended. In sum, 80 per cent. of aircraft are now equipped or will shortly be equipped with slotted wings.—"Handley Page Bulletin."

**New Dutch Air Service to East Indies.** — A message from the Hague says that the Royal Dutch Air Navigation Company proposes to start a weekly service to the Dutch East Indies on October 1st if the financial position of the country is such as to enable the necessary subsidy to be granted.

# The Ford Works at Dagenham.

The British motor manufacturing industry and all those who have knowledge of the motor trade cannot fail to be amazed at the daring of the Ford enterprise at Dagenham on the North bank of the Thames, midway between Barking and Rainham. Undoubtedly the position is most advantageous for manufacturing purposes on a large scale as it is well served by road, rail and sea transport and is only about ten miles from the centre of London. Convenient as the situation is, it has been sedulously avoided for the purpose of development of any description from time immemorial until selected less than two years ago as the site for the huge Ford factory, the reason being that it was little more than a mud flat varying in depth from 30 to 50 feet. This treacherous marsh had nothing but a thin top soil crust, quite incapable of carrying the weight of even a moderate sized building. To-day this desolate marsh carries the now almost completed largest motor car works in Europe.

The main building, which is really three buildings in one, covers an area of 20 acres, whilst the total area of the estate upon which it is erected is 500 acres. The total length of railways which will serve the factory, and which will be electrically driven, will be approximately 11 miles. Also a jetty is being constructed which will accommodate vessels up to 12,000 tons with an average draught of 28 feet. In addition there is the blast furnace, which is now nearing completion, the first to be erected, in the South of England, and furthermore it is the largest blast furnace in the world. The power house is unique in design and the first in this country to be run at a pressure of 1,200 lb. It is estimated that the works will find employment for 15,000 men and have a production capacity of 200,000 cars per annum. The foregoing gives some idea of the magnitude of the works and we can now proceed to deal with them in more detail.

In order to provide a suitable foundation to carry these buildings, reinforced concrete piles were utilised, which were driven from 50 to 70 feet into the ground and in many places they were packed as closely as it was possible to drive them. 13,800 of these piles have been driven. The piles, which were driven home by four ton pile drivers until repeated blows could drive them no further, are connected by concrete beams and, over the whole, a reinforced concrete floor has been laid and covered with a wood block paving so as to ensure the warmth and secure foothold for the workers.

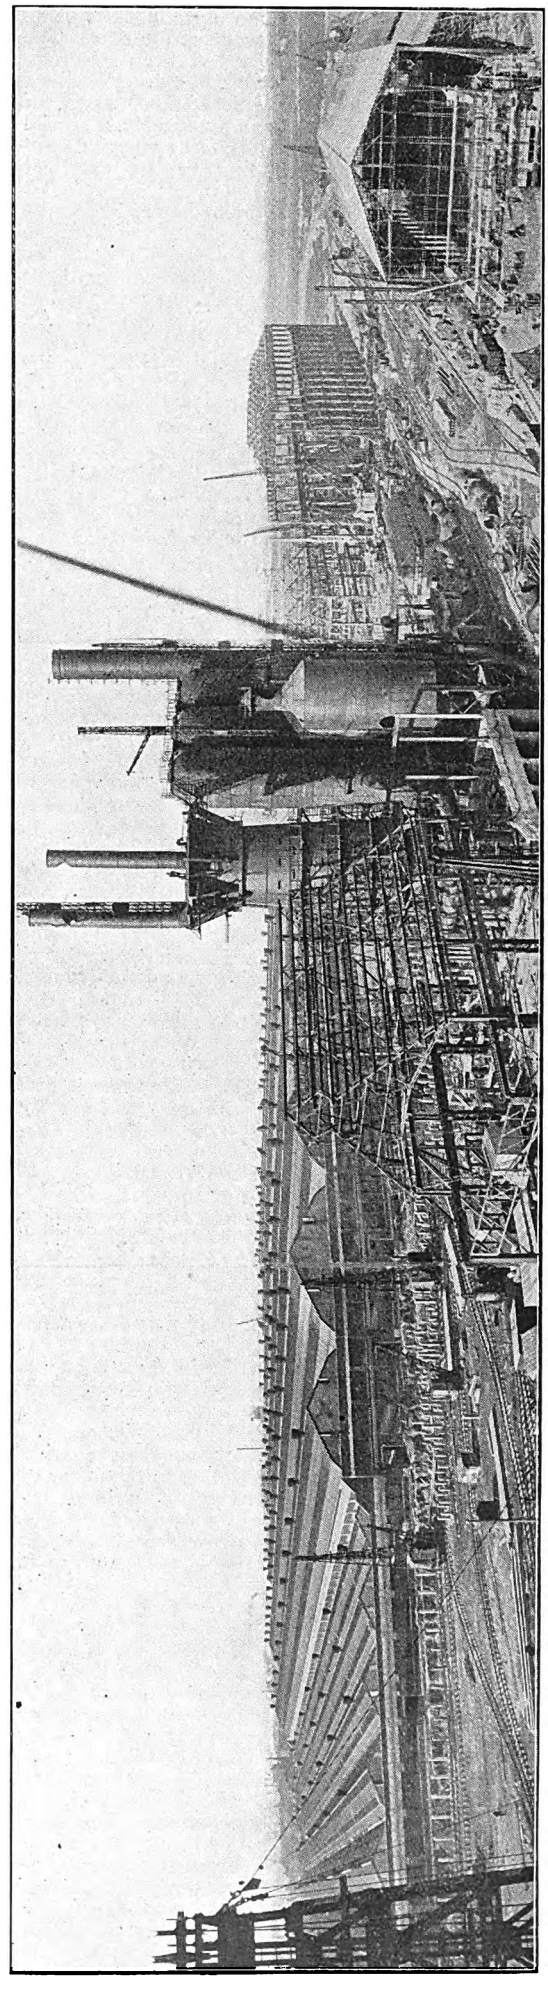
The three main shops are now ready for the installation of the manufacturing machinery. The blast furnace, also nearing completion, has a production capacity of 500 tons of pig iron per day and is designed to consume 10,000 tons of coal, ore and limestone a week. A storage yard is being constructed for the raw materials which will hold 40,000 tons of coal, 150,000 tons of ore and 15,000 tons of limestone which will be fed to the furnace by electrically driven machinery. It is interesting to notice that the site selected for this blast furnace—the heaviest part of the plant, weighing nearly 9,000 tons—proved to be probably the most unstable part of the estate, judging from the fact that the first steel piles used, weighing five tons each, disappeared completely into the marsh without a blow from the pile driver.

A battery of 45 coke ovens is being erected and is well advanced towards completion. This installation will be capable of carbonising 800 tons of coal every 24 hours, and by means of special equipment—employed in England for the first time—steam is to be generated from the coke for other sections of the works. Adjacent to the ovens is situated the by-products plant for treating the residuals from the coke ovens. The chief residue product will be benzole which will be used to drive the new Ford cars from the factory.

With regard to the power house which will be capable of producing sufficient electric current for a large town: London refuse is to be used as fuel at the rate of 1,000 tons per day.

In addition to provision for transport by road, rail and sea, the factory is to have its own aerodrome, a large piece of level ground having been reserved for that purpose.

The jetty will be more than 1,800 feet long. Its construction includes huge steel cylinders which are being sunk into the Thames mud and filled, under pressure, with concrete to form the piers and to sustain the colossal weight of the two largest unloaders in England. One third of the jetty will be reserved for the outward shipment of goods and is designed to accommodate two 6,000 ton ships. At the central portion, which has been dredged to a depth of 30 ft., vessels up to 12,000 tons can be accommodated. The eastern portion of the jetty will be used by barges delivering refuse for fuel for the power house. A floating pontoon at the western end will be provided as a landing stage for passengers at all tide levels. The entire wharf will be equipped with modern electric cranes, electric traction and electric conveyors..



£5,500,000 BRITISH MOTOR WORKS.

A remarkable picture of the new Ford factory in course of construction at Dagenham, Essex. The works will be the largest of its kind in Europe and is intended to give employment to 15,000-20,000 British workers. On the left can be seen the huge manufacturing and assembly shops which have a floor space of 1,000,000 sq. feet. In the foreground are the blast furnace stacks; this furnace is the biggest in the country and the only one in the South of England. Centre and right of the picture appear the great steel skeletons of other buildings connected with this vast enterprise.

Digitized by Google

Facing the centre of the jetty the main office block is being erected, a three storey building with garage at the rear. The comfort and health of the employees has been carefully considered. A maximum of natural light has been obtained by the design of the roofs, to glaze which 600,000 sq. ft. of glass has been used. Where glass was impracticable, a special treated metal was utilised, which in addition to other advantages, provides surface reflection adding to the excellent illumination of the shops.

Six miles of cat-walks are provided immediately below the roofs with combined handrail and water pipe to facilitate the cleaning of the glass roof, which work alone will require the permanent employment of a large gang. The window lights are controlled by a series of electric motors and it is possible to open eight tons of window by the turn of a switch. All supply mains are carried in a subterranean tunnel and cooled filtered drinking water is available at many points for the workers.

Perfect ventilation is assured irrespective of weather conditions. Heated or cooled air will be injected to maintain an ideal working temperature, while 250 ventilators ranging from three feet to four feet in diameter will extract the impure air. There are many other details making for economy of production, elimination of waste and amenities of conditions which space alone prevents us from describing.

## Law Cases.

### AN UNSAFE LOAD.

A case was heard at Wolverhampton Police Court recently, under the new Motor Vehicles (Use and Construction) Regulations, 1931.

Albert Lloyd, of Wolverhampton, pleaded guilty to driving a motor lorry, the packing and adjustment of the load of which was such that danger might be caused to any person on the road.

Police constable Chettar said that on March 12th, he was driving a motor cycle combination in Tettenhall Road. He saw defendant driving a light flat lorry on which were about a dozen empty barrels. They were not fastened on, and one of the barrels fell off. He had to swerve to prevent the barrel colliding with the motor cycle. When he spoke to Lloyd he said he had put a piece of string round the barrels, but that he should have used rope.

The defendant said that the jerking in consequence of the road, must have slackened the string. Had he known, he would have stopped and adjusted it.

The Magistrate, commenting that it was fairly obvious that string was useless, said he was dealing with the case leniently by fining defendant 7s. 6d.

### LORRY DRIVERS SUMMONED.

The Bristol magistrates dismissed a case in which Charles Joseph Maer was summoned for driving a motor goods-carrying vehicle at a speed in excess of the limit fixed by the new Road Traffic Act. It was stated that a police constable's motor cycle speedometer registered 40 miles an hour as he overtook defendant.

Mr. Mervyn Cook, for defendant, submitted that the speedometer was not a reliable test.

The chairman (Sir Sidney Humphries), said that there was a doubt in the case, and they would give defendant the benefit of it.

Fines of £1 each were imposed on William Denscombe, haulier, of Easton, near Wells, Somerset; Cecil Reeves Grimshaw, of East Harptree, Somerset, and Arthur Pollard, of High Grove, Sea Mills, Bristol, for driving motor lorries at an excessive speed along Portway. It was alleged that Denscombe was travelling at between 30 and 32 miles an hour; Reeves at between 25 and 28 miles an hour, and Pollard at between 35 and 40 miles an hour.

### AN INSECURE LOAD.

A summons under the Motor Vehicles (Construction and Use) Regulations, 1931, the first of its kind issued by the Rochdale police, was dealt with recently at Rochdale borough police court. There were two defendants. Sydney Wallis, a motor driver, of Rochdale, was summoned for driving a motor lorry on which the adjustment of the load constituted a danger to Edward Marsden, "a person on the lorry," and was likely to cause danger to persons on the road. Albert Wallis, a carrier, the father of Sydney Wallis, was summoned for permitting the vehicle to be so used.

The section of the regulations under which the proceedings were taken reads as follows: "Every motor vehicle, every trailer drawn thereby, and all parts and accessories of such vehicle and trailer shall at all times be in such condition, and the weight, distribution, packing, and adjustment of the load of such vehicle or trailer at all times be such, that no danger is caused or is likely to be caused to any person on the vehicle or trailer or on a road."

A police constable stated that on March 13th, whilst on duty at the bottom of Drake Street, he was informed that an accident had occurred at the junction of Walter Street and Drake Street. On going to the scene of the accident he found a motor lorry, which was stationary. In the roadway at the side of the lorry were portions of timber which had comprised a sectional motor car garage that had fallen off the lorry. Witness also found Edward Marsden lying injured, having been thrown off the vehicle. Witness ascertained from the defendants that the timber was being taken from Richard Street to Mizzy Road and had not been secured on the lorry. The injured man worked for the man for whom Albert Wallis was carrying.

The Magistrates' Clerk said Sydney Wallis (who was not in court) had sent a letter stating that he might not be able to be present at the hearing of the case and admitting guilt. Ignorance of the regulations was pleaded.

Albert Wallis told the magistrates that the accident was due to the back wheels of the lorry skidding.

The Chairman said the offence was of a serious nature, but as that was the first case in which such proceedings had been taken a fine of only 10s. each would be imposed on the defendants.

### DUBLIN CARRIERS SUCCESSFUL APPEAL.

In the Dublin Circuit Court, before Judge Shannon, W. F. Poole, carriers, Dublin, appealed from the decision of District Justice Sullivan in the District Court, convicting them of having used a general trade licence, issued under the motor regulations, for a purpose other than that prescribed, and imposing a penalty of 10s.

On behalf of the appellants it was stated than on September 18th, 1930, a customer had telephoned to Messrs. Poole saying that his lorry, with a load of furniture, had met with an accident in Harcourt Street, Dublin, and asking them to have the disabled lorry brought to their garage for repairs, and the load of furniture delivered to Greystones in the County Wicklow. The appellants sent a fully-licensed lorry to tow the broken lorry to their premises, and they sent a second lorry, bearing a general trade licence, to take the furniture to Greystones. No charge was made for the services rendered in delivering the furniture, and the appellants contended that they, were entitled to render the service under the general trade licence.

Judge Shannon said that the appeal raised a very interesting point to the motor trade generally. After reviewing the facts he held that Messrs. Poole were legitimately using the trade licence, and that the carrying of the furniture under the circumstances was a purpose connected with their business. He reversed the decision of the District Justice, but pointed out that his decision was not to be taken by the trade as any encouragement to extend, or attempt to extend, the purposes for which general trade licences were issued.

# News from all Parts.

**Midland Commercial Road Users.**—Mr. S. T. Abbotts, President of the Midland Commercial Road Users' Protection Association, speaking at the annual dinner held in Wolverhampton, said that many haulage contractors never thought the Road Traffic Act of 1930 would become law. Such things were not possible, they thought, and he felt that in attacking the clause on drivers' hours they missed the more drastic one applicable to motor coach owners. The Royal Commission on Transport thought more traffic must be directed to the railways. What they thought to-day would be law to-morrow unless road users fought with all their power.

**East Surrey Traction Co.**—Mr. Arthur H. Hawkins, Managing Director, presided at the annual dinner of the East Surrey Traction Co. and Autocar Co. held last month at Croydon. Proposing the toast of "The Staff and Employees," Mr. Hawkins said that the past year had been a very important one in the history of the East Surrey Traction Co., it being the first year they had operated with the L.G.O.C., while he thought it was also important in being one of the greatest years of development experienced by the Company. The area of operations had been expanded very considerably, especially in the western area, and in the operation of the Green Line coaches on the whole of the southern outer fringe of London from Maidenhead to Dartford. Their employees, too, since the last dinner, had practically doubled. The Company had operated during last year 12½ million miles, and if they carried on at the same rate of progress they would, within the next twelve months, have doubled that figure, while on the same estimate they would carry something like fifty million passengers. Mr. Hawkins said that their aim must now be to consolidate their position, while continuing to enlarge and modernise the fleet.

**Sir H. Austin on the Motor Industry.** — Sir Herbert Austin, speaking at a luncheon given by the American Chamber of Commerce in London, said that while the British manufacturers were trying to keep their end up, they recognised that the enormous taxation they were endeavouring to support called for greater efforts, and the rapid strides made by American manufacturers both in design and in reduction of price made their position in some export markets one of serious concern. They were not downhearted, and they did not expect to evade entirely the effects of the present world setback, but they would be heartily glad when some of the problems were solved and more normal conditions existed. In their wholehearted adoption of the small car they had shown the world that they were not all snobs and that they could adapt themselves to varying circumstances. Was the present extraordinarily keen competition between the United States and Britain altogether necessary or in their best interests individually or collectively? The two nations had very much the same ideals, and would be able, if linked together, to control the well-being and the peaceful occupation of the world. Why did they not collaborate more? They had each at times done a little in this direction and usually with some success, but in the grasping for all the plums which took place so often they must be losing quite a large proportion of what they might each retain, and still feed the foreign markets with what they required at satisfactory prices.

**Modern Transport.** — The subject selected for this year's Exhibition at the Royal Institute of British Architects is "The Architecture of Modern Transport." The exhibition will consist of photographs, drawings, and models of architectural and decorative subjects connected with modern transport, and is intended to illustrate the latest developments in such work both in Europe and America. The types of work covered by the title include railway stations, signal boxes, various types of railway coaches, docks, harbour works, canal power stations and locks, liners and yachts, bus and coach stations, garages and filling stations, trams, buses, chars-a-banc and private cars, bridges and viaducts, pylons, traffic control stations, hangars and aerodromes, aeroplanes and airships, lifts and moving stairways. The exhibition will remain open from April 22nd to May 22nd. Admission will be free.

**Ford Motor Company, Ltd.** — The second ordinary general meeting of Ford Motor Company, Ltd., was held in London on March 18th. Sir Percival Perry, K.B.E. (Chairman of the Company), presided, and in the course of his address said that the trading profits for the 12 months ended December 31st were greater than were earned during the previous 14 months. It was impossible to calculate the many millions of pounds sterling expenditure per annum involved in traffic control, street widening and other attempts to relieve congestion and speed up traffic, and yet our authorities exorbitantly taxed a small tradesman who was enterprising enough to use a motor van for delivering his goods, and at the same time refused to tax a horse and cart, which occupied much more space upon the road and required much more stable accommodation, moved at approximately one-fifth of the speed of motor traffic, thereby causing the daily loss of hundreds of thousands of working hours, and whose sole contribution to the public welfare was the necessity of engaging scavengers to keep the streets in sanitary condition. It had been calculated that if horse traffic were taxed in the same way as motor traffic there was a sum of approximately £2,000,000 waiting for the Chancellor to pick up. Upon the general question of taxation Sir Percival said there was little doubt that our country could never recover so long as taxes remained at the present high level. Capital in industry was only worth what it would earn, and when profits were taxed beyond reasonable limits, then taxation became, in effect, a capital levy.

**M.R.S., Ltd.** — The fifth annual general meeting of M.R.S., Ltd., of Liverpool, is being held to-day (April 15th) in Liverpool. The Report of the Directors and the Accounts of the Company for the year ended 31st December, 1930, to be submitted to the meeting, reveal that the year's trading shows a profit of £14,242 7s. 2d. After providing for income tax, depreciation, etc., there is a balance of £4,784 5s. which, added to the balance from last year's account of £3,531 3s. 3d., and deducting the dividend for the year ended 31st December, 1929, amounting to £1,154 12s., leaves an available balance of £7,160 16s. 3d. Out of this sum the Directors propose paying a Dividend at the rate of 5 per cent. per annum, less income tax, for the year ended 31st December, 1930, calculated from the dates of payment of the various instalments. This will absorb £1,027 2s. 9d., leaving a balance of £6,133 13s. 6d. to be carried forward. Depots have been established and equipped in various centres of the country for the purpose of increasing the efficiency of the Company's services and for the better maintenance of its rolling stock. The Company's business consists of two classes of transport, namely, general traffic and heavy or specialised work. The Report refers to the final Report of the Royal Commission on Transport and says that generally the recommendations contained therein will, in the opinion of the Directors, be beneficial to organised road transport undertakings, if and when carried into law. The transport of goods by road is now recognised as such an essential part in the trade of the country that the Directors consider the prospects of well established road transport undertakings, such as M.R.S., Ltd., are encouraging.

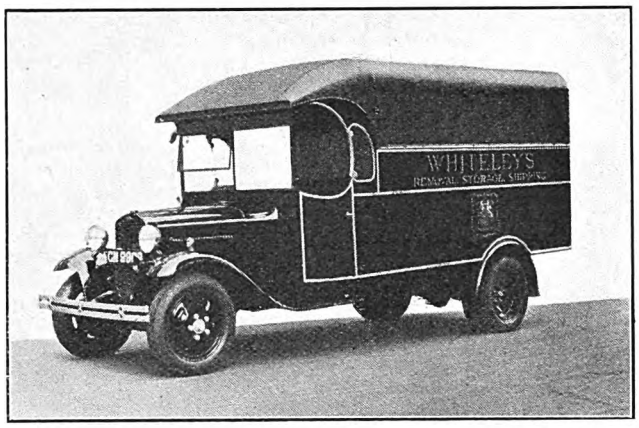
**Commer Service for London.** — The better to serve Commer users and owners in and around the London districts, a new London Repair and Service Station has now been opened at 66, Buttesland Street, Hoxton, N.1, where ample stocks of spare parts for present type and early Commer vehicles will be maintained. Specially skilled mechanics and other Commer experts are always in attendance and the repair and service facilities are such that a complete overhaul can be executed with no greater difficulty than the merest mechanical adjustment.

**R and R Petrol-Electric Super-Mobile Crane.** — The R and R Super-Mobile Crane, made in four sizes to lift and carry 1, 2, 3½/5 & 6 tons, has been designed by Ransomes & Rapier, Ltd., Waterside Iron Works, Ipswich, to meet conditions which differ from those already so capably dealt with by the Standard Mobile Crane, first placed on the market nearly five years ago, and of which the firm have sold several hundreds all over the world. Whilst the Super-Mobile Crane can do everything that the more familiarly known Standard Mobile is capable of doing it can also rotate the jib without moving the road wheels. As the tail radius of the rotating superstructure is relatively small, the Super-Mobile Crane may be used in even more restricted conditions than is possible with the other type and there is a further advantage that when rotating the load, power consumption is reduced and wear on the rubber tyres is entirely avoided. The arrangement provides, as with the Standard model, for travel on a continuously diminishing or

Digitized by Google

increasing radius, there being no instant between moving straight ahead and moving at minimum radius when it is necessary to stop the crane for manipulation of controls. This feature is unique.

**An Attractive Vehicle for Whiteley's.**—We illustrate a vehicle recently acquired by Wm. Whiteley, Ltd., of Westbourne Grove and Queen's Road, London, W.2, the design of the body being very attractive. The body is mounted on the ordinary 30 cwt. Ford chassis with a wheelbase of 157 ins. and is most useful for light and



AN ATTRACTIVE VEHICLE FOR WHITELEY'S.

quick work—the interior measurements are 10 ft. 6 in. long, 6 ft. wide and 6 ft. 2 in. high, so that it has a capacity, less the wheel arches, of 390 cubic feet. The layout of the writing, etc., is a departure from the firm's ordinary vehicles, the bottom panel being in black, the centre panel in "Whiteley Red," with a black top, the whole lined out with white, presenting a very attractive appearance. Furthermore, the rear doors have patent hinges, which do not allow them to be opened any wider than the width of the van, so that when the doors are thrown open they automatically remain so until a small spring catch is released. In addition there is room for three men comfortably in the driver's seat, besides the driver, and just to the left behind the driver there is a door which opens for access to the interior.

**The A.A. Office Broadcast.**—A microphone and loud speaker installation has been installed by Philips Lamps, Ltd., at Fanum House, the London Headquarters of The Automobile Association. From a microphone on his desk, Mr. Stenson Cooke, the Secretary of the A.A., is able to speak simultaneously to the whole of his Headquarters' staff, numbering over five hundred. The A.A. is the first to use this practical adoption of wireless, which enables heads of large businesses to maintain personal contact with large staffs.

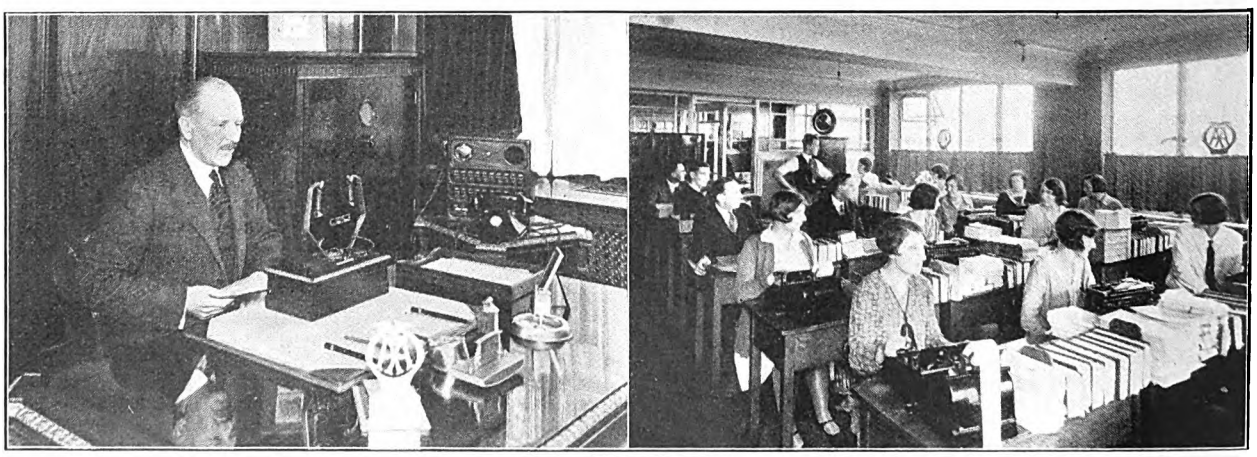
**"Buyers' Bulletin."**—We have perused with much interest the first issue of the *Buyers' Bulletin* the official organ of the Buyers' Provident Association and the 25,000 merchandise buyers of the United Kingdom. The Editor of the "Bulletin" is Mr. H. Cooper Day who is well known to many of our readers. Mr. Cooper Day is also Secretary of the Buyers' Provident Association. The Association was born 25 years ago at a gathering at which Mr. Cooper Day was himself present. Right from its inception the Association has concerned itself with the personal welfare of its members.

**Institute of Transport Lecture for Graduates and Students.**—On April 21st at 6 p.m. at the Institution of Electrical Engineers, London, Mr. R. Bell, C.B.E., a Vice-President of the Institute of Transport, will lecture on "Transport Developments in 1930."

**New Dunlop Factory. Great Workshops Opened in Japan.**—On the occasion of the opening of the new Dunlop factory built on the site of the old one at Kobe, Japan, for the manufacture of tyres and every type of industrial rubber product, Sir George Beharrell, managing director of the Dunlop Rubber Co., Ltd., dispatched the following message of congratulation: "Board and Directors of Dunlop Company, England, send warmest congratulations on opening of your magnificent new factory which will fully maintain the quality of Dunlop products and worthily symbolises the industrial genius of two great friendly nations.—Beharrell."

**Coward or Corpse?** — In the March number, "On Guard," the little monthly magazine of the National "Safety First" Association, reaches its first birthday. For twelve months it has carried on gallantly its self-appointed task of saving life and limb. The anniversary number contains articles of unusual variety. Among the contributors to it are Sir Gerald Bellhouse, the Chief Inspector of Factories, and Mr. John Hill, the General Secretary of the United Society of Boilermakers. Writing of the industrial development and the change in our attitude towards the value of human life, Mr. Hill announces the truly alarming fact that 90 per cent. of all accidents are caused by ignorance, carelessness or rashness. His conclusion, with which every sane person will very strongly agree, is that "it is better to be a coward than a corpse." In its own way "On Guard" is very effectively preparing the way for Safety Week, May 10th to 16th, in which over 300 local authorities have already promised to take part. Lt.-Col. J. A. A. Pickard is the General Secretary of The National "Safety First" Association, and the offices are at 119, Victoria Street, London, S.W.1.

**Great Eastern Train Ferries.**—The Eighth Ordinary General Meeting of Great Eastern Train Ferries, Limited, was held in London on March 31st. Lord Daryngton (the chairman), who presided, said that the net profits for the past year were £17,982, compared with £25,066 in 1929. It was not, he said, surprising that the freight receipts and working profits of the service were reduced; such had been the common lot of most shipping and transport undertakings during the past year. Having regard to the general state of trade, the tonnage carried in 1930 might well have shown a larger reduction. Their Train Ferry Service was in a position to play an important part in helping industry in the solution of some of its problems. It was not only in the matter of rapid transport and in the fact that fragile and perishable goods were transported without being handled, that the service made its appeal. Heavy weights had to be shipped by ordinary steamers necessitating special cranes, special



A.A. EFFICIENCY.

Digitized by Google

arrangements made for unloading, none of which difficulties arose in the Ferry Service. The report was unanimously adopted.

**Bouts Brothers Expansion.**—Mr. Oswald Tillotson and Mr. T. E. Rhodes have joined Mr. E. L. Bouts (managing director) and Mr. R. W. Bouts as directors of Bouts Brothers, goods haulage contractors, of Bow Road, E. Mr. Tillotson will be Chairman of the Company. Mr. Tillotson is Chairman and Managing Director and Mr. T. E. Rhodes is a director of Oswald Tillotson (1929), of Burnley, road transport engineers, and Northern representatives of Associated Equipment Company, Ltd.

**International Commercial Motor Transport Exhibition.**—The Society of Motor Manufacturers and Traders is now actively engaged in the organisation of the 10th International Commercial Motor Transport Exhibition to be held at Olympia from November 5th to 14th next (immediately following the International Motor Exhibition), for which purposes the whole of the accommodation of the extended premises will be brought into use. The Sections to be incorporated are:—Commercial Motor Vehicles and Bodywork; Commercial Vehicle Accessories and Components; Commercial Vehicle Tyres; Works Trucks; Service and Garage Equipment.

**The London Chamber of Commerce.**—The Chamber this year celebrates its Jubilee, and the Corporation of the City of London have kindly granted the use of Guildhall for the purpose of the Annual Dinner. His Royal Highness Prince George, K.G., will be the principal guest on this occasion, and the date fixed is Tuesday, May 19th. Amongst the other guests will be H.E. The American Ambassador (Brig.-Gen. Charles G. Dawes, C.B.), The Right Hon. William Graham, M.P. (President of the Board of Trade), and The Right Hon. Viscount Hailsham. The Lord Herbert Scott, C.M.G., D.S.O., D.L. (President of the Chamber) will occupy the Chair. The price of Tickets is £2 2s. each (including wine and cigars), applications for which, with remittance, should be made as early as possible to the Chamber at Oxford Court, and 97, Cannon Street, London, E.C.4.

**West Yorkshire Road Car.**—The twenty-fourth annual general meeting of the West Yorkshire Road Car Company, Ltd., was held last month in Harrogate. Mr. John F. Heaton (the chairman) presided and in the course of his address said it was very gratifying to have the privilege of presenting accounts which disclosed record profits, particularly having regard to the extreme depression in trade which had prevailed—and unfortunately still existed—throughout practically the whole of the area covered by the company's operations. The gross profits for the year were £171,256, an increase on the previous year of approximately £37,000.

**Mansion House Association on Railway and Canal Traffic.**—The Annual General Meeting of this Association will be held at 96, Victoria Street, Westminster, London, S.W.1, on April 24th at 3 p.m. Included in the special business to come before the meeting is to receive and adopt the following Special Resolution of the Council and Executive Committee:—"That the name of the Association be changed from its present title to: The Mansion House Association on Transport (Incorporated)."

**B.A.I.F.R. Annual Meeting.**—The Annual General Meeting of the British Association of International Furniture Removers will be held at the Guildhall, Portsmouth, on Thursday, May 21st, at 10.30 a.m. As will be seen from an announcement in another part of this issue the meeting of the B.A.I.F.R. will be followed by the annual conference of the Furniture Warehousemen and Removers' Association.

**Denmark. Call for Tenders for Transport System, Lifting Equipment, etc., for the New Municipal Slaughter House, Copenhagen.**—The Commercial Secretary to His Majesty's Legation at Copenhagen reports that the Copenhagen Municipality has published a call for tenders for the supply and delivery of the rail transport system, lifting equipment, and all other special arrangements necessary for the transport and storage, etc., of carcases in a new municipal slaughter house comprising chilling rooms, meat stores and other service; and further, for the entire layout of a pig slaughtery and a cattle slaughtery. A copy of the tender documents (in Danish) including a specification of the plant and material required, together with drawings has been received by the Department of Overseas Trade, and is available for loan to firms desirous of tendering for equipment of British manufacture, in order of application. Sealed tenders must reach the office of the City Architect (Stadsarkittektens Tegnestue) Ingerslevsgade 50, Copenhagen, Denmark, before 2 p.m. on Tuesday the 5th May, 1931. Firms who decide to submit a tender for the equipment required in this case are requested to notify the Department of Overseas Trade.

**Pirelli's Glasgow Depot.**—Pirelli, Ltd., the well-known tyre manufacturers, have vacated the premises until recently occupied by them at 44, Carlton Place, Glasgow, and their new address is Pirelli, Ltd., 55/57, Cadogan Street, Glasgow, C.2. Mr. T. C. Perkins, who has had a long and varied experience in tyre sales and service, is now supervising Pirelli's interests in Scotland.

**Whist for Charity.**—A charity whist drive and dance, held at Morpeth by the staff of F. W. Jermy and Co., Ltd., omnibus proprietors, Felton, realised £25. Morpeth Cottage Hospital and the Royal Victoria Infirmary, Newcastle, have each received £12 10s.

## MERSEYSIDE.

**Mersey Tunnel Tolls.**—Next year traffic will be using the new Mersey Tunnel which, it is estimated, will be toll-free in about fifteen years' time. The maximum tolls for vehicles scheduled in the Act will probably be found to be on the high side ranging up to 7s. for a tractor with trailer. There is no difference in the charge for heavy vehicles whether laden or empty. The Corporations of Liverpool and Birkenhead may provide a service of buses between the two boroughs and beyond, the only restrictive condition being that they must not under-cut the Mersey Railway, either now or when the tunnel has become toll-free.

**Drivers should be Warned.**—Many complaints have been received of the nuisance caused on the by-pass in Prescot Road, Knotty Ash, Liverpool, when drivers of steam wagons taking water from service boxes empty their ash-boxes in the road. These are receiving the attention of the health authority.

**Warrington Horse Parade.**—The date of the Warrington horse parade is now fixed for Saturday, May 16th. Last year the prize money amounted to £40 and there were also four silver cups which will be offered again this year. The Mayor (Ald. D. Plinston) is the president of the Parade Committee and Councillor H. Fairclough, chairman.

**Demonstrations of New Plant.**—Recently there was demonstrated at Liverpool, a crane specially built by Walkers Bros. (Wigan), Ltd., capable of lifting and carrying a 32-seater bus half full of passengers. An indicator shows safe weights at various angles of the jib and horns are sounded automatically if the hook or jib is raised too high or if the weight attempted is too great. Demonstations of the Karrier "mechanical horse" with hydraulic harness have been given at the L.M.S. Park Lane goods station, Liverpool, by Mr. J. V. Wilson, of Karrier Motors, Ltd., Huddersfield, and Mr. H. A. Edwards, of the Liscard Motor Co., Ltd., the local agents.

## MANCHESTER.

**Transport on the Wireless.**—Mr. R. Stuart Pilcher, general manager of the Manchester Corporation Transport Department, and Mr. Matthew Anderson, of Liverpool, recently broadcasted a discussion on the problems of public transport. Mr. Pilcher, in discussing street congestion, made the interesting announcement that the Manchester Corporation has negotiated the purchase of a "large loading station" to relieve the congestion caused by buses stopping in Piccadilly to take up passengers.

**More Diesel Buses for Manchester.**—Four new motor buses fitted with Diesel engines from Crossley Motors, Limited, are to be purchased by the Manchester Corporation Transport Committee. This decision is connected with the successful results obtained during the three months a Diesel bus has been running on the 53 route. The estimated saving is about £300 a year. Liverpool has discussed crude oil buses but has decided to defer the question during the experimental stage.

**Removal Contractor's Death.**—Mr. Richard Knight, a partner with his brother, Mr. Jack Knight, in the firm of Messrs. Knight Brothers, removal contractors, of Ashton, a business which they founded some twenty-five years ago, died recently at the age of 46 years.

**Rawtenstall Appointment.**—Mr. F. Lythgoe, who for 16 years was in the service of Lancashire United Transport and Power Co., and who became general manager of the Leigh Corporation bus department, has accepted the position of general manager of the Rawtenstall Corporation's tramways and omnibus undertaking.

**Horse Hire Contracts.**—Manchester Corporation Paving, etc., Committee has entered into contracts for the hire of team labour for six months from April 1st, with the following:—J. Jackson, J. Hancock, W. Leigh, A. Mountfield, J. H. Peck & Sons, Ltd., R. Melling, J. Bray, W. Tonge, Wilson & Co. (Ardwick), Ltd., J. Hancock, P. Lawless, T. Seward, D. Clay, G. H. Brocklehurst, C. Cooper, J. & G. Evans, W. S. Thorpe, P. Doherty, A. Peck, J. W. Street, G. Wilson, J. A. France, South Manchester Coal Co., S. & S. E. Royle, D. Middleton, J. Biesty, J. A.

Digitized by Google

Shafto, J. Wharton, J. Walmsley, W. Lancashire, H. Evers, Ltd., J. Bacon, Mrs. S. A. Green, and E. & R. Hughes—all of Manchester—Team labour. C. Horrocks, Manchester—Removal of materials from Docks.

The Gas Committees work (twelve months) has been allocated thus:—J. Biesty & Son, J. Bray, J. W. Cage, C. Cooper, E. Davies, C. Edwards, H. Evers, J. Hancock, S. Hynes, W. Leigh, G. Massey, R. Melling, D. Middleton, A. Mountfield, J. Peck, R. Riley, G. Welsby, and J. Wheeldon.

**Traffic Commissioners Get Busy.**—The Traffic Commissioners for the North-Western Traffic Area will hold their first public sitting about April 20th, at Manchester, to hear applications from a number of municipalities, including Manchester and Salford, and transport companies for licences to continue the services of motor buses run by them during the past year.

## NORTH-EAST COAST.

**Omnibuses to Replace Trams?**—Negotiations were still proceeding at the time of writing between Tynemouth Electric Traction Co. and Whitley & Monkseaton Urban District Council for the abolition of the tramway service and the substitution of modern motor buses. For some months both types of vehicles have been running on the route connecting North Shields, Tynemouth, and Whitley Bay. The Traction Company owns both the trams and the buses.

**"No Smoking."**—As S.M.T. motor buses pass through Stirling or Falkirk, it is not an uncommon sight to see a long distance passenger put out his cigarette or put his pipe in his pocket as these towns are approached. There are apparently stringent local regulations concerning smoking in buses. A notice in the bus declares that "Smoking in this vehicle is strictly prohibited while passing through the burghs of Stirling and Falkirk. Anyone breaking this regulation will be prosecuted."

**Safety First.**—Newcastle City Council has been asked to authorise the expenditure of £5,000, a Government grant included, for providing further traffic signals and safety islands in the centre of the city. Last year 1,837 persons were injured and 34 killed in the streets, the majority outside the one mile radius from the Central Station.

**Bedlington Council Bus Scheme.**—The proposed closing of Choppington Station by the L.N.E.R. has caused Bedlington Council to enter into negotiations with the Company for the acquisition of a stretch of road, with the object of running buses for Choppington residents. This would open the entire road alongside the railway from Choppington to Bedlington and, with a convenient bus service, minimise the inconvenience caused by closing the station.

**Tram Workers' Plea.**—Newcastle Corporation's Transport Committee has advised the officials of the Transport and General Workers' Union that extra holidays for tramway employees cannot be conceded under current conditions. It had been suggested that annual holidays, with pay, be increased from 8 to 12 days; and the Committee says a like claim in a more prosperous time would be considered sympathetically.

## HULL.

**The Proposed Humber Bridge.**—The hearing of the Humber Bridge Bill, one of the most important measures to be dealt with by a House of Commons Select Committee this Session, will be opened on Tuesday, April 21st. The Committee will consist of Mr. W. R. Raynes (Soc., Derby), Capt. D. W. Gunston (C., Thornbury), Mr. J. Walker (Soc., Newport), and Sir John Ferguson (C., Twickenham). The Bill provides for the erection of a road bridge across the River Humber, at Hessle, a few miles above Hull, with the necessary approaches and roads, and the Government will give 75 per cent. of the estimated cost of nearly £2,000,000. There are over a score of petitions against the scheme, and one of the largest arrays of counsel ever seen in the Committee Rooms at Westminster will be engaged. The hearing is expected to extend over a fortnight.

## SOUTH WALES.

**Cardiff's Mammoth Garages.** — Cardiff will shortly possess two of the largest omnibus garages in the country, and the building to house 145 vehicles for the Corporation in Sloper Road is rapidly approaching completion. It will cost £36,000 and will be fully equipped with oil tanks, water, heating, lighting, and other necessary appliances, with offices for a clerical staff. The site adjoins Ninian Park, the ground of the Cardiff City Football Club.

**Western Welsh Omnibuses, Ltd.** — The staff of the Western Welsh Omnibuses, Ltd., have moved to their new offices and garage for 100 buses on the Cowbridge Road at the garden city of Ely, just outside Cardiff. These buildings have cost £30,000, and the site of 12 acres offers a big margin for further development. Mr. A. Gray (General Manager), Mr. Williams, G.W.R. representatives, and Mr. S. B. Norris (Accountant), and their staffs are at Ely, and Mr. G. H. Lockley remains in charge of the old Cardiff Penarth Road Depot.

**New By-Pass.**—The opening of the new by-pass road from East of Bridgend to West of Laleston completes a great improvement in South Wales. Practically the whole of the new road runs through virgin, undeveloped country, and motorists will be greatly relieved to avoid the tortuous streets of Bridgend, with a "death trap" corner at the bridge, and the dangerously narrow road at Laleston. It means a great saving of time and the avoidance of terrible risks. The cost of construction was approximately £133,000, and in opening the road on March 26th, Colonel D. Watts Morgan, D.S.O., M.P., Chairman of the Roads and Bridges Committee, said only £33,250 of this would be paid by the Glamorgan County Council. He said it was anticipated that there would be five million vehicles, or 25 to the mile, on the roads in five years time. Major Sam Evans, South Wales Divisional Engineer for the Ministry of Transport, referred at the subsequent luncheon to the advantages of the new road, and expressed the hope that trees would be planted to give it a boulevard effect.

## NORTHERN IRELAND.

**A Respite.**—The Londonderry and Lough Swilly Railway, which runs from Derry and serves part of Co. Donegal, was to have been closed at the end of March, as Government grants, which have been given for a number of years, were to stop. The employees were put on notice, but as the result of negotiations, the Northern Ireland Government has agreed to give a grant of £3,862 in the present year, and £2,500 next year, in order to carry on the line for goods traffic and a small amount of passenger traffic. These grants, the Government say, represent "absolute finality." As a result of this arrangement, only one-third of the employees, or one hundred of them, will lose their employment.

**Harland and Wolff Deliver the Goods.**—The magnificent new motor vessel, "Reina del Pacifico," built by Harland and Wolff, Belfast, for the Pacific Steam Navigation Company's Liverpool and South American service, completed her trials in Belfast Lough on March 24th, when a luncheon was given on board by the builders. Amongst those on board were the Duke of Abercorn, Governor of Northern Ireland—who is connected with the Pacific Steam Company—the Duchess of Abercorn, Mr. F. E. Rebbeck, Chairman of Harland & Wolff, Ltd., and Mr. William Lewis, General Manager of the Pacific Steam Company. Mr. Lewis said this was the first time his company had been in collaboration with the Government of Northern Ireland, and their relations had been of the most satisfactory and cordial nature; while Harland & Wolff had "delivered the goods."

## IRISH FREE STATE.

**Imports of Commercial Motor Vehicles Increasing in the Irish Free State.**—The trade returns of the Irish Free State for the month of January last go to show that 1931 has started favourably so far as the imports of motor cars and commercial motor vehicles are concerned. Imports of the latter continue to increase, and the year has begun very well and favourably for users of motor vehicles for transport and trading purposes. During January, 145 commercial motor vehicles, of the value of £23,860, were imported, as compared with 103, of the value of £20,073, during January, 1930. Chassis for motor cars imported numbered 67, valued at £11,738, as against 60, of the value of £13,545 imported in the first month of 1930. Up to 603 touring motor cars, of the value of £79,583, were imported during January last, which was one less than the number imported in January, 1930.

**Motor Taxation in the Irish Free State.**—At a meeting of the Executive Council of the Irish Free State Association of Chambers of Commerce, held in Dublin on March 23rd, and which was attended by delegates from the Waterford, Cork, Limerick, Dublin, Drogheda, and Dundalk Chambers of Commerce, statistics in respect of motor taxation and road expenditure in the Irish Free State, came on for consideration. From these returns it appeared that the amount of motor taxation for the year ended March 31st, 1930, was £868,000, and for the previous year £730,000. It was interesting and instructive to note how motor taxation in the Free State progressed during the past eight years. For the year ended March 31st, 1923, motor taxation amounted to £100,000; in 1924, to £421,500; in 1925, to £458,500; in 1926, to £517,000; in 1927, to £612,000; and in 1928, to £666,000.

# League of Nations.

## The European Road Traffic Conference.

The European Traffic Conference met at Geneva from March 16th to 30th.

After electing as President M. Eckardt (Germany), and as Vice-Presidents M. Gianni (Italy) and M. Rubik (Czechoslovakia), the Conference constituted four Committees:

*First Committee*—Commercial Motor Transport: Chairman, M. Rasinski (Poland).

*Second Committee*—Road Signalling: Chairman, M. Stievenard (Belgium).

*Third Committee*—Taxation of Foreign Motor Vehicles: Chairman, M. Borduge (France).

*Fourth Committee*—Triptychs: Chairman, M. Carlos Resines (Spain).

The Conference concluded two conventions, one on the unification of road signalling, the other on the taxation of foreign motor cars. It also concluded a customs agreement for the cancellation of triptychs.

As regards the international *régime* of commercial motor transport, the discussion brought to light a number of legal problems which require further investigation based on a comparative examination of the municipal law of the various States represented. In these circumstances, the Conference expressed the view that any Convention that might be concluded before there had been time to proceed to such investigation and at a time when the laws of the various countries were in process of evolution must neglect the fundamental principles governing the subject. It therefore decided to suspend its work and instructed the Transit Organisation to continue its investigation of these questions.

Convention on the Unification of Road Signals.

This Convention was signed by ten countries: Belgium, Czechoslovakia, Danzig, Denmark, France, Germany, Luxemburg, Poland, Switzerland, Yugoslavia. Its object is the national and international unification of the signs employed for regulating motor traffic. The Conference reduced these signs to the minimum compatible with efficacy. It also limited the inscriptions or signs on the road signs themselves. It distinguished three main reasons for the existence of signals: 1. danger; 2. formal regulations; 3. optional information for the assistance or information of the driver.

The first category of signals is to be triangular, the second circular and the third rectangular.

The Conference adopted certain new signals: 1. to give warning of a danger other than those covered by the 1926 Convention (a triangle with a vertical bar in the middle); 2. a sign for priority of passage (a full triangle with the point downwards); 3. a sign indicating the vicinity of a customs house (a disc with a horizontal stroke and the word "customs").

The Conference also dealt with the question of light signals and signalling by officials directing traffic and by drivers of vehicles. It recommended that the Permanent Road Traffic Committee should energetically pursue its study of these problems and that young people in all countries should receive special training enabling them to recognise the dangers of the road and to guard against them.

Taxation of Foreign Motor Vehicles.

This Convention was signed by nine countries: Belgium, Czechoslovakia, Denmark, Danzig, Great Britain, Luxemburg, the Netherlands, Poland and Switzerland. It aims at the exemption of private touring cars from the taxes or charges levied on the circulation or possession of motor vehicles in the country visited, or in any part of that country. The exemption does not apply to taxi cabs, hired cars and vehicles used for the public conveyance of passengers for payment (motor buses and motor char-a-bancs). The duration of the exemption was fixed at ninety days in each year. These ninety days may be made up of one or several stays. Days are counted from midnight and the day of entrance and the day of departure are counted as one day whenever they are not separated by an interval of more than one day. If a foreign vehicle prolongs its stay for more than ninety days, it will be treated as a motor car registered in the country having begun to travel on the ninety-first day.

The Convention provides for the establishment of a fiscal permit for one year, issued not only by the competent authority of the country of registration but also, if need be, by a body designated for the purpose by the said authority. No duplicate or new permit may be issued for the same vehicle during the year of validity. However, in the case of the registration of the vehicle in a new country a new permit may be issued, providing exemption for ninety days. If a motorist leaves a country without an exit visa that country may refuse him exemption for the remainder of the year during which the permit is valid. Fiscal permits may be endorsed at the frontier by an office other than the customs house. The permit will be drawn up in the language of the country of issue. It will have a blue cover, which will bear a translation in each of the languages of the contracting parties of the words "fiscal permit." Entries in writing shall be written in Latin characters or in English cursive hand.

The Swiss delegation submitted a reservation in virtue of which Switzerland will be entitled to continue to apply a system of ninety consecutive days renewable on arrival. Should the motorist remain in the country in excess of the period, the authorities would be entitled to collect taxes in accordance with their law. The French delegate stated that he was unable to sign the Convention at present as the French authorities were contemplating complete re-organisation of the system of taxation of motor cars in France. As soon as circumstances permitted, his country would accede to the Convention.

*The Customs Agreement on Triptychs* was signed by nine countries: Belgium, Denmark, France, Germany, Great Britain, Luxemburg, the Netherlands, Switzerland and Yugoslavia.

In all cases where the production of a consular certificate for the purpose of verifying a triptych or a customs *carnet* is permitted, the party concerned may furnish a certificate from the customs authority of another country stating that the vehicle is within that country. The certificate should contain all particulars of identity entered in the triptych or customs *carnet* and should not be issued unless the vehicle has been identified by inspection as being that referred to in those documents.

# Third-Party Risks on Day Hire Work.

An important question concerning third-party risks led one of the Liverpool transport associations to take legal advice. It was supposed that a public body engaged to pay a haulier at so much per day for the loan of wagons and men to carry material to a housing estate. The wagons and men during the period of employment were under the control of a corporation official. The question at issue was:—If one of the wagons did damage whilst carrying out the contract, on whom does liability fall:—the hirer, the haulage contractor or the builder.

The courts are constantly having to deal with cases which hinge on the distinction between a servant and an independent contractor, because in practice a person may buy the benefit of services from another, without having the right to control those services or to issue orders to the person rendering them. The line of demarcation between an independent contractor and a servant is often a very fine one. If, in the case mentioned, the municipality would allow no interference by the wagon owner or contractor whilst the wagon and men were on their work, then it would seem they would be liable for damages caused by the wagon or men as long as they were under the direct control of the hirer, provided, of course, the liability of the hirer was not restricted by terms of contract.

If the wagon owner sub-contracts, and wagons are supplied by another owner to do the job under conditions similar to those outlined above, the question arises which of the two wagon owners, the hirer or the builder, is responsible. In such a case a contractor who obtains a job which necessitates the employment of additional motors should give notice to the hirer (his employer) that for the purpose of carrying out the contract he is engaging additional wagons and men from a third party (specified) and putting them under the control of a hirer's foreman.

Another question which has been raised is the liability of an owner-driver who does not insure, but who undertakes work on a day rate under the direction of a foreman employed by the hiring party. The legal advice in this case indicated that the mere fact of the owner-driver hiring his wagon and himself on a day rate did not cease to make him an independent contractor, and he is liable for damage occasioned by him or his second man. It is dangerous to assume that the owner-driver can say the corporation is liable for his damage because the hirer's foreman directs the job. The hirer's authority over the wagon owner and his second man would be a question of fact, not of law.

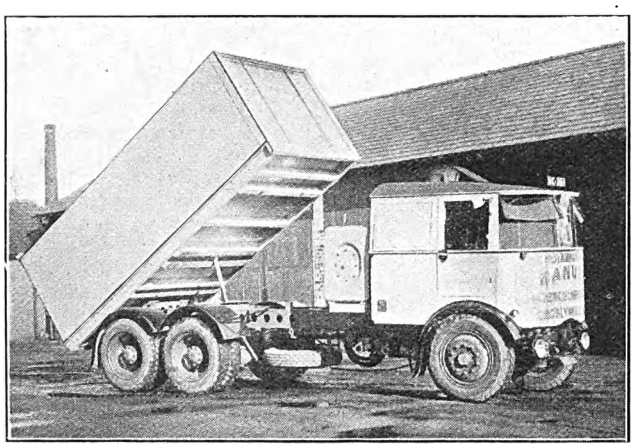
# Motor Notes.

**A Foden for Farm Haulage.**—The West Norfolk Farmers' Manure & Chemical Co-operative Co., Ltd., of King's Lynn and Boston, have recently taken delivery of a Foden "Speed-Twelve" pneumatic tyred six-wheeler fitted with an end-tipping body of 19 cu. yds. capacity. It is to be used for the haulage of chemical manures to local farms. The body is designed to carry 12 tons and the platform is 15 ft. long by 6 ft. 10 ins. wide. The end-tipping gear is worked by hydraulic power supplied from the boiler feed pump. The wheels are fitted with 40 ins. by 8 in. pneumatic tyres, single front and twins on each rear axle. The bogie axle castings are of the bowl type, and power is taken to each driving axle by worm gear from the cardan shaft. The bogie is attached to the main frame by a strong central casting. The engine is of the simple expansion type with two cylinders 5 in. bore by 7 in. stroke, placed transversely under the frame. The valves are of the poppet type actuated by the camshafts. The drive is through a two-speed gear box. The rated power of the engine is 80 b.h.p. at 500 r.p.m. The horizontal water tube boiler has a working pressure of 275 lb. per sq. inch.



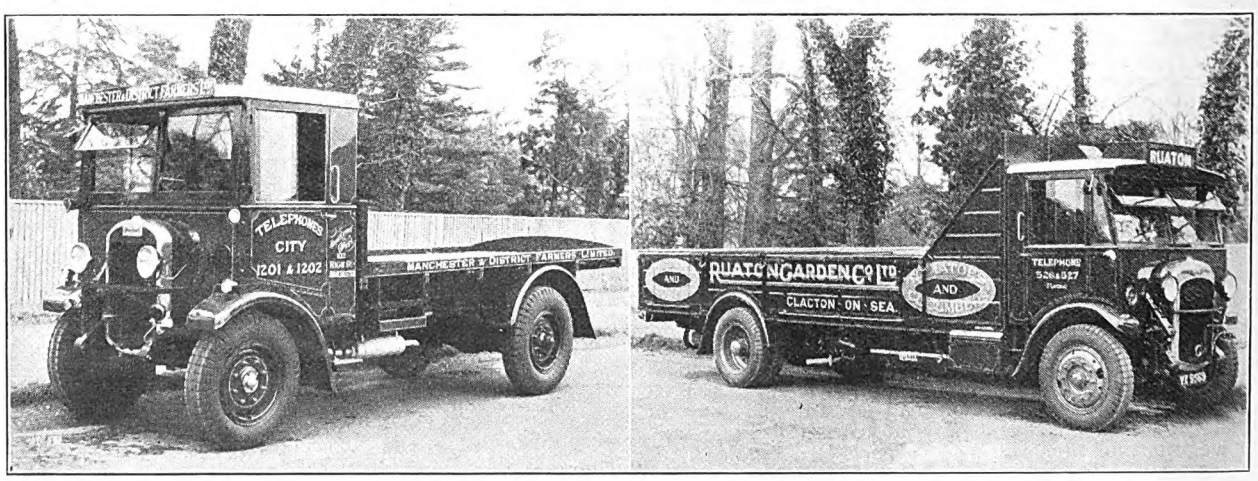
A FODEN "SPEED TWELVE" FOR FARM TRANSPORT.

**Henry Boys Trailers.** — Henry Boys & Son, Walsall, have sent us brief particulars of the very comprehensive range of trailers manufactured by them including 2, 4 and 6 wheel models both for ordinary transport from 10 to 12 cwt. up to 8 to 10 tons and for extraordinary transport up to 20 tons. Henry Boys & Son have been manufacturing trailers for road transport for over 40 years. They inform us that in the construction of their trailers no cast iron is used but that steel forgings or rolled sections are used exclusively. The turntables are provided with thrust ball races and the forged steel hubs are provided with adjustable taper roller bearings. The wheels are demountable steel disc which may be equipped with either solid or pneumatic tyres.

**The A.E.C. on the Farm.**—One of the most modern establishments of its kind is the model farm maintained near London, by Mr. J. Pierpoint Morgan, the financier. To its up to date equipment has just been added this smart A.E.C. 110 h.p. "Majestic" van which is used for a variety of purposes including, as shown in the photograph, the transport of pigs.

PIGS TAKE A DRIVE IN AN A.E.C.

**Thornycroft Sales.**—The two interesting photographs here reproduced show vehicles recently sold by John I. Thornycroft & Co., Ltd., Thornycroft House, Smith Square, S.W.1, one being a hinged sided lorry mounted on the firm's six-cylinder forward control long wheelbase passenger chassis for the express transport of fruit, vegetables and flowers, whilst the second is the firm's latest forward control two-ton platform lorry.



TWO INTERESTING THORNYCROFT VEHICLES.

**Lubricants for the C.M.U.A.** Sternol, Ltd., 110, Cannon Street, E.C.4, announce that in competition with about 60 lubricating oil concerns they have been appointed by the Commercial Distributors (Yorkshire), Ltd., as official suppliers of motor oils and greases to the members of the Yorkshire section of the Commercial Motor Users' Association. A contract has been arranged under which special grades of oils and greases are available at very attractive prices to such members as may wish to take advantage of them. The Commercial Distributors (Yorkshire), Ltd., are the buying organisation for the Yorkshire

Digitized by Google

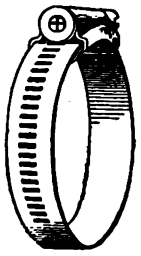
section of the Commercial Motor Users' Association, and the oil contract represents part of the buying scheme arranged for the benefit of the members.

**Latest Model Scammell Six-Wheeler.** — The vehicle illustrated is the latest model six-wheeler manufactured by Scammell Lorries, Ltd., of Watford and High Holborn House, 52-54, High Holborn, W.C.1. It is mounted on the new 13.5 section low pressure single pneumatic tyres on the driving and carrier wheels and 9 ins. section low pressure tyres on the front. The 13.5 tyres replace the previous 40 ins. by 8 in. twin equipment and are stated to be much superior. It is said that an appreciable improvement in petrol consumption is obtained, and that the resiliency and riding qualities are much improved, the rolling resiliency is reduced and the working temperature is considerably less. This particular vehicle has been recently delivered to A. F. Hancock, Ltd., of Attercliffe, Sheffield.

THE LATEST MODEL SCAMMELL SIX-WHEELER.

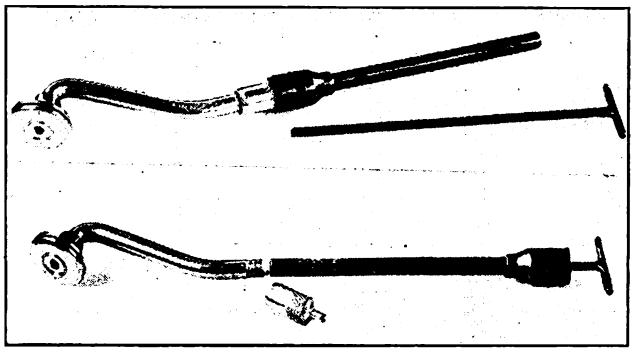
**D.B. Super Trailers.**—D.B. Super trailers, as illustrated, are built by B. Dixon Bate, Bridge Works, Tarvin Road, Chester. The chassis are solidly built of steel, welded together at the corners and are rigidly stayed by two tubular steel cross members at each spring mounting. A triangulated steel bracing member equally distributes the towing load. All 12 cwt. and 18 cwt. models are fitted with the "D.B." patent automatic servo brake gear. It is of simple design and extremely reliable. As the unladen weight of the 6 cwt. model is under 2 cwt., the law recognises that brakes are unnecessary. All these trailers can be towed behind any type of private or commercial vehicle. They do not affect the speed or petrol consumption of the towing vehicle, and it is obvious that they add to the carrying capacity of commercial vehicles at very little extra cost. Particular attention is drawn to the "D.B." patent automatic servo brake mechanism which is both powerful and smooth in action. It can be left applied when the trailer is standing unattached to the car.

**Jubilee Worm Drive Clips.**—The makers of these clips, Messrs. L. Robinson & Co., 14, London Chambers, Gillingham, Kent, have received the following unsolicited testimonial from the Ainsdale Garage & Engineering Co., Ltd., "Your clips are the finest in the world, but we obtain our supplies from Leo. Swain." We are informed that these clips were used on the world's fastest racing car, and on the last Schneider Trophy Engine. Messrs. L. Robinson & Co. inform us that they are prepared to give a free sample clip to any of our readers who write mentioning THE WORLD'S CARRIERS AND CARRYING TRADES' REVIEW.



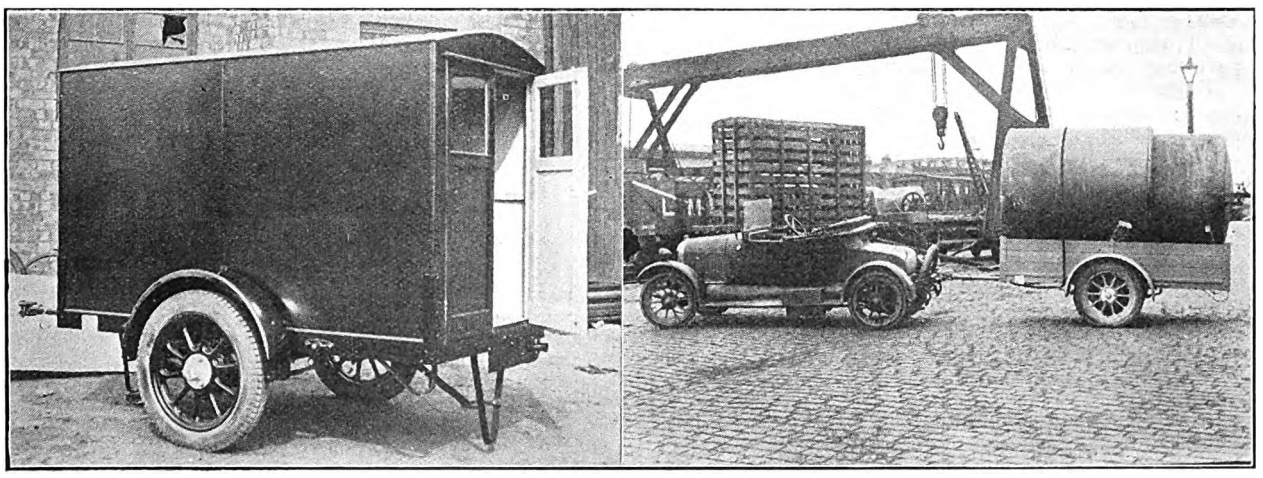
THE JUBILEE WORM DRIVE CLIP.

**A New Valve Tool.**—The Dunlop Rubber Co., Ltd., have produced a new type of valve tool for twin pneumatics. It does away with the necessity for thrusting the hand through the outer wheel to the inner valve. It is shaped so that it can be pushed through from the outside on to the valve cap and it is then rotated so as to unscrew the cap. The other end of the tool is next used and it is so designed that the valve "inside" is engaged and unscrewed in the bore of the tool. Retail price is four shillings.



THE NEW DUNLOP VALVE TOOL.

**The "Norvic" Pressure Cleaning Tank.**—A new cleaning tank has been placed on the market by R. Cadisch & Sons, 5 & 6, Red Lion Square, London, W.C.1. It has a heavy welded steel body supported on a steel axle frame. The paraffin is contained in the bottom of the tank and is forced by a powerful semi-rotary pump, through a spray nozzle, giving a high pressure output which removes all foreign matter from the articles to be cleaned. The latter are supported on a channel section steel platform capable of supporting great weight. The platform is removable for cleaning purposes. The intake of the pump is fitted with a floating diaphragm to ensure that only liquid is passed through the pump. The lid of the tank can be adjusted to any desired opening during cleaning operations. The dimensions are 3 ft. long by 2 ft. wide by 2 ft. deep. Height overall 3 ft. The price is £13.



LEFT: 18-CWT. D.B. TRAILER VAN MODEL E. 18F. RIGHT: 18-CWT. D.B. TRAILER MODEL E. 18C.

**Manchester-Commercial Price Reductions.** — As and from April 9th last, the Manchester-Commercial 30-35 cwt. models are reduced by £30 the chassis now being £230. The Standard 2-ton models are reduced by £13 the 2-ton chassis now being £285. The long wheelbase 2-ton chassis is reduced from £330 to £315.

# County Court Judgments.

The following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

R. Stockley, 110, East Street, Corfe Castle, Dorset, haulage contractor. £59/19/8. November 1st.

# Railway Electrification.

THE report of the Committee on Main Line Railway Electrification is a document of outstanding importance and is a worthy result of the labours of the three members, consisting of Lord Weir of Eastwood, the eminent engineer, chairman, Sir Ralph Wedgwood, General Manager of the London and North Eastern Railway Company and Sir William McLintock, the well-known Chartered Accountant, who in addition to his manifold labours, has been actively engaged on behalf of the Government in connection with the London Passenger Transport Bill.

The terms of reference were:—"in view of the progress which is being made towards wide-spread availability of high tension electrical energy, to examine into the economic and other aspects of the electrification of the railway systems of Great Britain, with particular reference to main line working and to report their conclusions." The committee, therefore, started with the knowledge that an adequate supply of electric current would be available as a result of the great National electricity scheme and it may be added, knowing the urgent need for finding a vastly greater field for the use of the electrical energy which can be supplied. It is a good thing for the Committee that their main duty was to examine and report on the economic aspect of the proposals and it may be stated at once that this they have carried out in a masterly way, so that should main line electrification be decided upon the basis is already laid down upon which to proceed. A careful perusal of the report leads one to the conclusion that as a result of the facilities for producing electrical current now available, the electrification of the main line railways in this country, is not only practicable, but as far as can be seen, also profitable, judged purely from an economic standpoint.

The Committee had before it an example of what has been done in the sphere of suburban Railway Electrification in the work carried out in this direction by the Southern Railway, to whom the highest praise is due for their enterprise, during a period of unprecedented depression—an enterprise which has brought its reward in the shape of greatly increased passenger traffic and revenue. Those of us who have travelled regularly on one of the suburban branches of the Southern Railway for more than forty years cannot speak too highly of the tremendous advance which has been made since the lines were electrified. It has been pointed out, however, that the problem is a different one when we come to consider main lines. Suburban railway lines have their own problems and have felt very seriously the effect of cheap road transport, whether by tram or by bus, but the result of electrifying these lines has been to regain for the railways a considerable portion of the traffic they had lost and of the new traffic which has come along since and this result has been achieved by reason of increased speed and greater cleanliness and absence of smoke and the greatly increased service, which can now be given. It is assumed that main line electrification cannot be expected to increase greatly the amount of traffic available, although this we maintain is merely an assumption, as we believe that every fresh facility given by the railways will result in increased traffic on the lines.

In spite of this assumption the result of the very thorough and expert enquiries made by the Committee over a period covering eighteen months has enabled them to come to the conclusion that main line railway electrification, is not only practicable, but is an economic proposition.

There are, however, other aspects of the question of the greatest importance and these will undoubtedly come to the front as the subject is investigated and discussed more closely. These aspects include the national, the financial and the political phases of the problem. First, how would it affect the country from the national point of view? It is estimated that the scheme, if carried out, will take from 15 to 20 years to complete and will give employment to 60,000 men for the whole of that long period. As against this it is stated that the effect on the national output of coal will be to show a reduction of nearly 10,000,000 tons per annum, reducing the consumption from 13,400,000 tons to 3,650,000 tons. This will result in a tremendous reduction in the number of miners engaged, unless in some way not stated, another outlet can be found for this huge amount of coal. With the coal industry in its present abnormally depressed condition, this is an outlook which it is difficult to face with

Digitized by Google

equanimity. Other industries such as that of locomotive building will be seriously hit but it may be assumed that what is lost in one direction will be gained in another.

Then we come to the financial aspect of this scheme. It is estimated by the Committee that the cost to the railways will be £261,000,000 in addition to a cost of £80,000,000 to be found by the Central Electricity Board, who are to provide the transmission lines and the substations and supply the converted energy to the railway companies. In addition to this it is estimated that £45,000,000 will be required to complete the electrification of the suburban lines at present still using steam for haulage purposes. This makes a grand total of £386,000,000, a gigantic figure, even in these days, when we deal in schemes running into millions of pounds without the smallest qualms and with very little apparent consideration.

It was not part of the Committee's work to deal with this aspect of the question, but we can see on what slippery ground they might have walked had their terms of reference been of a wider nature. In a general note at the end of the report they point out that during the last ten years our national expenditure on the construction, improvement and maintenance of roads has probably amounted to the colossal sum of £500,000,000 and is now proceeding at the rate of over £60,000,000 per annum. They draw from this the conclusion that the magnitude of the sum involved should not be a deterrent in itself to the consideration of such a programme. The simple answer to this statement is that the roads belong to the nation and every penny spent upon them is of national benefit and under national control, whereas the railways are private property, subject to legislation and regulation, and therefore, money spent upon them by the nation could only be granted subject to national control, likewise.

This brings us to the most serious point of all and it is to ask whether the railways, if they accept the scheme, which we understand the Government are proposing to put through with all their strength, can raise the necessary money without Government support and backing, because, if not it must lead to Government control, probably leading to unification, with nationalisation as the ultimate goal.

## London Passenger Transport.

THE first instalment of transport nationalisation—the London Passenger Transport Bill—has made considerable progress since we wrote about this in our last issue. The Minister of Transport may congratulate himself upon having come to terms with Lord Ashfield, representing the underground railways of London, The London General Omnibus Co., Ltd., and five tramway companies controlled by him. In this way he has secured most valuable support for his scheme for handing over the entire passenger transport of London to a Public Authority, which will supersede all the private enterprises which have done such great work on behalf of London transport up to now. The Minister of Transport has not only come to terms, but has secured the active support and co-operation of Lord Ashfield and it is stated that he now confidently hopes to carry the Bill through Parliament and have it placed on the Statute Book by August next. Lord Ashfield has acted quite correctly as the head of so many important undertakings in securing the best terms possible for those he represents and having done so in recommending very strongly the acceptance of such terms. Furthermore he has made it clear that he has received assurances from the Minister as to the control of the new Board which are satisfactory to him. As a result it is openly stated that he himself will be the first chairman of the new Authority. Unfortunately this is a business deal, carried out in the best business manner, having the interests of the stockholders and debenture holders in mind. The principle underlying the Bill, of public as opposed to private enterprise, does not arise and this principle must therefore be fought out on the floor of the House of Commons and as a last resort the House of Lords may have a say in the matter. For our part we agree with the remarks of Sir Robert Perks, the veteran railway shareholder, who stated at the meeting, when the terms were so clearly explained by Lord Ashfield, that he would like to see the measure thrown out, as he was opposed to the principle of public ownership of the transport undertakings of London. Should this Bill become Law the way is open for a much larger measure of nationalisation and the three important trade unions concerned are putting their views before the Prime Minister and strongly urging the nationalisation of both road and rail transport. The London County Council are still strong in their opposition to the Bill, but here again it is only a question of terms and if they can get the price to which they think they are entitled, their opposition will also disappear. There must not be any mistake or misunderstanding of the position. While all agree that traffic congestion must be reduced and traffic regulation must be strengthened, there is no reason why this should not be done by private enterprise and those who are supporting the London Passenger Transport Bill are giving a vote in favour of transport nationalisation.

## National Safety Week.

As we go to press the Safety Week arranged by the National "Safety First" Association is in full swing and we wish to add our voice to those who will be speaking on the platform and in the press, on behalf of the splendid work of this organisation. Year by year, the problem of how to prevent accidents on the roads and in warehouses and factories becomes steadily greater and its solution more urgent. The National "Safety First" Council has done magnificent work for years, in educating road users, industrial workers and those in authority, and in this way it has had a marked effect in helping to keep down the gigantic roll of accidents, fatal and otherwise, which we all deplore. It goes without saying that the enormous increase in the number of motor cars and commercial motor vehicles coming upon the streets and roads of this country, week by week and month by month, must result in a tremendous increase in the number of accidents. Human nature, being what it is, it may safely be said that the majority of accidents are due to the failure of precautions, either on the part of the pedestrian or of the motorist, and nothing, but education and intense propaganda, can instil into the minds of all road users the need for caution. It is in performing this admirable work that the National "Safety First" Association is playing so admirable a part. There is only one thing which needs to be said here, and that is that a greatly increased amount of financial support ought to be given to its work and that local authorities, as well as large industrial concerns, should all contribute to help forward the work in which they are so vitally interested. The General Secretary is Lt.-Col. J. A. A. Pickard, D.S.O., The National "Safety First" Association, 119, Victoria Street, London, S.W.1, who will be glad to receive and acknowledge all contributions and to give full details of the work of the Association. In this connection, reference may be made to a Safety First Competition on the Highway Code, which has been organised by the Association. The competition opened on Monday last, May 11th, and closes on July 15th next. The prizes, amounting to £5,000, have been guaranteed by Mr. Gordon Stewart, Governing Director of Stewart & Ardern, Ltd., a Vice-President of the Association. This competition should arouse great interest in the Highway Code, which has been drawn up to assist users of the road and to help forward the same good cause of "Safety First," as is being done by the National "Safety First" Association.

# Personal Notes.

**Metropolitan Railway Appointment.** — The Board of Directors of the Metropolitan Railway have appointed Mr. G. Hally, Traffic Manager to the Company in succession to the late Mr. W. Holt. He will continue to carry on his duties as Mechanical Engineer to the railway. Mr. Hally was born in Glasgow in 1885. He was educated at Uddingston Grammar School and the Royal Technical College, Glasgow. He served an apprenticeship of six years with Alley and McLellan, Limited, of Glasgow, and gained further experience with John Taylor and Sons, civil engineers, of Westminster, S.W.1, serving for three years as Mechanical Draughtsman and four years as Resident Engineer. Mr. Hally then became Chief Engineer of the Sun Power Co., Limited, of London and Cairo, and later Assistant Works Manager to W. H. Dorman and Co., Limited, Stafford. Some time later he took over the engineering managership of the Gloucestershire Aircraft Co., Limited, at Cheltenham. Subsequently, he occupied the position of Works Manager with several other concerns, and in July, 1923, he was appointed Chief Mechanical Engineer of the Metropolitan Railway.

MR. GEORGE HALLY.

**Great Western Railway Appointments.**—The Directors of the Great Western Railway have authorised the following appointments:—Traffic Department: Mr. F. R. Potter, Operating Assistant to Superintendent of the Line, to be General Assistant to Superintendent of the Line; Mr. B. M. Gordon, Station Master, Wolverhampton, to be Station Master, Cardiff General Station. Goods Department: Mr. C. Bassage, General Assistant to Chief Goods Manager, to be Principal Assistant to Chief Goods Manager; Mr. F. W. Lampitt, District Goods Manager, Liverpool, to be Assistant to Chief Goods Manager and Development Agent, Paddington; Mr. T. Martin, Goods Superintendent, Paddington, to be District Goods Manager, Liverpool; Mr. C. E. Boxall, Goods Superintendent, Birmingham, to be Goods Superintendent, Paddington; Mr. J. A. Warren King, Chief Clerk and Assistant District Goods Manager's Office, Newgate Street, London, to be Goods Superintendent, Birmingham.

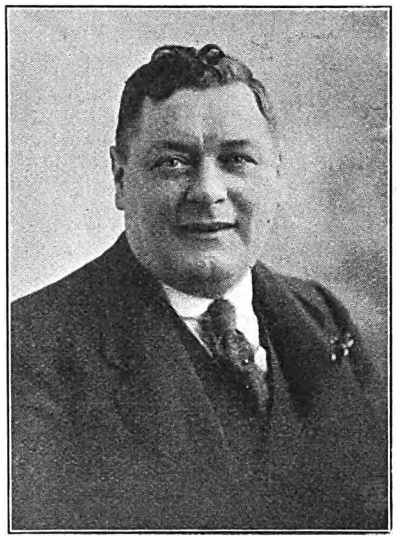
**Honour for Mr. John Godden.**—We offer our congratulations to Mr. John Godden, the head of the firm of Godden & Son, Canterbury, removal and warehousing contractors, upon his appointment as a Justice of the Peace. Mr. Godden, who is well-known throughout the removal and warehousing trade, is a Past-President of the Furniture Warehousemen and Removers' Association and takes an active part in local affairs in Canterbury, having filled the position, amongst others, of Chairman of the Canterbury and District Chamber of Trade.

**New General Manager and Engineer for Hull Tramways.**—Mr. D. P. Morrison, General Manager and Engineer of Dundee Corporation Transport since 1926, has been appointed General Manager and Engineer of Hull Corporation Tramways. Mr. Morrison is a graduate of Durham University. Before going to Dundee he was Engineer and Deputy Manager to Gateshead and District Tramways Company, of which his father was General Manager.

**Mr. E. B. Hutchinson.**—We offer our congratulations to Mr. E. B. Hutchinson who has been elected Chairman of the Leeds and District centre of the Institute of Transport for the session which commences next autumn.

**Important Addition to Crossley Sales Staff.**—Mr. W. H. Keys, one of the best known personalities in the commercial vehicle industry, has joined the Municipal Sales Staff of Crossley Motors, Ltd. Mr. Keys has for the past two years been associated with the Vulcan Motor & Engineering Co. (1906), Ltd., for whom he has done excellent work. In view of the popularity amongst municipalities of the Crossley production and particularly of the latest Crossley heavy oil engine, the adhesion of Mr. Keys to the Crossley organisation is an event of some importance.

**Mr. W. J. Lake's New Appointment.**—The Directors and staff of the Merseyside Touring Company, Ltd., on April 30th, presented an oak bureau to Mr. W. J. Lake, Manager of the coaching department. Mr. Lake, who has been with the Merseyside Touring Company since it began operations in Liverpool, and has been responsible for much of the great progress which has been made, has been appointed to the position of General Manager of Messrs. R. Barr and Co. (Leeds), Ltd., motor haulage contractors and motor coach owners, of Leeds.



MR. W. J. LAKE.

**Promotion for Mr. E. L. Cadwallader.**—In connection with the arrangement entered into between C. A. Vandervell and Co., Ltd., and Robert Bosch, A.G., we are very pleased to note that Mr. E. L. Cadwallader, who has been associated with the C.A.V. concern for many years and is extremely well-known and popular in the commercial vehicle world, will be General Sales Manager.

**Bean Cars, Ltd. New Appointment.**—Mr. E. Genna has been appointed Sales Manager of Bean Cars, Ltd., Tipton, Staffs. In notifying us of this appointment it is mentioned that Mr. Genna was lately Sales Manager of the Commercial Vehicle Department of A. J. Stevens & Co. (1914), Ltd., and previously was in control of commercial vehicle sales for the Star Motor Co., Ltd.; prior to that he was Sales Manager of the Sunbeam Motor Co. In view of the introduction of the "New Era" truck reported in our last issue, in addition to the other well-known products of this firm, this appointment is one upon which both Mr. Genna and Bean Cars, Ltd., are to be congratulated.

**Obituary.**

We regret to announce the death of Mr. C. E. Schneider-Hall, Joint Managing Director of European & General Express Co., Ltd., general shipping, insurance, clearing and forwarding agents and export packers whose head offices are at 37, Upper Thames Street, London, E.C.4. The death of Mr. Schneider-Hall will involve no change in the management or conduct of the Company's business, which will be carried on by the remaining Directors as heretofore.

# Institute of Transport.

THE Council of the Institute of Transport, at its meeting on May 11th, elected the undernamed to take office on October 1st, 1931:—

**President:**

Mr. Frank Pick, Managing Director of the London Underground Railways and L.G.O.C. Group.

**Past-Presidents to serve on the Council:**

Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B.; Sir Joseph Nall, D.S.O., T.D., D.L.; Mr. Roger T. Smith; Sir Josiah Stamp, G.B.E.; The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O.

**Vice-Presidents:**

Mr. A. L. Barber; Mr. R. Bell, C.B.E.; Mr. J. H. Follows, C.B.E., M.V.O.; Mr. R. J. Howley, C.B.E.; Major-General S. S. Long, C.B.; Sir David J. Owen.

**Hon. Treasurer:**

Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B.

**Hon. Librarian:**

Mr. W. V. Wood.

# The Institute of Transport.

## Debate on the Final Report of the Royal Commission on Transport.

THE meeting of the Institute of Transport held in the Lecture Theatre of the Institution of Electrical Engineers, London, on April 13th, last, was devoted to a discussion on the Final Report of the Royal Commission on Transport.

**THE HON. SIR ARTHUR STANLEY**, the President of the Institute occupied the Chair.

**MR. W. V. WOOD**, a Vice-President of the London, Midland and Scottish Railway, said his remarks had necessarily to be confined to the Final Report of the Royal Commission on Transport, and he spoke as an individual member of the Institute, although naturally his chief concern was with the railway aspect of the question.

The Commission referred to the fact that under the Railways Act, 1921, there was an amalgamation of existing companies, and not an allocation of the railway system of the country into definite geographical areas. This had to be coupled with the fact that a large number of the joint lines had still continued in existence. The result was that the Act, so the Commission said, had not resulted in a scientific arrangement from the geographical standpoint. That was quite true, but a re-parcelling of all the railways of the country into particular areas was part and parcel of the problem, and even if there were unanimity in the country, not only as between the railway companies, but as between various trades and towns, there would be very great difficulties still to overcome. These difficulties were felt when the Act of 1921 was passing through Parliament, and if the framers of that Act were unable to tackle the question, it was difficult for the privately owned railway companies to tackle it now.

He wished to mention the question of economy resulting from amalgamation. The Commission seemed to confuse economies which were effected as a result of steps taken by the railways in anticipation of amalgamation or rendered possible by amalgamation. The particular economies made possible by Section 59, of the Railways Act, were comparatively small—about a couple of million pounds, so far as he remembered; but that figure, which necessarily was found six or seven years ago, before the Railway Rates Tribunal began their work of fixing a standard revenue, was an unfortunate one to take when compared with the wider economies which had in fact resulted from amalgamation. If it were not for the striking economies made, some of the railways could not have carried on during recent years, and the policy of amalgamation had undoubtedly kept open certain railway lines which might otherwise have had to shut down.

### RAILWAYS AND THE ROADS.

It was suggested that the railway companies in a few years would become the largest road operators in respect to passengers in the country, and the Commission expressed doubt as to the wisdom of establishing omnibus services in direct competition with their railway services. It was entirely incorrect to say that the railways had expended money on operating road services. They had not done so; they had taken an ownership share in a large number of road undertakings outside the London area, but he knew of no case where they had expended capital sums of any importance, and of no case where they had established services in direct competition with their railways, nor did the Commission indicate any such cases. In fact, the railway companies by their part ownership of these omnibus undertakings, and the agreements they had made with the undertakings, which had worked very well indeed—had been able to secure some co-ordination of passenger traffic, including in that measure the closing of unremunerative branch lines and the withdrawal of unremunerative trains. The closing of these lines had caused some concern to the Commission, who stated that it meant the disappearance of facilities available to passengers. He knew of no such case. In every case he had seen, before the line was closed, adequate arrangements had been made for alternative facilities by road.

### THE USE OF CONTAINERS.

Another railway criticism referred to the under-use of containers. He was not sure whether that was a criticism of the traders or of the railways, but he was not aware of any complaints as regards the number of containers available. Whatever the final use of containers might be, undoubtedly their use was going to be a prominent feature of railway working in the future.

**MAJOR-GENERAL S. S. LONG, C.B.**, President of the Commercial Motor Users' Association, said that he could not help thinking, that if it was desired to do anything as regards some of the recommendations of the Royal Commission there were certain points which needed repeated emphasis. There was the question of weak bridges. There were throughout the country somewhere in the neighbourhood of 5,000 weak bridges. In the Midlands alone there were over 300 restricted in their use, more than half on scheduled roads. He ventured to think that they should urge on all occasions that the recommendation of the Royal Commission that a definite sum be set aside for the immediate repair of weak bridges at the rate of £1,000 a year until all the bridges in the country had been put right, should be enforced.

The question of level crossings required to be dealt with immediately. Toll bridges and toll roads were an anachronism and a sum should be set aside out of the proceeds of motor taxation for the purpose of freeing them.

### PROPOSED LICENSING OF ROAD HAULIERS.

The only criticism he ventured to make of the Royal Commission's Report was with regard to their recommendation for the licensing of road hauliers. He was glad to find that he was in agreement with one of the members of the Commission who differed from his colleagues on this subject, in saying that the licensing of road hauliers, or any restrictions upon them other than those laid down in the general motoring laws was unnecessary and was hampering to industry. He thought the proposal of the Royal Commission in this respect was likely to do more harm than good. The people of this country suffered too much from unnecessary legislation. Why it should be necessary to licence a road haulier he could not conceive. The operation of economic laws could be trusted eventually to solve the question whether there were too many of them. In a few years' time, he ventured to think, without any further laws or regulations this matter would adjust itself and road hauliers would take their economic place according to their value.

**MR. R. FANE DE SALIS, B.A., F.G.S.**, President, Canal Association, drew attention to the recommendations of the Royal Commission so far as they were based on the evidence placed before the Commission by the Canal Association. The first point which that Association had made was as to the necessity of amalgamations. When it was remembered that about 30 independent canal companies owned an average of 50 miles each, the necessity for such amalgamation seemed to go without saying. Such amalgamations were required if the canals were to be brought up-to-date and to be worked economically. One large amalgamation had taken place during the last two years, namely, the Regent's Grand Junction and the Warwick Canal, for which the speaker thought he might congratulate himself as having been primarily responsible.

In recommending, as the Commission did, the necessity of further amalgamations on main routes, they said, as did the Commission before them, and the Committee of 1921, that if within reasonable time the canals did not amalgamate, they should be amalgamated as a public trust compulsorily, and the Commission added the very important recommendation that where railway links were involved, the railway company should be heard only as to price. He thought that the line which the Commission had taken as to improvement of canals was a very sane and sensible one. They were not recommending any excessive outlay. They stated that any elaborate scheme of standardisation would be unduly expensive.

The Canal Association raised, as did the railways, the question of motor transport competition. About that he need say little, because those whom he represented were entirely at one with the earlier speaker (Mr. Wood). They agreed with him as to the unfair competition to which both were subjected. But one recommendation was forthcoming from the Commission which he thought might be of value if carried out, namely, that lorries weighing four or more tons empty should pay a higher tax, and that at the maximum weight the tax should be as much as £120. He thought that anything of that sort would be a help to canals, because naturally their competition was chiefly in regard to heavy goods, and the extra tax on an unusually heavy lorry would not stop what he hoped to see come into much more extended use, that is, the use of lorries by the canals themselves to distribute and collect their traffic.

**MR. R. E. HERDMAN**, President, Dock and Harbour Authorities' Association, said that docks provided the essential junction between land transport and sea transport, and the great aim of those responsible for the management of dock undertakings was—or should be—to provide adequate and efficient accommodation so that the safe and rapid movement of traffic from land to sea or *vice versa* might not be obstructed or arrested.

The Report made it clear that it was a gratifying feature that at the large ports especially the dock authorities had kept well abreast of modern requirements. In some instances

Digitized by Google

their efforts had gone considerably ahead of present requirements, and this had had the result that in certain cases equipment had not been used to an extent justifying its provision. Each authority, however, could only do its best to solve its own particular problem.

**THE RT. HON. SIR ARTHUR S. T. GRIFFITH-BOSCAWEN,** the Chairman of the Royal Commission on Transport, said that the Commission was set a very large and difficult task.

Their first two Reports were largely the law of the land. The members of the Commission had always recognised that their last Report, which dealt with the development and co-ordination of all forms of transport, would be far more difficult and far less likely to be carried into immediate effect, but he wanted to make clear what the Commission had had at the back of their minds in presenting that Report. They were trying to regard all forms of transport from the national standpoint, recognising that transport was the handmaid of industry, and that the cheaper and more effective it was the better it would be for British industry as a whole. Therefore, they could not favour any particular kind of transport and wished to see how each kind could best serve the national interest. That was the angle, and the only angle, from which they had approached the subject.

The great principle was that each form of transport should do its part, and that where competition came in, the State should hold the balance as fairly as possible between all of them. Another matter which the Commission had very much at heart was, that in this country wasteful competition could not be afforded. For one form of transport to be unnecessarily competing with another was not to the national advantage. They felt that an attempt should be made to co-ordinate all forms of transport, and dovetail them one with another so that each played its appropriate part. That was a most difficult task—he thought in many ways an impossible task—to set any Commission, but they had tried to carry out the intention so far as they could.

With regard to railways he had no complaint to make of the criticisms which Mr. Wood had uttered. What he had been a little surprised to notice was that the railway companies, although they had objected to some of the criticisms of the Commission, had failed to perceive that in many respects the Reports had been very greatly to their advantage. What the Commission had tried to do was to hold the balance perfectly fairly, recognising as they did that the railway companies had been, and in their opinion must remain for many years, the principal means of transport in this country.

He had rather expected to hear something in the way of hostile criticism of the proposal to increase the taxation upon heavy commercial vehicles. At the present time there was a scale of increased taxation for commercial vehicles of over a certain weight. The taxation was so much for a vehicle exceeding 2½ tons and not exceeding 3 tons; it was so much more for a vehicle exceeding 3 tons and not exceeding 4, and so on until one came to 5 tons, and after 5 tons there was a flat rate. He did not see how that could be justified. Surely if a vehicle of 5 tons did a great deal more damage to the roads than a vehicle of 4 tons, it followed of necessity that a vehicle of 6 tons did more damage than one of 5, and a vehicle of 10 tons much more damage than one of 6. Therefore, the Commission proposed that there should be a graded scale based largely on the fact, stated by every road surveyor, that these heavy vehicle were the principal cause of the deterioration of the roads. It was, therefore, proposed to extend the scale, and make the maximum figure something like £120.

**BRIG.-GEN. SIR H. OSBORNE MANCE, K.B.E., C.B., C.M.G.,** British Director, German Railway Company, said it would be a great help if the interested parties in this country could get together as objectively as possible and agree exactly how to calculate the charges which should be borne by motor transport to make it self-supporting in the sense of being no longer subsidised. In this country we were much nearer to motor transport paying its way than in any other country. It seemed evident that the regulation of taxation was not the sole or the chief consideration in determining the relation between rail and road transport. It seemed to him that the main problem lay rather in the fact that the railway tariff structure, including publicity and non-discrimination in tariffs, together with the obligation to accept traffic and to provide certain non-paying services, was only applicable in monopoly conditions, which no longer existed. With passenger traffic we were in the process of restoring monopoly conditions.

With regard to goods classification and railway rates, the Commission stated they were "not prepared to make any recommendation which would have the effect of disturbing the existing system." The Commission added that the railways shared this view. He wondered why. Was it likely that the transport system of this country would adapt itself to the entirely changed conditions if it refused to consider anything which "would have the effect of disturbing the existing system?" The problem of rail and road co-ordination required the widest outlook. The only practicable solution he had been able to think of to give some protection to the railways without unduly restricting the development of motor transport was the rough and ready one recommended by the Commission, and that was to alter the incidence of road taxation so as to bear more heavily on the class of vehicle which competed directly against the railway, namely, the heavy lorry. This proposal to tax the heavier road vehicles could only be regarded as a temporary expedient. It would be impossible artificially to restrict the free operation of economic forces, and the national economies would have to adapt themselves to the new tariff conditions.

**LT.-COL. A. E. DAVIDSON, D.S.O., R.E.,** Institution of Mechanical Engineers, said that in the Report under discussion the advantages of the multi-wheeled vehicle were commented upon, but steps did not appear to have been taken to implement the faith which had been placed on, say, the 6-wheeled lorry of the rigid frame type. It was clearly recognised that the effect on the roads of carrying the weight on a 4-wheeled bogie was very much less than in the case of a 4-wheeled vehicle, and it would have appeared that some advantage might have been given to vehicles of that sort by adjusting the taxation in their favour, and so encouraging their use by splitting up the heavy loads, or even some of the lighter loads, into two, and so decreasing the cost of maintenance of the roads.

**MR. G. TERRELL,** President, National Union of Manufacturers, said that he felt it was necessary to keep the railways going, and that the maintenance of an efficient railway system was of vital consequence to the country. Without a shadow of doubt, the heavy motor vehicle was a very unfair form of competition.

**MR. F. W. GALTON,** a member of the Royal Commission on Transport, said that the railway companies ought and must by some means find further ways of effecting economies without interfering with the efficiency of their services.

General Long had objected to the recommendation about the licensing of road hauliers. The answer was that the Commission were requested to make this recommendation both by the road hauliers themselves and by the persons representing the staffs they employed. This was really one of those rare cases in which unanimity was presented to the Commission in the form of evidence.

**MR. R. E. MORLEY,** Traffic Manager, Messrs. Bryant & May, Ltd., said they were all familiar with that blessed word "co-ordination." It had come forward again and again, and he was not surprised at the conclusion of the Commission that they had not found their way to make any definite recommendation with regard to it.

With regard to the question of heavy road vehicles that the Chairman of the Royal Commission had mentioned, he could assure him that there was a very grave objection to the recommendations of the Commission with regard to highways, and he noticed that in paragraph 265, the Commission said that their recommendations were made in the interests of the highways and their users. He thought that the Commission must have experienced some trepidation subsequently when they came to recollect that the types of vehicles concerned were turning over at a tremendous rate to pneumatic tyres and therefore, imposing much less strain upon the roads. Moreover, their damage to the roads was considerably lessened by the new speed regulations of the Road Traffic Act, 1930.

**THE PRESIDENT,** in closing the meeting, proposed the following resolution: "That the Institute of Transport congratulates the Chairman and Members of the Royal Commission on Transport for the able and expeditious manner in which they carried out their complicated and difficult enquiry." This was put to the meeting and carried unanimously.

# Main Line Electrification.

## Report of the Committee.

IN September, 1929, the Minister of Transport appointed a Committee, consisting of Lord Weir, Sir Ralph Wedgwood, Chief General Manager of the London & North Eastern Railway, and Sir William McLintock, the well-known Chartered Accountant, to examine the economic and other aspects of the electrification of the railway systems of Great Britain, with particular reference to main line working, and to report their conclusions.

The Committee have now submitted their report. They have considered not only the direct results as affecting the railways but also the reactions on the national electricity supply and the effect on industry generally, and their conclusions are summarised below.

The reference did not instruct the Committee to make recommendations, and, as they point out, any programme of general electrification involves national, financial, and possibly ultimate political considerations and implications which they do not feel it is any part of their present duty to discuss. The object of the Committee has been to make clear the essential economic factors involved, and they present the results of a dispassionate investigation into this portion of the problem.

The following is a summary and conclusions arrived at by the Committee:—

(i) The existence of the national scheme of generation of electrical energy and the consequent low prices and availability of such energy constitute a new and favourable factor in the economics of further railway electrification in Great Britain.

(ii) An efficient and progressive railway system is and will continue to be a matter of vital importance to the nation.

(iii) In view of the competition of road transport and the existing industrial and agricultural depression, it is essential that the railways should examine new methods of reducing the costs of railway transportation.

(iv) Comprehensive electrification of main line railways has not taken place in any foreign country except Switzerland, but, generally speaking, railway electrification is making steady progress in many parts of the world.

(v) The main reasons which have led to the adoption of electric haulage in foreign countries, broadly speaking, do not apply in this country, and they have not offered any conclusive guide or assistance in our investigations.

(vi) British railway electrification up to now has been confined to suburban lines, and the results, economic and otherwise, have been favourable.

(vii) The economic success of British suburban electrification is due to the substantial increase in revenue following on the much improved service which an electrified railway can provide.

(viii) Suburban electrification provides no sound comparison of actual operating costs of steam and electric haulage, but it does present certain *prima facie* considerations in favour of electric haulage for main lines.

(ix) The increased load on the national system which electrification of the railways would contribute, together with its high load factor, would react most favourably on the cost of electrical energy produced for all purposes, while the additional transmission network required for railway electrification would do much to accelerate rural electrification throughout the country.

(x) In the event of a scheme of main line electrification being adopted, the Central Electricity Board should be given statutory power to supply electrical energy direct to the railways for electrification schemes. In addition to this railway companies should be entitled to utilise, for purely railway purposes, at any point in their systems, supplies of electrical energy obtained from the Board or any other authorised undertakers.

(xi) In any comprehensive scheme of railway electrification the Central Electricity Board should provide the transmission lines, build and equip the sub-stations, and supply the energy at the Direct Current bus bars of the sub-station, but the operation and control of the sub-stations should be in the hands of the railway companies.

(xii) In regard to the most suitable system of electrification, the report and recommendations of the Pringle Committee should be followed.

(xiii) Improvements in the fuel economy of steam tractors will take place, but such economy is likely to be counterbalanced by higher capital costs and maintenance charges.

(xiv) The most promising alternative to steam haulage, other than electrification, rests in the development of the oil engine with electrical transmission to the driving wheels, but experience of this system is still limited, and it would appear that on well-loaded lines this system must always be less economical than electrification.

(xv) In considering alternatives to the steam locomotive preference should be given to systems using coal rather than oil as being in the national interest.

(xvi) Apart from the direct financial economies of electrification as disclosed in comparative costs of operation, electrification offers important indirect advantages associated with speed, comfort, amenity, improved service, and increase of capacity.

(xvii) Leaving aside the financial aspects of the matter, the disadvantages of electrification relate almost entirely to the dependence of the system on centralised sources of electrical energy.

(xviii) The main items of haulage cost which can be materially reduced by electrification are locomotive wages and locomotive repairs.

(xix) Unless special conditions obtain, the electrification of small sections of a main line railway system is unlikely to be economically justified on account of the costs of dual working, and the consequent inability to take the fullest advantage of the new capital expended on fixed equipment or haulage units.

(xx) To secure the fullest economic advantage of railway electrification in this country, any scheme adopted should be a comprehensive one preferably comprising all the non-electrified lines, less such branch lines as detailed examination may show to be more economically operated by independent haulage units either steam or oil electric.

(xxi) Assuming that such a scheme is carried out on a comprehensive programme over a period of from 15 to 20 years, on a conservative basis and on the assumption of existing traffic, the new capital involved on the part of the railways would be approximately £261,000,000, and the return on this through the various economies would represent about 7 per cent.

(xxii) Apart from the direct return due to these economies other substantial advantages could be realised, the most important being increased revenue from suburban and inter-suburban traffic. On a broad estimate we anticipate that schemes of intensifying suburban working would yield an additional revenue of £5,850,000 representing a return of 13 per cent. on the additional capital expenditure of £45,000,000 which would be involved.

(xxiii) The figure of estimated capital expenditure is likely to be reduced due to non-electrification of lightly loaded lines, redundant lines, and sidings, and reduction in capital cost of tractors, etc., due to large scale production, and a continuous manufacturing programme. On the other hand some allowance must be made for the electrification of private sidings and private branch railways worked over by the railway companies in the process of the transfer of traffic.

(xxiv) In addition to the expenditure under this programme, there would be a further expenditure by the Central Electricity Board and authorised Undertakers of approximately £80,000,000 in excess of existing programmes, on which these bodies would earn their normal revenue.

(xxv) The change-over from steam to electric traction will not materially affect the conditions of railway employees other than those in the locomotive grades. Even in the case of these grades we anticipate the adverse effect of the change will be a limited and temporary character owing to the duration of the programme, together with the probable increase in suburban and other train mileage. The matter, however, is one which should be more closely examined if it should be decided to proceed with the scheme.

(xxvi) Apart from considerations of finance and railway administration, a comprehensive programme such as we have indicated, if it is to be undertaken, should preferably be carried out as a united co-operative scheme by the railway companies, in order to obtain the best results from the technical, construction and supply standpoint.

(xxvii) From the point of view of technical development and international competition the value of such a programme of domestic electrification would be most substantial to our national electric manufacturing industry.

### General.

The preceding are the conclusions we have formed, and we would bring our report to an end with one general

Digitized by Google

observation. The existing railway system is a vital part of the equipment of our country and its efficiency and economy affect the lives of practically every inhabitant, our industry and our agriculture. A definite decision to alter the haulage system on a comprehensive programme, which in our view is the only method of achieving complete success, would involve a commitment of capital expenditure by the railways of about £261,000,000, and of about £80,000,000 by the Central Electricity Board and other authorities, apart from the extra expenditure necessary in order to realise an intensive suburban development. The magnitude of this would be unique in the history of world enterprise.

On the other hand, we feel bound to point out that without any predetermined long term programme, our national expenditure on the construction, improvement and maintenance of roads in the last ten years has probably amounted to the colossal sum of £500,000,000 and is now proceeding at the rate of over £60,000,000 per annum. Road haulage is in direct competition with the railways for a large amount of traffic but, unlike the railway system, there exists for the roads no balance sheet or computation of profit and loss. There is no definite economic test of financial soundness. With this reflection in mind, we have no hesitation in concluding that the mere magnitude of the sum involved in complete electrification of our railways should be no deterrent in itself to the most careful and earnest consideration of such a programme on its economic and social merits. The decision involves national, financial and possibly ultimate political considerations and implications which we do not feel it is any part of our present duty to discuss, but we trust that towards the consideration of the problem which will no doubt take place in the minds of those concerned, the railways, the Government and the country, we have at least made clear the essential economic factors.

## Motor Users and Manufacturers should Co-operate.

A STRIKING plea for more co-operation between motor users and manufacturers was made by Mr. C. F. Lawrence King, assistant general manager, Morris Commercial Cars, Ltd., in a speech of welcome to Liverpool members of the Commercial Motor Users' Association, on the occasion of their visit to Birmingham, on April 29th. The party of about 40 members travelled in two Morris-Commercial "Dictator" coaches. The itinerary was drawn up by Messrs. Morris Commercial Cars, Ltd., in collaboration with Messrs. W. Watson & Co. (Liverpool), Ltd., and covered 14 hours of travel and sight seeing. Warrington and district members of the C.M.U.A. joined the coaches at the premises of Messrs. C. Melbourne & Co., Ltd., Warrington.

MEMBERS OF THE LIVERPOOL C.M.U.A. AND THE MORRIS-COMMERCIAL "DICTATOR" COACHES IN WHICH THEY VISITED THE MORRIS-COMMERCIAL WORKS.

After luncheon, Mr. C. F. Lawrence King, on behalf of Sir William Morris and Morris Commercial Cars, Ltd., welcomed the visitors. All engaged in the transport industry, he said, were going through difficult times owing to the regulations that were being imposed upon them by the Government. It was his personal opinion that motor users did not make enough noise. He predicted that in eight or ten years time, the road transport industry might be faced with the same sort of regulations that passenger transport concerns had to observe. This would not be good for the industry, either the manufacturers or the users, between whom there should be more co-operation. It should not be possible for any Government to drive a wedge between them. The Government had to take notice of users, but he regretted to say they did not pay a great deal of attention to the manufacturers' point of view.

Mr. A. C. Bloomer, chairman of the Liverpool Area Committee of the C.M.U.A. voiced the thanks and appreciation of the Liverpool members to Morris Commercial Cars, Ltd., and to Messrs. W. Watson & Co. (Liverpool), Ltd., for rendering that visit possible.

Mr. T. Lawrenson also on behalf of the C.M.U.A., said that in the transport industry there were too many unions and too little unity. The time would come when the need would be felt for one organization providing all the needs of vehicle owners and users. The motor manufacturers were unique in their solidarity so far as organization was concerned, but for the life of him he could not understand why they were not much more forceful. He hoped now that Sir William Morris had entered the coaching world better conditions were ahead. Mr. Lawrenson commented on the large number of formalities that had to be gone through in regard to the running of public service vehicles and the extra expenses which coach-owners had to bear. The time had arrived, if it was not long since passed, when the whole of the motor users throughout the country should get together into one great organization. If that were done, and there was some understanding

Photo] [World's Carriers.

A DEMONSTRATION DURING THE VISIT.

with the manufacturers, he was confident that legislation would not be as oppressive as it had been in the past.

Mr. Lawrence King in reply, again stressed the necessity for a united front by the motor users and manufacturers.

The most interesting part of the day's programme was the visit to the testing grounds, at Bilston, where there was demonstrated some of the famous Morris-Commercial six wheeled W.D. type lorries and trucks, also a six cylinder six-wheeled saloon car. Their evolutions on gradients with a rise of one in one and a half, over rough ground with deep corrugations and sharp rises, through muddy expanses and down precipitous slopes were both spectacular and acrobatic. One lorry carried a two-ton load and two passengers during its tests and was several times cheered on putting up what was considered by the visitors to be a wonderful performance.

We then visited the Soho works where Morris-Commercials are made but time would not admit of making a detailed survey of all the departments of production. It was, however, interesting to learn that approximately one-third of the entire works is devoted to testing operations, so as to ensure a finished car that will give the user the maximum quality and range of service. The start for home was behind the scheduled time but a good journey was made and we arrived back at Watson's depot at Liverpool at about 10.30 p.m.

# Motor Hirers and Coach Services Association.

## Public Meeting.

A PUBLIC MEETING, convened by the Motor Hirers and Coach Services Association, was held at the Cannon Street Hotel, London, on April 21st last to consider (1) Objections by the railway companies to applications for road service licences, and to applications for "Backings"; (2) The London Passenger Transport Bill; and (3) The position of the motor coach industry throughout the country and the only way to overcome the problems and difficulties.

**MR. M. LOGETTE** (Chairman of the Management Committee of the Association) presided, and, in opening the meeting, said it was desired to place before members of the Association and others engaged in or connected with the operation of public service vehicles the rather startling, and, if he might say so, chaotic position which had arisen since Part IV. of the Road Traffic Act came into operation in April last.

Throughout the past winter the Association, which was recognised by the Minister of Transport to be a national and representative body, had been engaged in trying to adapt the independent motor coach industry to the new conditions which had arisen under the Road Traffic Act, and probably the question with which at present they were most concerned was that regarding the licensing of road service vehicles.

The Traffic Commissioners appointed under the Road Traffic Act published information relating to applications for licences for road service vehicles in what was known as the Traffic Commissioners Statement, and upon the issue of the first of these Statements it became apparent that the railway companies intended to embark upon a widespread policy of objections to the grant of licences. These objections appeared to be of two kinds; on the one hand they were purely of a domestic nature and of somewhat minor importance, but in other cases they were of such a nature as to violate all the principles by which the independent coach operators had pioneered and developed their industry. In effect the railways were saying that road service licences should not be granted because the railways provided adequate train services, and therefore the granting of road service licences was not desirable in the public interest. This, he contended, was a direct challenge to the coaching industry; it challenged the right of a person to travel by road at all, and it was a challenge that would have to be fought out all over the country and to the bitter end. Unless the independent coach operators faced up to this challenge fairly and squarely, they would see happening throughout the country what he was told had been happening in a certain place during the past week, where, figuratively speaking, independent operators were being "twisted" and "turned" and "thrown upon the scrap heap."

**MR. HORACE WYATT, M.Inst.T.**, then addressed the meeting, and dealt with the London Passenger Transport Bill. He said he wanted coach operators in the provinces to realise that this Bill affected them just as closely as it did anyone else. The idea seemed to be to establish as big a monopoly as possible, the Labour Party knowing that sooner or later they would nationalise the railways, and he thought the Government was only waiting for a clear majority in the House of Commons before they did so. In the meantime they wanted to make the transport of the country a virtual monopoly, and this would be followed by nationalisation.

The Bill proposed to set up a Traffic Board consisting of five gentlemen who must be expert in many things, but transport did not seem to be one of them. (Laughter.)

The independent coach operators must act together, and those who were not members of the Association or of some other representative body should become linked up at once. (Applause.)

**MR. M. LOGETTE** said that, as Mr. Wyatt had pointed out, the London Passenger Transport Bill proposed to set up a Board consisting of five experts whose duty it would be to provide transport services in the London Traffic Area and to take over the various undertakings providing such services. The members of the Association were concerned regarding what would happen to those undertakings and business not taken over by the Board. The Board would have power to operate any transport services they liked in the London area in which they would have a complete monopoly, and they would, with the consent of the Traffic Commissioners, be able to operate anywhere outside the London Traffic Area and compete with existing undertakings. Inside the London Traffic Area the Board would be free from any control by the Traffic Commissioners, but if the Board wanted to go outside then they would have to apply to the Traffic Commissioners for licences, but even in the Traffic Commissioners Court the Board would have advantages over the independent operators because one of the matters which the Traffic Commissioners must have regard to when considering the grant of a road service licence was the relationship a proposed service outside the area bore to a service inside the area. Take Godstone as one of the boundary points of the London Traffic Area. At present there were something in the neighbourhood of 30 services each day to Godstone and the Board could easily go to the Traffic Commissioners and say that the limit of their present services was a small village with a population of some 1,700, and that four or five miles further on there was East Grinstead with a population of some 8,000 and that they thought their services should be allowed to go to East Grinstead as it was very inconvenient for a passenger to alight at Godstone and then take a local bus. In those circumstances he thought that the Traffic Commissioners might grant the Board such a licence, and so the procedure could go on, and the next month the Board would discover another town five miles farther on for which they would want the licence extended and they would go to the Traffic Commissioners and use the same argument. Soon the independent operators would find the services of the Board running farther and farther, and the Board could in this way extend their services so as to cover the whole of the country. Further, the Board would have power to enter into working agreements with undertakings outside their area, so that if any Traffic Commissioners saw through the ideas of the Board and refused to grant licences the Board could go to the Directors of an adjoining undertaking, purchase a financial interest in the business and so establish a network and a monopoly.

He did not call it a London Passenger Transport Bill—it was a national transport Bill. It was the first instalment of "Socialism in our time."

What about those undertakings not taken over by the Board? It was obvious that there would be a large number of businesses still in existence after the Board had been set up. After the 1st January, 1932, no person other than the Board would, except with the written consent of the Board, be able to use a stage carriage or an express carriage on any route within the London Traffic area; that was to say, those left behind in addition to being controlled by the Traffic Commissioners would have the London Transport Board with power to say "yes" or "no" to an application from an operator for permission to continue to run a service for the purpose of picking up and setting down passengers within the London Traffic Area, and if the Board granted their consent they could attach to the permission such conditions as they might think fit.

There was a small counter-balancing proposal to the effect that if a person was before March 12th, 1931, running a service of stage carriages or express carriages within the London Traffic Area and suffered any direct pecuniary loss by reason of the prohibition or restriction of the service he could claim to be entitled to recover compensation from the Board.

He was, however, more concerned with regard to those services to run which an operator would have to get the consent of the Board. It appeared that the Board could give their consent and then compete with the operators of those services. Again, the Bill gave no protection against the Board competing for contract hire work.

The Motor Hirers and Coach Services Association had presented a petition against the Bill.

With regard to the objections being lodged by the railway companies against applications made by operators to the Traffic Commissioners for licences, the railway companies were using the provisions of the Road Traffic Act to force people to forsake road travel and to go back to the railways. The railways claimed that they had an advantage over the road, yet they had to admit that their traffic had decreased. Why? There was only one answer, and it was that there was now a definite section of the public who would travel by road no matter what the railways did. The public would not go back to the rails. Motor coaches had been catering for the public many of whom, perhaps, had never before been able to do much travelling, and he was certain that any attempts to force

Digitized by Google

them back to the railways would be resisted. The policy being pursued by the railways was not one of co-ordination, but a deliberate attempt at repression. He asserted that any attempt to use legislation to provide artificial stimulus in respect of any commodity would in the long run stultify progress and development. The widespread action of the railway companies aimed at rendering road services other than local bus services completely obsolete.

He believed that the Traffic Commissioners intended, but perhaps not just at the moment, to impose a minimum coach fare. The Motor Hirers' and Coach Services' Association had already set up a Fares Board and it was hoped it would prove to be one of the means, in fact he thought the only means ultimately, whereby operators would be in a position to advise the Traffic Commissioners as to what the minimum fare should be on any particular route or journey.

The Minister of Transport had directed the Traffic Commissioners to have regard to the question of terminal points being off the highway. It was obvious that no individual operator could build his own coach stations solely for his own use, and proprietors would have to sink their domestic differences and collectively erect, should he say co-operative "shelters." Another matter brought to the attention of the Traffic Commissioners was the question of summer and winter services. For the moment he would divide long distance services into two classes. On the one hand there was the service between industrial towns, and on the other the services running to holiday resorts. The railway companies supported their opposition to the grant of road service licences to, say, Brighton, with the argument that the railways gave the public a summer and winter service. A section of the coach industry was essentially a summer industry and there should be no question of operators being under any obligation to the public to run winter services where no traffic existed.

The London Traffic Commissioner proposed to attach some general conditions to licences, one of which was that a minimum single fare of 1/-, return 2/-, should be charged. That, of course, was a point for individual operators to keep in mind having regard to the type of services being operated.

One condition which was regarded with a certain amount of alarm was the one to the effect that if an offence was committed under the Road Traffic Act, such as exceeding the speed limit or driving to the common danger, that fact would be taken into consideration when application for a licence was made. The Commissioner said he did not wish to be misunderstood, and he did not mean that if an offence was committed a licence would be withdrawn, but he wanted to see how far operators had paid due regard to the provisions of the Road Traffic Act. In his (Mr. Logette's) opinion this was wrong, as under the Act it was the duty of the Traffic Commissioners to examine time-tables, and if in their opinion the journey times shown would cause an applicant for a licence to exceed the speed limit on some part of the journey the Commissioners could say so, but if in their opinion the schedule was all right they really had nothing further to say on the question of speed and it was hardly fair that if later an operator found his employees did not keep to his schedule on certain parts of the route that he should be penalised by the Commissioners.

They had been told that the Road Traffic Act was passed to bring about uniformity throughout the country, but it had been shown immediately that there was lack of uniformity, as one Traffic Commissioner was saying that he would carry on the proceedings along the lines of a police court, another along the lines of a Select Committee, whilst yet another said, and it was with this one that he (Mr. Logette) agreed, that he wanted to keep the proceedings as simple as possible and the laws of evidence would not apply. He did think, whatever directions had been given to the Traffic Commissioners by the Minister of Transport, that the duties of all the Commissioners should be carried out in the same way so far as procedure was concerned. One could not help thinking that the conclusion had been reached that all applicants for licences must be legally represented at hearings.

The Association needed to be stronger in order to make it in every way a national organisation, and unless they all pulled together in harmony they would not succeed in reaching their goal. (Loud applause.)

**MR. A. G. PARTRIDGE** (Chairman, Association of London Omnibus Proprietors), said that the independent bus operators of London thought they were now witnessing the first instalment of "Socialism in our time." But his Association did not regard the London Passenger Transport Bill as a small instalment but as a serious step towards nationalising not only the transport of London but the transport of the whole country, and if the powers that be succeeded in doing that no doubt they would proceed to turn their attention to other industries. If the London Passenger Transport Bill became law it would be the first step towards compulsorily acquiring all the means of transport in this country.

The object of the London Passenger Transport Bill was to provide a co-ordinated system of transport. No doubt this was a most laudable object and one with which they had sympathy, as no operator objected to some form of control. Healthy competition, however, kept within reasonable limits was the lifeblood of industry, and if the spirit of competition was removed then there could be nothing but stagnation and decay. If the present system of control had failed, and he did not admit that it had, that was no justification for introducing such a measure as the London Passenger Transport Bill.

**MR. G. NOWELL** (Great Western Express), member of the Management Committee of the Association, said he would give the meeting a brief outline of what the Association had done. They had been successful in dealing with the important question affecting not only the operators present but every operator in England, namely, the question of the road service licence. It would be remembered that in the early instructions issued by the Minister of Transport it was laid down that for each separate excursion tour a sum of £1 should be paid for a licence. That meant that if a member was running 50 different excursions the amount he would have had to pay for licences would have been £50. As a result of the representations made by the Management Committee of the Association, and mainly due to the efforts of their Chairman, Mr. Logette, the Minister of Transport had agreed to licences being divided into two categories (1) regular services; (2) excursion tours; and the concession had been obtained that a sum of £1 would cover a whole group of excursions—in other words an operator could run 50 excursions and pay £1 instead of £50. (Applause.)

Then there was the question of the "Statements" issued by the various Traffic Commissioners dealing with applications for licences and decisions arrived at, and the Association had been successful in arranging that for the sum of £2 12s. per annum an operator could get the Statements issued not only by the Traffic Commissioners of the area in which a licence was applied for, but also the notices issued by the Commissioners in those areas through which a vehicle had to pass on its journey.

It was originally laid down that it would be necessary for an applicant for a licence to advertise the fact in every paper in every district through which the applicant wished to operate, and it might easily have been necessary for an applicant to advertise in some 300 or 400 papers. However, as a result of representations made by the Management Committee a concession had been granted, and it was now only necessary to pay the £2 12s. a year. (Applause.)

There was the question of the construction of coaches. Members of the Management Committee had attended many meetings both with the Minister of Transport and with Officers of his Department as a result of which many concessions had been made.

The Association had been doing a tremendous amount of press publicity and propaganda work.

There was the proposal to ban motor coaches from certain parts of London, and it would be remembered that application was made to the High Court for a rule to prevent the suggested order being made, and as they knew the Minister had decided not to proceed with the proposed order but had given the Traffic Commissioner certain directions in the matter.

The Association had petitioned against the London Passenger Transport Bill.

Counsel had been asked to advise as to procedure before Traffic Commissioners and they had been told that in every case it was essential for an independent coach operator to be represented either by Counsel or by Solicitor, and at the present moment the Association was trying to draw up a panel of legal gentlemen who could represent members of the Association at the various enquiries. If the Association was able to do that, then a small operator, say in the Midlands, who was a member of the Association could, when his application was about to be heard, approach the Association for advice as to what to do, and, if the operator desired it, legal representation could be arranged for him at much less cost than he could arrange it for himself. Of course the Association could not provide legal assistance for members out of the Association funds, but it could arrange legal representation at less cost to the operator than if he instructed his own legal advisers.

Upon the conclusion of Mr. Nowell's address there was a general discussion during which many questions were put to the Chairman and were answered. A hearty vote of thanks to Mr. Logette for presiding terminated the proceedings.

# Warehousing and Transport.*

By Harry Gaunt,
Managing Director, Liverpool Warehousing Co., Ltd.

WAREHOUSES have played an important part in the history and development of the Port of Liverpool.

Overside deliveries direct to trucks or barges are steadily growing, although much more could be done in this direction. The main trouble is that shippers do not state at port of loading that the goods are for "overside delivery" and in consequence they are often separated in the hold. This is fatal to overside deliveries which must be continuous. No ship owner or master porter could be expected to alter his gear from quayside to waterside for a consignment, if broken up into small lots. A reasonable minimum amount for a straightforward overside delivery, should be 50 tons. Secondly, there is the question of freight being payable on weight delivered. This might be overcome by having sworn weighers as at London and say 5 or 10 per cent. of the goods being weighed at warehouse in their presence. When goods are delivered overside, it should assist to minimise congestion. Valuable space at the dock side is continually needed for in-coming cargo, and various forms of transport play their part in the rush to make space. We often find traders endeavouring to use the quay space for storage, but this practice is penalised by the Mersey Docks and Harbour Board by imposing fines and penalties if goods are not removed from quay within 72 hours of being landed. It would be impossible for transport to run smoothly if traders were allowed to create piles of goods on the quays.

Transport has to be highly efficient for swift removal of goods from quays to rail, canal, coastwise or foreign steamers, warehouse and/or road transit. In the year ending 1st July, 1930, the approximate total net register tonnage of vessels paying rates to the Mersey Docks and Harbour Board inwards and outwards was 42,629,640 tons. The weight of merchandise for the same year on which dues were paid was 14,282,000 tons. Of the imports landed at Liverpool approximately 70 per cent. go into public warehouse. In the year 1929-1930, no less than 2,748,012 bales cotton of all descriptions entered the Port of Liverpool.

The quays in Liverpool are practically for transit and not for storage. Liverpool has a fine collection of warehouses, running somewhat parallel with the docks, approximately 1,000, and as the quays function for transit, so do these warehouses function for the storage of produce. In this number are of course included many bonded warehouses, the demand for which has increased very much during recent years owing to the wider range of dutiable goods requiring storage accommodation. The conversion of a free warehouse into a bonded store is a procedure which takes some little time and on occasion a costly one, owing to the customs regulations necessitating structural alterations.

Various forms of transport are employed to take produce to warehouse; years ago it was all horse drawn vehicles, to-day we have steam and petrol haulage, but these units to my mind have not been allowed to function properly in this city. Union interference has possibly done most to spoil this form of transport, and now we have the Government adding to the injury; weight for vehicle with four wheels must not exceed 12 tons. A steamer and platform weigh 7½ tons, so the load is cut down to 4½ tons. A one horse wagon takes this weight and there is only one man's wage, whereas with the motor there are two men's wages to pay also much heavier initial cost to earn interest. If we add an ordinary trailer we get ten tons but have to employ three men. A good team wagon will take 10 tons and only one man to pay, so you see that a number of motors of the past and present are practically obsolete. It is not fair, as the roads in the dock area were made to carry weight and have stood up to their work for years.

The matter of loads is now being taken up with the Ministry and it is hoped that they will allow the heavier loads for the dock area. Unfortunately, the appeal is coupled with road haulage outside the dock area where we have roads that will not stand the weight, and this is not a consoling feature for those who are prepared and willing to confine their activities to the dock area. It may be said that when the wagons are loaded they would creep out of town. One excellent suggestion has been put forward, to have all wagons with special privileges over the dock area, painted an exclusive colour so that they could be detected the moment they trespassed.

Wagons at the dock can be loaded up to 5 o'clock. These wagons cannot get to warehouse much under half an hour, therefore, the warehouse porters are thrown on to overtime. A similar thing occurs with the wagons. One cannot engage them for eight hours a day, commencing from different times. We, therefore, get wagons in the early morning in excess of the dock gangs speed for loading. All this makes it difficult to get an average of three loads per day with lots of produce for warehouse.

In the old days small haulage contractors affiliated themselves with or followed up larger contractors, which worked very well, but trade conditions have squeezed out these small useful units and the large contractor to-day has to keep a larger stock, in fact, he has almost to keep a maximum stock to carry on in his busy times, and they simply eat up all the profits in the quiet times, making haulage from dock to warehouse a very precarious business with more chance of losses than profits. A man has to be a hero to-day who commences business of this kind. I know of haulage contractors who made more profit at 1s. and 1s. 3d. per ton pre-war days than they can to-day at double the rate, in spite of the index cost of living being much less than this 100 per cent. increase of rates. Much might be done if we had more honesty of purpose from the government down to the man in the street.

I have known instances when say four motor wagons arrived at the ground for unloading, and the loaders were debarred by union rules from giving general assistance in the unloading of the first wagon to speed up the job, and other men had to be employed to assist, while the loaders from the wagons not unloading, stood with their hands in their pockets looking on. Had horse wagons been employed, it would have only been necessary to employ two men at the dump for lightening and the carter would have assisted. This is the kind of stupidity that does not assist progress.

When the goods are received into store they have to be piled according to marks, damaged section stored separately and often classified. Each morning an advice is sent out to firms for whom the warehouse people are acting, stating quantity of goods received the day previous and giving the ship's name; these returns are also entered in stock books at the head offices. When a consignment is complete, piling accounts are issued giving all details, and if desired, warrants or warehouse receipts can be obtained.

A piling account is not a title. A proper title is a negotiable warrant issued under a special act of Parliament, which can be transferred from one to another by endorsement, but before delivery can be obtained the warrant must be presented and the desired delivery endorsed on it. This is not so with warehouse receipts, these are preferred by the banks. Such receipts state that the goods are held to the name and to the order of the addressee. They are not transferable and can be filed; when delivery is wanted, the addressee simply makes out a delivery order in favour of whoever is desired and this is honoured upon presentation. Goods cannot be transferred on such an order, as a delivery order is not considered a title and can be revoked by they who issue it, whereas a transfer is final. Strictly speaking, if delivery is wanted on a transfer, it is customary to lodge the transfer and make out a delivery order. The only reliable way for goods to be transferred on a delivery order is to take delivery from the pile and re-stow in the name of desired party, as per transfer.

Certain accommodation must be set apart for the various classes of goods and the formalities of stowing and piling to fire salvage regulations must be understood. To stow a wrong commodity in a warehouse would throw out of gear all the insurance on other peoples goods stored in the same place and also that on the building; neither can goods be stored in a warehouse which would be detrimental to other produce stored therein.

With regard to haulage from warehouse—the road haulage section in many instances seem to forget that it is necessary to fix for deliveries before 8 a.m. for morning and before 1 p.m. for afternoon. They go direct to warehouse and complain of delay; sometimes there are no men on for delivery. There are certain warehouses such as those containing canned goods and provisions, where it is not necessary to fix but where you claim turn. These warehouses have men in attendance all day.

With these days of rapid motor transit I cannot see the warehousing business at such ports as Liverpool, falling away, although "To Let" notices displayed on railway warehouses at inland towns makes one think their prosperity is diminishing. If good and cheap accommodation can be acquired by sellers at ports of discharge, this seems more desirable and necessary, particularly as consumers are buying in smaller lots, now, they find that delivery can be practically effected the same day within a distance of 50 to 100 miles. This somewhat does away with the necessity for buyers to hold more stocks than are necessary for immediate requirements, and less necessary for sellers to keep up and maintain a chain of distributing centres.

* Abstract of a Paper read before a meeting of the Manchester and Liverpool Section of the Institute of Transport, on April 24th.

Digitized by Google

It is more desirable that independent companies should run the warehousing business, as they specialize in the work and can give equal facilities and charges to all forms of transport. Whereas those companies who have other interests in a particular form of transport, are apt to give preferential and I may say unfair competitive treatment, I cannot foresee the time when warehouses can be dispensed with as an adjunct to transport.

THE DISCUSSION.

Some interesting points were raised in the discussion which was opened by **Mr. W. Edwards**, of Messrs. Garlick, Burrell and Edwards, Ltd., who emphasised the importance of transport in the execution of the function of warehousing. They had heard, he said, that the Liverpool warehouses had jaws of great capacity but those who were engaged in transport also knew of the difficult formalities which had to be completed before goods could be taken out of warehouses. In connection with that, he had stated the case for the transport interests, before the Industrial Court on the question of the hours of labour of men engaged in the haulage industry. Those who had followed the cotton trade closely had the knowledge that the warehouse accommodation in Liverpool had enabled cotton manufacturers to buy cotton at lower prices than if they had bought it direct from the States. That was an important facility which should receive due and proper recognition from all concerned.

**Mr. Lorimer** (Jarvis Robinson Transport) remarked that the day was possibly not far distant when the alliance between warehousing and transport would be much closer than it is.

**Mr. Charlton** commented on the difficult labour conditions that existed in Liverpool in reference to dock traffic. In one case a lorry was sent to the dock for a load of goods. It was staffed by a driver and secondman but the union insisted that a third man should be employed to load the goods. Cases of that description caused a great deal of unnecessary hardship.

**Mr. Robinson** said a revolution was going on in the distributive trades and it seemed to be borne out that the cost of goods, would not stand haulage from the terminal point to the warehouse, and possibly another haulage to the wholesaler and then to the retailer. It seemed that the storage point must be at the terminal. Due to the speeding up and efficiency of modern transport systems, not the same use was made of warehouses as formerly. He felt there was increasing economic pressure to employ overside deliveries from steamers in order to cheapen the cost of handling.

**Col. Stevens** said in the old days the warehouse was a reservoir of goods but in these days of unstable prices, no one wanted to carry large stocks in warehouses on this side. He ventured to suggest that the government might consider granting assistance to the warehousing industry in view of its enormous importance in times of emergency.

**Mr. R. W. Royle** (C.W.S., Ltd.) made reference to the restriction on the weights of vehicles and mentioned that strong representations had been made to the Minister of Transport with a view to getting these modified. Before the Road Traffic Act, Liverpool enjoyed special facilities under local powers which enabled vehicles to be loaded with weights considerably in excess of those allowed elsewhere. He believed that Liverpool would take steps to try and get these advantages restored, at least so far as they referred to dock traffic. Mr. Royle commented on the speedy service which road hauliers gave to the cotton spinners in the delivery of raw cotton and on the competition for traffic by the railway companies. In passing, Mr. Royle mentioned that in the next Commercial Motor Show there would be a special section for warehouse equipment and machinery for the storage of goods. There was no doubt about it, machinery was going to be of great assistance to the warehouse keeper.

Replying to the various points raised in the discussion, **Mr. Gaunt** explained that when he said that 70 per cent. of the goods which passed over the Liverpool quays were warehoused, he meant all warehouses, railway owned as well as the private ones. The warehouse was used less and less by the retail distributive trades, but it was used very extensively for the storage of bulk lines of raw materials. There was no difficulty whatever about overside deliveries in regard to checking. If the master porter landed goods on the quay, then loaded on to carts, handling might run to 3s. 5d. a ton but for delivery overside, the charge was about 5d. a ton.

# Correspondence.

*The Editor is not responsible for the views expressed in letters appearing under this heading. No letter will be inserted unless accompanied by the name and address of the writer, not necessarily for publication, but as evidence of good faith.*

## DEFENDING THE HAULAGE INDUSTRY.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—Recently a haulage contractor was summoned for carrying a load in excess of 8 ft. wide between Coventry and Rugby and the Magistrates imposed a fine of £5 because he had not four men in attendance and had not given four days notice. The load was carried on a vehicle which complied in all respects with the Motor Vehicles (Construction and Use) Regulations.

One of our Drivers was summoned for the same alleged offence and the case was heard yesterday at Rugby Police Court.

We do not think we can do better than send you the attached cutting from the *Liverpool Daily Post*.

We are of the opinion the best way to deal with matters of this nature is to defend every case, and if a dismissal is obtained, to press most strongly for costs against the Police.

Yours faithfully,
For and on behalf of,
M.R.S. Ltd.,
E. C. MARSTON,
Director.

Liverpool.
29th April, 1931.

* * * *

REPORT REFERRED TO IN ABOVE LETTER.

Marstons Road Services, Liverpool, were parties in a case which was withdrawn by the police at Rugby, yesterday, and was followed by the awarding of ten guineas costs to the defence.

Eric Benson Clarke, of Handsworth, Birmingham, was summoned for driving a lorry and not having four persons in attendance on a load exceeding eight feet in width.

Police-Inspector Stanley asked for leave to withdraw the case saying that after serving of the summons, the defendant's employers, Marstons Road Services, corresponded with the Clerk with the result that certain inquiries were made of the Ministry of Transport, and the Deputy-Chief Constable decided to withdraw the case.

Mr. David Karmel, for the defence, said it was a matter of construing certain orders made by the Minister of Transport under the Road Traffic Act. Defendant handed the summons to his employers, who wrote to the Clerk to the Justices enclosing files of correspondence with the Chief Constables of Lancashire, Cheshire, and Buckinghamshire, where cases had been withdrawn. Messrs. Marston received a reply stating that the case had been adjourned to April 28th, and nothing more was heard until last Saturday, when a letter was written to the defendant in Birmingham, and as far as he (Mr. Karmel) was concerned it had not been received. He (counsel) had to leave Liverpool on Monday in order to get to the court in time, and he had to bring two directors of the firm with him. It had been a great trouble to them, and he asked that they should be allowed reasonable costs.

Inspector Stanley opposed any costs being given against the police, saying they had had no communication with Marstons Road Services.

The bench allowed the withdrawal of the case, and granted costs against the police.

## BLIND PERSONS AND THE DANGERS OF THE ROAD.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—A movement has been started in London for providing white sticks for the use of blind persons, on similar lines to that which has already proved so helpful in France. The first area to be dealt with is West Ham, in which there are 400 registered blind persons, and it is anticipated that the project will shortly be adopted throughout the country.

My object in addressing you is to ask motorists to extend every possible courtesy and consideration to those carrying a white stick as and when they come into general use by blind persons.

Yours faithfully,
F. P. ARMSTRONG,
Secretary.

Royal Automobile Club,
London, S.W.1.
29th April, 1931.

# Furniture Warehousemen and Removers' Association.
## Annual Conference.

THE Annual Conference of the Furniture Warehousemen and Removers' Association will be held at Southsea on Thursday and Friday, May 21st and 22nd. Meetings will be held at the Guildhall, Portsmouth.

The Programme is as follows:—

Thursday, May 21st. Morning Session. 10.30 a.m. Annual General Meeting of the British Association of International Furniture Removers. 11.30 a.m. Reception by the Lord Mayor of Portsmouth. 11.45 a.m. Annual General Meeting of the Association. Afternoon Session. 1.45 p.m. Extraordinary General Meeting. (a) Railways and Removals Traffic. (b) Report regarding issue of Membership Certificates. (c) Conferment of Degrees. (d) Report of the Costing Committee. 5 p.m. Annual General Meeting of the Benevolent Fund.

The Annual Dinner will be held at Messrs. Kimbell's Cafe, Osborne Road, Southsea, and will be followed by a Dance and Whist Drive. Several distinguished guests are expected to attend.

The members of the Southampton and District Centre announce that the entertainment of members and their guests who do not wish to dance will be fully provided for as the Whist Drive will be run concurrently with the Dance. Ladies are especially invited to be present.

Friday, May 22nd. Morning. By steamer from Clarence and South Parade Piers, Southsea, to Southampton Pier, arriving at approximately 11.35 a.m. Walk from Pier to Southampton Docks and inspect the s.s. "Berengaria." Lunch at South Western Hotel, Southampton, at the invitation of the Southampton and District Centre. Afternoon. For those who desire, general inspection of Docks or Southampton. Mr. A. H. Davis, the County Borough Librarian will be pleased to show any members the principal ancient parts and antiquities of the town. Return by steamer from Southampton Pier at 5.30 p.m. Friday's arrangements are at the invitation of the members of the Southampton and District Centre.

All members are urged to make this Conference a big success, and a cordial invitation is extended to all members to bring their ladies with them.

# Albion Motors, Limited.

THE twenty-ninth annual general meeting of the Albion Motor Car Company, Limited, was held recently in Glasgow. Mr. Norman O. Fulton, chairman and one of the managing directors, presided, and in the course of his address said that owing to the general trade depression the demand for new transport was considerably affected, particularly in goods carrying vehicles. Notwithstanding this, however, the Company secured a considerable volume of business in the face of keen competition. Their range of goods carrying vehicles dealt with nett loads of from 30 cwts. to six tons, and from the reports received from all parts of the world the firm's products were held in the highest repute and well maintained the Albion tradition for sound design and first-class workmanship. The Company continued to give a great deal of attention to the manufacture of passenger carrying vehicles, and large numbers of Albion buses were to be seen at work throughout the country, giving reliable and economical service.

During the year the Company executed large contracts for the British and Overseas Governments, various oil companies, and other large users.

Three new types of chassis were introduced during the year, viz.:—(1) A goods carrying chassis with net load capacity of 40 to 45 cwts; (2) A twenty passenger bus; (3) A thirty-two passenger bus.

"From time to time different members of the present Government have referred to the need for British industries to reorganise and re-equip themselves to meet the severe world competition which now exists. One very substantial help which the Government could render industry would be to increase the allowance permitted for plant depreciation before profits are determined for Income Tax purposes. Speaking for our own industry, the present basis is quite inadequate, as most of the machine tools used have a short life and require to be replaced long before they are worn out because of loss of the high degree of accuracy necessary for our class of work, or because new and improved tools have been put on the market."

After making adequate provision for depreciation on buildings, plant, and stock, also for Income Tax, interest on Debenture stock, and deducting directors' remuneration and bonus to employees, there remained a net profit of £46,195 5s. 4d. Adding the carry forward from 1929 of £30,879 7s. 0d., they got a total of £77,074 12s. 4d. available for disposal. Out of that figure they proposed allotting the sum of £1,000 to the Benevolent Fund for their employees. After providing for the dividend on the 6 per cent. Preference shares, they came to the Ordinary shares, and recommended that a dividend should be paid on these at the rate of 7½ per cent. per annum, less Income Tax. The carry forward would then be £36,955 3s. 4d.

There was no item for goodwill shown in the accounts, their reserves were substantial, and the Debentures had been reduced to a very small figure.

### COMPANY'S NAME CHANGED.

At the conclusion of the annual meeting an extraordinary general meeting was held for the purpose of considering a special resolution to change the name of the Company.

The Chairman said: When our Company was first established we built pleasure cars only. The name selected then—the Albion Motor Car Company, Limited—was quite appropriate. Later on we added commercial vehicles, and for years built both. But for many years past we have confined our attention entirely to commercial vehicles. This has made a certain amount of confusion. We are often asked, "What about your cars? Where do you build them?" In practice the Company is very often referred to as "Albion Motors." It is a short name, it is quite in keeping with modern usage, and our feeling is that the time has come for a change. We recommend that "Albion Motors, Limited," should be the name of the Company in the future. I have therefore to move the following special resolution:—

"That the name of the Company, Albion Motor Car Company, Limited, be changed to Albion Motors, Limited."

Mr. G. M. Young seconded the resolution, which was unanimously approved.

# Institute of Transport.
## Italian Tour and Congress.

THE members of the Institute of Transport participating in the Italian Tour and Congress will leave London on Saturday, May 30th. The first stop will be made at Como, whence the party proceeds to Milan (June 1st), Venice (June 2nd), Florence (June 4th), Rome (June 6th), Genoa (June 11th) and Turin (June 12th). The return journey will be made from Turin on Saturday, June 13th, and London will be reached on the afternoon of the following day.

As we go to press we are informed that a very interesting and instructive visit will be paid to the Port of Genoa by the members taking part in the Tour. This has been arranged by the President of the Consorzio Autonomo del Porto di Genova. The details are as follows:—

Depart in steamer from the Ponte dei Mille and proceed by water:—Dry dock, Portico of the Duca degli Abruzzi; Galliera Wharf, Prince Umberto Wharf; large dockyards; work under construction on the Mussolini Wharf; Central Electrical Thermal Baths in Victor Emmanuel III Harbour; export warehouses; Maritime station; to conclude with a visit on board a large trans-Atlantic liner (probably the "Conte Verde").

# Institute of Transport.
## Metropolitan Graduate and Student Society.

THE report for the Tenth Session of the Institute of Transport Metropolitan Graduate and Student Society, states that during this period the membership numbered 222, which is fifteen more than the previous highest record of 207 in the session 1923-1924.

During the session the society experienced a number of important changes in the personnel of its officers and committee. Mr. A. F. E. Belcher, who was elected chairman in May last, was appointed to a position on the Great Western Railway at Warwick, in January last. He joined the society in 1924, was hon. educational secretary for several years and later became vice-chairman. Mr. A. Earle Edwards, who served on the committee for some years before being elected vice-chairman, was appointed to a position at Exeter, while Mr. E. Havers, a former chairman of the society, who was elected to serve on the committee for the present session, has for the present, resigned in consequence of prolonged absence from London. The offices of chairman and vice-chairman have been filled by Mr. A. G. Course and Mr. J. L. Harrington, respectively. Messrs. C. A. Dove, J. M. Leighton-Bailey and E. E. Potter have been elected to the committee.

# In Parliament.

**Speedometers on Motor Coaches.**—Asked if he had further considered the question of requiring that speedometers should be fitted to all motor coaches? **Mr. Herbert Morrison** (Minister of Transport) said he had no evidence of any general desire on the part of passengers in public service vehicles to know the precise speed of the vehicle in which they were travelling and he was not satisfied that, on grounds of public safety, regulations requiring the fitting of speedometers were necessary. He gathered that the Hon. Member had express carriages particularly in mind in making his suggestion, and while as at present advised he was not clear that even on such vehicles the carriage of speedometers was required, he would bear the point in mind.

**Railways and Road Services. — Mr. Remer** asked the Minister of Transport if he was prepared to introduce a Bill to amend the Road Traffic Act so that the railway companies should be debarred from opposing competitive road traffic services before the Traffic Commissioners? **Mr. Charleton,** who replied, said that as recently as last year Parliament included in the Road Traffic Act, 1930, a definite provision that in deciding whether to grant or refuse a road service licence and whether to attach conditions to such a licence, the Traffic Commissioners should take into consideration any representations which might be made by persons already providing transport facilities along or near to the route or any part thereof. That provision was essential for the purpose of enabling passenger transport services to be co-ordinated, and his Right Hon. Friend did not propose to ask Parliament to amend it.

**Speed of Motor Vehicles.—Mr. Remer** asked the Minister of Transport if his attention had been called to the inconvenience caused by the limitation of speed for vehicles carrying perishable goods, such as milk, under the Road Traffic Act; and if he would exercise his powers under Sub-section (4) of Section 10 of that Act to allow these vehicles to travel at the same speed as that allowed for the conveyance of horses? **The Minister of Transport** (Mr. Herbert Morrison), replying, said he was not prepared to accept the suggestion that vehicles carrying perishable goods should be allowed to travel at speeds greater than those recently determined by Parliament in the First Schedule to the Road Traffic Act, 1930. While horses conveyed in motor vehicles constituted a light load, the laden weight of vehicles carrying perishable goods such as milk might reach the maximum laden weight allowed by law for the class to which the vehicle belonged.

**Motor Coach Traffic.—Sir N. Grattan-Doyle** asked the Minister of Transport whether he was aware of the delay in dealing with applications for motor coach licences; and what action he proposed to take? **Mr. Herbert Morrison** said he was not aware of any undue delay in dealing with applications for public service vehicle licences or road service licences. On 9th February he made an Order which was later amended and consolidated as the Public Service Vehicle (Transitory Provisions) (No. 2) Order, 1931, for the purpose of regulating the use of public service vehicles until such time as the Traffic Commissioners had been able to deal with and come to a decision upon the applications made to them. **Mr. D. G. Somerville** asked the Minister of Transport whether there was any organisation, and, if so, what, which was concerned with representing at the proceedings before the different Traffic Commissioners the reasonable claims of pleasure seekers and ordinary tourists in respect of the provision of motor coach traffic; and, if not, whether he would consider the desirability of ensuring the representation of this point of view at all inquiries? **Mr. Herbert Morrison** said he was not aware of any organisation of the nature referred to. The Traffic Commissioners were required when considering applications for road service licences to have regard to the extent to which any proposed service was necessary or desirable in the public interest, and it was open to the applicants and local authorities concerned to argue before the Commissioners that there was a public demand for the service in question and to call evidence in support of their contention. **Lieut.-Colonel Sir Frederick Hall** asked the Minister of Transport how many applications had been made for licences for the running of motor coaches for hire under the new Road Act; how many of such applications had been already decided upon by the Traffic Commissioners; whether he could give any estimate of the legal and other expenses which would be incurred in dealing with the whole of the applications; and if he had under consideration the question whether it would be practicable to adopt more expeditious and less expensive machinery for dealing with the matter? **Mr. Morrison** said he was not informed as to the number of applications for road service licences for motor coach services which had been received or decided by the various Area Commissioners, and to obtain the information would impose additional work upon their staffs at a time of severe pressure. He could not form any estimate of the legal and other expenses to be incurred by applicants and objectors. It was a matter for the parties themselves whether they wished to be legally represented or should appear in person or through their own officers, as they were, of course, free to do. With a view to a saving in time and expense, arrangements had been made by the Commissioners to sit in various parts of their area for the convenience of the parties, and he was unable to suggest any more expeditious or less expensive machinery for dealing with these applications than that at present in operation. He had every hope that, as soon as the Commissioners' decisions were given upon a number of applications involving questions of principle, it would be possible for them to deal with the remaining applications more rapidly.

# Proposed Regulations to Deal With Dazzling Lights on Motor Vehicles.

THE Minister of Transport announces that Draft Regulations under the Road Transport Lighting Act, 1927, to deal with dazzling lights on motor vehicles have been prepared and circulated to organisations representing persons likely to be affected, who have been invited to comment upon them.

The Draft Regulations, which are tentative in character, provide in their present form that as soon as the Regulations come into force no lamp on any vehicle showing a light to the front shall be fitted with any electric bulb of a power exceeding 36 watts and that as from the 2nd October, 1932 (the commencement of winter time next year)

(a) all electric lamps of a power exceeding 6 watts (and all acetylene lamps) showing a light to the front of a motor vehicle shall be so constructed and fitted that the light is either permanently deflected downwards to such an extent that it is incapable of dazzling a person 25 feet away whose eye level is not less than 2 feet 6 inches above the plane on which the vehicle is standing, or can be deflected downwards or both downwards and to the left so as to render it incapable of dazzling such person;

(b) all lamps to which paragraph (a) applies and which are not permanently deflected shall be deflected by the driver of a motor vehicle when he meets another vehicle during the hours of darkness proceeding in the opposite direction;

(c) all electric lamps of a power not exceeding 6 watts showing a light to the front of a motor vehicle shall be fitted with frosted or obscured glass or some other device such as a frosted bulb which will cause the light therefrom to be diffused.

# The Tramways Light Railways and Transport Association.

## 21st Annual Congress.

THE 21st Annual Congress of this Association is to be held at Margate, on May 28th and 29th next.

On Wednesday evening the Chairman of Council (Mr. E. H. Edwardes) will hold an Informal Reception. The Conference proper commences on Thursday, May 28th, opening with an official reception by the Mayor of Margate. This is followed by the 34th Annual General Meeting of the Association, after which a paper is to be read by Mr. J. A. Fordes, J.P., A.M.I.E.E., General Manager and Engineer, Isle of Thanet Electric Supply Co., Ltd., entitled "Odds and Ends."

At 1 o'clock there is to be a Luncheon at the Queen's Hotel, at the invitation of the Directors and Manager of the Isle of Thanet Electric Supply Company.

The Annual Dinner of the Association takes place the same evening at 7.45, to be followed by a dance.

On Friday, the 29th, at 10 o'clock, a paper is to be read by Mr. R. G. Pittard, Traffic Manager, Bristol Tramways and Carriage Co., Ltd., on "The Operation of the Road Traffic Act, 1930."

In the afternoon there will be excursions and in the evening a Reception and Dance given by the Mayor and Mayoress of Margate.

# Speciality Brakes.

## Their Details explained and Maintenance described.

(*Continued from page* 303.)

## II.—Westinghouse Vacuum-Servo Brake.

THE Westinghouse Brake & Saxby Signal Co., Ltd., 82, York Road, King's Cross, N., manufacture both an air pressure brake and a vacuum-servo brake for road vehicles. The present article deals with the vacuum-servo type.

Distinctive features claimed for this servo are that none of the internal parts requires to be adjusted after leaving the maker's works, and that the inlet is opened by means of

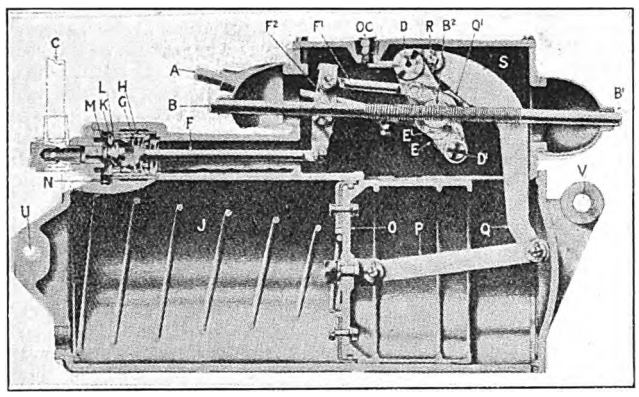

FIG. 1. SECTION OF WESTINGHOUSE VACUUM-SERVO BRAKE UNIT FOR ROAD VEHICLES.

pressure on the pedal and closed by suction (not by movement of the rigging) which ensures a progressive brake with a light pedal pressure.

Fig. 1 is a sectional view of one model of the Westinghouse Vacuum-Servo, of which the following is a description; Fig. 2 is a diagram of the layout.

The pedal is connected to rod A, and the rod B-B1 is connected directly to the brake rigging. A pipe connecting with the induction pipe of the engine is fixed to a union C. The rod B-B1 is attached to a point B2 on the lever D-D1, which is fulcrumed at D, and carries at D1 a floating lever E. At point E1 of E is attached rod A from the brake pedal.

### How the Brake-Servo Functions.

When the brake pedal (see fig. 1) is depressed, the rod A pulls on point E1 of lever E, which, in turn, pulls on point D1, and swings lever D-D1 slightly to the left until any

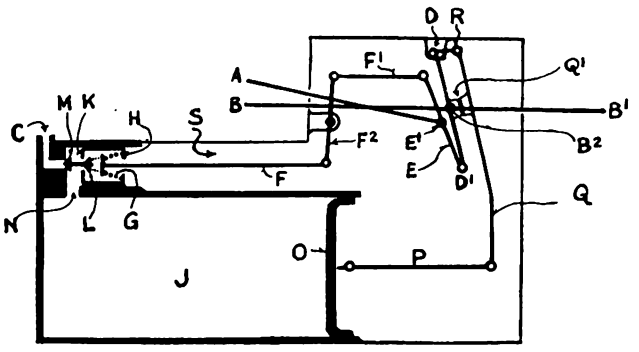

FIG. 2. DIAGRAM EXPLANATORY OF FIG. 1.

slack in the brake rigging is taken up. Then D1 becomes a fixed point, and further pull on lever E is transmitted to spindle F of the control valve through the short link F1, and reversing lever F2. The pull on the stem F is transmitted through a spring G to a piston H, to which is connected a valve seat K, and moves it to the right. This seat is brought into contact with valve L, thus closing communication between the atmosphere and the brake cylinder. Further movement in the same direction opens a valve M, which establishes communication between the engine induction pipe and the brake cylinder J by a passage N. The vacuum acting on the piston O pulls it towards the left, and by means of a link P, pulls on lever Q. The latter is pivotted at R, and transmits the power to lever D-D1, against which it pushes at Q1. Lever D-D1 then pivots about D and applies the brakes through the rod B-B1 with the power supplied by the vacuum cylinder added to the muscular force pulling through rod A and lever E.

### Application and Grading of the Vacuum Pressure.

The left hand side of the piston H being subjected to the same degree of vacuum as the piston O, piston H is drawn to the left as soon as the degree of suction acting on the area of that piston equals the compression of the spring G as applied by the brake pedal. This causes the valve M to close. The brakes are then held on with a force proportional to the pressure on the pedal. If the pedal be further depressed, valve M is again opened, and the degree of vacuum in the brake cylinder is increased until it overcomes the greater compression on spring G, when valve M again closes.

When the reduction of pressure on the brake pedal allows rod A to move back towards the right, valve seat K leaves the valve L, and air enters the brake cylinder from chamber S. When the degree of vacuum is reduced to correspond to the pedal pressure, the seat K moves up to and again closes valve L, the brake is then held on with reduced force.

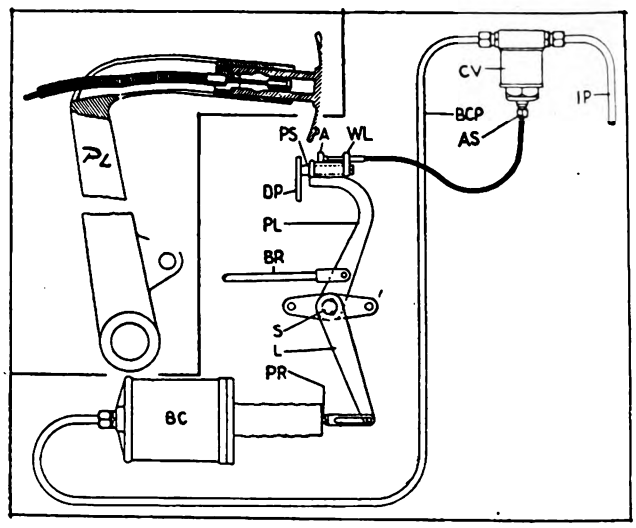

FIG. 3. AN ALTERNATIVE LAYOUT WITH SEPARATE (DETACHED) VALVE MECHANISM. INSET (LEFT) THE ADJUSTABLE BOWDEN WIRE PEDAL PL.

If the foot pressure be entirely removed from the pedal the brake is completely released.

### Maintenance Hints.

The set is fixed to the chassis by means of bolts through holes U and V in the end brackets (fig. 1).

A strainer, consisting of two perforated plates, with a layer of felt between them, forms one of the side covers of chamber S, and prevents the admission of dirt with the air drawn in through the control valve when the brake is released. Rods A and B are provided with flexible dust covers.

For lubricating the cylinder and piston, use only "Paragon" grease. It requires to be replenished only when the vehicle is in for overhaul. The mode of greasing is as follows: Remove cover V and pin D allowing link P and lever Q to be withdrawn. The interior wall of the cylinder and the piston should then be cleaned with a dry cloth and thereafter well smeared with "Paragon" grease, which is supplied by the Westinghouse Brake & Saxby Signal Co., Ltd.

It is essential that the piston leather should be kept soft and pliable to prevent leakage of air past it. In replacing the piston in the cylinder care must be taken to see that the leather enters the cylinder evenly so that it is not damaged or distorted.

The pipe leading from the induction pipe to the vacuum-servo and the connections thereof should be kept airtight.

Periodical lubrication at the oil cup OC, is necessary for the levers and pins.

### A Separate Valve Layout.

A modification of the standard Westinghouse combined valve and cylinder unit is shown in the diagram (fig. 3).

Digitized by Google

It is not the only example of the maker's separate valve and cylinder units, but is one which, because of its simplicity and use of the well-known Bowden cable mechanism, is likely to interest many owners of light vans and other vehicles which may not be standard equipped with combination type vacuum-servo brake control.

It should be noted that with this layout (see diagram, fig. 3) the (piston type) control valve CV may be placed in any convenient position, and does not require to be in line with the pedal as in the standard arrangement. A separate brake cylinder BC is used, and its piston rod PR is usually connected to a lever on the cross shaft of the mechanical brake.

The ordinary pedal lever PL which operates the mechanical brakes by the brake rod BR, is fixed to a shaft S. One end of a Lever L is also fixed to this shaft, the other end being connected to the piston rod PR of the brake cylinder BC, by means of a pin and slotted link. The opposite end of the brake cylinder is connected by a brake pipe BCP to the control valve CV, which is also connected by another pipe IP to the induction pipe of the engine. The control valve CV is operated by a Bowden wire. One end of the outer member of the wire is connected to an adjusting screw AS, and the other end to a lug WL secured to the movable stem PS of the brake pedal DP. One end of the inner end of the wire is connected to the interior mechanism of the control valve CV, and the other end to an attachment PA secured to the pedal lever PL.

**How it Functions.**

To apply the brake the driver presses the pedal DP, which causes the pedal lever PL to move towards the right, taking with it brake rod BR, and thus bringing the brake shoes into contact with the brake drums. The brake rod BR is then under tension, and resists further movement of the pedal lever PL. Increased pressure on the pedal DP then causes the pedal stem PS to be pushed inwards towards the lever PL, carrying with it the lug WL, thus tending to shorten the outer member of the Bowden wire with relation to the inner member. This movement operates the control valve CV and opens communication between the induction pipe IP of the engine and the brake cylinder pipe BCP. The partial vacuum thereby created in the left hand end of the brake cylinder BC causes the piston therein to move towards the left carrying with it the piston rod PR, and exerting a braking effort through the levers L and PL and the brake rod BR.

Should the servo be out of action the driver can still apply the brakes mechanically as if no servo existed. The slotted link on the end of the brake cylinder piston rod PR enables this to be done without moving the piston in the cylinder.

The foregoing instructions as to lubrication of the brake cylinder and control gear apply to this form of two-unit layout, in addition to which there is occasional attention required for the Bowden mechanism. Provision for adjusting the tension as already noted is at AS in diagram, fig. 3.

Our next article will deal with
the **Marelli Vacuum-Servo Brake.**

# Round the Lancashire Associations.

**Conference of Liverpool Transport Employers.**

The Conference of Liverpool and District Road Transport Employers, which is composed of representatives of the Liverpool and District Motor Owners' Association, the Liverpool and District Short Cart and Motor Owners' Association, Motor Transport Employers' Federation and representatives of various important local trades, has given consideration to proposals put before them by several of the constituent bodies, that the time has arrived for approaches to be made to the Liverpool and District Carters' and Motormen's Union for a reduction in the present rates of wages and for some alleviation in the existing working conditions. With this end in view, it is anticipated that a meeting of the parties will take place in the near future.

**Liverpool Short Cart and Motor Owners.**

The Committee of the Liverpool and District Short Cart and Motor Owners' Association has been giving careful consideration to the regulations dealing specifically with the wings of road vehicles. In consequence of drivers being stopped by police officers, the secretary sent a letter to the Chief Constable with particular reference to wings on heavy motor vehicles and tipping wagons. In one case a driver who was pulled up because there were no mudguards over the rear wheels of a tipping wagon, pointed out to the constable that the body gave adequate protection, and furthermore through its construction as a tipping wagon, it was impracticable to fit and work with mudguards. The Chief Constable replied that he could not give a ruling on the point. If a body did not afford adequate protection, then wings or some other alternative device must be fitted. What constituted "adequate protection" must be decided upon the merits of each individual case, and an authoritative ruling could only be given by the courts, but he doubted whether much protection would be afforded by a lorry or trailer body, even if shaped round the wheel, could be so described. The matter has been taken up by the Association with Mr. R. P. Bailey, secretary of the National Road Transport Employers' Federation, who has replied that no case has been brought to his notice where any judgment has been given in this connection. If it could be proved that as a trade, transport contractors were being persecuted then some action would have to be taken.

**East Lancashire Road Transport Association.**

Motor coach owners carrying on business in the East Lancashire and South East Lancashire towns as well as in Blackpool, Burnley and Morecambe, attended a meeting convened by the East Lancashire Road Transport Association, which was held at Blackburn, on April 29th, to consider questions arising from the administration of the Road Traffic Act so far as it applied to passenger carrying vehicles. Mr. Horsfall, of Blackpool, presided. Complaints were made against the railway company for objecting to numerous applications by private owners for licences, at the necessity of attending courts in support of licences and "backings" applied for, and the cost of representation. The feeling of the meeting was that a more expeditious way of granting licences and of examining applications should be introduced. The meeting authorised its representatives to convey its opinions to a conference of coach owners to be held in London in the near future so that representations may be made to the proper quarter. Mr. J. C. Hindle, of Blackburn, who is 70 years of age and has just celebrated his golden wedding, is well known in South West Lancashire transport circles. He has been chairman of the East Lancashire Road Transport and Commercial Motor Users' Association and is still chairman of the Lancashire Federation of Road Transport Associations, of which he was one of the founders. He has a seat on the Lancashire and Cheshire Joint Road Transport Council. He took part in the first national negotiations between employers and employees of the road transport industry and was a member of the only Whitley Council that ever existed in connection with the industry.

**Blackpool and District Motor Coach Owners' Association.**

The Association embarks upon its new season's programme in circumstances that promise to be beneficial to every member. Every coach owner in the district is now in the Association and an agreed schedule of fares has been compiled, rates being an advance on those which ruled last season. It has been agreed that instead of the minimum fare for short afternoon and evening drives to places in the immediate vicinity such as Poulton, Lytham and Wrea Green, Great Eccleston and Fleetwood being 1s., the fare be 1s. 6d. On some of the long distance tours occupying the whole day, increases have been made.

**Long Distance Road Haulage Association.**

A meeting was held in Liverpool on April 30th, and one is about to be held in Manchester, with the object of forming a North Western Area Committee of the Long Distance Road Haulage Association, of which Mr. E. C. Marston, of M.R.S., Ltd., Liverpool, is chairman. In an interview, Mr. Marston explained the intention of the Association to form an area committee in each of the 13 areas into which the country has been divided by the Road Traffic Act, 1930. The meeting which has just been held in Liverpool, he said, was called with the object of impressing upon Liverpool and district long distance hauliers, the necessity for organisation on sound and businesslike lines. When the North Western Area Committee is formed, local meetings will be held probably at monthly intervals to deal with difficulties as they arise. In his speech at the meeting held at Liverpool, Mr. E. C. Marston said the weakness of the long distance motor haulage industry was that its hundreds of scattered units were fighting one another instead of combining to find a remedy for the troubles with which they were beset. When section 25 of the Act came into operation it will become an offence for a vehicle to pass over a bridge if its weight was in excess of that painted on the bridge and as the railway companies were the chief owners of these structures, it would be seen that hauliers were in a very difficult position. Liverpool, as the home of heavy long distance road haulage, ought to take the lead in the new organisation which would have to function to remove the prejudice that now exists against the road transport industry.

# Furniture Warehousemen and Removers' Association.

## Annual Report.

THE following are extracts from the Fourteenth Annual Report of the Furniture Warehousemen and Removers' Association to be presented at the Annual General Meeting to be held at the Guildhall, Portsmouth, on Thursday, May 21st, 1931:—

The Report contains a summary of the principal subjects which have engaged the attention of the Association during the year ended March 31st last, and clearly demonstrates once again that there is a large and ever increasing number of matters which require consideration, watching and representation, and that it is necessary that the industry should be united. Further variety has been given to the scope of operations of the Association by the adoption of regulations for the conferment of degrees and by the decision to issue Certificates of Membership, and the work of the Association continues to advance step by step for the betterment of the industry.

**Road Traffic Act, 1930.** When this measure was before Parliament the Association made earnest representations in reference to the provisions as to the limitation of time for which drivers of certain vehicles may remain continuously on duty. Although the original section was re-drafted, the provisions as they appear in the Act gave rise to perturbation. Negotiations subsequently took place between organised bodies of employers and workpeople with a view to the making of a joint application to the Minister of Transport for an Order varying the requirements. An Order was afterwards issued, and a copy of extracts relating to goods carrying vehicles was furnished to Members, but your Committee feel that notwithstanding the variations made the Section will inflict hardship on the removal industry.

During the Committee stages various amendments were suggested by the Association, and it is felt to be desirable to state that the Association urged that the maximum speed for goods vehicles should be identical with passenger vehicles, but that the efforts in this particular were not successful.

Before making regulations under the Act the Minister is required to consult such representative organisations as he thinks fit, and the Association was afforded, and availed itself of, the opportunity to participate in the discussions. It was thus possible to place before the Minister and his Department, in an appropriate manner, the views of the Furniture Warehousing and Removal Industry, and the Association will doubtless be consulted with reference to any further regulations to be made.

The Association published and issued "An A.B.C. of the Road Traffic Act, 1930, as affecting Furniture Removers and a summary of the Regulations thereunder," and commendatory letters from Members have been received.

The Executive Committee has conveyed its appreciation of their labours to the Special Committee of the Association (under the able Chairmanship of Mr. G. H. Good) which in 1929 was appointed to safeguard as far as possible the interests of Members.

**Royal Commission on Transport.** The Final Report of the Royal Commission on Transport published in December last deals with the Co-ordination and Development of Transport. A synopsis of the principal conclusions and recommendations was published in the February issue of the Journal, and it will have been noticed that the Commission came to grips with the more complex and difficult considerations arising from their terms of reference.

It will be recalled that at the outset of the Commission's proceedings the Association submitted evidence and during the final stages of the Commission's deliberations the Association transmitted for their consideration a lengthy communication elaborating our views on the subject of licensing of road hauliers.

**Proposal to Institute in London the Unilateral System of Dealing with Waiting Vehicles.** In conjunction with other organisations, the Association objected to the proposal to institute the unilateral system in certain streets in London for an experimental period of six months. Effect has not been given to the proposal.

**Conferment of Degrees.** Since the last Autumnal Meeting, at which authority was given for the conferment of degrees and for the appointment of an Honours Committee to make regulations and to confer such honours, the Executive has approved regulations, copy of which appeared in the April, 1931 issue of *Removals and Storage*.

**Certificates of Membership.** A resolution was passed at the Autumnal Meeting authorising the Executive to issue Certificates of Membership.

**Design Registered when the Association's Publicity Scheme was under Consideration.** The suggestion that the design should be used by Members was discussed at the last Annual Meeting, but was not favourably considered.

**Hours of Industrial Employment Bill.** It had been hoped that this measure had been abandoned, but it was re-introduced in the House of Commons on the 13th November, 1930.

**Hiring of Vehicles (all kinds) and also Insurance and Rights of Subrogation.** A statement for the guidance of Members was published in the February, 1931, issue of the Journal, and to protect themselves Members are urged to follow the recommendations prescribed therein.

**Joint Industrial Council.** The Council meets quarterly and the matters dealt with during the period under review include:—1. Road Traffic Act—Section 19. 2. Works Council (No. 2) Bill. 3. Technical Education—Scheme of Apprenticeships.

**Parking Place Charges.** The attention of the Association was drawn to certain instances where parking place charges appeared to be excessive. Representations were made, but unfortunately did not have the desired effect.

**Road Signposts — Repainting and Omitting Mileage.** Particulars of instances which were brought to the notice of the Association were communicated to the appropriate quarter.

**Estimators' Examination.** An Examination was held on the 25th February at which there was a gratifying increase of examinees. It is hoped that Members will lose no opportunity to encourage their employees to avail themselves of this test of their knowledge and abilities.

**New Articles of Association.** New Articles of Association were adopted at the Autumnal Conference in November.

**Motor Taxation.** The Association was a signatory to a memorandum in regard to motor taxation which was recently submitted to the Chancellor of the Exchequer.

**Centre Activities.** There can be no doubt that a most important feature of the work of the Association is the meetings arranged by local centres at which a great deal is done by an exchange of views on a basis of mutual understanding and confidence.

* * * *

## Benevolent Fund.

The thanks of the Committee are due to those who, during the past year, have so generously accorded their support. The yield from annual subscriptions has shown a considerable increase as compared with the previous year; indeed, the amount realised from the subscriptions of employers and employees has in each case reached the highest figure since the inception of the Fund in 1926, and it is confidently anticipated that this progress will be maintained. It is hoped that those who may be interested and who have not yet rendered support will see their way to assist by becoming Patrons, Vice-Patrons, Life Subscribers or Annual Subscribers. The terms are:—Patrons, £52 10s. Vice-Patrons, £26 5s. Life Subscribers—Corporations or Limited Companies, £10 10s. Individual Members, £5 5s. The minimum Subscriptions of Annual Subscribers are:—Employers, £1 1s. per annum. Employees, 5s. per annum. The minimum Annual Subscription of 5s. for employees was fixed at that moderate figure in order that no employee would, by reason of the amount payable, be barred from joining.

Any members or others interested would gladly be furnished with collecting boxes if they would be good enough to acquaint the Secretary of the number they require.

The President (Mr. A. C. Osborn) has, during the year, written a personal letter to each Member of the Furniture Warehousemen and Removers' Association, Ltd., with a view to enlisting the fullest co-operation in an endeavour to increase substantially the present membership.

A large addition to the Membership would mean that the increased revenue would automatically place the Funds on a strong and sure foundation and enable the Committee to deal with all necessitious cases amply as circumstances demanded.

The grateful thanks of the Committee are extended to the Midland Centre for £17 17s. 7d.; and to the London Centre for £10 3s. realised from a Whist Drive and Dance in February, 1930. The Committee trust that other Centres will, during the coming year, make similar endeavours to popularise the objects of the Fund and at the same time augment its resources. It is hoped that the practice of some Centres in making collections at their meetings will become general.

# The Ford 30 cwt. Truck in Devonshire.

Since the early days of motoring, Devonshire has been a favourite County for testing the hill climbing abilities of new chassis. The favourite hills for such tests are Beggars' Roost, Lynmouth, and the famous Porlock. On these hills recently a 30 cwt. Ford Truck demonstration was given. The Ford Motor Co. believe this to have been the first successful series of climbs of these particular hills, by fully laden commercial vehicles.

FORD TRUCK ON BEGGARS' ROOST.

Two vehicles were used for the purpose of the demonstration, one loaded with 30 cwt. ballast, in addition to which nine passengers were carried up the steepest inclines; the second vehicle was loaded with a standard Fordson agricultural tractor. On the various hills, stops and restarts were made to demonstrate the ample power in hand. Porlock hill, as our readers are probably aware, provides a 2½ mile climb and has a maximum gradient of 1 in 4., a rough surface and two sharp hairpin bends. We are informed that the Ford 30 cwt. truck took this easily, without having once to drop to bottom gear.

After demonstrating on Porlock the trucks proceeded to Lynmouth, joining a convoy of other Ford vehicles which had already been demonstrating in the district to local dealers and business men. At Lynmouth another demonstration was given by the Porlock trucks, this time climbing Lynton hill.

FORD TRUCK AT HAIRPIN BEND ON LYNTON HILL.

A luncheon was held at the Castle Hotel, Lynmouth, Mr. W. J. Rand, Advertising Manager of the Ford Motor Co., presided and was responsible for all arrangements.

# A New Articulated 6-Wheeler.

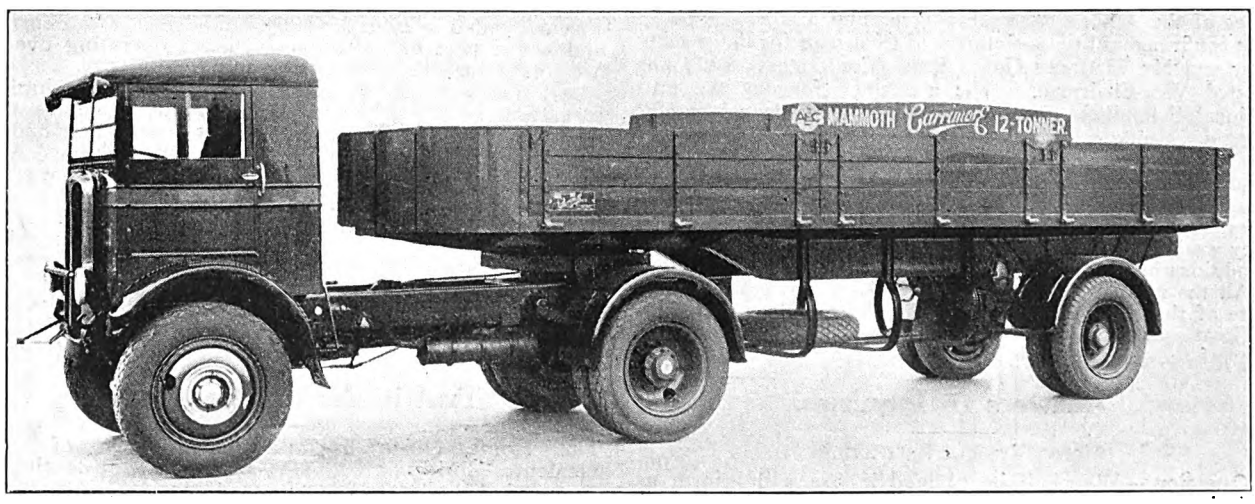
The latest addition to the range of A.E.C. goods vehicles is the "Mammoth"-Carrimore 12 tonner—a 6 wheel model expressly designed to meet the legal conditions affecting heavy duty transport units as imposed by the Road Traffic Act, 1930.

The 6 cylinder, 110 h.p. power unit is the same as used for the standard "Mammoth" model, and all other features remain unaltered with the exception of the shortening of the chassis wheelbase to 10 ft. 6 ins. This has the effect of making the vehicle extremely manœuvrable, and it is a point worthy of note that the complete unit can be turned round in a roadway as wide as the diagonal length of the body.

The body, as shown in the illustration, is of the hinged and detachable sided pattern, constructed to drop in three sections. Its load length is 25 ft. 6 ins. which brings it well within the legal overall limit. The interior height of the sides is 2 ft.

A 14 ins. frame of 7/16th ins. section has been used for the carrier portion, whose wheels are interchangeable with those of the prime mover. Servo brakes, controlled by the foot pedal, operate on all the six wheels.

The turntable, mounted at the rear of the "Mammoth" chassis is constructed of heavy steel pressings, and built on the well-known Carrimore principle.



THE A.E.C. "MAMMOTH"-CARRIMORE 12 TON ARTICULATED 6-WHEELER.

# The Hauliers' and Concrete Aggregate Merchants' Alliance.

At a meeting held during the early part of last month at the Council Offices, Treaty Road, Hounslow, which was attended by some of the leading hauliers and merchant hauliers engaged in the haulage of sand, ballast, etc., it was decided to form an association of sand and ballast merchants and haulage contractors with the specific objects of dealing with haulage rates and protecting the interests of members generally.

MR. FRANK F. FOWLER, CHAIRMAN.

Mr. F. F. Fowler (Murrell's Wharf, Ltd.), London, presided and dealt with the principal causes of the existing low rates for haulage and said that something must be done to stabilise rates. There was, of course, no question of an attack being made on consumers, the object being merely to obtain economic rates and a fair deal.

Mr. Fowler paid tribute to the excellent work that had been done by the Ballast, Sand and Allied Trades' Association and said the suggestion was that the new Association might work side by side with the B.S.A.T.A. and, it was hoped, in co-operation with it.

The following committee was appointed, in addition to the Chairman, Mr. E. S. Clifford (Cliffords (Fulham), Ltd., Great West Road, London, W.4.), Mr. T. Leigh De Fraine (Chartridge, Chesham, Bucks), Captain E. G. Gordon-Poggi (Gordon Transport, Ltd., 6, Stamford Brook Road, London, W.6), Mr. H. J. Greenham (Henry J. Greenham (1929), Ltd., Langley, Bucks), Mr. H. Hands (Wm. Truckell, Ltd., 141e, Battersea Park Road, London, S.W.8), Mr. T. R. Sanders (5, High Street, Windsor), Mr. H. Janes (Janes Bros. (Contractors), Ltd., 2c, Buckingham Avenue, Trading Estate, Slough).

AN "ALLIANCE" FORMED.

At a further meeting held at Hounslow, on May 6th, the Association came into being, and "The Hauliers' and Concrete Aggregate Merchants' Alliance" was formed. The rules of the Association were adopted and Mr. F. F. Fowler was confirmed in his appointment of Chairman for the ensuing year and Mr. H. Janes (Janes Bros. (Contractors), Ltd., was elected Vice-Chairman. The gentlemen forming the provisional Committee as mentioned above were elected *en bloc* for the ensuing year.

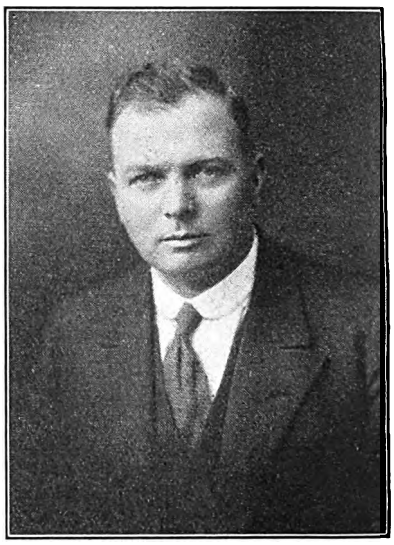
An interesting discussion took place on the question of haulage rates at present quoted and in the result it was unanimously agreed to leave this and other important questions to the Committee, the hope being expressed that they would take immediate action in an endeavour to improve conditions in the industry.

All the members of the Committee have had much experience of the trade particularly during the post-war period.

Great satisfaction was shown by those present at the formation of the Alliance, it being contended that as there was no other Association covering their particular needs the formation of the alliance would fill a long felt want and that it was assured of a successful future. It was pointed out that the measure of that success would depend upon how many of those engaged in the industry joined the Alliance as the future of the trade rested upon whole hearted support of the efforts to be made by the Alliance to bring rates back on to an equitable and economic basis.

OBJECTS.

Briefly the objects of the Association are to regulate the relations of those engaged in the business of hauliers and sand and ballast merchants, and to stabilise conditions in the industry particularly as regards haulage rates and the price of delivered materials; to encourage, promote and protect the industry and generally to obtain for members the advantages of mutual co-operation and support; to enter into such arrangements as may be for the benefit of the Alliance; to give advice and render assistance to members; to resist any action or proposal deemed contrary to the best interests of members.



MR. H. JANES, VICE-CHAIRMAN.

The ultimate aim of the Alliance is to have on its membership roll those engaged in all branches of short distance haulage.

SOME OF THE OFFICERS.

Mr. Frank F. Fowler, Chairman of the Alliance, is the General Manager of Murrell's Wharf, Ltd., Blackfriars Bridge Wharf, London, S.E.1, with which Company he has been connected for about thirty years. Murrell's Wharf, Ltd., controls many river and coastal barges and employs about 25 steam wagons. Every year some 250,000 tons of material are dealt with by the haulage side of the business.

Mr. H. Janes, Vice-Chairman of the Alliance, is Managing Director of Janes Bros. (Contractors), Ltd., haulage contractors, sand and ballast merchants, 2c Building, Buckingham Avenue, Trading Estate, Slough, Bucks. The Firm, founded in 1921, is firmly established in the business and has a fleet of up-to-date vehicles operating over an area of some thirty miles from Slough.

Mr. Janes acted as Honorary Secretary during the formation of the Alliance relinquishing this office upon being elected Vice-Chairman. He also acted as Honorary Secretary for the Ballast, Sand and Allied Trades' Association during the setting up of this body and was one of the prime movers in its formation. He is still a member of the Central Committee of the B.S.A.T.A.

Both Mr. Fowler and Mr. Janes have had long experience of the transport industry and know intimately the troubles from which it has suffered in recent years.

All communications regarding the Alliance should be addressed to The Secretary at 6, Stamford Brook Road, Hammersmith, London, W.6.

## Answers to Inquiries.

MOTOR VEHICLE REGULATIONS.

**Question:**—We shall be obliged if you will inform us if it is necessary to mark the unladen weight and speed on the offside of a light commercial motor vehicle, i.e., a vehicle, the unladen weight of which is not more than 2½ tons. Our query arises from the Motor Vehicle (Construction and Use) Regulations, 1931, a precis of which appeared in your issue of February 16th last.

**Answer:**—A vehicle, the unladen weight of which does not exceed two tons and a half, is classified as a motor car under the Road Traffic Act and it is not necessary to mark on the vehicle the weight and speed.

## Traffic Accidents in 1930.

THE Home Office has issued a return of traffic accidents during 1930. It shows a substantial increase in the number of such accidents, and also in the numbers of deaths and personal injuries resulting from them, in comparison with the previous year's figures. Over the whole of Great Britain, 7,305 persons were killed in traffic accidents during 1930 and 177,895 suffered personal injuries. In 1929 there were 6,696 deaths from similar causes, and 170,917 persons were injured. The total of killed and injured, therefore, was greater last year by 7,587 than in 1929. In the Metropolitan Police area 1,398 persons were killed and 55,827 injured in traffic accidents. In the City of London 17 persons were killed and 836 persons injured.

# Motor Coach and Bus Notes.

**Traffic Commissioners—Southern Area, Scotland.** — Owners of public service vehicles in the Southern Area, Scotland, have received a letter from Mr. T. E. B. Chalmers, the Certifying Officer, stating that in view of the fact that there are many owners who desire to have new vehicles passed for a Certificate of Fitness with as little delay as possible he has arranged to inspect such vehicles at the following centres:—Edinburgh—June 8th and June 29th; Glasgow—May 18th, June 1st and June 15th; Dumfries—May 25th and June 22nd. Owners should give the Certifying Officer at least seven days clear notice of their desire to avail themselves of these facilities. Mr. Chalmers address is 44, Palmerston Place, Edinburgh.

**The Prince's First Bus Trip.** — The Prince of Wales travelled over 5,000 miles—to Peru—and took his first ride in an omnibus. The vehicle was built by the Associated Equipment Co., Ltd., of Southall, England, and shipped to Lima for service with the Metropolitan Bus Company of that city. It was while attending a ball held at the British Legation in Lima, according to "El Commercio," that the Prince expressed a wish to have an interview with the Manager of the Metropolitan Company concerning the activities of the business he controls, and the possibilities of establishing trade relations with Great Britain. He also made known his desire to inspect the bus which had recently come out from England. The following afternoon, in the garden of the British Legation, H.R.H., accompanied by Lord Ednam, a member of his suite, Mr. Bentinck, the British Minister, and Mr. W. M. Gurney, Commercial Secretary to the Legation, inspected the bus, its various mechanical features being explained to him by Sen. Carlos A. Franco, Manager of the Metropolitan Company, and Mr. Lacy-Hulbert, representative of the Company which built the vehicle. At the Prince's request a trip was then made over the country club tracks and outskirts.

**"Invasion" of Afghanistan.**—A 20-seater Commer "Invader" coach has been specially built for shipment to Afghanistan where it will be put into service on the Kabul—Peshawar route.

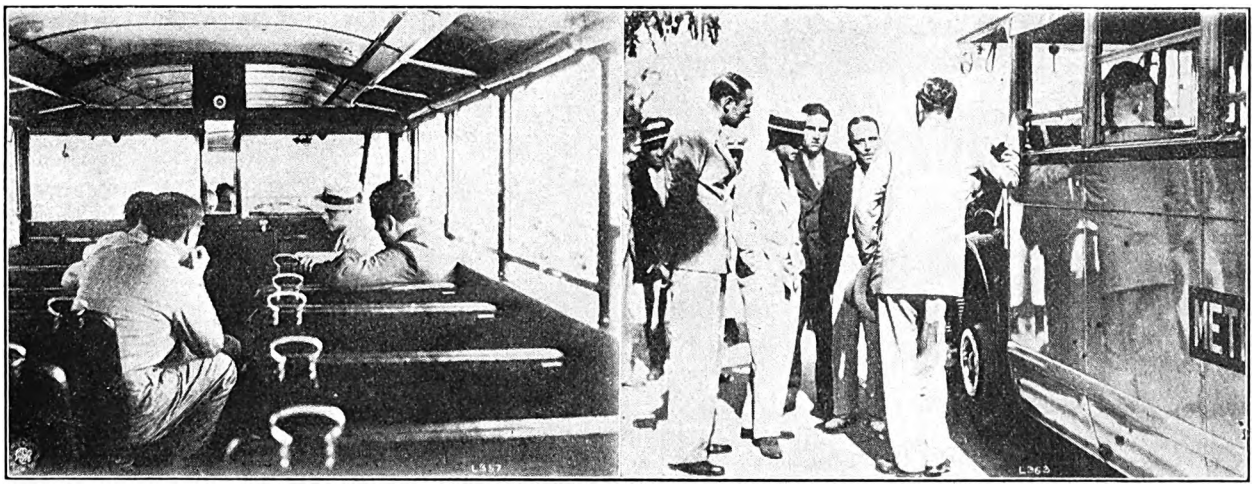
**Speed-up for August Rush.** — Good progress is being made with the United Bus Company's £40,000 garage at the corner of Portland Terrace and Jesmond Road, Newcastle, and the work is being speeded-up to get the premises ready for the August holiday rush. This huge pile of buildings will provide accommodation for over 150 buses as well as a large office staff. There will be seven main entrances to the garage from Portland Terrace and a special exit, which will be used for emergencies, into Jesmond Road. The building, which is mainly composed of iron, stone and bricks, will be fire proof.

**Buses to Replace Trams.**—Carlisle Corporation has decided definitely to purchase the tramway undertaking of the Carlisle & District Transport Co., Ltd., besides other assets, the cost amounting in all to £86,500. The object in view is to start a municipal bus service, though this may be leased.

**Motor Bus Pioneer.**—The death has occurred, at the age of 80 years, of Mr. John Charlton, of Messrs. J. Charlton & Sons, Hebburn, well-known motor bus owners and one of the pioneers of the long-distance service from the North to London. Mr. Charlton worked for many years as a blacksmith, retiring therefrom when 60. The funeral took place on May 3rd.

**Public Service Vehicles.**—In accordance with the powers conferred upon him by Sections 84 and 85 of the Road Traffic Act, 1930, the Minister of Transport has made Regulations as to the conduct of passengers in public service vehicles and as to the conduct of persons licensed to act as drivers or conductors of public service vehicles when acting as such. Copies of the Regulations, which are entitled "The Public Service Vehicles (Conduct of Drivers, Conductors and Passengers) Provisional Regulations, 1931," are obtainable from H.M. Stationery Office or through any bookseller.

**Coach Owners Win.**—Wigan and District Motor Coach Owners' Association, the Liverpool Corporation and the L.M.S., objected before the Traffic Commissioners for the North Western Area to the application of the Wigan Corporation for a licence for excursions and tours by motor bus. It was pointed out that the services would be confined to the summer months and at no time would be earlier than 6 p.m. Mr. R. H. Gee, representing the Wigan motor coach owners, gave an assurance that his members would do their best to meet the requirements of the excursionists. The Corporation withdrew its application.



H.R.H. THE PRINCE OF WALES INSPECTING THE A.E.C. BUS IN WHICH HE TOOK HIS FIRST BUS RIDE.

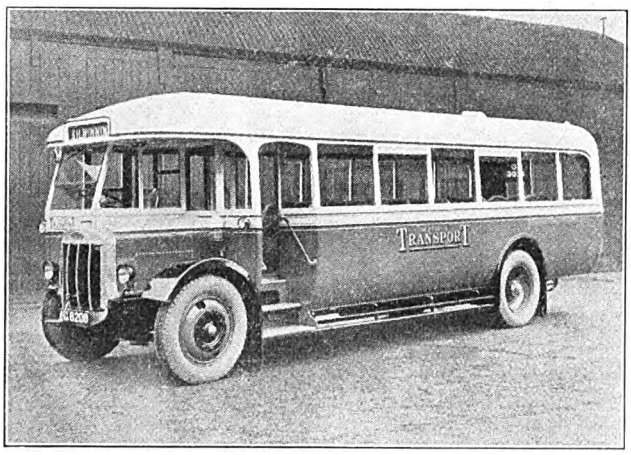
**Inter-running Agreement Modified.**—The agreement between the Darwen and Blackburn Corporations for the running of an express omnibus service between the two towns has been modified. Instead of the revenue from the service being divided in the ratio of 45 per cent. to Blackburn and 55 per cent. to Darwen Corporation and the mileage being run by each Corporation in the same proportion, the revenue is to be divided between the two Corporations in equal proportions, each Corporation to bear its own costs of operating one half of the service.

**Awaiting the Commissioners Decision.**—The agreement between the Liverpool Corporation and the group of motor bus companies, in which the railway has an interest (Ribble, Crosville and Merseyside), for the rationalisation of the local passenger transport services, has been ratified. None of the routes now operated by the Ribble, Crosville and Merseyside companies from districts outside Bootle, but which routes pass through Bootle and proceed to Liverpool, will be interfered with, subject, of course, to the Traffic Commissioners granting the necessary licences to these companies and the Corporation. With regard to the Merseyside services operating in Bootle or from Bootle into Liverpool, these services will be replaced by Corporation bus services. Application has been made by the Liverpool Corporation to the Traffic Commissioners for the necessary transfer to the Liverpool Corporation of the licences at present held by the Merseyside Touring Company from the Bootle Council.

Digitized by Google

Although the services operated by the Merseyside Touring Company may not be run in future exactly as they are at present, bus services to meet all traffic requirements in the Bootle area will, subject to their being financially justified, be maintained. The greater part of the route is served by Liverpool Corporation tramcars. There will be no break in the continuity of the services. It is the intention of the Corporation to maintain these services for a period in order to ascertain whether the traffic on the route is adequate and sufficient to justify the services being maintained and if this is found to be so, the Corporation will continue them. On the other hand, it is the view of the City Council that they cannot extend facilities to the passengers who use these routes, superior to the facilities provided for their patrons in the city, and if it is found that the financial returns on these routes are such as to warrant the services being curtailed or withdrawn, the situation will be considered again.

**"Express" Omnibus for Scottish General Transport Co., Ltd., Kilmarnock.**—We illustrate an omnibus, one of a large number recently supplied by T.S. Motors, Ltd., the well-known commercial motor vehicle manufacturers, of Maidstone, to the Scottish General Transport Co., Ltd. The chassis is the firm's well-known and popular "Express" type B.10A.2. with 17 ft. wheelbase. The engine is of Ricardo design 29/70 h.p. The "Express" is popular amongst many of the most important operating companies in the country, primarily due, we are informed, to its economical performance. The body of the vehicle illustrated was made by the Brush Electrical Engineering Co., Ltd., to the design of The British Electrical Federation, Ltd. Seating is arranged for 32 passengers, and the upholstery is a special pattern of moquette with the edges of the cushions and back rails in blue leather.



ONE OF T.S. MOTORS' "EXPRESS" BUSES IN THE SERVICE OF THE SCOTTISH GENERAL TRANSPORT CO., LTD.

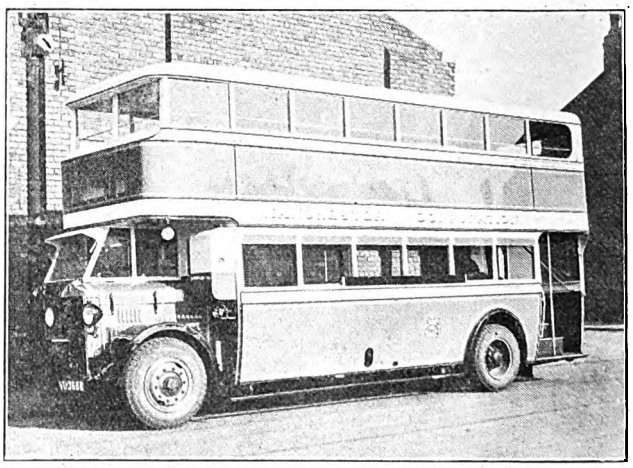
An important feature is the container roof which is designed to carry passengers' suit cases, etc.

**New Bus Contract Conditions.**—New conditions have been imposed upon passengers holding contract tickets for travel by the motor buses of Ribble Motor Services, Ltd. Prices of contracts have been substantially reduced but passengers must pay one penny for each journey they undertake. Persons who make one return journey per day, on contract tickets, are well in pocket by the change, but not so the person who makes very extensive use of his pass. The case from the Ribble Company's standpoint is that contract holders had not been paying for what they had been receiving, because contract rates had been far too low, in fact, were heavily subsidised by ordinary fares. As many people could not afford to put down the value of a contract, the basic rate had been so reduced to overcome that disadvantage which should result in a considerable increase in the issue of contracts. The old half-yearly contract between Preston and Penwortham, which used to cost £3 2s. 6d., is now £1 5s., so that reckoning two return journeys per day costing 4d., the total expenditure for the six months would be £3 17s., equivalent to a little over ½d. per mile. The new method will ensure the examination of contracts on each journey by the bus conductor.

**Blackpool Season Opens.** — Thirty Blackpool motor coach owners ran special tours in connection with the local tradesmen's holiday at the beginning of this month nearly all of them participating in extended touring work, for which a comprehensive programme had been drawn up. Fares, inclusive of travel and hotel accommodation for two days or more, worked out at 19s. to 22s. per day, which even in these days of depreciated values, must be considered extraordinarily cheap for the quality of the rolling stock which the Blackpool owners employ. After Whitsuntide, of course, the demand for travel facilities is sustained entirely by the visiting population of Blackpool and not by the residents who, during the holiday season, are mainly concerned in catering for the needs of the visiting population.

**Manchester's Surprise.**—At the opening court of the North Western Traffic Commissioners, Mr. R. H. Adcock, Deputy Town Clerk, Manchester, said it was with surprise that Manchester and practically all the operating municipalities in South-east Lancashire had received in the last days for objections, a wholesale batch of objections to practically every application made by the municipalities. By the Acts of 1928 the railway companies got powers to operate omnibuses and they had opposed practically every Bill promoted by a local authority for the same end. In the present case, objections had been lodged by them to over thirty of the Manchester applications. Mr. Adcock suggested that the railway companies could only obtain licences if they became partners in the co-ordinated service of Manchester and the other local authorities and, apparently, they didn't want to engage with the authorities, but wanted to force the hand of the local authorities by making the Traffic Commissioners insist upon co-ordination and on the railway companies being entitled to share in this road service.

**Heavy Oil Engined Buses for Manchester.** — Crossley Motors, Ltd., have received a further order from Manchester Corporation Transport Department for 9 double-deck chassis. Five of these are the standard "Condor" petrol-engined chassis, and 4 are for double-deck chassis with the Crossley heavy oil engine. The Crossley heavy oil engine is interchangeable with the Crossley petrol engine, and when these 4 are delivered Manchester will be running 6 heavy oil engined buses. This is the seventh repeat order from Manchester, and will bring the total of Crossley omnibuses in service with Manchester Corporation Transport Department to 162.



THE FIRST OF 5 CROSSLEY HEAVY OIL-ENGINED DOUBLE DECKERS FOR MANCHESTER.

# Roads Improvement Association.

## Annual General Meeting.

THE forty-fourth Annual General Meeting of the Roads Improvement Association was held in the Assembly Room at the Central Hall, Westminster, London, on April 29th last.

**The Hon. Sir Arthur Stanley, G.B.E., C.B., C.V.O.,** who presided over a good attendance, was supported by Major Walter E. Elliot, M.P., Mr. David Vaughan, M.P., Alderman Palin, M.P., General M. Mowat, C.B.E., Mr. William Haigh, M.A., B.Sc., Col. R. E. Crompton, M.Inst.C.E., Col. D. Watts-Morgan, C.B.E., D.S.O., M.P., Mr. Peter Freeman, M.P., Mr Dan Chater, M.P., Mr. Somerville Hastings, M.P., and Mr. W. T. Kelly, M.P.

**Sir Arthur Stanley** said that in the absence of their Chairman, Mr. Rees Jeffreys, who had not yet returned from his world tour in extension of his already wide knowledge of the potentialities of road development, he would ask Mr. Haigh, one of their Vice-Chairmen, to move the adoption of the Annual Report.

Before he did so he would like to refer to the loss they had sustained by the death of Earl Russell who had been a member of the Council of the R.I.A. for over 30 years and a Vice-President since 1925. He would not say that the views sometimes held by Earl Russell and those held by other members of the R.I.A. always coincided, but perhaps Earl Russell's views were just as likely to be right as theirs. (Applause.) Earl Russell had been a great tower of strength to them and they all knew how well he fought their case in the House of Lords.

He would like to say how appreciative those who had been road enthusiasts for over 40 years were of the progress that had taken place in the modernisation of our roads during the last two or three years. Many of the reforms the R.I.A. had advocated for over 25 years were being adopted and they were sure that substantial benefits would accrue.

No-one to-day felt that better roads were simply being provided for the sole benefit of speed mad motorists. Ample road facilities were imperative for the efficient operation of transport which was so vital to the economic and commercial life of the country. Roads were now recognised as probably our most important public service.

We had not yet in the United Kingdom so many motor vehicles per head of the population as exists in America—but we already had more vehicles per mile of road than in any other country in the world.

Although the country is now spending over one million pounds per week upon road improvement and maintenance the volume of road development work actually in hand at present is not commensurate with the amount of money that has been made available for road work and the number of schemes of improvement that have been approved. He knew routine had to be followed and formalities observed in all public services, but in view of the urgent need to provide work for the unemployed and for additional road facilities to be available for our ever-increasing traffic, they would like the Government definitely to tackle ways and means of short circuiting these routine formalities to ensure that a larger volume of road work is actually put in hand at once. They had the support of the Minister of Transport in this. Mr. Morrison was frequently appealing to local authorities to push on with approved road works. He noticed that at Derby recently the Minister said: "A determined effort by all concerned will not only be of assistance to this country in weathering the present crisis, but it will mean that when the situation improves we shall find ourselves in possession of a modern and highly developed highway system, which will be second to none in its suitability for the purposes of modern road transport."

After all road users were now paying their taxes for roads and these roads were needed to-day. The R.I.A. wanted the money in the Road Fund turned into roads as rapidly as possible. They felt that very substantial benefits would accrue from a capital expenditure of fifty million pounds during the next five years—at the rate of ten million pounds per annum—in the direction of modernising our existing road system by widening narrow sections of important roads, the bye-passing of congested central areas, the reconstruction of weak bridges, the elimination of level crossings, the opening out of dangerous junctions, blind corners, and the like, and the construction of more footpaths. This would not only considerably assist the unemployment situation at a time when it badly needs help, but would give us at the end of five years a road system that, with our ordinary maintenance and improvement expenditure, would be sufficient for the needs of traffic for the next 25 years.

He was much interested, therefore, to note that the Chancellor of the Exchequer, in his Budget speech, indicated that the Exchequer was coming to the aid of the Road Fund to meet the cost of expedited road schemes and that power would be sought in the Finance Bill to raise loans for this purpose.

Our road improvement and development programme had never recovered from the setback caused by the raids on the Road Fund by Mr. Winston Churchill in 1926 and 1927 when nineteen million pounds of the capital of the Road Fund was transferred to general revenue.

**Mr. William Haigh, M.A., B.Sc.,** a Vice-Chairman of the Association, moved the adoption of the Annual Report.

He said it should be borne in mind that we were now standing at the end of a development period of some ten or fifteen years, and when the history of that time came to be written, one of the most, if not the most, striking pages of that history would be the enormous increase in road traffic which has taken place in that period.

During the last few days there had been published a roadway goods transport guide from which it appeared that there were in existence some 20,000 different regular goods services throughout the country. This alone went far to justify the existence of an Association such as the R.I.A. and indicated how worthy the Association was of support in view of the enormous amount of work that lay before it.

The Traffic Commissioner for the Metropolitan Traffic Area, Mr. G. F. Robinson, was now receiving applications from motor coach operators for licences, and the question of road versus rail would be one of the crucial questions of the day. The railways were up against the question whether this advancing tide was going to overwhelm them or whether they could resist the advance. The position was well recognised by the railways and he understood they were offering opposition to every possible claim for a motor coach licence. That, of course, was a gesture and did not necessarily indicate that the railways thought no coach licences should be granted, but it did show that the railways realised the seriousness of the position.

The Report was adopted unanimously.

Several members of the All Parties Roads and Bridges Committee of the House of Commons attended the meeting and expressed appreciation of the work being done by the R.I.A. **Lt.-Col. D. Watts Morgan, C.B.E., D.S.O.,** expressed the view that there is room for both rail and road transport and we must not close our eyes to the fact that roads will require to be improved and will carry more in the future than they have done in the past.

**Alderman J. H. Palin, M.P.,** in the course of his remarks, said that this country is in need of both roads and railways.

The Annual Accounts were adopted on the motion of **General Magnus Mowat, C.B.E.** He said he hoped that 1931 would bring a little more prosperity and that there would be more funds available to enable the Association to tackle on a larger scale the wide programme of work ahead of it.

H.R.H. Prince Arthur of Connaught, K.G., was re-elected President of the Association. The other Officers elected were:—Vice-Presidents: Hon. Sir Arthur Stanley, G.B.E.; Viscount Brentford, P.C.; Sir Edward Iliffe, C.B.E.; Mr. W. Rees Jeffreys; Sir Edward Manville, M.I.E.E., J.P., and Major Walter E. Elliott, M.P. Hon. Treasurer: Sir Edward Iliffe, C.B.E. Hon. Technical Adviser: Mr. John A. Brodie, M.Inst.C.E. Chairman: Mr. W. Rees Jeffreys. Vice-Chairmen: Col. R. E. Crompton, C.B., and Mr. William Haigh, M.A., B.Sc.

After other formal business a vote of thanks was accorded to the Chairman. Sir Arthur Stanley, in his reply, specially thanked the Members of Parliament who had attended the Meeting, and assured them that all the resources of the Association were always available in support of the efforts to secure for this country a highway system that would enable each and all to travel freely and safely at all times.

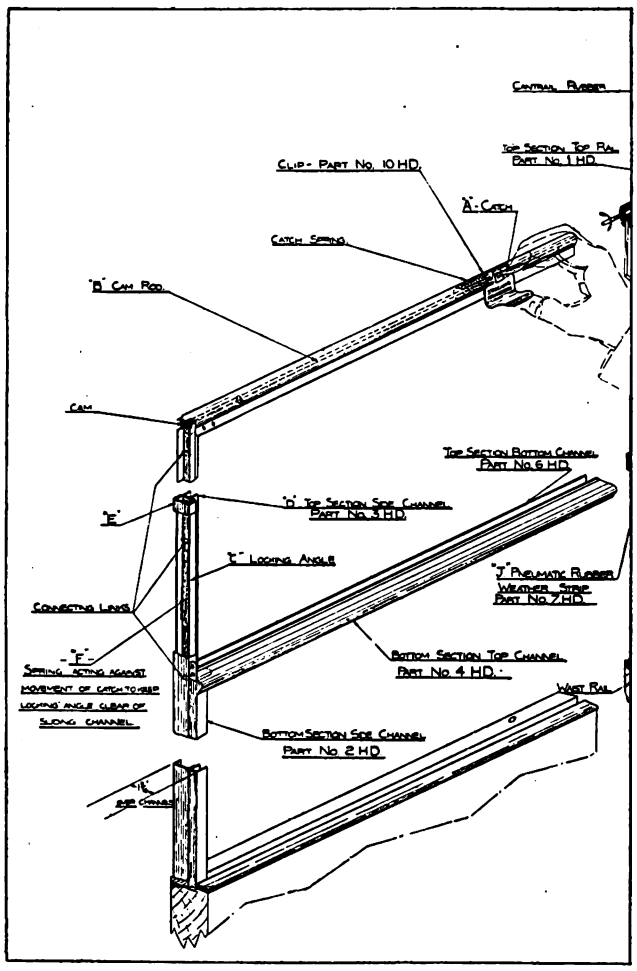
# Strachans Half-Drop Window.

Strachans (Acton), Ltd., have completed arrangements to put their half-drop windows into full production and they are already including them in a large number of double deck bodies which they are building for important passenger undertakings. The price will vary according to the material and finish of the metal frame. Particulars may be had on application to the Company. The operation of the window is as follows:—It is controlled entirely by the thumb and first finger. Referring to the diagram: by depressing the catch (A) the cam rod (B) is revolved, the cam of which forces the angle (C) down. The latter, being connected by links to the window frame is naturally drawn nearer to it, thereby lessening the distance between the outside faces of the two sections.



EXPLANATORY DIAGRAM,
STRACHANS' SELF-LOCKING HALF-DROP WINDOW.

The window is then free to slide in the fixed channels (E), which are screwed to the pillars. On the release of the catch (A) the angle is forced outwards again by the spring (E) and the window is rigidly fixed each side of its entire depth. When closed, a weather seal is provided between the upper and lower frames by a pneumatic rubber section (J) which also absorbs vibration. The entire window (upper and lower halves) may be removed from the frame in a few minutes by the removal of the two screws in each of the bottom section brakes and three screws from each side channel.

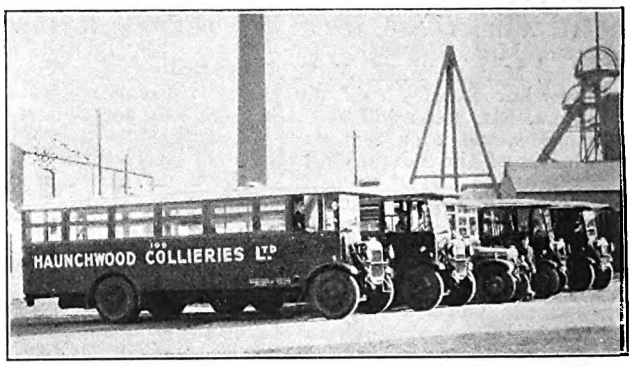
# A Colliery Company's Transport Service.

**By E. W. COBBIN, Transport Manager of Haunchwood Collieries, Ltd., reprinted from The Thornycroft Basingstoke Works Magazine.**

In 1924 Messrs. Haunchwood Collieries, Ltd., of Nuneaton, Warwickshire, decided to purchase a number of buses to convey their workmen to and from work. Various makes of chassis were tested, the final selection being "Thornycroft." Five solid tyred "JB Long" chassis were ordered, to be fitted with special 50-seated single-deck bodies. These were put into operation in August, 1924, running over various routes, including some of the worst roads in the Nuneaton district. They caused quite a stir, people coming to their front doors to see the new type of miners' "Paddy."

The buses became so popular with the workmen that it was decided to buy two more. As the first five were giving good service, the order again went to Thornycroft's, but this time pneumatic tyres were specified. The two newcomers were used on the long distance service (10 miles from the pit), owing to their superior speed.

The provision of buses to bring a large number of men from the outlying districts to work in our pits had been such a success that it was decided to change the whole fleet for faster pneumatic tyred vehicles. Again several makes were tested over our routes, with the result that the Thornycroft "BC forward" proved the best. With this new fleet, which



HAUNCHWOOD COLLIERY "THORNYCROFT" COACHES FOR PITMEN.

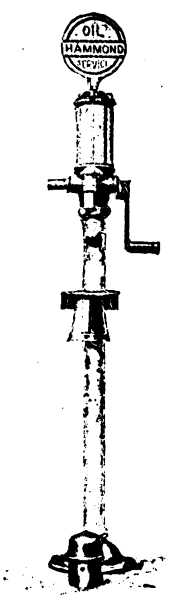
is illustrated in the accompanying photograph, we were enabled to speed up the services considerably, as we could do one long run and one short one in the time it used to take to do a single trip only.

Up to date the buses have covered 520,000 miles, carrying approximately 650 men daily, without a man losing a single minute's work through delay; even when the local public passenger services gave up on account of weather conditions, the "Blue Fleet" carried on. We don't know what breakdowns are, because we never have any. A number of our buses have run 30,000 to 40,000 miles without incurring the expenditure of a single penny for repairs, renewals or tyres.

The bodies are equipped with wooden lath seats, but these are quite comfortable and the men coming out of the pit appreciate an agreeably warm conveyance to carry them home. On return to the garage the vehicles are cleaned out and disinfected, ready for the next shift.

In exchange for a weekly fare, which works out at about three-eighths of a penny per mile, each man receives a ticket, stamped with the shift on which he is working. The services are run to a time-table, which the drivers observe so faithfully that the people on our routes check their clocks by the passing of the buses.

# The S.I.A.M. Oil Pump.



THE S.I.A.M. OIL PUMP.

Liquid Measurements, Ltd., Hammond Works, Victoria Road, North Acton, London, N.W.10, are the sole concessionaires for the S.I.A.M. all British oil pump which provides an easy and clean method of supplying oil to vehicles. It is provided with a positive automatic non-drip valve which eliminates oil pools. It has a vitreous enamel finish, impervious to weather and hard wear. It is provided also, with a weather proof meter accurately recording the amount of oil delivered. The pump can be placed anywhere, either directly over the tank or by pipe from a remote supply tank. It is not a pressure fed system. It is sold in two models, Model 201, including the 50 gallon tank, 1 ft. 11 ins. in diameter by 3 ft. deep of mild steel plate electrically welded with lockable filling pipe, costs £19. Model 201-U, also costs £19 but does not include tank. It is for use where it is not possible to place the tank immediately below the pump. In this model the pump may be placed in any position and is connected by pipe line to a distant tank, from which the reservoir is fed by gravity.

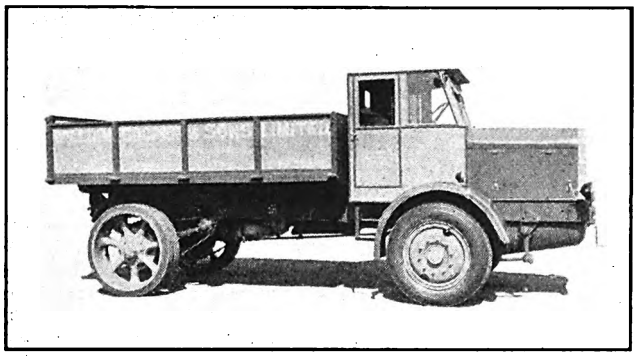
# The 8-ton "Trader Six 90."

THE PEERLESS TRADING CO. (Spares & Repairs), LTD., Slough, have placed a new 8-ton chassis on the market known as the "Trader Six 90." It is specially designed to meet the transport requirements of the sand and gravel industry and consequently it may be regarded as an all round contractor's transport unit.

Its legal capacity is 8 tons on a platform body, 7½ tons



THE "TRADER SIX 90."

with drop sided body, and 6 cu. yds. when fitted with a hydraulic tipping body. It is fitted with twin solid tyres on the rear wheels and pneumatic tyres on the front, and, as may be seen from the photograph, the front axle is well to the rear of the engine, by which arrangement a fair share of the load is carried by the front axle thus relieving the rear axle so that the latter does not carry more than 8 tons when the vehicle is loaded. The chassis price is £798; fitted with a drop side or platform lorry and enclosed cab £898; or with a hydraulic end tipper of the St. Paul type (maximum lifting capacity 15 tons) £998; the prices including a twelve volt lighting and starting set and also painting and lettering.

The engine employed is the Meadows 6 E.W. 6-cylinder model the nominal horse power of which is 33, developing 90 b.h.p.; the bore and stroke are 95 m.m. by 130 m.m. The engine is a monobloc casting provided with detachable cylinder head of which the design of the combustion chambers are a special feature, promoting gas turbulence and rapid explosion. The valves are of the overhead type, push rod operated. Ignition is by automatic control and advance and retard magneto, eliminating hand control. The fuel is fed by mechanical petrol pump. The crankshaft is mounted in seven bearings. Lubrication is by gear type oil pump to all main bearings, the oil first passing through efficient filters. Transmission from the engine is through a single dry plate clutch. The gear box is strongly built throughout and provides four forward speeds and a reverse, and from the gear the drive is through chromium steel jackshafts and by chains to the rear wheels. The rear axle is a heavy section drop forged beam.

The jackshafts are provided with foot brakes. Front wheel brakes can be fitted as extra. The front wheels are steel disc, fitted with 40 in. by 8 in. pneumatic tyres. The rear wheels are the hollow spoke type fitted with 40 in. by 6 in. twin solid tyres. Steering is of the Marles type. Chassis lubrication is by pressure gun and nipple. The petrol consumption under full load is given as 9 m.p.g.

The principal dimensions are as follows:—wheelbase 11 ft. 5 in.; track 5 ft. 10¾ in.; overall length 9 ft. 3 in.; overall width 7 ft. 6 in.; dash to end of frame 15 ft. 1 in.; frame height from ground 3 ft. 4½ in.; turning circle 50 ft. diameter.

# London Chamber of Commerce and the London Passenger Transport Bill.

THE Council of the London Chamber of Commerce, after considering a report from their Transportation Committee upon the provisions of the London Passenger Transport Bill, have forwarded to the Joint Committee the following statement of their objections to the measure:—

1. That in spite of the protestations of the Government that they are anxious to place London's transportation outside political control, the Bill does in fact, place complete control in the hands of the Minister of Transport on all vital questions such as the appointment and removal of members of the Board and the determination of development policies.

2. That efficiency cannot be expected under the system of divided control contemplated. Although in all cases the Minister of Transport is to be the final arbiter, no less than four committees are to exercise important functions in the proposed management of the undertaking, viz., Transport Board, London and Home Counties Traffic Advisory Committee, a Standing Joint Committee and the Railway Rates Tribunal.

With so many authorities taking independent decisions, which must affect the earning power of the combined undertaking, it will be quite impossible for the Board to know what their revenue will be in any given year, and consequently to pursue with any confidence a co-ordinated plan of development.

3. Experience has shown that a complete monopoly may lead to stagnation, especially when responsibility is not clearly and certainly attributable to a sole authority but is divided as is now proposed between a Government Department and four committees.

4. That the Bill is confiscatory in character; it deprives shareholders in the various undertakings of their voting rights so that they will have no voice in the conduct of their own undertakings; it affords them no option to sell their interest at present values should they be dissatisfied with the proposals for their State management.

5. That the concentration of all London's means of transport in one undertaking would cause the greatest hardship to the travelling public in the event of any dispute between that undertaking and its employees, resulting in a stoppage.

# Institute of Transport.

THE following gentlemen were recently elected to membership of the Institute of Transport:—

MEMBERS.

| | |
|---|---|
| Anderson, Charles Buxton | Commissioner of the South Australian Government Railways. |
| Barnard, John Henry Owen | General Manager, Bolton Corporation Tramways. |
| Brooks, George Henry | Commercial Manager, London County Council Tramways. |
| Fiddian, William Alfred | District Superintendent (Newcastle-on-Tyne), London and North Eastern Railway. |
| Griffiths, Ralph Stanley | Engineer, Westinghouse Brake and Saxby Signal Co., Ltd. |
| Hunter, Cecil James Herbert | Chief Assistant General Manager, Sudan Government Railways. |
| Lockhart, James | Traffic Manager, Great Northern Railway, Ireland. |
| Robinson, Montague Arnet | Commercial Manager, Coast Lines, Ltd., Liverpool. |
| Swales, Harry | Goods Agent (Gateshead), London and North Eastern Railway. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Attwell, Alfred Lee | South African Railways and Harbours (East London). |
| Dickinson, Frederick Arthur | Divisional Manager (Rhyl-Denbigh-Mold), Crosville Motor Services, Ltd. |
| Ellson, John | Accountant and Chief Assistant to the General Manager, Leicester Tramways and Motor Omnibus Department. |
| Farrar, Robert | Chief Assistant, Rochdale Corporation Passenger Transport Department. |
| Kendall, Cyril Lambert | Assistant Engineer, Burma Railways. |
| Kneller, Sydney Francis | Director and Secretary, Kneller & Chandler, Ltd. (London). |
| Lythgoe, Frank | General Manager, Leigh Corporation Motors. |
| Shaddock, William Torrie | Engineer, Ministry of Transport. |
| Stewart, Thomas Buchan | Assistant to General Manager, Buenos Aires Great Southern Railway. |

# Law Cases.

## CARTAGE CONTRACTOR SUED.

IN the Shoreditch County Court, before Judge Cluer, Messrs. E. Hart & Sons, Ltd., of 450, Hackney Road, E., furniture manufacturers, sued R. Gilbert, of 37, King Edwards Road, South Hackney, N.E., a removal and cartage contractor, to recover £6 7s. 6d. The case had been adjourned. The claim set out that in September of last year, one easy chair was handed to the defendant for cartage to Campbells of Glasgow, but it had never been delivered or accounted for.

Mr. Hart gave evidence, and said that since the previous hearing he had communicated with the defendant, who came to see him. The defendant told him that he did not put in an appearance in Court, because he thought it was all straightforward, and therefore unnecessary. He added that he did not know what had become of the chair, and it might have been left by the roadside. Witness then handed him the subpœna to attend the Court. Mr. Hart then said the facts were that the chair was handed to the defendant for delivery, and it had never been accounted for.

The defendant said it was quite true the easy chair was put on the van of Messrs. L. M. Coyte & Sons, of Hackney, in conjunction with whom he worked the Glasgow route. Messrs. Coyte's lorry came into collision with one of the Scottish buses, with the result that so far as he knew the chair was destroyed. As a matter of fact he was suing Messrs. Coyte for the amount he was being sued for. He could have got evidence from Scotland to prove what he was telling the Court, but he had not the means.

Judge Cluer: If you undertook to deliver this easy chair to Glasgow, and you allowed it to go, with your sanction, into the hands of someone else, and now you say that the someone else was negligent, you must bring them in as co-defendants. You are not a common carrier, you make special contracts, and if this easy chair had been burnt and you were not negligent in the matter, you would not have been liable, but under the circumstances as presented to the Court now, you are liable, and you must pay for this. There must be judgment for the plaintiffs for the amount claimed, and costs.

## AN INTERESTING CASE.

IN the Lambeth County Court, before Judge McCleary, Charles William Baker, of 29, Fowey House, White Hart Street, Kennington, S.E., a lorry driver, sued Albert Wallaker, of 108a, Warner Road, Camberwell, S.E., a cartage contractor, to recover £6, being one week's wages, and a week in lieu of notice.

Mr. MacArthur appeared for the plaintiff, and Mr. H. Hargreaves for the defendant.

The plaintiff in his evidence said that on November 13th, he reported for duty at the yard at 6 o'clock in the morning, and he was instructed to take a load of Bottles to Messrs. Seager, Evans, and then on to Murrows Wharf at Deptford. He arrived there at 2 o'clock in the day, by which time he had had no breakfast or dinner, and the foreman then instructed him to take a load to Woking. He thereupon phoned up Mr. Wallaker, and asked him if he wanted him to take the load to Woking, and whether he could have something to eat. The defendant told him to bring the lorry back to the yard, which he did, whereupon another driver was put on the job to Woking, and he was dismissed. He had a time sheet signed by Seager, Evans, to the effect that he left at 2 o'clock, and at the bottom of all the defendant's time sheets were the words "If in doubt, phone," and he did.

In cross-examination he denied that he refused to go to Woking with the load, as he did not want to arrive back at 11 o'clock at night.

Mr. Wallaker, the defendant, gave evidence, and said that when the plaintiff phoned to him with reference to the journey to Woking, he said that he was not going out and he did not want to get back at 11 o'clock at night. As a matter of fact the driver who did take the load arrived back at the yard at 8 o'clock that night. It was up to the man to get something to eat when he was out. There were numerous coffee rooms about, and they could stop as many times as they liked without him knowing.

Judge McCleary said the whole question was whether the defendant had satisfied him that he discharged the plaintiff because he had wilfully disobeyed a lawful command. The onus was upon the defendant to satisfy him, and he had come to the conclusion that although there might have been some argument about the matter, he was not satisfied that the plaintiff wilfully disobeyed a command. Under those circumstances he would give judgment for the plaintiff for £4 5s., in addition to the money paid into Court, £1 15s., and costs.

## PASSING A POLICEMAN'S SIGNAL IN A STORM.

IN the Shoreditch County Court, before Judge Cluer, Blandford Henry Stubbs, of "Altrive," Hadley, Barnet, a bank clerk, sued Samuel Stoller, of 247, Amhurst Road, N., a master fishmonger, to recover £19. 17s 7d., damage alleged to have been caused through defendant's negligence.

The plaintiff's case was that on November 11th, 1929, he was driving his car from Park Square across the Marylebone Road, when he was held up at the cross road by the traffic policeman. After a short time, the policeman let him go, and signalled to the Marylebone Road traffic to stop. The defendant's van, however, continued on, and eventually stopped in his path, so that he could not avoid a collision, and the subsequent damage.

P.C. Field said he gave the defendant's driver about ten yards to pull up in, which he considered a reasonable distance. He agreed it was a very wet and stormy night, and if he had signalled at a greater distance, the driver would not have a chance of seeing him. He thought it was highly possible that the defendant's driver did not see him, owing to the rainstorm, and the condition of the windscreen. He thought that if the defendant's driver and the plaintiff had used a little more care, the accident would have been avoided. He would not consider the defendant's driver had been careless or negligent in passing his signal to stop, owing to it being a blustering stormy night.

It was pointed out by the defendant's brother, who represented the defendant, that the damage to the van amounted to 2s. to repair, as the impact was only very slight, the plaintiff saying he was only travelling about two m.p.h.

Judge Cluer said that he could not see how the plaintiff was going to get over the fact that his own witness, the constable, did not think the defendant had been careless. It was clear that it would be difficult for a driver to see a signal on a wet and stormy night.

Mr. Noakes (Counsel for plaintiff): I submit the negligence is in passing the policeman's signal. A driver has a right to assume that nothing will come across his path past the police signal.

Judge Cluer: That was the fault of the weather. It is like a condition at sea or a blinding snowstorm; he could not see.

Mr. Noakes: Then he should not be driving at a pace so that he could not see.

Judge Cluer: I wish that was the law. We should have fewer accidents, and we should be safer. I must find in this case there was no negligence on the part of the defendant's driver, and therefore, there will be judgment for the defendant, with costs.

# International Federation of Forwarding Organisations.

## Meeting of Management Committee to be held at Amsterdam, on May 28th.

By Ludwig Weiss.

Managing Director, International Federation of Forwarding Organisations.

IN accordance with the constitution of the International Federation of Forwarding Organisations, meetings of the Management Committee are held every two years unless circumstances arise in the meantime rendering it advisable for a meeting to be called.

At the invitation of the "Scheepvaart Vereeniging Nord," the meeting of the Management Committee this year is being held on May 28th, at Amsterdam, which of course is a noted centre for world-wide traffic and offers many attractions to those who will be attending the meeting.

Apart from the business side of the meeting, when I mention that Vice-President A. J. Driest and Managing Director Dr. M. H. de Yong are in charge of the arrangements for the conference delegates may be sure that the social side of the gathering will be well looked after.

The Agenda is printed in another part of this issue and the President, Mr. Paul Lehmann, will preside at the conferences.

At the conclusion of the usual routine business Mr. Hans Blum, Vice-President of the Federation (Adolf Blum & Popper Aktiengesellschaft, Hamburg), and who is the delegate of the "Verein Deutscher Spediteure-Reichsverband des Deutschen Speditionsgewerbes e.V." will open a discussion on the world-wide economic situation and the outlook for the forwarding agent. This discussion will be of great importance although in view of the existing state of affairs it will in all probability prove impossible to pass any definite resolutions on the subject, but a body of importance, such as is the International Federation of Forwarding Organisations, cannot meet at a time like the present without having given such a vital problem their earnest consideration, and the interchange of opinions amongst delegates from so many countries cannot fail to be of the utmost value.

Dr. Walter Kes, who is the delegate of the "Verein Deutscher Spediteure-Reichsverband des Speditionsgewerbes e.V." and also managing member of the Committee of the "Fachgruppe des Speditionsgewerbes (Spedition, Binnenschiffahrt und Lagerhausbetrieb) des Reichsverbands der Deutschen Industrie" will introduce the subject of railways and road transport on which Dr. Kes is a specialist. Here again a most interesting discussion will no doubt take place, as the competition of the mechanically propelled vehicle is a matter receiving more and more of the attention of the railway companies who often adopt measures affecting the interests of forwarding agents. As, however, the degree of competition and the methods adopted by the railways differ in the various countries which will be represented at the conference it is doubtful whether it will prove possible to make definite resolutions on the question. A discussion of the methods adopted in the various countries will prove very instructive.

Another matter which is to be given special attention is the demand made by forwarding agents for an alteration to be made in the International Agreement regarding railway goods traffic. The Federation has already reported that immediately following the publication of the wording of the new convention in 1924, complaints were received regarding the difficulties occasioned by the new International Agreement. The Federation lodged a protest against the inconveniences caused and quoted a concrete instance to the Central Office, Berne. Since then other instances of inconvenience have come to light and these will be embodied in a second protest to be lodged, as the Agreement has now been in force a few years.

Obviously the International Federation of Forwarding Organisations must be keenly interested in the work of the International Chamber of Commerce at Paris, especially as the Chamber discusses transport matters. Unfortunately an organisation such as the International Federation of Forwarding Organisations is precluded from membership of this Chamber and is therefore, dependent upon the help of its constituent associations who enjoy membership of the International Chamber of Commerce in the various countries. Dr. Paul Dumont, a Vice-President of the International Federation and Manager of the "Schweizerischer Spediteuren-Verband" at Berne, will report regarding the work being done by the Chamber and by the Economic Committee of the League of Nations.

At the request of the "Verein Deutscher Spediteure-Reichsverband des Deutschen Speditionsgewerbes e.V." the question of the liability of forwarding agents in regard to customs duties and customs regulations will be discussed. As is well known the large number of regulations impose a big degree of responsibility upon the forwarder at clearance, and it is important that delegates should know how this important question is dealt with in the various countries. It is very probable that Mr. Wilhelm Loeb (Messrs. Wilhelm Loeb & Benedict Schwarz Nfg., Vienna) and of the "Zentralverband der Spediteure" at Vienna, will speak on this subject.

The action taken by the Federation on various important matters, and the question as to whether the Federation can prosecute these matters further, will be discussed. There is the question of compiling a Black List, and whether Associations affiliated to the International Federation should be informed of the names of firms who have proved to be unworthy of confidence being placed in them. Some of the Associations affiliated to the Federation have not as yet supplied the Federation with the names of firms whose methods of conducting business are open to criticism, yet it is hardly to be supposed that there are countries in which not a single firm of forwarding agents has proved to be unreliable.

Another important question to be discussed is that of obtaining some uniformity in the laws affecting forwarding Agents, and Dr. Walter Kes, of Berlin, has prepared an instructive report on the question. A resolution will probably be put to the meeting to proceed with this important work, although, of course, some few years must elapse before such conditions could be made uniform and put into operation.

As readers know, the Federation has set up a court of arbitration and it is a matter for no little surprise that forwarding agents have not made greater use of this opportunity to settle free their international difficulties. Another important activity of the Federation is the compilation of a uniform nomenclature for services rendered by forwarding agents, the aim being that the various services rendered by forwarding agents on any part of the continent should be designated under uniform headings. Progress in this connection must necessarily be slow as the material supplied is in all languages and difficulties are frequently encountered.

It has been considered advisable that the Federation should publish a Year Book in which can be published the names of forwarding agents who are members of each affiliated association, and in which also can be printed detailed information regarding the many important transport questions dealt with by the International Federation. The question whether it is possible to produce such a book will no doubt be decided at the coming meeting.

There is the question of the collection of overdue accounts on behalf of forwarding agents which has for a long time been a matter under consideration by the Federation and its affiliated associations, and the question whether it is possible to introduce a system under which outstanding accounts and claims can be dealt with by the Federation will be discussed.

The question of the limitation of the responsibility of Forwarding Agents will also be discussed and it is intended that an opportunity should be given for a discussion on this subject with the object of exploring the possibility of drawing up a clause limiting responsibility, and worded in such a way as to be applicable to all countries. German and Austrian Agents have already agreed upon a uniform clause, and it will be obvious how very valuable a clause which can be made applicable to all continental countries would be.

Various other matters for discussion are to be brought forward by delegates who have intimated their intention of being present, and a resolution that the next general assembly of the Federation should be held at Budapest, will be brought forward.

I think I have said enough, however, to show that the agenda for the coming meeting is a full and important one, and that a big programme lies in front of the delegates from the Associations affiliated to the Federations amongst whom is Mr. F. J. Gerson, who represents the British Association of Shipping and Forwarding Agents, and who took a prominent part in the formation of the Federation and has always taken keen interest in our activities.

# International Federation of Forwarding Organisations.

## Meeting at Amsterdam on May 28th.

AN ordinary Committee Meeting of the International Federation of Forwarding Organisations will be held at Amsterdam, Holland, on May 28th.

The following matters amongst others will be placed upon the agenda:—

The President will review the work done during the year.

To consider the world wide economic position and the outlook for the forwarding trade.

To consider the question of Railways and Road Transport.

To consider the demand for an alteration in the International Agreement regarding railway goods traffic.

Co-operation with the International Chamber of Commerce and the League of Nations Committee on Economy.

To consider the liability of Forwarding Agents in regard to customs regulations.

The present system of "Customs Bonds" for the vans of International Furniture Removers.

To consider progress made in regard to the following matters:—Compilation of a Black List; Uniformity in forwarding laws; Court of Arbitration; Conditions of carriage in the forwarding trade; Adoption of a system of universal nomenclature for services rendered by forwarding agents.

To consider the limitation of a forwarding agents responsibility.

It is hoped that delegates from all the affiliated Associations will attend this meeting, as in addition to the above matters of importance are to be brought forward by several of the Continental Associations.

# British Association of Shipping and Forwarding Agents (Incorporated).

A MEETING of the Council of the British Association of Shipping and Forwarding Agents was held at the offices of the London Chamber of Commerce, on April 28th last, the undermentioned gentlemen being present:—Mr. A. W. Heard (Chairman) (Jones, Heard & Co., Ltd., Newport, Mon); Mr. M. E. Duffett (Vice-Chairman) (J. D. Hewett & Co., Ltd., London); Mr. Norman N. Bird (Vice-Chairman) (Herbert Watson & Co., Ltd., Manchester); Mr. F. H. S. Rouse (Hon. Secretary and Treasurer) (American Express Co., Inc., London); Mr. J. B. Ballantyne (J. B. Ballantyne & Co., Ltd., London); Mr. John B. Bower (F. Bower & Co., Liverpool); Mr. A. Faulkner (Crowe & Co. (London), Ltd., Manchester); Mr. Frank J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd., London); Mr. Wm. O'Brien (G. W. Sheldon & Co., Ltd., Liverpool); Mr. C. F. Sanderson (Sanderson's Express, Ltd., Nottingham); Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London); and Mr. E. W. Turvey (Nunzi & Co., Ltd., London).

**Letters expressing regret at inability to attend** were reported from:—Mr. J. H. Harrison (Oughtred & Harrison, Ltd., Hull); Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd., Birmingham); Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow); Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool); and Mr. J. O. Wood (T. F. Wood & Co., Ltd., York).

The minutes of the previous Council Meeting held on January 13th, 1931, of which copies had been circulated to all members were adopted.

Most of the business of the meeting consisted of general routine matters, included in which were the following:—

**International Federation of Forwarding Organisations.** The Chairman reported that advice had been received that a meeting of this Federation had been convened for May 28th, 1931, at Amsterdam, and that the British Association of Shipping and Forwarding Agents had been invited to send a delegate. It was unanimously agreed that Mr. Frank J. Gerson should attend this meeting on behalf of the British Association of Shipping and Forwarding Agents.

**Correspondence.** The Secretary read a letter dated March 28th, 1931, which had been addressed to the New York Freight Forwarders' and Brokers' Association, referring to an article which appeared in a recent issue of the New York Journal of Commerce on the subject of suggested Government control of Freight Forwarders in the U.S.A., and asking for any information available on the matter.

**Certificates of Origin for Poland.** The Secretary gave a resumé of correspondence that had been exchanged with a member on the question of Certificates of Origin issued by British Chambers of Commerce, whereon under present procedure for goods consigned to Poland it was necessary to obtain a visa by the Polish Consul in London at a charge of 1 per cent. *ad valorem*. It was noted that certain other countries enjoyed facilities whereby goods were admitted into Poland upon the production of an official Customs document giving proof as to the origin of the goods, and no visa was necessary. It was considered that the 1 per cent. *ad valorem* could be regarded as an additional import duty upon British goods for Poland, and that Great Britain was thereby placed at a serious disadvantage as compared with other countries.

The Chairman stated that he understood that some action in this matter had already been taken by the Association of British Chambers of Commerce and the Board of Trade, and that it was still in abeyance. The Council considered, however, that the British Association of Shipping and Forwarding Agents might also press for some amelioration in the present conditions, and the Secretary was requested to take certain steps accordingly.

**Finance.** The Hon Treasurer gave a report on the present financial position of the Association, and stated that it was gratifying to note the promptness with which the subscriptions due from members for this year had been received, there being only a very few outstanding.

Referring to the Third Annual Report covering the year 1930, the Treasurer stated that members would have noticed that the Accounts on this occasion had been presented in a different form. It had been found necessary, by reason of the incorporation of the Association, for the Auditors to do this, in order to conform with the Companies' Act. The Chairman then moved "That the Auditor's Report and Balance Sheet for the year ending 31st December, 1931 (based on the figures furnished to them by the Hon. Treasurer), be received and adopted." Carried unanimously.

The Treasurer was authorised to pay certain outstanding accounts.

**Verein Deutscher Spediteure.** The Secretary reported the receipt of a copy of the Verein Deutscher Spediteure Year Book for 1931, containing useful information as to Agents' names and addresses, local associations, etc. Further copies may be obtained through the Secretary at a cost of 3s. each.

# Port of London Authority.

IN the May number of "The P.L.A. Monthly," the Editor, Mr. A. G. Linney (author of "Peepshow of the Port of London"), announces the imminent publication of his "Pocket Guide to the Docks of London."

"The aim has been to provide a small book (it *will* go into the masculine pocket) which shall tell in practical fashion how to get to the vicinity of the Docks, what is of interest to the sightseer, and what are the characteristics of each of the big Docks themselves.

"I have sought to furnish a very detailed description of what is to be seen by the voyager going down from Westminster Pier to Gallions Reach, and four contrasting walks by the riverside have been set out for the benefit of the rambler.

"There are half a dozen map-diagrams designed to reinforce the written description and a number of half-tone illustrations. This 'Pocket Guide to the Docks of London' will cost but a shilling, and it is issued by Newton & Company (Publishers), Ltd., 110, Strand, W.C.2.

"I have sought to make the Guide absolutely practical."

* * * *

Writing on the Food Supply of Great Britain, the Rt. Hon. Winston Churchill, M.P., says: "The leading grain markets in Britain are situated at the principal ports of entry. The London market is the world's largest grain buyer, both for Britain and Europe."

"London Corn Trade Association is a world-wide organisation; its contracts, designed specifically to cover imports from many and various sources of supply, are recognised and used by all countries."

* * * *

Remarking upon the record tonnage of vessels that used the Port of London last year, a contemporary writes: "London has again created a record as a port. The Berth of a Nation."

# News from the Ports.

**Burden on Foreign Trade.**—Liverpool Steamship Owners' Association replies to the contention of the Suez Canal Company that the dues represent 1 per cent. or 2 per cent. of the value of the bulk of the goods which pass through the canal, by pointing out that the dues do, in fact, amount, on an average, to no less than 13 per cent. of the gross freights on the regular outward and inward traffic. Vessels have to pay the same amount in dues as they would if fully loaded.

**Manchester Canal Traffic.**—Traffic receipts of the Manchester Ship Canal Co., for the month of March, were approximately £91,891, a decline of £14,968 from February of last year. The total for the first quarter of the year was £279,694, a decrease of £44,010. There were only three months in 1930 and none in 1929 or 1928 in which the total was below £105,000.

**Liverpool Shipping and Forwarding Agents' Association.**—At the last meeting of the Council of the Liverpool Shipping and Forwarding Agents' Association, further consideration was given to the much debated subject of shipping agents' commissions which, it is contended, has led to unfair competition with the business of bona fide shipping and forwarding agents. The Council has now sent letters to several of the steamship conference lines asking them to give attention to the matter; replies are now being awaited. It is expected that the conference officials will communicate with the individual steamship owners. The possibility of shipping and forwarding agents taking out an insurance policy to cover themselves against loss arising from clerical errors, particularly on consular documents, has led to inquiries being made in insurance circles. The Council of the Liverpool Association is now informed by Lloyds that they do not offer any such policy. The Council has, therefore, decided to take no further action. Lawyers advice on the rights of lien of shipping and forwarding agents has been obtained by the Council. Counsel's considered opinion has been obtained and is available to members of the Association on application to the Secretary, Mr. S. L. Jude. It has been decided to change the date of the monthly meeting of the Council from the third Monday in the month to the first Monday in the month, in order to meet the general convenience.

**Southampton Docks.**—Preliminary work on the gigantic graving dock being built at Southampton to accommodate the 73,000 ton Cunarder is proceeding apace, and apart from necessary dredging the site of the dock is being enclosed with interlocking steel sheet piling and temporary timber viaducts. Two trainloads of chalk for embankment making and filling-in purposes are received daily from the Company's quarry at Micheldever. So far as ocean-going passenger traffic is concerned, statistics relating to the 1930 carryings published by the Board of Trade show that the Southern Port claimed 35 per cent. of the total United Kingdom traffic compared with 36 per cent. in the previous year. Liverpool, which in 1929 claimed 27 per cent. of this traffic, dealt with 25 per cent. in 1930 and London took third place with 15 per cent. The Peninsular & Oriental Steam Navigation Company have decided to carry out an extended cruising programme from these docks this season. Two fine ships, the "Ranchi" and "Viceroy of India," will undertake the cruises which, commencing this month, continue until September 5th.

**Night Shifts at Middlesbrough Docks.**—Loading conditions at Middlesbrough docks have become so active that night shifts have been introduced. There have been big shipments of sulphate and steel rails latterly. One steamer had a cargo of 6,500 tons of steel made on Teesside and some 1,500 tons of coal, which is one of the biggest loads taken away from Middlesbrough by any one ship for some time.

**Tees Conservancy Commission.**—Mr. John H. Amos, General Manager of the Tees Conservancy Commission for 44 years, has resigned, though his services will be retained in a consultative capacity. Mr. Amos previously held positions with the old North Eastern Railway and with Newcastle Corporation and acted as General Manager of Newcastle Jubilee Exhibition. His successor is Alderman F. T. Nattrass (Mayor of Stockton), a member of the Commission since 1913.

**New £1,000,000 Mersey Dock.** — The most notable Merseyside event of the month has been the opening of the new £1,000,000 dock at Bromborough for Messrs. Lever Bros., by Mr. William Graham, President of the Board of Trade. During the six years the dock has been in construction, work has been provided for five or six hundred men. The dock itself, with its adjoining quays, occupies some 37 acres, flanked on the north and south by two large areas which have been enclosed by retaining walls and embankments and are being reclaimed from the Mersey. This reclamation will provide more than 100 acres of new land suitable for industrial development. The basin is rectangular in form and has a deep water area of about 18 acres. The depth of water provided in the dock is 35 feet at spring tides and one quay has been specially equipped as an oil quay. Beyond this quay is a tank installation capable of storing some 25,000 tons of oil. Altogether 2,975 linear feet of berthage is provided. All the berths are rail berths.

**Better Second Class Travel.**—The L.N.E.R. report that the second class accommodation on the Harwich—Flushing steamships of the Zeeland Steamship Company has been greatly improved. 1,000 sq. ft. of the promenade deck and 500 sq. ft. of the upper deck have been enclosed by large glass panels. The new shelter deck has accommodation for 115 seats whilst there are 75 seats on the open deck and room for 25 deck chairs. This compares with a total second class seating accommodation of 40 before the shelter deck was constructed. There is also 1,455 sq. ft. of space for motor cars.

**Importation of South African Cattle into Cardiff Docks.**—For the first time in the history of the port, Rhodesian cattle were landed at the Bute Docks, Cardiff, on April 26th last.—The Clan Liner, "Clan Morrison," with 400 head of cattle from Beira, Portuguese East Africa, berthed at the Great Western Railway Company's up-to-date cattle lairs at the Roath Dock, Cardiff. This importation does not, however, represent by any means the first arrival of live cattle at the Bute Docks, Cardiff, for many thousands have been dealt with there, particularly from Canada. Cardiff is one of the comparatively few ports in Great Britain at which live cattle may be imported, being licensed for this purpose by the Minister of Agriculture and Fisheries. Every facility is provided for this important branch of the import trade, and advantages are offered at Cardiff which are comparable with any of the cattle-importing ports.

**Liverpool Shipping and Forwarding Agents Inspect Mersey Tunnel Works.**—In consequence of the great interest taken by members of the Liverpool Shipping and Forwarding Agents' Association in the progress of the Mersey Tunnel works, arrangements were made by the secretary, Mr. S. L. Jude, for a party to inspect the tunnel workings. Close on 70 shipping and forwarding agents accepted the invitation and this necessitated the organisation of two parties. One of the principal tunnel engineers acted as guide and the party made an exhaustive tour of the tunnel, viewed all points of interest in the constructional work and traversed its entire length.

**White Star Line.**—In an interview recently, an official of the White Star Line stated that the Company have again made special arrangements for the tourist season this summer. "We have introduced a large number of improvements and innovations," stated the official, "including such amenities as all-night restaurant service in the "Majestic" and "Olympic," special cocktail bars, and late dancing facilities in the restaurants on these vessels, which are the result of a careful study of the American outlook and should prove very popular. In tourist third cabin accommodation in many of our vessels the public rooms have been modernised in many ways." The plans prepared to cater for the traffic from this country are well advanced and apart from the many extended tours available, the White Star Line this season, to meet the demand from this country for short holidays at sea, are organising 17 days tours to U.S.A. by means of the "Majestic", "Olympic" and "Homeric", the Company's express passenger and mail steamers from Southampton at a price within reach of the man in the street, the cost for the tour in Tourist Third Cabin accommodation being £49 10s. and upwards. These short tours, specially arranged to cater for those who are unable to devote more than three weeks to their holidays, enable passengers to make the 6,000 miles round-trip in one of these giant steamers, and have three or four days in America. The time ashore permits of a thorough exploration of New York itself with many attractive excursions, an example being a yacht trip round the Island of Manhattan.

**Reduction of Dues on Ships and Goods Entering the Port of Dublin.**—At a meeting of the Dublin Port and

Digitized by Google

Docks Board, Mr. Walter Baird proposed that from the 1st July next the dues on ships entering the port of Dublin be reduced in the following manner:—On foreign ships a reduction from 10¼d. per ton to 9¾d. per ton, and on cross-channel and coast-wise ships, from 6¼d. per ton to 5¼d. per ton. Furthermore, that dues on goods inwards be reduced from 100 per cent. of the schedule to 95 per cent. of the schedule, and on goods outwards, a reduction from 100 per cent. of the schedule to 90 per cent. of the schedule. The resolution was approved by the meeting.

**New Tyne Commissioner.**—Mr. John A. Greener, who has been elected to the Tyne Improvement Commission, vice Mr. J. E. Tully (retired), is managing director of Messrs. W. Mathwin & Son, coal exporters, of Newcastle, with whom he has been forty years. He is a director and past chairman of the N.E. Coast Coal Exporters' Association and a member of the Council of Newcastle and Gateshead Chamber of Commerce.

**Belfast Harbour Board.**—The auditor's report on the Belfast Harbour Board's accounts show total receipts in 1930 of £318,577 9s. 2d., as against £302,632 19s. 10d. in 1929, an increase of £15,944 9s. 4d. The payments were £238,178 0s. 5d., leaving a gross surplus of £80,399 8s. 9d. From this, sums of £10,738 16s. 3d., annual statutory contribution to sinking fund, and £9,671 1s. 2d., depreciation of plant, were deducted, and after other allocations, a net balance of £38,989 11s. 4d. was left, and this was transferred to the unappropriated receipts account.

**Bristol Port Authority.**—Figures issued recently by the Port of Bristol Authority show that more ships and more cargo tonnage entered the docks during the year ending March 3rd last than in the previous year. Nearly 8,730 tons more foreign shipping came into the port during the year, and the tonnage of coastwise ships increased by 36,626. The tonnage figures for imports and exports also show a considerable increase. Foreign tonnage handled during the period rose by 110,167 tons and the coastwise tonnage figures show an increase of 32,351 tons.

**Baltic Exchange. Election of Chairman.**—Sir F. Vernon Thomson has been elected Chairman of the Baltic Shipping and Mercantile Exchange in succession to Mr. John E. Parry, and Sir Herbert Robson has been elected Vice-Chairman. The practice is to alternate in the Chairmanships between representatives of the grain and shipping industries. Sir Vernon Thomson, who has been Vice-Chairman of the Exchange for the last three years, has various shipping interests. He is Joint Managing Director of Dodd, Thomson and Co., Limited, managers of the King Line, and he is a Director of the London Maritime Investment Company. Since 1923 he has been Chairman of the Documentary Committee of the Chamber of Shipping, which is responsible for the forms of charter used in the principal maritime trade routes of the world. He was Chairman of the London General Shipowners' Society in 1928-29, and is a member of the Committee of Lloyd's Register and of the Committee of the Royal Alfred Aged Merchant Seamen's Institution. Sir Herbert Robson is a Director of Ross T. Smyth and Co., Limited, grain merchants, and he is a Vice-President of the London Corn Trade Association.

**Shipping Display in Glasgow.**—A display of shipping, the object of which is to demonstrate the advantages of the port, will be one of the features of Glasgow's Civic and Empire Week, between May 29th and June 6th. The Admiralty, the Anchor Line, the Blue Funnel Line, and the Burns Laird Line are opening vessels to public inspection, and the Clyde Navigation Trustees are arranging for the decoration of the craft in the harbour. Between June 1st and 4th the Anchor liner, "Caledonia," at Yorkhill Wharf, and the Anchor-Donaldson liner, "Letitia," at Princes Dock, will be available to the public between the hours of 10 a.m. and 5 p.m. Both liners are Glasgow built and have a particular interest for Scots people. Permits for these visits will be issued by the Anchor Line and by the Manager for Civic and Empire Week, City Chambers, Glasgow.

**Monthly Steamer Service Between Java and South Africa.**—A Batavia message says that the steamship service between Java and South Africa has been put on a regular monthly basis by the decision of the Royal Mail Steam Packet Company to put two new ships on the route, the s.s. "Houtman" and the s.s. "Tasman."

## Publications Received.

THE ROADWAY GOODS TRANSPORT GUIDE. No. 1 of "The Roadway Goods Transport Guide" (price 25s.), has been published under the auspices of The Commercial Motor Users' Association. The Publishers are Roadway Time Tables, Bookings and Publications, Limited, 1, Warwick Street, Piccadilly Circus, W.1, in conjunction with Temple Press, Limited. It is a volume of 978 large quarto pages, to which Lord Brentford contributes the "Foreword" in the course of which he says "I welcome the publication of this unique Guide. I am satisfied that more and more suitable traffic will be diverted from the railways to the roads, and it will become more and more essential to know how and where to find the services required. This task the Roadway Goods Transport Guide fulfils." Some 750 pages are required for a directory of haulage contractors in England, Wales, Scotland and Ireland, arranged in alphabetical order of towns, and alphabetical sequence under each town, this directory giving the resources of each haulier in plant, the usual area of operation, regular services undertaken, and the branch depots or agencies. London has its own section, and as might be expected, the facilities offered by Carter-Paterson, and Pickfords are amongst the most prominent. Regular services of goods vehicles are shown by means of a comprehensive index. There is a section on Commercial Motor Law by Mr. F. G. Bristow, F.C.I.S., Barrister-at-Law, General Secretary to The Commercial Motor Users' Association, and another dealing with working costs of all kinds by Mr. G. Mackenzie Junner.

FRENCH-ENGLISH AND ENGLISH-FRENCH DICTIONARY. By J. O. Kettridge, F.S.A.A., A.C.I.S. (George Routledge & Sons, Limited, Broadway House, 68-74, Carter Lane, London, E.C.4. Complete in 1 volume, price 25s. net.). This is a very useful Dictionary of commercial and financial terms, phrases, and practice comprising mercantile business, exporting and importing, produce exchange transactions, transport and travel by water, land and air, customs, marine insurance, finance, banking, currency, foreign exchange and stock exchange transactions, company work, accountancy, income tax, secretarial and office work, postal, telegraphic and telephonic services, and allied subjects; also abbreviations in common use, conventional signs, weights and measures. The author points out in the preface that this volume is the outcome of a life-long study of the English and French languages, fortified by forty years experience in the City of London. It is not a compilation from existing French-English dictionaries, but a new and original production from radical and authentic sources. The book contains the translations of fifty thousand words, terms, and phrases, illustrated by numerous instructive examples, explanations, and commentaries, the whole arranged in progressive alphabetical order in the readiest form for rapid reference.

F.B.I. REGISTER OF BRITISH MANUFACTURERS, 1930-31. The 1930-31 edition of the F.B.I. Register of British Manufacturers, edited by Ernest A. Nash, A.C.I.S., and published by the Federation of British Industries, 39, St. James's Street, London, S.W.1, is a comprehensive volume. The book is arranged in six sections, viz:—(1) Introductory, a general survey of the organisation and activities of the Federation; (2) Products and Services; (3) Addresses; (4) Trade Associations; (5) Brands and Trade Names; (6) Advertisements. The F.B.I. exists to encourage and develop British Manufacturers, and to safeguard the interests of British producers both at home and abroad. Nothing that concerns the welfare of British Industry falls outside its scope. It is a voluntary association of Manufacturers and Producers for the promotion of their several and mutual interests.

HOW TO MAKE THE BRITISH RAILWAYS PAY—AN ECONOMIC SURVEY. By M. F. Farrar, with a foreword by Professor J. H. Jones, M.A., Professor of Economics and Head of the Commerce Department, University of Leeds. (Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, London, W.C.2. Price 3s. 6d. net.) In this book the author attempts to indicate a way back to the former prosperous condition of the railways, largely by co-operation with the newer forms of transport, and by the alteration of the system upon which the railway rates and charges are based. In the preface the author says that in his opinion the present charging system of our railways is out-of-date, and he introduces to the notice of his readers a scheme for a new system. He says that if we allow our railways to be nationalized, we shall do ourselves a very bad turn and that it should not lie beyond our capacity to make the railways an efficient paying concern. In view of the issue recently of the Report of the Committee on Main Line Electrification, the chapter in this book entitled "Railway Electrification" is of particular interest. "At present" says Mr. Farrar, "Co-ordination and rationalization are the order of the day in the British electrical industry. But a great mistake is being made in the application of rationalization. The railways are being left outside, whereas they should form the very basis of the country's electrification scheme . . . . the question the community must try to answer is not 'Should the railways be electrified?' but rather, 'Why has the electrification of the railways not been considered jointly with the national grid scheme for the country?'"

# Railway Notes and News.

**The Railway Barometer.**—The railway traffic receipts of the four group railway companies have now been published for the first 17 weeks of 1931 compared with the same period in 1930 and 1929, and are as under:—

| | 1931 | 1930 | 1929 |
|---|---|---|---|
| | £ | £ | £ |
| Passengers ... | 19,673,000 | 21,137,000 | 21,378,000 |
| Merchandise, etc. | 18,042,000 | 21,057,000 | 21,371,000 |
| Coal, coke, etc. | 11,252,000 | 12,178,000 | 12,671,000 |
| Total ... | 48,967,000 | 54,372,000 | 55,420,000 |

**Summer Holidays. Railways Ready for the Rush.**—The British railway companies are this year placing before the public great opportunities for holiday-making. Months of careful consideration have again been given by each of the four groups to the improvement of the excursion traffic. Everything is now in readiness throughout the country for the Summer holiday rush. Here are some of the outstanding features of the railway programme for this summer:—cheap fares, faster trains, earlier holiday expresses, frequent excursion services, extension of return excursion facilities, interavailability of rail and motor coach tickets, holiday season tickets, more powerful locomotives, more restaurant cars, new steamers, accelerated continental services, special provision for motorists by rail and sea.

**Saving the Minutes.**—What is claimed to be the greatest acceleration of local services in the history of the British railways comes into operation on July 20th next, with the introduction of the G.W.R. summer service. Hundreds of trains throughout the entire system embraced in the London—Birkenhead—Penzance Triangle will be accelerated in some cases by as much as 15 minutes, and totalling in the aggregate 2,340 minutes each weekday. Speed has always been a feature of the Great Western Railway. This summer over 5,000 miles will be covered daily (Sundays excepted) by 62 expresses at "start to stop" speeds of 55 to 66.2 m.p.h. and include the "Cheltenham Flyer," the world-famous "Cornish Riviera" and "Torbay Limited" expresses, and the Birmingham and Bristol 2-hour expresses.

**Big Contract for G.E.C.**—The General Electric Co. has been awarded the contract for the equipment of four new traction sub-stations for the London Electric Railway Co. at Sudbury Hill, Alperton, North Ealing, and Northfields.

**Railway Economies.**—A statement was recently made in the Press that representatives of the London, Midland & Scottish Railway and the London & North Eastern Railway Companies were discussing the "pooling" of certain services so as to avoid needless competition. Later, the following statement was issued by the London & North Eastern Railway headquarters in London:—"The statements published regarding proposed working arrangements between the L.M.S. and the L.N.E.R. are not authentic. The two companies are considering how by co-operation the traffic common to both can be worked at the lowest cost subject to the requirements of the public and the traders. The negotiations are in a preliminary stage only, and no schemes have been laid before the boards of the respective companies."

**British Railways.**—Mr. William Whitelaw, Chairman of the London & North Eastern Railway Company, speaking at the inaugural meeting of the Railway Students' Association, held in Edinburgh recently, said that by talking among themselves about railway affairs the students would probably get into the habit of talking about them outside, and so they might dispel the appalling ignorance on the part of the public about railway matters. Major Stemp, Superintendent, L.N.E.R., Edinburgh, in the course of an address on "Railways—What of their Future?" said the traffic of the weeks of the present year which had passed continued to show a further steady decline, and the question arose, How were the railways to make ends meet? In the first place, the most desirable of things as it appeared to him would be a revival of the world's trade. It seemed to him that railways would be forced to seek for a greater elasticity in the matter of rates and charges, and adopt methods less cumbersome in coming quickly to terms with the trader if they were to compete on more level conditions with the road haulier. Much had already been done to reduce the cost of operation, and many schemes with that object in view were under close investigation, but the search for even greater economies in this direction must be still more intensive in the future. It seemed to him in these days of rationalisation of industry, rationalisation of railways would also need to be resorted to. This might be in the form of a further amalgamation into one concern controlled by some form of Government legislative control, or even by national purchase. That amalgamation yielded a wide field, for economy could not be disputed.

**Quicker Routes to the Continent.**—The L.N.E.R. announce that commencing to-day (May 15th), greatly accelerated services will be in operation between Liverpool Street and the Continent via Harwich. The journey time to destinations in Western Germany and Southern Europe will be reduced by periods of 45 minutes to no less than 7 hours. Travellers to Cologne will save 1 hour 17 minutes, to Vienna 3 hours 40 minutes; Budapest 6 hours 52 minutes; to Trieste 6 hours 15 minutes; Carlsbad 4 hours 30 minutes; Cassel 6 hours 41 minutes; with corresponding accelerations to other towns. From the same date through Pullman cars will be run from Flushing to Amsterdam in connection with the boat from Harwich, and this service will be accelerated by 33 minutes.

**Southern Railway Magazine.**—The April number of the Southern Railway Magazine contains a very interesting article by Mr. J. Clayton, M.B.E., M.I.Mech.E., entitled "Modern Locomotives of the Southern Railway" and some excellent photographs including one of the "Lord Nelson" are reproduced. Another outstanding article in this number deals with the inaugural trip of the T.S.S. "Autocarrier," the Southern Railway Company's new cross-Channel steamer built specially for the conveyance of motor cars and their passengers.

**Contracts Placed by G.W.R.**—Contracts to the value of £240,000 have recently been placed by the G.W.R. These include important works in connection with the £8,500,000 schemes now in hand at Paddington, Cardiff, Swansea, Bristol and Taunton. Amongst the orders placed are the following:—Supply and delivery of 5 Ford 30 cwt. tipping trucks for use at Theale—R. Pratt & Co., Sutton, Surrey; supply and delivery of 12 Fordson tractors for general use—R. Pratt & Co., Sutton, Surrey; five cob tractors for experimental use at Paddington Goods—Karrier Motors, Ltd., Huddersfield.

**International Colonial Exhibition, Vincennes, May to October, 1931.**—With the view of attracting visitors from France to Great Britain the British railway companies have prepared an illustrated folder in English and French for distribution at the Vincennes Exhibition, which was opened to the public on May 7th. This holiday booklet has been issued on behalf of all the British railways and an endeavour has been made to present in handy form descriptions of all that is best in Great Britain from a scenic, historic or romantic point of view and likely to attract visitors, at the same time indicating the comfort, speed and safety with which these places can be reached by rail. As a further instance of co-operation it may be mentioned that arrangements have been made for the booklet to be distributed at the stand of the Travel Association of Great Britain and Ireland.

**Retirement.**—After more than 45 years service, Mr. W. T. Aldred, City Agent of the L.M.S. Railway in Manchester, has retired..

**London & North Eastern Railway Magazine.**—The May issue of the London & North Eastern Railway Magazine contains a very interesting article entitled "Associated Road Companies in the Southern Area," by Mr. G. F. Thurston, Divisional General Manager, Southern Area, and in addition to this the following make attractive and informative reading:—"New Machinery at York Carriage Works"; "The Launch of the P.S. 'Jeanie Deans'" with an illustration; "Railway v. Road," and "How to Make the British Railways Pay." As usual this issue is well illustrated.

**Canadian Pacific Earnings for March.**—The Canadian Pacific Railway gross earnings for March amounted to 12,002,263 dollars, and expenses to 10,482,087 dollars. The net earnings were thus 1,520,176 dollars, showing a decrease of 619,541 dollars as compared with a corresponding period last year. The decrease in gross earnings as compared with March, 1930, was 2,513,534 dollars.

**A Useful Publication.**—The L.N.E.R. List of Agricultural Shows, Live Stock Sales, Markets, etc., for 1931, has just been issued and may be obtained free at L.N.E.R. stations and offices. The booklet contains lists of shows, sales and markets in England, Ireland, Wales and Scotland, auctions, principal events in London, and full information regarding the conveyance of all kinds of live stock and farm produce.

# Air Transport Notes.

**Civil Aviation.**—Speaking at the Fourth Annual Dinner of the Air League of the British Empire, held in London recently, Lord Amulree, Secretary of State for Air, said he was afraid that this year civil aviation would have to take its chance with the rest so far as monetary assistance was concerned. There were critics who contended that the development of British air transport was too slow. The determination to build slowly, but surely, seemed to him typical of the British character. Showy window dressing without attracting substantial and enduring custom had been demonstrated to be a very short-sighted policy. And, after all, if one looked at the map, the picture of our activities represented a very considerable achievement. While the beneficent work of aviation in promoting international understanding was maturing they were bound to recognise that flying had complicated these problems of defence, and of the security of these islands and of the Empire as a whole, which no Government could afford to ignore. It was most earnestly to be hoped and striven for that the development of aviation in the coming years should be so guided and governed as to remove the menace of a new and perilous competition between civilised nations in the form of air armaments.

**Air Travel.**—The need for youth in business and the development of aviation were two of the subjects discussed at the Third Annual Dinner of the Northampton and County Junior Chamber of Commerce held recently. The guest of the evening was Mr. G. E. Woods Humphrey (Managing Director, Imperial Airways, Ltd.), and he pleaded for the dissipation of prejudice against air travel, and said that Northampton must feel ashamed at not having a municipal aerodrome. British trade and commerce needed the drive, determination, and enterprise which built up the British Empire. These qualities could be obtained from modern youth. "If we were as air-minded as we are rail-minded and sea-minded, we would have no fear for the future," he said. He declared that the inauguration of air services all over the world would help British trade. That, however, needed drive and determination. "One of our hardest jobs in air transport," he asserted, "is to live down prejudice. I am looked upon usually when I talk on air transport as a sort of fanatic." Railways, when introduced, could not pay their way. Airways could not pay their way, but they could see the time when they would be able to pay. "You," he continued, "can help to overcome prejudices by spreading the gospel of air-mindedness. Imperial Airways," continued the speaker, "aimed at the development of Empire routes. India had been brought within six or seven days of this country, instead of two weeks by surface transport. East and Central Africa had been brought within seven days, compared with two to three weeks, and Australia would be brought to within 1½ weeks, compared with a month or five weeks. The burden of taxation on industry to-day made one hesitate to press for greater expenditure on air subsidies and development, but as a nation we could not afford to be left behind."

**Australia unable to Subsidise Air Mail.**—A Canberra message says that replying to a question in the House of Representatives on April 30th, Mr. Scullin, the Prime Minister, said he had informed both Imperial Airways, Limited, and the Dutch Air Mail Company that the Australian Government was unable to subsidise any air mail services.

**India's Aeroplanes.** — The Government of India has placed an order in Britain for a fleet of Avro Armstrong-Siddeley passenger aeroplanes for use on State-operated air services in India.

**"Baltic Air Express" Inaugurated.**—A new air line, "The Baltic Air Express," was inaugurated at Antwerp on May 1st. The new service is an extension to Scandinavia of the line from London to Hamburg. Among those who were present at the inauguration ceremony were the Duke and Duchess of Brabant, M. Lippens, the Belgian Minister of Transport, and members of the Consular Corps.

**You Can Have:** High speed by increasing aerodynamic efficiency as in a racing monoplane in which drag has been reduced to the lowest point; or You Can Have: Low landing speed by decreasing aerodynamic efficiency, for example, by using rotating wings, or by decreasing wing loading. But you cannot have both high speed and low landing speed together unless you have Handley Page wing slots and wing flaps. These afford the only means yet discovered of incorporating in the same aeroplane the advantages of high top speed and low landing speed.—*Handley Page Bulletin.*

**Ford Aerodrome at Arundel.**—It is officially announced that Ford Motor Company, Ltd., has acquired the lease of the aerodrome known as Ford Aerodrome situated at Arundel, Sussex. Although no announcement has been issued indicating the proposed date for the commencement of operations it is understood that machinery and personnel are being installed and that the site is to be used as a Service Aerodrome for Ford aircraft throughout Europe. This venture is under the immediate control of the London Office and plans are in hand to fit the aerodrome out for its new purpose.

**Imperial Airways.**—Imperial Airways, Ltd., Charles Street, London, S.W.1, have issued a pamphlet entitled "Notes for the comfort and convenience of passengers." Amongst the useful hints and tips are the following:—Your ticket can be booked at any Imperial Airways office or aerodrome, or with any of the travel agencies at the published fares. The fares cover the cost of conveyance in a comfortable saloon car from the town office to the aerodrome. Your seat is automatically reserved on payment of your fare. There cannot be crowding in aircraft; it is "limited" travel. Your baggage up to any normal quantity can be taken with you. Large quantities can be sent on ahead, or, if you desire, Imperial Airways can store it for you at your convenience. Any of the Company's offices or agents will tell you of the baggage regulations, the free allowance and charges for excess. The following is a list of the principal British and Foreign Companies operating air lines from Croydon:—Imperial Airways—the only British service between England and Paris, Basle, Zurich, Brussels, Cologne, Egypt, Palestine, Iraq, Persia, India, The Sudan, Central and South Africa. Deutsche Luft Hansa—the German National Service between London, Amsterdam and Berlin, and the German network of air lines. S.A.B.E.N.A.—the Belgian National Company operating between London, Ostend, Brussels, Antwerp, Cologne, etc. K.L.M.—the Dutch National Line between England, Holland and Scandinavia. Air Union—a French National Company, which operates to Paris, Marseilles and Switzerland.

**Imperial Airways Statistics.**—The April-May issue of *Imperial Airways Gazette* contains the following statistics (including the European and England-India and England-Africa Services):—

| From April 1st, 1924, to March 31st, 1931. | |
|---|---|
| Miles flown ... ... ... ... | 7,010,577 |
| Passengers carried ... ... ... | 170,159 |
| Freight carried (tons) ... ... ... | 6,139 |
| Total route mileage, including N. African service ... ... ... | 11,453 |

**Amsterdam—Batavia Line.**—The K.L.M. air mail and passenger services between Holland and her Colonies have run with great regularity for some considerable time, fortnightly departures being made from each end. The schedule for the 8,000—9,000 mile single trip was at first twelve days, but has recently been reduced to ten. The machines used are all tri-motor Fokker monoplanes, well-known on the European services of K.L.M., and range from the eight passenger F.VIIb. type to the sixteen passenger F.XII with three Wright Whirlwind 420 h.p. engines, and the F.IX twenty passenger plane with three Bristol Jupiter engines. All these machines are capable of flying on any two motors when fully loaded, and the F.XII has a cruising speed of 120 m.p.h. It is considered essential to have high speed for long distance mail lines. So popular has this service become, both in the Netherlands and in the Dutch Indies, that this fortnightly service will possibly become a weekly one. *K.L.M. Lines.*—The K.L.M. Royal Dutch Air Lines caters rather for the business man than for the tourist or the pleasure traveller, though a great number of the latter classes make use of the services. Of special interest to business travellers are the following K.L.M. services:—*The Scandinavian Air Express* in conjunction with A.B.A. which brings Copenhagen within six and a quarter hours of London, enabling passengers to breakfast in London and dine in Copenhagen. Malmo is also connected with London by this service. *The London-Berlin Line,* which leaves Hotel Victoria, London, at 11.30 a.m. and Croydon Aerodrome 12.30 and which has been arranged to afford business men the opportunity of perusing their morning mail and making the day's arrangements in London before leaving. *The London-Rotterdam-Amsterdam Service* leaving Hotel Victoria 6 p.m. and Croydon 7 p.m., which allows a full working day in London and a comfortable night's rest in Holland instead of the night being spent in travel.

**Road Traffic Regulations.**—The Secretary to the Ministry of Transport announces that the fee for inspecting, copying, or taking extracts from the duplicate copies of the record of licences granted or backed by the Traffic Commissioners, under the Public Service Vehicles (Records of Licences) Provisional Regulations, shall be one shilling in respect of each duplicate copy.

**Western Transport Company.**—The Western Transport Company (formerly Wrexham and District Transport Company, Ltd.) reports revenue for the year 1930 amounting to £134,436, as compared with £97,183 for 1929. After deducting all expenses and setting aside £17,200 to renewals account, there remains £4,578, which, added to £7,792 brought forward, makes available £12,371. The directors recommend a dividend on the ordinary shares of 4 per cent. (against 2½ per cent.), leaving to be carried forward £7,371. During the year the capital was increased from £125,000 to £175,000, and the Great Western Railway Company acquired a joint interest in the company equal to that of Tilling and British Automobile Traction. At the same time, the Western Transport Company acquired the omnibus undertaking which the Great Western Railway Company had been operating in the district.

**FORTHCOMING EVENTS.**

**F.W. & R.A. Elections to Membership.**—The following firms have been elected to membership of the Furniture Warehousemen and Removers' Association:—Mr. Ernest Bennett (trading as Harry Wilson), 63, Cobwell Road, Retford, Notts.; Messrs. H. J. Goodman & Son, Avebury Avenue, Tonbridge, Kent.

**Leyland "Tiger" fitted with Special Pantechnicon Body.**—We illustrate a Leyland "Tiger" chassis fitted with special pantechnicon body supplied recently by G. N., Ltd., Motor Engineers, 300, Balham High Road, London, S.W.17, to Mr. S. E. Collis, of 1, Lawn Terrace, West Kensington, London, W.14. The body, built by Messrs. Jessups (Motor Bodies), Ltd., of Sugar House Lane, Stratford, London, E.15, measures 21 feet behind the driver, is seven feet wide and over 8 feet in height. A locker is fitted on the rear of the body to accommodate a spare wheel and there are four other lockers on the nearside for carrying petrol cans, tools, etc. Two spare tip-up seats, facing one another, are fitted on the near inside of the cab to accommodate two extra men. The retail price of the vehicle is £1,400.

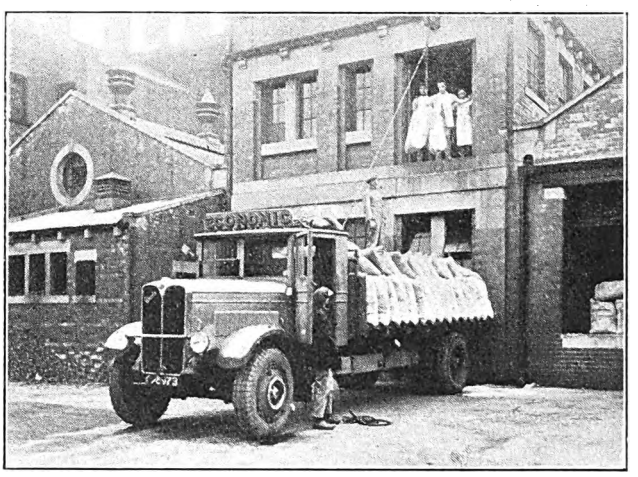
**Traffic Commissioner—Metropolitan Area.**—The offices of the Traffic Commissioner, Metropolitan Area, are at Gaywood House, Wood Street, London, S.W.1.

**International Container Competition.**—The jury of the competition organised by the International Chamber of Commerce for the establishment of the best container system has recently met in Paris. It has retained eight designs of six constructors who are to submit final models before July 15th next. These models are to be tested on lorries, trucks and boats at London or Berlin before the end of July. The jury will then meet again and decide on the model which it considers the most satisfactory, i.e., it will choose the model the uniform adoption of which will be recommended to highway, railway and maritime transport organisations.

**The Traders' Traffic Conference.**—We have received from Mr. H. H. Mansfield, the Secretary of the Traders' Traffic Conference, whose offices are at Birmingham, a booklet giving the objects of the Conference and the Rules of the Association connected with it. The list of members, which appears at the end of the booklet, shows that the Conference is supported by leading firms of manufacturers and merchants in all branches of business throughout the country. The Conference was founded in 1911 and incorporated in 1915. Its particular objects are to promote and to protect the trade and commerce of the manufacturers of the United Kingdom: to consider all questions connected with trade, commerce and manufactures and particularly to investigate all matters on railway and other traffic facilities. Any of our readers who are interested in this Conference can obtain further information on application to Mr. H. H. Mansfield, at 34, International Exchange, Edmund Street, Birmingham.

**A Unique Vehicle.**—It is becoming an increasing practice for operators to make their vehicles adaptable for several forms of service. A particularly good example is furnished by the A.E.C. "Majestic" platform lorry, recently supplied to The Economic Stores (Halifax), Ltd. This vehicle has to operate under circumstances which necessitate hoisting up its loads to second storey storerooms. This arrangement would entail a great deal of handling time on the part of the driver and mate if mechanical means were not available for lifting the load quickly and easily. The manner in which this is carried out is worthy of notice. An extended shaft, taken from the gear box, supplies the power for driving the capstan

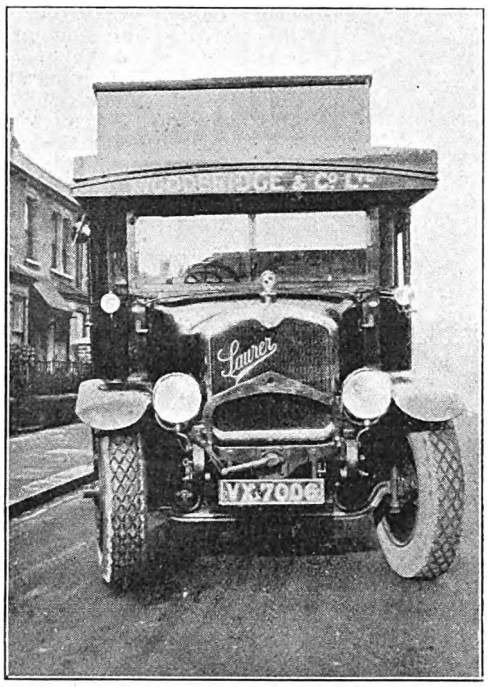
LEYLAND "TIGER" FITTED WITH SPECIAL PANTECHNICON BODY SUPPLIED BY G. N. LTD.—BODY BY JESSUPS (MOTOR BODIES), LTD.



THE A.E.C. "MAJESTIC" REFERRED TO IN TEXT.

Digitized by Google

or winch which is located beneath the offside door of the cab. A rope, carried in the cab, is passed round this, and the other end put through the pulley on the beam fixed above the door of the storeroom, to which the load has to be hoisted. A chain is then attached to the rope and passed round the goods to be lifted; a slight tightening of the rope around the winch lifts the load easily and quickly. A load usually consists of about 300 lbs. of foodstuffs, over 1,000 sacks of which are handled by the vehicle every week. Such is the power supplied by the 110 h.p. 6-cylinder engine of the vehicle that to operate the winch efficiently it is only necessary to leave the engine running at idling speed. In the event of the rope becoming fast, the winch can be cut out of action by means of the clutch.



A "SAURER" IN THE SERVICE OF WOODBRIDGE & CO., LTD.

**Saurer Vehicles in Use.**—We are reproducing two photographs of Saurer vehicles which are in constant use by two of our readers. These vehicles are familiar to those directly concerned with road transport and have a very high reputation amongst users. Messrs. John Walsh, Ltd., of Sheffield, who have advertised their removal department in our Classified Directory for many years, state that after twenty-five years' experience they find

JOHN WALSH'S 5-TON "SAURER" SUPPLIED IN 1924.

the Saurer one of the very best propositions that any one in their class of business can select. In 1924 they took delivery of the 5-tonner, which we reproduce, and which was fitted with solid tyres. This vehicle is still being operated, but it has been converted to pneumatics. Another Saurer which this firm employs is the well-known 6-tonner. The other photograph shows a Saurer vehicle running in the service of Messrs. Woodbridge & Co., Ltd., experts in foreign removals as well as general removal and storage contractors and packers, of 149, Mornington Road, Leytonstone, London, E.11.

**Bosch, Ltd.**—Messrs. J. A. Stevens, Ltd., announced recently that as from April 1st last their business was being conducted under the name of Bosch, Ltd. Arrangements have been made for the formal voluntary liquidation of J. A. Stevens, Ltd., but the business will be carried on without interruption and the entire staff remains with the new company, the offices being at Upper Rathbone Place, London, W.1, as hitherto.

**Royal Patronage.**—His Majesty The King has been graciously pleased to grant his Patronage to the International Motor Exhibition and Commercial Motor Transport Exhibition organised by The Society of Motor Manufacturers and Traders, Ltd.

**British Motoring Honours for Argentine** President.—In the course of his visit to the British Motor Exhibit, which formed part of the Buenos Aires Trade Exhibition, the President of the Argentine Republic was pleased to accept an invitation to become a Vice-President of the Royal Automobile Club. H.R.H. The Prince of Wales himself presented the President with the Club's badge for use on his car, and a special replica of the R.A.C. badge suitably inscribed and mounted as a paper weight was presented to him on behalf of the R.A.C. and the Society of Motor Manufacturers and Traders as a memento of the occasion.

**Testimonial for Albions.**—The Birmingham branch of

AN ALBION 24 H.P. 30-CWT. SUBSIDY LORRY BELONGING TO HAINE & CORRY, BUILDERS, GLOUCESTER.

the Albion Motor Car Co., Ltd., recently received a letter from Haine & Corry, Southgate House, Gloucester, in connection with the 24 h.p. 2-tonner which we illustrate. In the course of their letter Messrs. Haine & Corry say:—"We take this opportunity of expressing our satisfaction with the lorry. It has just completed 103,000 miles. . . . We have just had her overhauled and painted and she has several times to-day been taken for a new lorry. The engine is almost as silent as when new." Mr. George Waddacor, haulage contractor and coal merchant, Man-

ONE MODEL 34 AND THREE MODEL 35 ALBIONS, BELONGING TO GEORGE WADDACOR, HAULAGE CONTRACTOR, BRADFORD, MANCHESTER.

chester, uses a number of Albion machines including three of the latest 4-ton Overtype models and one machine of similar load capacity but of the bonnet type. These vehicles are shown in our other illustration.

**New Address of Tecalemit, Ltd.**—Tecalemit, Ltd., announce that as from May 2nd, their address is changed to Tecalemit, Ltd., Great West Road, Brentford, London, Telephone, Ealing 6661.

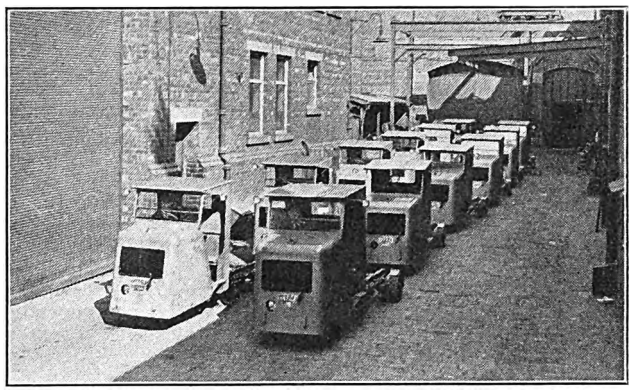
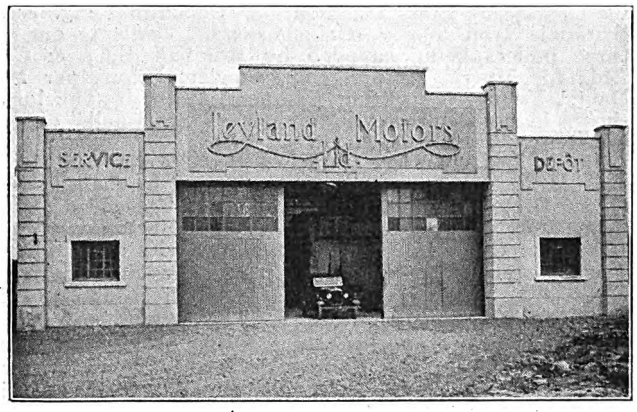
**Karrier "Cobs" for the L.M.S.R.**—Production of the Karrier "Cob" is now proceeding apace, and Karrier Motors, Limited, Karrier Works, Huddersfield, are effecting deliveries daily. Among others, orders have been received from the L.M.S. and L.N.E. railway companies, and our photograph shows a batch of "Cobs" for the L.M.S.R. ready for leaving Karrier Works. We might also mention that a considerable number of agencies have been fixed up to handle this particular product in various parts of the country, but certain districts are still uncovered. All correspondence relative to the "Cob" should be addressed to Dept. "C" at the Company's Head Office as above.



A BATCH OF KARRIER "COBS" FOR THE L.M. & S. RAILWAY.

**A New Form of Prime Mover.**—On Thursday, June 4th, a paper is to be read before the Royal Society of Arts, John Street, Adelphi, W.C.2, by Mr. J. F. J. Malone describing a new form of prime mover and its uses for locomotives, marine and other engines. The principles of this new type of engine, which derives its motive power from the expansion and contraction of fluids, will be fully demonstrated. The meeting will be held at six p.m., and the Chair will be taken by Mr. Llewelyn B. Atkinson, M.I.E.E., Assoc.M.Inst.C.E., a Vice-President of the Royal Society of Arts.

**Leyland Service Depot at Plymouth.**—The new service depot at Plymouth, constructed by Leyland Motors, Ltd., Leyland, Lancs., is now open for the servicing of Leyland vehicles of all types and the supply of spare parts. The address of the depot is Marsh Mills, Plympton, near



LEYLAND SERVICE DEPOT AT PLYMOUTH.

Plymouth, and the telephone number is Plympton 202. Our photograph shows the front of the building.

**Safety Week Competition. £5,000 in Prizes to Popularise the Highway Code.**—The Development Fund Committee of the National "Safety First" Association, of which Mr. Gordon Stewart is Chairman, has been constituted as follows:—Mr. Gordon Stewart (Chairman); Sir Gerald Bellhouse, C.B.E.; Mr. A. Hume Nicholl, C.B.E., J.P.; Sir Charles Igglesden, J.P.; Sir Henry Maybury, G.B.E., K.C.M.G., C.B.; Mr. W. B. Phillips, and Lieut.-Col. J. A. A. Pickard, D.S.O. (General Secretary). The chief work of the Committee is the organisation of the Association's Competition to popularise the Highway Code, for which prizes to the value of £5,000 are being offered. The Competition opened on the first day of Safety Week, May 11th last and closes on July 15th. The whole of the prize money has been guaranteed by Mr. Gordon Stewart. The offices of the Association are at 119, Victoria Street, London, S.W.1.

**Where to Stay When in Edinburgh.**—The Edinburgh Corporation have published a very interesting booklet for the purpose of providing information for visitors who desire to spend a holiday in the City. Mr. F. A. Fitzpayne, the City's Transport Manager, contributes the preface. The lay-out of the booklet is attractive and there are many excellent illustrations. A copy of "Where to Stay When in Edinburgh" will be gladly sent to any of our readers who will make application. Communications should be addressed:—"Apartments Booklet," Transport Offices, 2, St. James' Square, Edinburgh.

**H. C. Bauly, Ltd. New Address.**—H. C. Bauly, Ltd., well-known to road vehicle users for many years past, are removing from their present premises to new works at Eleanor Street, Mornington Road, Bow, where they will have every convenience for attending to repairs to motor vehicles.

**Pagefield Commercial Vehicles.**—The head offices of Pagefield Commercial Vehicles, Ltd., are now at Pagefield Works, Wigan, and not at the Stoke-on-Trent address, and all communications to the Company should be addressed to Wigan.

**A "Commer" for Haulage Contractors.**—Our photograph shows a G.5. 5-ton lorry recently delivered to Rowlatt Bros., haulage contractors, St. Neots, Hunts., by Commer Cars, Ltd., Luton. The vehicle is fitted with

ROWLATT BROS. G5 5-TON "COMMER."

detachable sides, so that it becomes converted into a flat platform lorry, and our illustration depicts the vehicle carrying a sling van.

**Birmingham and Midland Motor Omnibus Company, Ltd.**—The 26th annual meeting of the Birmingham and Midland Motor Omnibus Co., Ltd., held in London recently, was presided over by Mr. R. J. Howley, C.B.E., M.Inst.C.E. (chairman and managing director). The net traffic and other receipts amounted to £386,000 and showed an increase of £67,000 on the corresponding figures for the previous year. The sum of £113,000 paid by the company in respect of Road Vehicle Duty and Petrol Tax averaged £120 per omnibus per annum.

**An Appeal for Unity.**—An appeal for unity and organisation in the road transport industry was made at the first annual dinner of the Swansea and District Road Transport Association, which was held recently at Swansea. Mr. Frank Taylor, the Chairman of the Association, presided, and the principal guest was Mr. R. P. Bailey, Secretary of the National Road Transport Employers' Federation and the London Cartage and Haulage Contractors' Association. Mr. Bailey spoke of the effect of the Road Traffic Act upon the road transport industry, and remarked that Part 1 of the Act had many shortcomings and failed to meet the requirements of the industry. He thought that the maximum speeds permitted to vehicles weighing over 2½ tons were inadequate.

**Traffic Commissioners for the South-Eastern Traffic Area. Change of Address.**—The offices of the Commissioners for the South-Eastern Traffic Area have been removed to Gaywood House, Wood Street, London, S.W.1.

Digitized by Google

**Motor Wheels at the Science Museum.**—Three additions have been made to the motor car wheel exhibit at the Science Museum, South Kensington. They have been supplied by the Dunlop Company and are a section of the Dunlop pressed steel artillery wheel, showing construction, the original B.D. wire wheel, Neales Patent, 1920, and the "Magna" wire wheel. The exhibit illustrates the development of the car wheel from its earliest stages and examples of new developments are added from time to time.

**R.A.C. Tourist Trophy Race.**—Considerable confusion has been caused by a statement that the R.A.C. Tourist Trophy Race would this year be held on 22nd September. The R.A.C. states that the date of the Race is Saturday, 22nd August, and that practice will take place on the mornings of Wednesday and Thursday, 19th and 20th August respectively.

**Thos. Cook & Son, Ltd.**—Mr. W. S. Highton, Financial Manager and Secretary of Thos. Cook & Son, Ltd., having retired, Mr. E. J. Wallman has been appointed Secretary and Mr. A. J. Isaac Chief Accountant.

**Railways and Road Transport.**—Mr. F. C. A. Coventry, Mr. C. R. Dashwood, and Mr. J. Milne, representatives of the Great Western Railway Company, have been elected directors of the Western Transport Company (formerly Wrexham and District Transport Company, Ltd.).

**Thornycroft for Timber Haulage.** — Our photograph

THORNYCROFT FOR TIMBER HAULAGE.

shows a Thornycroft 3-ton rigid six-wheeled lorry owned by Messrs. Evan Jones & Sons, timber merchants, of Portmadoc, North Wales, which has recently completed a big haulage job in some local woods. This involved the transport of timber which was lying in a dingle up a steep gradient rising to 1 in 4 with soft ground all the way until reaching the nearest lane beyond. Our picture taken whilst the work was in progress shows the vehicle rounding a curve on its way up.

**Shire Horse Society.**—A Meeting of the Council of the Shire Horse Society was held in London last month. Mr. N. W. Smith-Carington, M.P., was installed as President of the Society, and Mr. Thomas Forshaw was formally elected as President-Elect, i.e., President in 1932. Mr. Thomas Wareing, of Peel, Blackpool, was elected as Steward of the London Show for the ensuing three years. Mr. W. E. Cox, Mr. George Gotheridge, Mr. John Flowers, Jun., and Miss G. H. Webb-Peploe were elected Judges of the Shire section of the London Cart Horse Parade, while Mr. J. Morris Belcher and Mr. James Gould are being invited to represent the Society at the Liverpool Horse Parade to be held in conjunction with the Royal Lancashire Show at Liverpool this year. Donations of £5 5s. and £3 3s. were made to the National Horse Association and the London Van Horse Parade respectively. The vacancy occurring in the Council by the election of Mr. Thomas Forshaw as President-Elect was filled by the co-option of Lieut.-Col. T. W. Daniel, D.S.O. 71 new members were elected.

**Scottish Horse and Motor Men's New Wages Agreement.**—After negotiations, an agreement for the stabilising of wages has been reached between the general carting contractors of Scotland and the Scottish Horse and Motor Men's Association. Wages in Glasgow are to remain unchanged, but elsewhere the rates are to be raised to the Glasgow level. Under the new arrangement Leith and Kirkcaldy men are to receive an increase of 2s. a week; Aberdeen men an increase of 1s. 6d.; Edinburgh, Kilmarnock, Ayr, and other districts outside Glasgow, an increase of 1s. per week as from the first pay day in April last. All these districts are to receive a further increase of 1s. per week on the first pay day in October, 1931. As from the same date a minimum wage of £2 10s. is to be established for a horse and cart or lorry throughout the whole of Scotland, and all wages paid above this rate are to be continued and stabilised until March 31st, 1932. The wages of motormen are to be £2 19s. per week, and the wages of steam wagon drivers £3 9s.

**Northern General Transport.**—The accounts of the Northern General Transport Company show that after providing for debenture service there was a net profit of £77,331 for 1930 (against £42,478 for the previous year). The directors recommend a final dividend of 5 per cent., making 9 per cent. on the ordinary shares (against 7½ per cent.). £8,000 (against nil) is to be placed to reserve, and £1,096 (against nil) written off goodwill, leaving £13,614 to be carried forward. The company has purchased a number of small omnibus businesses operating in its area, and since the close of the year has acquired a controlling interest in the Sunderland District Omnibus Company. To provide for these additions and for the further development of the business, a proposal will be submitted to the shareholders at an early date for an increase of the company's capital. The fleet of omnibuses at the end of the year numbered 367.

**A Hefty Load.**—The photograph which we reproduce was taken on April 27th last and shows a "Marshall"

PICKFORDS TRANSPORTING A "MARSHALL" BOILER ON A "SCAMMELL."

Lancashire Boiler 30 ft. x 8 ft. (weight 22½ tons) leaving the works of Marshall, Sons & Co., Ltd., engineers, Britannia Iron Works, Gainsborough. This is one of three boilers being supplied by Marshall, Sons & Co., Ltd., for Morris Motors, Ltd., Cowley, Oxon., per Mr. Daniel Young, Consulting Engineer, Witney. The lorry shown in use in the photograph is a "Scammell," owned by Messrs. Pickfords, Ltd.

**Pirelli, Ltd.**—We are informed that Pirelli, Ltd., have vacated the offices until recently occupied by them at 144, Queen Victoria Street, London, E.C.4. The Head Office of the Company has been transferred to Burton-on-Trent, where the Company's modern tyre factories are situated. The registered office and the London branch office have removed to an ideal position at "Pirelli House," 343-5, Euston Road, London, N.W.1. The new Euston Road premises possess excellent tyre fitting service facilities, and consequently the Company's former fitting service depot at North Road, Caledonian Road, London, N., is now closed. The telephone number of the London offices is Museum 9802-6 (5 lines), and the telegraphic address "Pirellicon phone London."

**Burford Commercial Vehicles.**—On page 295 of our April issue we printed the old address of the manufacturers of the well-known "Burford" commercial vehicles. Communications for the Company should be marked for the attention of Mr. C. H. Gray, H. G. Burford & Co., Norfolk Works, Princes Road, Teddington, Middlesex.

**London Cart Horse Parade.** — We again call the attention of our readers to the Forty-first Annual Parade of London's Cart Horses to be held in Regent's Park, London, on Whit Monday, May 25th next.

**Institute of Transport. Annual Dinner.**—The Institute of Transport announces that its Twelfth Annual Dinner will take place at the Connaught Rooms, Great Queen Street, London, W.C.2, on Thursday, March 3rd, 1932.

**Mansion House Association on Transport (Incorporated).**—At the Fiftieth Annual General Meeting of the Mansion House Association on Railway and Canal Traffic for the United Kingdom (Incorporated), held at the offices of the Association in London on April 24th, under the chairmanship of General S. S. Long, the following resolution was unanimously adopted:—"That the name of the Association be changed from its present title to: "The Mansion House Association on Transport (Incorporated)." Certain alterations to the existing Committees and Meetings of the Association were also approved, the principal feature being the institution of a monthly Special General Meeting to which all members of the Association will be welcome to attend and discuss questions relating to transport, the first meeting of which will take place at 3 p.m. on May 22nd. Major Isidore Salmon, C.B.E., M.P., was accorded a very hearty welcome as the new Chairman of the Association's Parliamentary Committee in the place of the late Lord Melchett. General S. S. Long, C.B., and Mr. W. H. Gaunt, O.B.E., were unanimously re-elected Joint Presidents of the Association, Mr. Gaunt being congratulated on the action he had taken, and the results achieved, relating to goods traffic in connection with Clause 19 of the Road Traffic Act. Mr. R. E. Morley, unanimously re-elected Chairman of Committees, was accorded sincere appreciation, not only for his work as Chairman of Committees, a task entailing a good deal of strenuous work with sub-committees, etc., but for his zeal in closely watching all questions relating to dock and harbour charges, as the Association's representative on the Traders' Co-ordinating Committee (Docks). Mr. Wm. Oldham, re-elected Hon. Secretary, was also thanked for his work on the Traders' Co-ordinating Committee (Railway Rates and Charges), as was also Mr. E. A. Hilder for his work as Hon. Treasurer, again re-elected to that office. The Vice-Presidents, Council, Committees, Hon. Solicitors, Parliamentary Agents, and Auditors, were also re-elected for the ensuing year.

**International Horse Show.**—The International Horse Show will be held at Olympia, London, June 20-27th next. The directors feel that a club in Olympia during the run of the Show would be of great benefit to shareholders and exhibitors, and they propose to set aside the Princes Rooms for that purpose. This club will be strictly confined to members, and officers in uniform. The object of the club is to provide rooms where shareholders and exhibitors can rest, meet their friends, write letters, telephone, etc., and have light refreshments. A subscription of 10/6 will be charged as membership to the club, for the purpose of defraying the cost of hiring furniture, etc. In order to provide for those exhibitors and standholders who desire to have a seat for each performance at the Show, the directors have considered it desirable to issue a limited number of season tickets at the price of 30/- each. These tickets will entitle the holder to a seat in the Reserved Block, A Arena, specially set aside for the purpose, for every performance. Application must be submitted with remittance, not later than June 13th, 1931, and addressed to The Secretary, International Horse Shows, Ltd., 12, Hanover Square, London, W.1.

**Long Distance Road Haulage Association.**—A meeting was held in Sheffield, on April 24th, by the Long Distance Road Haulage Association and was attended by the principal firms of motor haulage contractors in the district. The chair was taken by Mr. Grocock, of Sheffield, and the meeting was addressed by Mr. E. C. Marston, Mr. L. W. Gupwell and Mr. E. B. Hutchinson, who impressed upon the meeting the necessity for haulage firms to get together both locally and nationally if their position was to be adequately represented to the Government in connection with taxation and for the purpose of more friendly associations in the industry. A discussion followed which enabled the full scope of the movement to be understood and it was eventually resolved unanimously that a branch of the Long Distance Road Haulage Association should be formed forthwith for Sheffield and district and that a local committee be appointed to deal with matters in the area. The headquarters of the Long Distance Road Haulage Association are at Lloyds Bank Chambers, Vicar Lane, Leeds, and the secretary is Mr. C. Johnson, A.C.I.S.

**Marketing Statistics for the Motor and Cycle Exporter.**—While the term "Market Research" is common currency with the salesman and the publicity adviser, it does not often take such practical shape as the survey of export Motor, Motor Cycle, and Cycle trade just published by "The Export Trader" (The Trader Publishing Co., Ltd., St. Bride's House, Salisbury Square, E.C.4, 2/6 each net). This contains details of Custom Duties on all Motor and Cycle goods for every market of the World, a tabulated survey of British Production, Sales and Exports, and a comprehensive classified table which gives the value of our exports, and the number of vehicles registered in each country together with the traders who sell and service them. This survey should be of considerable value to all engaged in the manufacture or marketing of motor and cycle products for export.

**Institute of Transport. Birmingham and District Section.**—At the annual meeting of the Birmingham and District section of the Institute of Transport, held on April 14th, Mr. O. C. Power was re-elected chairman. The following officers were also re-elected:—Vice-chairmen, Mr. J. F. Bradford, Mr. J. H. Stirk, Mr. J. McDonnell; hon. secretary, Mr. W. H. Watson; asst. hon. secretary, Mr. A. A. Logan; hon. treasurer, Mr. L. W. Gupwell. Mr. Power has been chairman of the Birmingham section of the Institute of Transport for four years, and prior to that was a vice-chairman for three years. He has also been appointed chairman of the Birmingham Horse and Motor Vehicle Owners' Association for the twentieth year in succession and yet, be it noted, Mr. Power is now only 51 years old.

**Bason & Sons, Limited.**—As his sons are now reaching an age when they are able to take part in the business, Mr. J. Bason has decided to convert his business, Bason & Condliffe, the well-known mechanical transport and consulting engineers, Pink Bank Lane, Longsight, Manchester, into a Limited Company under the name of Bason & Sons, Limited. The company has been formed, and will proceed to carry on in the same manner as heretofore under the guidance of Mr. J. Bason as managing director.

**The Architecture of Modern Transport. An Exhibition.**—The Royal Institute of British Architects is holding an Exhibition at 9, Conduit Street, London, W.1, which demonstrates the contact between architecture and transport by means of some models and photographs collected from this country, the Continent and America. Some examples of the most recent vehicles of transport are included. The one fact which stands out from the survey of architecture upon the walls in these galleries is that we are evolving a new mode of expression, to the form of which transport is largely contributing. This Exhibition contains, perhaps, not even all the best, certainly not all the possible examples, but the committee hopes that it is reasonably representative, and makes a fair comment upon "The Architecture of Modern Transport" at home and abroad. The Exhibition remains open till May 22nd, after which date it will tour the country.

**The Motor and Cycle Trades Benevolent Fund.**—A new showcard advertising the Fund is now in course of preparation and will be available for distribution almost immediately. It is mounted on stiff board approximately 10 in. by 14 in., glazed, eyeletted and corded for hanging up, and should, if displayed in places where eligible motor and cycle traders most do congregate, prove very effective in bringing home to them the manifold advantages of joining the Fund. The General Secretary, Mr. A. H. Dawson, 42, Bedford Row, London, W.C.1, will be very glad to send one or more to any trader willing to display it to advantage and thus help on the good work.

**A Road Obstruction.**—The Automobile Association announces that the recent fall of rock at Penmaenbach, on the Conway-Bangor Road, will necessitate the closing of this road for some weeks. Traffic is being diverted via the Sychnant Pass. In the meantime the Automobile Association has organised an emergency service with specially trained traffic patrols on the Sychnant Pass Road. Tourists approaching North Wales, west of Conway, are advised to go via Bettws-y-Coed and Capel Curig.

**Motor Vehicles and Menai Bridge.**—The Minister of Transport has made "The Motor Vehicles (Use on Menai Bridge Regulations, 1931," under which it shall not be lawful for any person to drive or permit to be driven on or over Menai Bridge any motor vehicle the weight of which, together with the weight of the load (if any) and of any vehicle drawn by such motor vehicle and of the load (if any) of such vehicle exceeds 4¼ tons. No person driving or in charge of a motor vehicle when in use on the bridge shall cause or suffer the same to proceed at a greater speed than four miles an hour. No person driving or in charge of a motor vehicle when in use on the Central Span of the Bridge shall cause or suffer the same to proceed or be at a distance less than 50 feet from any other vehicle proceeding in the same direction. No person driving or in charge of a motor vehicle when in use on the Bridge shall wilfully cause the same to stop unnecessarily or to loiter thereon.

## MERSEYSIDE.

**Accepted Tenders for Cartage and Haulage.**—Liverpool Corporation Health (City Engineer's) Department has accepted the following tenders for motor haulage on day

Digitized by Google

rates for the periods specified in the contracts submitted by the following firms:—Allerton Haulage Co., Liverpool; Frederick J. Ashcroft, Liverpool; L. F. Briggs, Ltd., Liverpool; J. Harman & Son, Liverpool; Frederick C. James, Liverpool; Robert Jones & Son (Contractors), Ltd., Liverpool; F. L. Kirk and Co., Liverpool; Samuel Lee, Liverpool; Leece Motors, Liverpool; John Mason, Liverpool; Richard M. Walker, Liverpool; J. W. Rigby and Son, Liverpool; T. J. Shillington, Ltd., Liverpool; James Stansfield, Liverpool; Vincent Stansfield, Liverpool; Wellington Haulage Co., Liverpool. Tenders were recently invited by the Liverpool Corporation Water Committee for 12 months cartage. The successful cartage contractors are:—The Liverpool Corporation Veterinary Department; Messrs. Robert Jones and Son (Contractors), Ltd., Liverpool; Messrs. L. F. Briggs, Ltd., Liverpool; Mr. Joseph Dyson, Liverpool; Mr. J. E. Levis, Liverpool; Messrs. Bolton Bros., Liverpool; Leece Motors, Liverpool.

**Coachowner-Councillor.**—Mr. F. H. Macdonald, motor coach proprietor, of Birkenhead, has been elected to the Birkenhead Town Council. His father, Mr. W. E. Macdonald, was Manager of the Palm Grove branch of the old Birkenhead United Tramways and Omnibus Co. After the war, Mr. F. H. Macdonald was instrumental in forming the Liverpool District, Cheshire and North Wales Motor Coach Owners' Association and he became President.

**Laden Weights; Liverpool Position.**—Liverpool haulage contractors and owners of private works fleets, especially those engaged on dock transport, have been much perturbed by the action of the police authorities in Liverpool, Bootle and elsewhere in regard to the laden weight of steam wagons and heavy petrol machines. Owing to the number of prosecutions that were pending, a deputation waited on the Town Clerk and the Chief Constable of Liverpool to present the views of owners and users of such vehicles. In 1921 the Liverpool Corporation obtained powers owing to special local circumstances enabling vehicle owners to load vehicles with weights greater than those which were permissible elsewhere. Those powers were superseded by the Road Traffic Act, the effect of which has been to prevent vehicles being loaded to anything like their rated carrying capacity. What renders the situation anomalous is the fact that horse-drawn lorries can carry loads to almost any weight. The restriction on commercial goods carrying vehicles is, therefore, a serious matter in view of the amount of bulk traffic that is regularly passing to and from the Liverpool docks. If, indeed, the letter of the Road Transport Act is enforced and owners are precluded from carrying the tonnages that have been customary, it will be most difficult to operate some classes of big vehicles on an economic basis unless, of course, it is possible to pass the burden on to hirers which is very doubtul. Representations have been made to the powers that be in the hope that the present severe imposition on the earning capacity of vehicles may be speedily removed.

## MANCHESTER.

**Prizewinning Turnouts.**—In connection with the arrival at Manchester of the steamship "Surrey" with a cargo of New Zealand produce, prizes were awarded by two New Zealand organisations for the best commercial vehicle turnout. The winners were:—1. Horse and lorry, Mr. Stephen Holmes; 2. motor owned by Messrs. Burgons; 3. horse and lorry owned by the Co-operative Wholesale Society, Ltd. Highly commended turnouts were:—Horse and lorry owned by the C.W.S., Ltd.; motor owned by Messrs. George Little, Ltd.; motor owned by Messrs. Garlick, Burrell and Edwards; team of two horses and lorry owned by Messrs. Garlick, Burrell and Edwards.

**Commissioners Big Task.**—The Traffic Commissioners for the North-western Area have a big task before them in dealing with applications for permission to run stage and express bus services and advertised excursions and tours by motor saloons and coaches. Operators of public service vehicles within the nine counties comprising the North-western Traffic Area total 850; public service vehicle licences applied for, 5,538; applications for road service licences, 2,500; applications for "backings" of road service licences received from 250 operators desirous of running powers into, or through, the N.W. Traffic Area, 800; applications received for drivers' licences of public service vehicles, 9,100; applications received for conductors' licences of public service vehicles, 5,000. The first business of the commissioners was the hearing of unopposed applications by corporations of which there were 19 from Manchester, 12 from Bolton, 14 from Wigan, 8 from Salford and 8 from Bury, as well as 28 from the Lancashire United Transport and Power Co., Ltd. Objections have been made to nearly 30 applications by Manchester Corporation.

## NORTH-EAST COAST.

**Tynemouth Trams.**—The annual report of the Tynemouth and District Electric Traction Company states that the experimental service of motor buses over the tramways route has proved "very popular with the travelling public," and negotiations are proceeding for an early entire abandonment of the trams. The company made a profit during the year of £3,770. Total receipts were £62,984. After setting aside £3,500 for renewals, and adding £795 from last year's accounts, there is an available balance of £1,065 which the directors recommend should be carried forward to the next account.

**Getting to Work.**—The Northern Area Traffic Commissioners, of whom Mr. Henry Riches is the Chairman, have been holding their first public sessions in Newcastle, West Hartlepool and elsewhere, to hear applications for road service licences, etc. The Lord Mayor of Newcastle (Ald. David Adams) attended on the first occasion, and welcomed Mr. Riches and his colleagues, Ald. A. Pattinson (Kendal) and County Councillor J. Wallace (Hebburn). Five of the 23 applications were granted, considerations of others being deferred owing to opposition thereto.

**Buses for Tramcars.**—Further conferences have taken place between representatives of Tynemouth and Whitley Bay Councils regarding the proposed substitution of omnibuses for tramcars in the Borough of Tynemouth. It was recommended that if the tram service ceases, Tynemouth Traction Company accept a lump sum payment based on 3s. 9d. per square yard for the whole area of the tram track, that the poles be purchased at £1 each, and that respective clerks settle the terms of agreement.

**Bridge Hustle.**—Scotswood Bridge was closed to vehicular traffic from midnight, May 13th, to 6 a.m. on May 21st, to enable the contractors, Messrs. Dorman, Long and Company to speed up progress on the bridge reconstruction.

**New Garage in Newcastle.**—The new Dex Garage, in the heart of Newcastle, with accommodation for 500 cars, is now open.

## HULL.

**Proposed Humber Bridge.**—At the time of writing the case for the promoters of the Humber Bridge has not been completed although it has been before the Committee of the House of Commons, over which Mr. W. R. Raynes is presiding, for a fortnight. As to the desirability of a bridge over the Humber somewhere near Hull there is no question, but the point is whether one can be constructed without doing almost irreparable damage to both Hull and Goole. The opponents say that to place a series of large piers across the stream is calculated to have a very prejudicial effect upon the ebb and flow of the tide, and that the fronts of the Hull docks may be silted up whilst the channel to Goole may be rendered unnavigable. Members of the Commons Committee have not given any indication of the effect the evidence is having on their minds.

## SOUTH WALES.

**Cardiff Improvements.**—In addition to the new orbital road just sanctioned at Cardiff, the Corporation and the G.W. Railway are contemplating arrangements for the improvement of the centre of the city. The orbital road, however, though officially approved, is rousing a lot of opposition from ratepayers. The G.W.R. are proceeding with their new station, and the Corporation are being urged to go further than putting up a new bus station in close proximity by clearing this part of the town of a great deal of slum property. This would give a fine open front to the new station. The acquisition of the Glamorgan Canal, which runs through the city into the harbour, is also being considered, with a view to covering it in to broaden the central streets.

## MIDLANDS.

**Summer Services.**—The summer bus service arrangements come into operation in most parts of the Midlands about the middle of the month. There are indications of a profitable season on the whole and a tendency for an increase of services, especially in connecting up existing services and in linking up country places with the towns and further developments are anticipated. Of course the Area Commissioners have to be considered in regard to this matter now, and expressions of opinion are heard that the growing needs of the public for passenger road transport is a fact not always sufficiently recognised.

**L.M.S. Closes Branch Lines.**—The L.M.S. are closing some branch lines in the Midlands for passenger traffic. One such is that from Nuneaton to Ashby-de-la-Zouch. Now the Audley branch affecting five stations is to close, the passenger traffic being undertaken by Potteries buses in which the railway company is financially interested.

Digitized by Google

**Birmingham and Crude Oil Buses.**—Birmingham Corporation is experimenting with crude oil buses, a new bus fitted with a Diesel engine having recently been acquired and experiments carried out. It will probably be twelve months before the experiment is complete.

## NORTHERN IRELAND.

**County Donegal Motor Services.**—Mr. James Winters, Belfast, is at the head of a new concern, the County Donegal Motor Services, which has acquired the bus services of Messrs. Roberts, operating between Londonderry, Moville, Greencastle, and Shrove; Messrs. Doherty's, operating between Londonderry and Moville; and Messrs. Ward's, operating between Londonderry, Letterkenny, Gortahork, and Milford.

**Derry Transport.**—The reduction of the passenger service on the Lough Swilly Railway has led to the abandonment of an old transport institution in Londonderry—M'Monagle's horse bus service, which for more than fifty years ran between Waterloo Place, in the city, and the terminus of the railway. The horses drew a large four wheeled vehicle with side seats, covered with a roof. Many years ago Derry had a city service of horse-drawn buses, which were superseded by horse trams. These were eventually abandoned, and the city public street transport is now supplied by the well-known Northern Ireland firm, H. M. S. Catherwood, Ltd.

**Gyratory system of Traffic.**—The gyratory system of traffic has been introduced at Carlisle Circle, Belfast. The system has been successfully used at Shaftesbury Square for a long time.

**Death of Mr. William Moorehead.**—Mr. William Moorehead, who was for more than 40 years in the service of the Belfast and Co. Down Railway, and retired last year from the position of chief accountant, which he had held since 1917, died on April 29th at Bangor, Co. Down.

**Belfast Transport Officials' Club.**—At the annual meeting of the Belfast Transport Officials' Club, Mr. Joseph Standfield, hon. secretary, reported that there were 10 vice-presidents and 107 members on the roll. Mr. Samuel Berkeley, managing director, Belfast Steamship Co., was elected president, in succession to the late Sir Thomas Wilson; and other officers appointed were:—Chairman of committee, Mr. James Edgar; vice-chairman, Mr. John Cathy; hon. treasurer, Mr. T. T. Lone; hon. assistant treasurer, Mr. T. Shanks, J.P.; hon. secretary, Mr. Standfield; hon. assistant secretary, Mr. Robert Reid. The annual outing will be to Bundoran on 19th and 20th June.

## IRISH FREE STATE.

**American Express Established in Dublin.**—The American Express Company has established an office in one of the leading and most central streets in Dublin, where business is now being carried on, and in addition to acting as agents for all the steamship companies and air lines throughout the world, the Dublin office will issue tickets to all railway stations in Great Britain and Ireland. Transport work, foreign exchange and banking facilities, both at home and abroad, will also be included in the activities of the Dublin agency.

**Omnibus Services Continue Increasing in the Irish Free State.**—It is satisfactory to be able to state that omnibus services continue to increase in the Irish Free State, and that this present year promises well for bus traffic all over the twenty-six counties, in respect of routes and distances traversed, passengers carried, and receipts for services. There is no doubt but 1931 began favourably for the buses in the Free State, and the patronage extended to them during the first two months of the year has been all that could be desired. This can be seen from the returns, issued for the month of February last by the Ministry of Industry and Commerce, from which it appeared that the number of vehicle miles run by buses in the Free State during the second month of the present year was 1,901,000, as compared with 1,757,000 miles in 1930; the number of passengers carried on buses last February was 3,972,000, as against 3,575,000 in February, 1930; and the gross receipts for February last amounted to £54,546, as compared with £54,166 for February, 1930. The first month of the present year had proved to be an equally beneficial one for bus traffic in the Free State in the matters of mileage, passengers, and receipts. During the two months of January and February last the bus services receipts were £116,952, as compared with £115,926 received from bus traffic during January and February, 1930.

# Dunlop Rubber Company, Ltd.

THE Report of the Directors of the Dunlop Rubber Company, Ltd., for the year ended December 31st, last, mentions that, with its world-wide interests, the Company has felt severely the acute economic depression at the end of the year which unfortunately prevailed in all markets without exception. The Directors announce that the profits realised for the year, though substantial, do not warrant the payment of a final dividend and feel confident that the shareholders, after reading the report, will come to the conclusion that in all the circumstances the results, though disappointing, are not on the whole unsatisfactory.

The Report refers to the adverse conditions of a financial and political nature from which the Company has suffered, and emphasises that the year 1930, witnessed the greatest downward fluctuations in commodity prices known in modern economic history, and the effect had been universal. Overseas there has been an unusual series of political disturbances, either arising directly from, or serving to accentuate the severe economic depression in what are almost exclusively primary producing countries. These adverse conditions have resulted in a heavy depreciation in the Exchanges, particularly in the latter part of the year, in such countries as Australia, China, South America, Spain and Persia, in all of which the Company has an important volume of business.

The Report shows that the financial position of the Company remains strong.

In view of the general unsettlement of the economic conditions referred to, the Directors have, as a measure of precaution, allocated from General Reserve £1,000,000 to Special Reserve against the Company's Investments in and advances to subsidiary companies.

The Directors assure the proprietors that: (i) Throughout the world the Company's organisation has successfully retained its full competitive position; (ii) The Quality of the Company's products was never better: (iii) Its productive efficiency and economy is higher than it ever was and is steadily rising; (iv) The less favourable results this year are attributable to extraneous causes over which the Company had no control, and not to any deterioration in the Company's organisation or in its relative trading position; (v) Upon a revival of trading conditions the Company is in a position to take immediate advantage.

# Horse Transport in London.

A DEPUTATION arranged and headed by the National Horse Association, and including numerous other organizations interested in Horse Transport in London was received on May 8th, by a Sub-committee of the London and Home Counties Traffic Advisory Committee, with regard to the proposed Oxford Street Draft Regulations, with particular reference to, and protesting against, the regulations affecting Horse drawn traffic.

Among those present on the deputation were Major Gen. Geoffrey H. A. White, Sir Archibald Weigall, Sir Walter Gilbey, Sir John Moore, Mr. Nigel C. Colman, M.P., Mr. N. W. Smith-Carington, M.P., Mr. Henry Tilling, Mr. H. C. Laurence, Major James Paterson, Mr. T. Woodley, Mr. G. Moffatt, Mr. J. W. Perkins, Mr. W. Perryman, Mr. C. S. Hinton, Mr. C. Powell, Mr. R. A. Brown, and others representing Horse owners, Forage Merchants, Farriers, Veterinary Surgeons, Saddlers, Farmers, etc.

In addition to the 95 Societies affiliated to the National Horse Association, the following were also represented on the deputation: The National Farmers Union, The Shire Horse Society, The London Cart and the London Van Horse Parade Societies, The Hackney Horse Society, The Hunters' Improvement Society, The National Veterinary Medical Association, The London Saddle and Harness Makers' Protection Society, The Federation of Master Saddlers, The National Leather Goods Association, The Amalgamated Society of Farriers and Blacksmiths, The National Master Farriers' and Blacksmiths' Association, The British Hay Traders' Association, The Retail Corn Dealers, The National Association of Corn and Agricultural Merchants, The Central Veterinary Society, The Metropolitan Drinking Fountain and Cattle Trough Association.

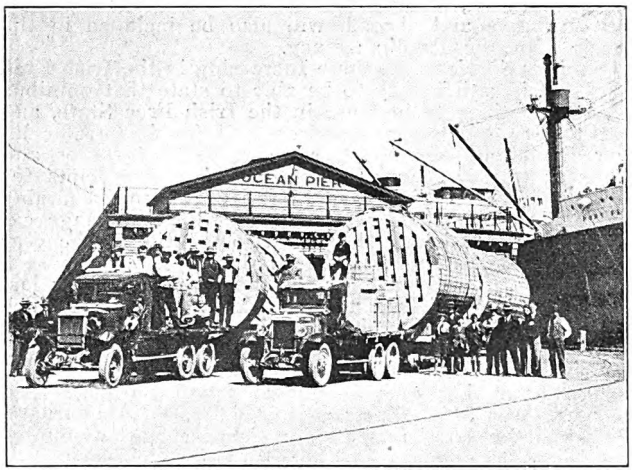
# Motor Notes.

**Morris Commercial Cars in Tasmania.**—Two Morris Commercial 6-wheeled lorries supplied by Morris Commercial Cars, Ltd., Soho, Birmingham, and delivered to Mr. G. A. Jackson, haulage contractor, of Hobart, Tasmania, are shown in the accompanying photograph. Each



TWO MORRIS-COMMERCIAL SIX-WHEELED LORRIES EACH HAULING A 22-TON LOAD.

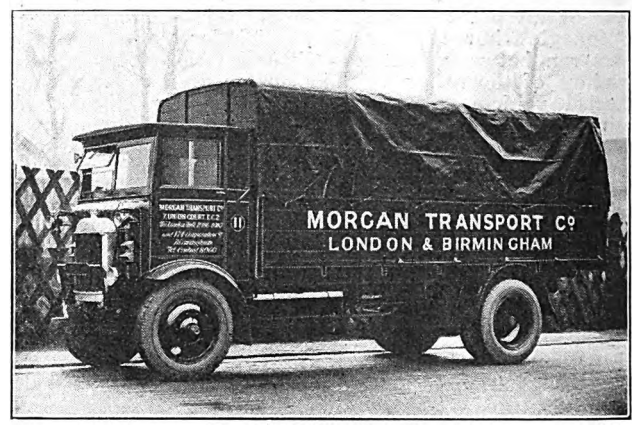
one is hauling a 22-ton steel vat, landed at the Hobart Docks. Mr. Jackson, we are informed, has a fleet of 8 Morris Commercial vehicles and a Morris "Isis."

**Commer Deliveries.**—The right-hand photograph shows a G.3. type 3-ton chassis mounted with a 3-way mechanical tipping body which Commer Cars, Ltd., of Luton, have just delivered to the Kent. C.C. The other photograph shows a 6-ton Commer lorry recently purchased by the Cement Marketing Company.

**Orders for Guys.**—Amongst a large number of orders recently received by Guy Motors, Ltd., for vehicles of from 30 cwt. to 11 tons, are repeat orders from the following firms:—Allen & Hanbury, Ltd., British Oxygen Co., Ever Ready Co., Glico Petroleum, Ltd., Holdrons, Ltd., Red Line Motor Spirit Co., Retail Dairymen's Mutual, Ltd., and Stoke-on-Trent Corporation. The Premier Omnibus Co., also, have placed an order for six 6-cylinder "Victory" coaches, which was placed on the market at the beginning of the 1931 season.

**Recent Albion Orders.**—Amongst orders received by the Albion Motor Car Co., Ltd., Scotstoun, Glasgow, are the following:—4 30/35 cwt. chassis for the Derby Corporation; 35 3-ton chassis for the Anglo-Persian Oil Co., for use by the British Petroleum Co. W. Alexander & Sons, Ltd., have placed two repeat orders, including 11 "Valkyrie" chassis, and J. Lyons & Co., Ltd., have placed a repeat order for 3-tonners.

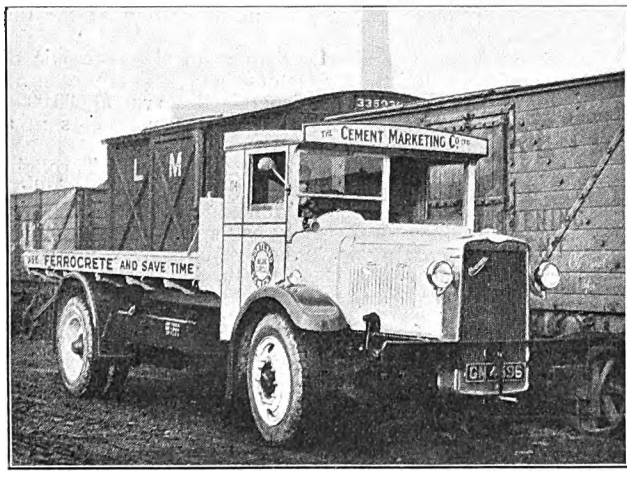
**An Up-to-Date Six-Tonner.** — The Morgan Transport Co., 7, Union Court, E.C.2, have recently taken delivery of a Dennis six-ton forward-control chassis, as shown in the accompanying photograph, on which is mounted a sheet van body. The vehicle was supplied to the Morgan

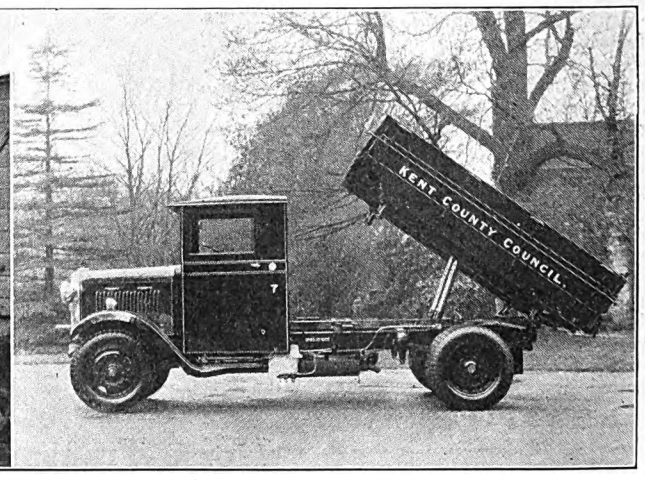


DENNIS 6-TON FORWARD CONTROL CHASSIS WITH SHEET VAN BODY.

Transport Co., through Clement Butler & Cross, Ltd., in whose works at Brentford the body was constructed.

**Recent Leyland Deliveries.**—Recent Leyland deliveries include a "Bison" 90 cwt. machine supplied to Richard Johnson, Clapham & Morris, Ltd., of Trafford Park, Manchester, and four "Lion" single-deck buses to the Merthyr Tydfil Corporation; a "Bull" supplied to W. J. B. Halls, Ltd., road transport contractors, Gloucester; a similar vehicle supplied to Mr. John Taylor, haulage contractor,





LEFT: A 6-TON COMMER FOR THE CEMENT MARKETING CO., LTD. RIGHT: KENT COUNTY COUNCIL'S NEW 3-TON COMMER CAR.

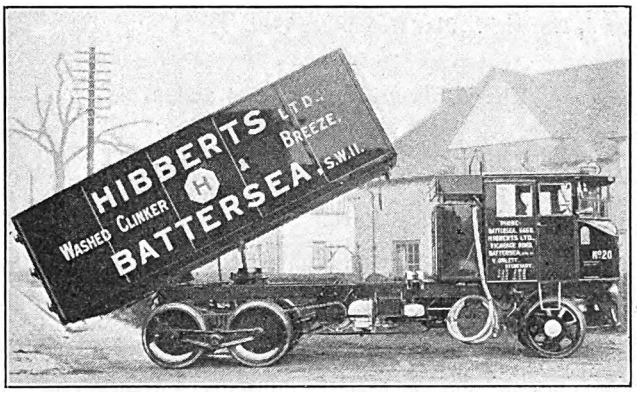
Longridge; a "Hippo" supplied to Smith & Robinson (Leeds), Ltd., the well-known northern transport contractors; a "Lioness" supplied to Stotts Motors, Ltd., of Manchester, who are contractors to Johnson, Clapham and Morris, of Trafford Park, Manchester, and a "Bull" supplied to Mr. G. W. Wood, Woolton, Liverpool.

**Fodens Busy.** — Amongst recent orders received by Fodens, Ltd., Sandbach, England, for their pneumatic tyred steam wagons, is one from Murrell's Wharf, Ltd., London, S.E., for four "speed-six" 6-tonners and four "speed-twelve" six-wheelers (all fitted with pneumatic three-way-tip bodies) and four 6-ton pneumatic tyred side-tip trailers. This firm is one of the first users of pneumatic tyred steam wagons and the additional order is excellent proof that they are giving high satisfactory results.

Digitized by Google

Orders have also been received from Coombe's Flour Mills, Thorverton, Devon, Baker & Son, builders' merchants, Bideford, J. L. Penfold, haulage contractors, Barnham, Sussex, H. M. Nowell, Ltd., public works contractors, Nottingham and Musselwhite & Co., contractors, Salisbury.

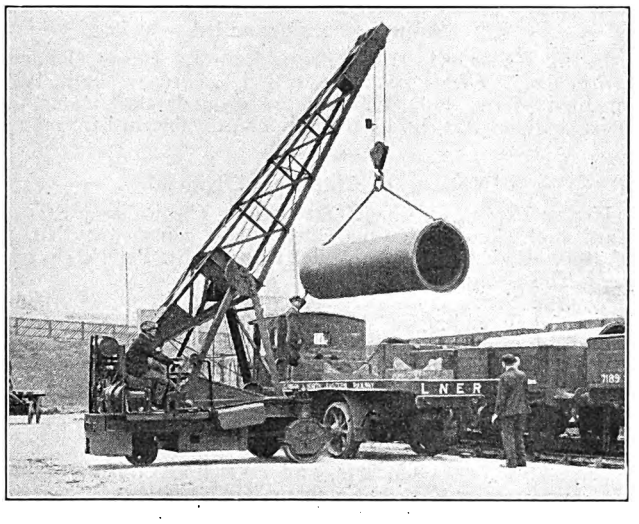
**A Useful Contractor's Waggon.** — Hibberts, Ltd., of Battersea, took delivery early this year of the "Sentinel" D.G.6 waggon shown in the accompanying photograph. This



ONE OF HIBBERTS D.G.6 SENTINELS.

is the third vehicle supplied by the "Sentinel" Waggon Works, Ltd., to this well-known contracting firm. The notable features of the waggon are the large capacity end-tipping body and the oversize water tank.

**Morris Versatile Cranes.** — Our illustration shows a Morris versatile crane in the service of the London & North Eastern Railway Co. One of these cranes can be seen transferring a large cast-iron water pipe from a railway truck to a motor lorry or *vice versa*. The cranes are built by Herbert Morris, Ltd., Loughborough, under Mossay Patents. The crane, operating as an independent unit, can pick up a load anywhere and take it anywhere else. It is supplied either as a petrol-electric crane or with battery accumulators.



THE HERBERT MORRIS VERSATILE CRANE.

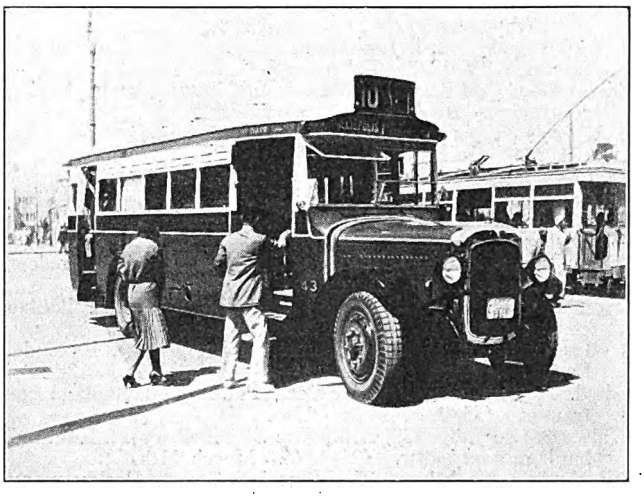
**Albion Motors, Ltd.**—At the Annual Meeting of the firm of motor manufacturers known for so many years under the title of the Albion Motor Car Co., Ltd., of Scotstoun, Glasgow, it was decided to change the name to Albion Motors, Ltd. In recommending this change the Chairman pointed out that in its earlier days the Company manufactured private motor cars and the name was strictly in accordance with their business. For many years, however, they had concentrated on commercial motor vehicles and were familiarly known as Albion Motors, so the change was in every respect a suitable one.

**Guy Service.** Guy Motors, Ltd., Fallings Park, Wolverhampton, have recently placed on the road a fleet of six Guy vans, as illustrated, in connection with their scheme of two years free periodical inspection. Each van is in the charge of a qualified Guy mechanic who carries a consumable stock of spare parts, and is stationed in a specific territory, the country having been suitably divided into sections for this purpose. This scheme has now been operating for a number of years and the inspector works, as far as possible, to a definite programme. He advises the customer beforehand of the approximate time of his visit thus providing inspection at suitably regular intervals. The report of the condition of the vehicle and any adjustments which have been carried out by the inspector is then rendered direct to the customer by the Guy maintenance department, together with advice on any difficulty of operation or maintenance which may have arisen since the inspector's previous visit.

GUY INSPECTION SERVICE VEHICLES.

**Thornycrofts in Egypt.**—The Overseas Transport Co. are putting into service a fleet of 108 omnibuses in Cairo, being supplied by John I. Thornycrot & Co., Ltd., Thornycroft House, Smith Square, S.W.1. The "LC" type 4-cylinder chassis, as shown in the photograph, was selected and the bodies are being built by the Park Royal Coachworks, Ltd. The seating capacity is for 12 first-class passengers and 15 second-class passengers.

**B.E.N. Tyre Automatic Inflator.**—The new and improved B.E.N. all-British model Automatic Tyre Inflator provides means for rapid tyre inflation and accurate gauging in one operation. The inflator is a combined gauge, air control and universal chuck for attaching to any compressed air line. The exact pressure reading of air in a tyre is obtained immediately the chuck is placed over



ONE OF THE 108 "L.C." TYPE THORNYCROFT BUSES FOR CAIRO.

the valve. Air is admitted by compressing the lever, and is released by pressing a button. The inflator has a pressure range from 20 to 130 lbs. and is therefore suitable for all classes of balloon and high-pressure tyres, including the heaviest tyres used on commercial vehicles. This device eliminates four articles that have before been found to be necessary equipment, i.e., (1) high-pressure gauge; (2) low-pressure gauge; (3) valve chuck; (4) air-reducing and control valve. The instrument is fitted with a gauge that is permanently accurate to a pound. It is easy to operate, practically indestructable, and a big time saver for any garage, service station, or fleet owner. This new model is not only more efficient than the old type, but it is very much more attractive in appearance. The new price is 45/- as against £2 17s. 6d. for the old model, so that B.E.N. Patents, Ltd., 92, Tottenham Court Road, London, W.1, are now able to offer a more attractive and efficient article at a considerably lower price.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Jno. Hy. Sutcliffe, Falconbridge Street and 1, Uplands Road, Leicester, haulage contractor. £51/15/10. February 12th.

E. J. Mylon, Merrimans, Hayes, Middlesex, haulage contractor. £25/5/6. February 24th.

Risdon (life directors), A. Bridge-Pike and C. H. C. Hughes. Secretary: C. H. C. Hughes.

**L. H. Dimond & Company, Ltd.** (256,065).—Private company. Registered April 29th. Capital £3,500 in £1 shares (500 7 per cent. cumulative preference and 3,000 ordinary). Objects: To acquire the business of haulage contractors, motor and general engineers and garage proprietors, carried on by L. H. Dimond & Company at Pile Street, Temple Gate, Bristol. The permanent directors are: C. H. Clifford, L. H. Dimond, A. J. Dimond. The two first named are managing directors. Secretary: C. H. Clifford. Registered office: Pile Street, Temple Gate, Bristol.

## Mortgages and Charges.

**Broad and Montague, Ltd.**—Particulars filed of £3,000 debentures authorised February 14th, 1931, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

**Allan Simpson (Bristol), Ltd.** — Issue on March 2nd, 1931, of £250 debentures, part of series already registered.

**H. J. Phillips & Sons, Ltd.**—Debenture dated March 3rd, 1931, to secure £1,500, charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, subject to a mortgage on its freehold property, 288/290, Merton Road, Wandsworth. Holder: G. F. Dorr, "Revelstoke," Beacon Road, Broadstairs.

**H. J. Phillips & Sons, Ltd.**—Mortgage dated March 3rd, 1931, to secure £2,000, charged on 288 and 290, Merton Road, Wandsworth. Holders: Magnet Building Society, Magnet House, Paddington Green, W.2.

**Highways, Ltd.**—Issue on March 4th, 1931, of £4,000 debentures, part of series already registered.

**R. V. Morris, Ltd.**—Particulars filed of £800 debentures authorised March 5th, 1931, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

**J. W. Gammans & Co., Ltd.**—Mortgage dated March 9th, 1931, to secure £684 10s. and any moneys which may become due on any account whatsoever, charged on land used as a chalk pit in Charmandean Lane, Sompting, Sussex. Holders: Steyning Permanent Benefit Building Society, Steyning, Sussex.

**Cross and Hill, Ltd.**—Debenture dated March 9th, 1931, to secure £2,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: E. J. Hill, 27, Stafford Road, Bournemouth.

**Mablethorpe & Sutton Motor Service, Ltd.**—Mortgage debenture charged on the company's undertaking and property, present and future, including uncalled capital and goodwill, dated March 9th, 1931, to secure all moneys due or to become due from the company to Barclay's Bank, Ltd.

**Singer Transport Co., Ltd.**—Particulars filed of £400 debentures authorised March 10th, 1931, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

**Modern Super Coaches, Ltd.**—Deposit on March 11th, 1931, of deeds of 87c, Hertford Road, Lower Edmonton, N.9, to secure all moneys due or to become due from the company to Barclays Bank, Ltd.

**Isaac Robinson & Sons (Rhyl), Ltd.**—Mortgage dated March 18th, 1931, to secure £1,500 charged on land fronting West Parade, Rhyl, with Harbour Garage thereon. Holders: J. Lloyd, E. Hughes and R. L. M. Lloyd, Preswylfa, Russell Road, Rhyl, Flint.

**Knowles Motors, Ltd.**—Mortgage on freehold land with garage and three houses thereon in Cromford Road, Queen Street, and Gladstone Street, Langley Mill, Derby, with fixtures, etc., dated March 19th, 1931, to secure all moneys due or to become due from the company to the Midland Bank, Limited.

## Satisfactions.

*Note: Where the amount "originally secured" is stated, that is not necessarily the amount outstanding at the date of the satisfaction recorded below. There may have been previous partial satisfactions, registered or unregistered. The registration of Satisfactions is not compulsory.*

**James Straughan & Sons, Ltd.**—Satisfaction in full on December 20th, 1930, of deed of indemnity dated March 14th, 1925, and registered March 19th, 1925.

**Direct Haulage Company, Ltd.**—Satisfaction in full on January 22nd, 1931, of debenture dated June 29th, 1927, and registered July 8th, 1927, securing all moneys due or to become due from the company to Barclays Bank, Ltd.

**Watford Co-operative Mutual Omnibus & Transport Company, Ltd.** — Satisfaction in full on February 24th, 1931, of debenture dated December 19th, 1929, and registered December 30th, 1929. (According to the register of mortgages, the debenture registered December 30th, 1929, originally secured £1,000.)

**H. J. Phillips & Sons, Ltd.**—Satisfaction on March 3rd, 1931, (a) in full of 20 debentures of £50 each authorised February 8th, 1928, and registered February 24th, 1928, 10 only of which were registered (the remaining ten having been cancelled); (b) in full of mortgage securing £1,500 dated August 3rd, 1928, and registered August 15th, 1928; and (c) to the extent of £1,500 of second debenture dated May 22nd, 1929, and registered May 31st, 1929, securing £2,000.

## Receiverships (Appointment or Release).

**Springer & Company, Ltd.**—J. Ringle, of 42, Carnarvon Road, Forest Gate, E., was appointed Receiver and Manager on February 20th, 1931, under powers contained in debenture dated December 2nd, 1929.

**Dobinson's Road Transport, Ltd.**—E. J. Bell, C.A., of 23, King Street, E.C.2, was appointed Receiver on March 2nd, under powers contained in debenture dated January 2nd, 1931.

# Our Airship Policy.

JUST as the last pages of our May issue were running through the printing presses the Prime Minister, in the House of Commons, was outlining the future airship policy to be adopted by this country. He said that we should proceed with scientific and technical research, that our airship equipment will be reduced to proportions and to an organisation and an activity which will, for the time being, be more in the nature of scientific investigation. R100 is to be reconditioned but not with the idea of undertaking any long-distance spectacular flights, her construction will not be altered, and she will be used for test purposes to obtain such data under actual flying conditions as cannot of course be made available by merely carrying out experiments with models. With this policy we think all thoughtful people will agree. As the Prime Minister pointed out, airships have as yet neither proved a failure nor achieved an assured success. The tragic fate of R101 showed that our knowledge of airships is still inadequate, but none of the difficulties with which we are confronted need prove insurmountable, if we continue with our scientific investigation of the subject. Were we to scrap R100 and to give up all interest in airship development, then we would indeed feel that the sacrifice made by those brave pioneers who gave their lives in the cause of airship development had been in vain. Few will consider that we should go ahead again immediately and build more new airships, but on the other hand the number must be small who will argue that we should cease to take a part in discovering whether airships have a future or not. We still have men possessing technical knowledge of airships of the utmost value even though, unhappily, so many of our air experts perished in the R101. It may well be that airships will prove anything but failures, and the developments of the next few years may compel us to adopt again a very active and practical interest in their development. If that should prove to be the case then by reason of the decision which has now been made to maintain a nucleus at the Royal Airship works at Cardington, we shall have ready to hand men with the necessary skill and capacity required for airship construction to push on with that development. In the meantime there is a whole field of unsolved problems in regard to the subject awaiting investigation and in this field R100 with its gallant crew of officers and men will play not a spectacular but an inherently important part. The R101 Report does not show that there is anything wrong with airships as such, and the disaster did not disprove the case for airships, and time alone can show whether travel by airship has an assured future. Airships may yet prove of the utmost advantage to the British Empire. It is true that France and Italy have temporarily abandoned airship development, but France has retained the nucleus of an airship organisation. The experiments being conducted by Germany are well-known, and the Graf Zeppelin is continually making long and successful voyages. The United States is pursuing an active airship policy and the huge dirigible "Akron" now being built in Ohio will be floated shortly and will be the first airship to be able to carry an aeroplane. The "Akron" will require 6,500,000 cubic feet of helium which is nearly twice the capacity of the Graf Zeppelin and 35 per cent. larger than that of the R101. The late Air Vice-Marshal Sir W. Sefton Brancker, K.C.B., A.F.C., who perished in the R101, addressing the members of the Institute of Transport in 1928, said: "The new generation which is growing up—the boys who are leaving school to-day—will accept aviation as a matter of course and at its true value without demur—and progress will be correspondingly accelerated. We as a nation have a wonderful history in the realms of transport and it is my highest ambition to help British air transport to live up to the standards set by its forbears on sea and land." Colonel The Master of Sempill, in a book just published entitled "The Air and the Plain Man," in the last chapter which deals with airships, says it had not been his intention to discuss that subject at any length, but while the proofs were being read the news of the disaster to R101 staggered and appalled the whole world. The author concludes the chapter as follows:

Digitized by Google

"It is illogical to urge that because certain airships have met with disaster, all lighter-than-air craft are necessarily unsafe. There have been tragedies in all realms of transport—marine, rail, road and aeroplane; but they have not stopped progress. Rather have they stimulated effort to render such disasters less likely in the future. The loss of R101 should be regarded in the same way. Those brave men who gave their lives did so in the cause of the progress of Imperial communications. We should be disloyal to their memories if we abandoned our airship programme. For commercial transportation, the value of the airship has yet to be completely proven. The British Empire in particular cannot afford to neglect the airship, which offers the best means, so far as can at present be seen, of covering great distances, particularly over long stretches of water; but further research and experiments are needed, and it would be extremely injudicious to abandon this vital work because of a popular outcry based on sentiment rather than reason." The decision of the Government is a right one—we must go on with our research programme and watch carefully the interesting experiments proceeding in Germany and the United States.

**Removing is an Expert's Job.**

The Annual Conference of the Members of the Furniture Warehousemen and Removers' Association was held last month at Southsea, and our usual special and full report appears in this issue. The Conference was a most successful one and we offer our congratulations to all who were responsible for the arrangements upon the way in which these were carried out. The Annual Meeting was presided over by Mr. A. C. Osborn, the retiring president, while the extraordinary general meeting held in the afternoon and the dinner in the evening were both presided over by Mr. F. W. H. Winwood, the in-coming president, to whom we offer our warmest congratulations and good wishes for a successful year in the high position to which he has been called. The slogan of the Association is the title of this note "Removing is an Expert's Job" and, unlike many slogans, it is strictly accurate. Those of us who can look back to the earliest days of the Association are inclined to think that those were the palmy days of the trade, but we are convinced that there never was more need for experts in the removal business than there is to-day. When Joint Industrial Councils were first started, representatives of the Furniture Warehousemen and Removers' Association applied for their trade to be recognised as a separate industry and this application was accepted. We have always looked upon the removal business as part of the great Transport Industry, and we still believe that it is a most important section of it, but there is a great deal more than merely transporting goods from one place to another, and the members were quite justified in claiming that theirs was an industry in itself. The haulage of the goods entrusted to the members, although important, is only a part and perhaps not the most important part of their work. Estimating the amount of furniture to be removed, to be done accurately, needs special training and experience. We are glad to note that the examinations for estimators are steadily growing in value and are being supported by leading firms in the industry. Then, the packing of goods for removal is a most important part of the business. It may be said that anyone can load goods into a motor lorry or a lift van for rail transport, but this is not the case. The utmost care is required in handling furniture which may have a real or sentimental value to the owner so that it may arrive at its destination in as good a condition as it left the starting point. The members of the Association rightly claim that they are experts in the handling and packing of furniture, as well as Transport employers, and we are sure that they have no need to be unduly depressed or afraid to meet any competition which may arise in the future.

**Tramways and Buses.**

The discussion which followed the interesting paper read by Mr. J. A. Forde, General Manager and Engineer to the Isle of Thanet Electric Supply Co., Ltd., at the Annual Congress of the Tramways, Light Railways and Transport Association held at Margate last month, showed how far tramway managers have journeyed on the road to scrapping their trams and adopting motor buses in their place. Even a representative of an electric supply company like Mr. Forde, stated in his paper that within ten years most tramways will have ceased to exist. In an able contribution to the discussion Mr. C. J. Spencer, General Manager, Metropolitan Tramways Co., deprecated suggestions of so far reaching a character and received the support of the meeting in his statement that every case had to be decided on its merits, circumstances being very different in various localities and centres of population. Undoubtedly every tramways manager is considering most seriously what steps he shall take to bring his rolling stock up-to-date and in what direction this can best be accomplished. The argument which struck us most forcibly was that used by Mr. R. Stuart Pilcher, who is this year President of the Municipal Tramways and Transport Association and who occupies the important position of Tramways Manager to the Corporation of Manchester. In the course of his remarks he said that the public undoubtedly prefer buses to trams and it was waste of time to consider the respective advantages of the two types of vehicles, because in the long run what the public want they would have and it was their duty to provide it.

**International Container Competition.**

We have given from time to time particulars of the competition arranged by the International Chamber of Commerce for the best system of container suitable for the international transport of goods. We have been keenly interested in this competition since we heard the scheme advocated by Senator Crespi, in an address given at the World Motor Transport Congress, held in Rome, in September, 1928. According to the latest information which we have received, eight designs of six constructors have been retained by the jury in charge of the competition, and these constructors are now to submit final models before July 15th next. It is interesting to know that these models are to be tested on lorries, trucks and boats, in London or Berlin, and after that the jury will meet again and decide which model it considers the most satisfactory, and which it will recommend for uniform adoption by organisations concerned with highway, railway, and maritime transport. The container system for goods transport has been a great success and has developed very rapidly within the last two years, until it is now a recognised factor in goods transport, particularly applicable to railway and road traffic combined. The difficulty, hitherto, has been to produce a container light enough for ordinary purposes, and yet strong enough to stand hard treatment such as is inseparable from transport across the water to other countries. The container system has been found useful for almost all kinds of traffic, but whether it will be really suitable for furniture removals is doubtful. As we have mentioned in another editorial note this business is of a peculiar character, necessitating very expert packing and care, and we are doubtful whether the new form of container will ever supersede the well constructed lift van which has held the field for so many years. At the same time, there is undoubtedly a very wide scope for the use of these containers, enabling goods to be transported from door to door without unpacking or handling, even when this means crossing the channel to the Continent. The system, therefore, constitutes a big advance on former practice, and in the near future should fill a much larger place than it has done hitherto.

## G.W.R. Dock Enterprise.

On May 18th a new swing bridge over Bute West Dock Lock, at Cardiff, was officially opened for traffic. This double track swing bridge has been built to carry railway and road traffic across the Lock between the Bute West Dock and Basin, immediately inside the main entrance to Cardiff (Bute) Docks at the Docks end of Bute Road and is capable of carrying the heaviest loads that use either railways or roads. This is but another instance of the enterprise being shown by the Great Western Rail-Way Company at their Docks. A day or two before this bridge was opened Mr. Lionel Heald attended a hearing of the Railway Rates Tribunal on behalf of the Monmouthshire and South Wales Coal Owners' Association and is reported to have complained that no improvement of the South Wales Docks had been carried out by the Great Western Railway Company and that it would seem that the programme for modernizing the docks had been postponed indefinitely. Since the amalgamation in 1922 of the South Wales dock-owning railway companies with the Great Western Company, we have necessarily watched the development and modernization of the Great Western Ports with much interest and we cannot associate ourselves with the criticism reported to have been made of the G.W.R. before the Rates Tribunal. It has been our pleasure from time to time to record in this journal the various works undertaken by the G.W.R. to meet not only the present needs of industry, but to raise the efficiency of their docks to a high standard ready to deal with the vastly increased trade we are all longing to see come to these shores. In our view the G.W.R. have continued a progressive policy for a number of years, and we say this not because we hold a brief for railways in particular, but because we naturally like to see honour paid when due to any phase of activity which goes to make up our great transport system. Mr. J. Milne, the General Manager of the Great Western Railway, in a letter to *The Times,* repudiates the suggestion that the Company's programme of modernizing their docks in South Wales has been postponed indefinitely. On the contrary, he points out that the cost of the works now proceeding involves an expenditure of £2,123,000, the works being carried out in accordance with a five-years' programme expiring in 1935, the only schemes which are being held in abeyance at the present time being the pier extensions at Port Talbot and the second entrance lock at Swansea which are estimated to cost approximately £1,250,000 and it is considered that in existing circumstances the carrying out of these works could not be justified. Further, Mr. Milne points out that the programme of work now in hand is additional to the large schemes which have been completed by the company since they took over the docks in 1922.

## Avoid the Expert?

Mr. F. A. Macquisten, K.C., in a letter to the press says that last year more people were killed on the highways than all the casualties by enemy action in the Boer War; that the railways would have been abolished if they had killed and mutilated anything like the number of people that motor transport does to-day, but that whereas the railway kills in bulk, the motor kills one at a time usually, and so it does not shock so much. Mr. Macquisten contends that these casualties will increase as the number of vehicles increases, and that there can be no mitigation under the present system of mixed traffic. Further, he states that the electrified railways may suit suburban London, but for less dense traffic it is ruinously wasteful and is no more use than steam for goods traffic, as the terminal and carriage charges are not eliminated, and he says that all the mineral traffic where terminal charges are involved could be cheaper done by road. Mr. Macquisten continues "I want to see the most efficient and the cheapest transport, and in a small country like ours the motor—so soon as it is Diesel-engined—is the right vehicle. The railways are as obsolete as the tramways are, which is denied by those municipalities that have sunk their capital therein, and so they too try to hamstring the motors against the public weal. In this matter we must avoid the railway expert. Indeed, in all reforms we must avoid the expert, for he comes from the top of the tree, and in his view the existing state of affairs must be pretty nearly right or he would not be at the top." It would seem that Mr. Macquisten is an advocate for road transport in spite of its alleged killing propensities. What is clear from his letter is that he has no time for the expert in matters of reform. So far as transport is concerned, in our opinion any amelioration of our present difficulties, if forthcoming, will most probably emanate from proposals put forward by experts on the subject. We value the opinions of the expert provided we know that he is not a crank. Obviously, only long and intense training in any walk of life produces the expert. A King's Counsel is an expert in interpreting the law, and if there should come about a reform of our legal system which would enable us to have a little flutter in the Courts without running the risk of being adjudged bankrupt should the result go against us, we should not think we had got full value unless we had an expert in the form of a K.C. to lead for us. Mr. Macquisten may have seen enough of experts in cases in which he has appeared at the Bar, as an expert is often put into the box by each side and, strange to relate, each declares the deductions of the other to be wrong, but, then, even experts have to earn a living! No, there are experts and experts. Our faith in a man who understands his job remains unshaken.

## What would you do?

At the Manchester Assizes three people claimed damages for injuries caused to them whilst passengers on a bus which had swerved to avoid killing a child. The Corporation, in whose employ the bus driver was, raised the point that if the driver was found guilty of negligence must he and they be penalised for swerving to avoid the death of the child. It was pointed out that it would not have cost the Corporation anything for killing the child as no damages could be claimed the child having no one dependent upon it. In the result the Corporation was ordered to pay £145 damages. Well, we know how we would answer our own question. Every decent driver would do what the defendant in this case did and—well never mind the consequences. In this case the driver definitely saw a life to be saved—need he have looked beyond? We do not think the ratepayers concerned will mind paying up.

## Thou shalt not—Sneeze.

In some countries it used to be the custom to bless those who sneeze. In this country it may cost you ten shillings. A Nottingham van driver was summoned recently for infringing that section of the Road Traffic Act which says "If any person drives a motor vehicle in a road without due care and attention . . . he shall be guilty of an offence." The defendent said he was about to pass a dray when he sneezed and this caused his van to collide with the dray. It was contended on his behalf that any driver was liable to sneeze, but the Magistrates fined him ten shillings and perhaps thought that a good sneeze was cheap at the price. We believe that a sneeze can sometimes be prevented by pressure with the fingers at the sides of the bony bridge of the nose—we will not vouch for the efficacy of this remedy—but if any driver should try it we think it would be as well if before doing so he stopped his vehicle.

# Personal Notes.

**President-Elect of the Institute of Transport.**—As announced in our May issue, Mr. Frank Pick, Managing Director of the London Underground Railways, and the L.G.O.C. Group, has been elected President of the Institute of Transport for the 1931-32 Session and will take office on October 1st next. Mr. Pick was born in 1878, and was educated at St. Peter's School, York. Subsequently he was articled with Mr. George Crombie, a Solicitor of York, and in 1902 qualified as a solicitor with second-class honours, and in 1903 became LL.B. (London University) with first-class honours. In 1902 he entered the service of the North Eastern Railway Company under Sir George Gibb, the then General Manager, and in 1906 came to London with Sir George on the latter taking over the management of the Metropolitan District and London Electric Railways, and, upon his retirement in 1907, Mr. Pick was transferred to the staff of Mr. A. H. Stanley, now Lord Ashfield. Associated with Lord Ashfield's management ever since Mr. Pick became Traffic Development Officer in 1909, and Commercial Manager in 1912. In 1917 he was appointed by Lord Ashfield, then President of the Board of Trade, to take charge of the Household Fuel and Lighting Branch of the Coal Mines Department, under the late Sir Guy Calthrop, and here Mr. Pick was responsible for the preparation and administration of the orders governing the retail distribution of coal and its rationing for domestic use until 1919. In 1921 he was appointed Joint Assistant Managing Director of the companies comprised in the London Electric Railway and Omnibus Group, and in 1924 assumed full administrative control under Lord Ashfield. In March, 1928, Mr. Pick was appointed Managing Director. Mr. Pick, who is a foundation member of the Institute of Transport, is a member of the London and Home Counties Traffic Advisory Committee, a member of the Publicity Committee of the Empire Marketing Board, a member of Council of the London and Provincial Omnibus Owners' Association and the Commercial Motor Users' Association, and a member of the Standing Joint Committee on Mechanical Transport. He is also President of the Railway Students' Association, and served on the Royal Commission on Police Powers and Procedure appointed in 1928.

MR. FRANK PICK.

MR. ERNEST M. C. INSTONE, J.P., F.C.I.S.

**New President of the S.M.M. and T.** — Mr. Ernest M. C. Instone, J.P., F.C.I.S., who has been elected to succeed Mr. E. H. Blake as President of the Society of Motor Manufacturers and Traders, was born in 1872. He was educated at King Edward VI. Grammar School, Birmingham (Foundation Scholarship) and joined the Daimler Motor Company, Limited, in March, 1896, resigning in 1899 having then been Secretary of the Company for 2½ years. He re-joined the Daimler Company in 1902 as Commercial Manager. Mr. Instone became an associate member of the Chartered Institute of Secretaries in 1897 and a Fellow in 1905. He has been a member of the Council and Committee of Management of the Society of Motor Manufacturers and Traders since its inception, and Vice-President of the Society upon five occasions. He has been a member of the Council of the Motor Trade Association; member of the Committee of the Motor Trades' Protection Association and President of the Motor Trades Debating Society. Mr. Instone is a founder member and member of the Committee of the Royal Automobile Club since 1905 and is now a Vice-Chairman. He was a member of the Coventry City Council for nine years and has been a Justice of the Peace for Coventry since 1913 and for the County of Warwick since 1920. Mr. Instone was a Vice-President of the Bureau Permanent International des Constructeurs d'Automobiles and is a member of the Council of the Royal Warrant Holders Association and Chairman of the Circle of the Nineteenth Century Motorists, of which the Hon. Sir Arthur Stanley is President.

**Principal Assistant** to Chief Goods Manager, **G.W.R.**— Mr. C. Bassage, M.Inst.T., F.R.H.S., who has been appointed Principal Assistant to the Chief Goods Manager, Great Western Railway Company, has been in the service of the Company for some 47 years and has had an all-round experience in goods work. He occupied the post of District Superintendent and Cartage Superintendent at Hockley goods station for some years. Early in 1914 he acted as Goods Agent at Wolverhampton for a time, and later was transferred to Paddington as Assistant Goods Superintendent. Four years later he returned to Birmingham as Goods Superintendent, and in 1920 was promoted to Assistant District Goods Manager. In 1921 he went to Bristol, taking charge of the many goods depots in that city, and in 1923 became District Goods Manager there. As General Assistant to the Chief Goods Manager Mr. Bassage has taken a special interest in problems affecting the working and operating side of the Goods Department's activities. At the same time he has been largely interested in staff arrangements, including Sectional Council work.

MR. C. BASSAGE, M.INST.T., F.R.H.S.

**United Automobile** Services, Ltd. — Mr. J. F. Heaton, Chairman of Thomas Tilling, Ltd., has been appointed Chairman of United Automobile Services, Ltd., and Mr. G. Cardwell, a Director of the North-Western Road Car Co., Ltd., has been appointed Managing Director of United Automobile Services. Mr. Thomas Hornsby, of the L.N.E.R., remains on the Board.

**L.M.S. Appointment.** — Mr. J. Noel Phillipps, L.M.S. Assistant Divisional Superintendent of Operation, Crewe, has been appointed Assistant General Superintendent for Scotland. He will be succeeded at Crewe by Mr. J. H. Robinson, who has been Assistant Divisional Passenger Commercial Superintendent at Manchester.

**Imperial Shipping Committee.** — Sir William Crawford Currie, one of the members of the Imperial Shipping Committee has resigned his membership of that Committee, and the Prime Minister has appointed in his stead Mr. Alexander Shaw.

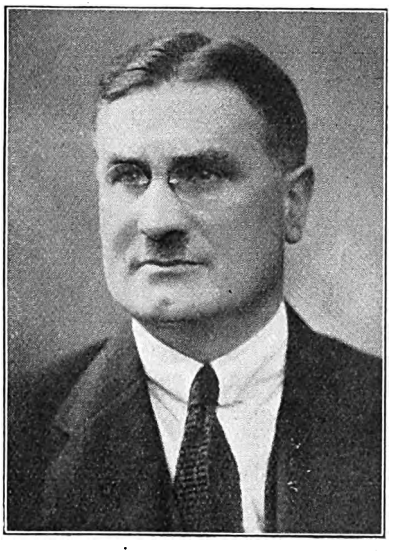
**Dock Company's Appointment.** — The Directors of the Gloucester Dock Company have appointed Mr. Arthur C. Lisle to the position of Assistant Secretary. For the past ten years Mr. Lisle has been Continental Manager and representative of a London concern having interests in

Digitized by Google

shipping, coal exporting, and other kindred activities. Mr. Lisle has travelled extensively and he has a wide knowledge of the customs and usages of the principal Continental ports.

**Assistant to Chief Goods Manager and Development Agent, G.W.R.**—Mr. F. W. Lampitt, formerly the Liverpool District Goods Manager, has been appointed to the post of Assistant to the Chief Goods Manager and Development Agent, Great Western Railway Company. Entering the Company's service in the South Wales district in 1896 Mr. Lampitt came to London two years later and gained extensive experience at various London depots. He was engaged at the Victoria and Albert Depot and at Park Royal when these stations were opened and in 1911 was made Chief Clerk to the then newly constructed South Lambeth station. This position he held for nearly ten years. In 1921 Mr. Lampitt was attached to the Chief Goods Manager's staff at Paddington, and served on various Committees entailing the visiting of all the larger goods stations on the Company's system. These Committees operated with the dual functions of introducing mechanical appliances and modern methods of book-keeping and of re-organising the clerical staff. Two years later Mr. Lampitt was appointed Goods Superintendent, Bristol, an office he held during the entire rebuilding of the Temple Meads Goods Depot. He was promoted to be District Goods Manager of Liverpool district in 1927 and did much to increase the prestige of the Great Western Railway Company on Merseyside. As a member of the Liverpool Chamber of Commerce and of the Liverpool Traffic Club he kept in touch with all the movements of business and spared no efforts to attract additional traffic to the Company.

MR. F. W. LAMPITT.



MR. E. GENNA.

**Bean Cars, Ltd. New Appointment.**—In our May issue we announced the appointment of Mr. E. Genna as Sales Manager of Bean Cars, Ltd., Tipton, Staffs., and gave a few brief details of his career. We now have pleasure in reproducing a recent portrait of Mr. Genna.

**Road Safety.** — Mr. Frederick G. Bristow, F.C.I.S., M.Inst.T., General Secretary of the Commercial Motor Users' Association, has been elected Chairman of the Public Safety Committee and Chairman of the Road Safety Committee of the National Safety First Association.

**Leigh Corporation Motor Bus Department.** — Mr. J. Atherton, General Assistant to the Manager of the Yorkshire Traction Company, Barnsley, since 1914, and previously for five years on the staff of the Wigan Corporation, has been appointed General Manager of the Leigh Corporation Motor Bus Department.

**A.J.S. Commercial Vehicles.**—Mr. D. W. King has taken over the position of Sales Manager of the Commercial Vehicle Section of A. J. Stevens & Co. (1914), Ltd., Walsall Street, Wolverhampton, makers of the well-known A.J.S. passenger and commercial vehicles. Previously, Mr. King was Assistant to the Sales Manager, and also held a position in a similar capacity in the Commercial Vehicle Department of the Star Motor Co., Wolverhampton, for a number of years. He is well-known in the trade.

## The Municipal Tramways and Transport Association.

### Annual Conference at Southampton, June 24th to June 26th.

THE annual Conference of the Municipal Tramways and Transport Association will be held at Southampton from June 24th to 26th, but at the time of going to press the programme had not been finally passed.

The Dinner of the Association will be held at the South Western Hotel, Southampton, on Wednesday, June 24th, and for Thursday, June 25th, the Mayor and Corporation of Southampton are issuing invitations to luncheon on board the R.M.S. "Aquitania" (by kind permission of the Cunard Steamship Company, Limited) as well as invitations to attend one of the Southampton theatres in the evening of that day.

Mr. J. Beckett, F.S.A.A., is the General Secretary of the Association and the offices are at 3 and 4, Clements Inn, Strand, London, W.C.2.

## Institute of Transport.

### Nomination for Election to Council, 1931-32.

THE following fifteen members of the Institute of Transport have been nominated by the Council to fill the vacancies as Ordinary Members of Council resulting from the retirement of eleven present members of Council on September 30th, next.

MEMBERS.

*Representing railway transport* (nine nominations for seven vacancies).

| | |
|---|---|
| Argile, Thomas Evans | Assistant Chief Goods Manager, London, Midland & Scottish Railway. |
| Baxandall, Frederick Ernest | District Goods Manager (Leicester & Nottingham), London, Midland & Scottish Railway. |
| Coventry, Fulwar Cecil Ashton, O.B.E. | Superintendent of Road Transport, Great Western Railway. |
| * Davies, Ashton, O.B.E. | General Superintendent (Passenger Commercial), London, Midland & Scottish Railway. |
| Richards, Henry Walter Huntingford | Electrical Engineer, London & North Eastern Railway. |
| Robertson, Vernon Alec Murray, M.C. | Civil Engineer, London Underground Railways. |
| Thurston, George Francis | Divisional General Manager (Southern Area), London & North Eastern Railway. |
| Warriner, Fred, M.B.E. | District Superintendent (King's Cross), London & North Eastern Railway. |
| Wheeler, George Herbert, M.B.E. | Commercial Assistant to Traffic Manager, Southern Railway. |

*Representing road transport* (four nominations for three vacancies).

| | |
|---|---|
| Chivers, Alfred William Alexander | Chief Inspecting Officer, British Electrical Federation, Ltd. |
| Morley, Richard Ernest | Traffic Manager, Bryant & May, Ltd. |
| Pilcher, Robert Stuart | General Manager, Manchester Corporation Transport Department. |
| Robinson, William Percival | County Surveyor, Surrey. |

ASSOCIATE MEMBERS.

*Representing road transport* (two nominations for one vacancy).

| | |
|---|---|
| Jones, Ellis Leslie | Secretary, Carter, Patterson & Co., Ltd. |
| Lane, Frank | Inspector of Postal Traffic, General Post Office. |

* *Former Member of Council.*

Not later than June 21st, 1931, any ten Corporate Members may nominate any other qualified person or persons to fill any or all of the aforementioned vacancies by delivering a nomination in writing to the Secretary and, in the case of each person so nominated, a statement setting forth which branch of transport, transit, locomotion or traffic, or works connected therewith, such person represents, and also his consent in writing to serve as an Ordinary Member of Council, if elected. Forms of nomination may be obtained from the Secretary of the Institute, at 15, Savoy Street, London, W.C.2.

# Public Service Vehicles (Equipment and Use) Provisional Regulations.

On June 3rd the Minister of Transport made the Public Service Vehicles (Equipment and Use) Provisional Regulations, 1931, to come into force forthwith as Provisional Regulations and continue in force until Statutory Rules shall have been made.

**Regulations governing the equipment of Public Service Vehicles.**

As from 1st August, 1931, in or upon every Public Service Vehicle there shall be carried in such a position as to be readily available for use suitable and efficient apparatus for extinguishing fire, and such apparatus shall comply with the requirements of the Fire Offices Committee and shall be of one or more of the undermentioned types, namely:—Foam Producing fire extinguisher; Soda acid chemical fire extinguisher; Carbon tetra chloride fire extinguisher.

As from 1st August, 1931, in or upon every public service vehicle which is for the time being used as an express carriage or as a contract carriage there shall be carried:—(a) a suitable receptacle containing the first aid dressings and appliances specified below, which shall at all times be maintained in good condition, and; (b) apparatus capable of raising any wheel fitted to the vehicle not less than 6 inches clear of the ground.

**Regulations governing the use of Public Service Vehicles.**

Every entrance, exit and gangway shall be kept clear of obstruction while passengers are being carried. Provided that for the purposes of this regulation standing passengers shall not be deemed to form an obstruction.

No person shall be carried on the right hand side of the driver nor shall any article be so carried in such a position as to be liable to obstruct the driver.

The body both externally and internally and all windows and fittings and all seats for passengers shall be maintained in clean and good condition.

The lamp or lamps provided in compliance with the requirements of the Public Service Vehicles (Conditions of Fitness) Provisional Regulations, 1931, for the internal illumination of a public service vehicle and on the upper deck of a double-decked vehicle not fitted with a permanent top to the upper deck shall be kept lighted at all times during the hours of darkness when passengers are being carried.

The steering arms shall be kept clean and free from rust.

The exhaust pipe and all apparatus connected therewith shall be maintained in such condition as to prevent so far as practicable any fumes from entering the vehicle.

The petrol tank shall not be filled, nor shall any filler cap thereof be removed while the engine is running.

Except for the fuel and lubricant necessary for the use of the vehicle, no explosive, highly inflammable or otherwise dangerous substance shall be carried on a public service vehicle unless it is so packed that, even in the case of an accident to the vehicle, it is unlikely to cause damage or injury to the vehicle or passengers carried therein.

No trailer shall be drawn by a public service vehicle. Provided that this Regulation shall not apply to the drawing of one empty public service vehicle by another in case of emergency.

The seating capacity of a public service vehicle shall be calculated in accordance with the provisions of Regulation 3 of the Hackney Motor Vehicles (Seating Capacity) Regulations, 1927, and the number of passengers carried on the vehicle shall not exceed the seating capacity so ascertained. Provided that in the case of a stage carriage carrying a conductor, where additional passengers not exceeding 25 per cent. of the number for which the deck has seating capacity and not exceeding five in number are carried in a single decked vehicle or on the lower deck of a double decked vehicle, a person shall not be convicted of an offence under this Regulation if he satisfies the Court that the additional passengers were taken up during hours of peak traffic or in circumstances in which undue hardship would have been caused to such passengers if they had not been carried on the vehicle. Nothing in this regulation shall prejudice the power of any Traffic Commissioners to attach to any road service licence a condition prohibiting the conveyance of additional passengers.

As from 1st August, 1931, where a public service vehicle is being used as a stage carriage a conductor shall be carried thereon if the seating capacity thereof exceeds 20 passengers: Provided that in the case of a single decked vehicle where no adult fare is less than 6d. no conductor need be carried if the seating capacity of the vehicle does not exceed 26. Nothing in this Regulation shall prejudice the power of any Traffic Commissioners to attach to any road service licence a condition requiring a conductor to be carried on any stage or express carriage.

If any person uses or permits to be used a public service vehicle in contravention of or fails to comply with any of these Regulations he shall for each offence be liable on summary conviction to a fine not exceeding twenty pounds.

The provisions of these Regulations are in addition to and not in derogation of the provisions of the Motor Vehicles (Construction and Use) Regulations, 1931.

**First-Aid Dressings and Appliances.**

One 2 oz. bottle Sal Volatile (with amount of dose printed on label); One 2 oz. bottle aqueous solution of Iodine; One Foulis tourniquet; One telescopic splint; One large wound sterilised dressing (gauze and wool): Three small wound sterilised dressings (gauze and wool); Three roller bandages (3 in. by 6 yds.); One flannel bandage; One roll of surgical Strapping; One pair of Spencer Wells pressure forceps; One pair of rustless scissors; Two eye pads; One box of large strong safety pins.

# Nationalization of Transport?

The Prime Minister received recently a deputation from the National Union of Railwaymen, the Associated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association. He was accompanied by the Lord Privy Seal, the Minister of Labour, and the Minister of Transport.

Mr. A. G. Walkden, M.P., Mr. C. T. Cramp, and Mr. J. Bromley, M.P., submitted and explained to the Prime Minister the following addendum to the recent findings of the National Railway Wages Board subscribed to by the representatives of the Railway Unions, the Co-operative Movement, and the Trade Union Congress on the Board:—

"While concurring in the findings which provide a measure of assistance for the purpose of enabling the companies to encounter the immediate difficulties, we desire at the same time to state that in our opinion this inquiry has clearly revealed the necessity for other action in order that the industry may be in a position to provide the transport facilities desired by industry, commerce, and the travelling public. In our view the continuation of four separate groups of railways is unsatisfactory. Modern requirements make further co-ordination imperative, and the present inquiry has re-enforced our opinion that only along the lines of comprehensive national organization of all forms of transport under public ownership and control can the problems of the transport industry be overcome."

The Ministers undertook that the views which had been submitted to them should be given consideration.

# Obituary.

## A. Whalesby Windsor.

We much regret to report the death on June 4th of Mr. A. Whalesby Windsor, M.B.E., A.M.I.Mech.E., M.I.A.E., M.Inst.T., the General Sales Director of Leyland Motors, Ltd., at the age of 50 years. Mr. Windsor was held in the highest esteem by all who knew him and his popularity with the employees in the Leyland factory was particularly evidenced by the fact that when it became known that a blood transfusion was to be tried with the hope that it might aid to his recovery, between 40 and 50 of the employees volunteered. Previous to the War Mr. Windsor was Assistant Technical Editor of our contemporary, the *Commercial Motor*. In 1916 he received an appointment at the Ministry of Munitions. After the War he took up a position with Leyland Motors in which service his ability brought him rapid promotion.

THE LATE MR. A. WHALESBY WINDSOR.

# Furniture Warehousemen and Removers' Association.

## Annual Conference.

THE Annual General Meeting of the Furniture Warehousemen and Removers' Association was held in the Banqueting Room, Guildhall, Portsmouth, on May 21st last.

**THE PRESIDENT, MR. A. C. OSBORN** (Curtiss & Sons, Ltd., Portsmouth), presided, and extended a hearty welcome to all.

The members were honoured by being accorded a civic welcome by the **LORD MAYOR OF PORTSMOUTH** (Councillor Walter Gleave), who expressed the hope that the Conference would prove of great value to the industry.

Mr. A. C. Osborn thanked the Lord Mayor for his kind welcome and for allowing the Association to hold the Conference in the historic banqueting room in the Portsmouth Guildhall.

The President moved the adoption of the Annual Report and Accounts for the year ended March 31st last. This motion was seconded and carried unanimously.

ELECTION OF PRESIDENT, 1931-32.

The President said it was with very great regret that he had to announce that Mr. A. E. Knill (Pickfords, Ltd., London), their Senior Vice-President, had not found it possible to submit himself for election as President of the Association for the ensuing year.

Mr. Osborn said he had the greatest possible pleasure in proposing that **MR. F. W. H. WINWOOD** (Frederick Winwood, Ltd., Worcester), their Junior Vice-President, be elected to the Presidential Chair. He was sure members would agree that they could not elect a gentleman to that high position who possessed a more able intellect than did Mr. Winwood. (Loud applause.)

MR. F. W. H. WINWOOD (FREDERICK WINWOOD, LTD.), PRESIDENT.

Mr. W. L. Barber (J. Greaves & Son, Birmingham) cc[illegible]d the proposition which was carried with la[illegible]atic

[illegible]R F. [illegible]H. WINWOOD, who was received with enthusiasm, expressed surprise at suddenly finding himself in so distinguished a position and said he hoped the members would give him until the banquet that evening to collect his thoughts; then, perhaps, he might be able to say how very grateful he was for the honour conferred upon him. He could say at once, however, that he would start upon his duties with the fixed intention and determination to do everything possible to benefit the members and help forward the work of the Association. (Applause.)

MR. F. C. SKINNER (ARDING & HOBBS, LTD.), SENIOR VICE-PRESIDENT.

ELECTIONS OF VICE-PRESIDENTS.

Mr. A. C. Osborn proposed the election of **MR. F. C. SKINNER** (Arding & Hobbs, Ltd., London) as Senior Vice-President for the ensuing year.

This resolution was seconded and carried unanimously.

**MR. F. C. SKINNER**, acknowledging his election, remarked that Shakespeare had said: "Some achieve greatness and some have greatness thrust upon them"; and he seemed to come into the latter category. (Laughter.) He had tried in a humble way to do his best in the interests of the Association, and he sincerely hoped that at the end of his year of office the choice of the members would be found to have justified itself; in any case he could assure them all that he would do his best.

Two gentlemen were nominated for election as Junior Vice-President. A poll was taken, and in the result **MR. A. G. COOMBE** (The Pantechnicon, London) was declared elected.

**MR. A. G. COOMBE**, acknowledging his election, said that in his earliest days in the removal industry he thought that the greatest honour one could attain was to become an officer of the Furniture Warehousemen and Removers' Association, and to-day he thought the same. (Applause.) He sincerely thanked the members for the honour they had conferred upon him, and he realised that his illustrious predecessors had set him high ideals to follow. He could only say he would do his best.

**MR. A. E. KNILL** was unanimously elected a member of the Executive Committee.

Mr. W. L. Barber proposed the re-election of **MR. G. H. GOOD** (J. J. Allen, Ltd., Bournemouth) as Chairman of Standing Sub-Committee. He said he thought he could say without fear of contradiction that the position filled by Mr. Good was one of the most arduous in the Association. He knew the work the Chairman of that Committee had to do and they could not have a better man than Mr. Good for the position.

Mr. A. G. Coombe seconded the proposition, and said he had the pleasure of sitting on the Committee under Mr. Good, and the work carried out by their Chairman was really tremendous.

The resolution was carried unanimously.

**MR. G. H. GOOD**, acknowledging his re-election said he rather wished he had been a man with a pale complexion so that he could blush at all the nice things that had been said about him. It was an honour to hold the position of Chairman of Standing Sub-Committee but it certainly did involve giving up a lot of time to the work; happily, however, the business of his firm enabled him to be in London each week. He could assure the members he would continue to do his best. (Applause.)

MR. A. G. COOMBE (THE PANTECHNICON), JUNIOR VICE-PRESIDENT.

**MR. F. C. SKINNER** was re-elected Vice-Chairman of Standing Sub-Committee.

Mr. G. H. Good proposed the re-election of **MR. VICTOR BROWN, J.P., C.C.** (Victor Brown, Blackburn & Co., London) as Hon. Treasurer for the ensuing year. He said he was sure members would agree that they could not have a better man for that position. Mr. Victor

Digitized by Google

Brown always held tightly the strings of the Association purse. Mr. R. J. Armstrong seconded the proposition, and Mr. A. C. Osborn, supporting it, said that the Association was exceedingly fortunate in having such an Hon. Treasurer as Mr. Victor Brown. During the last twelve months he had come into very close contact with their Hon. Treasurer, and it had been an eye-opener to him to see the enormous amount of work Mr. Victor Brown put in on behalf of the members, and the incoming President was very fortunate in having Mr. Victor Brown as the Treasurer during his year of office. (Applause.)

**MR. VICTOR BROWN,** who was received with applause, thanked the members for re-electing him to his old position. As long as the members wanted him to occupy the position he had held for thirty odd years, and he continued to feel able to do so, it would give him much pleasure to carry on, as he looked upon himself, he hoped not with conceit, as one of the founders of the Association for which he had a great love. (Applause.)

RETIRING PRESIDENT THANKED FOR HIS SERVICES.

Mr. F. W. H. Winwood moved a hearty vote of thanks to Mr. A. C. Osborn, the retiring President, for the excellent services he had rendered to the Association during the past year. He said that it had been proved abundantly that members did themselves a good turn when they elected Mr. Osborn to the Presidential Chair. (Applause.)

**MR. H. MAYES** (White & Co., Ltd., Southampton) seconded the proposition. He said that Mr. Osborn's firm were somewhat competitors of his, but he could say with all sincerity that if all firms could work together as did Curtiss & Sons, Ltd., and White & Co., Ltd., there would not be so many complaints brought to the notice of the Association. (Applause.)

Mr. F. C. Skinner also supported the proposition and said Mr. Osborn had served the Association to the very utmost of his capacity, not only in London but over a great part of the Kingdom.

**MR. A. C. OSBORN,** who was received with acclamation, said it was very nice to feel that one's efforts were appreciated. He had certainly tried to do his best for the Association during his year of office, and it had been a time that had given him intense delight. He had been enabled to come into contact with many more members of the Association than it had been his privilege to meet before; everywhere he had met with unfailing courtesy. Members were well served by gentlemen such as Mr. G. H. Good and Mr. H. Mayes, and really they were the men who did the work. In Mr. Harris, the Association had a Secretary of undoubted worth, who always greeted one with a smile and no matter at what time he was approached he always gave his full attention to the matter in hand. In conclusion Mr. Osborn thanked all the members of the Association for the splendid time they had given him during his year of office. It had been a red letter year in his life and to hold the Presidency had been the greatest honour that had come to him during his business career. (Applause.)

MR. S. E. JONES,
CHAIRMAN, SOUTHAMPTON AND DISTRICT CENTRE.

* * * *

At the conclusion of the ordinary business an Extraordinary General Meeting was held.

The newly-elected President of the Association, **MR. F. W. H. WINWOOD,** was heartily cheered on taking the Chair.

RAILWAY AND REMOVAL TRAFFIC.

**MR. R. J. ELTON,** Vice-Chairman of the Railways and Removal Traffic Committee, addressed the meeting and dealt fully with the negotiations which had taken place from the time when the Association was approached by the railways.

A discussion followed in which several members participated, and Mr. Elton replied to several points which had been raised.

**MR. G. H. PRICE,** Chairman of the Railways and Removal Traffic Committee, said that Mr. Elton had addressed the meeting at his request, because he had spoken to them before on the subject. It was hoped that the present difficulties would soon disappear.

DRIVERS HOURS.

**MR. G. H. GOOD,** the Chairman of the Association's Special Sub-Committee, reviewed the negotiations conducted by the Association in conjunction with other transport organisations in regard to getting some modification of Section 19 of the Road Traffic Act.

He detailed the Order made by the Minister of Transport which is now in force specifying the hours during which drivers of certain mechanically propelled vehicles may be employed in driving and said that to make road transport pay it was essential that the machines employed should be able to be on the road or loading and unloading as long as possible each day. It was also essential that their costs should not be increased. The point then was how best to use and employ the drivers to obtain these two essentials.

A great deal of most days was taken up in work of packing and loading or unloading and unpacking when the driver was not absolutely required. If the lorry was in a private drive or roadway it was easy; the man could go off duty and return when required for driving, but frequently the lorry stood in a public road and the driver must be in attendance if not actually working; the point then arose as to how he was to be in attendance and not on duty. At the home end another driver could take the lorry to the house and remain until loaded and the proper driver then come on duty and go on the journey and drive for eleven hours with intervals for rest and refreshment. After driving for this time, however, he would have to go off duty for ten hours and if the lorry was then in a public road a difficulty would at once arise as the lorry could not be left unattended. It seemed to him, therefore, that to overcome the difficulty the mate on the car would have to be initiated into the art of driving to enable him to move the car if required by the police.

Taken generally he thought the section could be worked without too great hardship to firms running reasonable hours. If the section was enforced, and from what he learned it would be, it should do something to stop some of the terrifically low prices sometimes quoted and help the industry to a greater stability of costing; it would, however, mean much greater care in working out daily time tables.

His great regret was their inability to get any better terms from the joint application made after great efforts had been expended in getting agreement between all the interests concerned and a great amount of time given freely by so many very busy men in the road transport world.

**MR. A. E. KNILL** reported to the meeting on the subject of the Joint Industrial Council Wages Agreement.

**MR. BISHOP** reported that the Executive Committee had approved the regulations for the conferment of degrees on members and for the appointment of an Honours Committee. A Certificate of Membership had also been drawn up and had been adopted by the Executive. A member would have to comply with certain conditions before a Certificate would be granted to him. The steps taken in regard to both these questions would encourage the younger men in the industry to go ahead and qualify for the distinctions which it was now within the power of the Association to bestow.

**MR. F. C. SKINNER** (Chairman of the Costing Committee) submitted a report of the work of the Committee since the last General Meeting. The report was adopted.

**MR. E. A. HARRIS,** the Secretary of the Association, reported as to the steps recently taken with a view to increasing the membership of the Association. He said that the Executive Committee would welcome any suggestions any member could make on the subject. It was believed that nearly all established removers were members, but there were a number of firms outside the Association who, if they became members, would prove a source of strength to the Association, and would themselves benefit

Digitized by Google

by being members of an organisation which worked for the betterment of the industry.

It was resolved that the Annual General Meeting, to take place in 1932, should be held at Southport.

* * * *

## Benevolent Fund.

The Fifth Annual General Meeting of the members of the Benevolent Fund followed the Extraordinary General Meeting.

The Annual Report and Accounts for the year ending March 31st last were adopted.

Mr. Victor Brown, J.P., C.C., Mr. A. C. Osborn, and Mr. J. R. Harris were re-elected Trustees.

Mr. A. C. Osborn said the Trustees hoped that if there were any cases in the industry deserving assistance that they would hear of them.

* * * *

## The Banquet.

The Banquet which followed the Annual General Meeting was attended by the Lord Mayor of Portsmouth (Councillor Walter Gleave) and by many other distinguished guests.

**MR. F. W. H. WINWOOD,** the newly-elected President, was in the Chair and submitted the toast of "The King," which was received in the usual loyal manner.

**DR. A. BOSWORTH WRIGHT, M.R.C.S., L.R.C.P., J.P.,** submitted the toast of the Association. He said he wondered why he had been invited to do so—it was certainly not because he was a furniture remover although as a Surgeon it was his business to remove most things. (Laughter.)

He was fortunate in sitting next to Mr. F. C. Skinner, their Senior Vice-President, who had told him a good deal about their Association, and he began to appreciate many of their difficulties. He knew that the railways had entered into competition with them, but he had always been taught that in business the great thing was to please one's customer and if he were himself removing his furniture he would like to see it packed carefully into a van at his own door and taken by the firm he employed to pack it straight to its destination rather than to consign it by rail and, perhaps, have it deposited, say, at Nine Elms to remain there for an unknown time before arriving eventually at its destination.

He knew all about the restrictions imposed on them by the Road Traffic Act with its limitation of drivers hours. The present were really difficult times for furniture removers just as they were for medical men as people were not having things removed as often as they used to. (Laughter.)

It had been a great pleasure to him to meet Mr. Victor Brown, their Hon. Treasurer, and one of the founders of the Association and who had perhaps done more for it than anyone present that night, and it must give him great satisfaction to realise that the Association was still growing and was proving such a great success. The F.W. & R.A. was established in the year 1900 on a firm foundation, and Service to the community was their chief aim and coupled with that was the desire to satisfy their own employees. He believed that in the old days a man used his van for greengrocery in the morning and moved furniture in it in the afternoon, but now the young men coming into the industry were examined as to their knowledge of the intricacies of the industry.

ON THE STEPS OF THE PORTSMOUTH GUILDHALL.
THE LORD MAYOR OF PORTSMOUTH WITH MEMBERS OF THE FURNITURE WAREHOUSEMEN AND REMOVERS' ASSOCIATION.

### REPLY BY THE PRESIDENT.

**MR. F. W. H. WINWOOD,** the President, who was received with great enthusiasm, thanked Doctor Bosworth Wright for coming that evening to wish success to the Furniture Warehousemen and Removers' Association.

That evening Doctor Bosworth Wright saw members of the Furniture Warehousemen and Removers' Association at a time when they had set aside the heavy responsibilities inseparable from their calling and were showing themselves as a confederation of serious-minded business men who realised the value of co-operation and unity within their ranks and who recognised the necessity for combined action in dealing with their common problems.

The reception given him that day increased his obligation to all who had assisted in placing him in the coveted and distinguished position of President of the Furniture Warehousemen and Removers' Association. To be placed

Digitized by Google

in the Presidential Chair of one's own Trade Association and by one's business competitors was an event impossible to surpass, and that day he had achieved one of his life's ambitions and in future they would behold in him a miserable man, in that he had no more worlds to conquer. (Laughter.)

At the first meeting of the Association in May, 1900, there was present amongst others his father, Frederick Winwood of Worcester. He himself was but seven years old at that time. He well remembered that his father had deep admiration for Mr. Victor Brown and when faced with any problem in connection with the operation of his fleet of three pair-horse vans that problem was put on one side until Mr. Victor Brown came to Worcester and could be consulted. Mr. Victor Brown, as all the members knew, had been the guide, philosopher and friend of many a struggling firm in the industry. (Applause.)

He remembered attending in 1913 his first meeting of the Association, and being unused to meetings at that time he recalled that he sat down with his hat on owing to his extreme nervousness. (Laughter.) He did not remember the particular subject that was being discussed but for obvious reasons he held aloof from the debate fervently hoping that he would be regarded as a strong and silent man. (Laughter.) Suddenly a gentleman, probably it was Mr. G. H. Price, whose interest in him and friendliness he would never forget, turned and asked what he thought about the matter, and it was then that he made his first and possibly his last really helpful contribution to the affairs of the Association, for he summed up the situation in three words—"It all depends." (Loud laughter.) He was sure not one of his then spell-bound listeners ever thought that that blushing and stuttering speaker would in the year 1931 become the blushing and stuttering President of the Furniture Warehousemen and Removers' Association. (Laughter.)

### THE POSITION TO-DAY.

The present membership of the Association included all the leading firms in the furniture warehousing and removal industry and although the Association could not guarantee prosperity they did contend that they got their members good value for money, and they had available the advice of the leading men in the industry free of charge.

It seemed to him that too often had it been said that it was not what members got out of the Association that counted but what they put into it. He could not subscribe to that and during the next twelve months he would try to show furniture removers, both inside and outside the Association, just how much they could get out of the F.W. & R.A. for the trifling amount of the annual subscription.

It was true that to-day, in common with other professions and industries, they found themselves face to face with complex and difficult problems, yet it was amazing, in the case of their own industry, how disturbing elements failed to fulfil their early threat of ruinous destructiveness, and that protection and relief was unquestionably due either directly or indirectly to the work of their Association.

The Road Traffic Act had disturbed their peace of mind, and although motor taxation in this country was five times greater than in the United States, the Chancellor of the Exchequer proposed to extract another £8,000,000 from motors and possibly £250,000 of that sum would come from the industry in which those present that night found themselves unhappily engaged. (Laughter.)

### THE RAILWAYS.

The railway companies were trying to force back on to the rails traffic which they themselves and the process of evolution had sent on to the roads. The railways contended that the container was the last word in removal equipment and modernity, but the container was in use by removal contractors at least twenty-five years ago and its possibilities had already been fully exploited.

For some time the attitude of furniture removers towards the railways appeared to have been one of unsettled perflexity, and if he might be permitted to express what must be regarded as entirely his own personal opinion, he would say that it would be an error of judgment for furniture removers to return once more to railway transport as a definite policy. For ordinary merchandise the railways had much to recommend them, but a woman's home was something much more intimate, and to forsake the endless possibilities of the road would be a step in the wrong direction; it would not be progress but retrogression and modern industry had no room for backward movements. Furniture removers were not unfriendly or antagonistic towards the railways, because members were using containers in all parts of the country and loaded them for the railway companies, but it must be recognised that the public was entitled to the speed and efficiency which only road transport could give.

Certain old-established customs and methods, processes and traditions were going into the melting pot—"The Moving Finger writes; and, having writ, Moves on."

### RATIONALISATION.

His friend, Mr. A. C. Osborn, who had just completed a memorable year as President of the Association, in his Presidential Address twelve months ago, referred to rationalisation. He (Mr. Winwood) wondered if the term was fully understood by some in the industry. Rationalisation had come to mean the overhauling of old systems and methods and the continual introduction of new machinery. That meaning could be applied to the furniture removers vans, depositories and personnel. Unquestionably their Association had done much to raise the standards of practice, but there did seem to him to be boundless opportunities for the modernisation of their equipment. If he were asked to point the way towards prosperity in their industry he would answer in one word, "Rationalisation."

### PROSPERITY NOT A MIRAGE.

For the removal trade prosperity was not a mirage, it was something more tangible. It was no good expecting to cross a desert on a camel with the speed of aircraft. Various suggestions had been made for reducing their costs, but most of them were remote from practical politics. In his opinion they could not reduce costs and be prosperous unless they had modern equipment. Even to-day well equipped and well organised businesses were going ahead and were paying big dividends despite what was regarded to be a state of world depression. Those up-to-date firms saw opportunities in their difficulties and not difficulties in their opportunities. Such firms were getting ahead and, not fearing competition which might be threatened, would continue to prosper whilst their less enterprising competitors would pay the penalty of inefficiency and go to the wall.

### GROUPING OR AMALGAMATION.

It seemed to him that perhaps some scheme of scientific grouping or amalgamation might be desirable and so save many wasteful processes. Here there seemed to be an opportunity for the master minds in their profession. The old idea that business consisted of one man trying to get the better of another was no longer regarded as sound economics.

### REMOVING IS AN EXPERT'S JOB.

They had as their slogan the excellent phrase "Removing is an expert's job." To the public that motto conveyed, quite rightly, an impression of efficient transport, but to some in the industry the meaning seemed to be somewhat more obscure. The qualifications of the expert were not confined to the elementary process of transferring a van load of furniture from one point to another, but in the management and direction of each individual transaction in such a way that only the expert operator could survive. Removing had developed from a mechanical operation into an economic science.

### ESTIMATORS' CERTIFICATES EXAMINATION.

He was gratified to observe that more young men engaged in the industry were coming forward to sit for the Estimators' Certificates Examination. Those with lifelong experience of the industry held the view that furniture removing was essentially a young man's job—a job for the young man with an imagination which would make him steadfastly refuse to get into a rut, and the fact that there were so many young men now coming forward for the Examination was evidence that there were men amongst the younger generation possessing that enterprise.

A Prime Minister was a lonely man in that he had no one with whom he could share his ultimate responsibility. For some reason, as yet unexplained, he had that day been elected Prime Minister of the Furniture Warehousemen and Removers' Association, but when he looked round at the members of his Cabinet he saw a dozen or so Ministers who would share the responsibility which was likely to fall upon his shoulders—men who were anxious to do battle for the industry and who unselfishly gave up their time for the common good; men who lived up to the ideal of service before self. With such stout hearts with him he hoped that during his year of office the Association would move forward to even greater influence. (Loud applause.)

Digitized by Google

**MR. A. C. OSBORN,** the retiring President, said it was his happy task to submit the toast of "The Lord Mayor and Corporation of Portsmouth." He had great pleasure in doing so because he had seen the growth and development of Portsmouth during half a century of business association with the City. They were fortunate in having at Portsmouth a cautious body of municipal rulers and the vast area which the city covered was admirably served. Portsmouth became a Borough in the reign of Henry I. and a City in 1926. At Portsmouth they had Nelson's "Victory" and a wonderful Guildhall at which they had been privileged to hold their meetings, and the members were deeply indebted to the Lord Mayor for his kind permission for them to use the handsome Banqueting Hall at the Guildhall and for permitting them to view the Corporation Plate.

**THE LORD MAYOR OF PORTSMOUTH** (Councillor Walter Gleave) responded and congratulated Mr. F. W. H. Winwood upon his election as President of the F.W. & R.A. He said their President would prove to be the right man in the right place. (Applause.)

"THE PRESIDENT."

**MR. A. G. COOMBE,** Junior Vice-President, proposed the toast of "The President." He said he believed he had known Mr. Winwood as long, if not longer than most members of the Association.

Longer ago now than he cared to remember Mr. Winwood and he first set their feet in the way, and a not too easy way, of the removal contractor, and had tried to pick up the rudiments of the game under the tuition of one of their Past-Presidents. They also learned to know each other and he could assure his hearers that so far as he was concerned the passage of years had but tended to increase his regard for his friend and competitor Mr. Winwood. (Loud applause.)

Mr. Winwood's cheery personality and optimistic counsel were always welcome and helpful to the industry and he could assure them that their President's optimism was far removed from the kind that did not care what happens to the other fellow so long as it does not happen to oneself. Rather he was the type of man who did everything possible to bring the job to which he put his hand to a successful conclusion. Mr. Winwood would not merely hope for the best but would seek and work and make real efforts to ensure that those things their industry hoped for would come to pass.

As a trade they had some difficult problems confronting them, and so far as it was possible for a President of an association to be the instrument for securing the success of an industry, they had, for the ensuing year, selected the right leader. (Applause.)

To be merely a figurehead would not content their President, and if members desired to show their true and real appreciation of the worth of Mr. Winwood, he was sure there was nothing that would please their President more than that they should take their part wholeheartedly, sincerely and willingly in the work of the Association. (Applause.)

**MR. F. W. H. WINWOOD,** responding, called to mind the man who rose to speak and started off by saying "I don't know what I can talk about"—back came the answer from the audience "Talk about a minute, Gov'ner." (Loud laughter.)

He felt it to be an undoubted fact that his record as President, and he would do his very best, would not possibly compare with the records left behind by the many distinguished gentleman who had preceded him in that Chair.

The friendliness shown him that day was something he would cherish all his life. He thanked Mr. Coombe for his splendid flights of fancy and he could only pray that during his year of office some miracle would happen which would justify so vivid a description of his imaginary virtues. (Laughter.)

**MR. F. C. SKINNER** (Senior Vice-President) said that to him had been entrusted one of the most important toasts of the evening, namely, that of "Our Guests," and firstly he extended a most cordial welcome to the ladies.

That day they had been honoured with the presence of the Lord Mayor of the historic City of Portsmouth, a City of noble and stirring naval events many of which came back to their minds through the mists of antiquity. The City was granted its Charter in 1194 but old Portsmouth came into being in 491 B.C. Dry docks were built at Portsmouth in 1495—prohibition was evidently known in those far distant days. (Laughter.)

Members of the F.W. & R.A. would long cherish the memory of the generous welcome extended to them by the Lord Mayor that morning and he felt sure members would carry away with them memories which should prove a good advertising media for Portsmouth. (Laughter.)

Continuing, Mr. Skinner said that Mr. A. C. Osborn, the retiring President, had left a great progressive mark in the annals of the Association both with regard to the ordinary work of the Association and also with regard to the Association's Benevolent Fund, the inauguration of which was so much due to Mr. Osborne's efforts. (Loud applause.) In this connection Mr. Skinner said that amongst their friends they numbered Mr. H. E. Binstead, the Chairman of the After-Care Committee of the Furnishing Trades' Benevolent Association which Association had so kindly ruled that orphans of deceased members of the F.W. & R.A. could be considered for free admission to Radlett House, the beautiful Orphanage of the F.T.B.A. at Highgate. He could assure Mr. Binstead that the F.W. & R.A. fully appreciated the great value of that privilege and the F.T.B.A. was the link connecting up with their own Benevolent Fund.

**MR. CHARLES A. DAVIS** responded, and thanked the Association, on behalf of the guests, for the warmth of their reception and generous hospitality.

**MR. VICTOR BROWN, J.P., C.C.,** the Hon. Treasurer of the Association, who also responded, said that for him to be regarded as a guest of the Furniture Warehousemen and Removers' Association after thirty-one years association with it, reminded him of the man on the dole who refused employment and when asked the reason he said he could not engage in unnatural employment; when questioned as to what the employment was he said it was to put corks in bottles. (Loud laughter.)

The Winwood family were some of the oldest friends he had in the removal trade. Their President's grandfather, who was Mayor of Worcester at one time and also a County Magistrate, was a friend of his, and their President's own father was a very great friend of his and he would never forget the high compliment paid him, many years ago now, when their President's father was on his deathbed, he told his wife that if she ever wanted to know anything regarding the business she was to write to Mr. Victor Brown. He was therefore very pleased to be present that day to see the Son of that Father occupying the highest position in the removal trade. (Applause.)

## The Southampton Centre entertains the Members.

On Friday, May 22nd, the members were the guests of the Southampton Centre, and a most enjoyable programme had been arranged by Mr. S. E. Jones (Geo. Rogers, Boscombe), the Chairman, and Mr. F. W. Cossins (White & Co., Ltd., Southsea), the indefatigable Hon. Secretary of the Centre.

The party proceeded by steamer from Southsea to Southampton and inspected the Canadian Pacific luxury liner, "Empress of Britain", 42,500 tons.

Lunch was served at the South-Western Hotel, **MR. S. E. JONES** presiding.

**MR. G. H. GOOD,** on behalf of the Southampton Centre, welcomed the guests. He said that those present had honoured the retiring President, Mr. A. C. Osborn, by coming to Portsmouth and Southampton, and he thought he might be permitted to say that the gathering was a fitting finale to Mr. Osborn's most successful year of office. (Applause.)

**MR. F. C. SKINNER,** Senior Vice-President, responded, and said he was sure that all had spent a most enjoyable time.

**MR. F. W. H. WINWOOD,** the President of the Association, proposed the toast "The Southampton Centre," and heartily thanked the Centre for the excellence of their arrangements and generous hospitality. The Conference, he said, had been a huge success.

**MR. S. E. JONES,** the Chairman, who was received with applause, responded. He said it was very kind of the President to thank the Southampton Centre for what they had been able to do, but it had given his colleagues and himself much pleasure to entertain the members. The bulk of the work had fallen upon Mr. Cossins, their Hon. Secretary, and upon Mr. Osborn. He hoped that some time in the future the Annual Meeting of the Association would again be held in Bournemouth and in May and not in November as on the last occasion.

After luncheon some of the members accompanied Mr. A. H. Davis, the County Borough Librarian, on a tour of the ancient parts of Southampton, whilst others visited the Docks again and watched the s.s. "Berengaria" sail.

All were unanimous in voting the Conference a great success.

# British Association of International Furniture Removers.

THE ninth annual general meeting of members of the British Association of International Furniture Removers was held in the Banqueting Room, Guildhall, Portsmouth, on May 21st last.

**MR. J. RILEY** (James Riley & Sons, Derby), the President, was in the chair.

The annual report and balance sheet for the year ending January 31st, 1931, which had been circulated, was adopted.

ELECTION OF PRESIDENT.

**MR. EVAN COOK** (Evan Cook's Depositories, Ltd., London) was unanimously elected President of the Association for the ensuing year.

[At the time this meeting was held Mr. Evan Cook was abroad.]

Mr. A. E. Knill (Pickfords, Ltd., London) proposed the election of **MR. R. J. ARMSTRONG** (Army and Navy Co-operative Society, Ltd., London) as Vice-President for the ensuing year. He said he thought members would agree that it was necessary to appoint a gentleman to this office who could devote time to the duties. Mr. Armstrong had proved in the past that he was a gentleman who did a job with great credit to himself and to all concerned. The proposition was seconded and carried unanimously.

Mr. W. H. Brothers proposed the re-election of **MR. E. WOODBRIDGE** (Woodbridge & Co., Ltd., London) as Hon. Treasurer. He said that Mr. Woodbridge had served the Association faithfully and well for several years and they could not do better than re-elect him. They all very much regretted that Mr. Woodbridge was not able to be with them that day owing to indisposition, and they hoped he would soon be restored to health. Mr. Woodbridge was one of the founders of the Association and had consistently refused nomination for any other position than that of Hon. Treasurer.

The proposition was carried unanimously.

MR. EVAN COOK
(EVAN COOK'S DEPOSITORIES, LTD., LONDON),
PRESIDENT.

INTERNATIONAL TELEGRAPHIC CODE.

**MR. W. H. BROTHERS** (Van Oppen & Co., Ltd.) then addressed the meeting on the question of the international telegraphic code. He said the Association had felt the need for something not provided for in the ordinary telegraphic codes with which members were familiar. International transport necessitated frequent telegraphic communication with firms abroad. The Association had adopted a code at present in use on the Continent, but it was not easy to find out exactly what it was members required. The present code was in use by most of the important removers in Europe, and the Association recommended it for general adoption. The great advantage of having an international telegraphic code was plain, but if the code was allowed to fall into disuse there was danger that if it was only used occasionally firms might receive messages and be unable to read them. Members should notify their staffs that such a code existed, where to find it and how to use it. The code was being used not only by the F.W. & R.A. and The British Association of International Furniture Removers but also by the German and Austrian associations, Dutch, Swiss, etc., and it was understood that the French association were taking steps to enable their members to use it. The point to consider was whether it was intended to maintain the international character of the code already in force in so many removal associations or whether it was desired to go ahead and compile a code for use only by their own members.

After discussion, during which it was suggested that further information from the German association of furniture removers should be awaited before further steps were taken, it was moved, seconded and carried that the Council be empowered to take such action in this matter as seemed necessary in the interests of members.

EXCHANGE OF EMPLOYEES BETWEEN BRITISH, DOMINION AND FOREIGN FIRMS.

A very interesting paper, prepared by **MR. RICHARD THORPE**, of Ripon, outlining a scheme for the exchange of employees between firms in this country and those carrying on business in our Dominions and in foreign parts, was read and an abstract appears in another part of this issue. The paper evoked a very interesting discussion and in the result it was decided to refer the matter to the Council for consideration.

A vote of thanks to Mr. J. Riley, the retiring President, was carried with acclamation.

# The Mineral Transport Users' Association.

THE Mineral Transport Users' Association has been registered as a Trade Union under the Trade Union Acts.

The President is Captain Roland Addy, M.A., Managing director of the Carlton Collieries Association and the vice president is Mr. Duncan Bailey, O.B.E., M.I.Mech.E.

The Objects of the Association include:—To promote the interests of owners and users of railway and road vehicles or other means of transport engaged in works connected with mineral transport.

To defend private owners against encroachments upon their rights by Government departments or other bureaucratic bodies whether in connection with railway, road or other transport, and if necessary, to support or oppose measures which concern mineral transport users.

To give to members, free of charge, technical and legal advice upon all questions appertaining to mineral transportation by rail, road or other agencies.

To investigate questions of improvement and economic development of the provision, maintenance and operation of transport and of equipment for the loading, carriage, and unloading of minerals and liquids.

To establish an information bureau and to carry out a programme of discreet propaganda.

To examine, and if and when desirable, to prepare schemes for the rationalisation, upon voluntary lines and upon a private ownership basis, of the systems of distribution and user of privately owned rolling stock.

The head office of the Mineral Transport Users' Association is at 8, Lloyd's Avenue, London, E.C.3, and the Northern office at Red Doles Chambers, Huddersfield. The General Secretary is Mr. Leslie A. Kenworthy, LL.B., A.M.Inst.T., and Mr. J. L. E. Straker is the Treasurer.

# British Association of International Furniture Removers.

## Suggested Scheme for Temporary Exchange of Employees between British, Dominion and Foreign Firms.*

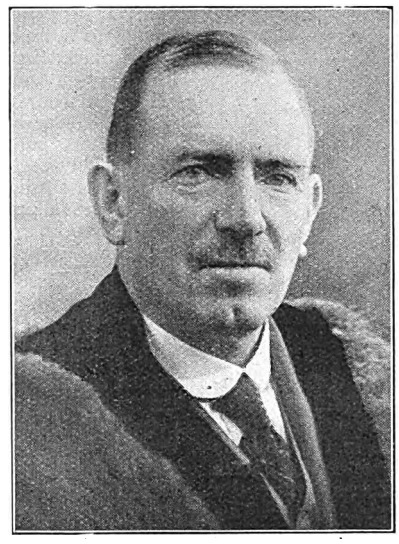
By Richard Thorpe.
Alderman, Ripon City Council; Contractor for Removals at Home and Abroad.

THE British Association of International Furniture Removers numbers amongst its members representatives of some twenty-two countries, whose declared object is to bring about uniformity of conditions as between contractor and client, and eventually to bring within its membership firms the world over who are engaged in the removal and storage of household furniture. Something more than mere membership and circulation of printed terms of contract must be set up, and a much closer co-operation in actual working conditions brought about.

No matter what the difficulties may be, it is necessary that the operating staffs responsible for the actual work being carried out, should conform to some elementary rules and regulations, and by so doing gradually establish customs in the trade that will have universal application, no matter in what country the work is to be done. It is only by actual contact with the man on the spot, adopting ways and means and using appliances that are entirely new, that the workman will better appreciate what is required of him when packing goods for removal to those other countries overseas.

It does not fall to the lot of every firm in this country to be entrusted with a removal of furniture abroad, and in most cases, when they are so entrusted, the work is handed over to one of the larger firms who specialise in overseas removals, and who have their appointed agents abroad to see the work carried through.

If the trade is to be organised by an Association such as ours, a thorough knowledge of how the business is carried on abroad must be acquired by all who direct and operate the business of furniture removing and warehousing.



ALDERMAN RICHARD THORPE.

It is not suggested that any financial assistance be provided from the funds of the association, but I suggest a scheme for a transfer of employees including Managers and Assistants as well as Foremen, workmen and small proprietors. I propose that an opportunity should be given them to go out by arrangement with firms overseas and have a period of employment or attachment with those firms which will bring them into direct contact with each and every phase of operation right from the beginning; methods of advertising, canvassing, approach to prospective clients, estimating, costing and the actual carrying out of the work to the completion of the contract. The moral support and assistance of the association in arranging the transfers must be forthcoming. The language difficulty is a difficulty, but like all difficulties it can be surmounted. In many large firms there is at least one employee who will be able to speak a little of the language of the country from which a transferred person might come, and by daily intercourse the advantage will be mutual. The financial arrangements will have to be made between the two firms participating, each case taken on its merits, and in no case can I conceive that it will be possible for a transferred employee to secure terms that will bear the cost of transportation, accommodation, and all the other expenses that go with it, without some considerable amount of the cost being provided from a source outside the actual payment, if any, made by the firm to whom he is attached. This is a matter for the Firm by whom he is employed, and for the man himself to contribute in such proportion as can mutually be arranged.

In many cases it will pay handsomely the larger firms to send out men to other countries and to bear the whole of the cost of the transfer. Here a mutual arrangement for exchange of employees for a given period would appear the easiest and most satisfactory way between those firms who carry on their business on the big scale. But the transfer of men from smaller firms who could not place a man in exchange presents a further difficulty, not insuperable, but somewhat different, to the arrangement suggested above. Here the man so transferred would require some payment for his services, and he would be required to live in the least expensive way possible, and probably contribute towards the cost of his transportation, but because of this disadvantage he should not be debarred from participating, but on the contrary every encouragement and assistance be given to enable this type of man to go. He is the backbone of the industry and should be encouraged to the utmost to go out and acquire knowledge, and it is that knowledge and experience, which cannot be acquired in any other way, that is going to be of such advantage to those firms who employ men with practical experience of working conditions in other countries and that will secure for them more business than can be obtained with only the limited experience of purely local contracts. Our only concern for what has happened in the past should be to use such experience to assist in preparing for, and anticipating the altered conditions of the future.

Owing to many causes many people at present resident in this country will probably be taking up residence in Northern Europe and this should provide endless numbers of contracts for Removers and Warehousemen in the countries concerned; again, there is a tendency to remove to the Dominions factories and works owing to overcrowded conditions in this country.

Those firms who have men in their employ who are fully conversant with Customs formalities and removal conditions in France, Germany, Belgium, Holland, etc., will be the first to reap advantage when the awaited Ferry that will convey motor vehicles fully loaded to and from the Continent matures. In the same way those firms operating on the continent would enjoy an immediate advantage by their employees having a first hand knowledge of English laws and customs of the trade, so that a removal by road and ferry all the way, to and from any town or village on the Continent and Great Britain would mean no more than from Yorkshire to London.

To encourage employees in any trade or industry to acquire knowledge of how their trade is carried on abroad is being adopted by an increasing number of British firms, and the Removers and storers of household furniture should not be behind in this matter.

A scheme such as this would bring to the association a large increase in membership and would embrace firms operating in every country to which the exchange of employees applied.

* Abstract of a Paper read at the Annual Conference of the British Association of International Furniture Removers, held at Portsmouth, on May 21st, 1931.

**Municipal Purchases.** — Wallasey Corporation have decided to purchase two Diesel-engined A.E.C. motor buses and four new Leyland petrol buses at £1,733 each. The Diesel-engined buses will be operated experimentally. Liverpool has also decided to acquire one heavy oil driven motor bus.

**Buses Expected to Save Money.**—By the substitution of a motor bus service for a portion of the tramway route at Burnley, which is to be abandoned, the Burnley Corporation proposes to borrow £20,000 for the purchase of 16 double decker buses and expects to save about £7,000 a year.

# Speciality Brakes.

## Their Details explained and Maintenance described.

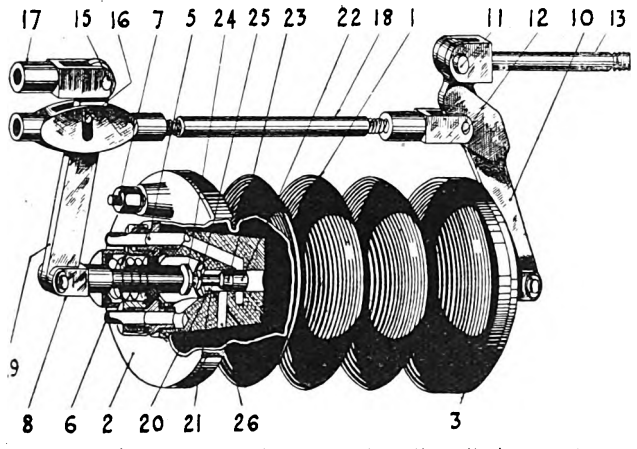
(*Continued from page* 345.)

## III.—Marelli Vacuum-Servo Brake.

THE Marelli vacuum-servo brake for vehicles is a comparative newcomer, and differs constructionally from the two types of vacuum-servo brakes already reviewed. The makers and their British distributors are Marelli Magnetos (London), Ltd., 71-72, Bolsover St., W.

### Details of the Mechanism.

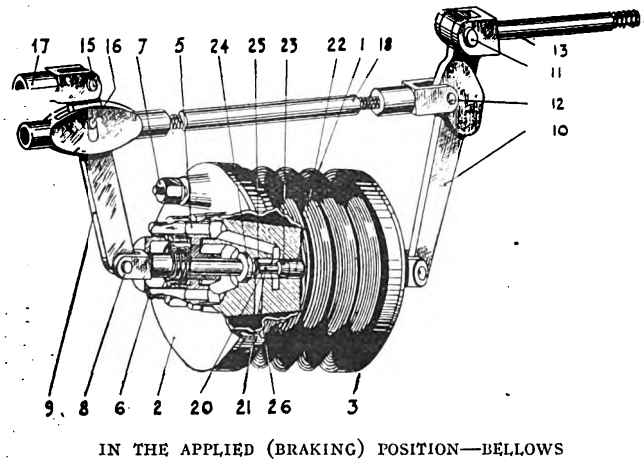
The body of the brake is a bellows-type rubber sleeve of special material (Figs. 1 and 2), closed at the two extremities



A MARELLI VACUUM-SERVO BRAKE UNIT IN THE NORMAL (IDLE) POSITION—BELLOWS DISTENDED.

by end plates (2) and (3), and is maintained in shape by internal steel rings. The front end-plate (2) contains a valve (21). The rear end-plate (3) contains a valve which opens from inside the sleeve only when the pressure in the interior of the bellows is higher than the external or atmospheric pressure, *e.g.*, when the brake pedal is depressed while the engine is stationary. Communication with the engine's induction manifold is by a passage (5) and with the atmosphere by another (6).

The regulator (23) is connected by a rod (8) to a lever (9). The rear end-plate (3) carries a fixed rod connected to lever (10), which is pinned at the hold (11) to a support anchored to the chassis. A rod (13) connected to the



IN THE APPLIED (BRAKING) POSITION—BELLOWS COLLAPSED.

thickened portion of the lever (10) by a yoke and pin, controls all four brakes. The levers (9) and (10) are connected by a tie-rod (18). The bellows-sleeve with its end-plates is attached to the chassis (usually, but not necessarily, on the off-side); end-plate (2) being fixed by (7) to the chassis and end-plate (3) being movable in step with the bellows-action.

### How the Brake Functions.

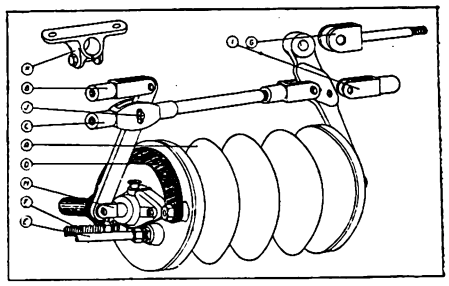
When the brake pedal is pressed, the end (15) of lever (9) is moved forward. This reacts through a fulcrum point (16) and causes the end of the regulator spindle to move backwards and control communication between the vacuum induction pipe from the engine and the interior of the bellows, so that the latter contracts and draws with it lever (10).

Independently of the vacuum-servo effect, the driver's movement of the pedal actuates the brakes' rod (17), lever (9), tie-rod (18), and rod (13). When the brake pedal is released the suction ceases and releases the brake either gradually or quickly according to the degree of opening of the atmospheric valve.

### Operation of the Control Valve.

In Fig. 1 the regulator is seen with the vacuum-servo in the normal or idle position. The tube (5) is connected to the induction manifold of the engine by a connection (6) and communicates also with the atmosphere. The orifice is connected to a flexible metallic tube, the free end of which has to be placed in a position protected from mud or dust (for instance, on the dashboard of the vehicle). A suction valve (21) is placed in the passage (20) with a cylindrical portion (22). This provides both a complete closing and a gradual closing, the part (23) being at first slightly conical and then greatly reduced.

For communication with the atmosphere, a circular plunger (25) with a diameter slightly less than that of passage (20) is formed solid on the suction valve stem. This leaves a constant small circular space for the passage of a throttled influx of air. The travel of this valve is limited by a disc stop (24) which ensures also the prevention of any passage of air after the brake is approximately fully on. By means of this stop the action of the pedal is added directly to the effort of the vacuum-servo. A series of holes (26) establishes communication between the central hole (20) and the interior of the bellows.



A MAINTENANCE DIAGRAM.

Key to letters:—A bellows; B control yoke; C front slotted yoke; D carrier; E vacuum pipe; F atmospheric pipe; G rear carrier yoke; H valve yoke; I rear pull yoke; J yoke pin; K bracket to suit D and supplied as an extra.

If the valve (21) be pushed towards the interior by pressing the brake pedal, plunger (25) first obstructs, to a great extent, the passage left free to the air; then the suction valve (22) by reason of its slightly conical part (23), produces a suction (vacuum effort) in the passage (20), of which the degree varies with the amount of opening of this valve. The vacuum pull is then transmitted to the bellows through apertures (26).

Pressing further, the area of the suction orifice increases and the area of the air-passage towards the atmosphere, remaining constant, there results a vacuum which increases as the suction valve is opened, owing to the influx of air. At the end of the travel, stop (24) causes the pedal to act directly on the brakes, and closes the air passage.

### Single v. Double Bellows.

By using a bellows sleeve the makers claim that it solves in a simple way the problem of equalising the tension on the four pull rods of a normal brake-layout. This means a somewhat different layout, and a regulator which is constructed on the same principle as the normal type, but is mounted separately from the bellows and is connected to the carburetter (induction pipe) and to the atmosphere by two tubes, and by the three pipes to two bellows attached to the brake rods. The bellows are anchored to the chassis by their levers with both end-plates closed and the rods are attached to them and connect directly to the brake levers. In the front end-plates is the connection to the regulator, and in the rear end-plate is the usual valve, previously described. Hence with this

Digitized by Google

duplex layout, when the brake pedal is pressed the vacuum produced at the regulator will also exist in the two bellows, and, subject to the action of the vacuum, not one end-plate only will move, as in the single layout, but both of them will do so and move the two brake rods towards the centre, thereby exerting an equal tractive effort upon all four rods. The normal or single bellows outfit is for vehicles up to 50 cwts. (nett.); the double units set being for heavier vehicles.

The Marelli vacuum-servo is also adaptable for braking trailers. When it is employed for trailer work another bellows is fitted to the trailer and is connected with the power vehicle by a flexible pipe, which in turn is connected to the regulator; the third bellows being coupled direct to the brakes already fitted to the trailer. In the bellows on the trailer the vacuum pressure will be the same as that in the bellows on the towing vehicle. Therefore, it is claimed, no shocks will be transmitted to the towing bar. In the regulator for heavy vehicles there is a device which allows the brakes to remain on, even when the engine is stopped.

**Maintenance of the Marelli Vacuum-Servo Brake.**

The brake pedal must be free and connected only to the control yoke (B) (Diagram Fig. 3) on the upper end of the front lever, so that the pedal only operates in conjunction with the servo-control.

The pin (J) in the slot of the front double (right and left) yoke (C) must be kept central, and free from "jamming" at the top and bottom of its movement. This can be effected by raising or lowering the chassis bracket (K) by means of packing strips, followed by testing the movement for "free" in all positions.

The vacuum pipe (E) should be as short and have as large a bore as the layout permits: this applies especially to the size of the union or connection to the induction pipe, as it is there and from the cause stated that a permanent throttling effect often occurs.

The bolts which fix the unit to the chassis frame must be a neat (not a driving) fit, and should have spring-washers behind the nuts.

All moving parts must be free, and the pivotal joints lubricated with Tecalemit or a similar solidified-petroleum grease, but no lubricant should be applied to the servo-bellows (A).

For four-wheel brake constructions, the usual method of adjustment consists of:—Raising the four wheels from the ground on carefully placed jacks; releasing the fly-nut on the off-side back brake; adjusting the other three brakes by their respective fly-nuts so that the wheels can be spun round freely (this will also show whether the brake drums are true or have high spots. If defective, it is useless to proceed with the job until they are put right): then similarly adjust the No. 4 wheel-brake. Adjust each brake in turn until the shoes are just rubbing on the drum, and then slack-back the fly-nut by a half-turn.

The brakes, when adjusted, should be tested first by pedal pressure without the servo; this will show if they are dependable to stop the vehicle independently of the servo.

If the brake-pedal be pressed hard when the engine is running the bellows (A) should not close completely, and there should always be at least 1 in. movement to allow for wear of the brake linings. This point should be borne in mind when fitting the unit, as a reminder to examine the individual brakes as to the state of the shoe-linings. If a removal is found to be necessary, it is better to renew the linings as a pair.

In the case of engines with worn inlet valve-guides it is permissible (but should not be done if not necessary) to open slightly the carburetter's slow running jet.

The top yoke (G) (of the rear brake pull-rod (I) (Fig. 2)), must be proof against whip or chatter, and it may be advisable to fit a stiffening bracket or a light cross-frame member for that purpose.

The air pipe (F) should be kept clean so that it does not restrict the air-flow.

The control yoke (B) should be so adjusted that the valve (H) has already moved on from 1½ to 2 mm., but without causing an air leak (which would impair the vacuum effect in the bellows (A)). To test for this possibility, place a finger over the atmosphere pipe (F); if there is a leak there the bellows will slowly close up.

If the braking becomes less effective, the fault may be traced to worn brake-shoe or oil-sodden linings, clogged brake tension members (this defect is usually denoted by sluggish action of the pull-off springs), and in the case of cable controls, the cause may be "stretch."

Attention to this point as regards brake-cables should be given after the first 500 miles use of the servo. When fitting brake cables, get those with the Trulock (patent) non pull-out barrel fastening. These cables are supplied already fully stretched.

If the brake-pedal be sluggish in returning to normal (off) position, lower the bolt in the bracket which grips the carrier (D) (in the front end of the bellows (A)) and revolve the plate slightly. This will bring the spindle, or valve, into line with the rod from the pedal to the top-yoke (B).

The control valve return-spring should only exert the slightest tension when the brake is in the idle state; if the tension is too strong, it will not ensure a progressive action. This spring must not be changed for one of another make, as a small difference in tension may cause defective working.

The spring cap serves also as a grease-retainer; it is necessary to fill it approximately every 7,000 miles, using an appropriate Tecalemit connector. After greasing, press the brake-pedal fully home two or three times to expel excess of grease.

Our next article will deal with the
**Lockheed Hydraulic brake unit.**

# Manchester Commercial Motor Users.

AT the annual general meeting of members of the Manchester branch of the Commercial Motor Users' Association, Mr. R. W. Royle, M.Inst.T., was again elected chairman. In the course of the meeting, a considerable number of items arising from the Road Traffic Act were debated, and it was obvious that the interest of motor users has been concentrated on the numerous difficulties that have arisen from the operation of the Act.

Congratulations were extended to Mr. R. W. Royle on being re-appointed chairman of the North Western Division of the C.M.U.A. and a vice chairman of the National Council. The officers of the Manchester C.M.U.A. for the ensuing year are:—Vice chairman, Mr. A. Watkinson (Jewsburys Motors); Vice presidents, Mr. R. C. Reynolds (Bleachers' Association), Col. Sir J. Nall, Mr. John Faulkner, Mr. L. Swain and Mr. J. T. Lawton; Hon. treasurer, Mr. A. J. Green (Calico Printers' Association); Committee, Messrs. N. E. Box (Box Grouting and Spraying Co., Ltd.), T. H. Dunbabin, J. Leatherbarrow, — McVie (Bleachers' Association), W. E. Hall, jun., T. Huskinson, W. Brown (Wilsons Brewery, Ltd.), W. Makinson, H. Young (Manchester & Salford Co-operative Society), W. H. Burgess (Sutton & Co., Ltd.), T. M. Grindley, H. Hollingsworth (Viney & Co., Ltd.), E. F. Topham, T. Lamb, J. Smith (Kendal Milne & Co.), E. Tootill (Pickfords, Ltd.), J. Powell (Macinlop, Ltd), B. Goodfellow, and G. H. Stonehewer (Cusson Sons & Co.).

Mr. H. Howard Robinson, secretary, in his report upon the work of the Association, stated that the legal defence scheme had been used on behalf of members in the case of 94 summonses, of which 14 were dismissed; in the remaining 80 fines were imposed. Numerous matters were referred to the secretary for advice and dealt with as required.

On several occasions it was necessary for the chairman and secretary to represent the views of this area to the National Council, when matters were submitted to the Royal Commission on Transport, in the form of evidence. In consequence of the operation of the Road Traffic Act heavy work has fallen on the officers and committee of the Manchester Association. It was necessary to make a most careful scrutiny of all draft orders as they became available, and as the Act provides that the Minister shall consult with representative organisations, the officers had been called upon to give a very extensive portion of their time to the scrutiny of such draft orders. As a result of action by the organisation, a number of alterations have been made.

Although the best possible arrangements have been made concerning Clause 19, the Committee is not satisfied with the present position, and in October next the whole position will be reviewed in order to ascertain whether any further variations are desirable in the interests of the road transport industry.

The Special Motor Coach Committee which had been set up in the Manchester area had completed its work in such a way as to ensure the applications of the whole of the members being submitted to the Traffic Commissioners in a complete form and on a co-ordinated basis, which is the only one of its kind in the country.

Success had been achieved by the Manchester Committee of Road Users, of which the Manchester C.M.U.A. is a constituent, in securing the withdrawal from the Manchester Corporation Bill of several clauses which would have adversely affected the interests of motor users.

The membership of the Association was increased during the year by 42 new members.

# Tramways and Buses.

THE twenty-first Annual Congress of the Tramways, Light Railways and Transport Association was held at Margate from May 27th to 29th and a large gathering of members met to take part in the proceedings both business and social.

The Chairman of the Executive Council, **MR. E. H. EDWARDES, A.M.I.E.E., M.INST.T.,** held an informal reception on Wednesday evening, the business of the Congress commencing on Thursday morning, May 28th, the meetings being held in the Pavilion and Winter Gardens. A civic welcome was given to the Congress by the Mayor of Margate, Mr. Councillor P. B. Osborne, J.P., and following this the thirty-fourth annual general meeting of the Association was held.

**THE CHAIRMAN,** in the course of his review of the work of the past year, said that the outstanding events since the last meeting were the passing into law of the Road Traffic Act and the issue of the third and final Report of the Royal Commission on Transport.

The Council had spent a great deal of time in considering Clause 19 of the Road Traffic Act regarding limiting the time for which drivers of certain vehicles might remain continuously on duty, and they had done their best with a view to getting some relief. He had attended a large number of meetings, together with the Secretary, and although some members might not be satisfied with the results obtained he could assure them they were the best possible under the circumstances.

They had all received large numbers of new regulations issued by the Ministry of Transport as to the application of the Act, and when he told them that the Ministry of Transport convened meetings to consider each and every one of those regulations, and that some involved several meetings, they would appreciate that the Council—which he represented at those meetings—had had quite a busy time. Here again, some might not be satisfied with the results, but if they could have only seen some of the regulations as originally drafted he was sure their hair would have turned white. At all those meetings they worked in close harmony with their sister association—The Municipal Tramways and Transport Association, and The Omnibus Owners' Association—and he was of opinion that the results achieved might be considered fairly satisfactory.

With regard to the Royal Commission's Report it would be untrue to state that they were not a little disappointed with the conclusions arrived at, so far as the Commissioners' remarks in relation to Tramways were concerned, but at all events they could find some consolation in the fact that whatever might have been said with regard to the present aspect of tramways in view of the altered conditions of road transport in general, no criticisms appeared in the Report of the management and handling of the tramways of the Country, not only at the present day, but in the days that had gone, when the only means of passenger road transport was by means of tramcars.

Personally, he agreed with the Royal Commission's findings that a large number of tramways, especially in inter-urban areas, had fulfilled their useful life and should be abandoned as soon as possible, but he was not at all sure that, in certain large towns where the roads were wide and the traffic heavy, the modern tramcar was not yet the best method of moving, expeditiously and safely, large numbers of people. In his opinion, the reason tramways were so unpopular with the travelling public at the present time was due to the fact that the rolling stock had not been modernised except in a very few instances on some of the larger undertakings. He thought that if systems had been modernised they would not be subjected to the severe criticism which was being received at present when comparisons were made between the comfort of a modern bus compared with a tramcar.

He thought the Royal Commission was rather unfair to the tramcar when it was stated that "the tramway is the direct cause of many accidents." From his own experience, extending over some 30 years, during which time he had been concerned in the operation of tramways along narrow roads, he could conscientiously say that exceptionally few cases had come to his knowledge where street accidents were contributed to by the existence of a tramway. If some accidents had been caused through the existence of tramways, it must not be overlooked that a tramcar, without doubt, was the safest method of carrying passengers.

He was rather disappointed that although the Royal Commission admitted that trackless trolley vehicles might ultimately prove useful, no great encouragement was given. From his limited experience of the modern trackless system, he was of opinion that it was a very excellent substitute for tramways, especially where the terminal points were more or less fixed, and on a service where there are frequent stopping places similar to a tramway route.

The report and accounts were duly adopted.

Mr. J. A. Forde, J.P., A.M.I.E.E., M.Inst.T., General Manager and Engineer, Isle of Thanet Electric Supply Co., Ltd., then read an interesting paper dealing with the supply of electricity and the running of trams and buses in the district covered by his company. An abstract of this paper is printed below.

The members and visitors were entertained to lunch at the Queen's Highcliffe Hotel by the Isle of Thanet Electric Supply Co., Ltd., a large company being present to enjoy the good fare provided by their hosts.

At 2.45 special motor coaches took a large company of members and friends to Canterbury where they again enjoyed the hospitality of the Isle of Thanet Electric Supply Co., Ltd., who provided tea at the County Hotel. They then inspected the famous cathedral and were extremely indebted to the gentleman who acted as guide and whose knowledge of the cathedral was only surpassed by the very interesting way in which he handled his subject.

In the evening the annual members' dinner was held.

On Friday morning an important paper on the Operation of the Road Traffic Act, 1930, an abstract of which is printed below, was read by Mr. R. G. Pittard, Traffic Manager, Bristol Tramways and Carriage Co., Ltd.

The Congress concluded with a reception and Ball given by the Mayor and Mayoress of Margate in the Pavilion and Winter Gardens.

## "Odds and Ends."*

**MR. J. A. FORDE, A.M.I.E.E., M.INST.T.,** Engineer and Manager, Isle of Thanet Electric Supply Company, Limited, in the course of a paper entitled "Odds and Ends," said that there was an agitation for the scrapping of trams, and in that he was one of the agitators, while, on the other hand, there were those who desired their retention. Nearly twenty-five years ago he was desirous of introducing motor buses for feeding the tramways, and ever since 1918 he had been in favour of the abandonment of the trams.

It was generally stated by those who wished to retain tramways that their scrapping would involve enormous loss of capital; that they were still the best means of dealing with large crowds; that if scrapped more vehicles (buses) would have to be run; that trams were more economical, more comfortable, safer to travel in, did not skid, caused less injury to the roads than other vehicles, tended to regulate the better use of the roads, by causing buses and other vehicles to reduce their speed, i.e., to a speed consistent with safety. It was pointed out that tramways were large consumers of electricity, and if scrapped would probably result in the charges to domestic and other consumers being increased.

The reasons, among which were the following, for the scrapping of trams appeared to be much stronger than those for their retention. They were:—The capital invested would, in any case, have to be written off, for the reason that few, if any, tramways were paying their way and had only a short term of years to run under their Orders. If scrapped, tramways would be replaced by motor buses, without generally increasing the number of vehicles. The carrying capacity of the modern bus was, for most purposes, equal to the carrying capacity of most tramcars. The average speed of the bus was much higher than that of the tram. In his own case they could do more work with a fewer number of buses.

He found with a mixed fleet of thirty-five buses, with a large number of 20-seaters, they could take as much money more cheaply and on routes not so favourable as the tramways.

Tramcars caused considerable obstruction to other vehicles; they were rail-bound in the middle of the road, thus compelling other vehicles to avoid them, with a tendency to further obstruction and congestion. And with

* Abstract of a Paper read at the Annual Congress of the Tramways, Light Railways and Transport Association, held at Margate, May 27th to 29th.

Digitized by Google

a failure of current, which was not unknown, this was greatly increased. Passengers were compelled to take risks in boarding or alighting as a consequence of having to go to the tram instead of being able to step on or off the kerb.

Where tramways had been scrapped the carrying capacity of the roads had been increased. It is much more difficult to maintain roads where tramways are laid, and the cost of permanent-way upkeep is increasing. Electricity used for tramway purposes would be available for domestic and other purposes without increasing generating plant. No one would lay down tramways to-day to meet development in new districts, and that surely constitutes a sound argument against them.

It might be urged that the alternative to the tram was the trolley-bus, with its use of electricity for propulsion and its greater mobility. Certainly a trolley-bus did possess more advantages, but one of its worst features was that it was still tied up to the overhead wire, and could not, without further expenditure, be applied to new districts or alternative routes.

"Generally, tramways are obsolete, or rapidly on their way towards becoming so. Within ten years most tramways, particularly those in provincial towns and cities, will have ceased to exist. My view is that the motor bus is the best method of passenger transport, and probably will continue so for the next fifteen or twenty years."

Motor buses were preferred by the public. They were less costly to run. Buses are very comfortable nowadays. They are speedy, do not obstruct other traffic, and there is better continuity of service. New routes can be opened to meet requirements. Passengers' risks in boarding or alighting are done away with. The carrying capacity of the bus is for nearly all practical purposes equal to the tram. Whilst the life of the bus is relatively short, this is not so much of a handicap, as one can more readily keep up to date.

He thought there was hope that the compression ignition engine, after it had gone through its teething troubles, would result in the further development of motor vehicles, and the practicability of fuel being commercially obtainable in the near future from out coal-fields, would make the business largely independent of outside supplies.

In conclusion, Mr. Forde said he thought one could term the present as being the mechanical age, which meant movement and change, commencing with the invention of the steam engine by James Watt in 1769, developed by means of the railways, electricity, and the internal combustion engine, until we were now speeding along at an extremely high rate, which would be much more intensified in the near future. Whether this had been or would be beneficial to mankind was an open question; almost certainly the younger members of the Association would have to undergo similar trials and troubles within the next fifteen to twenty years to those tramway men were experiencing to-day.

## The Operation of the Road Traffic Act, 1930.*

**MR. R. G. PITTARD**, Traffic Manager, Bristol Tramways and Carriage Co., Ltd., in the course of a very interesting and instructive paper describing the operation of the Road Traffic Act, said that although the Act received the Royal Assent on August 1st last, the Area Traffic Commissioners only commenced their duties in January, so that at the time of writing members had had only about four months' experience. These four months had been a period of transition from the old order to the new, and, whilst many things had happened, sufficient time had not elapsed to form any definite opinion as to the ultimate effect of the Act on their business. Probably in the minds of most managers the only immediate result of the Act was the multitude of forms they had had to prepare and sign, and the time and attention they had had to devote to the preparation of their "case" for presentation before the Commissioners.

Mr. Pittard then proceeded to deal very fully with each part of the Act. He pointed out that in various parts of the Act the Minister "may make regulations for any purpose for which regulations may be made"; these powers were extremely wide and collectively, would appear to give the Minister almost unlimited authority to rectify any omission in the Act, to supplement any of the provisions, or to deal with any difficulties which might arise in its operation. Under these powers the Minister issued the Transitory Provisions Order (No. 68, 1931). This Order permitted a person licensed as a driver or a conductor on 31st March, 1931, to continue to act in this capacity, and left established services undisturbed until such time as the Traffic Area Commissioners were able to deal with applications, but in the meantime prohibited any modifications, extensions or new services. The Chairman of Commissioners of the West-Midland Traffic Area made a particular point of this at his first sitting, when he said that unless covered by the Transitory Regulations no service must be operated until a new licence had been issued, and any offender would be liable to heavy penalties. The need for such an order would be appreciated, but possibly it might have been more flexible.

Section 10 dealt with speed, and under this section public service vehicles were now permitted to travel at a speed not exceeding thirty miles per hour.

Section 19 provided for the limitation of time that drivers might remain continuously on duty. This had been the subject of much controversy, and in many instances duties had had to be re-arranged or amended. The need for some elasticity was recognised when the section was drafted, and provision was made by subsection 3 for the variation of the periods worked, providing it was unlikely to be detrimental to public safety. Advantage had been taken of the powers under this subsection, and a joint representation was made by the Association, together with other similar Associations and representatives of employees. As a result the Minister issued, on the 30th March, an Order varying the provisions, and this has been of great assistance in the allocation of duties.

Members were no doubt fully conversant with the terms of the drafting of the original section and of the Order varying the provisions, but these did not, of course, cover all types of duties, and some anomalies had been created. For instance:—

"(1) A man may work an eight-hour duty provided he is allowed 40 minutes' lay-over, but should a man have only 7½ hours' duty, with a 30 minutes' lay-over, the Act may apparently be complied with by keeping him standing in the depot for ten minutes before or after his duty; this would give him the desired 40 minutes' lay-over, but in effect would penalise him by keeping him hanging about unnecessarily.

"(2) A single period of duty is described under Subsection (2) (a) of Section 19 by the words:—'No two or more periods of time are deemed continuous periods unless separated by an interval of not less than half-an-hour.' It is, therefore, to be assumed that any period separated by more than 30 minutes becomes two periods of duty. Under the Order varying this sub-section of the Act a man is allowed to work 8½ hours straight duty where one period of duty only is worked. In practice, on some country services, it may be that something slightly over half-an-hour lay-over has been allowed; a duty is consequently separated into two periods. Where these periods are divided into unequal portions, say, two hours and six hours, the Variation Order would not come into force, and we fall back on the original Act of half-an-hour's rest after 5½ hours. It seems strange, therefore, that where in one period of duty a man may work 8½ hours, with a 45 minutes' lay-over, if one has two periods of duty, a man may not work six hours with an even greater period of lay-over."

It had been the practice of operators at times to use a driver for some short special duty after the completion of an ordinary duty. If advantage was taken of the Variation Order to give drivers a straight 8½ hours' duty with a 45 minutes' lay-over, this practice must cease, as it would transform the duty into a two-period duty, and in such case an employer must give half-an-hour meal relief every 5½ hours. In effect, once a driver had performed a straight 8½ hours' duty, under the Variation Order, he could not be permitted to work any more during that 24 hours.

The variation allowing a period of rest of nine hours to be reduced to eight hours on one day per week in respect of stage carriage drivers was extremely useful in arranging for the change-over from late to early duty each week. The reduction of ten to eight hours on one day per week (or two days in the case of a Bank Holiday) in respect of express or contract drivers would permit of two

* Abstract of a Paper read at the Annual Congress of the Tramways, Light Railways and Transport Association, held at Margate, May 27th to 29th.

Digitized by Google

long duties on consecutive days, as, for instance, on Saturday and Sunday, and on three days where a Bank Holiday was included, would help considerably on long-distance tour work.

On the whole he thought they must consider themselves fortunate in coming through a difficult situation so satisfactorily, for, although the operation of this particular clause would be responsible for some additional expense, he thought they would agree that it might have been less workable.

Part II made it compulsory for every vehicle to be insured against third-party risks. The desirability and need of this part of the Act would, he was sure, be recognised by everyone.

Part IV was, of course, the part of the Act with which they were most directly concerned. He found there was a belief in the minds of some operators that vehicles constructed to carry seven or less passengers did not come within the scope of this section. He thought there was no doubt whatever that a vehicle of any seating capacity which regularly carried passengers for hire at separate fares, was either a stage or express carriage, and was subject to the same control as passenger vehicles of greater seating capacity, and he would suggest it was the duty of any operator who had knowledge of such a vehicle plying for hire to acquaint the Commissioners.

In those applications that had been heard to date, the points that stood out particularly were the vast number of objections, many of them on purely technical grounds; the need for the applicant to have his case complete to the smallest detail, and the fact that almost every applicant and objector had been represented by counsel or solicitors. It was a moot point if the Act ever intended that operators should be put to this expense, but in view of the number of objections, it was difficult to see how these could be met without legal representation.

Section 72 was the section which defined road service licences, and the discretion to be exercised by the Commissioners in granting those licences. They had not yet seen how far this discretion was likely to be exercised, but if they were to obtain any benefit from the Act the Commissioners should eliminate or restrict those unnecessary and wasteful services that had sprung up in recent years in competition with established services. It was also desirable that those useful but unremunerative services which most of them operate should be brought to the notice of the Commissioners, and where these were provided preferential consideration should be given as against other applicants.

In conclusion, Mr. Pittard drew the attention of members to a comment made in the third report of the Royal Commission on Transport when dealing with railways. This was to the effect that regulation by legislation had been overdone in certain directions and had proved a serious handicap to the railways. "I fear," said Mr. Pittard, "that if we are not careful we may find ourselves in the position of the railways, or as a member, probably known to most of you, remarked recently: 'We asked for a thimbleful of legislation, but we have got a bucketful.'"

## In Parliament.

**Third Party Insurance.** **Colonel Howard-Bury** asked the Minister of Transport whether he was aware that a motorist, who through inadvertence had forgotten to take out a driving licence, caused his motor insurance policy to lapse automatically; and whether, seeing that the object of compulsory insurance was to protect third parties, he would take steps to remedy this? **The Parliamentary Secretary to the Ministry of Transport** (Mr. Parkinson), who replied, said he was aware that most insurance policies covering the use on roads of motor vehicles contained a clause to the effect that the holder was only insured whilst licensed to drive a motor vehicle, and that, in consequence, when a driver had allowed his licence to expire and had forgotten to obtain a new one, he was not for the time being insured. His Right Hon. Friend was at present in communication with representatives of motor insurance interests with a view to ascertaining whether, and if so in what manner, this difficulty could be overcome.

**Lights on Motor Vehicles.** **Mr. Remer** asked the Minister of Transport if his attention had been called to an accident at Meriden, Warwickshire, involving the death of two persons; if he would consider making regulations to make overhanging loads on lorries more clearly lighted; would he issue either regulations or recommendations as to the proper conduct of motorists as to dipping or putting out of headlights; and if his attention had been called to the new regulations on this subject now made compulsory in France? **The Parliamentary Secretary to the Ministry of Transport** said that according to his information the accident in question was due not to an overhanging load but to the driver of the vehicle concerned being dazzled by the headlights of an oncoming car. His Right Hon. Friend had had the question of making regulations with regard to headlights under consideration for some time and a draft of the regulations was being circulated to motoring organisations and to other organisations interested in the matter and also to the Press. His attention had been drawn to the regulations now in force in France with regard to headlights.

**Commercial Vehicle Taxation.** **Sir Charles Oman** asked the Chancellor of the Exchequer whether he would take measures to implement the recommendations of the Royal Commission on Transport by imposing heightened licence duties on commercial vehicles weighing more than four tons unladen? **Mr. Pethick-Lawrence,** who replied, said his Right Hon. Friend could not undertake to add to the Budget proposals which had been laid before the House.

**Mudguards on Motor Vehicles.** **Mr. Remer** asked the Minister of Transport if his attention had been called to the inconvenience caused to motor car manufacturers by the regulation that all motor vehicles must have wings attached; if he was aware that it was the practice on the part of many manufacturers to drive incomplete chassis short distances along the public highways, from one works to another, without wings; and if he would take steps to meet this difficulty? **Mr. Herbert Morrison** (Minister of Transport) said that the driving of a chassis without mudguards along roads could cause considerable inconvenience to the public when the roads were wet or muddy, and it was mainly for this reason that the regulation with regard to the fitting of wings to motor vehicles was made. Temporary wings made of such materials as wood and canvas could be fitted with little trouble and expense, and he did not see his way to relax the regulation in the direction which the Hon. Member suggested.

**Transport Routes in Wales.** **Mr. Freeman** asked the Minister of Transport whether he was aware of the expense and inconvenience caused to the travelling public by the circuitous route through small English villages which formed the only road at present between North and South Wales; and whether he had under consideration any proposal for a main direct trunk road between these two areas wholly within the principality? **The Minister of Transport** (Mr. Herbert Morrison) said that his predecessor caused a special survey to be made with a view to determining the most satisfactory line for an improved north and south route through Central Wales, having due regard to engineering and financial considerations. As a result a line had been chosen, in co-operation with the highway authorities concerned, which followed for the most part existing roads in Glamorganshire, Carmarthenshire, Breconshire, Radnorshire and Montgomeryshire. Various improvements of the roads embodied in this route had been accepted under the Trunk Road Programme.

**Horse-Drawn Traffic in London.** **Mr. Mills** asked the Minister of Transport whether, before issuing any further regulation prohibiting horse-drawn traffic in certain areas of London, he would consult all the trades dependent on this industry with regard to any such restriction on their usage? **Mr. W. B. Taylor** asked the Minister of Transport whether he had received the report of the London Traffic Advisory Committee with regard to the representations made by various bodies in connection with the restrictions on horse-drawn vehicles proposed in the draft Oxford Street regulations; and whether he could give an undertaking that modifications, satisfactory to all interested parties, would be made before the regulations were brought into force? **Mr. Parkinson** (Parliamentary Secretary to the Ministry of Transport), replying, said he was informed that the London Traffic Advisory Committee had recently had a meeting with representatives of the National Horse Association and a number of other organisations concerned with horse-drawn traffic. His Right Hon. Friend would receive in due course a report from the Committee on the representations made by these bodies among other representations and objections which had been received in respect of the proposed London Traffic (Oxford Street) Regulations. It might not be possible to meet the wishes of all interested parties, but every consideration would be given to their representations. **Sir W. Brass:** Will the Hon. Member take into consideration the unfairness of slow-moving traffic holding up the whole of the traffic? **Mr. Parkinson:** All such considerations are taken into account by my Right Hon. Friend.

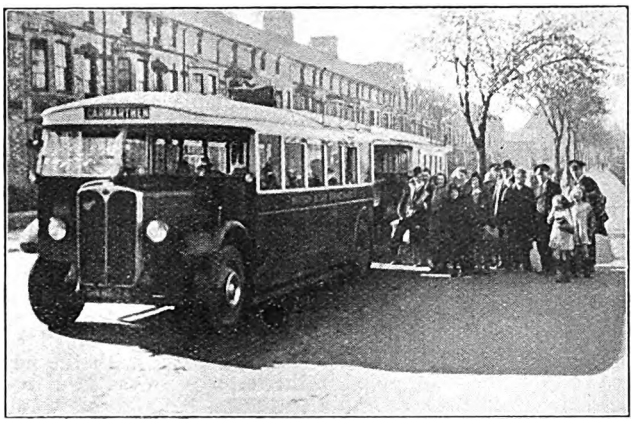
# Motor Coach and Bus Notes.

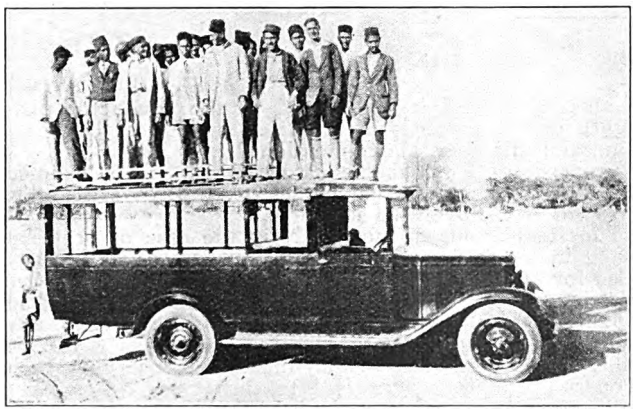
**"Regal" Buses for Welsh Express Services.**—We understand that for the maintenance of their only limited stop service—a 75 mile run between Cardiff and Carmarthen—the Western Welsh Omnibus Co., Ltd., are using the latest type A.E.C. 6-cylinder, 110 h.p. "Regal" buses. Twenty of these models are now included in the Western Welsh



ONE OF THE A.E.C. "REGAL" BUSES REFERRED TO IN TEXT.

fleet. The limited stop vehicles are of the rear entrance type, with room for 32 passengers. Seats are upholstered in red leather, and the woodwork finished in dark walnut. There are eight windows with chromium plated frames on each side, four on one side and five on the other being of the drop pattern and fitted with glass louvres.

**The Highways Guide.**—We are informed by Mr. Charles Rudy, Editor of the "Highways Guide" and of the "Booking Agents' Gazette," that new offices have been taken at Argyle House, King's Cross, N.W.1, where all communications are in future to be addressed. The new telephone number is Terminus 5163.



STILL ROOM FOR MORE ON THIS CHEVROLET BUS (GENERAL MOTORS, LTD.) WHICH UNDERGOES A SEVERE TEST BY CITIZENS OF BOMBAY, INDIA.

**Road Transport Brakes.**—The Westinghouse Brake and Saxby Signal Company, Limited, have been favoured with orders from The Associated Equipment Co., Ltd., of Southall, for 58 vacuum servo brake sets for "Regent" buses which they are building for the Birmingham Corporation. The Westinghouse Brake is now standard on all power-braked vehicles of this Corporation; and from Messrs. Ransomes, Sims & Jefferies, Ltd., of Ipswich, for 10 pressure brake sets for trolley buses for the Nottingham Corporation.

**Another Gain for Buses.**—Motor buses are to replace trams between Rochdale and Bury through Heywood.

**Profitable Bus Undertaking.**—We have received a copy of the annual report of the Manchester Corporation Transport Department, in which is given some exhaustive information concerning the municipal passenger transport undertaking. The number of motor buses in stock is 258. During the year they travelled 8,013,258 miles over 238 miles of route; passengers carried 56,532,889; on the converted tram routes where double deck buses are operated one can travel 1.617 miles for one penny, and on local and express service about .835 miles for one penny; average fare per mile 1.185d.; traffic revenue per bus mile 14.49d.; working expenses per bus mile 11.54d.; average number of passengers per bus mile 7.05. On the buses there was an increase during the year of 131 per cent. in the number of passengers carried and an increase of 76 per cent. in the receipts. The gross balance of income over expenditure was £116,545.

**Combined Road and Rail Tickets.**—At one of the principal sessions of the North Western Traffic Commissioners interesting evidence was given concerning the Manchester-Blackpool motor bus services on an application by the Lancashire United Transport and Power Company for licences for five express bus services to Blackpool. The railway companies objected that the proposed services would result in the roads in and out of Blackpool being blocked, specially at holiday times. There would be a bus every ten seconds. Mr. E. H. Edwardes (general manager L.U.T.) said the greatest number of buses the company had ever run on this particular service was

SOME OF THE A.E.C. "REGAL" SALOON COACHES USED BY A TIMPSON & SONS, LTD., THE WELL-KNOWN SOUTH LONDON OPERATORS FOR CARRYING 500 EMPLOYEES OF MESSRS. KENNARDS, THE BIG DRAPERS OF CROYDON, TO BRIGHTON AND BACK ON THEIR ANNUAL OUTING.

forty-five. He had not been approached to consider co-ordination with the railway to enable people to go by road and return by train or *vice versa*, but he thought it would be better to go by train and return by road. The Chairman suggested that consideration might be given to the interchangeability of tickets, as was the case in some parts of the country.

**Merged Coach Services.** — A mutual working arrangement has been entered into by the Imperial Motor Services and Rymers of Liverpool. The services to London, Glasgow, and Torquay are operated on this plan. Additional services will be operated later in the season.

**Motor Buses Create Traffic.**—Figures relating to motor bus operation, described by Mr. R. Stuart Pilcher, Manager of the Manchester Corporation Transport Department, as remarkable, were submitted to a recent meeting of his committee. They refer to a route on which motor buses replaced electric trams (route 53). The figures for twelve months' work show that 2,421,430 additional passengers have been carried by motor bus, an increase of 11 per cent. In order to accommodate these extra passengers, 217,283 extra miles have been run with a more frequent service of buses. The revenue has increased by £17,891 and the revenue per mile has gone up by .338d. per bus mile. The average speed of the trams used to be nine miles per hour. The speed of the buses is now 11 miles per hour. Here are the figures Mr. Pilcher submitted to his committee:—Miles (1930)—buses, 1,887,373; trams, 4,637; passengers, buses, 24,661,181; trams, 58,469. Receipts—buses, 17.15 per mile; trams, 15.57d. Expenses—buses, 13.94d. per mile; trams, 17.06d. The average profit was 3.2d. per mile, as representing £25,226. Mr. Pilcher now recommends the abandonment of the tramway along Middleton Road from the junction with Bury Old Road to Heaton Park and its substitution by motor buses. This has been accepted by the City Council.

# Motor Hirers and Coach Services Association.

A MEETING of the Management Committee of the Motor Hirers and Coach Services Association was held at The Oxford Circus Booking Office, Regent Street, London, on May 26th.

Mr. E. A. Monkman presided.

The Vice-Chairman, in opening the proceedings, stated that it was with very much regret that he had to report receipt of a letter from Mr. M. Logette tendering his resignation from the office of Chairman owing to reasons of continual ill-health and the necessity for him to devote his time to his own personal business affairs more fully than he had been able to in the past. No one, continued the Vice-Chairman, regretted more than he did that Mr. Logette had been compelled to take the step and under the circumstances he thought it was only right to recommend the Committee to accept the resignation on the understanding that Mr. Logette would continue to take an active part in the affairs of the Association as a member of the Committee.

Mr. Rickards then proposed and Mr. Jones seconded that the resignation of Mr. Logette from the Chairmanship of the General Management Committee be accepted with the utmost regret and this was agreed to without dissent.

The Vice-Chairman then remarked that he would ask for the Committee's consent to instruct the Secretary to communicate to Mr. Logette their decision and to suitably convey to him their unanimous thanks for the devoted and very able manner with which he had controlled the affairs of the Association as Chairman through a very long and trying period, and also to give expression to their hopes that he would make a speedy recovery. The proposal was received with general acclamation and the Secretary was thereupon instructed accordingly. Before closing the subject several members proposed that the members of the General Management Committee should subscribe for the purpose of making a suitable presentation to the retiring Chairman as a token of their marked esteem and appreciation. The response to this proposal was unanimous and the Secretary was called upon to acquaint Mr. Logette of the Committee's desires in this respect, and to ascertain his personal feeling as to what form such presentation should take.

ELECTION OF CHAIRMAN.

The Vice-Chairman announced that no nominations for the vacant office of Chairman had been received by the Secretary and he therefore proposed that Mr. F. A. Flin be asked to agree to stand for election. This proposal was seconded by Mr. Rickards and after a brief discussion, there being no other nominations forthcoming, Mr. Flin assented and was elected unanimously, assuming office forthwith.

The question as to whether it was necessary to provide a system of legal defence for the benefit of members, other than the present panel of solicitors was discussed at some length. It was unanimously agreed that experience was proving it was advisable to be legally represented as cases could be quoted where an applicant had suffered through the lack of knowledge displayed by legal representatives. On the other hand, cases could be quoted where an applicant presenting his own case had been far better off as he was able to more fully state his requirements.

Mr. Monkman proposed that a valuable means of educating operators would be the provision of verbatim reports on past proceedings, available for inspection at the offices of the Commissioners, even though, perhaps, a small fee might be charged for such a privilege.

He further proposed that the Secretary should be instructed to cause the necessary enquiry to be made in this respect and this was agreed to.

Mr. Monkman then proposed that all members be communicated with advising them not to accept any condition attached to their licences, but to appeal to the Minister of Transport in accordance with the terms of Section 81 of the Road Traffic Act and also in accordance with the advice to this effect contained in the letter from the Ministry dated the 21st May as a reply to the representations made by the Association. This procedure was also agreed upon.

The Chairman stated that on the occasion of a recent meeting of the Executive Committee the question was raised as to whether the railway companies had any *locus standi* as objectors under the terms of Section 72 of the Road Traffic Act and the Chairman of that Committee had instructed the Secretary to obtain legal opinion upon the matter and that opinion was to the effect that as the Traffic Commissioners had already allowed the railway companies to oppose and in view of the evident difficulties in obtaining a decision from the High Court it seemed hopeless to proceed further with such a very debatable point.

On the proposal of Mr. J. H. Lowe, seconded by Miss Culverhouse, Messrs. Stephens Supply and Service Station, Rainham, Essex, were unanimously elected to membership of the Association. The proceedings then terminated.

# Public Service Vehicles. Lost Property.

ON May 21st, the Minister of Transport made the Public Service Vehicles (Lost Property) Provisional Regulations, 1931.

The Regulations provide that with the exceptions mentioned below any property found in a public service vehicle shall be delivered to and retained by the operator of the vehicle. For this purpose any passenger who finds property in such a vehicle is required to deliver it immediately to the conductor, or if there is no conductor, the driver.

Inquiries in respect of property left in a public service vehicle should therefore be addressed to the operator of the vehicle in which it was left. If the property is claimed before the expiration of a period of three months, and the claimant proves to the satisfaction of the operator that it belongs to him, it is to be delivered to him on payment of a sum not exceeding 1s., together with a sum of one-eighth of the value of the property, which latter sum is to be awarded by the operator to the conductor who originally found the property or to whom it was handed by a passenger. Such award, however, is not in any case to be greater than £5 nor less than 1s.

If the property is not claimed within three months it will vest in the operator, who may either deliver it to the conductor, or sell it and award to the conductor one-eighth of the proceeds of the sale (subject to the maximum and minimum above-mentioned).

Property of a perishable nature which is not claimed within 48 hours may either be destroyed or otherwise disposed of as the operator sees fit.

The Regulations do not apply in the case of property found in a vehicle which during any part of its journey plies for hire by short stages in the Metropolitan Police District (i.e., the ordinary London omnibus) or found in a public service vehicle in the County of Lanark or in any Burgh in Scotland. In these cases the property will be dealt with as heretofore and enquiries concerning such property should be addressed to the Police.

The Home Secretary has simultaneously made an Order amending the Cab and Stage Carriage Order under the Metropolitan Public Carriage Act, 1869, in such a way as to relieve drivers and conductors of motor coaches licensed under that Act (as distinct from London omnibuses) of the obligation to hand over to the police property found in those vehicles. The Lost Property Office of the Metropolitan Police at 109, Lambeth Road, will therefore in future no longer handle any property left in motor coaches.

# "One-way" and "Roundabout" Traffic Schemes.

THE Minister of Transport has made Regulations for the institution of the following schemes of "one-way" and "roundabout" traffic working as from June 1st last.

**"One-Way" Schemes:**—Waterloo Place, Westminster; Brick Street, Westminster; Hans Crescent, Basil Street and Hans Road, Kensington; Southampton Buildings, Holborn.

**"Roundabout" Schemes:**—The junction of the Guildford Bye-pass with the Portsmouth Road and Boxgrove Road. The junction of the Guildford—Godalming Bye-pass with Stoke Road. The roadway surrounding the island site bounded by Cheniston Gardens and Wright's Lane, Kensington.

In order to facilitate movement of traffic in the above-mentioned streets and areas, direction signs have been erected and "white lines" laid down.

Any person acting in contravention of the Regulations will be liable to a fine of £5 for a first offence and £10 in the case of a second or subsequent offence.

# The Royal Agricultural Show, Warwick.

## July 7th to 11th.

THE following is a list of firms who, at the Royal Agricultural Show to be held at Warwick from July 7th to 11th, will be staging exhibits of interest to our readers:—

| *Stand No.* | *Name and Address.* |
|---|---|
| 219 | Allen and Simmons (1925), Ltd., Thames Side Engineering Works, Reading. |
| 215 | Anglo-American Oil Co., Ltd., Lloyds Bank Chambers, New Street, Birmingham. |
| 154 | Barford & Perkins, Ltd., Peterborough. |
| 281 | Bean Cars, Ltd., Tipton, Staffs. |
| 78 | Bessler, Waechter & Co., Ltd., Salisbury House, Finsbury Circus, London, E.C.2. |
| 152 | Blackstone & Co., Ltd., Stamford. |
| 252 | British Electrical Development Association, Inc., 15, Savoy Street, Strand, W.C.2. |
| 180 | British Oxygen Co., Ltd., Angel Road, Upper Edmonton, London, N.18. |
| 207 | Crossley Brothers, Ltd., Openshaw, Manchester. |
| 278 | Dodge Brothers (Britain), Ltd., Mortlake Road, Kew, Surrey. |
| 176 | Eagle Engineering Co., Ltd., Eagle Works, Warwick. |
| 361 | Eccles Motor Caravans, Ltd., Stirchley, Birmingham. |
| 221 | Fodens, Ltd., Elworth Works, Sandbach. |
| 181 | Ford Motor Co., Ltd., Trafford Park, Manchester. |
| 159 | Foster, William & Co., Ltd., Wellington Foundry, Lincoln. |
| 186 | Fowler, John, & Co. (Leeds), Ltd., Steam Plough and Locomotive Works, Leeds. |
| 153 | Garrett, Richard, & Sons, Ltd., Leiston Works, Leiston, Suffolk. |
| 208 | General Electric Co., Ltd., Magnet House, Kingsway, London, W.C.2. |
| 211 | Glico Petroleum Ltd., Alexandra House, Queen Square, London, W.C.1. |
| 155 | Glover, James Wm., & Sons, Ltd., St. John's Works, Warwick. |
| 1 | Gray Horseshoe Pad Co., Ltd., 13 and 14, Suffolk Street, Birmingham. |
| 227 | Hall, J. and E., Ltd., Dartford Ironworks, Dartford, Kent. |
| 104 | Herbert, Alfred, Ltd., Coventry. |
| 241 | Hope, Hartope & Co., Ltd., 43, Gower Street, London, W.C.1. |
| 35 | Imperial Chemical Industries, Ltd., Millbank, London, S.W.1. |
| 161 | International Harvester Co., of Great Britain, Ltd., 259, City Road, London, E.C.1. |
| 50 | Jennings, J. H., and Son, Ltd., Crewe Road, Sandbach, Cheshire. |
| 159 | Knapp, L. R., and Co., Ltd., Thames Valley Iron Works, Clanfield, Oxford. |
| 269 | Latil Industrial Vehicles, Ltd., 11, Albert Embankment, London, S.E.11. |
| 167 | Lister, R. A., and Co., Ltd., Dursley, Glos. |
| 163 | McLaren, J. and H., Ltd., Midland Engine Works, Leeds. |
| 157 | Marshall, Sons & Co., Ltd., Britannia Iron Works, Gainsborough. |
| 192 | Massey-Harris, Ltd., 53, 54 and 55, Bunhill Row, London, E.C.1. |
| 332 | Merryweather & Sons, Ltd., Greenwich Road, London, S.E.10. |
| 229 | Midland Cruiser Caravans, 113, Weston Lane, Warwick Road, Birmingham. |
| 249 | Morris Commercial Cars, Ltd., Soho, Birmingham. |
| 368 | National Motor Horse Box Co., Curtis Buildings, Abbey Road, Park Royal, London, N.W.10. |
| 277 | Price's Patent Candle Company, Ltd., Belmont Works, Battersea, London, S.W.11. |
| 166, 339 | Ransomes, Sims and Jefferies, Ltd., Orwell Works, Ipswich. |
| 177 | Sentinel Waggon Works, Ltd., Shrewsbury. |
| 213 | Slingsby, H. C., 89, Kingsway, London, W.C.2. |
| 359 | Smith Trailer Caravan Co., Tuffley Avenue, Gloucester. |
| 251 | Societe Anonyme Austin, 139, Rue Lafayette, Paris, France. |
| 283 | Texas Oil Co., Ltd., Wellington House, 125-130, Strand, London, W.C.2. |
| 254 | Thomas and Bishop, Ltd., 37, Tabernacle Street, London, E.C.2. |
| 69 | Trewhella Bros., Pty., Ltd., Island Road, Handsworth, Birmingham. |
| 280 | Vigzol Oil Refining Co. (London), Ltd., Ormskirk. |
| 366 | Vincents of Reading, Station Square, Reading. |
| 61 | Wheway, Job & Son, Ltd., Green Lane, Walsall, Staffs. |
| 108 | Willcox, W. H., and Co., Ltd., 38, Southwark Street, London, S.E.1. |
| 276 | Willys Overland Crossley, Ltd., Heaton Chapel, Stockport. |

# Round the Lancashire Associations.

**Conference of Liverpool Transport Employers.**

Negotiations have been opened between the representatives of the Liverpool Conference of Road Transport Employers, of which Mr. Allen Walter is Secretary, and the carters' and motormen's union for some relief from the present high rate of wages and easement in working conditions. These operate to place Liverpool haulage contractors at a disadvantage when competing for work against motor owners whose businesses are carried on in other South West Lancashire towns, where the labour conditions are less onerous.

**Liverpool and N.W. Division of the C.M.U.A.**

At the May meeting of the Liverpool Area Committee of the Commercial Motor Users' Association, held at the office of the Secretary, Mr. C. Dudley Whitnall, further consideration was given to the question of facilities being provided on new roads for steam wagons to obtain water supplies. This is felt to be a matter of prime importance, especially on arterial trunk roads now under construction, and which when completed are expected to be very heavily trafficked. Steps are being taken by the C.M.U.A. to ensure consideration being given to the motor users point of view. Several new members were admitted. A meeting of members of the North-Western Division of the C.M.U.A. was held at Liverpool on 21st May. One of the matters which has been before the county organisation has been the inconvenience suffered by members whose vehicles have been stopped on numerous occasions by the police, for the purpose of examining their insurance certificates. It has been recommended that in order to avoid this, firms should produce their insurance certificates to the local police office, so that when a vehicle is stopped they can make a direct enquiry to the local police and the matter is thus ended. Mr. R. W. Royle, M.Inst.T., Traffic Manager of the Co-operative Wholesale Society, has been re-elected Chairman of the Division for the ensuing year.

**Liverpool Motor Coach Owners.**

Liverpool and District motor coach owners are not so well organised as are those in many other parts of the country, and this defect has become strikingly apparent recently, owing to the necessity of making applications to the Traffic Commissioners for licences, etc. With the object of giving assistance in this connection a meeting of owners was held at Liverpool on Friday, 29th May. There is certainly room for a live motor coach owners' association in the Merseyside area. No special provision is made for them in any of the existing organisations.

**A.H. & M.O.A. and C.M.U.A.**

The Amalgamated Horse and Motor Owners' Association and the Commercial Motor Users' Association (South-East Lancashire Area) Joint Organisation, is making a special effort to augment its membership of motor coach owners. Mr. J. S. Howarth, the Secretary, in a communication to vehicle owners points out that the past few months have been, and the next year or two will be, a difficult period for operators, owing to the new regulations under the Road Traffic Act. An organised trade, he states, means strength, progress and efficiency.

**Manchester Transport Owners' Association.**

Applications made to the Traffic Commissioners for licences are now published in the notices and proceedings of the Commissioners, and objections are being lodged by the railway companies and certain municipalities. Manchester Transport Owners' Association (motor coach section) is dealing with these on lines of general principle, and in the near future negotiations will be commenced with objectors, to ensure that everything possible is done to secure satisfactory arrangements with all concerned.

**Liverpool Traffic Club.**

Mr. F. W. Lampitt, President of the Liverpool Traffic Club and the Liverpool District Goods Manager of the G.W.R., has been appointed Assistant to the Chief Goods Manager and also the Company's Development Agent at Paddington, London. He is being succeeded by Mr. T. Martin, Goods Superintendent, Paddington goods station, London.

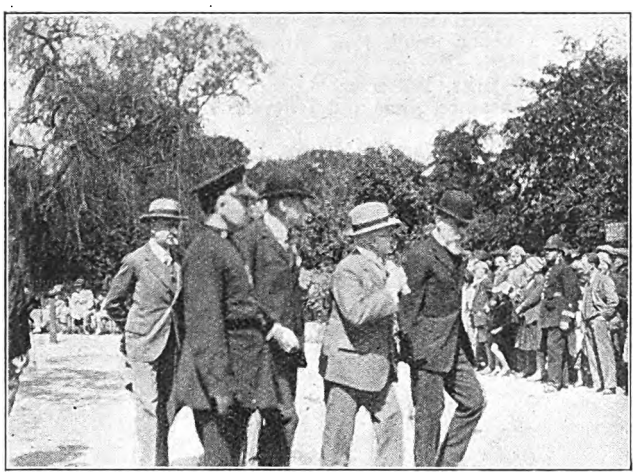
# London Cart Horse Parade.

The Forty-first Annual Cart Horse Parade, held under the auspices of the London Cart Horse Parade Society, was held in the Inner Circle, Regent's Park, London, on Whit-Monday, May 25th. These annual displays of London's cart horses are always a popular Bank Holiday attraction, and at the same time a striking manifestation of the excellent work of the Society. The Society was instituted to encourage drivers to take a humane interest in the animals under their care; to improve the general condition and treatment of London cart horses; to encourage the use of powerful cart horses suitable for heavy work in the London streets. All drivers of cart horses within the Metropolitan area are eligible to compete. The judges in making their awards take into consideration each turnout as a whole, horse, van, harness, and general appearance, paying due regard to the nature of the business or trade of the competitor.



Photo] [World's Carriers.
GENERAL GOURAUD (ON RIGHT) AT THE LONDON CART HORSE PARADE.

Although the entries this year were slightly lower than those of last year, the standard of excellence and quality of the turnouts was much higher, a fine tribute to the work of the Society, and to the care and attention bestowed upon the horses by the drivers. Each entry is inspected by veterinary inspectors before being judged. This work was carried out by Mr. J. W. McIntosh, F.R.C.V.S.; Mr. Stanley Broad, M.R.C.V.S.; Mr. Henry Gray, M.R.C.V.S.; Mr. W. J. Hatton, M.R.C.V.S.; and Mr. B. Tay, M.R.C.V.S. The judges, who worked in pairs, comprised Mr. Cecil G. Argles; Gen. Sir George Barrow, G.C.B., K.C.M.G.; Field-Marshal Sir W. R. Birdwood, Bt., G.C.B., G.C.M.G.; Major-Gen. Sir John Moore, K.C.M.G., C.B.; Mr. F. J. Rawle; Brigadier-Gen. Rome, D.S.O.; Lieut.-Col. Sir Hugh Turnbull, K.B.E.; Mr. N. W. Smith-Carington, M.A., B.C.L., M.P.; Major Maurice Tomlin, and Lieut.-Col. Sir Archibald Weigall, K.C., M.G.

Mr. Owen E. Mocatta and Mr. George Stewart acted as judges for the novice class.

Among the entries were a number from the G.W.R.

Special premiums and medals were awarded by the Suffolk and Shire Horse Societies, and Mr. W. E. Cox, Mr. John W. E. Flowers and Mr. George Gotheridge officiated as judges for the Shires, and Mr. E. J. Gaymer for the Suffolks.

Special premiums for long service and good character were awarded to drivers for not less than 25 years' continuous service with one firm. The premier prize, the Isabel Constable of £3 10s. 0d., was this year awarded to Mr. John H. Davies, for 48 years' service with E. Wells & Son, Ltd. The London Cart Horse Parade Society's special premiums of 20/- each were awarded to Mr. George Clare, 41 years' service with Whitbread & Co., Ltd.; Mr. Henry Rockhill, 41 years' service with Schweppes & Co., and Mr. Henry Bailey, 40 years' service with Whitbread & Co., Ltd.

Twenty-one premiums of 10/- each for 31 years' service and over, and thirty-seven of 5/- for 25 years' service and over were also awarded.

Among the visitors was General Gouraud, Military Governor of Paris.

Sir Walter Gilbey, Bart., president of the Society, in proposing the health of the judges and officials at the subsequent luncheon, said that they were threatened with legislation to prevent the use of the horse in certain London streets. He presumed that this was in consequence of the great congestion that had arisen. He emphatically denied that it was the horse that was causing the congestion. Oxford Street had been singled out for experiment, and that he considered was the thin edge of the wedge for keeping horses off all the streets. He had known Oxford Street and its traffic for 55 years and he did not consider that it was a question of horses impeding traffic there or any other street in the West End. He could prove that the real causes of the congestion were the omnibuses, motor coaches and lorries. Sir Walter pleaded for a fair proportion in dealing with traffic. From an economic point of view the use of horses in certain forms of business was an absolute necessity. Statements, he said, had been laid before the Traffic Commissioners on the subject. Even the Minister of Transport had acknowledged that for town work and short hauls the horse was still the most economic. To drive horses off the streets of our cities would be, he considered, not only a grave injustice to traders, but it would also be serious for the breeders of horses.

Field-Marshal Sir William Birdwood, in responding to the toast, said it was a joy to see that they were able to produce the magnificent horses that had been exhibited.

Miss Birdwood, daughter of the Field-Marshal, presented the awards and N.S.P.C.A. brass badges to the successful drivers at the subsequent march past of prize-winning turnouts.

# C.O.D. by Air.

To meet the requirements of persons poorly served by other means of transport in the outposts of the Empire, Eggar, Forrester & Verner, Ltd., 3, Billiter Avenue, London, E.C.3, have inaugurated The "Eggarplane" Service of Air Transport. By arrangement with Imperial Airways, Ltd., the "Eggarplane" Service offers an opportunity to our manufacturers and the large stores to develop their trade in products and commodities urgently needed by our kinsmen all along Imperial Airways African and Indian Routes..

The Service is a Mail Order business, the commercial side of which undertaking has been entrusted to Eggar, Forrester & Verner, Ltd., by Imperial Airways.

The scheme is that the latest catalogues and price lists of the leading Manufacturers and Stores who have joined in the "Eggarplane" Service are classified and advertised at every Imperial Airways Station throughout the Empire, and the "Eggarplane" Service Order-form is supplied so that purchasers on the highways and byways of the Empire, requiring service from home, may fill in their requirements on the spot. These orders are sent to Eggar, Forrester & Verner, Ltd., by Air Mail, and the goods so ordered are obtained under the "Eggarplane" Service and returned by the next outgoing Imperial Airways plane, payment, in full, being made on delivery. Thus, within certain limits, purchasers out of touch with our great suppliers can obtain, within a minimum of time, any article sold in this Country at London retail prices, plus the cost of transport. We understand that many of the leading British Houses are very enthusiastic in their support of this scheme.

In this service Eggar, Forrester & Verner, Ltd., are confining themselves to the Air Routes, thus keeping clear of all existing agencies.

All supplies collected by the firm from all suppliers are carried together in the firm's own container at a bulk rate of freight, thus avoiding the minimum which would be charged on each item if sent separately to each individual consignee by each individual supplier. The saving which may be effected is illustrated in the case of 12 packages sent recently to Basra. The bulk charge was £1 13s. 4d., as compared with £5 if each parcel had been consigned separately. This order was delivered within seven days of its receipt in London.

# Law Cases.

## THE HIGH COURT DECIDES A POINT OF MUCH INTEREST TO MOTOR DEALERS.

A QUESTION of considerable interest with regard to the use by motor dealers of their general trade licence was raised in a Divisional Court of the King's Bench, when Westover Garage, Ltd., of Bournemouth, appealed against a fine of £5, and a decision of the Recorder of Bournemouth that they had used their trade licence in such a way as to contravene the Roads Act, 1920. The prosecution in the case were the Bournemouth police.

It was stated that the Act allowed the granting by local authorities of two sorts of trade licences for the use of motor vehicles by dealers and manufacturers, one costing £5 and the other, a "general" licence costing £25 per year. Westover Garage, Ltd., held a £25 one. Last October they were endeavouring to sell a customer a 30 cwt. motor lorry and to demonstrate it fully they loaded it with the class of goods it usually would be expected to carry and ran it, under their trade licence, over the roads it would be expected to work. When the lorry reached a destination some 40 miles away the goods, which were the property of a customer of the prospective purchaser of the lorry, were delivered and the lorry came back empty. It was not denied that the demonstration was *bona fide,* but the police intervened and prosecuted the dealers alleging that they had gone much further than their licence allowed them to go and had used the vehicle for the delivery of goods for the financial benefit of a would be purchaser of the lorry. The Recorder, before whom the case ultimately went, affirmed a fine of £5 imposed on the appellants. He stated that he had no doubt about the *bona fides* of the demonstration run but he considered that the police were right in their contention. The most the demonstrators could do was to load the vehicle and keep that load on it until the return journey was completed.

For the appellants it was suggested that the Act said they could use the vehicle for demonstration in any way satisfactory to the purchaser and that was what they did. They at no time made profit for the demonstration. If what they had done was wrong they could get no more for their £25 licence that they could for a £5 one.

On the other hand, the submissions of the police were that the law did not allow an unlicensed motor vehicle to be used under a general trade licence for purposes of carrying goods for the profit of a possible purchaser. If the licence allowed the delivery of loads of goods, then there was a possibility of a crafty tradesman obtaining from motor dealers a number of demonstration runs and having his goods delivered free of charge to himself. However innocent the unfortunate motor dealer might be it was obvious that unscrupulous traders might make use of him, his cars and his general trade licence to benefit themselves.

In reply, appellants' Counsel pointed out the absurdity that would arise if the act of the police was upheld. A motor dealer might load a demonstration car with his prospective customer's goods and run it right up to the door of the person for whom the goods were intended. But he could not deliver the goods. He would have to say "I'm sorry, here are your goods, but, as I am demonstrating this car I must take them all the way home again or I shall be prosecuted."

The appeal was dismissed with costs and the decision of the Recorder affirmed.

The Lord Chief Justice said while the Act gave the owner of a general trade licence power to use vehicles on the roads for certain purposes, one of them being for demonstrations to would be purchasers, he did not think, for one moment, that it was anticipated or provided, that the licence would allow a collateral user for the pecuniary benefit of the prospective buyer. There was no doubt that the carriage of passengers or goods for profit to the licence holder was distinctly barred. Here it did not follow that, to demonstrate the value and use of the lorry, the goods with which the vehicle could properly be loaded for that purpose, could be delivered for the financial or other benefit of the person for whom the demonstration was carried out. Of course, no question could be raised about the mere fact that the lorry was loaded with the prospective purchaser's goods to make the demonstration more effective.

## EXCEEDING THE SPEED LIMIT.

### AN IMPORTANT POINT FOR OWNERS OF COMMERCIAL VEHICLES TO NOTE.

IN a King's Bench Divisional Court, composed of The Lord Chief Justice and Justices Acton and Branson, on May 14th, Mr. Edward Weatherhogg, the Chief Constable of Rotherham, appealed against a decision of the Rotherham Justices by which they dismissed a summons against a lorry driver named Percy Johns, under the Traffic Act, 1930, for, it was alleged, driving his lorry on the highway at a speed greater than that allowed by the Act.

Mr. Johns' address was given as at Foster Street, Hull.

Mr. F. W. Gentle, appearing for the appellant, said the proceedings were brought under the section of the act which fixed the speed limit of heavy vehicles like the lorry driven by the respondent at 20 miles an hour. Section 10 of the Act laid it down that a person should not be convicted solely on the evidence of one witness who expressed an opinion as to speed and not as to an actual fact. It was alleged that a policeman on a motor cycle followed the respondent's lorry for some miles and, according to the speedometer on the cycle, the speed of the lorry was 28 to 30 miles an hour. When he stopped the speedometer returned its pointer to zero. The Justices held that the evidence given by the policeman was merely of opinion as to the speed of the lorry, as it could not be supported by the production of the speedometer indicating that speed or any person other than the policeman who saw it at that time. The police, however, argued that the constable was a witness as to actual fact and that the offence had been proved.

The Lord Chief Justice said the Court was of opinion that the constable was a witness as to an actual fact. It would appear that it was plain that the speedometer, when tested, was accurate, and that it indicated the speed sworn to by the officer as he kept pace with the lorry. It did not seem to the Court that such evidence was merely of opinion and the appeal would, therefore, be allowed.

The other Judges agreed and the case was sent back to the Rotherham Justices with instructions that the charge on the evidence they had heard had been proved.

## NEW TRAFFIC ACT OFFENCES.

IT was laid down by the Chorley magistrates recently that if a tractor-drawn threshing machine is moved along the highroad, the driver or drivers, under the Road Traffic Act which described such a combination as a "light locomotive," must have driving licences.

Henry Dawson, Haigh, and Allen Pilkington, Standish, were summoned for driving a light locomotive without licences, and Pilkington was further summoned for driving a light locomotive being a person under 21 years of age. The employer, Mr. J. M. Aspden, of Chorley, was summoned in each of the three instances for permitting the offences.

Mr. L. B. Wallwork, for defendants, pointed out that these were offences created by the Road Traffic Act. Dawson had driven the machine in question six years.

Aspden was fined 7s. 6d. in each case and the other defendants were ordered to pay costs.

# International Federation of Forwarding Organisations.

## Meeting at Amsterdam.

THE large number of delegates from organisations affiliated to the International Federation of Forwarding Organisations who attended the meeting held at Amsterdam on May 28th, proved clearly that the interest of European forwarding agents in the work of the Federation remains unabated.

Mr. Paul Lehmann, the President, presided.

Amongst those present were: Mr. Frank J. Gerson (representing the British Association of Shipping and Forwarding Agents, London), Dr. Paul Dumont (Schweizerischer Spediteurenverband, Berne), Mr. I. W. Cadenius, Helsingfors, Consul Olaf Forsblad (Nordisk Speditor Forbund, Kopenhague), Mr. Josef Schwarz (Zentralverband der Spediteure, Vienna), Mr. Richard Kirchenberger ("Globus" and "Swask," Prague), Mr. A. J. Driest and Dr. M. H. de Jong (Scheepvaart Vereeniging Noord, Amsterdam), Mr. Hans Blum and Dr. Walter Kes (Verein Deutscher Spediteure, Berlin), Mr. Jos. Albert de Ryckere (Federation Nationale des Entrepreneurs de Transports de Belgique, Antwerp), General Secretary Mr. Siegfried Balla (Landesverein Ungarischer Spediteure, Budapest), Vice-President Mr. Roger Brunet and Babian Fernande (Federation Nationale des Commissionnaires de Transports, Transitaires Agents Maritimes et Assimiles, Paris), Dr. C. B. Ingwersen (Danks Mobeltransport Forening, Kopenhague), Director Ludwig Weiss of the Federation's central office at Vienna, and the Secretary, Mrs. Helene Weiss (Vienna).

Dr. de Jong welcomed the delegates in the name of the Scheepvaart Vereeniging Noord which association were the hosts of the Federation. He expressed the hope that the delegates would enjoy their stay at Amsterdam and would carry away with them happy memories of their visit.

The President referred to the great loss the Federation had sustained by the death of Mr. Girolamo Spitzer (Zagreb), a member of the Committee, who, Mr. Lehmann said, had never spared himself in his efforts to forward the work of the Federation.

After the adoption of the minutes of the last annual meeting held at Antwerp, on June 4th, 1930, correspondence which had been conducted by the Federation was referred to. The Federation has addressed to the chief banking organisations in several countries a memorandum following upon a resolution passed by the last meeting concerning the transfer of documents from banks to forwarding agents and from forwarders to customers upon the value being reimbursed by cheque, and a number of suggestions for the protection of the forwarding agents were made. From the answers received from the "Reichsverband der Bankleitungen" at Berlin, and the Bank Corporation of Switzerland, it would appear that the banks have full knowledge of the demands of forwarding agents so that the Federation hopes some good for forwarding agents will result.

The Federation has, in accordance with a request made by the Forwarding Agents of Bulgaria, communicated with a number of steamship companies protesting against their continuing competition with shipping and forwarding agents.

The Annual Report of the Federation, the adoption of which was proposed by the President, referred to the fact that the Federation had had a successful year and had been very active. The objects of the Federation are becoming known more and more amongst forwarding agents and the efforts made to obtain the affiliation to the Federation of all European Forwarding organisations are nearing a successful issue. It is regretted that so far it has not been possible to ascertain the name of any Italian organisation with authority to negotiate with the Federation for affiliation of Italian colleagues.

The report details all the work carried out by the Federation and in closing points out that in most matters the Federation has to take the long view, and success in all directions cannot be expected immediately but it is confidently expected that eventually international regulations satisfactory to all will be drawn up covering all questions brought to the attention of the Federation.

The report was adopted.

Dr. M. H. de Jong submitted the accounts which were passed.

Mr. Hans Blum then initiated a discussion on the question of the economic situation of the world and the outlook for the forwarding trade. He expressed the view that it will be difficult, in view of the present economic position, to find a special remedy for the forwarding trade which is governed by the success of commerce and industry. In any case, one could help the situation to some extent by arrangements made with local organisations, even if one had to admit that in view of the present bad times one could not count on a full adherence to rates and conditions.

The discussion that ensued was very informative and agreements come to by agents in various places to ease the position were mentioned.

Mr. Handelsrat Kirchenberger referred to competition by railway companies, and Mr. S. Balla proposed that steps should be taken to ensure that firms complied with recognised rates and conditions or else be subject to penalties.

Dr. Walter Kes speaking on the question of Railways and Road Transport soon showed that he was master of his subject. He mentioned particularly the treatment accorded to a certain firm of Forwarding Agents by the German Railways and suggested that a memorandum on the matter should be addressed to the German Minister of Traffic, pointing out that the Federation had concurred in his actions up till now but pointing out the danger that would threaten not only German forwarding agents but those in all other countries if the treatment referred to was continued.

The remarks by Dr. Kes which were supplemented by Mr. Blum were the prelude to a thorough discussion of the matter, and in the result it was agreed that a memorandum of a more general character should be addressed to the German Minister of Traffic.

Dr. Paul Dumont, of Berne, a Vice-President of the Federation, in an excellent address, referred to the work of the International Chamber of Commerce and the League of Nations Committee on Economy so far as it affected the interests of forwarding agents and the question of traffic, and he expressed the hope that forwarding agents would be given the opportunity to participate in this work.

With regard to the liability of forwarding agents for duties according to the Customs laws of the various countries. Mr. Josef Schwarz, a vice-president of the "Zentralverband der Spediteure" Vienna, explained the chief principles governing treatment in this matter in the various countries. As, however, he had at his disposal, information on the subject from but a very few countries, he expressed the hope that all organisations affiliated to the Federation would forward what information they had on the matter to the Secretary of the Federation, so that, after considering all points of view steps could be taken to bring about an improvement in the general and legal position of forwarding agents.

Dr. C. B. Ingwersen reported on the question of the hindering of furniture van traffic by payment of Customs bonds. An active discussion ensued and the points made will provide material which will enable the Federation to commence a campaign in this matter.

Mr. Ludwig Weiss, of the Federation's Central Office, reported the action taken on various matters by the Federation. He mentioned the Black List; Uniformity in Forwarding Laws; Court of Arbitration and the linking up with the legal aid departments of the affiliated associations; General conditions of carriage applicable to the forwarding trade: Adoption of a system of universal nomenclature for services rendered by forwarding agents; Proposed Year Book; Rendering assistance in collecting outstanding accounts, etc.

A number of Motions tabled by delegates resulted in instructive discussion which gave the Federation facts upon which action can be taken.

Budapest has been chosen as the venue for the next General Assembly of the Federation.

If the success attained by the Federation up to the present time is not overwhelming, members fully demonstrated at this meeting their great enthusiasm for and interest in the work the Federation is doing, and, as usual, the time allotted for discussion proved altogether insufficient. This is proof if proof were needed, that the formation of the Federation was an absolute need and must, sooner than may be anticipated bring about many urgently needed improvements in the forwarding trade which will benefit all.

For the first time since the Federation began to function the French forwarding agents sent delegates to this meeting, so that now one may hope that in a very short time all European forwarding organisations will be banded together in the Federation.

---

In our next issue an abstract of a paper entitled "Railways and Road Transport Competition in Central Europe" by Mr. Ludwig Weiss, Managing Director of the Federation, will be printed.

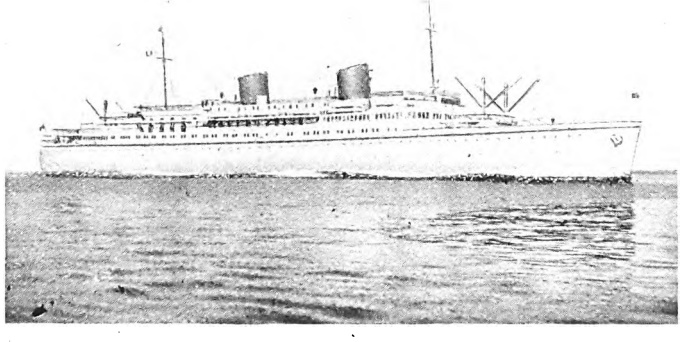
# News from the Ports.

**Liverpool Shipping and Forwarding Agents' Association.**—At the May meeting of the Liverpool Shipping and Forwarding Agents' Association, the time of the Council was fully occupied in considering matters of domestic importance. Mr. J. A. Eckes, a member of the Council, made a speech at the annual meeting of the Liverpool Chamber of Commerce, of which he is President, that has attracted much attention in business circles. He said: "As a port Liverpool is tremendously strong and virile, and even if we must acknowledge the loss of some departments of trade to other centres, such losses come from no inherent weakness in ourselves, but rather from outside causes, resulting from economic upsets, which have been followed by re-shuffling and re-arrangement on the part of traders, to meet the thrusts of foreign competition and the new conditions in the home and world markets. Our foreign trade has suffered severely, and will suffer more by the elimination of the merchant from most branches of our export trade. Our export trade is in a difficult way and efforts that are being made to displace this tried and trusted friend, the merchant, is running in the face of the old, but none the less, true adage, 'don't swap horses whilst crossing the stream.' Skilled knowledge such as we require in our export trade comes only from personal contact with the innumerable markets we seek to serve."



M.V. "VICTORIA."
LLOYD TRIESTINO.

**Cosulich Line. Maiden Voyage of m.v. "Victoria."**—The m.v. "Victoria," intended for service on the Grand Express Europe-Egypt via Adriatic route, will commence her maiden voyage from Trieste on June 27th—six weeks ahead of the date previously fixed—and will re-sail from Alexandria on July 4th. This vessel, it is hoped, will enable Lloyd Triestino to exceed their own speed record for the crossing, as the time for the crossing from the coast of Italy to the Eastern Mediterranean borders of Africa will be shortened by 8 hours. The principal dimensions of the m.v. "Victoria" are as follows:—Length, 162.50 metres; breadth, 20.54 metres; depth to main deck, 12.95 metres; gross register about 13,500 tons; speed 20.5 knots; engine power, 17,000 shaft horse-power. Many of the latest innovations have been installed for the comfort of passengers. The ship is fitted up so as to carry, with the maximum of comfort, a total of 522 passengers; 237 first, 145 second, 100 third and 40 fourth. The first class accommodation is situated on the upper deck, amidships, and the dining saloon is large and luxuriously decorated. There is at the disposal of passengers a large verandah, smoke room, card room, gymnasium, nursery, writing room, social hall and vestibule as well as ample promenades and space for games and amusements. There is also a ladies' hair dressing saloon. The second class rooms are situated aft and consist of a large dining saloon, social hall, bar, smoke room, writing room and ample promenades very well placed. Some of the cabins in this class will be interchangeable with those of the first class. The third class, which is situated forward, has two, four and six berth cabins, all fitted and furnished in the most up-to-date manner, as are also the dining and smoke room. There is in addition a promenade and a shelter deck. The London offices of Lloyd Triestino (Cosulich Line—Marittima Italiana-Adria S.S. Co., Puglia S.S. Co., San Marco S.S. Co.) are at 16, Waterloo Place, London, S.W.1.

**"Empress of Britain's" Decks.**—For her maiden trip, part of 7,000 square yards of deck on the "Empress of Britain" were laid with rubber flooring by Macinlop, of Manchester, to give elasticity during the motions of the ship.

**Manchester Shipping and Forwarding Agents' Conference.**—Mr. A. Faulkner, Manager for Messrs. Crowe & Co. (London), Ltd., Albert Street, Manchester, has been appointed Hon. Secretary of the Manchester Shipping and Forwarding Agents' Conference in succession to Mr. J. H. Allen who has resigned. Mr. Faulkner has been a member of the Conference since its inception and is a member of the Council of the British Association of Shipping and Forwarding Agents.

**Atlantic Trips for Engineering Students.**—Following the success of the scheme drawn up in 1921 by Mr. W. J. Willett-Bruce to provide Liverpool University Engineering Students with practical experience, the White Star Line has again arranged for a number of students to make the Atlantic voyage in either the New York or Canadian steamers. The students will take watch with experienced marine engineers and assist in the running of engines and boilers, and also take part in the overhaul of deck machinery. The scheme will extend until September and the first student will sail from Liverpool in the "Cedric" on July 11th.

**The Continent via Harwich. L.N.E.R. Large Development Scheme.** — The L.N.E.R. announce that Parkston Quay (Harwich) is to be extended by 1,200 ft. to cope with the increasing traffic to and from the Continent via the Harwich routes. The L.N.E.R. Harwich fleet at the beginning of 1929 consisted of ten steamships, three of which convey cargo only; in 1929 this fleet was supplemented by the s.s. "Vienna" which entered the Harwich-Hook of Holland service in July to be followed by two more similar vessels, the "Prague" which made its maiden voyage in February, 1930, and the "Amsterdam" which closely followed it. The Harwich routes now include daily services to the Hook of Holland, Flushing, Antwerp (except Sundays), Zeebrugge (summer only) and Esbjerg (except Sundays) and the accommodation at the existing quay is now taxed to its limit. It is proposed to extend the present quay in a westerly direction to provide three additional berths of approximately 400 feet each; adjoining the quay will be a new passenger station connecting with the main line and the existing Parkeston Quay Station. Two new sheds are to be constructed each with an upper and lower floor and fitted with all requisite facilities for the rapid handling of both passengers and goods; the marshalling siding will be extended considerably and three 5-ton and nine 30-cwt. cranes will be provided. The Customs accommodation for dealing with Harwich-Zeebrugge train ferry wagons will also be improved.

**Appointment.**—Mr. John Quinn, Chairman of the Newry Port and Harbour Board, has been appointed a member of the Carlingford Lough Commission.

**Tanker Launched at Belfast.**—Harland and Wolff have launched at Belfast a shallow draft steam tanker, "Maracay," for the Lago Shipping Co., Ltd. The tanker has a gross tonnage of 3,840, and is 350 feet b.p. by 60 ft. beam by 17 ft. 6 ins. depth moulded; and it is specially designed for the carriage of petroleum in bulk from Lake Maracaibo in Venezuela. The "Maracay" was christened by Mrs. M'Bride, wife of Captain James M'Bride, Director of the Lago Shipping Co.

**Southampton Docks.**—The contract for the construction of the mammoth graving dock at Southampton has been placed with Messrs. John Mowlem & Co., Ltd., of London, and work will be commenced almost immediately so as to ensure the dock being completed and ready to accommodate the new 73,000 ton Cunarder upon her advent to the Port in 1933. In order to expedite the completion of the work by the earliest possible date Messrs. Edmund Nuttall & Co., Ltd., of Trafford Park, Manchester, will co-operate in the carrying-out of the contract, the total value of which exceeds £1,000,000. Preliminary work which necessitated the building of enclosing banks marking the site of the dock is now practically finished, day and night dredging and reclaiming together with the dumping of thousands of tons of chalk having assisted towards this end. The Southern Railway Company has recently instituted a fast road transport container service for meat and certain other traffics from Southampton Docks to various nearby towns such as Portsmouth, Bournemouth, Salisbury, etc. A fleet of 6-ton "J.J." Thornycroft vehicles has been concentrated at Southampton, and the result of this experiment, which is one of the largest of its kind made by any railway company in this country, will be watched with interest.

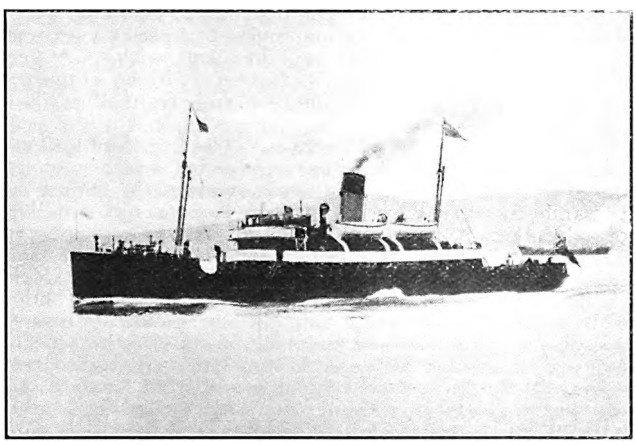
**Important New Works at the Bute Docks, Cardiff.**—The Great Western Railway Company are to be congratulated on their enterprise in providing a new double-track swingbridge, which has been built to carry railway and road traffic across the Lock between the Bute West Dock and Basin, immediately inside the main entrance to Cardiff (Bute) Docks at the Docks end of Bute Road. The bridge replaces the single track swingbridge that has been in existence for many years, and will greatly facilitate the rail and road traffic at a very busy part of the Docks. This bridge and the swingbridge opened in September, 1929, over the Bute East Outer Lock now form a modern and direct road to and from the Queen Alexandra Dock. The new bridge, which is hydraulically operated, consists of two main built-up steel girders with steel cross girders and timber decking, the total length being 90 feet 6 inches and the width over main girders 28 feet 4 inches. Between the girders there are two roadways each 8 feet 5 inches wide, having a division between them on the centre line of the bridge 1 foot 8 inches wide, and footpaths 3 feet 3 inches wide. The bridge, which has been built by the Horseley Bridge & Engineering Co., Ltd., to the design of the Chief Engineer of the Great Western Railway, is capable of carrying the heaviest loads that use either railways or roads. The bridge was officially opened for traffic on May 18th.

**Newcastle Shipowner Chosen.**—The Council of Newcastle and Gateshead Chamber of Commerce have unanimously elected Councillor R. S. Dalgliesh as its representative on Lloyd's Register of Shipping, Mr. J. Emery Tully, whose term of office terminates on June 30th, having intimated that he does not intend to seek re-election.

**Luxury Motor Liner.**—The "Venus," the largest vessel in regular service between England and the Continent, and claimed to be the world's fastest motor ship, is now making a double crossing twice weekly, leaving the Tyne on Tuesdays and Saturdays. The "Venus" makes the crossing to Bergen in 21 hours from quay to quay, with 19 hours only in the open sea, or seven hours quicker than formerly.

## Enterprise of the Southern Railway.

IN a recent issue we referred to the placing on the Dover-Calais route by the Southern Railway of the T.S.S. "Autocarrier" a newly constructed and specially adapted steamship to provide for motorists who desire to visit the Continent in their cars. This twin screw Cross Channel steamer was built by Messrs. David & William Henderson & Co., Ltd., Glasgow, for the Southern Railway's Cross Channel service and has been specially designed for the carriage of motor cars, and their passengers. She is constructed under the



T.S.S. "AUTOCARRIER."
SOUTHERN RAILWAY COMPANY.

requirements of the Board of Trade for a cross channel passenger steamer (Licensed to carry 120 passengers) and is in full compliance with the requirements of the International Convention for the Safety of Life at Sea, 1929. The leading particulars of the "Autocarrier" are:—Length (overall) 230 ft.; Breadth (extreme) 35 ft. 8 ins.; Depth (moulded to Main Deck) 15 ft.; Load Draft 11 ft. 6 ins.; Gross Tonnage 850 tons; Nett Tonnage 280 tons; Complement of passengers and crew provided for, 140.

The general appearance of the "Autocarrier" is characterised by a cruiser stern, complete main deck fore and aft, with forecastle and long bridge deck, above which there is a large deckhouse with navigating bridge and lifeboats, two masts and one funnel. The watertight sub-division is effected by six transverse watertight bulkheads extending to the main deck. Water ballast and feed water is carried in the double bottom and the fore and after peaks are arranged as trimming tanks.

The ship will carry approximately 35 Motor Cars, which will be loaded in and out of the holds by means of two Derricks, each of 5 tons lifting capacity. The motor cars will all be carried under cover, and the head room is sufficient to house the largest type of car. Suitable arrangements have also been made for securing the cars, so as to ensure their safety in all conditions of weather. These spaces are well ventilated by large mechanical fans which have been installed to clear away any gasses or foul air. Fire prevention has also been carefully considered and a full fire fighting system is fitted.

On the main deck forward of the machinery space accommodation is provided in well appointed saloons for ladies and gentlemen. On the same deck the crew are accommodated in the forecastle and right aft is fitted the steam steering gear having telemotor connections from the midship bridge. Above the main deck amidships is the boat deck on which is the general saloon, buffet and lavatory accommodation; here the passengers may have a shower bath, hot or cold at their will. On this same deck also is found in the deck house, accommodation for the officers as well as a wireless cabin. Above the boat deck, accommodation is provided for the Captain and there is also the wheel house for navigation purposes. The ship is lighted throughout by electricity and every consideration has been given to the details for the comfort of the passengers and the safe transit of their motor cars.

The machinery, constructed also by Messrs. David & William Henderson & Co., Ltd., consists of two sets of triple expansion engines having cylinders 15 ins., 25 ins., 29 ins. and 29 ins. stroke working at 200 lbs. pressure. Steam is supplied by two single ended boilers 11 ft. 3 ins. diameter by 17 ft. 6 ins. long, working under forced draft and giving ample power to maintain at sea a speed of 15 knots.

## Port of London Authority.

**Public to See London's Shipping and Docks.**

The public is now afforded for the first time regular facilities to visit the heart of London's dockland.

Such has been the revival in the demand on the part of Londoners and visitors from the Provinces and Overseas for facilities to see something of the world's most important international trade centre that the Port of London Authority have made arrangements for a weekly steamer excursion to the principal docks in the Port. A cruise through the historic Pool of London, the busy Reaches of Limehouse, Greenwich, Blackwall, Woolwich and Gallions and culminating in an inspection of the Royal Victoria & Albert, and King George V. Docks, the largest of the five great dock systems of the Port, is the only practical way to obtain in a short time a real impression of the vastness of the Port of London through which flows more than one third of the total overseas trade of Great Britain.

A steamer will start each Wednesday afternoon from Tower Pier, alongside the Tower of London, a large number of passengers can be accommodated in comfort and there will be facilities for tea on board. The price of tickets is 3s. 6d. for adults, half-price under 18. Special terms are provided for parties of over 10 in number.

Tickets will be obtainable on the pier prior to the departure of the steamer or advance bookings may be made by application to the Port of London Authority, Trinity Square, E.C.3, or the usual Travel Agencies.

**First Consignment of Canadian Butter.**

Owing to the demand for cream in the United States, no Canadian Butter had been sent to London during the past five or six years until the first week in June. Canadian Butter was on June 2nd being discharged from the s.s. "Beaverburn" and s.s. "Alaunia" at the Surrey Commercial Docks.

**Brazilian Oranges.**

London is eating more Oranges. Over 280,000 boxes of Brazilian Oranges had arrived in London this season up to the beginning of this month against 13,000 last year.

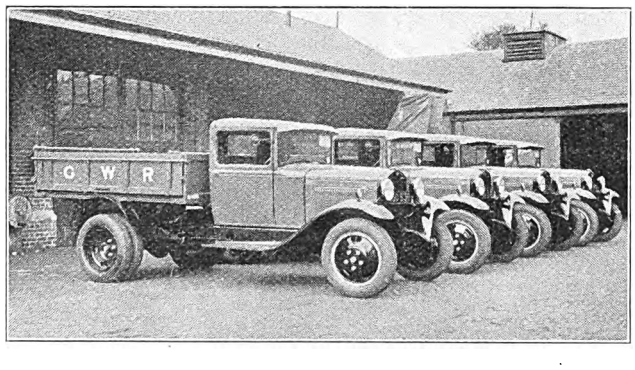
# Railway Notes and News.

**The Railway Barometer.**—The Railway Traffic Receipts of the four Group Railway Companies have now been published for the first 21 weeks of 1931, compared with the same period in 1930 and 1929, and are as under:—

| | 1931 | 1930 | 1929 |
|---|---|---|---|
| | £ | £ | £ |
| Passengers, etc. ... | 24,854,000 | 26,350,000 | 27,337,000 |
| Merchandise, etc. | 22,489,000 | 26,133,000 | 26,618,000 |
| Coal Coke, etc. ... | 13,668,000 | 14,753,000 | 15,158,000 |
| Total ... | 61,011,000 | 67,236,000 | 69,113,000 |

**Great Western Railway Magazine.**—The June issue of the "Great Western Railway Magazine" refers to the rapid progress which is being made with the £8,500,000 G.W.R. schemes of improvements which are being carried out all along the line throughout the system. The Annual Conference of the G.W.R. Social and Educational Union, held at Weymouth last month, is fully reported, and, as usual, this issue contains some excellent illustrations.

**Canadian National Railways.**—Mr. W. A. Kingsland, Toronto, general manager for the Central Region of the Canadian National Railways, formerly general manager of the Western Region, has been placed additionally in charge of the Montreal and Southern Counties Railways, the Oshawa Railway, and the Thousand Island Railway, electric lines operated by the Canadian National.



FOUR FORD 30-CWT. 3-WAY HYDRAULIC TIPPING TRUCKS FOR G.W.R.

**For Heavy Service.**—Five Ford 30-cwt. 3-way hydraulic tipping trucks have just been supplied to the Great Western Railway by Messrs. R. Pratt, Ltd., of Sutton. They will be used in the sand and gravel pits at Theale, near Reading. Our illustration shows four of the trucks ready for delivery.

**Putting Railway Stations on the Phone.**—The growing popularity of the telephone as a time saver is demonstrated by the fact that the L.N.E.R., in co-operation with the General Post Office, have recently installed 900 post office telephones at stations all over their system, including those on lines jointly operated with other companies. Over 500 of these have been provided at stations in rural areas, where in many cases traders are anything from 5 to 20 miles and more from the nearest railway station. No fewer than 142 stations serving the East Anglian agricultural areas have now been equipped with telephone facilities.

**L.M.S. Station Car Parks.**—The L.M.S. Railway announce that following the recent arrangements made for car parking facilities being provided at 89 passenger stations, an extended scheme has now been approved whereby parking facilities are available at some 359 goods stations. The spaces available range from sufficient to accommodate over 100 cars down to small spaces for two or three cars. The charges have been fixed at 1/- for cars and 6d. for three wheeled vehicles, motor cycles, etc. In certain areas reduced charges are in force. Of the 359 parks, 249 are in England and Wales and 110 in Scotland. These 359 goods depots have been definitely scheduled as permanent car parks, but in addition there are occasional parking facilities at a large majority of the thousands of L.M.S. stations and depots throughout the country. In effect motorists may regard any L.M.S. depot as a potential parking place for cars.

**G.W.R. and the Royal Agricultural Show.**—All is now ready for the Royal Agricultural Show at Warwick from July 7th-11th next. The new station at Cape Yard Sidings, which has been erected by the G.W.R. at a cost of £8,500, is complete. Here the whole of the rail traffic, cattle, agricultural implements and other exhibits passing to and from the Show will be handled. The station has a platform of 700 feet in length constructed to afford every facility for the careful and expeditious loading and unloading of the traffic. Special craneage facilities are available and enquiry bureaux and livestock booking offices at the station and on the Show ground itself, where every enquiry will be dealt with. A fleet of between 30 and 40 G.W.R. tractors will be employed for the conveyance of traffic to and from the Show ground.

**Southern Railway Road Services.**—The Southern Railway road freight services have been extended and are operating from 36 railhead centres covering the South of England from Kent to Cornwall. Road vehicles deliver to and collect from any point within a radius of approximately 10 miles from railhead. A notable departure is an Express Road Container Service from Southampton Docks which carries meat in special insulated containers for immediate delivery from the ship to centres in Hampshire, Dorset, Berkshire, Sussex and Wiltshire. Another special feature is a service of Road Motor Horse Boxes to convey racehorses, etc., across London and from London railway terminal stations to destinations within a 30 miles radius. The special road collection and delivery arrangements to assist hop farmers in Kent will again operate in the coming hopping season. The Southern Railway's road fleet consists of 356 motor vehicles—1,220 horses and 1,500 horse vehicles. The total tonnage carried by the Company's road services during 1930 was 1,775,094 tons, including over 16,000,000 parcels.—*Railway Newsletter.*

**Railway Accidents and Casualties in Great Britain During 1930.**—The Minister of Transport has issued a preliminary statement containing provisional returns of railway accidents and casualties in Great Britain during 1930 as reported to him by the Railway Companies. Copies of this statement may be purchased (price 2d.) from H.M. Stationery Office, Adastral House, Kingsway, W.C.2, or through any bookseller.

## G.W. Extend Freight Road Services.

DELIVERY is now being effected of 219 new motors and tractors, ordered at a cost of £127,000 by the G.W.R. for use in connection with big developments in its freight, rail-road services.

They will be used in connection with:—

The expansion of the Company's collection and delivery services as a result of the extension of its free delivery areas due to the growth of housing estates, etc.

The inauguration of new country lorry services serving 12-15 miles from rail heads, and to strengthen certain existing services.

Affording traders cartage facilities for certain lower class traffics consigned by rail at "station to station" rates.

Special Rail-Road contracts and throughout road services especially in London and South Wales for the conveyance of general building materials, bricks, pipes, girder work, timber, roadstone, etc., required for delivery to site.

The concentration of collection and delivery traffic upon one main station serving a considerable area whereby traffic is expedited and economies in working effected.

The development of the Company's container traffic, tractors being specially suitable for the work as they enable the trailer to be left at traders' premises for loading or unloading while the tractor is utilised to full advantage.

The Company now operates 1,331 motor vehicles, 2,380 horses and 3,780 horse vehicles in connection with its freight cartage services, which cover practically every town and village in the territory it serves.

Collection and delivery of traffic is undertaken at 619 of its stations and last year the Company's goods and parcels lorries covered a record of 8,641,362 miles.

# Air Transport Notes.

**Municipal Aerodrome for Blackpool.**—On Tuesday, June 2nd, the Prime Minister opened the new municipal Air Park at Stanley Park, Blackpool. The aerodrome is controlled by National Flying Services, Limited, and is the home of the Blackpool & Fylde Aero Club.

**Royal Aeronautical Society.**—At the last Council Meeting of the Royal Aeronautical Society, Mr. R. C. Fairey, M.B.E., F.R.Ae.S., was unanimously elected President of the Society for a second term of office. At the same meeting the following were re-elected Vice-Presidents of the Society:—Professor L. Bairstow, C.B.E., F.R.S., F.R.Ae.S.; Lt.-Col. J. T. C. Moore-Brabazon, M.C., F.R.Ae.S.; Mr. H. E. Wimperis, C.B.E., F.R.Ae.S. Mr. Griffith Brewer, F.R.Ae.,S., was unanimously elected a Vice-President in place of Air Vice-Marshal Sir Vyell Vyvyan, who resigned from the Council in March, 1931. Mr. J. Laurence Pritchard is the Secretary of the Society and the offices are at 7, Albemarle Street, Piccadilly, London, W.1.

**Cheaper Empire Air Travel.** — Imperial Airways are finding it possible, in the devolopment of their long-distance routes, to introduce considerably lower air fares on the Empire air lines to India and Central Africa, and many such reduced rates are now operative. Taking London-Cairo as an example, the previous fare was £50, whereas the new single fare is £45. It has not been possible, hitherto, to offer reductions on return fares on Empire air routes, but now long-distance air travellers can effect appreciable savings in this respect. A return air ticket to Cairo and back can, for example, now be obtained for £81, as compared with £100 previously. Another example may be taken in the case of Baghdad. Here the previous single air fare was £81, and the return £162. These figures are now £65 and £117 respectively. Karachi, India, 5,000 miles from London, can now be reached in only a few hours over five days by air at a cost, for a reduced single fare, of £98; only £6 more, it may be mentioned, than the first-class fare by surface transport for a journey occupying 17 days. The new return air fare, so far as Karachi is concerned, is £176 10s., showing a reduction of as much as £65 10s. on the previous return air fare. The reduced air fare from London to Kisumu, on the Imperial Airways Central-Africa route, is £2 less than a first-class journey by surface transport —the figures being £95 and £97 respectively; and yet the air route saves as many as 23 days. Any traveller flying to Central Africa and back by Imperial Airways can now save over 40 days as compared with a similar return journey by land and sea, and do so at a less cost than by first-class surface transport.

**And Now Switzerland!**—An agreement has been concluded between the Service Technique du Département Militaire Fédéral, Berne, Switzerland and Handley Page, Ltd., whereby the Department can fit the Handley Page slotted wing to certain of its types of aircraft. This is another important step towards the world-wide use of slots on all aircraft. Already all the leading air powers are standardising slots or are engaged in negotiations with the Company with that end in view.—"Handley Page Bulletin."

**Over the Andes on an Avro.**—An Avro Trainer fitted with an Armstrong Siddeley Lynx engine, flown by Captain Norman Macmillan, recently had the honour of being the first British aircraft to cross the Andes range. The flight started from Buenos Aires and continued to Puerto Belgrano (350 miles), Neuquen (330 miles) and Chillan (295 miles) this stage including one crossing of the Andes. From Chillan to Santiago (120 miles) the course ran in a northerly direction and conditions were comparatively easy, but the next stage from Santiago to Mendoza (120 miles) included a passage of the Andes with Aconagua (22,868 feet) in close proximity to the course. The flight from Mendoza completed the round trip of just over 1,800 miles, during which Captain Macmillan states the Avro Trainer and Lynx engine performed magnificently.

**British Airman's Success at Cologne.**—Mr. A. C. M. Jackaman, of Highfield, Slough, secured the chief honours at the first international flying meeting held in Germany at Aix-la-Chapelle by winning three events out of six in his Puss Moth and leading the winning team in the relay race. Mr. Jackaman was first in the long-distance race (441 km. in 145 minutes), in the landing competition and in another race. Some 30 British, Dutch, French, Belgian and German pilots competed.

**International Air Fete.**—In order to stimulate interest in aviation and encourage trade for private pilots and manufacturers, the Aero Club, Milan, is launching a gigantic scheme for an International Air Fete, to be held at the Taliedo Airport on the 28th of June.

**Round Sweden Air Race.**—The 1,300 Kilometre Air Race round Sweden organised in connection with the Aero Show at Stockholm attracted 40 entries representative of the best pilots and aircraft in Sweden, Norway, Finland and Denmark. It was flown in two days and included separate classes for land and sea aircraft. Both events were won by pilots using British aero engines, the land plane class being headed by Lieut. Erik Rasmussen, of the Royal Danish Navy, who flew a Dankok machine fitted with a 385 h.p. Siddeley Jaguar engine, and the seaplane class being won by Captain Bremer on a Junkers Junior fitted with an 80 h.p. Siddeley Genet engine. It is interesting to note that Lieut. Rasmussen still holds the Scandinavian height record which he won two years ago on the same aircraft.

**Deutsche Luft Hansa A.G. Air Lines.**—A very comprehensive summer time-table has been published by the Deutsche Luft Hansa A.G. Air Lines and is now in force and will be effective until October 31st. A new air freight tariff is also in force. Full details may be obtained from the London Manager, Air Port of London, Croydon.

**Air Passenger Traffic in United States.**—The total number of passengers carried on the 26 air mail routes in the United States in March was 11,504, according to the Post Office Department. The largest number was on the route from New York to Los Angeles (2,353). The route from Boston to New York came second with 1,960 passengers, and the New York-Atlanta route carried 1,504. For the quarter ending March 31st the number of passengers was 28,368, of which 8,094 were carried in January, 8,770 in February and 11,504 in March.

# Royal Air Force Display.

SEVERAL new features will be presented at the 12th Royal Air Force Display at Hendon on Saturday, June 27th.

The attendance at last year's display of more than 150,000 people constituted a record for an outdoor event on a single day, and arrangements have been made to provide accommodation for a record attendance at this year's Display.

Tickets for the special enclosures and the stands can now be obtained from the Secretary, Royal Air Force Display, Hendon, or from various booking agents.

One of the new events will be the catapulting of a large twin-engined bomber. This land-type catapult operates on an entirely different method from the type used on naval vessels, and has been developed as a portable catapult for use where the taking-off area is restricted.

Two new spheroidal engines, which have many unique features, together provide the necessary forces to propel the aircraft forward. Each of them develops 2,000 h.p. in the course of 3 seconds, and enables the aircraft to take off in about 30 yards instead of the normal run of 300 yards, at a speed of nearly 60 miles an hour.

Compressed air will be used during the demonstration at Hendon, but steam and cordite can also be employed with these engines which can, if required, develop a total of 16,000 h.p.

The catapult and engines have been developed at the Royal Aircraft Establishment, Farnborough.

For the first time an exhibition of refuelling military aircraft in the air will be given. Successful experiments to prove the practicability of aerial refuelling were carried out several years ago by the Royal Air Force, but as there was then no immediate need for departing from the regular practice of filling up aircraft on the ground, the matter was not proceeded with.

For certain technical reasons flying boats cannot take-off with as great a load as land aircraft with equivalent horse-power, and if successful arrangements can be made for refuelling flying boats in the air, their effective range can be greatly increased. Experiments to this end have accordingly been recently restarted, and a demonstration of the method employed will be given at the Display by two Vickers Virginia bombers. Radio telephony will be used for communicating between the two aircraft before the dropping of the pipe line and during the proceedings. The fuel carrier will be auto-controlled so as to ensure that it will fly on a perfectly straight course. The use of an aircraft so fitted is entirely new in refuelling experiments, and greatly assists in securing speedy and successful refuelling.

# Karrier Motors, Ltd.

## Annual General Meeting.

The annual general meeting of Karrier Motors, Ltd., was held at Huddersfield, on June 4th.

Mr. H. F. Clayton, the chairman of directors, in moving the adoption of the directors' and auditors' reports, said that during the whole of the year they had to contend with a continuous decline in the world trade and their own particular industry had been aggravated at home by the introduction of the Road Traffic Bill, in Australia and South Africa by threatened motor legislation, and in India by the boycott of British goods.

The firm's heavy duty chassis and road cleansing vehicles found a fairly ready market, and the electric trolley omnibus made further progress.

The Karrier road-rail omnibus was completed and thoroughly tested during the year, and a demonstration was given by the London, Midland and Scottish Railway Company early this year with the vehicle, which they had purchased and which would shortly be put into regular service.

The "mechanical horse" had been produced to compare favourably with the single or two-horse dray in regard to (1) first cost, (2) upkeep cost, (3) manœuvrability, and (4) simplicity.

"We believe there are about 30,000 horses still in use by the British railways, and it is with the intention of replacing at any rate a good proportion of these (and others) by mechanical transport that we have designed and put on the market, the two vehicles designated the 'Karrier Cob' and 'Karrier Colt.'"

The four big English railway groups had each placed orders for the "cob" tractors, and one of them had already favoured the Company with two repeat orders. This type of vehicle had also been adopted by various breweries, coal merchants, Co-operative societies, and haulage contractors.

He was pleased to report an increased demand from municipalities for the firm's road-sweeping machines, refuse collectors, and similar types of vehicles.

Profit on trading was roughly £38,300 against £42,700, with net profit £8,041, as compared with £2,097 last year.

Mr. R. F. Clayton, who seconded the resolution referred to the adverse effect of the recent Government legislation on the commercial vehicles industry both on the manufacturing and operating sides.

"I am sorry to say," remarked Mr. Clayton "that the uncertainty of the position created by the introduction of the Road Traffic Bill has not been dispelled now that the Act is on the Statute Book, and our hopes for a more satisfactory position for our industry do not appear to be well founded."

"Whilst we all realise the necessity for regulating traffic and safeguarding the road and the road users, I feel that anything which tends to reduce the demand for our products and thereby increases unemployment is to be deprecated, especially in the present state of trade."

The resolution was unanimously carried.

# Answers to Inquiries.

### Road Maps.

**Question:**—Can you tell me where I can obtain a map showing a complete schedule of the A. & B. roads in the country with index.

**Answer:**—No official map showing a complete schedule of Classified Roads with index is published but we send you a pamphlet giving particulars of the Ministry of Transport half-inch road maps; also the Ordnance Survey Maps as list enclosed, show first, second and third class roads and give a reference at the foot of each map.

### Name on Vehicle.

**Question:**—I notice in a local paper a paragraph to the effect that a farmer was ordered to pay costs for not having his name and address painted on a milk float from which he was selling milk. Can you inform me if the Police were correct in taking action against him?

**Answer:**—Section 75 of the Highways Act, 1835, is repealed by the Motor Vehicles (Construction and Use) Regulations, 1931, only in so far as motor vehicles are concerned. Possibly the owner of the milk float who was summoned and ordered to pay costs, was using a horse-drawn milk float.

**Northampton Road Transport Company's New Address.**—The Northampton Road Transport Company's Northampton offices are now at Transport Chambers, 40, Newland, Northampton. The telephone numbers remain unchanged, viz.:—Northampton 1274 (two lines).

# The Show of a Thousand Horses.

## Final Preparations for Olympia "International."

### June 20th—27th.

Nearly a thousand horses will take part in the ever-popular International Horse Show which will be held at Olympia from June 20th to 27th.

Final preparations are now in hand and Lord Lonsdale and his fellow directors of the unique display will have every reason to be proud of the programmes they will be able to offer the public and lovers of horses and the thrills which this event always produces.

The animals "on parade" and taking part will range from the finest thoroughbreds in the world, handsome hackneys, hardy hunters, to strong pit ponies from the Mon. and South Wales Collieries and the always delightful donkeys of the London costers.

The floral decorations will be on an even more generous and elaborate scale than ever before and the huge Olympia will be transformed into a gorgeous flower garden with thousands of gay coloured hydrangeas, geraniums, marguerites, yellow coleus and golden privet and velvety real grass lawns.

The entries are particularly heavy and the huge ring will be busy from early morning to midnight on each of the seven days the show will be running. The riding classes are especially strong, and many thrilling contests are promised not only in the international classes in which teams from at least five nations will try to wrest the trophies from Great Britain, but also in the classes for hardy hunters and the miniature "Grand National" of the Scurry Stakes in which leading personalities of famous Hunts will take part.

# Society of Motor Manufacturers and Traders.

### Election of Officers for the year 1931/32.

The Annual Election of Officers of the Society of Motor Manufacturers and Traders, Ltd., took place at a Meeting of the Council held on May 21st.

Mr. E. M. C. Instone, J.P., F.C.I.S., succeeds Mr. E. H. Blake as President.

Mr. E. H. Blake, as the immediate Past President, becomes the Depty President of the Society in succession to Mr. J. Maughfling, C.A.

Sir Herbert Austin, K.B.E., Chairman of Austin Motor Co., Ltd., and Mr. J. A. Thomson, J.P., Managing Director of Brown Brothers, Ltd., and Thomson & Brown Brothers, Ltd., become Vice-Presidents in succession to Mr. P. F. Bennett and Mr. A. Perman.

Mr. Leslie Walton, Chairman of Vauxhall Motors, Ltd., is reappointed Honorary Treasurer of the Society for the 7th year in succession.

# Publications Received.

The Air and the Plain Man. By Colonel The Master of Sempill, A.F.C., F.R.Ae.S., Immediate Past-President of the Royal Aeronautical Society (Elkin, Mathews & Marrot, Ltd., 54, Bloomsbury Street, London, W.C.1. Price 3s. 6d. net.). Aviation is a subject of much interest to the man in the street who will no doubt accord a warm welcome to this little book by so well-known an authority on flying as The Master of Sempill. The author points out that this publication is in no sense a technical treatise on flying, but, as its title implies, it is an attempt, and in our opinion a very successful one, to set forth simply and concisely, some of the many facts connected with aviation which, in these days, should come within the knowledge of everyone. The book is divided into fifteen chapters under the following headings:—The rise of commercial and private flying; The flying clubs—what they are and what they do; Learning to fly; Flying as a career; The modern light aeroplane; Touring by light aeroplane; The sporting side of flying: The air and the business man; Private aeroplanes as business aids; The air and the Empire; The aircraft industry; Service flying and the civilian; Britain's place in the air; Gliding and soaring; Airships. In view of the Government's recently announced airship policy, chapter XV, "Airships" will be of much interest to "the plain man." From all points of view this is an excellent little book.

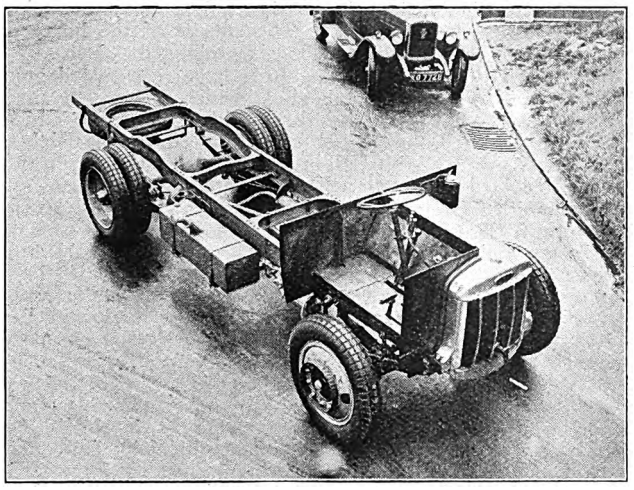
# A New T.S. 4-Ton Chassis.

THOUGH T.S. Motors, of Maidstone, have supplied many vehicles for goods carrying purposes, mainly they have concentrated upon public service passenger vehicles of which their "Empress" model enjoys remarkable popularity in all parts of the world. Now, however, the firm has made a new departure, having specially designed and built a chassis for the transport of goods, for which it has a capacity of 4 tons plus the weight of the body. This chassis may be fitted with either a petrol engine or with a Gardner heavy fuel oil engine.

The petrol engine is a 4-cylinder model with 4¼ in. bore and 5½ in. stroke. The cylinders are cast mono-bloc and have detachable cylinder heads in pairs. 44.5 b.h.p. is developed at 1,000 r.p.m. and 63.5 b.h.p. at 1,400 r.p.m. R.A.C. rating is 29 h.p. Accessibility to all parts is a feature of the engine.



4-TON LORRY CHASSIS SUITABLE FOR SINGLE CAB, TYPE B 39C3.

Without interfering with the tappets, exhaust or inlet pipes, the heads can be removed, exposing the pistons for cleansing and the valves for grinding or removal. The heads can be taken off in a few minutes enabling the pistons to be removed through the tops of the cylinders.

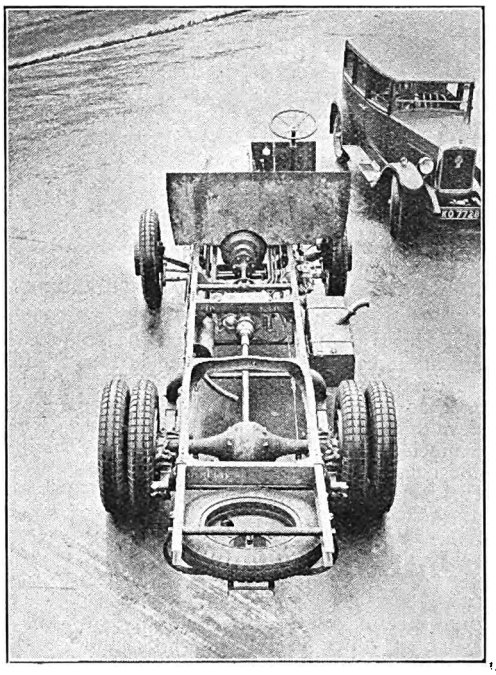
The crankshaft has three main bearings, phosphor bronze white metal lined. A gear type pump is used for lubrication.

The carburetter is a Zenith. Ignition is by H.T. magneto.

Should the Gardner engine be fitted, it is a 4L2 type having a bore of 4⅛ in. and a stroke of 6 in. and is capable of developing 50 b.h.p. at 1,100 r.p.m. It has a five bearing crankshaft, and push rod operated overhead valves, Bosch fuel pump and injection nozzles, a centrifugal governor and a Gardner patented decompression device which permits the engine to be started by hand from cold.

The frame is the straight sided type. The engine is carried on a sub-frame and the gear box on two cross members. The gear box is fitted with four speeds and a reverse. Gear change is effected by selector rods from the front of the box which are carried forward to the change speed gate, situated in the drivers cab, left hand operated.

From the engine to the gear box, power is transmitted from a single plate clutch. The coupling shaft joints between the clutch and the gear box are of the flexible disc type. Those between the gear box and the back axle are, one end, a "Hook" coupling with plain bearings, the other a similar type of coupling and a sliding splined shaft.



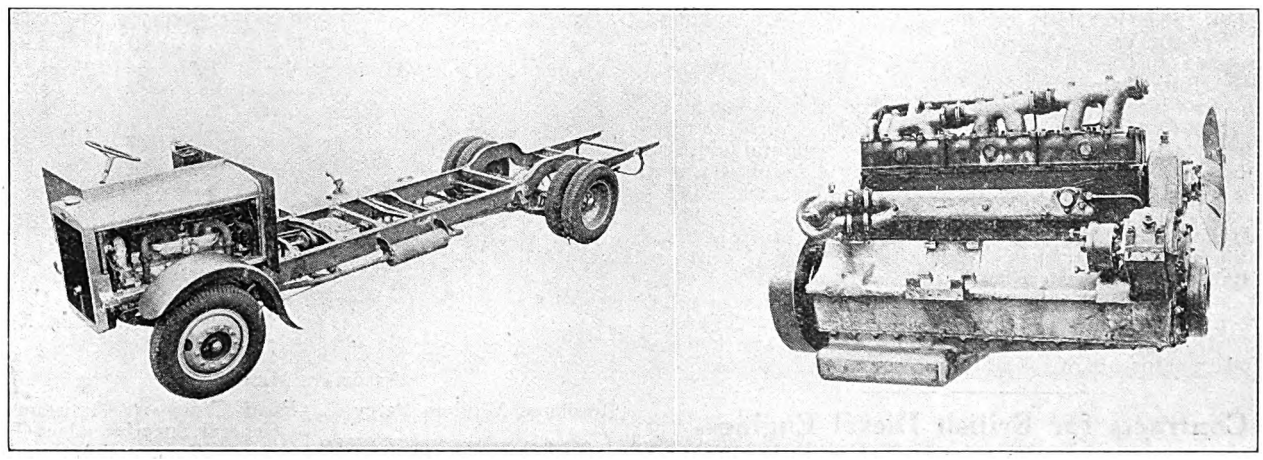
4-TON LORRY CHASSIS SUITABLE FOR SINGLE CAB TYPE B 39C3.

The back axle is the underslung worm type, fully floating with bevel type differential. Four wheel brakes are provided operating on front and rear wheel drums. The hand brake operates on independent drums on the rear wheels. The four wheel brakes are Servo assisted.

The cooling for the petrol model is by gilled tubular type water pump and fan. The Gardner engine requires no fan.

Steering is of the Marles type and chassis lubrication is on the Tecalemit system.

The dimensions are as follows:—wheelbase 12 ft. 8 ins., front track 6 ft. 4 ins., rear track 5 ft. 10 ins., height of

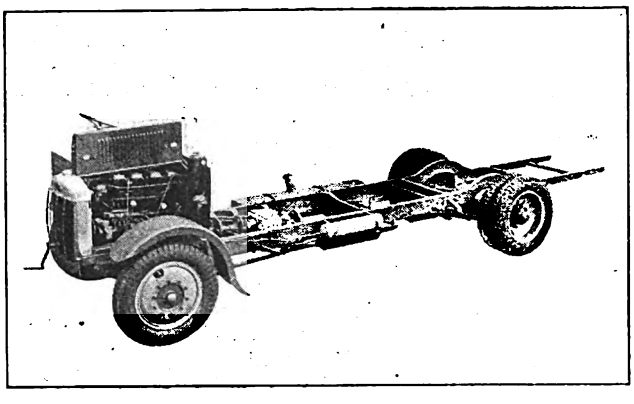


LEFT: THE T.S. 6-CYLINDER COACH CHASSIS. RIGHT: THE T.S. 6-CYLINDER ENGINE.

Digitized by Google

frame loaded 2 ft. 7 ins., overall length 21 ft. 10 ins., overall width 7 ft. 5¾ ins., dashboard to end of frame 17 ft. 1 in., dashboard to centre of back axle 10 ft. 10 ins.

The price of the petrol engine model is £720 with either forward or normal steering. The price includes 12 volt lighting equipment, speedometer and 38 in. by 7 in. Dunlop pneumatic tyres.



26-32 SEATER CHASSIS WITH GARDNER ENGINE.

The above chassis can be supplied for passenger work, the only modification being that the frame is lower and arched over the rear axle. It is suitable for a 26-32 seater body.

Another chassis, the T.S. new 6-cylinder coach which is really a development of the four cylinder models which have gained so much popularity, is certain to enjoy similar popularity. The chassis is designed to carry 36 passengers. The engine develops 110 b.h.p.

## Institute of Transport.

THE opening meeting of the Session 1931-32 of the Institute of Transport, at which Mr. Frank Pick, the President for the ensuing year, will deliver his Inaugural Address, will be held in London on Monday, October 12th, 1931.

The Annual General Meeting will take place in London on Monday, November 9th, 1931.

Considerable interest has been evinced in the formation of the recently sanctioned Graduate and Student Society for Nottingham and District, which it is hoped will be functioning at the beginning of next session. A provisional committee has been set up to consider questions of preliminary organisation and comprises: Lt.-Col. F. Rayner, D.S.O., Chairman; Messrs. G. E. Cowley, A. Dixon, H. Hackney, E. Heaton, W. H. Kirby, W. E. Levers, H. G. Morley, K. B. Powell-Lee, G. H. R. Searson, H. R. Smith, G. Sweet, C. A. G. Watts, W. E. Watts, W. W. Woodcock, and G. G. Goodings, Hon. Secretary (*pro tem.*) whose address is 3, Cowper Road, Woodthorpe, Nottingham.

The first meeting of the current session of the Argentine and River Plate Centre was held on May 29th, when the new Chairman, Mr. C. A. Roberts, delivered his inaugural address. Forthcoming arrangements include the reading of a paper on Statistics by Mr. Richard, of the Buenos Aires and Pacific Railway, on June 26th, and of a paper on a "Stores" subject by Mr. Ll. W. Makin, of the same railway, on July 21st. On the 25th of September a visit will be paid to Mecha on the Buenos Aires Western Railway to view the running shed and cattle wagon cleaning plant. On the return journey an inspection will be made of the Vascongada's plant at Suipacha and a discussion will follow a paper by Mr. K. Marshall on "Modern transport of milk by rail."

## Contracts for British Diesel Engines.

AT a time when industry is labouring under great difficulties and in the face of intense foreign competition it is gratifying to note that there is a definite tendency on the part of British power users to place orders for Diesel engines of British make.

Following on the order of the B.B.C. for four Crossley Vertical Compressorless Diesel Engines for the new Scottish Regional Station, come new orders from England, Wales and the Irish Free State.

The Bridport Electricity Works have ordered a 5 cylinder 325 b.h.p. engine for driving an electric alternator, a 3 cylinder unit is to operate near Beaumaris in the Dinmoor Park Quarries of the Minerals Construction Co., Ltd., whilst the Government Boot Factory at Carlow, I.F.S., have ordered a 3 cylinder set for dynamo drive.

## Gragrip Shoeing.

THAT the horse still plays an important part in our transport system cannot, we think, be disputed, and whilst the use of man's four-footed friend is found to be a sound economical proposition for short journeys which involve frequent stops the question of proper shoeing is one that deserves earnest thought by all horse users.

The Gray Horseshoe Pad Co., Ltd., 13 and 14, Suffolk Street, Birmingham, have for many years undertaken intensive research into the all important question of giving the horse a shock-absorbing grip on the road, and the Gragrip method of shoeing has been known and adopted for long past by those horse owners who realise the necessity of protecting the feet and legs of the horse, thus prolonging its working life and retaining its value.

The Gray Flexible Bridge Pad is a flexible steel bridge (holding rubber, but not in smelly contact with the Frog) which provides a shoe with an everclean resilient non-slip ground or road surface, against which the frog itself actively and effectively functions, thus naturalising shoeing and not only prevents slipping but absorbs jar and produces or maintains sound and healthy feet. The energy of the horse is conserved and the life of the shoe is prolonged.

The Gray Horseshoe Pad Co., Ltd., have recently adapted their Gragrip method of shoeing, which previously had applied only to flat shoes, to shoes with calkins for which they have obtained the British and Foreign Patent Rights, so that now a horse with Calkin shoes can be dealt with and the frog enabled to function healthily and naturally.

An exhibit of Gragrip shoeing is being staged at the Royal Agricultural Show, Warwick (referred to in another part of this issue), and thus many horse owners will be enabled to form their own opinion regarding what we consider to be a just claim that from the economic point of view the extra cost of Gragrip shoeing is cancelled out by the longer life of the shoe and far out-weighed by the increased efficiency of the horse.

As we have said, "Gragrip" shoeing is a "tried and not found lacking" method but we fear not sufficiently well-known or else not so fully appreciated as it should be. Standard works on Veterinary science explain fully this method of shoeing and many Veterinary surgeons have testified that these pads do undoubtedly confer a most beneficial service to frogs, heels and legs.

## Institute of Transport.

THE following gentlemen have been elected to membership of the Institute of Transport:—

MEMBERS.

| | |
|---|---|
| Anderson, John Sloane | General Manager, Metropolitan Railway. |
| Cleminson, Henry Millican | General Manager, Chamber of Shipping of the United Kingdom. |
| Fearnley, Ronald Arthur | General Manager and Engineer, Southend-on-Sea Corporation Light Railways and Transport. |
| Kuit, Albert | Commissioner of the South African Railways and Harbours. |
| Polson, Alexander Rose | Transport Manager, C. A. Parsons & Co., Ltd., Newcastle-on-Tyne. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Bradbury, William Percy | Road Transport Assistant to General Superintendent (Passenger Commercial), London, Midland and Scottish Railway. |
| Chapman, Herbert Sidney | Secretary, Metropolitan Railway. |
| Edwards, George | Traffic Manager, Bury Corporation Tramways and Motors. |
| Hardy, James Alfred | South African Railways and Harbours (Port Elizabeth). |
| Harrington, James Leslie | Southern Railway. |
| Lane, Lawson William | Rhodesia Railways (Broken Hill). |
| MacLeod, Alistair Balmain | Assistant for the Isle of Wight, Southern Railway. |

# News from all Parts.

**Long-Distance Road Haulage Association.**—At a meeting of Birmingham and district long-distance road transport contractors held last month, it was decided to form a West Midlands branch of the association. Mr. L. W. Gupwell presided and described the present condition of the industry as deplorable. It was necessary to organise, he said, if the industry was to prosper or even to continue its existence. Mr. Gupwell contended that unfair burdens and impositions had been placed on the industry, and that it behoved members to combine for the purposes of joint action and protection. The Association, after only two months' existence, he added, had a membership of 150 firms, representing 1,500 vehicles. Mr. J. S. Nicholl and Mr. Donaldson Wright both emphasised the necessity for co-operation if the industry was to receive the consideration that was so vital to its interests.

**Motorists' Sight Tests.** — The Automobile Association is appealing against the recent decision of the Divisional Court concerning motorists who are unable to read a number plate at 25 yards. The Divisional Court decided that there was no right of Appeal against the refusal of the Licensing Authority to grant a driving licence. It is the contention of the A.A., that under Section 5 (sub-section 5) of the Road Traffic Act, motorists have a general right of appeal, and the present action is being taken in the interests of many motorists throughout the country, who, although unable to read the letters or figures on a number plate at 25 yards, have driven for long periods without accident or infringing the law in any way.

**Midland Centre of the F.W. & R.A. Visit Morris Commercial Cars, Ltd., Soho, Birmingham.**—Recently the members of the Midland Centre of the Furniture Warehousemen and Removers' Association visited the test grounds and works of Morris Commercial Cars, Ltd., Soho, Birmingham. Members were entertained to luncheon by the firm at the Grand Hotel, Birmingham. The visit was extremely interesting and much enjoyed by all.

**"Ovoline" Golden Milestones Competition.**—Brett's Oil & Grease Co., High Level Works, Gateshead-on-Tyne, manufacturers of the well-known "Ovoline" motor lubricant, have launched an interesting competition. On May 4th last a specially-designed Ovoline Display Van started from Gateshead Town Hall on a seven-week's round tour of the Northern Counties and the South of Scotland. It is following exactly a route marked out on a map incorporated in a folder which will be supplied with the competition entry form, and the task of competitors is to estimate what distance the van will cover. The speedometer was read and the mileage at the commencement certified by the Mayoress of Gateshead. The speedometer was then masked and sealed by the Mayoress. The van is due back in Gateshead on June 19th and the seal will then be broken and the mask removed by the Mayor or Mayoress of Gateshead who will certify the number of miles then recorded by the speedometer, the difference being the correct mileage covered by the van during the seven weeks tour. Entry forms for the competition are only obtainable through garages, one entry form being given for each quart of "Ovoline" purchased. The entry forms are numbered numerically, the numbers sent out to each garage being recorded. The first prize is £100, second prize £25 and 25 special prizes each consisting of a 6-gallon drum of Ovoline complete with telescopic "non-drip" tap and quart can with clip for fixing under bonnet of car. The garage which sells the winning quart of motor oil will be given a prize of £25, and there is a second prize of £5 for the garage which sells the quart winning the second prize. A useful little booklet in regard to "Ovoline" motor oils, giving the correct grades to use upon various makes of vehicles, is issued by the firm.

**FORTHCOMING EVENTS.**

| | |
|---|---|
| June 20—27. | International Horse Show, Olympia, London. |
| June 24—26. | Municipal Tramways and Transport Association. Conference at Southampton. |
| July 7—11. | Royal Agricultural Show, Warwick. |
| July 27—31. | First International Conference on Public Cleansing, Guildhall, London. |
| Sept. 10—26. | Shipping and Engineering Exhibition, Olympia, London. |
| Nov. 5—14. | Commercial Motor Transport Exhibition, Olympia, London. |
| Nov. 16—21. | Public Works, Roads and Transport Congress and Exhibition, Royal Agricultural Hall, London. |

**Trolley Omnibuses in the London Area.**—Mr. Frank Pick, Managing Director of the Underground Group, speaking at a luncheon at Fulwell last month in connection with the inauguration of the new trackless trolly vehicles over part of the route of the London United Tramways, said that he was not quite sure whether the occasion was "a funeral or a christening," because they did not really know whether they would own the tramcars for more than two months, or whether they would be taken over by the Government Board. The route extends from Twickenham to Teddington, but shortly the service will be operated through to Kingston, and by the middle of the summer it is hoped that some 17 miles of the London United Tramway system will have been converted to the trolley system. The fleet will comprise 60 vehicles and in general appearance and design they are similar to the L.T. type of L.G.O.C. motor omnibus. The chassis are of similar type—the six-wheeled "Renown" chassis built by the Associated Equipment Company, Ltd., and adapted to trolley omnibus service.

**Leyland's New Telephone Number.**—We are advised by Leyland Motors, Ltd., that they have received a new telephone number owing to changeover to automatic telephones in the Leyland, Lancashire, district. The new

MEMBERS OF THE MIDLAND CENTRE OF THE FURNITURE WAREHOUSEMEN AND REMOVERS' ASSOCIATION VISIT THE WORKS OF MORRIS COMMERCIAL CARS, LTD. MR. F. W. H. WINWOOD, THE PRESIDENT OF THE ASSOCIATION, IS INDICATED BY A CROSS.

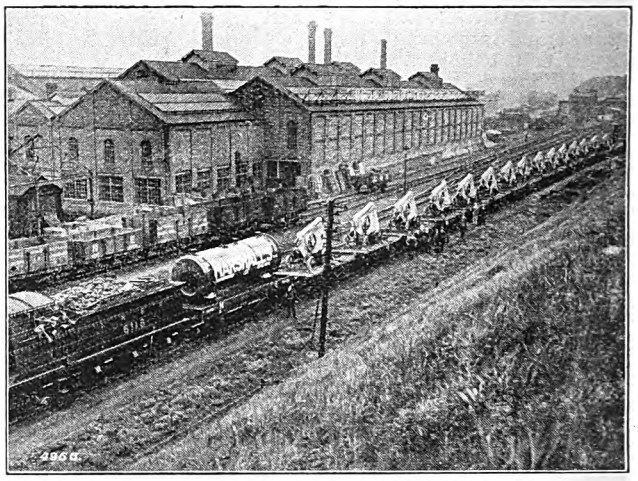
Digitized by Google

number is 81400. Will all our readers who are interested in Leyland vehicles either as users or prospective users make a careful note of the change.

**Yorkshire C.M.U.A. New Offices.**—The North-eastern Division of the C.M.U.A. has moved its offices from Dewsbury to Wellington Chambers, City Square, Leeds.

**A Smart Removal Turnout.**—We illustrate one of the vehicles in the fleet owned by Mr. Richard Thorpe, the well-known removal and haulage contractor, of North Road, Ripon, Yorks.

A REMOVAL OUTFIT OWNED BY MR. RICHARD THORPE, OF RIPON.



"MARSHALL" PRODUCTS ON THE MOVE.

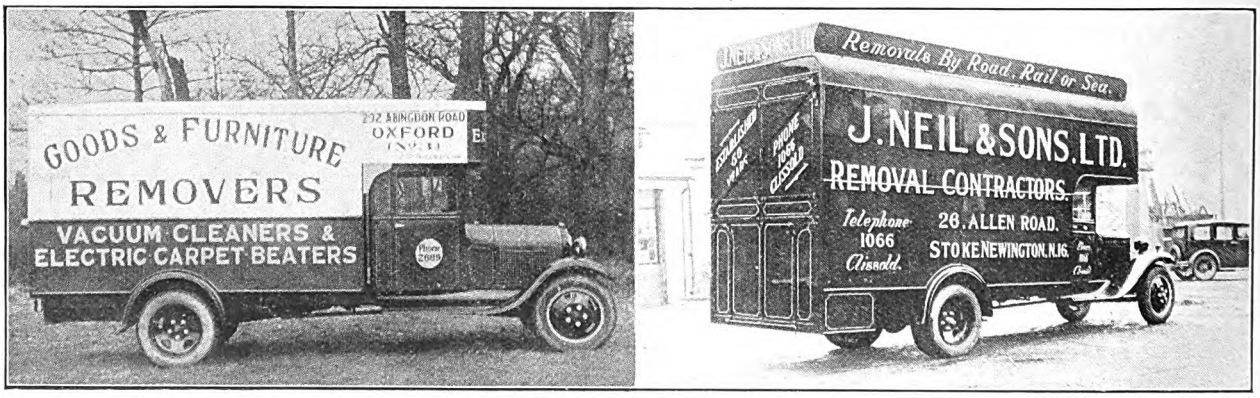
loads, and full details of any particular body to suit operators own requirements will be gladly sent by the firm on request.

**A Trainload of "Marshall" Products.**—The photograph here reproduced shows an interesting trainload of power plant and machinery dispatched from the works of Marshall, Sons & Co., Ltd., Engineers, Gainsborough, Lincolnshire, last month. The delivery included two oil-power road rollers and several boilers of various types destined for India; and fifteen portable steam engines for a continental government contract. These engines belong to the world-famed "Marshall" Class "S" series.

**Trusty "Commers."**—Messrs. Watts & Nephew, Ltd., have an M.C. type Commer which is now in its 13th year. We understand that so reliable has this wagon proved, that they have decided to retain it for further service by having it reconditioned. The Electricity Department of the Bath Corporation has ordered a Commer "G2" (40-50 cwt.) chassis mechanical 3-way tipping body.

**London Transport Bill. Suburban Line Traffic to be Pooled.**—A settlement has been reached by the Minister of Transport with the four main line railway companies, in addition to the agreement with the Underground Group. The settlement with the main line railway companies provides for the "pooling" of their passenger receipts in the London area with those of the undertakings to be controlled by the Board which the Bill sets up.

**Nottingham Chamber of Commerce—Transport Department.**—In order to cope with the increasing traffic on the regular services, the Transport Department of the Nottingham Chamber of Commerce has now opened its own depot or transit shed under the direct control of the department. The depot is situate in Sherwin Road, Castle Boulevard, and consists of a commodious building where the necessary transhipment and the loading of lorries can be carried out completely under cover. The depot has been fitted up with spacious loading docks and the necessary office accommodation, and is being run by the department's own staff. Full particulars of services can be obtained on application to the Transport Manager, Mr. W. Donaldson Wright, at the offices of the Chamber, Smithy Row, Nottingham. Co-incident with the opening of this depot, arrangements have been made for the lorries running from Nottingham to have the use of a large garage in the Tooley Street area of London. This will enable members of the Chamber, particularly those in the provision trade who utilise the services from London, to send in their orders to this depot, when they will be collected for despatch to Nottingham with all speed. The address is:—Messrs. A. J. Gupwell, Ltd., Barnham Street, Tooley Street, London, S.E.1. This depot will deal with any number of consignments of 5 cwt. and upwards, but for smaller quantities instructions for collection should



ATTRACTIVE BODYWORK BY J. H. JENNINGS & SON, LTD., OF SANDBACH, CHESHIRE.

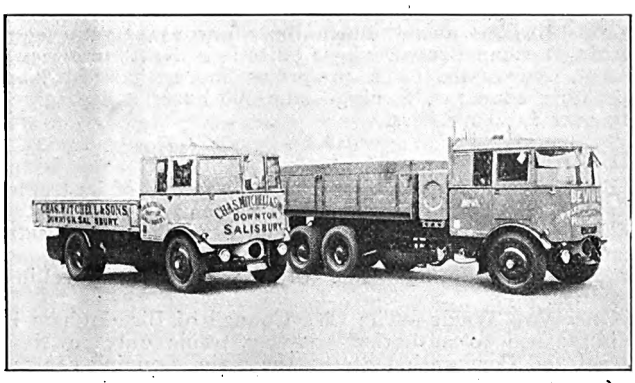
**Jennings Bodywork for Furniture Removers.**—Of interest to our readers will be the photographs which we reproduce of two removal vehicles the bodywork of which is by J. H. Jennings & Son, Ltd., Crewe Road, Sandbach, Cheshire. This firm was established over 150 years ago and can undertake the building of any type of commercial vehicle body.

**Gilford Commercial Vehicles.**—The Gilford Motor Company, Ltd., 465 and 471a, Holloway Road, London, N.7, have issued recently an attractive coloured folder depicting popular types of Gilford commercial vehicles. Amongst the vehicles shown are a 2½-3 ton petrol wagon, a milk float, an open truck for 2½-3 ton loads, a 4 ton furniture van and a biscuit van. The Gilford range of chassis cover all classes of transport from 50 cwt. to 4 ton

Digitized by Google

be given to:—Messrs. Carter, Paterson & Co., Ltd., 128, Goswell Road, London, E.C.1.

**Fodens at the Royal Counties Show, Portsmouth.**—At the Royal Counties Show, held at Portsmouth in the early part of this month, the exhibits staged by Fodens, Limited, Elworth Works, Sandbach, included a "Speed-Six" 6-ton pneumatic-tyred steam wagon with standard body (to the order of Messrs. Chas. Mitchell & Sons, Contractors, Downton, Salisbury); a "Speed-Six" 6-ton pneumatic-tyred steam wagon, with three-way tipping body (to the



FODENS AT THE ROYAL COUNTIES SHOW, PORTSMOUTH.

order of Messrs. Murrell's Wharf, Ltd., London); a "Speed-Twelve" 10/12-ton pneumatic-tyred six wheel steam wagon, with three-way tipping body (to the order of Messrs. Frank Bevis, Ltd., Public Works Contractors, Portsmouth); an Overtype Standard Tractor, fitted with winding-gear, suitable for hauling 10/12 ton loads. Our photograph shows two of the pneumatic-tyred steam wagons.

**A Correction.**—In our report of the discussion following the reading of the paper on Warehousing and Transport by Mr. Harry Gaunt, printed in our May issue, we indicated that Mr. Lorimer was connected with Jarvis Robinson Transport, Ltd., of Liverpool. We regret we had overlooked the fact that Mr. Lorimer's association with this Company ceased towards the end of 1928. Our report should have read: "Mr. Lorimer (Collister & Co., Ltd., Tower Building, Liverpool) remarked . . . . ." etc.

**Thornycroft Vans for Glasgow Police.**—Our illustration

"THORNYCROFTS" FOR GLASGOW POLICE.

shows a fleet of six Thornycroft vans in the service of the Glasgow Corporation police. They first began to operate Thornycroft vehicles in 1914 and the vans shown in the photograph were delivered by John I. Thornycroft & Co., Ltd., in 1928. It is understood they have been running very consistently in the meantime and have given altogether satisfactory service. The bodies are of a different type than the earlier vehicles, and the new design was the result of experience gained during the General Strike of 1926. The interior is divided into three compartments, one for female, one for male prisoners, and a third for their police escort.

**Municipal Tramways and Transport Association.**—The following gentlemen have been elected Associate Members of the Municipal Tramways and Transport Association:—Mr. Adam Armstrong, Traffic Superintendent, Pontypridd Council Transport Department; Mr. F. G. Cockayne, Traffic Superintendent, St. Helens Corporation Transport Department; Mr. Thos. Kinghorn, Traffic Superintendent, Edinburgh Corporation Transport Department; Mr. Henry W. Sykes, Traffic Superintendent, Northampton Corporation Transport Department; and Mr. Frank Lythgoe, General Manager, Rawtenstall Corporation Transport.

**Leading the World.**—Sir Felix Pole, Chairman of Associated Electrical Industries, Ltd., and formerly General Manager of the Great Western Railway, speaking at the annual luncheon of the International Association for the Promotion and Protection of Trade in London, referred to the Weir report on the electrification of main line railways, and said that if the recommendations contained in that report are adopted promptly we shall once again lead the world in railway development and efficiency, while at the same time assisting the project for complete electrification of industry and agriculture.

**Staff Social.**—About 120 members of the staffs of the associated companies of the Bradford Storage and Transport Co., Ltd. (Bradford), and Ryburn Garage and Transport Co., Ltd. (Sowerby Bridge), Robert Edwards and Co., Ltd. (Halifax), Hudson and Greenwood, Ltd. (Eccleshill), and Lancia Luxury Tours, held a happy social gathering at Bradford recently. Mr. Hartley Turner (Managing Director) said that with the rapid growth of the concern the directors felt it necessary that the members of the various staffs should know each other better socially as with the fostering of good fellowship he knew that good would be derived from a business point of view. Among those present were Mr. E. B. Hutchinson (Chairman of Directors), Mr. S. M. Sykes (Director), Mr. A. Vine (Secretary), Mr. W. Wright (Accountant), Messrs. C. Downham and F. Bywater (Bradford Storage), H. Hudson and H. Dutton (Ryburn), Greenwood, senior, and junior (Hudson and Greenwood), and M. Crowe (Lancia Luxury Tours).

**Plucky Driver Rewarded.**—The C.M.U.A. Award of Merit medal, which was instituted by the Commercial Motor Users' Association in 1911 for acts of distinction in connection with the use of commercial motor vehicles has just been awarded to Hector Rule, a motor driver in the employ of a haulage contractor in London, for his plucky conduct on the 8th April last in connection with a blazing petrol lorry at a timber yard. Rule was in charge of a petrol lorry in the yard when the fire broke out. The sides of the cabin of the lorry caught alight and his mate, who was on the top of the lorry, jumped off, spraining one of his ankles. Realising the danger of an explosion, as the lorry was near a house, Rule jumped into the cabin and drove the vehicle out of the yard. Firemen then subdued the flames. Rule's hands were badly burned, and he had to receive medical attention. But for his conduct, considerable damage to property and probably loss of life or injury to persons would undoubtedly have been the result.

## MERSEYSIDE.

**Liverpool May Parade.**—Liverpool's famous May Horse Parade took place on Saturday, May 30th. The classes for heavy horses and trade turnouts usually held on the morning of the Pageant, will this year be judged on Saturday, August 1st, the third day of the Royal Lancashire Agricultural Society's show at Liverpool. The holding of the Royal Lancashire Agricultural Society Show in Liverpool necessitated some alteration in the usual programme, but, in view of the fact that the May Parade of Horses has been an established annual function since the year 1866, it was felt desirable to continue with the parade and judge the Decorated Horses on similar lines to previous years. The classes for Heavy and Light Horses, Mounted Police and Cleanest and Best Appointed Horses and Gears are being incorporated in the Royal Lancashire Show. The prizes for the decorated horses were similar to those provided in other years, and the judging was carried out by the Lady Mayoress, who was assisted by a panel of lady judges.

**Hauliers' Comments on Weight Restriction.**—Liverpool commercial motor users have welcomed the news that new regulations are to be shortly issued by the Ministry permitting existing four-wheeled steam wagons up to 14 tons in weight, provided the maximum speed with or without trailer does not exceed twelve miles per hour. Different conditions will apply to steam wagons registered after 1st January next. This is a matter which in the last few months has been a source of worry to haulage firms. Owing to the peculiar traffic conditions of the port, the opinion is strongly held in some quarters that an exemption from the restrictions of gross weight should be given to vehicles working in the Liverpool dock area. Ten and twelve ton loads for horse hauled lorries are common enough. The views expressed by Mr. Harry Gaunt in the paper read before the Institute of Transport, and

Digitized by Google

referred to in our last issue, are shared by many. What lorry owners do not like is the curtailment of lorry speeds to 12 m.p.h. when heavy loads are being transported.

**Purchases Sanctioned.**—Liverpool Corporation Health Committee has accepted the following tenders for new motor vehicles:—Messrs. Karrier Motors, Limited, Huddersfield, two motor sweeping machines at the price of £1,041 each; Messrs. W. H. Knibbs and Son, Ltd., Manchester, two motor vans at the price of £260 each; Messrs. T. Coleborn and Sons, Ltd., Liverpool, two bedding vans, £244 10s. each; Messrs. Hill Brothers, Southport, two 30-cwt. motor lorries, £209 12s. each.

## MANCHESTER.

**Haulage Tender Accepted.** — Manchester Paving, etc., Committee has accepted the tender of Mr. T. Lamb, of Manchester, for haulage.

**Six Manchester-London Services.**—There are now six day, night or day-night motor coach services between Manchester and London, the return fare being 25s. in each case. The operators are:—Aniways, St. Peter's Square; Finglands, St. Peter's Square; Majestic, Oxford Road; Manchester Motorways, Piccadilly; Roscoes Services, 17, Oxford Road; Yelloway, St. Peter's Square.

**How to Relieve Traffic Congestion.** — The need for motor bus stations in Manchester was commented upon by the Traffic Commissioner for the North-West area at a recent sitting. He said it would relieve traffic congestion if bus stations were instituted at points north, south, east and west of the city area within reasonable distance of the city itself.

**Orders from South America.**—Mr. Maurice Edwards, of Messrs. Bromilow and Edwards, hydraulic and tipping gear manufacturers, Bolton, has just returned from South America after visiting the Buenos Aires Exhibition. The firm has obtained some valuable business. The number of men working overtime has been increased until now there are 150.

**Prizewinners in Bolton Parade.**—In the Bolton May horse and motor parade, which is a very popular local annual event, prizes were won by:—Horses, 1. James Brown; 2. Herbert Gilston; 3. W. Atkinson; 4. J. Owen; 5. J. Brindle; 6. J. Vivian; 7. D. Tattler. Judges: Messrs. Turner, Moyers, R. Critchley and W. Critchley. Motors, 1. H. Whiteside; 2. W. G. Maxfield; 3. J. E. Crompton. Judges: Messrs. Widdop and Wilcock (Rochdale).

## HULL.

**Proposed Humber Bridge.**—The fight on the Humber Bridge Bill before the Committee of the House of Commons is proving even more lengthy and costly than was first anticipated. At the time of writing it has occupied twenty-three days, and as the many petitioners against it appear to have only just started to put their respective cases it is expected to occupy twelve or fifteen days more. As the Committee sits for only four days a week, and there was a long adjournment over the Whitsuntide holidays, anxiety is being expressed by the promoters that, assuming they get the Bill through the Commons Committee, and later through the House of Lords Committee, there will not be time for it to pass all its stages into law this session. Some of the smaller petitioners have been settled with, but the Humber Conservancy Board, the London and North Eastern Railway Company, who own the docks at Hull, the Aire and Calder Navigation, who are responsible for the dock interests at Goole, and other bodies concerned with the estuary and its navigation, are so convinced of the potential dangers of the proposed bridge that they will fight to the very end.

## NORTH-EAST COAST.

**Bus Tickets Interavailable.**—Motor bus passengers on routes in the North-Eastern area will in future be entitled to use their return tickets on any bus on the same route. This is the effect of an important ruling given by the Traffic Commissioners for the Northern Area at their meeting in Newcastle on June 4th. Having regard to the fact that a very valuable concession is made in the grant of a road service licence, said Mr. H. Riches, the chairman, the Commissioners feel that there should be no insurmountable difficulty in giving effect to this condition.

**Automatic Booking Office.**—What is the first completely mechanized booking office in England, that at Newcastle Central Station, was opened formally on June 2nd. There are open glass fronts, and intending travellers can see the entire operation. The system used is the A.E.G. ticket printer, and two types are in operation. The first is the multi-ticket printer, where the names of the stations are on a cylinder, which is rotated by the clerk to the desired position and the ticket asked for is printed and dated. This one deals at the moment with 1,000 stations but is capable of issuing tickets for 2,500 stations. Also in use are the rapid printers, similar to but larger than those used on the Underground Railways in London; and others which, when 1/- is placed in a slot, deliver the required ticket.

**South Shields as Air Port.**—The Parliamentary Committee of South Shields Council has been considering the development of an air port at the entrance to the Tyne, and the establishment of a marine aerodrome has many supporters.

**Big Bus Association.**—The Big Bus Association known as the Northern Transport Motor Bus Owners' Association is forging ahead under the vigorous secretaryship of Mr. Norman Brown, whose office is in Northumberland Street, Newcastle. It comprises more than 70 bus-operating concerns, owning some 600 buses and employing over 1,650 workers.

## MIDLANDS.

**Birmingham Trams.**—Birmingham is proud of its trams, which is one of the most efficient systems in the country and one of the cheapest, the same time showing a substantial profit. Corporation omnibuses also show a good profit while offering some of the cheapest travelling facilities.

**One Way Traffic.**—The City Council of Birmingham is being asked to authorise one-way traffic only in New Street and Corporation Street, the main shopping centres of the city. Traders were surprised by the suggestion and will undoubtedly oppose it as they feel that it will result in a heavy loss of trade. The whole of the centre of the city will be affected from Snow Hill Station to New Street Station.

**The Traffic Regulations.**—In many ways coach and bus proprietors are finding difficulty under some of the new regulations. Some of the smaller proprietors say they will give up rather than have the trouble and expense of fighting for licences.

**But Station at Shrewsbury.** — Shrewsbury intends settling its traffic problems in a practical way. Connected with the scheme for the construction of an inner loop road is the construction of a central bus station and car park. The scheme, which is now being proceeded with, will involve £54,350 in the purchase of property alone.

## NORTHERN IRELAND.

**Belfast Tramways.**—No manager had, up to the time of writing, been appointed for the Belfast Corporation Tramways, in succession to Mr. William Chamberlain.

**After Half a Century of Railway Service.**—After a half century of railway service Mr. Henry Hunt, secretary and general manager of the Londonderry and Lough Swilly Railway, has resigned. He was appointed to that position about fifteen years ago, after 35 years in the service of the Great Central Railway, England. Mr. Hunt is succeeded by Mr. James Whyte, the chief accountant, who is a native of Co. Donegal, and has been with the company for 20 years.

**A Licence Question.**—When a motorist was summoned at Belfast for failing to produce his licence, he contended that while he would show his licence to a policeman, there was no obligation on him to hand it over, and he was only obliged to hand it over to the court. The magistrate said it was clear it was the motorist's duty to hand over the licence, and he hoped it was not true that motoring associations had advised drivers not to hand their licences to the police.

## IRISH FREE STATE.

**The Transport Problem in the Irish Free State.**—In Dail Eireann, Mr. P. McGilligan, Minister for Industry and Commerce, in moving for a vote of £70,590 to complete the sum necessary for his Department, made a reference to the Free State transport services and the preservation of the existing railway systems. He explained that he was leaving the subject of the transport services over until three Bills in connection with it, which were now being considered, were introduced in the Dail. These Bills would certainly be introduced before the House rose for the summer recess. He made no secret of the fact in connection with his side of transport that the legislation he had made aimed at the betterment and preservation of the existing railway systems. He felt bound to pay special attention to railway requirements. During the end of last year, and early this year, however, after consultation with railway directors, to whom he put certain questions, and had recently received replies, he found it necessary to embark on another line, having the very definite view that the railways of the country must be preserved.

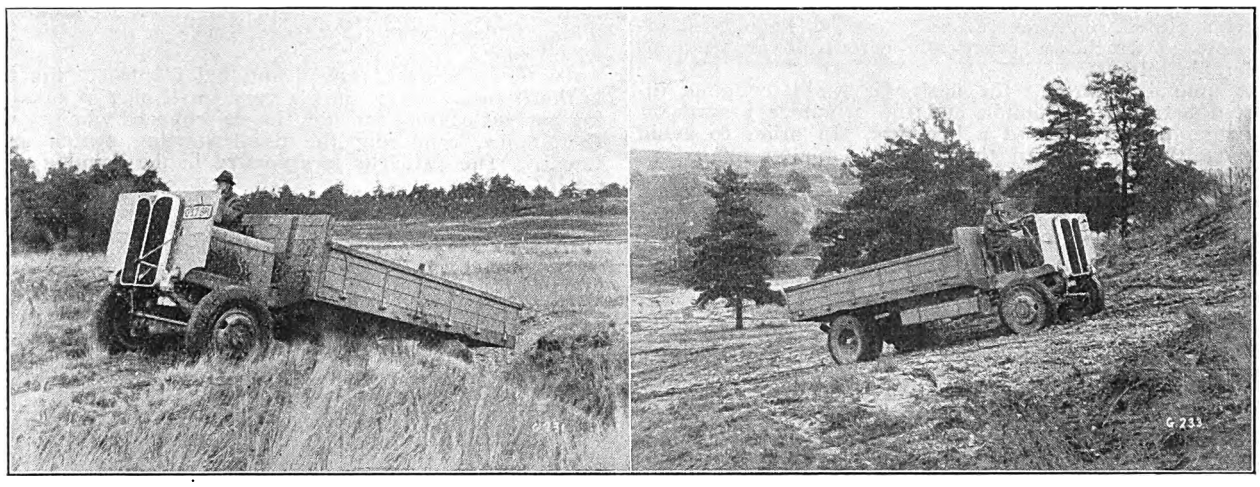
# The "Hardy" 4 and 6 Wheel Drive Vehicles.

VEHICLES on which all wheels are driving wheels are essential for transport under abnormal earth surface conditions and the type is very advantageous for many purposes even under normal road conditions. The first four-wheel-drive vehicle was introduced into this country from America either immediately prior to or during the War. Since then the design has greatly improved not only in engine efficiency and transmission but also in the development of frame suspension permitting the wheels of the vehicle to accommodate themselves to exaggerated surface conditions with minimum movement of the platform from the horizontal. Without this highly developed frame suspension, even the four-wheel-drive vehicle would be heavily handicapped on rough ground.

It took some little time for the four-wheel-drive vehicle to become appreciated. Additional mechanism of any kind is usually looked upon by disfavour by the user and, indeed, by the average engineer, as it adds complication and absorbs additional engine power. Practice has demonstrated, however, that though additional power is absorbed in the transmission mechanism of the four-wheel-drive chassis, it is more than compensated for by the additional road grip or wheel adhesion.



THE HARDY FOUR WHEEL DRIVE CHASSIS MODEL 4/4 DEMONSTRATING ON ROUGH GROUND.

The Four-Wheel-Drive Motor Co., now Hardy Motors, Ltd., 12, Whitehall, London, S.W.1, were first to introduce this type of vehicle into this country and has developed it to an advanced degree towards perfection, and is not only producing four-wheel-drive vehicles but six-wheel-drive also.

Hardy Motors are associated with the Associated Equipment Co., Ltd., of Southall, and in consequence the majority of the units used in the construction of the Hardy vehicles are interchangeable with those of the A.E.C.

The engines used in the Hardy vehicles are the four and six cylindered A.E.C. engines which are of extremely robust construction and comparatively light in weight. They provide easy accessibility to all parts. The camshaft is mounted in the easily detachable cylinder head and runs in an oil trough so that lubrication to all valve mechanism is secured. The six cylinder engines have seven crankshaft bearings and the four cylinder, five. The six cylinder engines with a bore of 110 mm. and a stroke of 130 mm., develop 56 b.h.p. at 1,000 r.p.m. and 110 b.h.p. at 2,500 r.p.m. The four cylinder models, with 112 mm. bore and 130 mm stroke, develop 38 b.h.p. at 1,000 r.p.m. and 65 b.h.p. at 2,000 r.p.m.

The latest chassis placed on the market by Hardy Motors are the models 4/3 and 4/4, the carrying capacity of model 4/3 being 3½ tons, with driver behind the engine, and that of model 4/4, 4 tons, with driver beside the engine.

The power is transmitted from the engine to a single plate clutch. The main gear box is of unit construction with the engine, giving four forward speeds and one reverse. An auxiliary gear box is mounted behind the main gear box and increases the total number of speeds to eight forward and two reverse. Incorporated in the auxiliary box is the drive of the front axle which is automatically disconnected when the four high speeds are engaged and comes into operation only when the four low speeds are in use.

The gear ratios are as follows:—Top 1 to 1, 3rd. 1.59 to 1, 2nd. 2.69 to 1, 1st. 4.37 to 1; reverse 5.33 to 1. Low range: Top 1.86 to 1, 3rd. 2.96 to 1, 2nd. 5 to 1, 1st. 8.14 to 1; reverse 9.91 to 1.

The front axle is of the full floating worm type. The rear axle is a semi-floating worm type and the standard ratio for both axles is 7¼ to 1, with alternative ratios 8¼ to 1 or 9⅓ to 1.

Independent hand and foot brakes operate on the rear axle, the foot brake being servo assisted. The steering is the Marles type. Provision is made for steering the front wheels by universally jointed shafts passing through hollow stub axles with joints central with the steering pivots.

The wheels are of the standard disc type fitted with 34 by 7 in. pneumatics on model 4/3 and 38 in. by 7 in. on model 4/4, singles front and twins rear. Oil gun lubrication is fitted throughout and centralised in two batteries on a side member of the frame. A power take-off can be fitted on the auxiliary gear box and operated through any gear ratio in the main gear box. In addition, a smaller power take-off running at approximately half engine speed may be mounted on the side of the main gear box.

Lighting is by C.A.V. 12-volt battery with dynamo direct driven from the engine. The equipment includes combined head and side lamps, tail lamp, switchboard and battery.

The chassis dimensions are:—Track front 5 ft. 10 ins., rear 5 ft. 7 in., overall width 7 ft., body space 14 ft., wheelbase, model 4/3, 14 ft., model 4/4, 12 ft. lin., overall length, 4/3, 21 ft. 2 ins., 4/4, 19 ft. 2½ in.

---

**Increase in Weight of Steam Wagons.**—The Commercial Motor Users' Association has been informed by the Ministry of Transport that new Regulations are shortly to be issued providing that the total weight of an existing 4-wheeled steam wagon is to be increased from 12 tons to 14 tons provided that its maximum speed, with or without a trailer, does not exceed 12 miles per hour, and that in the case of a steam wagon registered after the 1st January, 1932, the total laden weight will be increased from 12 tons to 13 tons provided that it is fitted with pneumatic tyres on all wheels.

**Road Traffic Signs.**—The Minister of Transport, Mr. Herbert Morrison, has decided to set up a Departmental Committee to consider the whole question of road traffic signs. Under the Road Traffic Act highway authorities are allowed to erect traffic signs subject to the general direction of the Minister, but it is felt that before taking any comprehensive action under this section of the Act the whole question should be examined by a committee on which the highway authorities will be represented. Upon their recommendations will largely depend the measures to be taken for carrying into effect any changes that may be found necessary.

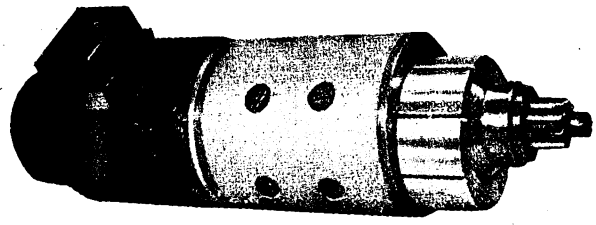
# The Improved Scintilla Starter.

THE high efficiency of the Scintilla magneto is well-known and so much appreciated by the motoring public that the firm now places on the market, with confidence, the improved Scintilla starter, which they claim, that troubles now being experienced with various starting systems, are eliminated.

In designing this machine, Scintilla, Ltd., 14, Clerkenwell Close, E.C.1, claim that they have overcome the continuous troubles which occur with the usual type of



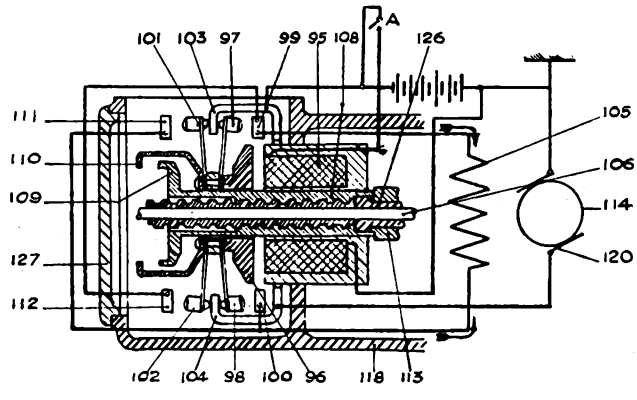
THE IMPROVED SCINTILLA STARTER.

starter pinions and several new features have been incorporated which are practically certain to arouse considerable interest.

A unique feature of the design is a slip coupling inserted between the pinion and the armature to prevent damage in the event of a back-fire. In order to avoid damage being done to the engaging pinion or to the toothed ring of the flywheel, the starter is provided with an automatic reversing switch, which alters the direction of the current in the event of the pinion not engaging. The rotation of the starter is altered by this reversion movement, ensuring a never-failing engagement and minimum wear of the toothed ring of the flywheel.

The following is a detail of the operation:—

By operating switch -A- current is admitted to -95 of the relay. The contact plate -96- with the contact brushes -97- and -98- is attracted to the segments -99- and 100-. A second set of brushes -101- and -102- remains on the contact bars -103- and -104-, one of which -103- is connected to one pole of the battery, and the other one -104- to the



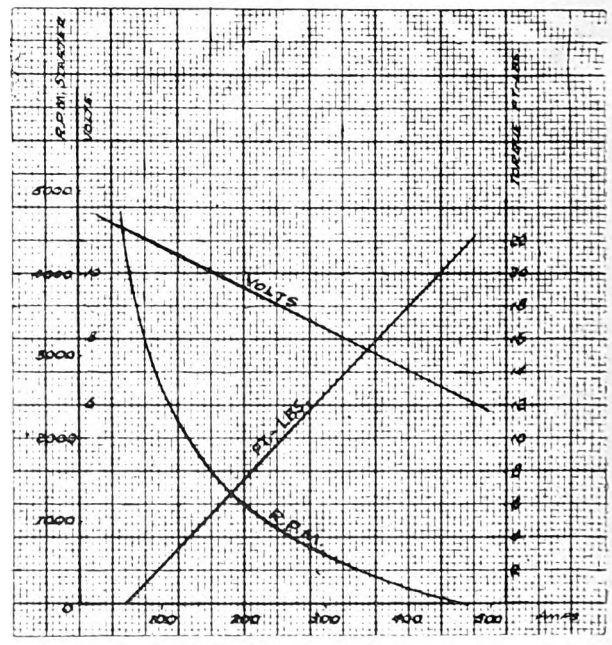
SECTION OF STARTER EXPLAINED IN TEXT.

other pole of the battery via the armature of the starter. A current flows from the contact bar -103- over the contact brushes -101- and -97- to the segment -99-, which itself is connected to the field coils -105-. The connection of the latter with the segment -100- and the contact brushes -98- and -102- transmits a current from the contact bar -104- through the armature back to the battery, thus completing the circuit. The starter is now under current and commences to rotate. Due to inertia, the spindle -106-, to which the pinion is fitted, screws itself out until the pinion engages with the toothed ring of the flywheel and turns the engine until the latter starts.

Should the pinion fail to engage with the toothed ring of the flywheel, the pinion ceases to rotate. The sleeve -108- commences to move backwards, and the flange -109- which comes to rest against plate -110-, pulls the reversing contact plate past the normal position on to the segments -111- and -112-. The current to the field coils passes across the contact bar -103- and contact brushes -97- and -101- on to the segment -111- through the field coils and segment -99- to segment -112- across contact brushes -102- and -98- back to segment -104-. The polarity in the field coils is reversed, and the starter turns in the opposite direction. The sleeve again moves forward to its original position and thus releases the reversing switch. The contact plate is again attracted by the relay coil -95- and the operation recommences, but the pinion is, of course, moved to a different position. This backward and forward movement of the sleeve repeats itself until the pinion finds its way to the next space in the toothed flywheel ring.

Another important unconventional feature of the relay is that it necessitates only a very small part of the starting current passing through the switchboard when starting the engine, rendering the usual starting switch superfluous. The switch is incorporated in the Scintilla starter itself.

This relay also controls an automatic brake which



PERFORMANCE CURVES OF 2HP-9-12V STARTER.

operates immediately the relay current is cut off. The brake has the effect of instantly stopping the rotation of the starter pinion, enabling another start to be made from rest, this mitigating the risk of damaging the gearing.

## Hull Traffic Association.

AT the annual meeting of members of the Hull Traffic Association, excellent reports of the year's work were submitted. Mr. Edward Dumoulin, J.P., presided. As an Association, said Mr. Dumoulin, they existed for the purpose of improving mutually the work and information of traffic managers. The profession needed to be kept up-to-date, and with that object in view they needed the opinions, not only of their own members, but the traffic managers throughout the country. The officers elected were as follows: President, Mr. Edward Dumoulin; vice-president, Mr. J. A. Lacey; chairman, Mr. W. H. Rowley; vice-chairman, Mr. C. E. Douthwaite; hon. secretary, Mr. Percy Smith: and hon. treasurer, Mr. S. Hattan.

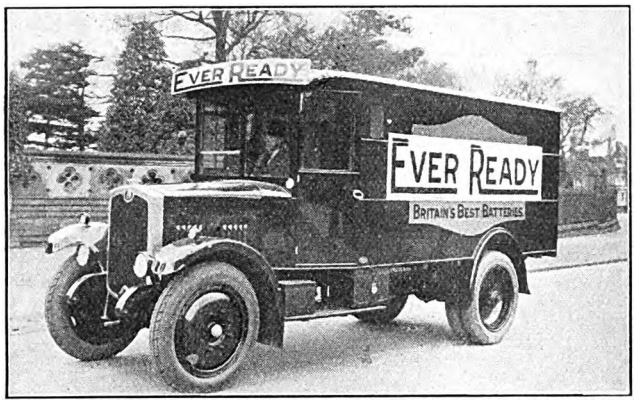
# Motor Notes.

**Fordson Tractors.**—The Ford Motor Co., Ltd., 88, Regent Street, W.1, have sent us a new booklet giving full particulars with illustrations of the new Fordson agricultural tractor. The booklet explains how production costs may be reduced to a minimum and how farming operations may be performed with great rapidity by using the tractor. The price of the tractor is £156.

**Ever Ready Company's Guy.**—The photograph shows a Guy 40/50 cwt. van recently supplied to the Ever Ready Co., this being the fourth repeat order Guys have received from this firm. Guy Motors, of Wolverhampton, inform us that this chassis, whilst being completely equipped and fully up to the Guy standard, is the lowest priced vehicle of this capacity on the market to-day.



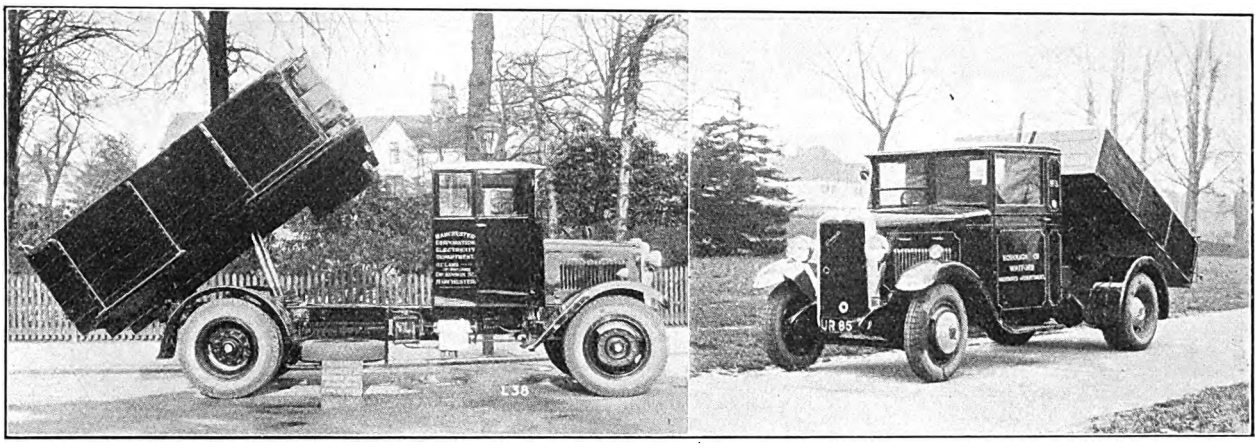
THE GUY VAN REFERRED TO IN TEXT.

**Commer Activities.**—The better to serve Commer users and owners in and around London districts, a new London repair and service station has now been opened at 66, Buttesland Street, Hoxton, N.1, where ample stocks of spare parts for present type and early Commer vehicles will be maintained. Specially skilled mechanics and other Commer experts are always in attendance and the repair and service facilities are such that a complete overhaul can be executed with no greater difficulty than the merest mechanical adjustment. Amongst recent Commer sales we illustrate two vehicles, one being the type G.5 supplied to the Manchester Corporation, and a type G.2 supplied to the Watford Town Council, both vehicles being fitted with tipping gear. The Cement Marketing Company have placed an order with the firm for two vehicles, one being a type G.6 and the other type G.2. Messrs. Robert Aitken & Co., Chemists, of Dunbar, have also taken delivery of a type G.2. The Middleton (Lancashire) Town Council have taken delivery of a type G.2 and the Borough of Gateshead a type G.3. Other recent deliveries include a type G.2 to the Builders Supply Co., Ltd., of Kendal and a G.3 type to the Kent County Council. A G.2 type was supplied to the Vacuum Oil Co., Ltd.

**The Morris Removal Van.**—The removal body shown in the accompanying photograph is mounted on a 50 cwt. Morris Commercial chassis. The vehicle was built for the Berkeley Upholstery, Ltd., 85, New Street, Birmingham, the well-known upholstery manufacturers, to use in transporting easy chairs between Birmingham and London. It will carry a load of 40 easy chairs. This type of vehicle is particularly suitable for carrying furniture and bulky loads. The vehicle was supplied through The Colmore Depot, the Birmingham dealers.

A 50-CWT. MORRIS-COMMERCIAL BULK LOAD CARRIER.

**The "Caswell" Giant Pneumatic.**—The Trowbridge Tyre and Rubber Co. (1929), Ltd., of 54, Victoria Street, Westminster, S.W.1, inform us that they have recently introduced a new line in giant pneumatic tyres known as the "Caswell" Super Service Blue Riband Giant pneumatic Tyre. It is manufactured in all high pressure sizes and in balloon sizes 38 in. by 8.25 in. and 38 in. by 9 in. It is of heavy duty construction and has more plies of cord, a greater tread width and a deeper tread than the firm's standard product. The retail price is competitive with that of tyres of similar design and in addition a comprehensive guarantee of six months service from the date of fitting is given with every tyre supplied.



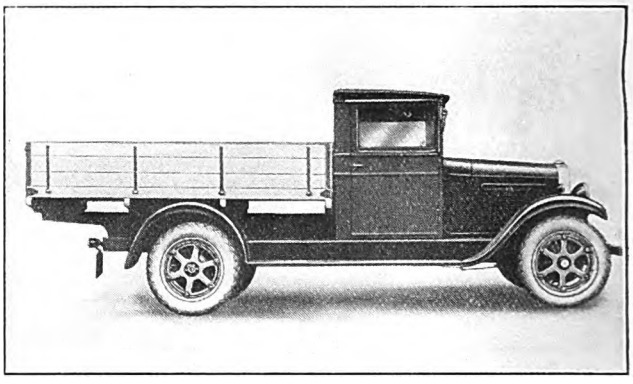
LEFT: A COMMER TYPE G.5 SUPPLIED TO THE MANCHESTER CORPORATION, AND RIGHT: A COMMER TYPE G.2 SUPPLIED TO THE WATFORD TOWN COUNCIL.

**"Sentinels" on Pneumatics.**—To-day when speed is everything, to permit of the "Sentinel" D.G. Waggons being driven legally at twenty miles an hour, the "Sentinel" Waggon Works, Limited, Shrewsbury, are now prepared to supply either of these models—four or six-wheeled—fitted with pneumatic tyres. A point to be remembered in connection with vehicles of over 5 tons unladen weight fitted with pneumatics is that the licence

Digitized by Google

duty is reduced by 20 per cent., in itself a considerable economy. The D.G.4. which is shown in our illustration is one of a number which have recently been ordered and is fitted with single 40 in. by 9 in. high pressure tyres on the front wheels and twins of the same size on the rear. The back axle is slightly arched so that the outer of the twin tyres carries its fair proportion of load when running on cambered roads, thus counteracting overloading of the inner tyres with a consequent increase in durability. The rear wheels run on anti-friction roller bearings and in each of the brake drums there are four brake shoes, one pair in each drum being operated by hand lever from the driver's cab, while the other pair is applied by a steam brake cylinder controlled by a pedal. Very ample braking surface is provided and the rapid radiation of heat

A SENTINEL D.G.4. PNEUMATIC TYRED LORRY.

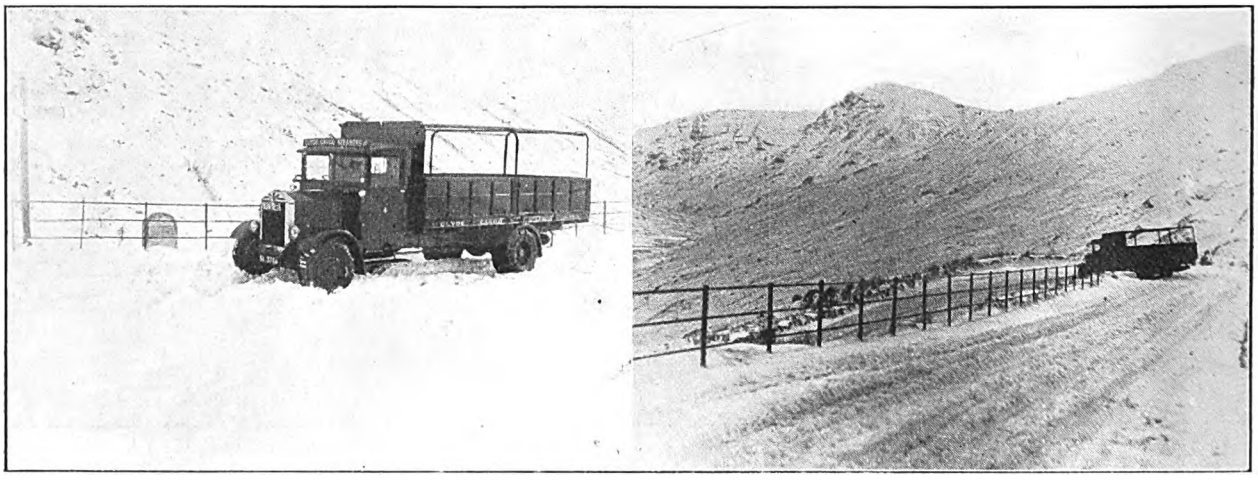


THE NEW WILLYS SIX-30 WITH 6-CYLINDER ENGINE.

generated by the application of the brakes is achieved by fins cast on the outside of the brake drums themselves. A small air compressor, driven by gears from the engine crankshaft and mounted on the crankcase, alongside the dynamo, supplies air under pressure for inflating the tyres. The mechanism of the compressor is of course normally out of gear when the vehicle is in motion but by the simple rotation of a knob on its casing, it can be brought into action when required. When it is being used the engine of the waggon is thrown out of gear with the driving mechanism of the vehicle and runs in neutral. This vehicle drawing a "Sentinel" pneumatic tyred trailer forms an extremely economical outfit and the legal speed at which it can travel is 16 miles an hour, or double that allowed for a solid tyred waggon and trailer.

**A New Willys Chassis for Rapid Transport.**—The latest Willys Commercial chassis has been designed for speed and power, the engine giving its greatest economy at modern cruising speeds. It need not be driven slowly to reduce fuel and oil consumption. Features of the specification are: (1) A 6-cylinder side valve engine of 25.35 h.p. treasury rating, developing 65 b.h.p. with a torque of 135 ft. lbs. at 1,200 r.p.m. (2) A side control 4-speed gear box, with power take-off flange on the right side of the housing. Gear ratios are: top 6.375 to one; third 10.77 to one; 2nd 19.7 to one; first 40.8 to one; reverse 49.85 to one. The rear axle is of the full floating banjo type. (3) Internal expanding self-energising 4 wheel brakes. The front drums are 12 inches, rear drums 16 inches in diameter. The hand brake operates in the rear drums only. (4) Detachable steel spoke wheels carry 6.00 by 20 in. reinforced heavy service truck tyres on the front wheels, and 32 by 6 in. truck tyres on the rear wheels. 6.00 by 20 in. dual tyres at rear can be supplied for an extra charge of £10 (£12 10s. in Irish Free State). (5) Three body styles are available, flat lorry, end tipper and van. The lorry design incorporates two new features. (a) The platform is armoured with flat steel strips, and has no chock rails, giving a clear lift off for heavy classes of goods. (b) The hinged side and tailboards are fastened by pivoting bolts with threaded wing nuts. Chassis price £198 (£215 in Irish Free State).

**Albion Orders.**—The Albion Motor Car Co., Ltd., Scotstoun, Glasgow, announce that Clyde Cargo Steamers, Ltd., who, in addition to their steamer undertakings operate a road transport service between Glasgow and the West Highlands, and have had for some time two 3-ton Albions on regular service. The journey over the notorious "Rest and be Thankful" hill is taken daily and the machines have never had any trouble negotiating this hill. A repeat order was recently received for two 35/55 h.p. 4-ton Albions and these went through their acceptance test on the 12th February. "Rest and be Thankful" was in the worst possible condition, there being deep snow and patches of frozen surface. The two Albions, however, though fully laden, made a steady climb, the only stop being the occasion of a touring car which had got into difficulties owing to the combination of gradient and slippery surface. The surface was so bad that on the hairpin bend at the top some difficulty was experienced in getting round owing to the front wheels when locked over simply pushing the snow aside.



THE ALBIONS ON THE "REST AND BE THANKFUL."

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

— Pharo, Badshot Lea, Nr. Farnham, Surrey, dealer and haulage contractor. £33/12/0. March 25th.

Priors Transport, Ltd., 24/26, Stanworth Street, Bermondsey, London, S.E., transport company. £84/4/1. February 19th.

# New Companies.

**Streatham Transport Company, Ltd.** (256,190).—Private company. Registered May 4th. Capital £300 in £1 shares. Objects: To carry on the business of ship and barge owners, carriers of passengers and goods, shipping, forwarding and transport agents, machinery, haulage specialists, jobmasters, motor car, cab, omnibus and coach proprietors, etc. The first directors (to number not less than 2 nor more than 5) are: F. K. Inglis, A. E. Comerford (chairman), R. F. Jones.

**John Wallis & Sons, Ltd.** (8,111).—Private company. Registered in Dublin on May 5th. Capital £10,000 in £1 shares. Objects: To carry on business as general carriers, railway and forwarding agents, furniture removers, storage contractors, etc. The first directors are not named.

**Stamfordham Bus Service, Ltd.** (256,213). — Private company. Registered May 5th. Capital £500 in £1 shares. Objects: To carry on the business of omnibus proprietors formerly carried on by J. Flint, at Stamfordham, as the "Stamfordham Bus Service," and that of carriers of passengers and goods in the North of England. The first directors (to number not less than 2 nor more than 4) are: J. Flint, G. Reah. Secretary: J. Flint. Registered office: Adelaide House, Westerhope, Newcastle-upon-Tyne.

**Seth Smith Brothers, Ltd.** (256,237).—Private company. Registered May 6th. Capital £20,000 in £1 shares. Objects: To carry on the business of commission agents, furniture depositories and warehousemen as formerly carried on by K. J. Seth Smith and F. Seth Smith as "Seth Smith Brothers" at "The Pantechnicon," Motcomb Street, Belgrave Square, S.W. The directors are: K. J. Seth Smith (managing director), Lt.-Col. H. G. Seth Smith (both permanent, subject to each holding 1,000 ordinary shares). Secretary: W. H. Merritt.

**Nunnery Transport, Ltd.** (256,287).—Private company. Registered May 8th. Capital £100 in £1 shares. Objects: To carry on the business of haulage contractors, proprietors of lorries, motors, horses, drays, carts, barges, ships, aeroplanes, etc. The first directors are not named. Secretary: E. V. L. Pepper.

**Mendel's Motors, Ltd.** (256,313). — Private company. Registered May 9th. Capital £600 in £1 shares. Objects: To carry on the business of cartage transport, goods carriers, motor hirers, etc. The directors are: L. Volkovitch, P. Jacobs, I. Mendelofsky, S. Segal. Secretary: P. Jacobs.

**A. J. Toms & Co. (Blyth), Ltd.** (256,379). — Private company. Registered May 13th. Capital £500 in £1 shares. Objects: To acquire the business of warehousemen, haulage contractors, general carriers and forwarding and commission agents heretofore carried on by W. A. Blyth as "A. J. Toms & Co." at Dispatch Buildings, Strand, Swansea. The directors are: W. A. Blyth, Mrs. Edith M. Blyth.

**Hollingdean Haulage Company, Ltd.** (256,424).—Private company. Registered May 14th. Capital £750 in £1 shares. Objects: To acquire the business of a haulage contractor and builders' supply merchant carried on by O. F. St. Martin, trading as "Frank Deacon," at 45, Hollingdean Road, Brighton. The directors are: O. F. St. Martin, T. H. Elderkin, H. O. Russell. The two first named shall be permanent. Secretary: H. O. Russell. Registered office: 1, Pavilion Buildings, Brighton, Sussex.

**W. E. Dawes & Son, Ltd.** (256,437).—Private company. Registered May 14th. Capital £500 in £1 shares. Objects: To carry on the business of general agents, carriers, haulage, cartage and removal contractors, motor and mechanical engineers, motor bus, char-a-banc and taxi cab proprietors, etc. The directors are: W. E. Dawes, C. Dawes.

**W. E. Haultons, Ltd.** (256,465). — Private company. Registered May 15th. Capital £100 in £1 shares. Objects: To carry on the business of haulage and transport contractors, carriers, etc. The directors are: R. M. Lang, E. H. Growcott (chairman), Ivy E. Page. Secretary: Ivy E. Page. Registered office: Parliament Mansions, Victoria Street, S.W.1.

**J. Hobden and Sons, Ltd.** (256,481).—Private company. Registered May 16th. Capital £4,000 in £1 shares. Objects: To carry on business as haulage, cartage, threshing machine, rolling and steam sawing contractors, manufacturers of and dealers in building materials, manufacturers and owners of wagons, lorries, motors and traction engines, ironmongers, dealers in paints, methylated spirits, petrol and oil, founders, woodworkers, quarry proprietors, etc. The first directors (to number not less than 3 nor more than 6) are: J. F. H. Hobden (permanent chairman), J. Hobden, F. Hobden. Secretary: Philly Hobden. Registered office: North Common, Chailey, Sussex.

## Mortgages and Charges.

**Goodfellow Services (1930), Ltd.**—Particulars filed of debentures for sums not exceeding £2,500 at any one time, authorised March 13th, 1931, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £1,500.

**J. & W. Jay (1931), Ltd.**—Debenture dated March 13th, 1931, to secure £500 charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. J. B. Bushnell, 43, Grove Road, Finchley.

**Harry C. France (Carriers), Ltd.** — Debenture dated March 14th, 1931, to secure £615, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Mrs. M. France, 19, Dalmeny Road, New Barnet.

**William Ardley, Ltd.**—Debenture dated March 20th, 1931, to secure £2,200, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: B. G. Broome and J. H. Green, trading as "Broome and Green," 27, James Street, Covent Garden, W.C.

**Wm. Hill & Son (Carriers), Ltd.**—Memorandum of Deposit dated March 24th, 1931, charged on land with garage thereon in Harehills Lane, Potternewton, Leeds, to secure all moneys due or to become due from the company to Lloyds Bank, Limited, not exceeding £7,000.

**G. E. Dodd & Son, Ltd.**—Particulars filed of £3,000 debentures authorised March 25th, 1931, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

**C. Davies and Sons, Ltd.**—Particulars filed of £1,500 debentures authorised March 26th, 1931, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

**John Tovell, Ltd.**—Charge on properties in Colchester and Abbotts Farm, near Colchester, dated March 27th, 1931, to secure all moneys due or to become due from the company to Lloyds Bank, Ltd., not exceeding £10,000.

# Nationalisation of Transport.

IN our May issue in dealing with the London Passenger Transport Bill we stated in plain terms our view that this Bill was the first step towards the nationalisation of Transport. Events which have taken place since then have only strengthened our judgment on this question and we feel it our duty to say something more on the subject, because it is a matter in which every one of our readers is vitally concerned. Speaking at the dinner of the Municipal Tramways and Transport Association held at Southampton, as reported in this issue, Mr. Herbert Morrison, Minister of Transport, in a somewhat long but interesting speech, made his position perfectly plain. Mr. Morrison, during his term as a Minister of the Crown has learnt his lesson fairly thoroughly. In the main portion of his speech, that which is carefully prepared and issued to the press, he does not give much away, so that it is only when he lets himself go in impromptu remarks that we learn something of what he is really thinking. In his speech referring to the co-ordination of Road and Rail Transport, he stated that if he was in office long enough, we should have co-ordination in the National system of Transport or he would get so far that the next fellow would have to do something in the same direction. If he did not, he himself would come back and finish it. We have always deprecated alarmist views and the rather natural desire to exaggerate, which is so common and characteristic of a section of the daily press. We have, however, published in this issue an article from a contributor dealing with this question of nationalisation, because we are so convinced of its urgent importance.

The London Passenger Transport Bill is steadily ploughing its way through the Joint Committee of both Houses of Parliament, under the guidance of the Minister of Transport, ably supported by Sir William McLintock, the well-known Chartered Accountant, who has been retained by the Government to deal with the financial aspects of the Bill. Each week some new agreement is entered into and some opposition has been bought off by the granting of better terms than those originally proposed. It looks, therefore, as though in due course the whole of the Transport organisations to be taken over under the Bill will have withdrawn their opposition and it will come back to the House as an agreed measure, so far as the business interests are concerned. Holding the views he does, there is no blame whatever attaching to Mr. Morrison and he is personally to be congratulated upon his success. The responsibility for the Transport position must largely fall upon those parties in the House who do not accept nationalisation as the millennium for the trade of this country, and who appear to be standing by and allowing the first instalment to go through without serious opposition. Even at the eleventh hour the Socialist Government did not hesitate to reject the Bills for co-ordinating London passenger transport, introduced by the previous Government, which would have kept the control in business hands and free from Government interference. It is not too late, therefore, for effective opposition to be organised in order that a policy which we regard as of the most serious import to the good of this country, should be rejected.

To realise the seriousness of the position one has only to read the reports in the press on the scheme for the electrification of main line railways. The Railway companies having considered the proposals, have submitted their views to the Minister of Transport, who is arranging for a Conference to discuss the problem with them. There is no doubt that the whole scheme turns on the question of finance, and this is being seized upon in more than one quarter as a lever for pushing forward proposals for the nationalisation of our railways. While the railway companies have no objection and are doubtless in favour of electrification, they realise that under present circumstances it is impossible for them to raise the enormous sum of money required to carry through the reorganisation. This is an opportunity for those who openly advocate nationalisation, which they are not slow to take advantage of and they are demanding that Government financial support should only be granted subject to

Digitized by Google

Government control. At the Annual Conference of the National Union of Railwaymen held at Ipswich, a resolution was passed approving of the action of the Executive in taking part in the deputation to the Prime Minister, which appealed for legislation providing for the comprehensive national organisation of all forms of Transport under public ownership and control. It is now announced that an important series of resolutions has been tabled for the Trade Union Congress which will meet in Bristol during the first week of September. These resolutions all aim at nationalisation as the goal to be achieved.

All those who believe that private enterprise, as opposed to nationalisation, is still the best policy for this country, should bring all their influence to bear to oppose any measure likely to lead to nationalisation.

## The Motor Industry of Great Britain.

The annual volume dealing with the Motor Industry of Great Britain issued by the Statistical Department of the Society of Motor Manufacturers and Traders gives valuable information, including many tables showing how important the motor industry of this country has become. The present volume just issued offers a mass of figures which if carefully studied will provide full information on any aspect of the industry, which in such a comparatively short time has grown to be of such tremendous national importance. We have briefly reviewed this valuable work in another part of this issue and our reason for referring to it now is to emphasise the necessity for giving the industry full and favourable consideration as one of the greatest factors in providing employment in this country, both in the Home Market and by fostering our export trade. In spite of all the trade depression the industry only shows a very slight reduction in the total number of vehicles produced over 1929, and this activity is largely due to the increase in the number of commercial vehicles, the production having more than doubled in the past six years. While the report states that it is not anticipated that sales of home produced vehicles in the United Kingdom will show any great decrease in 1931, we must point out that there are certain disturbing elements which should not be overlooked. For instance the delay in granting licences to road operators is making it very difficult for the firms interested to place orders for new vehicles and this is becoming a very serious factor in the carrying on of the Motor Manufacturer's business. Another serious question is the difficulty of laying plans for manufacturing vehicles in face of the constant stream of orders and regulations which have been pouring out from the Ministry of Transport for the last few months. The motor manufacturer may well despair of carrying out the wishes of his customers and at the same time of conforming to all the regulations necessary to secure licences under the Road Traffic Act. It should be the primary object of the Government to encourage the motor industry in every possible way by lightening its burdens, by removing unnecessary restrictions and by reducing the heavy load of taxation under which it is now suffering.

## Technical Transport Education.

One of the most important subjects dealt with by Mr. R. Stuart Pilcher, the retiring President of the Municipal Tramways and Transport Association, in his address at the Annual Conference at Southampton, was that of technical education for Transport men, a subject in which we have always taken a very special interest. Those who attended this important annual Congress, of which a comprehensive report appears in this issue, realised the importance of the statement made by Mr. Pilcher, that a special committee had been set up at the instance of the Council of the Municipal Tramways and Transport Association, comprising representatives of all the important Transport associations, with the object of urging the authorities of our Universities to deal with this important subject. Although no list was given of the Associations which were co-operating in forming this committee, we are informed that the organisations who have been invited to take part with the Municipal Tramways and Transport Association are the Commercial Motor Users' Association, the Institute of Transport, the Motor Hirers and Coach Services Association, the Omnibus Owners' Association, the Tramways, Light Railways and Transport Association and the Joint Committee of the Association of Technical Institutions and the Association of Principals of Technical Institutions. It is well-known that America is a long way ahead of this country in providing technical education for those engaged in Transport and Mr. Pilcher, in his address, referred to the work being done by several Universities in the United States and Canada. The support of the Institute of Transport in this work is particularly valuable, because the subject of Transport education is one which has held a foremost place in its activities since it was founded. The examinations in Transport held every year by the Institute, are of very great value to all young men hoping to rise in their profession and the knowledge and experience of the Institute should be of the utmost value to this committee.

## For Which Many Thanks.

Since our last number there has been issued another crop of Regulations and Amending Regulations made by the Minister of Transport under the powers vested in him by the Road Traffic Act, 1930. These Regulations are dealt with in another part of this issue. When Robert Burton wrote somewhere about the sixteenth century "That which is a law to-day is none to-morrow" he summed up the position in which those engaged in road transport find themselves at the present time. The Road Traffic Act, 1930, is the framework of the law to regulate traffic on roads and of motor vehicles, and Regulations made under that Act were expected but not in quite such bewildering profusion. No doubt eventually matters will be sorted out and the community will benefit by the placing on the Statute Book of this monumental piece of legislation, but meantime transport operators, particularly those interested in the motor coach must be pausing and asking themselves "where are we." The Minister of Transport stated in the House of Commons recently that thirty-one Orders and Regulations had been made under the Act of which three had been revoked and suspended by subsequent Orders or Regulations and that of the remainder a number dealt with the fixing of the dates of commencement of different sections or other formal matters. The Minister then went on to say that it was his intention when the Regulations which were of general interest had assumed a permanent form to have them grouped according to their subject matter, and made available in a convenient and compact shape. We hope that happy state of permanency may soon be reached—then we may know where we are for which we shall be truly thankful.

## Co-ordinating Rail and Road Travel.

In this issue we give full particulars, reprinted from the *Railway News Letter* edited by Mr. A. W. Arthurton, Director of the Railways' Information Bureau, of all the Road Passenger Undertakings with which Railway companies have entered into working agreements. This list shows how far reaching have been the arrangements entered into and how deeply interested our great railways now are in the Road Passenger Transport business of this country.

# Personal Notes.

**Appointment of Sir Francis Joseph, C.B.E., J.P., as a Member of the Overseas Trade Development Council.**—The Department of Overseas Trade announces that on the invitation of Mr. G. M. Gillett, M.P., Secretary of the Department, Sir Francis l'Estrange Joseph, C.B.E., J.P., who was a member of the United Kingdom Trade Mission to South Africa, has accepted membership of the Overseas Trade Development Council. Sir Francis Joseph is Chairman and Managing Director of Settle, Speakman & Co., Ltd., Mossfield Colliery, Ltd., and Bignall Hill Colliery Co., Ltd., and has been President of the North Staffordshire Chamber of Commerce since 1923.

**Firestone's Birmingham Manager.**—The Firestone Tyre and Rubber Company, Limited, announce the appointment of Mr. W. Young as Manager of the Firestone branch in Birmingham. Mr. Young is well-known to many Firestone friends in the Midlands, and has for the past two years been in charge of the Company's Manchester branch.

MR. W. YOUNG.

**New Appointment for Mr. E. R. Park.**—Mr. Ernest Reginald Park, who was for many years connected with The Dunlop Rubber Co., Ltd.'s Overseas Staff, has now joined the firm of R. & J. Park, Ltd., and subsidiary Company—Park, Buckeridge & Co., Ltd., of Dominion House, Thames Road, Chiswick, and would be glad to hear from his many overseas friends.

**Sunbeam Motor Car Co., Ltd.** — We learn on good authority that Mr. W. M. Iliff has requested the Board of The Sunbeam Motor Car Co., Ltd., to allow him to retire from the position of Managing Director, and that the Board have yielded to his desire with expressions of regret at the severance of Mr. Iliff's long connection with this famous Company.

**Inspectorate of Subsidized Transport.** — Major E. H. Fitzherbert, D.S.O., M.C., has vacated the appointment of Chief Inspector of Subsidized Transport and will be succeeded by Major A. N. Travers-Rountree, O.B.E., on the 1st August next. The duties meanwhile are being performed by Major J. T. M. Morton-Clarke, O.B.E., in his capacity as Assistant to the Chief Inspector.

**G.W.R. Legal Appointments.**—The following appointments are announced by the Great Western Railway:—Mr. S. Witherington, Common Law and Chancery Assistant, to be Principal Assistant to the Solicitor, Mr. C. H. Whitelegge, Assistant in Parliamentary and general works, to be Parliamentary and General Assistant to the Solicitor.

**Mr. W. R. Shephard and T.S. Motors, Ltd.**—We are informed by Mr. W. R. Shephard that his agreement as Managing Director of T.S. Motors, Ltd., has been terminated. He remains a member of the Board of Directors. It has been our pleasure to know Mr. Shephard for a good many years and we have watched with much interest the progress of the Company, better known as Tilling-Stevens Motors, Ltd., since he became its managing director. By reason of its early associations our interest in the Company has been particularly keen and we were therefore very glad to see the way in which it made progress under the management of Mr. Shephard, the profits increasing from the low water mark of £3,512 in 1926 to a total of £82,007 in 1929. The year 1930 showed a drop in the profits to £25,706, due to very special reasons apart from the general trade depression. We are glad to know that Mr. Shephard's experience will not be lost to the Company and we trust that the present year will see it regain the prosperity which it enjoyed in 1928-29.

**Goods Agent at King's Cross.**—Mr. F. C. Robbins has been appointed goods agent at King's Cross in succession to Mr. G. B. Massa, who has retired after 50 years service. Mr. Robbins has been Assistant Goods Agent for 11 years and in the service of the railway for 32 years.

**Southern Railway Assistant for Road Transport.** — Consequent upon the retirement of Mr. Robert Buxton, Assistant for Road Transport to the Superintendent of Operation, Southern Railway, Mr. A. E. Hammett, Deputy Assistant for Road Transport, has been appointed as his successor.

**Mr. Frank Lythgoe.**—Mr. Frank Lythgoe, M.Inst.T., the General Manager of the Rawtenstall Corporation Tramways and Motors, is and has been for some time a full member of the Municipal Tramways and Transport Association. In our June issue we gave the names of gentlemen who had recently been elected Associate Members of the M.T. and T.A. in which list we included Mr. Lythgoe, whereas the information we intended to convey was that the Association, in reviewing the work of the past year, had referred to the fact that during that period Mr. Lythgoe had transferred his transport activities from Leigh to Rawtenstall.

**L.N.E.R. Appointment.**—The London & North Eastern Railway Company announce that Mr. J. H. Smeddle, who has been Locomotive Running Superintendent for the North Eastern Area since 1919, has retired under the age limit, and that they have appointed Mr. C. M. Stedman as his successor. Mr. Stedman, who is a former officer of the old Great Eastern Railway Company, held the position of Assistant Locomotive Running Superintendent for the Company's Southern Area from April, 1923, until February, 1926, since which date he has filled a similar position as Assistant to Mr. Smeddle at the North Eastern Area Headquarters at York.

## Obituary.
### Phillip Burtt.

WE regret to record the death, on June 8th, at his home at Harpenden, of Mr. Philip Burtt. The deceased gentleman had held high appointments with the old North Eastern Railway, on which he was in succession, Superintendent, Chief Traffic Manager, Deputy General Manager and Passenger Manager. After his retirement, early in 1914, Mr. Burtt came to London and busied himself with educational and other interests. During the war and for some years afterwards, he lectured on transport at the London School of Economics and he also acted as General Editor of Pitman's Transport Library, and himself wrote a number of books upon transport in which he was so keenly interested. Mr. Burtt was well-known to many of our readers as he took a prominent part in the affairs of the Institute of Transport and was closely associated with the development of the educational arrangements made by that body. Mr. Burtt took a deep interest in China and its problems and about a year ago returned from a long visit to the Far East. He did all he could to promote friendship between Chinese students and our own people. In recognition of his efforts he received a high Chinese decoration.

## Mass Production.

IN "Mass Production" Sir Eric Geddes, Chairman of the Dunlop Rubber Company, has written a convincing tract for these times in which the author declares that, while we may have been dilatory in protecting our industries under the old factory system, further delay will be suicidal under the revolutionary system of mass production. The theme is illustrated with a number of diagrams. Sir Eric makes the point that the foreign mass producer is now in a position to force our unprotected manufacturers into fast increasing losses merely by reducing the latters' volume of trade. He defends the home manufacturer against the charges of lack of courage, enterprise and ingenuity. He argues that British manufacturers in reproductive industry urgently need fiscal protection against mass produced imports dumped in this country at far below full cost. "If," he concludes, "our manufacturers cannot be equipped with the full armour of mass production, our export trade must pass from us. If it does pass, what, I ask you, will be the effect upon the greatest Empire the world has ever known? And what the effect upon the standard of life in our island home?" The book is published by the Pelican Press, 2, Carmelite Street, E.C.4, at sixpence.

*Pressure upon our editorial space has necessitated our holding over instalment IV of the series of articles describing various speciality brakes. The next article will deal with the Lockheed hydraulic brake, to be followed by a description of the Westinghouse Air-Brake in both forms.*

# Public Service Vehicles.

## Amendment to Equipment and Use Provisional Regulations.

As a result of representations received the Public Service Vehicles (Equipment and Use) Provisional Regulations, dealt with on page 378 of our June issue, have been amended by the Minister of Transport.

The schedule which deals with the first aid equipment that is to be carried on public service vehicles as from August 1st, next, has been revised and a suitable receptacle containing the following must now be provided:—

One 2 oz. bottle Sal Volatile (with amount of dose, mode of administration and a warning "NOT TO BE ADMINISTERED IN CASE OF HÆMORRHAGE" printed on the label); one 1 oz. bottle of iodine (2 per cent. alcoholic solution); one tourniquet; one telescopic splint; one large sterilized dressing suitable for burns and wounds (not less than 3 in. by 3 in.); three medium sterilized wound dressings (gauze and wool or lint and wool not less than 2 in. by 2 in); one roll sterilized cotton wool (not less than ½ oz.); three roller bandages (3 in. by 6 yds.); two triangular bandages or one triangular bandage and one flannel bandage (not less than 2 in. by 3 yds.); one roll of surgical strapping (not less than 1 in. by 3 yds. or ½ in. by 5 yds.); one pair of Spencer Wells pressure forceps; one pair rustless scissors; two eye-pads; one box large strong safety pins.

All materials for dressings and bandages including cotton wool must be those designated in, and of a grade or quality not lower than the standards prescribed by, the current British Pharmaceutical Codex and all instruments and appliances shall be of reliable quality and of suitable design and construction.

NAME ON PUBLIC SERVICE VEHICLES.

It is provided that, as from August 1st, 1931, the name and address of the person to whom a public service vehicle licence is granted shall be painted on the near side of the vehicle.

TRAFFIC COMMISSIONERS GIVEN DISCRETION REGARDING CONDUCTORS ON SINGLE-DECKERS.

The Traffic Commissioners are given a discretion to allow single-decked vehicles with a seating capacity not exceeding 26 to be operated without a conductor if in their opinion the nature of the service warrants such a concession.

With the above exceptions the new Regulations (Public Service Vehicles (Equipment and Use) Provisional Regulations, No. 2, 1931) will have the same effect as the regulations which they revoke.

## Certificates of Fitness and Public Service Vehicle Licences.

The Road Traffic Act, 1930 (Adaptation of Part IV to the Special Area) Order, 1931, which provides, amongst other things, for the exercise by the Commissioner of Police of the Metropolis within the Metropolitan Police District and the City of London of the powers and duties of Traffic Commissioners and Certifying Officers in respect of the issue of certificates of fitness and public service vehicle licences, has now come into force. The Order was made on the 27th February, last, but the provisions of the Act required that it should lie upon the table of each House of Parliament for a period of 28 days, during which the house had sat, before the Order became operative.

In these circumstances it has become necessary to amend the Regulations governing the procedure on applications for certificates of fitness and public service vehicle licences, and the Minister of Transport has therefore made the Public Service Vehicles (Licences and Certificates) (No. 2) Provisional Regulations, 1931, to come into force immediately.

These Regulations revoke the previous Regulations dated 9th February, and the amending Regulations dated 31st March, 1931, dealing with this subject.

The only alterations of substance from the provisions of the previous Regulations in addition to those necessitated by the coming into force of the Order referred to at the Commencement of this Notice are as follows:—

The Regulation dealing with the public service vehicle licence in the case of a vehicle hired by one operator from another has been entirely re-drafted so as to permit of the maximum smoothness and convenience in the operation of legitimate road passenger transport consistent with proper control.

The Regulation now reads as follows:—

If during the currency of a licence the vehicle to which it relates is let on hire the owner of the vehicle for the time being shall be deemed to be the holder of the licence provided that he is already the holder of a licence or that he holds a permit issued to him by the Commissioners to hire public service vehicles for the purpose of using them as contract carriages or as stage or express carriages under a road service licence of which he is the holder or under the Public Service Vehicles (Transitory Provisions) (No. 2) Order, 1931.

Before granting a permit to any person under the provisions of this Regulation the Commissioners shall satisfy themselves that he is a fit person to hold a licence and any such permit shall be revocable at any time by the Commissioners by whom it was granted.

When a vehicle is let on hire and is being used as a stage carriage or an express carriage under a road service licence held by some person other than the person to whom the licence in respect of that vehicle was granted and issued, the person so using the vehicle shall throughout the time that the vehicle is so used cause to be displayed in a conspicuous position either on the windscreen or on the near side of the vehicle a notice bearing in letters easily legible and not less than one inch in height the name of the holder of the road service licence under which it is being used, preceded by the words "On hire to."

This amendment will involve a consequential amendment in the Regulations dealing with the equipment and use of public service vehicles.

Definite provision has been made for the return to the Commissioners of a public service vehicle plate as well as the public service vehicle licence when the holder of the licence ceases to be the owner of the vehicle to which it relates.

## Licensing of London Omnibuses.

With the coming into force of the "Road Traffic Act, 1930 (Adaptation of Part IV to the Special Area) Order, 1931," made by the Minister of Transport for the purpose of adapting and applying to the London Area the provisions of the Road Traffic Act with regard to public service vehicles, the Home Secretary has made the "Metropolitan Short-Stage Carriage Order, 1931," to take the place of the existing London Cab and Stage Carriage Orders so far as concerns "Metropolitan short-stage carriages," that is to say, the ordinary London omnibuses.

London omnibuses are "public service vehicles" within the meaning of the Road Traffic Act, 1930, and their operation on road services is governed by that Act, subject to the modification that, so far as regards their operation in the Metropolitan area, they do not require road service licences, the machinery set up by the London Traffic Act, 1924, being retained instead. The licences for the vehicles and their drivers and conductors will continue to be granted under the provisions of the Metropolitan Public Carriage Act, 1869, and will have effect throughout the country exactly as if they were licences of the corresponding class granted under the Road Traffic Act. Under the new Order a single fee is fixed for the grant of a vehicle licence, the amount being £3 10s., and the fee for a driver's or conductor's licence is 1s. All licences will, as before, be valid for a year unless revoked or suspended, and existing licences, whether for vehicles or to drivers and conductors, will continue in force for their normal duration, as if granted under the new Order.

The new Order came into force on June 15th, and the conditions which it prescribes and the other provisions relating to vehicle and drivers' and conductors' licences are applied as from that date to the holders of existing as well as new licences.

DRIVERS AND CONDUCTORS OF PUBLIC SERVICE VEHICLES.

The Road Traffic Act, 1930 (Adaptation of Part IV to the Special Area) Order, 1931, having now come into force it has become necessary to amend the Regulations governing the procedure on applications for drivers' and conductors' licences and the Minister of Transport has therefore made the Public Service Vehicles (Drivers' and Conductors' Licences) (No. 2) Provisional Regulations. The Regulations, dated June 16th, 1931, came into force immediately.

These Regulations revoke the previous Regulations dated 11th March, 1931, dealing with this subject. In substance, however, they are almost identical with the previous Regulations, the only alterations being those necessitated by the coming into force of the Order referred to at the commencement of this Notice.

## Records of Licences.

The Minister of Transport has made the Public Service Vehicles (Records of Licences) (No. 2) Provisional Regulations, 1931.

The Public Service Vehicles (Records of Licences) Provisional Regulations, 1931, made on April 2nd, 1931, are revoked.

The new Regulations provide that the Traffic Commissioners or the Commissioner of Police of the Metropolis as the case may be shall keep a duplicate copy of every licence granted by them and of every backing of a road service licence backed by them under Part IV of the Act, and such duplicate copy shall be certified by or on behalf of the Commissioners to be a true copy of such licence or backing.

The fee for inspecting, copying or taking extracts from such duplicate copies shall be 1s. in respect of each duplicate copy inspected or copied or from which extracts are taken.

# The Introduction of Despotic Government.

**The London Passenger Transport Bill: Significance of Recent Enactments: Ministers' Powers: Extermination of Local Authorities: Smoke Screen Authorities Covering the Change to Complete Central Control.**

**By Reginald A. Ryves.**

PERHAPS the most important event of recent years was the acceptance, in principle, by the leaders of the Conservative Party, of the pooling of London Traffic.

The prevalence of a kind of hypnotic influence of the "it-is-of-course-agreed" order, and the unexplained paralysis which has affected, as it still affects, the London daily Press, had prepared the ground by making the Public accustomed to a new element in government; that the decision of a few leaders shall, no matter how serious the issue and how far-reaching the consequences, be accepted as though it were the decree of an absolute monarch.

### THE PARALYTIC PRESS.

When the pooling of London traffic was advocated, the Press and Parliament failed to foresee that it would inevitably involve, or lead to, single management and, as inevitably, to Government control culminating in Government ownership. A technical journal did, however, remark that it would mean either a monopoly or Government management. Utterly opposed though it is to the principles of representative government and obviously striking at the roots of that individual enterprise and that healthy and necessary competition which some of the politicians concerned regarded as essential to sound national life, the proposal to create in the London area an arithmetical organisation the existence of which would make it easy for the Government to take over the whole passenger transport system at one stroke, met with scarcely any opposition from our palsied daily Press or from the hypnotised representatives of the People.

### THE SCOPE OF THE BILL.

So assured were the advocates of central control, which is the administrative counterpart of that fully despotic rule steps towards which are now rapidly and openly being taken, that the idea of utilising the opportunity merely to make a start and create a precedent was abandoned, and the Bill has been so drafted as to relate officially to an area of about 1,800 square miles, but, by virtue of Section 3 (b) to cover an area of some 5,000 square miles and, by virtue of Section 14 (1), requiring only the acquiescence of the Traffic Commissioners and a little time for the overcoming of other concerns, to extend over the whole of Great Britain. The process of extension beyond some 60 miles from Charing Cross would be gradual and might be held in check in some directions for considerable periods; but it is difficult to believe that, even without the aid of supplementary legislation, the Board could fail to overcome such resistance.

### PREPARING THE GROUND.

In the meantime, to facilitate this and other measures intended to place the whole control of national and private life in the hands of a Government of the Oriental or Despotic type—the only alternative to representative parliamentary government for any populous State—the rural district councils, having been deprived of their chief public duties, are being executed a few at a time under powers such that the executions may, at any time, be speeded up. Extinction of the rural districts is evidently what is intended. It is weakly supposed, by some who are believed to interpret or to guide public opinion, that the purpose is to make the county councils the sole rural authorities. The process is, however, merely the lopping of branches and afterwards of boughs, in order that the tree may later be felled, may fall into the place chosen for it and do so without rending and cracking noises. The county councils will, if this attack be not warded off, be executed in their turn. To facilitate this process, the wording of the largely useful Road Traffic Act, 1930, has been used as a cloak concealing weapons. The Act is so drafted that much which seems capable of being simplified, or made straightforward in its application, by means of Regulations, can be made more complicated by Regulations, or be rendered satisfactory only by the provision of exceptions, made on the sole responsibility of the Minister and depending on his will for their continuance. Generally, Regulations can be so devised as to bring about a harrassing state of affairs, the readily offered remedy for which will be further central control with the final relief of absorption into Brahma as the happy issue out of affliction.

### SMOKE SCREENS AND WIRE NETTING.

Some of the measures which are being taken have the function of the smoke screen, simply hiding the position of an attacking vessel. In another and more significant aspect they play the part of wire netting, stretched before the site of fortification works, and through which everything outside can be plainly seen by those within, but nothing inside the netting is visible from far off.

The Traffic Commissions, not as now constituted but potentially, may play such parts, for, although the present Commissioners are persons in whom the public has complete confidence, the Act provides for full central control being exercised, when the time comes. The Minister may, by Order, increase or *reduce* the number of traffic areas, so deepening the waters under which the county councils are being submerged and preparing the way for the conversion of the commissions into a single State system. There is, however, provision in the Act for the annulling of a proposed Order, by either House of Parliament.

As regards the status of the Commissioners, while it is not suggested that any individual statesman responsible for the Act intended this part of it to be other than what it seems in respect of the immediate purpose, it has to be realised that an opportunity is provided for future exploitation of the provisions, in furtherance of a policy of central control. The paid member is appointed by the Minister and (63 (ii)), the Minister may remove any Commissioner from his post for "inability." The potential control is therefore complete.

### THE TRAFFIC ADVISORY COMMITTEE.

As an instrument which, by increasing the power or authority behind the central transport system, may aid in imposing upon the surrounding country the extension of that system, the London and Home Counties Traffic Advisory Committee is to be given extended powers. The significance of the composition of this body should not be overlooked by the county councils of Buckinghamshire and Hertfordshire which are to have only one member between them, nor by those of Berkshire, Hampshire, Oxfordshire, and Sussex, which are not to be represented.

Of the 34 members no less than eleven are to be appointed by Ministers and the Secretary of State, while London authorities will be represented by fourteen members, the local authorities of seven-eighths of the London Traffic Area being allotted only nine seats on the committee, although the areas they represent within a circumference to which the "London" passenger transport system may easily and quickly reach, is about 97½ per cent. of the whole area so enclosed.

### JUSTICE DENIED.

It is a part of the constitution of this country that aggrieved persons may have their cases heard in open court, by a judge or magistrate who hears witnesses and

Digitized by Google

is completely independent of personal or official interests involved in the case. As also provided by the Road Traffic Act, the London Passenger Transport Bill provides that persons aggrieved by the refusal of traffic commissioners to approve a route are deprived of this right, there being no appeal except to the Minister, whose decision is final and who may be, officially and as a matter of ambitions to be realised, an interested party. Admitted that there are precedents, these should not be allowed to stand when, if ever, a constitutional government is again in office.

### Features of the Bill.

*Ministerial Control.* The chairman and the four other members of the Board will all be appointed by the Minister, who may re-appoint a member as often as he wish, while he may remove any member, for "inability." In regard to the Amalgamated Railway Companies, the Board and the Minister have, together, a very large control over matters such as those to be "arbitrated" upon by a joint council; for (22. (6)) the Board may refuse to accept the finding of the council, whereupon the decision rests with the Minister.

The powers of regulation under Section 46 (number of stage carriages and express carriages using certain streets) are subject to annulment by either House of Parliament; but in respect of the far wider powers of making regulations with respect to road traffic generally in the London Traffic Area there is no such control.

*Expenses.* Up to some point, amalgamation of transport and other concerns, though nearly always a disadvantage to the public, is beneficial to the owners of the concerns. Beyond that point amalgamations are more costly to run than the separate concerns; because the enforced co-ordination of the parts is more costly than the voluntary co-ordination for mutual advantage; because each part requires management and staff practically as expensive as before, while the correlation of these artificially joined parts of the concern is itself expensive; because the larger concern cannot make the adjustments possible for smaller enterprises, in regard to wages, occasional help and so forth, and because the larger the concern the more important do all officials and servants consider themselves to be, the better are the conditions they enjoy in comparison with those with which similar workers have to be content, the larger are the salaries and wages which they demand, and obtain. All these considerations apply especially to passenger transport services, more especially to very large concerns and, most especially to such as are in a large measure controlled by the Government. Of this there are many examples. If this Bill becomes law, fares will be higher. Moreover it is inevitable that the technical side of public transport will suffer and the convenience of passengers also, for however expensively they may be accommodated the devices and inspirations of open competition will be lacking. Broadly considered, good value is never received if the payment is obligatory and the service is at the option of the concern providing it, or is the subject of representations made to a government department or other aloof body.

There will be very heavy costs involved in the change-over; retirement and pension payments will necessarily cost more than if the present arrangements had continued; the costs of the Arbitration Tribunal and the Joint Committee will also be considerable, while all the books and office machinery of management will be functioning in duplicate for a considerable period. Standing charges will include the expenses of the Board itself, those of the Advisory Committee and, to the tax-payer, the increased staff at the Ministry of Transport. It is clear that the new system will be costly.

*Area.* The County of London has an area of about 117 square miles, the London Traffic Area is about 1,800 square miles. The board may, Section 3 (b), "with the approval of the Minister, acquire by agreement or take on lease the whole or any part of any other passenger transport undertaking if that undertaking or that part is being worked within or mainly within the London Traffic Area." Taking this to apply, at a conservative estimate, to undertakings with services running into the London Traffic Area from places about 14 miles beyond its boundary, the radius, of about 40 miles, gives an area of over 5,000 square miles, Some undertakings with headquarters at greater distances have their services mainly within the London Traffic Area, or, having headquarters nearer in, extend to considerable distances further from London. The Board may thus very soon spread its tentacles to a radius giving an area of seven or eight thousand square miles.

*The Whole Area of Great Britain.* Section 14 (1), (the italics being not so printed in the text) provides that: "It shall be lawful for the Board and any local authority or other person authorised to provide road services of public service vehicles in any county borough or any county district adjacent to the London Traffic Area, *or adjacent to any county borough or country district in which the Board is providing any passenger transport service,* to make and carry into effect, notwithstanding any enactment to the contrary, agreements for the following purposes . . ." These purposes, as set forth, are such as allow of practically joint working, but the significant clause is, (2), "The Board may make advances of, or otherwise contribute, any moneys which may be necessary for the establishment or maintenance of any service under an agreement made under this section." It is clear that "otherwise contribute" covers provision of capital or other costs, the power of the purse in a most effective form, while the provision for such contributions for maintenance gives the Board the power immediately to solve all the financial difficulties of an undertaking which they wish to absorb.

### The "Regard" of the Traffic Commissioners.

To make the process the easier, there is Section 12 (3), which provides that: "The Traffic Commissioners appointed under the said (Road Traffic) Act, in considering whether they will grant a road service licence to the Board in respect of any route or part of a route which is outside the London Traffic Area shall . . . . have regard to the extent to which the road service . . . . is necessary or desirable in connection with any road service provided by the Board within the London Traffic Area." That is, to weight the scales in favour of the State Elephant, heavy though it is.

The Ministers actively engaged in this peaceful revolution are to be respected for their open declaration of the ends they have in view. It is too much to expect that they should disclose to their followers the fact that "communism" and "socialism" are merely verbal stepping stones by means of which are crossed the rising waters of a stream which will soon cut off retreat. It is impossible, on the other hand to find excuses for those politicians of other parties who are watching a great and growing industry becoming the first victim of a system, in the making, of government on the basis of mechanical efficiency as provided by despotic authority and a slave population. The astonishing aspect of the matter is that experienced statesmen, who must have realised what a London "traffic pool" implied, did not oppose the idea with vigour and determination when it was first put forward. So great, however, is the power of suggestion in the "of-course-it-is-agreed" form, that even now the nature of the proposals does not seem to be realised in the Houses of Parliament. A flood of talk regarding the means may disguise the fact that whether the end be desirable or not has never been discussed at all. This has happened a number of times in the past few years with very grave results.

# Institute of Transport.

## Italian Tour and Congress, 1931.

If the primary object of a Congress be the reading of papers with discussions to follow, then the recent Italian Tour in which members of the Institute of Transport participated, cannot claim equality with those which have preceded it in previous years. On the other hand, if the first object be the education of the members, coupled with a widening of their interests and experience of transport in other countries, then the Italian Tour and Congress is entitled to rank with any of its predecessors.

The unanimous decision of those who were privileged to take part in the tour was that, in addition to being a most enjoyable tour, a great deal of exceptional value had been seen and studied, which should serve a useful purpose to all students of Transport, whatever may be the branch in which they are engaged.

Simply to mention the names of the towns and cities which were the headquarters of the party during the Tour, brings to one's recollections a variety of Transport methods, probably unequalled in any part of the world; Lake Como, with its delightful and enchanting views from the deck of a pleasure steamer; Milan, the centre of the fertile plain of Lombardy, the busy hive of industry with its efficient tramway system and its wonderful new railway station; Venice, where one descended from the train at the railway terminus to step straight into a gondola, to be transported by canal straight to the front of one's hotel; Florence, with its untold treasures of art, where one could either travel in an up-to-date motor coach or hire a one horse brougham or fiacre, and amble along to see anything in which one was particularly interested; Rome, the heart of Italy and the centre of the marvellous organisation, which is revolutionising the country under the leadership of Il Duce, Benito Mussolini, where since we were there in September, 1928, in connection with the World Motor Transport Congress, the trams and tramlines have been removed from the heart of the city and substituted by mobile and convenient motor buses; Genoa, the great trading Port of Italy, which although suffering from the world-wide trade depression, has laid great plans and is busily engaged in carrying them out, to double the facilities of the Port in readiness for the return of prosperity, which is confidently anticipated; Turin, perhaps somewhat unfairly solely associated in Transport minds with the great Fiat works, which undoubtedly form the principal attraction for members of the Institute of Transport, who were privileged to see not only the famous Lingotto Motor Car Works where the visitors in motor coaches drive straight through the entrance, mount floor by floor until they reach the top of the building where the testing grounds, a Brooklands on a small scale, is reached, and they are able to see motor cars built entirely in the works run out under their own power and thoroughly tested on the roof of the building, the visitors then descending to the main entrance without once having to get out of their vehicles.

A party numbering 120 in all comprising members and their wives, and in some cases daughters, left Victoria on Saturday afternoon, May 30th, in special reserved coaches by arrangement with the Southern Railway. An element of romance was present at the start in the fact, which quickly became known, that a member of the party, Miss Marjorie Ford, daughter of Mr. E. Ford, who has recently resigned from the position of Chief Goods Manager, Great Western Railway, became engaged half-an-hour before the train started.

Throughout the Tour members of the party felt it incumbent upon them to try and cheer up Miss Ford under trying circumstances, the happy man not being a member of the party. By the time this appears in print Miss Ford will, we believe, be happily married and preparing for a much longer journey to Malaya, where her husband to be, holds an important position. The good wishes of the members go with her.

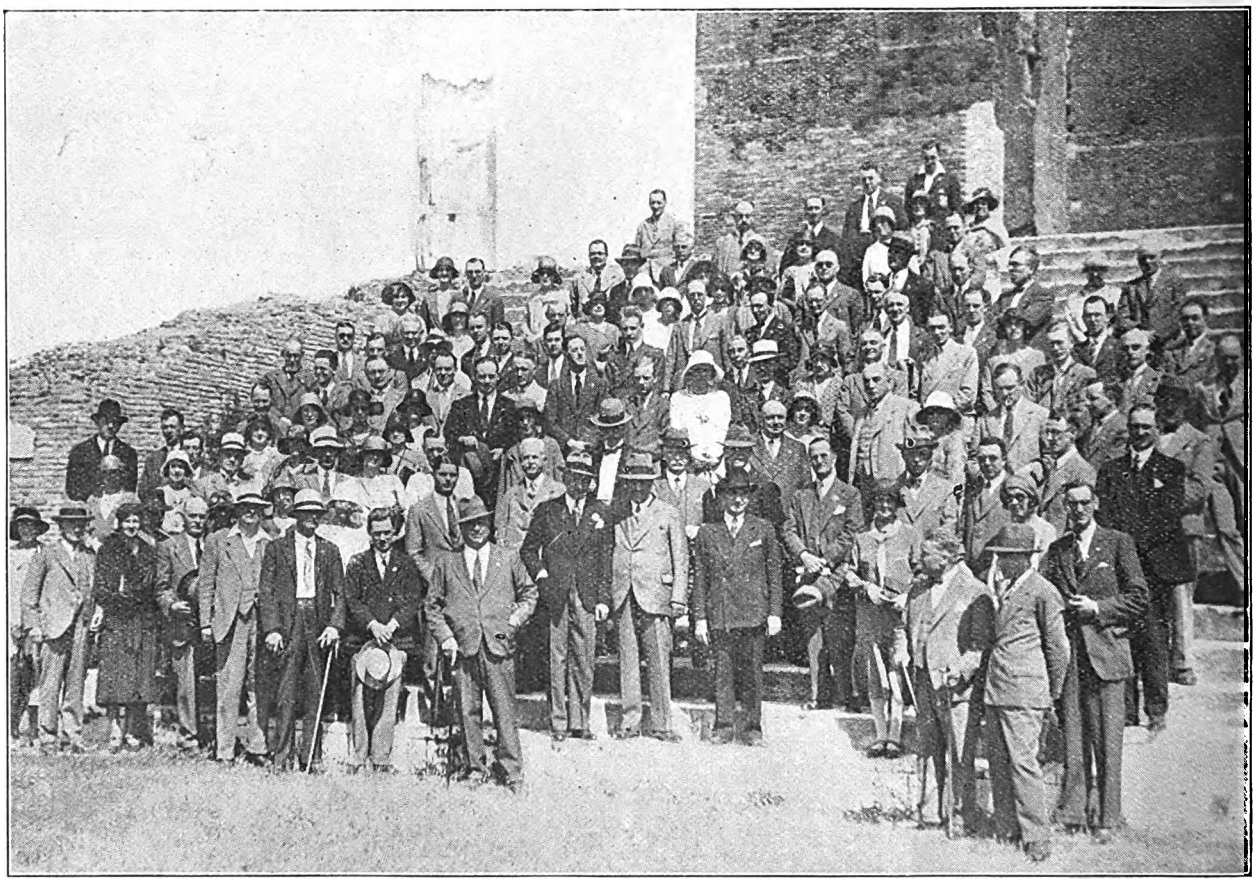
The leader of the party was Mr. Roger T. Smith, a past president of the Institute of Transport and formerly electrical engineer to the Great Western Railway, whose reputation as an electrical engineer is as well known on the Continent as it is in this country.

Others to be specially mentioned were Sir Joseph Nall, a Past President of the Institute of Transport, Mr. W. A. Jepson, a member of the Railway Rates Tribunal and Colonel A. S. Redman, Chairman of Area Traffic Commissioners, Birmingham.

Practically every branch of Transport was represented. Amongst the railway officials taking part were Mr. W. V. Wood, a Vice-President of the Executive, L.M.S.R., Mr. E. B. Hassall, Assistant to Vice-President, L.M.S.R., Mr. O. C. Gatenby, Mineral Manager, L.N.E.R., Mr. A. W. Arthurton, Director, British Railways Press Bureau, Mr. R. C. V. Ash, L.N.E.R. (Hull) Mr. L. J. Berry, Southern Railway, Mr. M. Browne, G.S.Rlys. of Ireland (Dubin), Mr. H. E. Cartwright, L.N.E.R. (Peterborough), Mr. P. J. Chilcott, L.M.S.R. (Birmingham), Mr. S. Cott, Assistant Chief Draughtsman, L.M.S.R. (Derby), Mr. A. V. Daniels, Inspecting Clerk, L.N.E.R. (Newcastle-on-Tyne), Mr. A. C. H. Glaze, L.N.E.R. (Manchester), Mr. B. J. Holden, Southern Railway (Lingfield), Mr. J. G. Hutton, L.N.E.R. (Aberdeen), Mr. R. R. Joll, Southern Railway (London), Mr. K. A. Kindon, L.N.E.R. (Marylebone), Mr. H. Kirwin, L.N.E.R. (Grimsby), Mr. G. W. Lukins, Southern Railway (London), Mr W. Maddy, G.W.R. (Pontlottyn), Mr. R. Nicholson, L.M.S.R. (Derby), Mr. B. E. Osborne, L.N.E.R. (London), Mr. G. E. Parker, Southern Railway (London), Mr. L. E. Robson, L.N.E.R. (Gateshead), Mr. A. W. Satchell, L.N.E.R. (London), Mr. H. A. Venton, Southern Railway (Paris), Mr. F. O. Waite, Southern Railway (London), Mr. W. E. Watts, L.M.S.R. (Leicester), Mr. R. M. Wheatley, L.N.E.R. (London), Mr. W. T. Whitehouse, L.M.S.R. (Wolverhampton).

The following retired railway officers were members of the party: Messrs. E. A. Clear, E. Ford, D. Halliwell, H. H. Holbrook, B. E. Holloway, J. Pike, H. J. Prytherch, and H. A. Watson.

Canal Transport was represented by Mr. T. Abbott, Chairman and Managing Director, F. J. Abbott & Co., Ltd., Liverpool and Manchester: Road Transport by Mr. N. Axson, Manchester Corporation Tramways; Mr. R. W. G. Barnett, Manager, Liverpool Cartage Company; Mr. P. R. Blake, General Manager, Scottish General Transport Co., Ltd.; Kilmarnock; Mr. R. Burgess, Chief Operating Superintendent, and Mr. F. S. Mallcott, Traffic Manager, Carter, Paterson & Co., Ltd.; Mr. H. H. Crow, Managing Director, Crow Carrying Co., Ltd.; Mr. C. S. Dunbar, Birmingham and Midland Motor Omnibus Company; Mr. W. F. Endean, General Manager, Gateshead and District Tramways Company; Mr. J. McDonnell, Assistant General Manager, Birmingham Corporation Tramways; Mr. P. W. R. Marston-Clark, Thos. Tilling, Ltd.; Mr. F. Molloy, Manchester Corporation Tramways; Mr. A. Witcomb Smith, Manager, Motor Omnibus and Transport Section, West Bromwich Corporation; and Mr. C. H. Stafford, General Manager, Burnley Corporation Tramways; Docks by Messrs. C. E. Baldwin, General Manager and Secretary, Blyth Harbour Commission and R. W. Johnson, Ex-Traffic Superintendent, Singapore Harbour Board: Industrial Transport by Messrs. M. Campbell, Transport Manager, General Electric Co., Ltd.; A. Hastie, Traffic Superintendent, Synthetic Ammonia and Nitrates, Ltd., (Billingham-on-Tees); C. F. King, Bryant & May, Ltd.; J. E. Peacock, Transport Officer, Cargo Fleet Iron Co., Ltd., Middlesbrough, and R. W. Royle, Traffic Manager, Co-operative Wholesale Society, Manchester; Shipping by Mr. M. Salt, Assistant Manager, Messrs. Wm. France, Fenwick & Co., Ltd., London; and Mr. J. L. Wilson, Fairfield Shipbuilding & Engineering Co., Ltd.; Roads by Mr. T. A. Mitchell, Secretary, Constable, Hart & Co., Ltd.



ON THE STEPS OF THE RECENTLY DISCOVERED FORUM AT OSTIA, THE ANCIENT PORT OF ROME, FOLLOWING SPEECHES OF WELCOME AND THANKS.

Other members of the party were Mr. T. L. Paterson of the Ministry of Transport, Mr. W. G. Burt, Mr. T. W. A. Hayward, Mr. J. F. A. Jones, Mr. E. W. Palmer and Mr. F. G. Royal-Dawson.

In addition four members of the Transport press took part in the Tour: Mr. D. R. Lamb, Editor, "Modern Transport," Mr. W. A. Willox, Chief Assistant Editor, "The Railway Gazette," Mr. H. Wyatt, Director, "Bus and Coach" and Motor Transport," and Mr. E. W. Willis, Editor and Managing Director of THE WORLD'S CARRIERS AND CARRYING TRADES' REVIEW.

Digitized by Google

Last but not least there were Mr. A. Winter Gray, Secretary of the Institute of Transport and Mr. F. W. Crews, his Assistant, upon whom the responsibility for the successful organisation of the Tour and Congress so largely depended and who are to be congratulated upon the success which attended their untiring efforts.

Space does not permit of our mentioning by name the ladies of the party. Suffice to say that they added very greatly to the pleasure of the Tour. Our Italian hosts with that gallantry for which they are renowned, presented them with flowers on numerous occasions, while each lady received a bouquet on the occasion of the visit to the motor ship "Augustus." The ladies also received full acknowledgment in the person of Mrs. Roger T. Smith, to whom magnificent bouquets were presented at all special functions and in particular, when the party left Turin. On this occasion Mrs. Smith received a magnificent bouquet of roses from the representative of the Italian State Railways and also a handsome silk bow in the colours of the Municipality, presented by the Mayor of Turin.

A smooth Channel crossing was enjoyed and then after a night journey from Calais to Basle, the party proceeded to the Italian Frontier at Chiasso, where they were met by representatives of the Italian State Railways and by Ing. Gennaro Starace, the representative of the Compagnia Italiana Tourismo, who accompanied the party throughout the whole of the Tour and to whose courtesy and unfailing assistance we were much indebted. A short run then brought us to Como, the real starting point of the Tour.

In the afternoon the party enjoyed a trip on Lake Como where they were the guests of the Municipality and were received and welcomed by Marchesa Rosalis, Vice-President of the Council of Como, who was accompanied by his daughter, Marchesina Rosalis. After the trip some of the party visited the Volta Memorial where they were welcomed by the Marchesina Rosalis.

An early start was made next morning in motor coaches by the famous Autostrada of Milan. This road is one of three, constructed mainly for military purposes by the Italian Government, and gives the visitor a good idea of what can be done where all slow traffic is excluded.

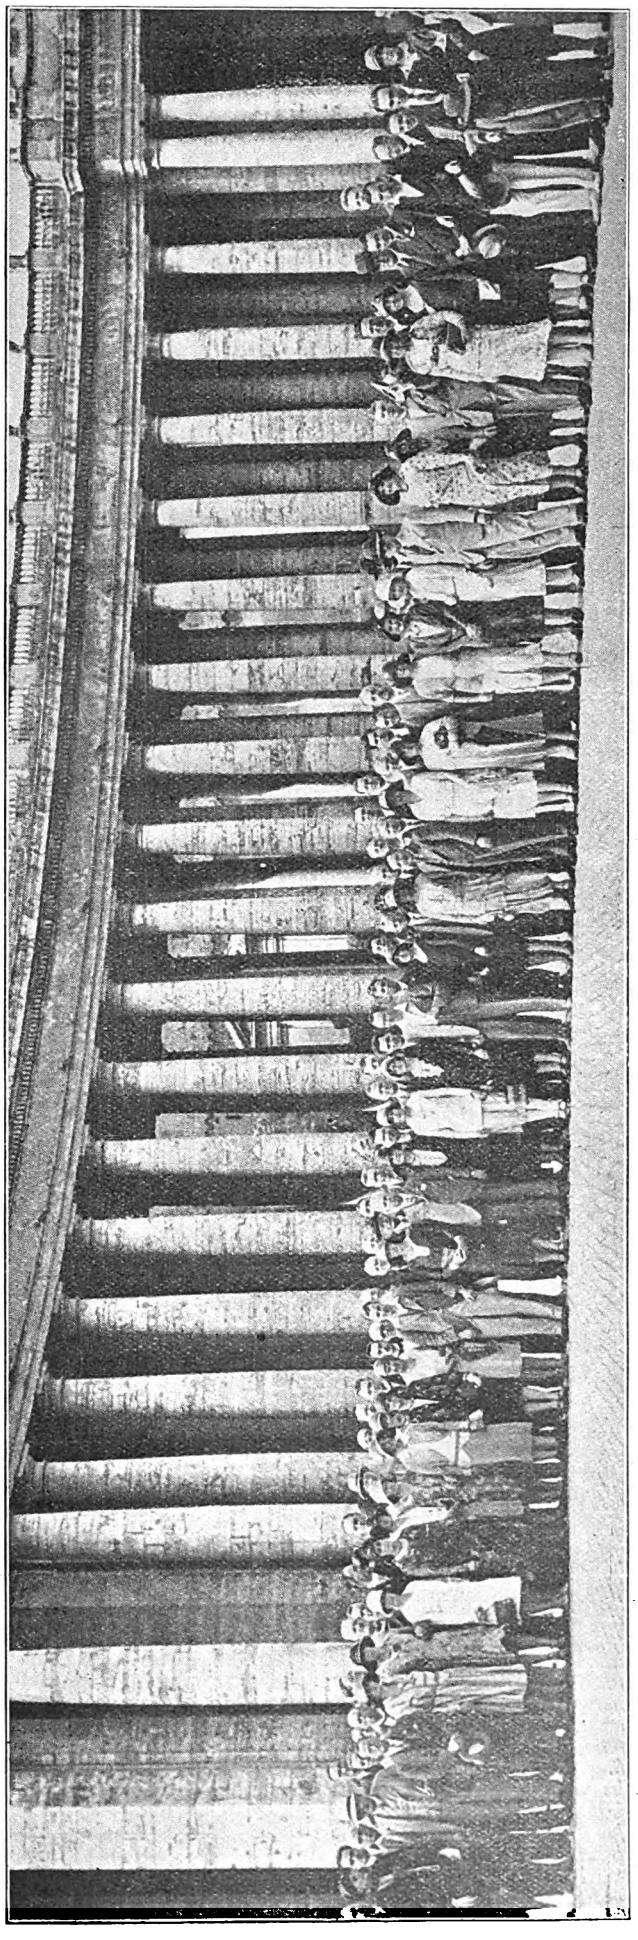
At Milan, on the invitation of the Italian State Railways, the party visited the magnificent station which is nearing completion, and already partly used, which within the next month or so will entirely supersede the old station and form a magnificent terminus for the Milan section of the Italian Railways. As an expression of Italian National aspirations, the new station stands pre-eminent amongst railway buildings throughout the world, both for its layout and facilities, and as a work of art also. In the magnificent restaurant we were entertained to lunch by the Italian State Railways, having the honour of being the first to make use of the building. After lunch a visit was paid to all parts of the station and the party then visited the electric sub-station at Novate and were entertained to tea and light refreshments.

On Tuesday morning, June 2nd, we were conveyed in very modern tramcars to the city tramway depot and were shown over the workshops and garages. Milan may be termed the "Paradise" of the tramway official as practically the whole of the city traffic is carried on the magnificent tramway system, buses being excluded with the exception of an insignificant number running on a route where the narrowness of the streets made tramlines impracticable. The depot is laid out on lines which show that the authorities in Milan, at any rate, have no idea of scrapping their trams, and both the system and the depot are examples of what can be done under favourable conditions.

We then met to discuss an interesting paper dealing with "Public Transportation and Town Planning in Milan and its Environs" written by Signor Marco Semenza, Consulting Engineer to the City of Milan, whom we were all proud to welcome as a member of the Institute of Transport and who, amongst other high qualities, speaks English with a fluency which made many of us envious. A most interesting discussion took place inaugurated by Sir Joseph Nall, in which many members took part.

The party were given a civic welcome by the Mayor (Podesta) of Milan and the hospitality which was so lavishly bestowed upon us in this city added much to the enjoyment of our visit.

In the afternoon we journeyed on by train through beautiful country with the snow on our left, past Lake Garda, through Padua and Verona, made familiar to all English speaking people by our great dramatist, William Shakespeare, to Venice, where we spent a short two days which are never likely to be forgotten by those who took part in the Tour. Transport of all kinds is by water, from the fascinating gondola to the modern motor launch and pleasure steamer and the barge, carrying goods of



THE INSTITUTE OF TRANSPORT PARTY PHOTOGRAPHED AT ST. PETER'S, ROME, IN FRONT OF THE MAGNIFICENT SEMI-CIRCLE OF COLUMNS FORMING ONE SIDE OF THE APPROACH TO THE CATHEDRAL. ON THE EXTREME LEFT WILL BE SEEN MR. AND MRS. ROGER T. SMITH, AND MR. A. WINTER GRAY.

Digitized by Google

all kinds, through the Grand Canal and the bye-pass canals which intersect it. Then on again to Florence, where the main interest was not Transport, but the wonderful Uffizi and Pitti Galleries, vying with the Vatican at Rome itself, in the wonderful accumulation of paintings and sculpture which dazzle the eye and give one mental indigestion.

Rome, where the party stayed for four short days, was in one respect a disappointment, as the paper which should have been read on the "Replanning of Rome," now under consideration, failed to materialise. A glorious four days, however, was spent, three of them in sight-seeing in Rome itself, and one a red-letter day at Ostia, the ancient Port of Rome, where once again we were the guests of the Italian State Railways. Journeying by motor coach, the last two miles over a magnificent road, specially built direct to the sea, we were shown over the discoveries of the ancient Port, which have recently been uncovered and were amazed at the buildings which had been brought to light. One of the photographs which we reproduce shows the party taken on the steps of the Open Air Forum, after a welcome had been given and speeches had been made by representatives of the Government and by Mr. Roger T. Smith for the Institute of Transport. Some two miles from the old Port a new Ostia is rapidly springing up and has become the "Lido" of Rome. Here we were entertained to lunch by the Italian State Railways. Before this, however, we were taken to the Government Hydroplane Station and were privileged to see what was being done in this branch of Military Air Transport. Following the luncheon a few of the leading members of the party had the privilege of a short flight in a small hydroplane, whilst the rest of the party enjoyed the "Lido" and its bathing facilities. Of Rome itself it is quite impossible to say anything in detail, the wonderful buildings giving evidence of Transport efficiency in years going back to the B.C. period.

We then journeyed by night train to Genoa, where we were the guests of the Port Authorities, who placed a steam tug at our disposal and took us round the Port to see the great improvements and extensions which are being carried out. We then visited the Hydro-Electric Power Station, of which Genoa is rightfully very proud, and after seeing the up-to-date maritime station, were entertained to tea on board the motor ship "Augustus" belonging to the Navigazione Generale Italiana, afterwards inspecting this magnificent vessel. Our stay in Genoa was all too short and the next morning we were on our way to Turin which was reached in time for lunch.

In the afternoon we made a tour of the Fiat Motor Car Works, already referred to, and those who were specially interested were shown the four-cylinder and six-cylinder heavy oil engine lorries, which the Company is now building and which have met with a very gratifying reception and are doing good work. The following morning we journeyed to the Fiat Aeroplane Works and the Aerodrome and inspected this branch of the Company's activities. The party was afterwards received at the Municipal Buildings by the Podesta, who gave us a hearty welcome.

In the afternoon we once more entrained, this time for Paris, where our splendid Tour may be said to have reached its termination. Some few members of the party remained in Paris, whilst the majority returned by the day train to Calais, reaching Victoria on Sunday evening, June 14th, after a fortnight of glorious sunshine, of wonderful visits and an experience which should be of great value, particularly to those younger men in the Transport World, upon whom the future of this great profession so largely depends.

## The Exide Service Convention.

THE Exide Service Convention held at Bournemouth from June 16th to 18th, broke all records both in the matter of attendance and we understand in the quality of the papers and discussions. The gathering included representatives not only from all parts of this country but from France, Belgium, Holland, Sweden, Germany, Spain, India, Latvia, Africa and Australia as well. The most remarkable feature of the Chloride Electrical Storage Co.'s organisation, apart from the excellent quality of the Exide battery itself, is its service organisation, there being 600 service stations in the British Isles and no fewer than 13,000 scattered over the world, each one of which it is stated, is ready with trained men and equipment with testing machinery to give every assistance in every need. In opening the Conference Mr. D. P. Dunne, the popular Managing Director of the Chloride Electrical Storage Co., Ltd., Clifton Junction, Nr. Manchester, expressed the determination of the firm to go ahead and develop business in the face of general trade depression. The afternoon of the 17th was spent by some on a visit to Lulworth Cove and others in a golf competition at Parkstone Golf Club. The morning's session on the 18th was devoted to the reading of the agent's prize-winning papers on sales problems, and the banquet on Wednesday evening was attended by the Mayor of Bournemouth and also by Mr. G. M. Gillett, the Parliamentary Secretary to the Department of Overseas Trade. Thursday was devoted to the discussions of problems, technical and financial, and the Convention concluded with a visit to the Union Castle Liner "Carnarvon Castle." Such a convention as this is regarded as a general stimulant to the development of business not only in this country but all over the world. Agents from the farthest points of this country and abroad discuss with each other and with the representatives of the factory and sales organisations of the company, their problems, technical, commercial and financial, and obtain from such discussions much useful and helpful information and many practical ideas which they can put into operation on returning to their places of business.

COACHES LEAVING FOR LULWORTH COVE.

## Legal Weight for Heavy Motors Increased.

THE Minister of Transport has made the Motor Vehicles (Construction and Use) Amendment Provisional Regulations, 1931, which make certain minor amendments in the Motor Vehicles (Construction and Use) Regulations, 1931, and in addition modify the provisions as to maximum permissible laden weights of four-wheeled heavy motor cars propelled by steam. This modification has been made as a result of representations which the Minister has received from the Mining Association of Great Britain and from users of heavy steam wagons that, owing to the weight of water and fuel carried by steam vehicles the paying load is smaller in proportion to the total weight than in the case of a petrol-driven vehicle. The effect of the modification is that the existing permissible total weight of 12 tons allowed by the Regulations for four-wheeled heavy motor cars whether propelled by steam or petrol is increased in the case of such vehicles when propelled by steam to 14 tons where the vehicle is registered under the Roads Act, 1920, before the 1st January, 1932, provided that its maximum speed with or without a trailer does not exceed 12 m.p.h., and where the vehicle is registered under the Roads Act, 1920, on or after that date to 13 tons provided that it is fitted with pneumatic tyres on all wheels.

**Commer Wins Challenge Cup.** — A Challenge Cup offered for the best-turned-out vehicle at the Old English Fair recently held at Watford has been awarded to a Commer 4-tonner owned by Messrs. Benskin's Watford Brewery. There were 17 competitors in the class with the Commer.

**"Ovoline" Competition.**—During its 7 weeks' tour the special "Ovoline" display van covered 2,169 9/10 miles. The first prize of £100 offered by Messrs. Brett's Oil & Grease Co. (Gateshead) to those estimating the mileage was won by Mr. John Preston, of Ferryhill; and the second prize of £25 by Mr. C. H. Hall, of Prudhoe.

# Municipal Tramways & Transport Association.

## Thirtieth Annual Conference.

THE Annual Conference of the Municipal Tramways and Transport Association is an important event, because not only do the General Managers of Municipal Transport undertakings meet together, but are assisted in their deliberations by the Chairmen and Vice-Chairmen of the Municipal undertakings with which they are associated. For this reason the discussions which constitute so important a part of any congress, do not adhere strictly to technical matters, but cover the whole sphere of Municipal Transport, from the point of view of the business men, who are devoting a large portion of their leisure in an honorary capacity for the benefit of the towns or cities in which they live.

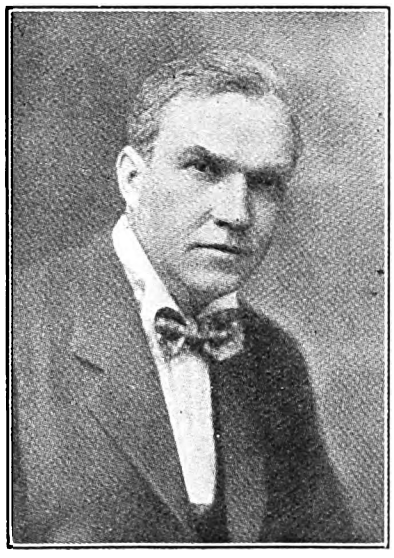
The thirtieth Annual Conference was a record in point of numbers, the members and friends reaching a total of 420 all told, the venue being Southampton and the Conference covering the three days, June 24th, 25th and 26th.

This is the first time in the history of the Association that Southampton has been selected for its annual meetings and it was the unanimous opinion of those who took part, that the Southampton Corporation, in the person of the Mayor, Mr. Councillor E. W. Cross, J.P., Ald. P. V. Bowyer, J.P., Chairman of the Southampton Corporation Tramways Committee, and the General Manager and Engineer, Mr. P. J. Baker, M.Inst.T., had done extremely well as the hosts of the Congress and had given visitors a magnificent reception and entertainment.

ALDERMAN A. G. ELLAWAY, J.P., THE NEW PRESIDENT.

Before proceeding to the formal business of the Conference a word may be said about the social arrangements.

An informal reception of members and ladies was held at the South Western Hotel by the President, Mr. R. Stuart Pilcher, F.R.S.E., M.Inst.T., and Mrs. Pilcher, and Mr. Councillor I. Brassington, chairman of the Manchester Corporation Transport Committee, and Mrs. Brassington.



MR. R. STUART PILCHER, F.R.S.E., M.INST.T., THE RETIRING PRESIDENT.

On Wednesday evening the Annual Dinner of the Association was held at which the guest of the evening was Mr. Herbert Morrison, M.P., Minister of Transport. Following this a dance was held.

On Thursday, following the morning conference, the members and friends enjoyed luncheon on board the R.M.S. "Aquitania" by kind permission of the Cunard Steamship Co., Ltd., at the invitation of the Mayor and Corporation of Southampton.

An invitation which met with great appreciation was the arrangement for members to attend one of four theatres in Southampton on the invitation of the Mayor and Corporation, the selection of the theatre to be visited being left to the choice of the member himself. Following this another dance was held at the South Western Hotel.

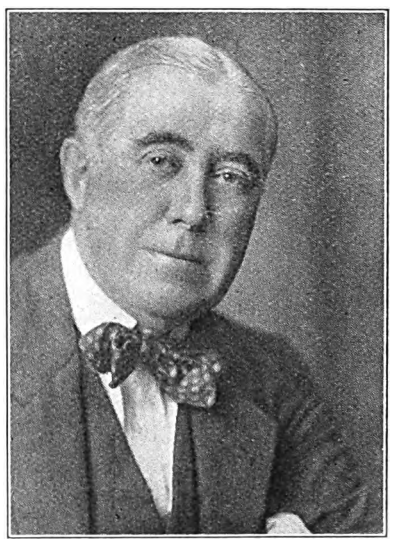
On Friday, the entire party enjoyed a full day on the water at the invitation of Sir John and Lady Thornycroft. It was intended to travel on the M.S. "Medina," but owing to the large number of members and guests who had accepted the invitation, it was found necessary to charter the very fine pleasure steamer "Lorna Doone" for the trip. Very hearty thanks were accorded to Sir John and Lady Thornycroft for their generous hospitality in providing the delegates with such an enjoyable outing, extending from 11 o'clock in the morning to 6 p.m. and in including both luncheon and tea on the water.

The Conference proper opened on Wednesday, June 24th, at 10 a.m. with a civic reception in the Chantry Hall, St. Mary Street, by His Worship the Mayor of Southampton, Mr. Councillor E. W. Cross, J.P.

Before delivering his presidential address it was agreed, on the suggestion of Mr. Pilcher, that messages of sympathy be sent to Mr. R. L. Horsfield, General Manager of the Leeds Corporation Tramways, and to Mr. T. B. Goodyer, both of whom had occupied the position of President of the Association, and who were seriously ill.

The President then extended a hearty welcome to representatives of other associations, especially mentioning Mons. de Backer, the General Secretary of the International Union of Tramways, who had come from Brussels to be present at the Conference.

Mons. de Backer, who was cordially received, thanked the President for his welcome and gave the Conference the good wishes of Mons. de Lancker, the President of the International Union, who regretted that he was unable to be present. Mons. de Backer expressed the hope that many members of the Association would be present at the International Conference to be held next year at the Hague. He expressed his disappointment that so few of the British municipal authorities had joined the International Union, particularly because they would be able to make English one of the official languages at their Conference if a sufficient number joined that body.



MR. CHARLES FURNESS, VICE-PRESIDENT.

The Presidential Address, delivered by Mr. R. Stuart Pilcher, F.R.S.E., M.Inst.T., the General Manager of the Manchester Corporation Transport Department, was an address of outstanding quality, showing a breadth of outlook and experience of the greatest value to the Association.

In a paper with many good points the subject of outstanding importance was that of technical education in the Transport Industry, a subject which is being tackled very thoroughly by the Institute of Transport, of which Mr. Pilcher is a member. It was interesting to learn that a special Committee had been set up with representatives of all important Transport Associations to deal with this subject, and there is no doubt that if this Committee gets busy, great good will follow in the education of the transport men of the future.

Digitized by Google

Following this came the presentation of medals and cheques to prize winners in the annual Essay Competition, and the president had the pleasure of handing to the successful candidates, not only medals but cheques for substantial amounts as a reward for their success. The prize winners were as follows:—

First Section.

(a) "Describe the methods or propaganda which should be adopted by a road passenger transport system to advertise the system and promote travel."

Cheque for £15 and silver medal:—Mr. Willaim J. L. Wood, clerk, Leicester City Tramways and Omnibus Department.

(b) "Modern methods of construction for electrical equipment of line, tramways and trolley buses, including cables and bonding."

Cheque for £15 and silver medal:—Mr. H. M. Dudgeon, overhead engineer, Birmingham Corporation Tramway and Omnibus Department.

(c) "What are the vital statistics necessary for the manager of a transport undertaking and why?"

Cheque for £15 and silver medal:—Mr. Edgar Ashby, chief accountant, Birmingham Corporation Tramway and Omnibus Department.

Second Section.

(d) "Describe the methods or propaganda which should be adopted for the prevention of accidents in connection with the operation of tramway cars, railless cars or buses, as applied to the passengers and as applied to the driver and conductor."

Cheque for £15 and silver medal:—Mr. L. M. Harley, bus conductor, South Shields Corporation Tramways and Motors Department.

(e) "Describe the way which, in your opinion, an omnibus driver should be trained."

Cheque for £10 and silver medal:—Mr. George Beckett, bus driver, Oldham Corporation Tramways Department.

(f) "Describe the methods or propaganda which should be adopted by a road passenger transport system to advertise the system and promote travel."

Cheque for £15 and silver medal:—Mr. Thomas F. Porter, trolley bus driver, Darlington Corporation Transport Department.

### The Annual General Meeting.

The General Report of the Council was submitted and carried unanimously, as was also the treasurer's annual statement.

Office bearers for 1931-32 were elected as follows:—

President.—Alderman A. G. Ellaway, J.P., Vice-Chairman, Birmingham Corporation Tramway and Motor Omnibus Department.

Vice-President. — Mr. Charles Furness, Transport Manager and Borough Electrical Engineer, Blackpool Corporation.

Hon. Treasurer.—Mr. A. R. Fearnley, General Manager, Sheffield Corporation Tramways and Motors.

Hon. Solicitor.—Mr. F. C. H. Wiltshire, Town Clerk of the Birmingham Corporation.

Hon. Auditor.—Mr. H. Moxon, Financial Officer, Leeds City Transport Department.

### New Members of the Council.

Mr. A. C. Baker, General Manager and Engineer, Birmingham Corporation Tramways.

Mr. A. T. Eardley, General Manager, Stockport Corporation Tramways.

* * * *

Following this necessary business an interesting discussion took place on the Compression-Ignition Engine, a subject of very special interest to the members of the Association, which was discussed at considerable length last year, after a paper read by Capt. W. Vane Morland, under the ten minutes' rule. The brief paper in which he introduced the subject appears in this issue following this report. The discussion which ensued showed the great interest taken in the subject by the members and also that the similar discussion of twelve months ago had borne fruit, by the fact that quite a number of Municipal Authorities had been experimenting with the heavy oil passenger vehicle, with successful results. To add to the interest a memorandum had been printed and circulated, dealing with the operating experience with motor omnibuses propelled by heavy oil engines, up to May 31st last, as used by municipal transport undertakings. Results of working by eight municipalities were given and these should form a valuable basis on which other municipalities can work.

After luncheon the Conference was resumed and a valuable paper dealing with the final report of "The Royal Commission on Transport" was discussed. This paper had been compiled by three members of the Association, Mr. John Barnard, M.B.E., M.Inst.T., General Manager, Bolton Corporation Tramways; Mr. John F. Cameron, General Manager, Northampton Corporation Tramways; and Mr. A. R. Fearnley, M.Inst.A.E., Sheffield Corporation Tramways and Motors. An exceedingly interesting and instructive discussion followed the introduction of the subject by the three authors of the paper, which dealt with many important points in the Road Traffic Act, 1930, and its effect on the working of municipal transport undertakings. Many of the delegates gave their views on this subject as it had effected their undertaking and many points of great interest were elucidated by one or other of the three authors of the joint paper.

The Conference resumed its discussions on Thursday morning when an interesting paper was given on "Road Passenger Transport Services: recent developments and the outlook: where do we stand?" by Mr. J. M. Calder, General Manager, Reading Corporation Tramways.

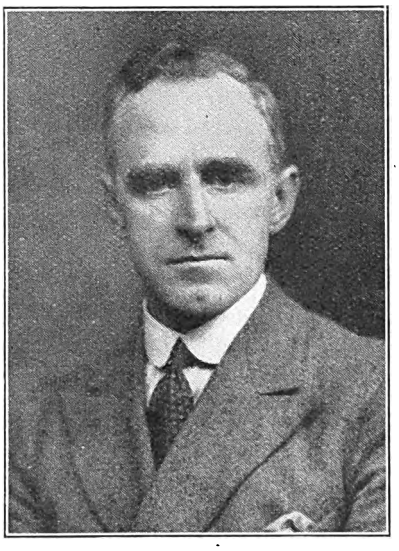
At the conclusion of the Conference votes of thanks were accorded with great heartiness to all who had taken part in the organisation of a very successful Conference.

Special congratulations are due to Mr. J. Beckett, the able and genial General Secretary of the Association, and to his Assistant, Mr. A. Chadwick, to whose indefatigable efforts the delegates were deeply indebted.

* * * *

## Annual Dinner.

The Annual Dinner of the Association, presided over by Mr. R. Stuart Pilcher, the retiring President, was so successful numerically, that no hall was big enough to contain the visitors, who overflowed into two other rooms which were connected by loud speakers. The particular guest was Mr. Herbert Morrison, M.P., Minister of Transport, who for the third year in succession had got away from his arduous duties to be present.



MR. P. J. BAKER, M.INST.T.

Following the usual Royal toast, Mr. Pilcher proposed the health of the Minister of Transport in a heartily worded speech.

Mr. Herbert Morrison, in his reply, expressed his thanks to the Association for inviting him to be present and for responding to the toast in so cordial a manner.

Mr. Morrison said that the work of the Association was of very great importance to local authorities owning transport undertakings, for it kept a national watch in the interests of such authorities, provided a means of communication and consultation between the local authorities, and pooled the managerial and technical knowledge of those responsible for the day-to-day conduct of municipal transport undertakings. The Association had more than justified its existence. Indeed, the position of the municipalities in the world of transport would have been very much weaker than it was had it not been for the work of the Association. Moreover, the Association was a valuable assistance to the State, for it constituted an organisation with which Ministers and Departmental Officers could consult on legislative and administrative matters of a national character.

Local authorities were playing a big part in the provision of local means of transport. The municipal capital invested in tramway and trolley vehicles undertakings alone — quite apart from omnibuses — was roughly £90,000,000, the gross receipts for the financial year 1929/30 being nearly £24,000,000 and the number of passengers carried over four thousand million.

In conclusion, Mr. Morrison thanked the Association for their valuable co-operation and assistance to his Department in framing of regulations and in other ways, and he confidently appealed to them to co-operate in the same spirit with the Traffic Commissioners who had now entered upon their important duties under the Road Traffic Act.

Digitized by Google

The President-Elect, Ald. A. G. Ellaway, J.P., proposed the toast of the Mayor and Corporation of Southampton, and this was responded to by Mr. Councillor E. W. Cross, the Mayor, and Ald. P. V. Bowyer, J.P., the Chairman of the Tramways Committee.

The toast of the President was proposed by Mr. Charles Furness, Vice-Chairman Elect, and Mr. Pilcher responded in his usual happy and appropriate way.

During the evening the toast of Mr. P. J. Baker was proposed by the President and received with acclamation, being accorded musical honours. Mr. Baker briefly responded.

The speeches finished just before eleven, the room was rapidly cleared and a very enjoyable dance followed in which many of the members took part.

* * * *

## Presidential Address.*

### Progress of Transport.

If we turn to the different spheres of transport, we see change and progress in every direction. The Chinese say "The future is only the past again," but this cannot be said to apply to transport. The French saying is more applicable: "Nothing is constant but change." On the sea, there is the development with different kinds of fuel, oil burning and pulverised coal. On the land, there is the great advance in road transport, an accelerated programme of road construction and an important development in the adaptation of the heavy oil engine for road transport purposes. In the air, there is greater safety in flying. The advent of the new type of flying boat "The Dornier Do X"—an unknown quantity—a machine capable of carrying 170 passengers, with a crew of nine. This machine is fitted with three decks, and has 12 engines developing 7,500 horse power, surely a new era in air travel.

### Importance of Transport to the Community.

In the introduction to the final report of the Royal Commission on Transport is the following statement.

> "It is unnecessary for us to emphasise the paramount importance of transport in relation to the State. Regarded in the narrower sense, solely as an industry, its magnitude may be illustrated by the fact that, according to the Committee on Industry and Trade, fully one and a half million people, or nearly 8 per cent. of the whole employed population, are directly engaged in one or other of its branches."

A very large number of these transport workers are engaged on road transport service.

Transport costs have a definite bearing on practically every commodity. In some cases, the cost of transport is as high as 60 per cent. of the cost of the goods. Any rise or fall in the cost of transport affects the price of the particular commodity. It may therefore be said that the successful trading of the country is inseparable from efficient and cheap transport.

The following is a census I have recently had taken in a typical Manchester factory to find out the cost of travel for each worker:—

| Transport | Number | Per-centage | Average weekly cost per employee s. d. | Percentage of travelling expenses to weekly wages |
|---|---|---|---|---|
| Bus | 94 | 27 | 2 0 | 4.22 |
| Train | 14 | 4 | 3 1 | 7.69 |
| Tram | 86 | 25 | 1 10 | 4.05 |
| Bus and Train | 6 | 2 | 7 2 | 10.68 |
| Bus and Tram | 52 | 15 | 3 0 | 5.64 |
| Train and Tram | 8 | 2 | 5 5 | 12.28 |
| | 260 | 75 | 2 5 | 5.07 |
| Bicycle | 15 | 4 | | |
| Walking | 72 | 21 | | |
| | 347 | 100 | | |

From this statement it will be seen that of 347 workers, 72 walked, 15 cycled to work, and the average cost to the remainder (75 per cent.) who required transport was 2s. 5d. per week. This worked out at 5.07 per cent. on the weekly wages. This is a typical case and it only shows how important the transport question is to the average citizen.

### Technical Education in Transport Industry.

It is true that the more one learns the more ignorant one feels. Owen said: "All things I thought I knew: but now confess the more I know I know, I know the less." I believe this applies equally in transport problems as in all others. I believe we all see the necessity of higher education and in my view, we should do what we can to foster the study of transport in all its branches in our young men. I would like to see our Universities and Technical Schools recognising the importance of transport as a subject to be treated specially. I am aware that a number of our Universities include in their syllabi for the B.Com. degree subjects like railways, but road transport is becoming as important as railways, and what of the other transport branches, such as the air services? Surely the time has come for a comprehensive course being introduced which would include all sections of transport, which our young assistants could take up as whole or part time courses, so that the Engineers and Managers of the future would have the advantage of starting their careers with as much technical knowledge of the subject as is required for other professions.

No industry can succeed without technical instruction. No profession can prosper without specialists, and with a growing and prosperous development such as exists with transport, there is no reason why the education authorities should not recognise the claims of what is a very important industry.

It is satisfactory to know that most of our University Authorities already recognise the importance and necessity of dealing with this subject—not only so, but some are anxious to make a start. I believe they are only waiting for some millionaire interested in transport to leave them the necessary funds in order to create lectureships, but we are a healthy body of men, we live long, we would ask them not to wait until we are dead! In the University of Yale, U.S.A., there are two professorships in Transportation, also one professorship in the economics of Transportation, the endowments for the chairs of transportation were given by Lord Strathcona.

In the Harvard University there is one professorship and two part time lecturers in Transportation. Many of the American Universities include in their curriculum, Railways, Canals, Road Transport, Public Utilities, Economics of Transport, and the subject of Commerce is usually bracketed with Transport, viz:—"Commerce and Transport."

In the University of Toronto there is one Professor of Transport in the school of economics.

A lectureship on transport when included in another subject, such as economics, can be provided for £350 to £400 per annum. This is the sum required by a University to make a start.

A special Committee has been set up at the instance of your Council with representatives of all the important Transport Associations and with their assistance I am hopeful that we may be able to urge the University Authorities to deal with this important subject.

### Road Traffic Act.

Although the Act has only been in force for a short period, I think we can say that its operation has been a great improvement on the old order of things. So far as legislation is concerned, the Act is in advance of most other countries as regards safeguards for the public, the regulation of services and the standardization of regulation of fitness for vehicles.

The speed limit alterations have had little effect on the operation of public service vehicles, except to permit a maximum of 30 miles instead of 20, and few of us wish buses to run higher speeds than 30 miles per hour.

### Traffic Congestion.

Among the foremost problems of the day is that of Traffic Congestion, especially in our large cities. The streets have reached saturation point, when the road will not take any more traffic, without a slowing up process taking place. It is difficult for the public to appreciate that in a given street there are only so many vehicles which can pass in an hour, and to add to that number is merely to slow down the whole, and eventually to cause a complete blockage.

Our transport undertakings, whether tramways or buses, are materially affected by this problem. The trams are blamed for obstruction and yet they remove more people per yard of street space occupied than any other vehicle.

The buses are abused for blocking the thoroughfare because they occupy the whole of the street, yet they occupy a very small amount of street, per person carried, as compared with the ordinary motor car.

The following table shows the relative amount of street space occupied by each vehicle in Manchester:—

| Average Passengers Carried | Type of Vehicle | Street Space Occupied | Square Yards per Passenger |
|---|---|---|---|
| 2 | Motor Car | 9 sq. yds. | 4.5 |
| 50 or 32 | Motor Bus | 22 sq. yds. | .44 or .687 |
| 78 | Tram Car | 28 sq. yds. | .36 |

There has been a great improvement in the regulations and speeding up of traffic by the introduction of automatic signals and the introduction of one-way streets. I believe

* Extracts from the Presidential Address of Mr. R. Stuart Pilcher, F.R.S.E., M.Inst.T., General Manager of the Manchester Corporation Transport Department and the retiring President of the Association.

Digitized by Google

that a greater advance could be made by the abolition of slow-moving vehicles on certain main streets and the restriction of parking of motor vehicles during certain hours. The public utilities can assist the problem by running their vehicles at a higher average speed, and by the introduction of garage or bus stations in or near the centre of the town.

### Peace in Industry.

One of the best ways of promoting good trade is by the avoidance of trade disputes, strikes, lock-outs, or stoppages for whatever cause. Disorganised trade affects the flow of orders, causes bad feeling amongst customers, employers and employees, and breeds a general distrust of each other. It always takes some time to recover from a dispute: there are many sufferers and none that benefit. The settlement is usually a compromise: why not a compromise at the beginning?

We have been fortunate in freedom from strikes since 1925. This is due to the smooth working of the Industrial Council and the national agreement which is in force.

This principle is now being extended to the Municipal Bus Industry and I believe the benefits will be equally good when a new national agreement is made in conjunction with local agreements and with its area councils.

Transport is a key industry, its workers come in contact with every trade and profession. The public tram or bus is a democratic vehicle where all classes meet on a level.

The transport worker is enthusiastic and keen in his work. As a rule he has a good esprit de corps. He works under good conditions, receives good wages, has reasonable prospects of promotion and a steady job.

### Conclusion.

The Association is becoming stronger and more influential every year. Its representatives are invited to be members of all important committees connected with transport whether Government Committees or otherwise. I am sure that the work of the Association has a material effect on improving all the undertakings associated with it.

In closing, I would like to refer to the work of the Hon. Treasurer, Mr. Fearnley, who is always available and who is ever ready with constructive assistance in all the difficulties and problems which the Association has to face.

As to our General Secretary, Mr. Beckett, you all know how efficient and active he is, but although the different members see his correspondence, which he says you don't always read, you do not see as much as the President. I wish to personally pay my tribute to him and thanks for his assistance and co-operation. The Association is fortunate in their General Secretary. In eleven days from now—July 4th—he will have completed twelve years in his present position.

The members of the Executive Council, one and all, give a great deal of time and diligence to their work. It has been a great pleasure to be associated with them during the year.

## Compression-Ignition Heavy-Oil Engines.

### Introductory remarks by Mr. W. Vane Morland, A.M.I.Mech.E., M.I.A.E., M.Inst.T.

Ever since the beginning of the Age of Energy each new discovery and invention has had to make its way into practice against a scepticism that amounted at times to hostility. This may be due to the fact that the history of human development is one largely of errors made in good faith and later repented with sincerity. And it is not always our errors which are ridiculed. Many epoch making achievements have been subject to ridicule and opposition, often — let it be said — mainly compounded of lack of understanding and technical conservatism. Moreover a newly discovered or new application of mechanical energy is at a serious disadvantage in these days in the sense that it has to compete against an already established rival.

CAPT. W. VANE MORLAND.

When the compression-ignition oil engine entered the field of road transport, to compete with the petrol engine for the eventual supremacy, it was heavily handicapped by reason of the utter success of its petrol consuming rival. Thus the compression-ignition engine is faced by a disadvantage which was not shared in the evolution of the petrol engine, i.e., comparison.

Let us freely admit that the modern petrol engine is a highly efficient and refined power unit. It is common knowledge that the exigencies of the Great War caused an immense amount of wealth and energy to be concentrated on its development. This national need or urge in the development of the compression-ignition oil engine, is perhaps not obvious. To my mind it is however present in no small measure. Land transport is becoming increasingly petrol driven. Huge fleets of goods and passenger vehicles have sprung into being and it is the very presence and success of this modern transport Armada which urges concentration on the problem of finding satisfactory alternatives to imported motor spirit. Last year we paid approximately £42,000,000 to foreign nations for the 2,000,000,000 gallons of oil which we imported, at least 75 per cent. of which was Motor Spirit and Fuel Oil. I believe that our economic salvation will, to a large extent, be found in the utilisation of our great natural fuel resource, coal, in providing the fuel for this vast fleet. The evolution of the compression-ignition engine is undoubtedly a great step forward in this direction on which the existence of our national safety depends in no small measure. The progress of the experiments that we have already made demonstrate that the end of our present dependence on imported spirit fuels is well in sight. How far this will materialise largely resolves itself into a question of national policy. Let me be quite candid and say that I do not suggest that the compression-ignition oil engine is at the moment superior to the petrol engine. Like all other power units it is experiencing its "teething" troubles.

Perhaps I might be excused for repeating what I said at the last Annual Conference:—

"It should be remembered that the latest types of petrol-engined buses have reached an exceedingly high stage of refinement, and any attempt on the part of the operators to inflict on the public a vehicle in any way inferior, will be strongly resented. The conditions obtaining in the operation of motor omnibuses on heavy trafficked town routes are such as to require a highly efficient and refined vehicle, and the heavy oil engine has not yet reached that high stage of refinement. If any attempt is made to force the pace, and place considerable numbers of more or less immature models on the streets, there is a real danger that hostile criticisms may strangle the use of these engines for passenger work, and so retard normal development and progress."

It is not my intention to indulge in a lecture on the technicalities of the oil engine or a dispute with the protagonists of the tram or the trolley-bus, or the petrol bus, but merely to remark that since writing the foregoing, considerable progress has been made.

I believe the compression-ignition engine has immense possibilities, and that in one form or another it is bound to play an ever-increasing part in our national transport scheme. Those of us who appear before you to-day as experimenters are in no sense wearing the white sheet of penitence. We have, in the limited mileage already accomplished, saved our respective ratepayers approximately £1,000 in fuel economies. From the manufacturers' point of view the successful evolution of this remarkable engine is no less important. Transport operators overseas are literally clamouring for this engine. The economics of the oil engine in the tropics can be gauged from the fact that in such countries as India, petrol loses approximately 10 per cent. in volume daily. As a nation of engineers, exporting our products to the four quarters of the globe, the evolution of the oil engine is a matter of supreme importance.

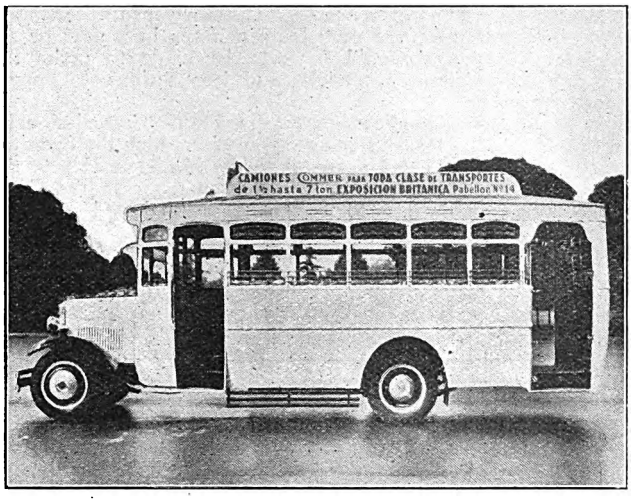
# Motor Coach and Bus Notes.

**Crossley Heavy Oil Buses for Bury.**—Crossley Motors, Ltd., Gorton, Manchester, recently received an order from Bury Corporation for five complete heavy oil engined double-deck omnibuses.

**Commer "Invader" in Buenos Aires.** — During the British Empire Trade Exhibition held at Buenos Aires in March and April last, the Commer "Invader" fitted with a special bus body and shown in the photograph, was in use.



THE COMMER "INVADER" REFERRED TO IN TEXT.

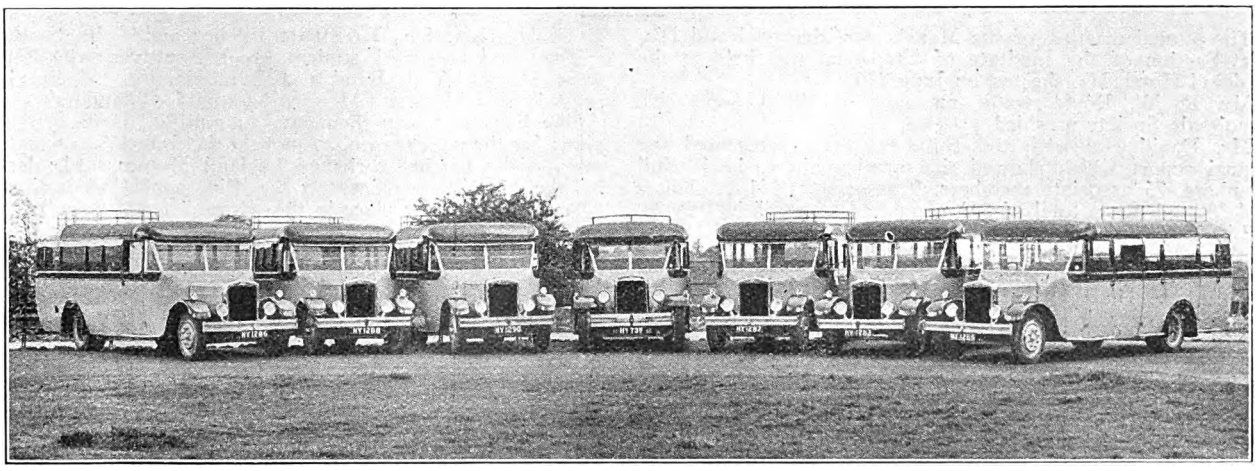
ONE OF THE EASTERN NATIONAL OMNIBUS CO.'S LATEST "THORNYCROFT" DOUBLE-DECK BUSES.

**Bence All-weather Coaches.**—Our illustration shows a fleet of seven all-weather coaches recently designed and built by W. J. Bence, Ltd., Longwell Green, near Bristol, for Mr. L. W. Andrews, "Clifton Greys," 73, Whiteladies Road, Clifton, Bristol. Six of the vehicles in question are mounted on the "B.A.T." cruiser chassis and the remaining one on the "Reo" long wheelbase pullman chassis. All the coaches are fitted with "Sunsaloon" head fittings—mechanically operated from the driver's seat—and all have three doors on the near side, to facilitate quickness of entrance and exit and also accommodating extra seating. The "Reo" pullman is a 28-seater and the "B.A.T." cruisers are 24-seaters. All are upholstered in moquette and all fittings—exterior and interior—are chromium plated.

**One of the Latest "Thornycroft" Double-Deckers.**—Our photograph shows one of a fleet of John I. Thornycroft & Co.'s latest double-decked buses supplied to the Eastern National Omnibus Co., Ltd.

**New Type Buses for Birmingham.**—The Birmingham Corporation Tramways and Omnibus Committee has decided to place an order for 10 Morris-Commercial "Dictator" 34-passenger single-deck omnibuses. The engine and transmission gear of these vehicles can be run out of the chassis on the front wheels, and similarly replaced, in less than three hours.

**Manchester Coachowners Scheme.**—Manchester coach-owner members of the Manchester Transport Owners' Association are finding that their co-ordination scheme is again this season giving very satisfactory results in eliminating modestly filled coaches, avoiding unnecessary congestion in the streets and in regulating the use of booking offices. It is satisfactory to learn that the city police authorities take a friendly view of this effort in practical co-operation. Many difficulties which might have arisen had coach owners been operating their services single-handedly, have been satisfactorily dealt with in the co-ordination scheme.



MR. L. W. ANDREWS' ALL-WEATHER COACHES—BODYWORK BY W. J. BENCE, LTD.

**Traffic Commissioners in Scotland.** — Mr. T. E. B. Chalmers, the Public Service Vehicles Certifying Officer for the Southern Area of Scotland, has sent a letter to the owners of public service vehicles in his area pointing out that when purchasing second-hand vehicles operators should make quite sure that they comply with the Regulations issued under the Road Traffic Act. He states that he has found numerous cases where operators have bought such vehicles only to find afterwards that they did not so comply and in some cases the expense incurred in alterations has been actually more than the price paid. Mr. Chalmers points out further that owners must return application forms P.S.V.1 and P.S.V.3 in duplicate before a request is made for new vehicles to be inspected with a view to the grant of a Certificate of Fitness. Mr. Chalmers will inspect public service vehicles for Certificates of Fitness at Dumfries on July 20th, and at Glasgow on July 27th.

# Liverpool, Cheshire and North Wales Coach Owners.

To discuss difficulties arising from the operation of the Road Traffic Act, the Liverpool Area Committee of the Commercial Motor Users' Association convened a meeting of Liverpool and district, Cheshire and North Wales motor coach owners which was held in the North Western Hotel, Liverpool, on June 19th.

Mr. T. Lawrenson presided and amongst those present were Mr. F. G. Bristow, general secretary of the C.M.U.A., and representatives of the following firms:—Messrs. Carney and Watson, Llandudno; Southport and Birkdale Motor and Carriage Co., Ltd.; C. James, Liverpool; Wilkinson and Co., Liverpool; D. W. Owen, Caernarvon; New Brighton Touring Co., Ltd.; Owen Roberts, Colwyn Bay; T. J. Roberts, Bethesda; Major James Bennett, Liverpool; F. Supplies, Liverpool; Bullock and France, Southport; Marriner Bros., Southport; Chas. Grieve, Liverpool; H. M. Robinson, Wallasey Motor Touring Co., Ltd.; F. H. Macdonald, Maxways, Birkenhead; Gores, Southport; M. McAdam, Liverpool; J. Jones, Llandudno; H. Greening and Sons, Warrington; Harry Shaw, Warrington, etc.

Mr. T. Lawrenson in opening the meeting said it looked as if motor coach owners were in for a rough time when they appeared before the Traffic Commissioners, and what made things worse was the fact that in the matter of organisation Liverpool and district motor coach owners seemed much behind the rest of the country. In consequence of the zoning agreement which had been reached between the Liverpool Corporation and the railway owned motor bus companies, there were troubles ahead. He was of the opinion that when the agreement came before the court strong opposition should be put forward by motor coach owners whose interests might be adversely affected. Much of their troubles in the past, and perhaps to-day, might be due to the fact that in the transport industry there was too little unity. If users could face the Ministry as a united body, they would command much more respect.

Mr. F. G. Bristow who examined and explained the principal provisions of the Road Traffic Act said that even in the last few days he had come across many instances where not even the most elementary requirements of the Act were appreciated by the people most concerned. The limitation of drivers' hours would loom largely on the horizon in the next twelve months. No driver was allowed to work more than eleven hours in any one day, commencing at 2 a.m. but as time went on, he was hopeful that some concession would be made to the industry.

A great deal of discussion had centred round a very simple point:—when should the driver stop his vehicle? There were only three occasions when a driver was compelled to stop (1) when requested to do so by a constable in uniform; (2) when there is an accident to a person, vehicle or animal and (3) when the driver is commanded to do so by traffic signals or traffic constables. When an officer in plain clothes attempted to hold a driver up in the street there was no need for him to stop.

If any operator publishes a time table or gives instructions to drivers which would have the effect of any journey being completed at a speed exceeding 30 miles per hour, the owner could be summoned and the driver also for aiding and abetting. The Traffic Commissioners were attaching great importance to speed limits.

Mr. Bristow in a reference to compulsory insurance said it was obvious that before very long, perhaps in a year or so, some arrangements would have to be made to make the insurance provisions watertight and less serious for many operators.

With regard to applications to the Traffic Commissioners, in the event of a decision being given with which the operator was not satisfied, he could appeal to the Minister. Up to the end of May 30,000 applications had been made to the Commissioners, of which 3,095 had been granted and only 154 refused.

The C.M.U.A. was endeavouring to get a reduction in the amount of the vehicle licence fees in view of the increase in the amount of the petrol tax. They also took the view that as there were thirteen traffic commissioners, they should hold periodical conferences and pave the way for a uniform policy throughout the country. The present procedure for the granting of licences for spare drivers was rather cumbersome; it should be made much more simple.

Operators also felt there should be some finality as to the number of accessories that should be required on vehicles. They were objecting to the installation of speedometers on various grounds. It was being suggested to the Ministry that where party excursions and tours were undertaken by motor buses and where the passengers were taken from one particular point to another, it should not be necessary for the owner to apply to the Commissioners for a road service licence. Seven days notice should be given to operators of the intention to inspect vehicles, or alternatively an arrangement should be made mutually convenient to the examiner and the owner.

The chairman called attention to what had been done in Manchester by way of making a block application for licences, the cost being distributed over the number of applicants. It appeared to be late in the day for Liverpool to adopt similar procedure, owing to lack of organisation, but if the forms were submitted by coach owners to the secretary, the latter would make the best arrangements possible.

# Institute of Transport.

**Manchester-Liverpool and District Section.**

The annual meeting of the Manchester-Liverpool and District Section of the Institute of Transport was held at the Midland Hotel, Manchester, on June 26th.

Mr. R. W. Royle, traffic manager of the Co-operative Wholesale Society presided.

Mr. David Halliwell, the Hon. Secretary, presented the annual report which showed the membership to be 70 full members, 75 associate members, 9 associates, 111 graduates and 38 students, a total of 303, compared with 295 in 1929-30, 202 in 1928-29 and 273 in 1927-28. Mr. Halliwell paid tribute to the memory of Mr. W. A. M'Grath who he said was the foundation chairman of the North Western Section and occupied the chair for three years. Much of the success of the Section was due to his inspiration.

After a detailed reference to the work of the past session, Mr. Halliwell mentioned that the Institute examination was held at the High School of Commerce, Manchester, and sixteen candidates entered from the Section. The Committee expressed their appreciation of the help afforded by the Manchester Education Committee and the Principal of the High School of Commerce (Mr. H. L. Marsden).

The financial statement was presented by Mr. H. Howard Robinson and adopted.

Five vacancies were notified on the committee due to the automatic retirement of Major Frank Bustard, Mr. E. H. Edwardes, Mr. G. B. Lissenden, Mr. Gerald Leedam and Mr. J. R. Williams after three years service. Their places are to be filled by Mr. William Chamberlain (chairman of the North Western Traffic Commissioners). Mr. A. J. Green (traffic manager, Calico Printers' Association), Mr. Maclaren Hamilton, Mr. M. A. Robinson (Coast Lines Liverpool) and Mr. C. A. Stafford. The other members of the committee are Messrs. Norman E. Box, R. W. Bradley, F. H. Cowell R. Davidson, W. Edwards, F. R. Hauxwell, J. Marshall, J. G. Merriweather, R. Stuart Pilcher and Colin S. Percy.

The graduates and students representatives who retired were Messrs. A. J. Bond and J. Balmanno. Their places are taken by Messrs. T. P. Beasley and J. Gillanders.

The hon. secretary then gave an outline of the proposed plans for the next season. Amongst the fixtures contemplated are:—visits to the works of Leyland Motors, Ltd.; lecture by the veterinary officer to the Liverpool Corporation on "The horse and its place in the scheme of transport"; paper on the Diesel engine by a representative of Crossley Motors, Ltd., and possibly a visit to the works; social evening when it is hoped to show a cinematograph film of the recent visit by members of the Institute to Italy; Paper by Mr. Carl Fox on modern methods of road transport publicity; paper on railway electrification; paper on progress in passenger road transport; and at least one other works visit. The suggestion was made by one member that it would be very interesting for members to pay a visit to see the progress of the Mersey Tunnel works.

The secretary said this would be borne in mind for the visit to Liverpool in October.

There was discussion on the suggestion for a lecture on the technicalities of the Diesel engine, it being pointed out that as a large number of members of the Section were interested in the operative side of transport, data as to day to day operation and maintenance might be more desirable than technicalities.

The chairman said they had a good many members who were heads of departments and they were keenly interested in what the Diesel engine was going to do and how it was going to be developed. At present, this unit was only in embryo form but it was forcing its way to the front. He was sure that members would want to get all the information possible on the subject.

# Co-ordinating Rail and Road Travel.

## Further Working Agreements.

THE following is printed in the *Railway Newsletter*, July issue:—

Further working agreements have been made by the railways with the larger road transport concerns of the country. The setting up of joint committees in each case for exchanging ideas and carrying out a policy of co-ordination between rail and road services has been productive of benefit to the public in the shape of interavailability of tickets, which is now in operation at a very large number of places, improved connections between rail and road services, co-ordination of timetables, etc.

The following is a complete list to date of associated road motor companies with whom arrangements have been made:

LONDON, MIDLAND AND SCOTTISH RAILWAY.

| *Associated Road Company.* | *District covered.* |
|---|---|
| Ayrshire Pullman Service. | Ayr, Girvan and Newton Stewart. |
| Birmingham & Midland Motor Omnibus Co., Ltd., incorporating— Black & White Motorways, Ltd. (Jointly with Great Western Railway). | Staffs., Leicestershire, Warwickshire, Worcestershire, Herefordshire, Salop., Oxon. and Northants. |
| Crosville Motor Service, Ltd., incorporating— Llandudno Coaching & Carriage Co. Brookes White Rose Services, Rhyl. U.N.U. Motor Services, Carnarvon. Mona Maroon Services, Holyhead. | North and Central Wales, Anglesey, Chester, Wirral, Liverpool, Warrington, Northwich, Crewe, Whitchurch, etc. |
| Cumberland Motor Services. | Cumberland. |
| Glasgow General Omnibus Services, Ltd. | Glasgow. |
| Greenock & Largs Services. | Greenock and Largs. |
| Greenock Motor Co. and L.M.S. Joint Omnibus Services. | Between Glasgow, Greenock and Largs. |
| Highland Transport Co., Ltd. | Inverness, Dingwall, Dornoch, etc. |
| L.M.S. & Mansfield & District Tramways Co. (Joint Service). | Mansfield, Southwell and Newark. |
| Ribble Motor Services, incorporating— Rishton & Antley Motor Co. Furness Omnibus Co., Ltd. | Liverpool, Wigan, Bolton, Manchester and northwards to Carlisle. Barrow, Windermere, etc. |
| Stewart & McDonald, Ltd. | Glasgow, Coatbridge, Motherwell, Newarthill, Wishaw, Lanark, Biggar and Symington. |
| Todmorden Corporation & L.M.S. Joint Omnibus Services. | Todmorden. |
| J. W. & R. Torrance, Ltd. | Hamilton and Glasgow. |

LONDON AND NORTH EASTERN RAILWAY.

| | |
|---|---|
| Eastern Counties Road Car Co., Ltd. | Norfolk and Suffolk. |
| East Yorkshire Motor Services, Ltd. | East Yorkshire. |
| Northern General Transport Co., Ltd. | Northumberland and Durham. |
| United Automobile Services, Ltd. | Northumberland, Durham, Yorkshire, Lincolnshire, Norfolk and Suffolk. |

L.M.S. AND L.N.E.R. JOINTLY.

| | |
|---|---|
| Eastern National Omnibus Co., Ltd. | Essex and Bedfordshire. |
| East Midland Motor Services, Ltd. | Derbyshire, Nottinghamshire and Yorkshire. |
| Hebble Omnibus Services. | Yorkshire. |
| Lincolnshire Road Car Co., Ltd. | Lincolnshire and Nottinghamshire. |
| North Western Road Car Co., Ltd. | Cheshire and Derbyshire. |
| Ortona Motor Co., Ltd. | Cambridgeshire. |
| Peterborough Electric Traction Co., Ltd. | Cambridgeshire, Huntingdonshire and Norfolk. |
| Trent Motor Traction Co., Ltd. | Nottinghamshire and Derbyshire. |
| West Yorkshire Road Car Co., Ltd. | Yorkshire. |
| Yorkshire Traction Co., Ltd. | Yorkshire. |
| Yorkshire (Woollen District) Electric Tramways, Ltd. | Yorkshire. |
| Scottish Motor Traction Co., Ltd., incorporating— | Scotland. |
| W. Alexander & Sons, Ltd. | Scotland. |
| Scottish General Omnibus Co., Ltd. | Stirling, Fife, Lanark. |
| Scottish General (Northern) Omnibus Co., Ltd. | Aberdeen, Nairn, Inverness. |
| Simpsons & Forresters, Ltd. | Stirling, Fife, Kinross. |
| Pitlochry Motor Co., Ltd. | Perth, Ayr. |
| General Motor Carrying Co., Ltd. | Fife, Perth, Stirling. Lanark. |
| Midland Bus Services, Ltd. | Scotland. |

Note:—Arrangements have been completed for an amalgamation of the Eastern Counties Road Car Company, Ltd., the Ortona Motor Company, Ltd., the Peterborough Electric Traction Company, Ltd., and the undertaking in Norfolk and Suffolk of the United Automobile Services, Ltd., which will take effect as from the 1st October next. The new company will be known as the Eastern Counties Road Car Company, Ltd.

CORPORATION UNDERTAKINGS IN WHICH L.M.S. AND L.N.E.R. HAVE JOINTLY ACQUIRED AN INTEREST.

| | |
|---|---|
| Halifax. | Yorkshire. |
| Sheffield. | Yorkshire, Lancashire, Lincolnshire and Derbyshire. |

L.M.S. ONLY.

| | |
|---|---|
| Huddersfield. | Yorkshire. |

GREAT WESTERN RAILWAY.

| | |
|---|---|
| Birmingham & Midland Omnibus Co., Ltd., incorporating— Black & White Motorways, Ltd. (Jointly with L.M.S.) | Staffs., Leicestershire, Warwick, Worcester, Hereford, Salop, Oxon, and Northamptonshire. |
| Bristol Tramways & Carriage Co., Ltd. | Bristol district. |
| City of Oxford Motor Services, Ltd | Oxford district. |
| Devon General Omnibus and Touring Co. (Jointly with Southern Rly.) | Devon. |
| Thames Valley Traction Co., Ltd. (Jointly with Southern Rly.) | Parts of Buckinghamshire, Berkshire, Hampshire and Oxford. |
| Western National Omnibus Co., Ltd | Devon and Cornwall — south of a line from Newquay to Exeter; also parts of Somerset, Gloucestershire, Dorset and Wilts. |
| Western Welsh Omnibus Co., Ltd. | South Wales—south of a line from Aberayron to Hereford. |
| Wrexham & District Transport Co., Ltd. | North Wales—north of a line from Aberayron to Hereford. |

SOUTHERN RAILWAY.

# Public Cleansing Demonstration at Olympia.

IN connection with the first International Conference on Public Cleansing to be held from July 27th to 31st inclusive, there will be a comprehensive and interesting demonstration of vehicles, appliances and plant exhibited at Olympia for the three days from July 28th to July 30th. Although many of the entries do not come within the scope of transport, others should be of interest to road transport contractors, undertaking municipal work in connection with street cleansing and refuse-collection. We are therefore giving a list of the firms exhibiting, with the machines which will be shown in those cases where information has been supplied to us.

**List of Exhibitors and Their Exhibits.**

Dennis Bros., Ltd., Guildford.
- 350-Gallon Cesspool-Emptier incorporating 30-cwt. pneumatic-tyred chassis.
- 550-gallon Multi-Purpose Gully-Emptier.
- 1,100-gallon Dual-Purpose Machine.
- 1,200-gallon Street Washing and Watering Machine.
- 10 Cubic Yard Refuse-Collector.
- Dennis Motor Lawn Mowers.

W. & G. Du Cros, Ltd., Acton, W.3.
- Two Refuse Collectors.

Eagle Engineering Co., Ltd., Eagle Works, Warwick.
- Eagle-Thornycroft Hygienic low-loading Refuse Collection Vehicle.
- International Tractor coupled with a New Eagle Dustless Collector.
- Eagle Patent 2 wheel Trailer with Hygienic Covers.
- Eagle Cable Rotary Bin Collector.
- Other vehicles will appear on the stands of Halley Motors, John I. Thornycroft, Easyloader, Karrier Motors, and Electricars.

Electricars, Ltd., Lawley Street, Birmingham.
- Electrically Propelled Tractor.
- New chassis designed to take the Eagle-Neuey Dustless Refuse body equipped with Ess-Em shutters.
- A Similar chassis as above, with the exception that it has been made suitable to take the Faun body. Also equipped with Ess-Em shutters.
- All-Electricar model.
- Electricar 2-ton machine fitted with Ess-Em shutter.

F. M. Motors, Ltd., Manor Gardens, Chelsea, S.W.3.
- F. M. Refuse Collection Vehicle.

Guy Motors, Ltd., Fallings Park, Wolverhampton.
- Guy Sweeper Loader.

Halley Motors, Ltd., Yoker, Glasgow.
- 24-36 h.p. 4 cylinder Dustless Refuse Collection Vehicle.
- 30-85 h.p. cylinder 1,000 gallon Halley-Eagle Street Washing and Watering Vehicle.

Karrier Motors, Ltd., Karrier Works, Huddersfield.
- New Type "ESC" Sweeper and Collector with Curved Broom.
- "RB 700" Sweeper with Squeegee attachment.
- "CYR" 500 gallon Gully Emptier.
- New type "RSC" Sweeper and Collector with Curved Broom.
- "CYR" Special Purpose Refuse Tipper.
- "CYR" Tipper with interchangeable Water Tank for Street Washing Purposes.
- "Colt" three-wheel Refuse Collector.
- "Colt" three-wheel Street Sweeper.
- Two demonstration "CYR" Refuse Collectors with all steel bodies.

Lacre Lorries, Ltd., 78, York Road, King's Cross, N.1.
- Lacre "L" Type Sweeper. (Four of these vehicles will be shown, being repeat orders to different councils).

Morris Commercial Cars, Ltd., Soho, Birmingham.
- 35-40 cwt. Model Refuse Collection Vehicle.
- 35-40 cwt. Long Wheelbase Model Refuse Collection Vehicle.

Shelvoke & Drewry, Ltd., Letchworth, Herts.
- Two 3-ton 10 cubic yard Freighter Dustless Loaders.
- One "Chelsea" Type Freighter Dust Cart.
- One 3-ton, 10 cubic yard "Newcastle" Type Freighter Dust Cart.
- One Freighter Dust Cart having a 3-ton, 10 cubic yard body with canvas covers.
- One freighter Demountable Refuse Container Vehicle.
- One Freighter Double Deck Interchangeable Dustbin Wagon.
- One Freighter Street Watering Cart.

John I. Thornycroft & Co., Ltd., Thornycroft House, Smith Square, S.W.1.
- Eagle-Thornycroft 7 cubic yard low-loading Refuse Collection Vehicle.
- Eagle-Thornycroft 800 gallon Cesspit Emptier.

Unic Automobiles, Ltd., 303-5, Cricklewood Broadway, Cricklewood, N.W.2.
- Unic Low Load Line Refuse Collecting Vehicle.

Yorkshire Patent Steam Wagon Co., Hunslet, Leeds.
- Yorkshire Gully Emptier.

**Firms whose particulars have not reached us at the time of going to press are:—**

Albion Motors, Ltd. (Sales Dept.), Bank Buildings, 20, Kingsway, W.C.2.

Allan Taylor & Co. (F. W. Taylor), 118, High Street, Wandsworth, S.W.

Britannia Batteries, Ltd. (Advtg. Dept.), 233, Shaftesbury Avenue, W.C.2.

Bunce, Wm., & Son, Ashbury, Swindon.

County Commercial Cars, Ltd. (Secretary), Abbey House, Westminster, S.W.1.

D. P. Battery Co., Ltd., Bakewell, Derbyshire.

Faunwerke G.m.b.H. Wachterstr. 2/16, Nurnberg, Germany.

Fowler, John, & Co. (Leeds), Ltd., Leeds.

Garrett, Richard & Sons, Ltd., Aldwych House, Aldwych, W.C.2.

General Vehicle Co., Ltd. (Secretary), 15, Devonshire Street, Bishopsgate, E.C.2.

Gottfried Linder, A.-G. (Export Dept.), Ammendorf Nr. Halle-Saale, Germany.

Heenan & Froude, Ltd., Shrubb Hill Engg. Works, Worcester.

Industrial Waste Eliminators, Ltd., 20, High Holborn, W.C.1.

Maskinfabriks Aktiebolaget Norrbacken (Director Hilding Linde), Blomstehmala, Sweden.

Mitchell Conveyor & Transporter Co., Ltd., Atlantic House, 45-50, Holborn Viaduct, E.C.1.

New Easyloader Motors, Ltd. (A. E. Tapper), 100, Palmerston Road, N.W.6.

Sherwood, John, Dover House, 170, Westminster Bridge Road, S.E.1.

Somua (Andre Rhul), 146, Boul. Victor-Hugo, St.-Ouen-sur-Seine, France.

Vauxhall Motors, Ltd. (A. F. Palmer Phillips), Edgware Road, The Hyde, Hendon, N.W.9.

Walker Bros. (Wigan), Ltd. (Motor Dept.), Pagefield Iron Works, Wigan.

Woodall-Duckham Vertical Retort & Oven Construction Co. (1920), Ltd. (Secretary), Allington House, 136, Victoria Street, S.W.1.

## Third Party Risks.

**Important Announcement.**

IT has been brought to the notice of the Minister of Transport that in many policies against third party risks arising out of the use of motor vehicles is included a condition, of which the effect is that the insurers are not liable if the person driving the vehicle concerned is not the holder of a driving licence under the Road Traffic Act, 1930.

The result has been that in some cases where, through inadvertence, a driver has failed to renew his driving licence, this offence has entailed a further offence of a considerably more serious character under Part II of the Act, viz., using an uninsured vehicle on a road.

As the result of negotiations, members of the Accident Offices Association, Lloyd's Underwriters and practically all the independent Insurance Offices have agreed that all future insurance certificates issued in connection with motor vehicle policies will be amended by replacing the existing clause as to driving licences by the following:—

"Provided that the person driving holds a licence to drive the vehicle or has held and is not disqualified by order of a court of law or by reason of age or disease or physical disability for obtaining such a licence."

Future policies will be similarly amended.

Policies and certificates which have already been issued and are still in force will be interpreted by insurers as containing the above amendment and it is, therefore, unnecessary for policy holders to return their policies or certificates for alteration.

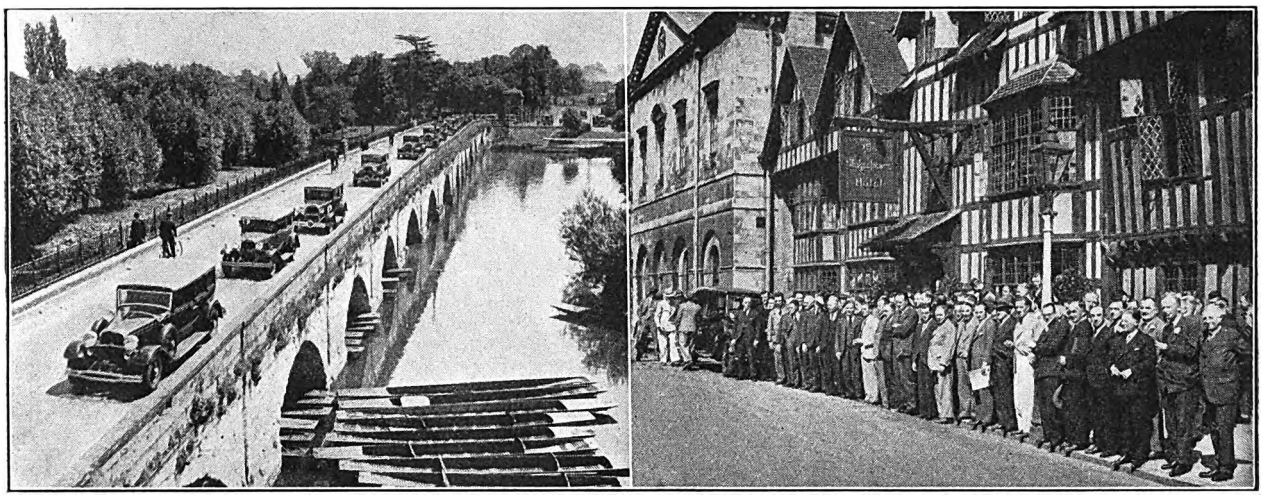
# Great Ford 72-Hour Reliability Trial.

MANY Ford cars took part in a great engine non-stop dependability demonstration organised recently by the Ford Motor Company, Limited.

By adhering to a predetermined route, embracing the stiffest gradients and poorest surfaces in the vicinity, the intention was to demonstrate the complete dependability of the Ford cars which, in addition to the three days and nights continuous running observed a strict time schedule.



LEFT: SOME OF THE CARS ARRIVING FOR THE RALLY AT STRATFORD-ON-AVON. RIGHT: THE ENGLISH ENTRANTS OUTSIDE THE ANCIENT SHAKESPEARE HOTEL AT STRATFORD-ON-AVON.

With a regularity that was almost monotonous, 194 New Ford cars travelled over their respective circuits for three days and three nights without an engine stop.

At the finish and straight from their record-breaking runs with the "scars of battle" still upon them, the cars and their drivers assembled at three points in the British Isles, Stratford-on-Avon, Edinburgh and Dublin. At each of these places, after a grand parade of the cars, a dinner was held at which representatives of the Ford Motor Company, Limited, laid before the assembled dealers the official figures and results of the tests.

The total mileages of the 194 cars entered was 334,930. The average mileage per car was 1,726 miles, which produces an average speed of approximately 24 miles per hour.

An average speed of 24 miles per hour over a period of 72 hours without engine stop is a remarkable and consistent performance, when one considers that it was created, not by a few highly-tuned cars, but by nearly 200 standard, stock Fords

The total distance covered was over 13 times round the world. All cars were standard New Fords, some new, some 2½ and 3 years old. The speedometer reading of one car at the start was "0." The speedometer reading of another car was "50,000." It had taken part in the last two Monte Carlo Rallys and the last Rigo Rally. It has won eight gold medals in M.C.C. reliability trials and returned on the day before the demonstration from a great Ford Rally at Cologne. Then it ran without an engine stop for three days and three nights.

# London and Home Counties Traffic Advisory Committee.

## Fifth Annual Report.

THE Fifth Annual Report of the London and Home Counties Traffic Advisory Committee to the Minister of Transport for the year 1929-30, has been published and copies (price 2s. 6d.) may be purchased from H.M. Stationery Office or from any bookseller.

The Report covers the period from the 1st October, 1929, to 30th September, 1930, and deals with the various matters considered by the Committee during this period amongst which are the following:—Road and bridge schemes including Charing Cross Bridge, improvements at the Elephant and Castle and in the Dock Area, and the Lower Thames Tunnel; The co-ordination of street works affecting important thoroughfares; The control of omnibus services under the provisions of Section 7 of the London Traffic Act; Regulations in regard to waiting vehicles, unhired cabs, and broken down vehicles; Prescribed routes for traffic where "roundabout" and "one-way" traffic systems have been put into operation; Traffic control signals; The fixing of stopping places for omnibuses and tramcars.

### HORSE-DRAWN TRAFFIC.

The Report states:—"From time to time we have received representations suggesting the restriction of the use of certain streets by horse-drawn traffic, but the opinion we have formed is that it would be inadvisable, having regard to the existing requirements of trade and the conditions under which certain forms of traffic are operated, to attempt to impose at the present time restrictions of a general character upon the use of horse-drawn vehicles in London. It appeared, however, that the restriction of slow moving vehicles (including horse-drawn) in Oxford Street might be an advantage in connection with the proposed installation there of traffic control signals . . ."

Included in the same volume are:—

(a) The Minister's report to Parliament under Section 8 of the London Traffic Act, and statistics relating to the operation of omnibuses in London.

(b) A statement extracted from the annual Tramway Return shewing the results of the operation of tramways in the London Traffic Area during the period under review.

(c) A statement shewing the number of passengers originating on the London Underground Railways during the years 1925-29.

(d) A statement respecting street accidents in regard to which certain powers of inquiry are conferred upon the Minister by Section 12 of the London Traffic Act, 1924.

# Furniture Warehousemen and Removers' Association.

## South Wales (Cardiff) Centre.

Many members of the South Wales (Cardiff) Centre of the Furniture Warehousemen and Removers' Association met at the Old Arcade Hotel, Cardiff, on June 17th, and entertained to dinner Mr. C. W. Curson, Manager at the Newport (Mon.) branch of Pickfords' Ltd. Mr. Curson is leaving Newport on being transferred to Messrs. Pickfords branch at Chatham.

Mr. Evan Jones (British Co., Ltd., Cardiff) the Chairman of the Centre presided, and amongst those present were Mr. Stacey (Manager, Pickfords, Ltd., Cardiff), Messrs. Roberts and Lerworthy (Pickfords, Ltd., Cardiff), R. N. Addington, M. Howell, — Baker, G. W. Wensley, G. D. Wensley and H. W. Wensley (Wensleys, Ltd., Cardiff), A. Setchfield and Frank Chapman.

Mr. Baker, who succeeds Mr. Curson at Newport, was given a cordial welcome to his new sphere of activity.

A handsome writing cabinet was presented to Mr. Curson by the Chairman on behalf of the Centre. The Cardiff Staff of Pickfords, Ltd., presented Mr. Curson with an umbrella and fountain pen.

During his residence at Newport, Mr. Curson has been a very active member of the South Wales Centre and occupied the Chair for some years and all his friends wish him every possible success in his new appointment.

# The Royal Show.

This year road transport was not so well represented at the Royal Agricultural Society's Show as usual, some of the firms familiar to Royal Show visitors being absent. Nevertheless there were several outstanding features such as the increasing use of the heavy oil engine for road vehicles; the decided improvement in steam wagon design, thus proving beyond doubt that the steam vehicle is by no means outclassed by its formidable competitor; the internal combustion engined vehicle. Thirdly, a very noticeable feature of the show was the large increase in numbers of tractors, industrial and agricultural. In matters apart from transport, the small power engine for stationary work was much in evidence. With the increase in use of the motor lorry, the tractor and the small power stationary engine, which can be used for such a variety of purposes, the mechanization of British agriculture is proceeding apace.

The steam wagon exhibits, though fewer in number than in previous years, showed a marked improvement in design, which makes one wonder whether those who have withdrawn from the field of competition and concentrated on other types of vehicles, have done wisely.

**Fodens** exhibit was impressive. It included two "Speed Sixes," two "Speed Twelves," a tractor and trailer. The tractor and trailer (the order included a second trailer) were for the Warwickshire County Council. The tractor, which has the same power unit as both the "speed sixes" and "speed twelves," was mounted on single pneumatic tyres 40 in. by 8 in., and the trailer, of 10 ton capacity, was equipped with 40 in. by 9 in. twin tyres on all wheels; it was provided with a three-way tipping body. One of the "speed sixes" was for Jas. Shipton & Sons, Ltd., Star Brewery, New Basford, Nottingham, and one for Warwicks & Richardsons, Ltd., The Brewery, Newark-on-Trent. Murrells Wharf had purchased a "speed twelve" after having been using two "speed sixes" for some time, and in addition to the machine exhibited they had ordered at the same time three more "speed twelves," four more "speed sixes" and four trailers.

The **Sentinel** stand was no less impressive, the feature of this exhibit being the Silica-Gel refrigerator body mounted on a D.G.4 chassis. This vehicle is intended for the transport of traffic from northern ports to inland towns and is, we understand, the first of its type placed on the market. A new model was the double geared D.G.6, which has also a completely new design bogie. A D.G.4 lorry and trailer were shown of which the Grieve Haulage Co., Kew Ferry, were the purchasers. All vehicles shown were repeat orders from well-known firms.

**Garretts** were showing an 8-ton undertype steam wagon, being a repeat order from H. Kay, Ltd., and also a "Suffolk Punch" four wheel drive steam tractor. The firm were also showing an entirely new crude oil 6/7 ton lorry, the engine being a Blackstone 6-cylinder model with spring injection. For this vehicle they were awarded the R.A.S. silver medal. They also had on view an agricultural tractor fitted with an Aveling & Porter "Invicta" oil engine.

**Marshalls** were showing oil engined tractors both agricultural and industrial. The engines are of the single cylinder horizontal heavy oil type, developing 15/30 h.p.

**Massey Harris** were showing agricultural tractors only. (They are producing an industrial tractor particulars of which we are to have later.)

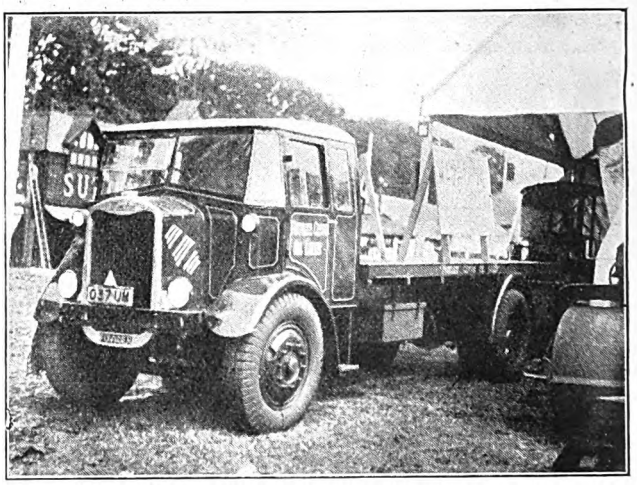
**Ford Motor Co.** had a very comprehensive range of vehicles for goods, passenger and cattle transport. The cattle truck shown was equipped with a general purpose body which could be adapted for the transport of either cattle or goods. There was a considerable range of tractors with certain modifications, including a 12/20 h.p. engine with a larger bore than formerly and with wings fitted as standard equipment. "Roadless" tracks are adopted as standard for the creeper track models.

**Fosters** were showing amongst other exhibits their well known "Wellington" rubber tyred steam tractor, with three speed gear.

**International Harvesters** were showing agricultural and industrial tractors, one of the latter being equipped with pneumatic tyres and another with a Hi-lift shovel equipment.

**Morris Commercial** had a particularly comprehensive exhibit amongst which was conspicuous the "Dictator" luxury coach. The feature of the "Dictator" chassis is that the engine can be easily disconnected from the frame and wheeled out for inspection or repair on the front axle. The coach body of this vehicle, by Caffyns, Ltd., Eastbourne, was particularly luxurious. Another feature was the particularly roomy cab obtained by slightly tilting the engine over to the near side. The Morris Commercial farm and estate wagon was another very interesting vehicle. It is built to comply with the Ministry of Agriculture and Fisheries regulations. It can be used for the transport of either cattle or goods. Its tailboard is easily lowered to form a ramp and the body is built without wheel arches. It has a canvas top which is easily removed when the vehicle is required for carrying market garden or similar produce.

On the **Fowler** stand the outstanding feature was the firm's new heavy oil engined lorry fitted with a M.A.N. 6-cylinder engine developing 90 b.h.p. at 1,400 r.p.m. This vehicle has a carrying capacity of 6/7 tons. It is sold either as a fast model known as the "Marathon" giving a speed of 46 m.p.h., as a heavy transport vehicle, with double reduction rear axle, known as the "Warrior," or with a three-way tipping body. A 45 h.p. petrol tractor mounted on pneumatic tyres was also exhibited.



THE FOWLER CRUDE OIL LORRY.

**The Eagle Engineering Co.** this year had a particularly large exhibit. It included their low loading refuse collection body mounted on a Thornycroft chassis; a special 3-ton two wheel trailer for use with the Karrier "Cob" tractor. A new product also was a high speed four wheel 5/6-ton pneumatic tyred trailer with new central braking control. Another interesting exhibit was a two wheel 5-ton trailer shown in conjunction with an International tractor. The trailer was equipped with a hand operated hydraulic tipping body. Also there were shown the Ess-Em type refuse collection body for use with the Ess-Em containers. Eagle tipping gears were a feature of the exhibit and the Eagle patent spring drawbar for trailers. The Eagle Warwick living van was in use as an office.

**Ransome, Sims & Jefferies** had amongst their exhibits a "Caterpillar" 30 tractor.

* * * *

**Gray Horseshoe Pad Co., Ltd.**—Another firm exhibiting at the Royal Show at Warwick was the Gray Horseshoe Pad Co., Ltd., 13 and 14, Suffolk Street, Birmingham, a firm who have specialised for many years in shoeing pads for horses. Their stand was in its right place near the shoeing forge, and as the Royal Show is noted for its magnificent exhibits of horses, this stand naturally attracted a great deal of interest. As many of our readers are still using horses for transport purposes, we strongly recommend any who are interested to communicate with this firm and obtain particulars of the "Gragrip" pad. We are informed that the Birmingham Co-operative Society have to-day 450 horses, and that over 80 per cent. of these are regularly "Gragrip" shod with very satisfactory results.

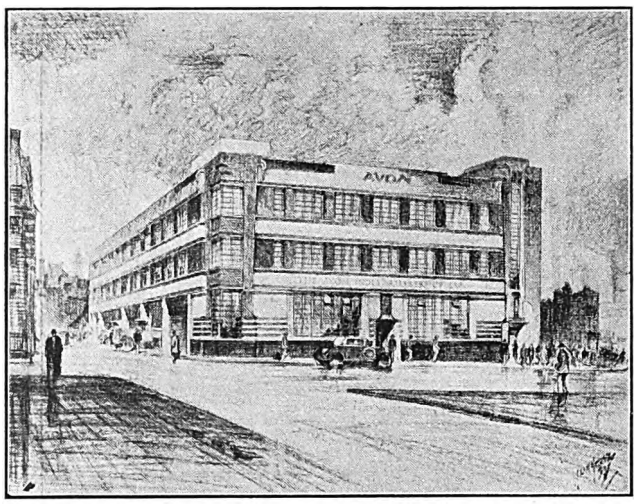
# The Avon India Rubber Co., Ltd.

IN our issue for April last we gave a description of the new London Depot of this well-known Tyre firm. It was, therefore, with special interest that we received an invitation to



AVON'S NEW LONDON HOME.

the "house warming" on Tuesday, June 23rd, last. On this occasion we had the pleasure of meeting Major R. F. Fuller, J.P., and Sir Herbert Blain, C.B.E., M.Inst.T., the Chairman and Deputy Chairman respectively, of the Company.

In a speech of welcome Sir Herbert Blain after telling his audience why the Company had built their new premises, constituting the London offices and Service Depot at Mabledon Place, St. Pancras, W.C.1, referred to the re-organisation of their works at Melksham, following the partnership which had been entered into with the well-known Seiberling Tyre Company of America.

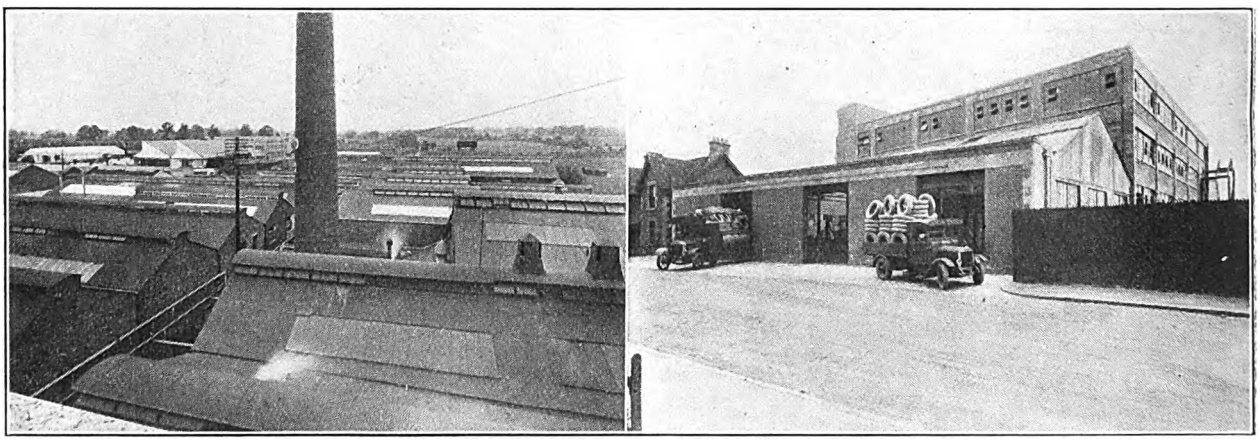
It was, therefore, with added interest that we took part in a visit to these works on Tuesday, July 7th, and had the opportunity of inspecting the up-to-date machinery and splendid organisation under which Avon-Seiberling tyres are produced.

Mr. F. W. Hinde, Joint Managing Director, was our host on this occasion, ably supported by a number of his colleagues including Mr. F. Webster, the General Sales Manager, Mr. Comley, Assistant Sales Manager, Mr. Swanborough, the Works Manager, and Mr. A. Peake-Jones, the London Manager.

In a brief speech at a luncheon which preceded the tour of the Works, Mr. Hinde referred to the recent developments whereby the Avon India Rubber Co., Ltd., which was established in 1885, had joined forces with the Seiberling Rubber Co., of America, pooling their experience and securing the benefit of American methods as well as the British system under which their business had become so firmly established. Sir Herbert Blain had paid a visit to America to study tyre production in the United States and the Vice-President of the Seiberling Co., had spent six months at Melksham studying production methods and organisation on this side.

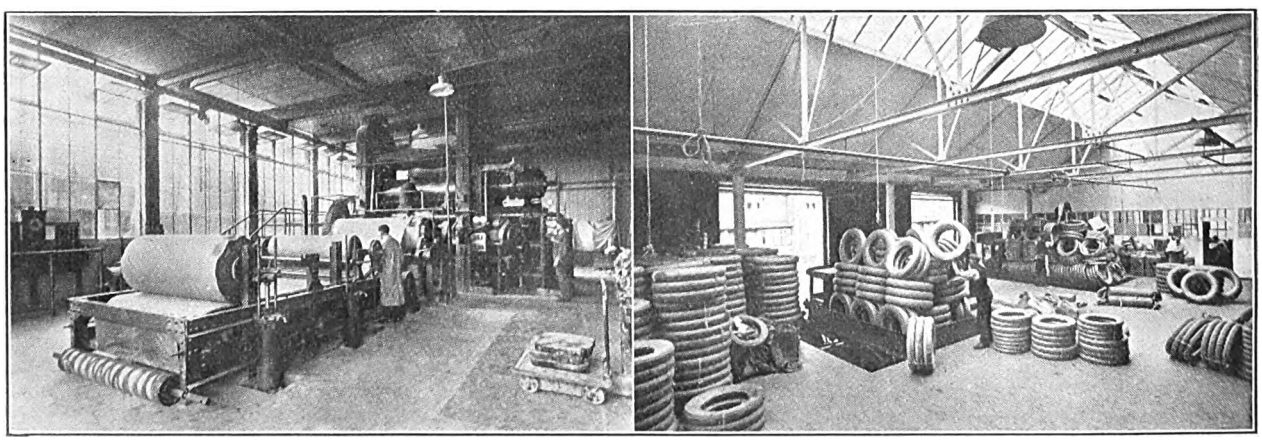
Our illustrations show some of the shops which were inspected and some of the many processes through which a modern tyre passes before it emerges ready for the road.

Extensive developments are still in progress, involving pulling down a considerable amount of old property and making another entrance to the Works, which will facilitate the despatch of goods.



LEFT: LOOKING NORTH FROM CENTRE OF FACTORY. RIGHT: NEW STORES EXIT.

Some details of the complicated process through which the raw material passes before it emerges as a motor tyre will be of interest. The raw rubber is grown principally in the



LEFT: ROLL CALENDER UNIT FOR CORD TREATMENT. RIGHT: TYRE LOADING DECKS.

Digitized by Google

Federated Malay States and Pale Crêpe and Smoked Sheet are the kinds used in the greatest quantities. In the old days motor tyres consisted entirely of pure rubber, but the modern article is a much more complex product, necessitating a laboratory and expert chemists to pass the various components and powders with which the rubber is mixed.

Another essential factor in the modern tyre is the cotton fabric impregnated with rubber spread on the material by a callendering machine.

The main tyre building shop has been built within the last twelve months and is of reinforced concrete. It is laid out so that the prepared components enter at one end of the building and finished tyres are stored and despatched at the other end.

The importance of the Factory Control Laboratory will be realised, when it is stated that all prepared material entering this shop must be passed by the Laboratory before it goes forward for production.

The tyres when built-up are stored in racks ready for shaping and after the shaping process has been completed, the unit is placed in the mould where the pattern is formed on the tyre. After moulding or vulcanisation, the tyres are examined, trimmed, painted, lined and despatched to the Stores.

New equipment has recently been installed for building giant pneumatic tyres, this equipment incorporating the most modern ideas.

It may be mentioned that the Company manufacture a large variety of rubber goods other than tyres including tennis balls, cycle tyres and tubes, solid tyres, sports sundries including golf balls, rubber flooring and tiling, rubber footwear, rubber sundries for tyres, hose, cab tyre, milking machine parts, rubber buffers, etc. for railways, rubber accessories for motor cars and aeroplanes, joints, washers and sheeting, etc.

Distribution for the home market is effected through 10 service depots situated in the large cities, and by the help of some 60 depot managers and representatives. Each depot carries adequate stocks, and is equipped with all modern appliances for the fitting and inflation of Pneumatic tyres, and for the pressing on of Solid Tyres.

## Answers to Inquiries.

### TROLLEY BUSES.

**Question:**—As the question of Trolley Bus services in extension or replacement of existing tramways in Belgium is one which promises to be very interesting in Belgium, I shall be glad if you can let me have any information, technical or otherwise, concerning trolley buses. Can you also give me the names of trolley bus manufacturers in England?

**Answer:**—A paper was read dealing with this subject at a meeting of the Institute of Transport held in London on February 10th, 1930. A brief report was printed in our journal *The World's Carriers and Carrying Trades' Review* at the time, and the Secretary of the Institute of Transport has been good enough to send us a copy of the complete paper which we now send you. A paper was read on "The Trolleybus in Urban Transport" before a meeting of the Omnibus Society in London on May 8th last and we enclose a copy of the *Omnibus Magazine* which contains this paper. The following firms are manufacturers of Trolley Buses in this country:—Associated Equipment Co., Ltd., Southall, Middlesex. T.S. Motors, Ltd., Victoria Works, Maidstone. Richard Garrett & Sons, Ltd., Leiston Works, Leiston, Suffolk. Guy Motors, Ltd., Wolverhampton. Ransomes, Sims & Jeffries, Ltd., Orwell Works, Ipswich. Clayton Dewandre Co., Ltd., Titanic Works, Lincoln.

### ROAD TRAFFIC ACT, 1930.

**Question:**—Reference is made in your issue of June 15th to a paper read by Mr. R. G. Pittard at the Annual Congress of the Tramways, Light Railways and Transport Association, held at Margate from May 27th to 29th, dealing with the operation of the Road Traffic Act, 1930. Will you let me know whether it is possible to obtain a copy of this paper and if so to whom I should apply.

**Answer:**—The Secretary of the Tramways, Light Railways and Transport Association is Mr. A. de Turckheim, O.B.E., 58, Abbey House, Victoria Street, Westminster, London, S.W.1, and we are sure he will be only too pleased to do all he can to assist you.

### TRANSPARENCIES FOR BADGES.

**Question:**—I am desirous of getting into touch with the British Transfer Co. and Eagle Transfer Co. with regard to transparencies for badges. As I cannot trace their addresses will you kindly have the enclosed letters despatched to these firms.

**Answer:**—We have been pleased to forward the two letters for you. The addresses of the firms in question are:—The British Transfer Printing Co., Ltd., Quinton Works, Coventry, and the Eagle Transfer, Ltd., Finsbury Court, Finsbury Pavement, E.C.2.

## More "One-way" Streets in London.

THE Minister of Transport has made Regulations for the introduction of a revised system of traffic working in the neighbourhood of Aldwych, under which the following thoroughfares are prescribed as "one-way" streets:—

Aldwych. (From West to East.)

Strand. Between St. Clement Danes Church and Wellington Street. (From East to West.)

Arundel Street. (From South to North.)

Surrey Street. (From North to South.)

Melbourne Place. (From South to North.)

Vehicles proceeding westwards along the Strand are also prohibited from making the right-hand turn into Wellington Street.

The Regulations came into force on June 29th, last. They provide for the revocation of the London Traffic (Prescribed Routes) Amendment Provisional Regulations, 1929, and for the continuance of certain traffic schemes prescribed in the revoked Regulations.

In order to facilitate the movement of traffic in the streets mentioned above, traffic signs have been erected and white lines laid down.

Any person acting in contravention of these Regulations will be liable to a fine of £5 for a first offence and £10 in the case of a second or subsequent offence.

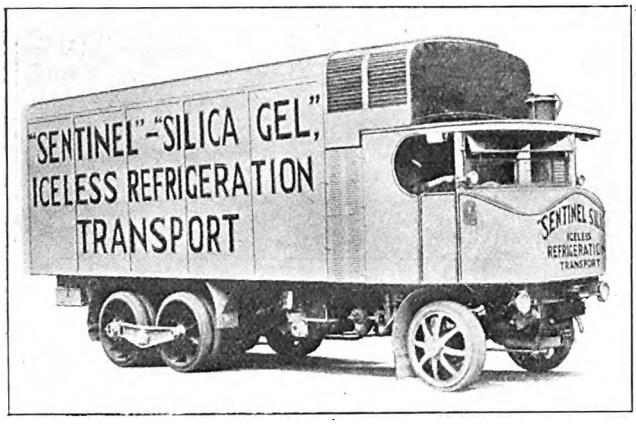
# "Sentinel" D.G.6 Equipped with a Remarkable Iceless Refrigerating Plant.

IT is in the general interest of the public that the existing methods of transport of foodstuffs should be improved. Experience in other countries has shown that if handled under proper conditions the demand for them is increased, and the heavy losses which so often take place during hot weather, or when there is a glut on the market, are avoided. The increasing use of insulated vans and containers indicates the growing recognition of the necessity for improved methods, but the insulated vehicle for the conveyance of perishable goods is only a compromise, and does not entirely meet the case, for the obvious reason that there is no means of preventing the entry of heat, which can only be entirely overcome when there is some source of cold, such as ice or refrigeration in the body of the vehicle itself.

As our readers are aware, "Sentinel" D.G.6's are being



THE "SENTINEL"-"SILICA GEL," REFRIGERATING VAN.

used for the transport of almost every conceivable class of goods, both solid and liquid, but the vehicle with which this article deals is adapted for what is probably the most unique and interesting work to which a D.G.6 has yet been put, namely, the rapid and economical transport of perishable commodities under refrigerated conditions. For this purpose it is equipped with the Silica-Gel System of refrigeration, which has been in very successful operation in the United States for some years past, and a specially designed insulated body. This D.G.6 is therefore a mobile cold-store of large capacity, capable of being used either for the long distance transport of perishable goods or their storage for an indefinite period. To ensure the maintenance of as low a temperature as 15°F. inside the body during the hottest weather, all that is required is a small quantity of steam from the boiler of the waggon, and the operation of the whole of the plant is so simple that no expert knowledge on the part of the waggon driver is necessary. The temperature is kept uniform throughout the length of the body, as the cooling medium is distributed by pipes along the whole of one side, more loading space is therefore available than is the case when ice is used.

Refrigeration in the "Sentinel" Silica-Gel D.G.6 is carried out as follows:—

Silica-Gel which is a highly porous substance similar in appearance to quartz sand is charged with sulphur dioxide which is in the adsorber, and when heated by steam the sulphur dioxide is driven off as vapour to a water cooled condenser, where it is liquified and from whence it passes to the evaporator inside the body. This evaporator, consisting of a number of parallel pipes, runs along one side of the inside of the body, and contains liquid sulphur dioxide. It is from the multitude of fins, like those on the cylinder of a motor cycle engine, with which these pipes are fitted that the cold is "radiated," or more correctly by which the warmth is extracted from the interior of the body owing to the evaporation of the sulphur dioxide which the pipes contain. As soon as the gel in the adsorber is again saturated with the returning sulphur dioxide vapour from the evaporator it is once more automatically heated by steam from the waggon boiler and the cycle is repeated, so long as it is necessary to remove heat from the body, or in other words to maintain the low temperature required within it.

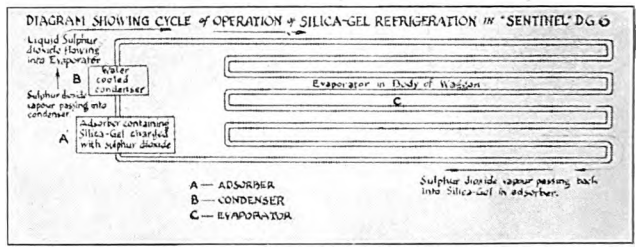


DIAGRAM SHOWING CYCLE of OPERATION of SILICA-GEL REFRIGERATION in "SENTINEL" D.G.6
Liquid Sulphur dioxide flowing into Evaporator
B
Water cooled condenser
Sulphur dioxide vapour passing into condenser
A
Adsorber containing Silica-Gel charged with sulphur dioxide
Evaporator in Body of Waggon
C
A — ADSORBER
B — CONDENSER
C — EVAPORATOR
Sulphur dioxide vapour passing back into Silica-Gel in adsorber.

DIAGRAM SHOWING CYCLE OF OPERATION.

As the whole system is entirely closed, and the life of the gel and refrigerant is indefinite, maintenance and depreciation charges are of the lowest order. The only mechanically operated part of the refrigeration plant is a small steam pump, which, whilst supplying cooling water to the condenser, also operates an automatic valve gear, which admits either steam or cooling water to the adsorber as the cycle of operations requires, and to enable him to maintain the temperature inside the body at the correct point, a clear reading thermometer is fitted in the cab. This indicates when it is necessary to start or stop the pump controlling the refrigerating apparatus.

The cost of operating the refrigerating plant with which the "Sentinel" Silica-Gel waggon is equipped, of course, varies with the amount of refrigeration required, but at most it is represented by the small extra amount of fuel required to raise the steam used by the circulating pump and for heating the adsorber. For example, in order to maintain a temperature of 30°F. in the body on a summer's day, with an outside temperature of 65° in the shade, the cost of the extra fuel would not be more than 1s. 6d. a day, even if the coal used cost as much as 40s. per ton.

# Round the Lancashire Associations.

**Conference of Liverpool Transport Employers.**

Since the beginning of May several meetings have taken place of and between representatives of the Liverpool Conference of Road Transport Employers' and the Liverpool and District Carters' and Motormen's Union to consider the suggestions which have been put forward by the employers for an amelioration in working conditions and the re-adjustment of rates of wages. It is understood that the Union has rejected the employers application. Feeling that they had ample justification for the programme they put forward, the employers, impressed by the necessity of obtaining some relief to enable them to meet the extraordinary keen competition, invited the union to agree to the application being submitted to arbitration. This also was turned down by the union. Whilst it is hoped that some way out of the impasse may yet be found, what the next step will be is, for the time being, simply a matter for conjecture. The principal transport associations represented on the Conference are Liverpool Cart and Motor Owners' Association, Liverpool and District Short Cart and Motor Owners' Association, and the Motor Transport Employers' Federation. In addition, of course, there are other separate trade interests.

**Southport Association Projected.**

Southport and district motor coach owners during the past month have had under consideration the idea of forming an association, or at least a motor coach owners section of the Commercial Motor Users' Association. They held a meeting at the office of Messrs. Gore on June 19th to discuss their difficulties under the Road Traffic Act and were represented at the meeting of Liverpool coachowners on June 22nd. A further meeting is contemplated.

**Lancs. and Cheshire Joint Road Transport Council.**

Employer members of the Lancashire and Cheshire Joint Road Transport Council attended a special meeting recently, to have a heart to heart talk with representatives

Digitized by Google

of the men's union, whose chief spokesman was Mr. Ernest Bevan, of the Transport and General Workers' Union. There was a general discussion on the state of the road transport industry with particular reference to matters which are covered by the Road Traffic Act. No definite resolutions were adopted at the meeting, but we understand that as the result, a further meeting will be held, when proposals may be put forward for improving the organisation of the road transport industry, both from the standpoint of employers and employees. The Transport and General Workers' Union has given notice to the employers' organisations to terminate the agreement regulating wages and conditions in the Lancashire and Cheshire area, excluding Merseyside. The matter will be discussed at the next meeting of the Lancashire and Cheshire Joint Road Transport Council. It is understood that the notice expires this month. The employers' associations which constitute the Lancashire and Cheshire Joint Road Transport Council are those operating in numerous towns in the East Lancashire area, South East Lancashire area, and in the Manchester district. Those which signed the 1929 agreement are:—The Amalgamated Horse and Motor Owners' Association, Ltd., Ashton, Stalybridge, Mossley and District Master Carriers' and Horse and Motor Owners' Association; Bolton and District Horse and Motor Carriers' Association; Burnley and District Road Transport Association; East Lancashire Road Transport Association; Conference of Manchester Carriers; Manchester Transport (Owners') Association, Ltd.; Stockport and District Team Owners' Association; Warrington Horse Owners' and Motor Owners' Association.

**Manchester A.H. & M.O. Association.**

Manchester Horse and Motor Owners' Association, of which Mr. J. Howarth is Secretary, is busy dealing with the applications by members for road service licences. About 70 members controlling about 250 coaches in S.E. Lancashire area, are applying to the Traffic Commissioners for licences.

**Wallasey Cart and Motor Owners.**

Success appears to have attended the efforts made to impart more enthusiasm into the Wallasey Cartowners' Association. Many of the haulage contractors of the town have agreed to attach themselves to the organisation which should proceed upon a useful career of usefulness, especially as there are many outstanding problems awaiting solution. Mr. C. L. Warren has been elected Chairman and Mr. W. F. Ewbank, of Messrs. W. F. Ewbank and Co., of Dale Street, Liverpool, Hon. Secretary. It is proposed to change the title of the Association to the Wallasey Cart and Motor Owners' Association.

**Manchester Transport Owners' Association.**

Consideration has been given by the C.M.U.A. and Manchester Transport Owners' Association joint organisation, to the hundreds of objections lodged by corporations, railways and railway controlled bus companies, to the applications by members for road service licences under the Road Traffic Act. Each objection is being investigated and an answer prepared on behalf of the operator, states Mr. Howard Robinson (Secretary), and this will be put before the Traffic Commissioners at the appropriate time. At the present time, negotiations are proceeding with municipalities and bus companies with a view to reaching an agreement that will permit the withdrawal of the objections. Altogether about 200 members controlling about 400 coaches are applying for licences.

**Burnley Transport Association.**

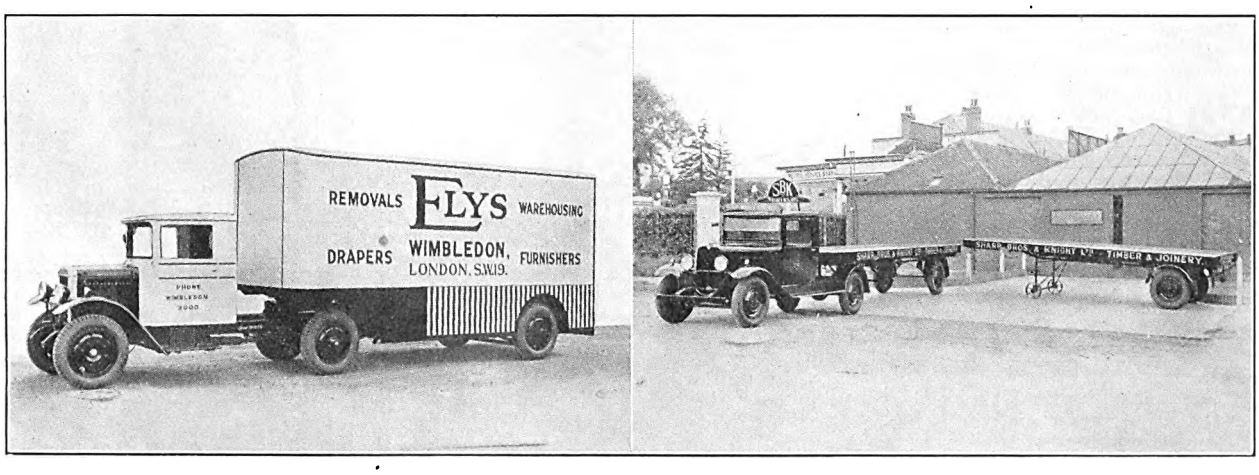
Mr. D. Prattley, of Burnley, who has celebrated his golden wedding, is the oldest carrier in the town. Mr. Prattley was the founder of a local horse owners' association, and took a leading part in the formation of the Burnley and District Road Transport Association, of which he is a former President. For six years he was a member of the Town Council.

**Manchester C.M.U.A. & T.O.A. (Joint Organisation).**

Certain groups of Manchester and district coachowners specialising in particular services have held meetings under the auspices of the C.M.U.A. and Manchester Transport Owners' Association (joint organisation), and have decided that in cases where their interests are adversely affected, or might be affected by applications for road service licences by other firms, to lodge objections with the Traffic Commissioners for the North Western Area. We understand that the Motor Coach Administration Committee of the joint organisation is reviewing the position on behalf of the coachowner members and with the advice of Mr. Howard Robinson, Secretary, is taking such steps as are necessary to preserve the intactness of existing services.

## The Carrimore New Transport System.

WE illustrate a new system of transport introduced by Carrimore Six Wheelers, Ltd., North Finchley, N.12. Furniture removers will no doubt appreciate the advantages given by the low loading totally enclosed type of attachments. These vans give a cubic capacity of 900 ft. with a loading level of 18 in. at the rear and a loading capacity of 3 to 4 tons when fitted to any standard 30 cwt. chassis. It is therefore seen that these vehicles can give an even bigger body space than is obtainable on a 4-ton lorry, giving a lower loading level, and yet retaining all the advantages of speed and low running costs of the 30 cwt. chassis. It is also worthy of note that one man only is required by law to drive machines of this type. One of our photographs also show a type of "Quickfit" carrier supplied for use in conjunction with a standard Chevrolet chassis, to Sharp Bros. and Knight, Ltd., timber merchants of Burton-on-Trent. Two or more carriers can be used in conjunction with the same prime mover, thus obviating any terminal delay. We understand that the firm have received orders for eight of these outfits from Edwards, timber merchants, of Folkestone, seven from Austins, timber merchants, of Ilford, four from W. W. Howard Bros., timber merchants, and six from John Sadd, of Maldon, Essex. The choice of prime mover is left entirely to the customer, since conversions can be carried out with equal efficiency on a Morris, Chevrolet, Ford, Bedford or any other standard truck. The method of coupling up is accomplished by means of a hydraulic jack.



THE NEW CARRIMORE METHOD OF TRANSPORT

# Prince George Visits the Leyland Motor Works.

AFTER having seen the Leyland exhibits at the recent British Empire Trades Exhibition and the large number of Leyland vehicles operating in South America, Prince George included the Leyland Motor Works in his tour of the industrial North, Leyland Motors, Limited, being one of the oldest manufacturers of commercial vehicles in the country. The first Leyland vehicle, a steam wagon, was built in a village smithy in Leyland over thirty-five years ago, and first driven on the road by the Company's present Managing Director. From

PRINCE GEORGE PASSING TO THE BODY SHOPS AFTER INSPECTING THE LEYLAND MACHINE SHOPS AND ASSEMBLY SHOPS.

a small beginning the Company has grown until to-day it employs approximately 6,000 men, and its Lancashire properties alone extend to over 160 acres in addition to other large branch works.

The Prince, who motored from Knowsley accompanied by his host the Earl of Derby and his equerry Major Butler, was met by Mr. J. H. Toulmin, Chairman of the Board of Directors and other members of the Board outside the Machine Shop attached to the Foundry.

The directors of Leyland Motors, Ltd., presented to the Prince were Mr. Henry Spurrier (managing director), Mr. Arthur Spurrier, Mr. C. B. Nixon, Mr. Walter Davies, and Mr. Vernon Walker.

The Machine Shop is the most recent addition to the Leyland Company's plant and contains some very modern machines.

The Prince then inspected the Company's nearby electric Steel and Iron Foundries which, in addition to manufacturing commercial vehicle components, specialises in castings of a type designed to withstand high pressure in water, steam and oil. The Firm supplies many large undertakings, including the Admiralty and leading ship-building and engineering firms throughout the country.

After leaving the Foundry the Prince was driven to the main Leyland Works. Here the chassis commences as a bare frame at one end of the long lofty building and proceeds stage by stage down the tracks until the completed article can be run off the line to the testing shop. By utilising four lines of erection each fed by completed units, built in other departments but arranged at intervals ready for assembly into the chassis, approximately three chassis every two hours can be run off the line. No moving track is used so that fitters can give the individual attention which is necessary in building high-grade vehicles of different types.

The Prince was invited to work a master measuring machine which is capable of measuring to 100,000th part of an inch, and can measure either internal or external gauges and either plain or screw diameters.

The Prince then inspected a number of vehicles lined up ready for delivery. Amongst these were one of the latest Leyland Motor Fire Escapes which was extended as His Royal Highness approached. Prince George talked to a man at the top on the telephone, with which this machine is equipped.

The next department to be visited was the Service Stores and Dispatch Section, which constitutes the Headquarters of the world-wide Leyland Service organisation. Aluminium die-casting is a process which has recently been developed extensively by Leyland Motors, Limited, and in this section of the South Works the Prince was able to inspect the die for a one-piece gear box casing which is probably the largest die-casting made in the world.

His Highness had specially asked to see an eight wheel drive chassis which is being built for the East African Cotton Growers' Association and this was shown to him in the Research department where the Company's experts are hard at work constantly endeavouring to improve the already high standard of efficiency which characterizes Leyland vehicles.

The tour ended on the extensive Sports Ground, where Prince George who is keenly interested in the welfare of industrial concerns was able to obtain some idea of the elaborate arrangements which are made for the welfare of this Company's employees.

# "Shell" Pictorial Advertising.

IN their advertising the proprietors of Shell Motor Spirit have always struck a distinct note and whether on the humorous side or the distinctly artistic side, their advertisements have attracted attention, not by shouting from the hoardings or from the newspapers but by those quiet and yet strong qualities which appeal to the educated section of the community.

These thoughts occur to one after having paid a visit to the unique and delightful Exhibition of Press and Pictorial advertising which was held by Shell-Mex, Ltd., at the New Burlington Galleries from June 16th to 27th inclusive.

On the walls of the rooms not only examples of well-known advertisements put out by "Shell," but what was more interesting to the student of such advertising, the original paintings from which the posters or advertisements had been produced were shown side by side with the finished advertising product. In some cases the visitor was able to see the original painting by a well-known artist and then the various stages through which the poster passed, and the progressive proofs showing how the lithographic process is built up, colour by colour, until the completed picture is ready for printing. Apart from the interest of the Exhibition itself it was an education to all interested in advertising but who are not engaged in that particular department of publicity. Such artists as E. McKnight Kauffer, W. Dacres Adams and Vanessa Bell, to mention only three out of many who contributed to the "Countryside: 'see Britain first'" series.

In a speech at the opening of the Exhibition Mr. Clough Williams-Ellis, in declaring the Shell Art Exhibition open, made some interesting remarks about advertising. Mr. Williams-Ellis is President of the Design and Industries Association and Chairman of the Council for the Preservation of Rural Wales. Hs is, therefore, well-known as an opponent of those advertisements which disfigure the countryside. His appearance, therefore, as the opener of an advertising exhibition aroused considerable interest and curiosity. Shell-Mex, Ltd., however, are themselves great supporters of the campaign for preserving the countryside from disfiguring advertisements and Mr. Williams-Ellis had much to say in praise of the advertising placed by this well-known firm. He referred specially to whole page advertisements consisting of photographs of typical English landscapes appearing in the illustrated papers, with just this and nothing else beneath them:—"Shell does not advertise in places like this."

We congratulate the publicity department of Shell-Mex, Ltd., upon the very successful exhibition which we were privileged to attend and we wish them all success in their campaign of combining the highest class of pictorial art with effective advertising.

**Sign Your Driving Licence.**—The Automobile Association announces that many motorists are still being prosecuted for omitting to sign their driving licences. Failure to comply with this provision of the Road Traffic Act may involve a fine not exceeding £5.

**Unilateral System in Newcastle.**—Twenty-five cases of motorists having caused obstruction in Newcastle streets came before the City Magistrates on July 3rd, when the chairman pronounced a warning that the unilateral system does not permit of parking—despite the obvious temptation to motorists to do so.

# London Shipping and Forwarding Agents' Conference.

A GENERAL MEETING of members of the London Shipping and Forwarding Agents' Conference was held at the London Chamber of Commerce on June 23rd, last.

The President of the Conference, **MR. M. E. DUFFETT** (J. D. Hewett & Co., Ltd.), presided, and said that in addition to questions dealt with by members in ordinary meeting various subjects were brought under discussion from time to time by the respective trade sections, which act independently with regard to their own domestic portions of the trade until such time as the advice of the Council is required.

**Export Rates on Railway Traffic Delivered Intermediately in London.** As members were aware, the special concession with the Railway Clearing House came into force on September 30th last and the arrangements made appeared to be working satisfactorily for those firms who had entered into it. Recently the Conference had been approached by the Railway Clearing House requesting information as to whether a certain firm was eligible to benefit from the concession granted, and the inquiry was being dealt with.

**Railway Delays.** Towards the end of last year, reports were received from certain members that delays in delivery were being experienced in regard to goods sent per one of the railway companies. The Conference took the matter up with the railway officials and quoted specific cases where such delays were supposed to have occurred. The railway company went to great trouble in locating the causes of these troubles, which for the most part were found to be due to minor mishaps beyond human control. The railway company in question appeared to be most anxious that members should not be further inconvenienced and an official from the company made a periodical call upon the Secretary to inquire if any further complaints had been made. If, therefore, any member was having difficulty and would report to the Secretary, no doubt the matter would receive thorough investigation at the hands of the railway.

**C.O.D. Orders.** A member had enquired whether any ruling had been laid down which could serve as a protection to forwarding agents against the risk run in connection with the collection of amounts due on C.O.D.'s. The Council was of opinion that a forwarding agent could not do more to safeguard his interests than draw his client's attention to his terms and conditions at the time a contract was made.

**Definitions of Commercial Terms used in the Trade.** From time to time queries raised by members concerning the definitions and limitations of terms common in the trade, e.g., "F.O.B.", "F.A.S., London," "Free Wharf, London," had been dealt with by the Council and replies sent which it was hoped had been useful to the members concerned.

**Delivery Orders.** It would be remembered that, following discussions at sectional meetings, the Conference considered it necessary to draw the attention of firms who were members of the Conference to the old-established practice existing in the trade whereby delivery orders were transferred from one member of the Conference to another member without charge, but that to non-members of the Conference a minimum charge of 2s. 6d. was made.

**Forwarding Agents' Lien.** At the last Council meeting of the Conference it was reported that the American Section had recently given full consideration to the question of liens, both general and particular, as affecting forwarding agents. It seemed to be generally understood that an agent could exercise a lien on any particular consignment, but with regard to general liens, much diversity of opinion existed taking the reports of actual experiences into consideration.

The matter was still receiving the close attention of the American Section.

**Customs Authority and C.105 Forms.** A question to which the Council had given consideration was a suggestion made by a member that, upon small consignments upon which the duty did not amount to more than, say, 10s. or £1, H.M. Customs and Excise should be asked to grant a concession by abolishing the necessity for obtaining the Customs Authority and C.105 Forms. Upon consideration, however, the Council did not think it advisable to take the course proposed in view of apparent obstacles.

**Port Rates on Goods—P.L.A. Discounts.** Towards the end of last year, a member drew attention to a circular issued by the P.L.A., in which it was stated that in calculating the Port dues, fractions of one penny would be disregarded.

It was pointed out that this rule would operate to the detriment of many forwarding agents. Representations were made to the P.L.A., but it was stated that the conditions laid down in the circular were necessary under certain statutory obligations.

**Credit Terms on River Plate Shipments.** This matter, it would be remembered, was raised at the Annual General Meeting of the British Association of Shipping and Forwarding Agents when a member drew attention to the alleged activities of a certain non-member firm of forwarding agents, who were also acting as steamship agents, in unfairly canvassing shippers direct for traffic destined for the River Plate, offering unduly long terms of credit and thus eliminating the forwarding agents who formerly had been handling such traffic.

The subject had engaged the attention of the Council of the London Shipping and Forwarding Agents' Conference at several meetings. Long discussions had taken place and in the result, in view of the fact that the number of London firms interested in the River Plate trade appeared to be small compared with the Liverpool and Manchester agents and bearing in mind the amount of textile trade which Liverpool and Manchester conducted to the River Plate, it was thought that the Liverpool and Manchester Associations should be consulted, and any action taken by the British Association of Shipping and Forwarding Agents should be decided upon only in close collaboration with the Liverpool and Manchester Shipping and Forwarding Agents' Associations.

**South African Shipping and Forwarding Agents' Association.** It was reported that a letter had been received from the South African Shipping and Forwarding Agents' Association which body is affiliated with the Shipping and Forwarding Agents' Associations of Cape Town, East London, Durban, Johannesburg, and Port Elizabeth, enquiring whether, in view of the mutual interests of the South African Association and the London Shipping and Forwarding Agents' Conference, it was possible to bring about a closer relationship.

The President said that this letter showed how the movement towards unity was growing.

It was agreed that information regarding the activities of the London Conference should be sent to the South African Association.

TRADE SECTIONS.

**Mr. L. G. Stockwell** (Stockwell & Co., Ltd.), Chairman of the French Section of the Conference, reported that during the year meetings of the Section had been well attended and members worked in close co-operation with one another.

**Mr. Frank J. Gerson** (Rosenberg, Loewe & Co. (Succrs.), Ltd.), Chairman of the German Section of the Conference, said that one important matter considered by this Section was that of the alleged granting to one firm in Germany of a forwarding monopoly in that country. However, he now gathered that the firm in question had been taken over by the German railways and if that were so then probably a great deal of the fear felt by forwarding agents interested in the German trade that the granting of such a monopoly would be injurious to their interests, would be allayed. A letter on the subject of the alleged monopoly was sent to the German Minister of Transport by the International Federation of Forwarding Organisations.

**Mr. G. Perry** (British Commercial Transport Co., Ltd.), Chairman of the American Section of the Conference, said that some members of the Conference who handled a large American traffic did not attend the meetings of the American Section. They should attend as matters were discussed and steps taken which affected their interests.

The American Section had exchanged information with the New York Freight Forwarders' and Brokers' Association.

# Amalgamation of Hernu, Péron & Co., Ltd., and Stockwell & Co., Ltd.

An arrangement has been made for the amalgamation of Hernu, Péron & Co., Ltd. and Stockwell & Co., Ltd.

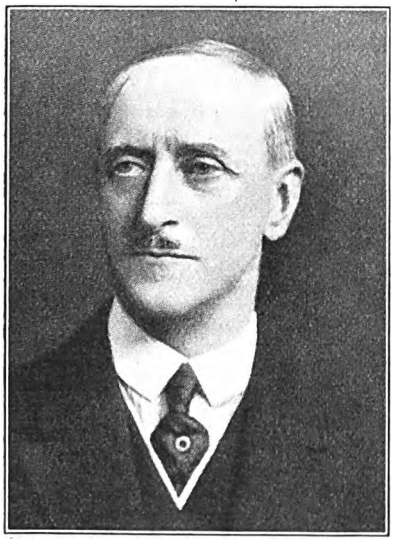
Both of the companies are of long standing in the Shipping and Forwarding business and the amalgamation will not only enable them to adopt the most up-to-date methods, but will also place at the disposal of the public an organization specialising in all sections of forwarding, embracing continental and overseas shipping, both export and import.

MR. G. STOCKWELL,
VICE CHAIRMAN.

In order to ensure continuity of management the former Directors of both companies will serve on the Board of the associated companies which will trade under the title of "Hernu, Péron & Stockwell, Limited."

All the branches of the new Company will continue their activities as in the past, together with the large number of Agencies of both firms throughout the world.

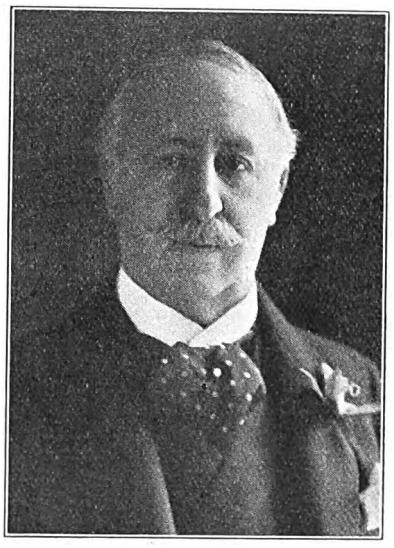
A few notes about each of the companies are given and show what both firms have done in past years towards providing facilities for efficient and speedy transport to and from all parts of the world.



MR. H. HERNU,
MANAGING DIRECTOR OF LONDON HOUSE.

Hernu, Péron & Co., Ltd., were established originally in 1802 under the name of Madame Vve Lebeau & Co., as merchants dealing in the international import and export of timber, wines and general merchandise. In 1870 they became Charles Lebeau; in 1876, Nollen, Henry and Guche; in 1882, A. Henry and Co.; in 1890, Hernu, Péron & Co. and in 1894, they became an English limited liability company under its present title.

The original managing directors of the Company, were Messieurs A. Hernu, C. Péron and H. Tournade to whose initiative was due the establishment of the business as an English Limited Liability Company. These gentlemen on their decease have in every case been succeeded by their sons as Managing Directors and it is no doubt due to the energy and ability of the younger generation that the great expansion of the business is due. The Chairman of the Company is Sir T. Vansittart Bowater, Bart., M.P., for the City of London, a former Lord Mayor of London.



SIR T. VANSITTART BOWATER, BT., M.P.,
CHAIRMAN.

The company are Continental and Overseas Forwarding and Shipping Agents; Travel and Baggage Agents; Warehousekeepers; Continental Furniture Removal Contractors, and General Shippers on an extensive scale. They are freight agents in France for the Peninsular and Oriental Steamship Co., and the Canadian National Railways, and also passage agents for practically all the Steamship Companies. They were the pioneers in 1889 of the Transatlantic passenger services for liners calling at Boulogne-sur-Mer, and deal annually with several hundred steamers. They do, in fact, arrange for the conveyance of goods or persons from anywhere in England to anywhere abroad. Regular shipments are made to all parts of the world, and inclusive rates can be quoted for all purposes. They have a daily express service to and from the Continent by sea or air, and are the Official Agents for the Imperial Airways in Paris. They are also the appointed Agents to the Southern Railway (S.E. Section). They have many branches in England and France; Provincial and Continental Agencies in the principal towns, and agents in all parts of the world.

MR. L. G. STOCKWELL,
MANAGING DIRECTOR OF LONDON HOUSE.

MR. EMILE TOURNADE,
MANAGING DIRECTOR OF PARIS HOUSE.

It is significant of the high repute in which this firm is held in this important sphere, that they are the Shipping and Forwarding Agents to the French Embassy and French Consulate in London by special appointment, and that during the War they were engaged in directing the transport of munitions for the French army from England to France.

A recent extension of the Company's interests in the Travel business is the establishment of an Associated Company under the title of Golden Tours, Ltd., with head offices

Digitized by Google

at 3, Bennet Street, St. James's, London, S.W.1. The object of this organisation is the direction of the more select tours for the discriminating traveller.

Stockwell & Company, Limited, were one of the pioneers of the foreign Forwarding and Shipping Trade being established in 1878, by Mr. Henry Stockwell, who took over the Agency of the Messageries Nationales de France.

MR. H. R. STOCKWELL,
MANAGING DIRECTOR OF PARIS HOUSE.

He at once proceeded to work up a Foreign Parcels Service, and also established in conjunction with Messrs. Danzas & Co., Ltd., Switzerland a Groupage Service, which to-day is extensively used by Merchants for shipments to and from Switzerland, Italy and the Near East.

The firm was turned into a Limited Company in the year 1900, and the organization was rapidly extended under the direction of Mr. George Stockwell, who recently celebrated the Jubilee of his connection with the firm, having joined the business in 1880.

To-day the business of the Company extends to all parts of the world, practically every class of merchandise being handled by Express, Grande Vitesse and Groupage Services. Its "Cash on Delivery" system was introduced in the early days of the Company and used by London and Provincial Houses, working advantageously years before the British Post came into the business, and even to-day is a great facility to many firms.

Stockwell & Co., Ltd., have a special Department and Bonded Warehouse for Watches and Clocks and also deal with intricate Assay operations in connection with British Hall Marking.

For many years past the Company has devoted much time to the study of local conditions overseas, and to-day the Shipping Department is in an excellent position to satisfy the requirements of shippers to our Colonies, the American Continents, and the Far East. Works of Art, Antique Furniture and similar goods are collected and efficiently packed for shipment.

MR. M. PÉRON,
MANAGING DIRECTOR OF BOULOGNE HOUSE.

The Company has also a large business in foreign removals; a recent transaction was the removal of £50,000 of furniture and Works of Art from Mayfair to Rome in 8 lift vans. All arrived in sound condition, and this speaks well for the expert handling of this valuable consignment.

Altogether the Shipping and Forwarding trade to-day has become a highly specialised calling, requiring the closest attention to endless detail and a very extensive organization.

# News from the Ports.

**An Ocean Showroom.**—The Exhibition Ship "British Exhibitor" is shortly to make a twelve months tour of the West Indies, South and Central America. It is an effort to provide manufacturers and exporters with a cheap and efficient means of making personal contact with foreign buyers which improves relations and helps to develop trade. The project is receiving warm support from British manufacturers and a large number of important exporters will accompany the ship on its tour. Leaving London on November 1st next the "British Exhibitor" will visit thirty ports where it will be on view for periods varying from a day or two in the case of smaller towns to a fortnight or three weeks in the case of the bigger cities. She is a twin screw, quadruple expansion, oil burning vessel with a speed of 15 knots, and her low draught will enable her to dock alongside the quay at practically all the ports visited. There will be space accommodation for nearly 500 separate exhibits and in addition there is room for 233 representatives in first class state rooms.

**Port of Glasgow.**—Shipping movement at the Port of Glasgow shows no sign of improvement and rate cutting is more intensive than ever. The laying up of cargo ships continues and there are now over 60 vessels of an aggregate tonnage of 248,807 tons lying idle in different parts of the river. During the latter part of June shipping activity in the Harbour was slightly better due to the arrival of fruit and grain consignments from Australia, New Zealand, and Mombasa. The position in the shipyards is disquieting. Launches for the month of June only totalled 10,600 tons as compared with 90,000 tons for the corresponding month last year. Orders are still scarce, and apart from the four destroyers to be built for the Portuguese Government by Messrs. Yarrow and Co., Ltd., there is little else of note. A fair amount of repair work is going on in some yards.

**Liverpool Shipping Week.**—It is proposed to hold a Shipping Week in Liverpool from August 29th to September 5th next, under the auspices of the Municipalities of Merseyside and in co-operation with the local shipping companies. One of the principal features of the Week will be an Exhibition to be held in the famous St. George's Hall, which will comprise all things relating to the shipping industry; a special section is being organised to show model ships and navigation instruments of all periods. Mr. Matthew Anderson, the Hon. Secretary, Liverpool Shipping Week, extends a cordial invitation to any individuals or shipping concerns, who possess and would be willing to loan anything of special interest, to make this exhibition as representative as possible. Communications giving details of the models offered will be welcomed at 357, Royal Liver Building, Liverpool, on behalf of the Exhibition Committee; size of exhibit should be stated, together with any historical details and, where possible, a photograph would be desirable.

**Colombia. Tender for Supply and Delivery of 1 Steel Motor Launch.** — The Commercial Secretary to H.M. Legation at Bogota reports that the Department of Supplies of the Colombian Government is calling for tenders, to be presented in Bogota by the 20th August, 1931, for the supply and delivery of one steel motor launch. Firms desirous of offering a British built launch can obtain further particulars of this call for tenders upon application to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. Reference number A.X. 10996 should be quoted.

**The River Severn Development Association.**—Speaking at the annual general meeting of The River Severn Development Association, held at Cheltenham on June 16th, Lord Ednam said that he believed The River Severn Development Association was meeting the needs of the municipalities in the Severn Valley and he was satisfied that during the coming year the activities of the Association would be considerably increased. In reviewing the work of the past year he said that the Annual Report was one of continued progress and indicated that the Association was a live and virile body and that there is no doubt but that it had accomplished much in bringing to the notice of industrialists and the general public alike, the fact that the potentialities of the Severn Valley for industrial purposes were very great. He commended the work of the Association to all those who sought to promote trade in the area from the Bristol Channel Ports to the Midlands. The offices of The River Severn Development Association are at 16, Bridge Street, Broad Street, Birmingham, and the Secretary is Mr. E. W. Bayliss.

Digitized by Google

**Manchester Shipping and Forwarding Agents' Conference.**—The Manchester Shipping and Forwarding Agents' Conference has decided to present to Mr. J. H. Allen, who recently resigned the Hon. Secretaryship, a silver cigarette case in recognition of his valuable services. Mr. Allen had been Hon. Secretary of the Conference since its inception about seven years ago. His successor is Mr. A. Faulkner of Messrs. Crowe & Co. (London), Ltd., of Albert Street, Manchester.

MR. A. FAULKNER.

**Mr. J. H. Sharrock.**—Mr. J. H. Sharrock, who has retired from the Chairmanship of the Liverpool Elder Dempster Line directorate, has been succeeded by Mr. Gerald F. Torrey. Apart from Mr. Sharrock's shipping interests he is also a director of the Ardrossan Dockyard, Ltd.; Liverpool Cartage Co., Ltd.; Nigerian Transport Co., Ltd.; and the West African Lighterage and Transport Co., Ltd.

**Liverpool Firm's Agency.**—Messrs. E. H. Mundy and Co., Ltd., shipping and forwarding agents, of Royal Liver Buildings, Liverpool, with which firm Mr. G. C. Horton, Chairman of the Liverpool Shipping and Forwarding Agents' Association, is connected, have been appointed general agents for the U.K. for the Ozean lines, operating regular freight and passenger services to Mexico.

**Lloyd Triestino. M.V. "Victoria."**—In our June issue we printed some details regarding the new motor vessel, "Victoria," owned by Lloyd Triestino, and intended for service on the Grand Express Europe-Egypt via Adriatic route. The vessel commenced her maiden voyage from Trieste on June 27th. After departure from Brindisi she made a perfect voyage to Alexandria, maintaining a regular speed of 21 knots without vibration whatsoever. She arrived at Alexandria on July 1st where 400 guests were entertained, amongst whom were the British High Commissioner, the Governor of Alexandria, Prince Ali Hassan, together with the Diplomatic and Consular Corps. Great enthusiasm prevailed, everybody expressing admiration of this fine new motor vessel. The London offices of Lloyd Triestino (Cosulich Line—Marittima Italiana-Adria S.S. Co., Puglia S.S. Co., San Marco S.S. Co.) are at 16, Waterloo Place, London, S.W.1.

**New Dock Director.**—Mr. Frederick C. Pyman, Managing Director of W. Gray and Co., Ltd., shipbuilders and dry dock owners, West Hartlepool, has been elected a Director of the Mercantile Dry Dock Co., Ltd., Jarrow, in place of Mr. Walter H. S. Pyman, retired. Mr. Pyman is a Director of National Shipbuilders Security, Ltd., and a member of the Council of the Federation of British Industries.

**New Gateshead Wharf.**—The new Gateshead wharf to replace the structure that collapsed, will, it is expected, be completed and ready for use by September. The wharf will have a river frontage of about 440 feet, carrying two crane tracks, and will be a continuation of the Tyne-Tees Company's Hamburg Wharf.

## Port of Bristol Authority.

### Film of the Docks.

This film has been prepared for the purpose of making known the extensive and modern facilities of the docks of the Port of Bristol, an important dock system which is municipally owned. The system comprises the Bristol, Avonmouth and Portishead Docks, and its administration is vested in a Committee of the Corporation under the title of the "Port of Bristol Authority."

The total area of the Dock Estate is 1,200 acres, and the total length of quayage 31,000 feet.

Bristol is known as the "Wetsern Gateway of England" and is the marketing and distributing centre for grain, provisions, petroleum and its products, fruit, timber and many other classes of goods for the West and South West of England, South Wales, Birmingham and the Black Country.

Bristol is not content to live on past records. Its geographical position has given it an assured place in the exchange and distribution of overseas traffic, and no effort has been spared to make its equipment so complete and efficient as to meet every modern requirement.

The film gives a clear idea of the extensive trade of the Port and the nature of the operations performed in the handling of all classes of cargo.

Every facility is afforded for the expeditious handling of all varieties of cargo. Vessels are seen working to quay and craft, also deliveries being made to road lorries, and numerous cranes in ceaseless activity in the work of discharging and loading.

Leather, flour and timber from various parts of the world, meat and dairy produce from Australia and New Zealand, and cocoa from West Africa are shewn in the process of being unloaded.

A considerable section of the film is devoted to the super modern methods of discharging, handling and distributing grain and to depicting the vast storage accommodation at the Port, particularly in connection with the new arm of the dock opened in 1928. Grain is seen being discharged by floating elevators working from the ship's hold to revolving endless bands which carry it to the large granaries where it is stored in silos, etc., with up-to-date arrangements for expeditious re-delivery to rail, road or craft. Thirty-two million bushels or 10 per cent. of the total United Kingdom imports are dealt with annually.

Frozen meat is seen being craned from the ship's holds and lowered through hatchways in the roof of a transit shed to a floor of the shed directly connected with the escalator galleries forming the entrance to the cold stores, exposure thus being reduced to an absolute minimum. These cold stores have a capacity of 50,000 cubic feet.

The discharging and delivery to rail of bananas in bulk by mechanical appliances, the discharging of oil tankers, the loading of export cargo, the capacious graving dock 875 feet long and 100 feet wide, the handling of fruit at the City Docks, also the sampling and storage of thousand of tons of tobacco are also shewn.

The film concludes with pictures of the Authority's Estate at Avonmouth, comprising 300 acres of land available for works and factories, with factory buildings on the site of a total floor area of half a million square feet and railways with direct connection to all parts of the British Isles intersecting the Estate.

## Port of London Authority.

### 26,500,000 Tons of Shipping Dealt with at King George V. Dock.

Ten years ago, on July 8th, 1921, H.M. The King performed the opening ceremony at King George V. Dock. It added 60 acres to the water area of the docks of the Port of London and marked the completion of a most important stage in the Port of London Authority's development programme devised to attract a greater shipping traffic. Results have proved the wisdom of the policy; during the ten years of its existence 7,050 vessels, representing 26,500,000 net reg. tons, have used the dock. The tonnage of vessels using the Port as a whole has increased during the same period from 32,758,640 to 58,083,000 net reg. tons.

### Ship Masts Support Church Roof.

Seven of the oak pillars that support the roof of the Church of St. Matthias, Poplar, are masts recovered from wrecks after the defeat of the Spanish Armada. The Church was founded by the East Indian Company in 1654 and contains a record of the Chaplains of the Company from 1654 to 1866. Like many other churches in dockland St. Matthias is none too well off and Sir David J. Owen, General Manager of the Port of London Authority, accompanied by Lady Owen, opened a Garden Fete in aid of funds.

**Honorary Chaplain, P.L.A.**—The Rev. P. B. Clayton, M.C., Vicar of All Hallows, Berkyngechirche, and perhaps better known in connection with the Toc H Movement, has accepted an appointment as Honorary Chaplain to the Port of London Authority. It is proposed that an annual festival service shall be held for the Authority at All Hallows.

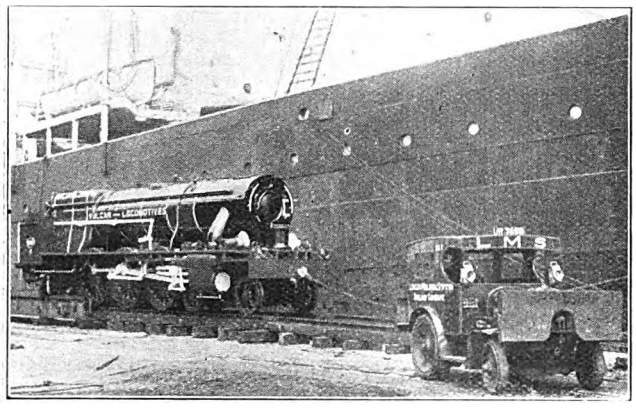
# Railway Notes and News.

**The Railway Barometer.**—The railway traffic receipts of the four group railway companies have now been published for the first 25 weeks of 1931 compared with the same period in 1930 and 1929, and are as under:—

| | 1931 | 1930 | 1929 |
|---|---|---|---|
| | £ | £ | £ |
| Passengers, etc. ... | 30,381,000 | 32,718,000 | 33,285,000 |
| Merchandise, etc. ... | 26,538,000 | 30,728,000 | 31,904,000 |
| Coal, coke, etc. ... | 15,825,000 | 16,957,000 | 17,737,000 |
| Total ... | 72,744,000 | 80,403,000 | 82,926,000 |

**40,000 Suggestions from Staff.**—In 17 years since the scheme was first introduced by the G.W.R. 40,000 suggestions have been received from the employees of the Company. These suggestions cover the whole field of the Company's activities, economies in working, improvement in train connections, adjustments of services to meet changing traffic conditions, poster designs, alteration in the methods of manufacture at the Company's Swindon locomotive works, signalling and renovation works, etc. Last year 2,342 suggestions were received of which 402 or 17 per cent. were recommended for adoption.

**"International" Industrial Tractors for the L.M.S.**—Our illustration shows one of the "International" Industrial Tractors in the service of the London, Midland and Scottish Railway Company. This little giant is seen at the Gladstone Dock, Liverpool, alongside a steamer outward bound to Bombay, her cargo consisting partly of Vulcan locomotives one of which is seen in the photograph depending upon the "International." The total weight of the locomotive and railway truck is about 120 tons, but it was easy going for this tough little product of the International Harvester Company of Great Britain, Limited, with London offices at Harvester House, 259, City Road, London, E.C.1.



ONE OF THE L.M.S. "INTERNATIONAL" INDUSTRIAL TRACTORS.

**Educational Outings for School Children.**—The London and North Eastern Railway Company have made special arrangements to cater for school children in public, secondary and elementary schools in order that they may develop their interest in transport and commerce. These educational outings include large and small parties who make conducted visits to the Railway Museum, York, where the history of transport may be studied; Locomotive Wagon Works at Darlington and Carriage Building and Repair Plant at York, where some of the most modern machinery may be seen at work; the L.N.E.R. Docks at Hull and Tyne Dock, also trips to Edinburgh; the historic battlefields, and monuments of national importance such as the Roman Wall. Organised parties of children are also being taken for trips to the Continent including the historic Zeebrugge Mole and Belgian battlefields. Already this Educational Outings plan has met with success, no less than 2,570 children and 500 adults having taken advantage of the reduced fare arrangements and the itineraries mapped out for them.

**G.W.R. New Express Rail-Road Services.**—The forerunner of a comprehensive scheme for the conveyance of parcels by express rail and road services, covering the whole of its system is announced by the G.W.R. Parcels up to one cwt. may now be booked through from London or any G.W.R. station, to any of 39 towns or villages in outlying districts within 20 miles of Oxford served by the City of Oxford Motor Services, Ltd. At each of these places agents have been appointed and the service enables parcels traffic to be conveyed by express services throughout—by rail to Oxford or Didcot and from these stations by the services operated by the road Company.

**Railway Salesmanship.**—In the course of a message circulated by Mr. Ashton Davies, the Passenger Manager of the L.M.S. Railway to all L.M.S. Staff who come into contact with the travelling public, he says that the time of year is at hand when every mind and every nerve in the Department must be strained to get more traffic. The new holiday return tickets are a very great advance on the old period excursion ticket, and they must make the most of them in their struggle with road competition. Everyone should be a salesman. "Remember the road interests never sleep. From morning till night they are planning how to fill their coaches with passengers. Don't let them take traffic from us. They have some advantages it is true, but never mind the advantages. Think of our own. Think how much safer, more comfortable, more punctual, faster and more trustworthy rail travel is than any other kind of travel."

**New Railway Stations.**—Two new stations, Dane Road (Sale) and Navigation Road (Altrincham) on the newly electrified Manchester, South Junction and Altrincham Railway, which is the joint property of the L.N.E.R. and L.M.S. systems, are to be opened to traffic on July 20th.

**A Mystery Train.**—The names of the famous British trains are household words but who has heard of the Whitewash Special? It would appear that its name belies the honesty attributed to its colour since its existence has up to now been kept a dark secret. It is very much a real express, but without a place in the time table. It is not for ordinary mortals this train is run—that is—directly, but indirectly, it has their interest very much at heart. The function of this mystery train is to bring to light any hidden defects in the permanent way and to solve the difficulty of deciding which is the most smooth-running type of bogie for railway carriages. In short, the perfection of track and rolling stock is the raison d'etre of the Whitewash Special, so that travel on the Great Western may become even smoother than it is already. The train is formed of various kinds of passenger stock, each coach being different as regards its bogies. An observer is stationed in a compartment over each bogie, and whenever the slightest jolt occurs he releases, by means of a special apparatus, a splash of coloured wash. This wash falls on the permanent way and indicates the exact position at which the uneven travelling occurred, and as each bogie has allocated to it a different colour wash—blue, yellow, green, red, etc., it is immediately apparent which one was affected at any particular point. Some bogies have been found to "kick" when passing over rail joints, whilst others have not shown the slightest vibration. The bogie that so far gives the best results is that designed by the Company's own Chief Mechanical Engineer. In another part of the train is an instrument which records graphically the movement of the train, and whenever anything exceptional occurs a note of this is immediately made by the observer. The express usually makes a fast run to some place on the line such as Plymouth, Newport, Wolverhampton, Taunton, during which time the bogies are tested and the wash dropped. On the return journey the train proceeds more slowly, stopping when necessary for an examination to be made of the permanent way at the places where the jolts occurred. Here the technical men get busy, and with rules and measure, notebooks and pencils, examine the track and coach. (G.W.R. Magazine for July).

**Canadian National's Drastic Economies.** — Extensive economies will save the Canadian National Railways a £1,000,000 a year, according to a statement issued by the London office of the Company. Of this saving, £600,000 a year will be due to reductions in train services representing a curtailment of some 3,250,000 train miles per annum, which is stated to be probably the most drastic reduction in train mileage ever effected by a railway company. The reductions, however, have been made only after the most careful study of the needs of the communities affected, with the result that none of the services will be seriously impaired. The Company is making a vigorous attempt to meet the inroads on traffic revenue made by such forms of transport as motor buses, etc.

# Air Transport Notes.

**Imperial Airways, Limited. Change of Address.**—Imperial Airways announce that as from July 27th their head office and London terminus will be:—Airway Terminus, Victoria Station (Continental Departures), London, S.W.1. Telephone: Victoria 2211. Telegrams: Impairlim, London. The entrance to the new premises is exactly opposite the Royal waiting room and entrance to the Continental departure platform, and taxi-cabs with air passengers will approach Victoria Station in exactly the same way as if they were taking passengers for the boat trains. Passengers for the services of the German Air Company, Deutsche Luft Hansa, and for those of the Belgian Company, S.A.B.E.N.A., as well as those of Imperial Airways, will use this Air Terminus, and thus the great majority of travellers to the Continent by whatever means they cross the Channel will start from and arrive at the same point in London. The present office at Airways House, Charles Street, will be retained as a branch West End passenger and freight booking office and enquiry bureau, but car services between London and Croydon will run from the Airway Terminus at Victoria to Croydon and vice versa from July 27th.

**New Hooton Aero Engine.**—Pobjoy Airmotors, Ltd., of Hooton, Cheshire, have marketed what is claimed to be the lightest aero engine for its power in the world. It is 75 h.p., weights 130 lbs. and consumes only 4¼ gallons of petrol an hour at full throttle, which represents about 30 miles to the gallon at 125 miles an hour. The engine will be incorporated in the Comper Swift aeroplane.

**More "Bristol" Bulldogs for Sweden.**—Some months ago the Swedish Government purchased a number of "Bristol" Bulldog single-seater fighters, fitted with "Bristol" Jupiter Series VII.F. supercharged engines, with the intention of submitting them to thorough tests over an extended period before committing themselves to the choice of this type for the general equipment of the Swedish Air Force. There trials included service throughout a Swedish winter. Recently the Swedish authorities placed an order with the Bristol Aeroplane Company, Ltd., for the supply of eight further "Bristol" Bulldogs. These have now been completed and fulfilled a series of performance tests in Bristol to the full satisfaction of a Swedish Acceptance Commission. The machines were then flown to Sweden by pilots of the Swedish Air Force, in two flights of four machines each.

**Air Parcel Post to India.**—Although the Imperial Airways England-India air mail has been in successful operation for three years, the service has hitherto been for passengers, letters, and freight only. Now, however, a regular parcels air mail has been instituted on this 5,000 miles route. The new facility is available weekly in each direction and will, it is hoped, be of considerable benefit to British business houses trading with India. As an example of the time-saving effected by the England-India flying mail, it may be mentioned that, by the accelerated service now in operation, parcels from London reach Karachi in only 5 days, as compared with 19 by the fastest surface transport, while, as an indication of the rates charged, the cost for a 1 lb. parcel is 6s. This England-India air parcel post is, it may be mentioned, proving already of value in the rapid transport of such articles as small, urgently-required spare parts or—just to take another example—in respect of consignments of seeds which, if they are any considerable time in transit under semi-tropical conditions, may run a risk of premature germination.

**Royal Dutch Air Lines and K.N.I.L.M.**—In the natural excitement caused a short time ago by the first experimental England-Australia and return air mail operated by Imperial Airways, Ltd., not so much was heard of another and perhaps not unimportant experimental air mail link between England and Australia. About the same time as the Imperial flights to and from Australia, mails from London were being carried by air to Australia along an existing and well organised Dutch route operated from England to Holland and from Holland to Batavia by the Royal Dutch Air Lines, a Company well known for its Amsterdam-Batavia fortnightly air mail service. From the Dutch East Indies to Australia the last link in the chain was forged by a return mail flight between Batavia and Australia by the K.N.I.L.M., a Dutch East Indies Air Traffic Company which operates air lines in the Netherlands Indies. The outward trip was without incident and ran to schedule, and the mail machine from Batavia to Australia was named the "Abel Tasman" after the Dutch explorer who discovered Australia in 1642. The return journey to England was interesting, because from Sydney to London, the mails only took 18 days and of these, two were spent inactively in the Dutch Indies because the "Abel Tasman" arrived two days before the K.L.M. Batavia-Amsterdam machine was scheduled to depart for Europe. Thus, if such a service became regular, there is no reason why the Australia-England journey should not be performed in 16 to 17 days with regularity.

**Handley Page News.** — An agreement has been concluded between an Italian Company and Handley Page, Ltd., by which Italian aircraft will be fitted with auto-slots. The Italian company has been formed for the purpose of handling the slot patents in Italy and it is understood that the slot is to be used extensively on Italian aircraft both civil and military. Handley Page wing slots are now used in Australia, Canada, Czecho-Slovakia, Denmark, Finland, Great Britain, India, Italy, Japan, New Zealand, Norway, Poland, Portugal, Rumania, South Africa, Spain, Sweden, Switzerland and the United States of America. Turning to civil aviation one finds that slots are equally widely used and that not only the flying organisations but also the private aeroplane owners appreciate the value of this fitting. On June 17th last the firm of Handley Page, Ltd., celebrated its 22nd birthday.

**Air Taxi Services Established in the Irish Free State.**—Air taxi services were established in the Irish Free State last month, when the first civil aerodrome was opened by Mr. S. Dolan, T.D., Parliamentary Secretary to the Ministry for Industry and Commerce, at Finglas in the County Dublin. This aerodrome is the headquarters of the Iona National Airways and Flying School, Ltd., of which Mr. Hugh Cahill is the Managing Director. Until this scheme of civil aviation was established there had been no air taxi service in the Free State, and a long-felt want is now supplied. A spacious field has been laid out and fixed up as an excellent aerodrome, on which big machines can conveniently land and take off, whilst a hangar has been constructed that can hold up to twenty aeroplanes. The aerodrome is fully staffed, and is in charge of a competent pilot, Mr. M. F. Coogan, who was, until recently, an officer in the Free State Army Air Corps. At the start the Iona National Airways had three light aeroplanes, all D.H. Moths, which have since been put into operation for air taxi transport in Ireland, so that it would be possible to charter an aeroplane at Finglas for a fast journey to any destination in Ireland.

**Model Air Liner for Blind Children.**—Blind children, like all other young folk, are interested keenly in aviation; but their affliction prevents them from grasping the various features of aeroplane construction unless they can actually handle model aircraft of a convenient size. Recently the Principal of the North Wales School for Blind Children at Rhyl wrote to the London air station, asking whether it might be possible to obtain a model of a modern air express for instructional purposes. "Blind children," she wrote, "miss so much of contact with the ordinary sights of life that it is impossible for them to realise, without handling a model, what such a thing as an aeroplane is like." This request was brought to the attention of Imperial Airways, and a letter was sent to the Principal, offering to forward to the school, immediately, a model with a 2 ft. 6 in. wing span of one of the Company's Handley Page W.8 biplanes. This offer, the Principal replied, she would be only too delighted to accept; whereupon the model was sent off at once, and, after its arrival, the Principal wrote again: "It is exactly the size for our purpose. Had it been bigger, the complete model might have been beyond the tactile comprehension of the smaller children; but as it is they are all able to feel the complete model within the length of their outstretched arms. The children are delighted with it." When forwarding the model, it was explained that the aircraft of which it was a replica was driven by two Rolls-Royce engines developing a total of 750 horse-power, and carried 14 passengers, together with pilot and engineer. It was also mentioned, as a point of interest, that the particular aircraft of which the model had been made had flown more than 500,000 miles in the Company's service. Increases in the size, power, and luxury of modern aircraft, and the concentration by Imperial Airways upon great machines driven by three and four engines, have now led the smaller twin-engined machines to be diverted from cross-channel passenger services, and they are now used largely for freight-carrying purposes.

# Publications Received.

THE LAW OF MOTOR VEHICLES. By Frederick G. Bristow, F.C.I.S., M.Inst.T., of the Inner Temple, Barrister-at-Law. (The Commercial Motor Users' Association (Inc.), 50, Pall Mall, London, S.W.1. Price 5s. net). The appearance of this book is opportune. The new Road Traffic Act was placed upon the Statute Book on August 1st, 1930, and during the last few months operators of mechanically propelled vehicles have become bewildered by the number of orders and regulations made under the Act until to-day it is doubtful whether any transport manager can put his hand to his heart and say "I know it all." Only a few weeks ago a Metropolitan magistrate is reported to have said "How on earth omnibus owners can possibly keep in touch with all these regulations I cannot conceive." Operators of all kinds of mechanically propelled vehicles must know, however, what they may and may not do, and in this book Mr. Bristow tells them and does it so simply that "He that runs may read." This book collects for the first time in one volume the Road Traffic Act, 1930, the Regulations and Orders made under it and other legislation affecting motor vehicles, and the opportunity has been taken to include such matters as the lighting, taxation, registration and licensing of motor vehicles; the conveyance, storage, and use of petroleum spirit; the transit of animals by road and other subjects with which owners and drivers should become familiar. That the book is "up to the minute" there can be no question; for instance, only a few weeks ago the Minister of Transport made Regulations dealing with lost property in connection with Public Service Vehicles, yet the author deals with these regulations. The Rt. Hon. Sir Eric Geddes, P.C., G.C.B., G.B.E., LL.D., the first Minister of Transport, contributes a foreword in the course of which he says "Mr. Bristow is admirably qualified for the work which he has undertaken having been continually in the counsels of the Ministry, both during the passage of the Bill through Parliament and in connection with the many regulations subsequently issued. His book will, I feel sure, be of the greatest interest and value to all users of the King's highway and no owner of a motor vehicle, whether passenger or goods carrying, with any pretention to a full knowledge of his business and a due regard for his responsibilities to the general public should be without a copy of it." May we say that we cordially endorse Sir Eric's remarks. Mr. Bristow is well-known to many of our readers as the General Secretary of the Commercial Motor Users' Association and since the passing of the Road Traffic Act he has lectured throughout the country on its provisions. The book contains the following, amongst other important matter:—The Road Traffic Act, 1930; The Construction and Use of Motor Vehicles; The Lighting of Motor Vehicles; The Highway Code and Traffic Signals; The Storage of Petroleum Spirit; The Conveyance of Petroleum Spirit by Road; The Taxation of Motor Vehicles; The Registration and Licensing of Motor Vehicles; The Transit of Animals by Road; The Conditions of Fitness of Public Service Vehicles; The Traffic Commissioners and Traffic Areas; Statutes, Orders and Regulations; Comprehensive Index. The alphabetical arrangement of each section renders it easy to refer to and the appropriate penalties for each offence are included in the respective paragraphs.

THE MOTOR TRANSPORT YEAR BOOK AND DIRECTORY.—Vol. 15, 1930-31. (Electrical Press, Ltd., 13-16, Fisher Street, Southampton Row, London, W.C.1. Price 30s. net.) This publication continues to grow in value and importance. It is the only comprehensive annual record of the motor transport industry. It is specially compiled to meet the requirements of the various business interests involved and provides a vast amount of commercial, financial and technical particulars of great value. It is, in fact, indispensable to all concerned in the progress of mechanical road transport. The new edition provides specially compiled information relating to 5,138 motor transport and allied undertakings; details (including addresses) of 6,500 Directors and Officials engaged in the Industry, and much other valuable information. New features include a digest of the new law and regulations governing Public Service Vehicles; 13 specially drawn maps of the newly constituted Traffic Areas; and a Geographical Index of Transport Undertakings operating in each Area. There are full particulars of Associations and Societies connected with the industry and a comprehensive index of all undertakings dealt with and the "fleet names" of services in operation

HOME MARKET ANALYSIS No. 5 (The Society of Motor Manufacturers and Traders, Limited, Statistical Department, 83, Pall Mall, London, S.W.1. Price 2s. 6d. post free.) This publication gives a complete analysis of the United Kingdom motor market. An estimate of sales of private cars for the year ending September, 1931, indicates a decrease of 4,000; sales of goods carrying vehicles a decrease of 2,000; sales of hackney vehicles a decrease of 800. The proportion of sales of saloon cars as against other models has risen from 46 per cent. in 1927 to 88 per cent. in 1930. Of the total vehicles in use at the end of 1929 approximately 8 per cent. of private cars, 10.3 per cent. of goods carrying vehicles and 6.7 per cent. of hackney vehicles were taken off the road in 1930. Total private cars, trucks and hackney vehicles in use have increased from 1,434,256 in 1929 to 1,532,820 in 1930. The greatest percentage increase is shown by goods carrying vehicles, namely, 11.4 per cent. as against an increase in usage of private cars of 7.6 per cent. and hackney vehicles, 3.2 per cent. This publication should be an invaluable guide to the retail vendor of motor vehicles, as well as to the manufacturer.

THE MOTOR INDUSTRY OF GREAT BRITAIN for 1931 (Issued by The Statistical Department of The Society of Motor Manufacturers and Traders, Ltd., 83, Pall Mall, London, S.W.1. Price 2s. 6d. net.) The motor industry of Great Britain deals with:—(1) The historical and statistical survey of the Motor Industry; (2) Roads and Taxation with International comparisons; (3) Imports, Exports and Production of Motor Products with International comparisons; (4) The number of Vehicles in use with International comparisons. Special points of interest are:—(a) The average life of a Motor Vehicle in Great Britain is now 7¾ years; (b) Whilst Motor Cars and Taxis have increased by nearly 300,000, the proportion of street accidents attributable to these vehicles has decreased by 1.6 per cent.; (c) The United Kingdom still pays the highest taxes in the world, viz., £27.9 per vehicle per annum, as against £6.56 in the U.S.A.; (d) Production in 1930 was 61 per cent. higher than in 1924; (e) Employment in the Motor Trade in 1930 was 8.9 per cent. higher than in 1924; (f) There has been a favourable balance in overseas trade of all Motor Products since 1926; (g) The British Empire owns 11.3 per cent. of the total vehicles in the world; (h) There are 29.8 persons to every Motor Vehicle in the United Kingdom and 4.6 persons to every Motor Vehicle in U.S.A; (i) There is on page 124 a new and interesting formula for gauging the potential markets of countries throughout the world. This very interesting and useful publication is obtainable from any bookseller. Trade agents are Messrs. Simpkin, Marshall, Ltd.

R.A.C. HANDBOOK. The 1931-2 edition of the R.A.C. Guide and Handbook is now available. The mass of information which this Guide contains has increased so enormously in recent years that it has been found necessary to remodel the new edition to prevent its becoming unwieldy. The whole of the contents have been rearranged, a lighter type of paper has been employed, and the stiff cover replaced by one of limp cloth. Not only is the Guide more comfortable and convenient to handle in its new form, but the information it contains is more elaborate than ever before. Amongst the principal features are a complete summary in simple language of all the laws and regulations relating to the use and ownership of private motor vehicles; a list of all registration and licensing authorities with index marks, statistical tables for calculating horse power, speed and so forth, police and driving signals, lighting-up tables, hints on first aid, and the principal motoring records. The touring section contains a directory of Great Britain and Ireland giving particulars of hotels, garages and repairers, places of interest, golf clubs, etc., for over 2,000 towns and villages, sixty street plans of the larger towns showing bye-passes and recommended through routes, a 32 page coloured map, a list of camping sites, tolls and ferries with charges and sailing times in the case of the latter; over 600 hills in Gt. Britain with their length and gradient, a directory of the 430 R.A.C. Telephone Boxes with numbers, and an alphabetical list of the 1,500 Inns where the standard R.A.C. 2s. meal can be obtained. The Foreign Touring Section sets out the various R.A.C. offices and agents in foreign countries, gives full information regarding customs duties and foreign touring facilities, including hotels and garages, and a complete summary of the law relating to motoring in sixty colonies and foreign countries. Copies are obtainable from the Secretary, R.A.C., Pall Mall, London, S.W.1, price 1s. 6d. post free to members, and 4s. to non-members.

ROAD TRAFFIC ACT MAP. Edward Stanford, Ltd., Cartographers to The King, 12-14, Long Acre, London, W.C.2, have published a very useful map showing in colours the traffic areas in England, Wales and Scotland. The scale is about 23 miles to 1 inch and the size 30 in. by 22 in. It will prove to be an almost indispensable map for Local Authorities and to all interested in Road Transport. Prices: Cloth lined paper, flat 3s. 6d. (3s. 11d.). Folded in cover 4s. 6d. (4s. 8d.). On cloth and rollers 6s. 6d. (7s.). (The figures in brackets include postage.)

# Law Cases.

## RULE GRANTED.

THE legality of the conviction of Robert Leslie Levett, of William Street, Blyth, a bus driver employed by a Newcastle-on-Tyne transport company, for alleged "reckless driving" within the meaning of a section of the Road Traffic Act, 1930, is to be tested in the High Courts. On June 2nd, before a King's Bench Divisional Court, Counsel for Levett asked if a rule *nisi* to issue to the Leightonstone (Hunts.) Justices calling on them to show cause why a conviction they recorded against him should not be quashed on the ground of nullity because of an error in practice. Counsel explained that, on Good Friday, an accident occurred in which Levett's bus collided with a motor lorry with the result that Levett was fined £30 and costs by the Justices for "reckless driving." Under a section of the Act the maximum penalty, if the offence is proved, is a fine of £50, or, alternatively four month imprisonment. The suggestion was now advanced that the Justices failed to give Levett the opportunity of choosing the right of trial by jury with the result that the conviction was a nullity. Mr. F. C. Whiting, a Northampton solicitor, supported the application for the rule by affidavit as to what happened before the Justices and the Court granted the rule *nisi* which will be argued in due course.

## MUDGUARDS ON STEAM LORRIES.

AN interesting point was raised at Ashton Police Court recently when Messrs. W. Storrs & Sons, Limited, of Stalybridge, were summoned for not having mudguards on a steam lorry to prevent the splashing of mud or water. It was explained that the steam lorry in question was a three-way tipping lorry and mudguards were not supplied by the makers, as these would be damaged by the tipping body. After an inspection by the magistrates, during which time the driver tipped the wagon in all its ways, the magistrates decided to dismiss the case. The presiding magistrate said that mudguards of American cloth could be used on this type of vehicle with great success.

## IS THE DRIVER TO BLAME?

AN interesting case in which a motor bus workers' trade union instructed the solicitor for the defence, was heard at Chorley recently when William Boothman, bus driver, was summoned for aiding and abetting the overcrowding of a bus he was driving at Chorley. The conductor of the bus was fined 20s. for allowing the bus to be overcrowded by carrying 58 passengers. The Magistrate's Clerk pointed out that in such cases the conclusion the magistrates had come to was that the driver was technically guilty of the offence by the mere fact that he was driving the bus. They recognised that if the driver attended to his driving he was doing as much as could be expected of him. In such cases they adopted the practice of ordering the driver to pay costs.

Mr. A. W. H. Riley, for defendant, explained that the driver was seated in the front of the bus and as soon as the lights were put on inside, the driver had to pull down three blinds. If he did not do so, disciplinary action was taken against him and he was fined. There used to be a practice that if the bus was full the conductor gave three rings on the bell so that the driver would know. Notice had been given, however, that this practice must stop forthwith. In such a case how could the driver know the bus was full?

Dr. A. Duckworth, one of the magistrates, pointed out that a company's regulations were not the law and that whatever they thought of the law, they could not take a company's regulations as such.

Defendant was ordered to pay costs for aiding and abetting.

## DAMAGES FOR CARTAGE CONTRACTOR.

IN the Bow County Court, before Judge Thompson, K.C., and a jury, John Honyben, of 79, Silwood Street, Rotherhithe, S.E., a cartage contractor, was the plaintiff in an action remitted from the High Court, to recover £200 alleged damages from Samuel Rogers, of 134, High Street, Stratford, E.

The plaintiff gave evidence, and said that on December 31st, he was driving his Ford motor lorry from Northfleet towards home. He was passing through Princes Road, Dartford, at a very slow pace, as he knew it to be a very dangerous spot, and further it was a very dark and stormy night. Suddenly two yards in front of him he saw a dark object, and before he could pull up he ran into it. He then found that it was the trailer of a motor lorry, on which there were no lights, and which had been stationary. A man was fixing a fresh light on, but was obscuring it while doing so, and he was pinned between the two vehicles. The man was so badly injured that he had to be taken to hospital. The plaintiff was flung against the steering wheel, and sustained a laceration of the right side and a contused spine. He had been earning £6 a week, but had been unable to work since.

In cross-examination he said his side lights were candles, but his head lights were on.

Medical evidence was given that the plaintiff's wound had not healed, and he would not be fit to do his ordinary work for another month.

For the defence it was set up that the plaintiff contributed to the accident by not keeping a proper look-out, and that it was his own negligence that caused the accident.

The jury retired, and on returning into court gave a verdict for the plaintiff for £150.

Judgment was accordingly entered, with costs.

## CUSHIONS LOST IN TRANSIT

THE question as to liability for cushions lost in transit, was discussed in the Shoreditch County Court, before Mr. Registrar Wickham. The plaintiff was Edward John Speckman, of 44, Gibraltar Walk, Bethnal Green Road, a motor driver, and he sued George Tovee, of 118, Brunswick Street, Hackney Road, E., transport contractor, to recover £4 5s. being 35s. a weeks wages, and £2 10s. petrol purchased on behalf of the defendant when on long distance journeys. There was a counterclaim for 30s. for cushions alleged to have been lost by the plaintiff when delivering furniture in Manchester and Birmingham.

The claim was admitted, and in support of his counterclaim, the defendant said the plaintiff took a load of furniture for delivery in Manchester, Birmingham and Liverpool, and when he came back it was found that a number of cushions were short. He was sub-contracting for this job, and he could not get his money until he allowed for these lost cushions. When he spoke to the plaintiff about it, he said he must have left them up in Manchester. Cross-examined by the plaintiff, he admitted that it was usual for the van to be loaded before the plaintiff started, and it was so on this occasion. The plaintiff said he could not see where he could be liable because his invoices were receipted on the journeys, and therefore he must have delivered the goods correctly everywhere. The Registrar said he could not see where the defendant was liable for the loss of these cushions any more than the plaintiff, because neither of them loaded the van and the receipts came back complete. It seemed to him that if a person took on transport work, he could not be liable for any lost articles unless the loading was done by the person who carried out the work. Under the circumstances, as the defendant himself was not really liable for the lost cushions, the plaintiff certainly could not be. He would therefore enter judgment for the plaintiff, with costs.

# In Parliament.

**Road Traffic Signs.** Answering a question in the House of Commons **Mr. Herbert Morrison,** the Minister of Transport, said that prior to the passing of the Road Traffic Act, 1930, he had issued circular letters to highway authorities recommending suitable types of traffic direction and warning signs as well as traffic control light signals, and the terms of assistance available from the Road Fund were also explained. Before taking any comprehensive action under Section 48 of the Road Traffic Act, he thought it desirable that the whole question should be reviewed by a departmental committee which he proposed to set up, and on which the highway authorities would be represented. Upon their recommendations would largely depend the measures to be taken for carrying into effect any changes that might be found necessary.

**Regulations made under the Road Traffic Act.** Asked the number of orders and regulations made by him under the Road Traffic Act, 1930, **Mr. Herbert Morrison** said that thirty-one Orders and Regulations had been made of which three had been revoked and suspended by subsequent Orders or Regulations. Of the remainder, a number dealt with the fixing of the dates of commencement of different sections of the Act, or other formal matters. It was his intention when the Regulations which were of general interest had assumed a permanent form, to have them grouped according to their subject matter, and made available in a convenient and compact shape.

**Motor Coach Services.** Mr. D. G. Somerville asked the Minister of Transport what steps were being taken to coordinate the varying decisions reached by various traffic commissioners in respect of the same motor coach services which passed through their areas? **Mr. Parkinson,** who replied, said that the conditions to be attached to a road service licence fell to be determined, in the first instance, by the traffic commissioners concerned, having regard, amongst other things, to the traffic conditions existing in their own area. He hoped that when further experience had been gained it might be possible for the commissioners to standardise such conditions as might prove to be generally applicable to a particular type of service. To these would be added such special local conditions as might be necessary.

**Mr. Somerville** asked the Minister of Transport whether in view of the uncertainty which existed all over the country in respect of motor coach services, he proposed to take any steps to expedite the investigations of the traffic commissioners; and whether he would consider the desirability of allowing all existing motor coach services to continue during the present summer, with the object of avoiding unemployment and enabling the public to know exactly what holiday facilities existed, it being understood that the recommendations of the commissioners would only become operative in the autumn? **Mr. Parkinson,** who replied, said that under the provisions of the Public Service Vehicles (Transitory Provisions) Order, an applicant for a road service licence who was operating a service on 9th February, 1931, could continue to run that service pending the grant or refusal of his application by the commissioners. Similarly a seasonal service operated during the 12 months ended 31st March last could be run during the corresponding period or periods of this year. In these circumstances his Right Hon. Friend saw no reason for taking action on the lines suggested.

**Omnibus and Coach Services. Mr. Remer** asked the Minister of Transport how many applications had been made to the traffic commissioners to run omnibus and coach services; how many had been heard to date; how many decisions had been given; and in how many cases had the applications been refused? **Mr. Parkinson,** who replied, said that up to May 31st the traffic commissioners had received approximately 30,000 applications for road service licences, including backings. At that date decisions had been given in 3,249 cases, including 154 refusals. He had no information as to the number of applications heard on which no decision had by that date been given. **Mr. Remer:** Will the traffic commissioners be able to complete all these cases within the year? **Mr. Parkinson:** We hope so.

**Mechanical Signals for Heavy Motor Vehicles. Sir George Penny** asked the Minister of Transport whether he would issue regulations making compulsory the use of mechanical and illuminated signalling arms on heavy mercantile and passenger-carrying vehicles? **Mr. Herbert Morrison** said that the Highway Code described fully the hand signals that drivers should give when intending to stop, slow down or change direction, while stating at the same time that where the appropriate signal could be given effectively by a suitable mechanical or electrical device there was no objection to its use. He did not think he should be at present justified in making the use of such mechanical or electrical devices compulsory in the case of any particular class or description of vehicle.

**Unilateral System for Waiting Vehicles.** In reply to a question **Mr. Herbert Morrison,** the Minister of Transport, said that consideration had been given to a proposal to introduce the unilateral system for waiting vehicles in certain streets in London, but in view of the objections which were made it was decided not to pursue the proposal further at the present time.

**Road Service Licences. Mr. Remer** asked the Minister of Transport if his attention had been called to the expense incurred by the opposition by railway companies and large omnibus undertakings against the smaller omnibus owners before the traffic commissioners; and if he would take steps, in cases where these applications were granted, to provide that they should be granted for a period of years, or that no objections could be made on the same grounds in the annual application? **The Parliamentary Secretary to the Minister of Transport** (Mr. Parkinson), who replied, said that the Minister's attention had not been called specifically to the matter referred to in the first part of the question. As regards the second part, he would point out that under the Road Traffic Act, 1930, a road service licence could not continue in force for a period exceeding 12 months, and that in exercising their discretion to grant or refuse an application for a fresh licence, the traffic commissioners were required to take into consideration any representations which might be made by persons who were already providing transport facilities along or near to any part of the proposed route. **Mr. Remer:** Is the Parliamentary Secretary not aware that if the small omnibus owners have to make application every year, and are put to very serious expense, they will very soon go out of business altogether? **Mr. Parkinson:** Of course, but there is no obligation to engage counsel, and, after all, the licence is only granted for one year according to law.

**Conductors on Public Service Vehicles. Mr. Remer** asked the Minister of Transport if his attention had been called to the hardships caused in many instances by the regulation requiring that in every case there should be conductors on omnibuses; if he was aware that this would mean the closing down of services in certain rural areas which were of great convenience to the travelling public; and if he would take steps to leave discretionary power with the traffic commissioners on those matters? **Mr. Parkinson,** who replied, said that no regulation had been made by the Minister requiring that in every case there should be conductors on omnibuses. Regulation 14 of the Public Service Vehicle (Equipment and Use) Regulations required that as from August 1st, 1931, where a public service vehicle was being used as a stage carriage a conductor should be carried if the seating capacity of the vehicle exceeded 20 passengers, with the proviso that in the case of a single-decked vehicle where no adult fare was less than 6d. no conductor need be carried if the seating capacity of the vehicle did not exceed 26.

**Age Limit for Motor Omnibus Drivers. Mr. Batey** asked the Minister of Transport if he was aware that about 200 young men, 18 years of age, had been thrown out of work in the northern area owing to the Road Traffic Act, which prevented them continuing as drivers of motor omnibuses until they were 21 years of age; and whether he would consider some way whereby these young men could continue their employment. **Mr. Herbert Morrison** said that Section 77 of the Road Traffic Act, 1930, provided that a person should be disqualified from obtaining a licence to drive a public service vehicle unless he is over the age of 21, or unless he shows to the satisfaction of the traffic commissioners that he was, during the six months immediately preceding 1st January, 1930, regularly employed as a driver of a public service vehicle. He had no power to waive or modify the provisions.

**Motor Vehicle Lights. Mr. Remer** asked the Minister of Transport if it was his intention to make any regulations with reference to the size of headlights on motor vehicles? **Mr. Parkinson,** who replied, said it was the intention of the Minister to make regulations which would prohibit the use of headlights of excessive power. The question of size was, he (Mr. Parkinson) thought, not a material factor.

## MOTORING OFFENCES.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—May I suggest that motorists should bear in mind some of the facts revealed by the Home Office statistics of motoring offences in England and Wales for the year 1930?

The following analysis of the figures covering offences committed by motor users during the year reveals, on a percentage basis, the relative frequency of various breaches of the law, in comparison with the total number of offences:

| | Per Cent. |
|---|---|
| Lighting offences | 25.9 |
| Driving Licence offences | 12.3 |
| Obstruction | 12.1 |
| Reckless driving | 9.0 |
| Silencer offences | 7.9 |
| Exceeding speed limit | 6.6 |
| Inefficient brakes | 6.0 |
| Registration offences | 5.3 |
| Failure to stop on request | 1.8 |
| Drunkenness | 0.5 |
| Failure to stop after accident | 0.3 |
| Manslaughter | 0.02 |
| Causing bodily harm | 0.01 |

Thus, over 63 per cent. of all the charges brought against motorists concern purely technical offences such as lighting, driving licences, silencers, registration marks and obstruction, leaving only a very small proportion of really serious offences.

These Official statistics indicate that, although the standard of conduct on the road in Great Britain is high, motorists are, nevertheless, being heavily fined for technical breaches having no bearing on the question of public safety.

The statistics regarding A.A. free legal defence, which was initiated by the Association in 1907, go far to bear this out.

Yours faithfully,
STENSON COOKE,
Secretary.

The Automobile Association,
Fanum House,
New Coventry Street, London, W.1.
June 30th, 1931.

## AXLE WEIGHTS INCREASED.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—We are pleased to be able to inform you that the Minister of Transport has given favourable consideration to the representations made to him by the Steam Road Vehicle Makers on the subject of axle weights.

A new amendment Order has now been issued legalizing an additional two tons of laden weight for four-wheeled steam vehicles licensed before 1st January, 1932. Thereafter all four-wheeled steamers on pneumatic tyres will be allowed one ton extra, i.e., 13 tons gross weight at 20 m.p.h.

This means that existing "Sentinels," "Super-Sentinels" and "Sentinel" D.G.4's are now legal with two tons more pay load than previously and that any new "Sentinel" four-wheeled vehicle licensed before the end of this year will enjoy a similar advantage.

Yours faithfully,
F. G. GODDARD,
Director.

The "Sentinel" Waggon Works, Ltd.,
Shrewsbury.
8th July, 1931.

## TRANSPORT CHAOS.

*To the Editor of* THE WORLD'S CARRIERS.

SIR,—As one interested in the attempts which are being made to remedy the chaotic state of transport in this country, I should like to call your attention to a national conference of local authorities which has been called by the Leicester City Council to discuss canal development.

The question of road congestion and damage by heavy traffic is bound to crop up and is of vital interest to architects of houses adjacent to main roads. May I suggest, therefore, that the conference would be a fitting occasion to discuss national transport as a whole? So far, I understand, no invitation to the conference has been issued to representatives of the three great inland carrying systems—the railways, the roads and the canals. As it is surely of the utmost importance that some measure of agreement should be reached by these three interests as to the types of traffic for which they should individually cater, I should like to suggest to the Leicester City Council that invitations should be extended to them.

The importance of the Conference is emphasised by the fact that the Grand Union Canal Company is now carrying out legal preliminaries before completing the purchase of the Leicester and Loughborough Navigations and the Erewash Canal, all of which serve Leicestershire and the neighbouring counties.

Yours faithfully,
G. B. J. ATHOE,
Secretary.

The Incorporated Association of Architects and Surveyors.
1, Wilbraham Place, Sloane Street
London, S.W.1.
25th June, 1931.

# Commercial Motor Users' Association.

**West Midlands Division.**

AT the Annual General Meeting of the West Midland Division of the Commercial Motor Users' Association held on June 11th, at Birmingham, Mr. S. Macadam, of Cadbury Brothers, Bournville, was elected Chairman for the ensuing year, and Mr. G. T. Mayhew, of Messrs. Chamberlain King & Jones, Birmingham, was elected Vice-chairman.

The annual report for the year 1930-31, stated (*inter alia*) that the Division sustained a great loss in the resignation of its Chairman, Mr. John H. Stirk, J.P., who left the district on his appointment as Traffic Commissioner for the East Midlands. The Council found an efficient successor in Mr. S. Macadam for the remainder of the year.

Efforts were continued to induce the Birmingham Corporation to fit automatic "stop" lights on trams and buses, and it would be seen that such were now being fitted to new buses.

Special attention had been given to the Road Traffic Act, 1930, throughout the year. Clause 19 in particular had been the subject of sustained effort and as was known a modification of this was made although, perhaps, not such a favourable one as was hoped for.

The Divisional Council was not satisfied with the section of the Act dealing with third party Insurance, and thought property should be included. This matter however, had yet to be debated before the National Council.

The existing speed limits created anomalies particularly regarding lighter vehicles. The C.M.U.A. made strenuous efforts to get what it considered more equitable treatment of speeds and would at the proper time renew its activities in this direction.

It was observed that passenger traffic regulations were onerous and restrictive and to these due attention was being paid.

The Division through the National Council objected to the Hours of Industrial Employment Bill, and was following its development.

Mr. C. le M. Gosselin and Mr. F. G. Bristow visited the Division on December 5th, 1930. Mr. Bristow spoke on the Road Traffic Act before a large audience at the Birmingham Commercial College, and the meeting was highly successful The President accompanied by Mr. Bristow attended the Drivers' Annual Supper at the Crown Hotel, Birmingham. Appreciation of the President's visit was shown by the increased number of drivers present.

Messrs. Morris Commercial Cars, Ltd., kindly showed the Morris Cinematograph Film to an interested audience at the Woodman Hotel, Birmingham, on January 20th, last. The Divisional Secretary, Mr. John Howell, opened a talk on the Road Traffic Act at the same place on March 10th. Much appreciation was shown by members and drivers at both meetings.

Special attention is drawn to the findings of the Royal Commission on Transport. The Division objects to the following recommendations, viz.:—that motor vehicles shall contribute more towards highway costs; that vehicles exceeding four tons unladen weight be discouraged; that vehicles whose unladen weight equals 9-10 tons shall have rates doubled; that trailers shall be licensed, and that there shall be co-ordination of road transport by means of nationalisation, rationalisation, or both, or by a public trust. It is obvious that if the Association is successfully to resist the above it must be better supported by its members and by all interested in Road Transport.

# News from all Parts.

**Advertising the Fair.**—The Department of Overseas Trade announce that they have appointed Dorland Advertising, Ltd., as their advertising agents for next year's British Industries Fair which opens in London and Birmingham on February 22nd, 1932. Mr. Sydney Walton will direct the news publicity not only of the London section of the Fair as heretofore but also of the Birmingham section. The news for both sections will be handled by Mr. Robert Williamson and Mr. Andrew Reid from 10, Adam Street, Adelphi, London, W.C.2.

**London Traffic. The Motorist and Oxford Street.** — The Automobile Association has issued a special map of Oxford Street, London, which clearly indicates the restrictions and prohibitions which obtain within the scheduled area of control. A novel feature is embodied, inasmuch as the map shows what the motorist should avoid at the various street intersections. All essential information is clearly shown. The A.A. advises all members to keep a copy available in their cars when motoring in the West End. The map may be obtained gratis on application to the Secretary, The Automobile Association, Fanum House, New Coventry Street, W.1, or to any A.A. Branch Office.

**FORTHCOMING EVENTS.**

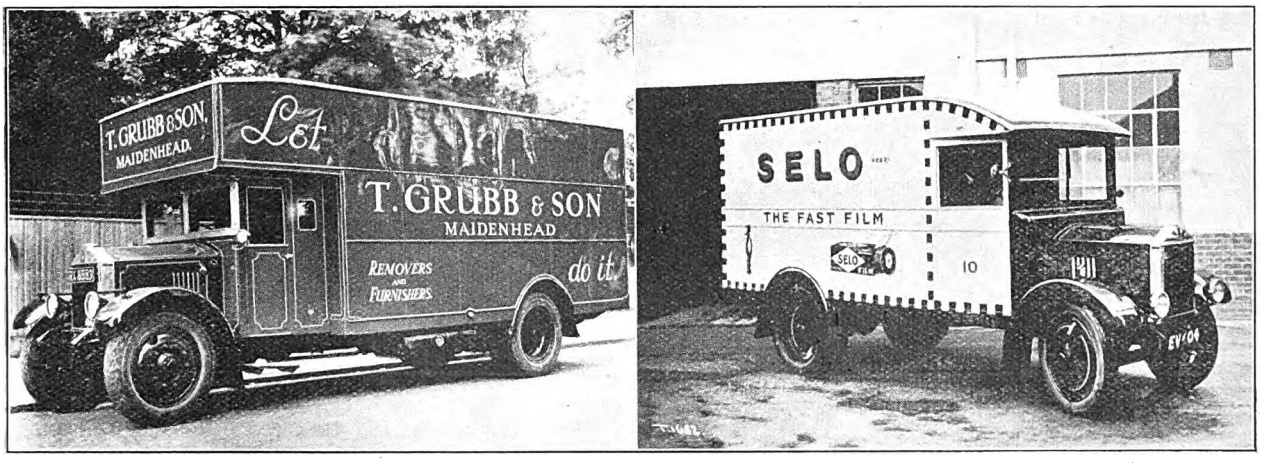
| July 27—31. | First International Conference on Public Cleansing, Guildhall and Olympia, London. |
| Sept. 10—26. | Shipping and Engineering Exhibition, Olympia, London. |
| Nov. 5—14. | Commercial Motor Transport Exhibition, Olympia, London. |
| Nov. 16—21. | Public Works, Roads and Transport Congress and Exhibition, Royal Agricultural Hall, London. |
| Nov. 26. | The Motor and Cycle Trades' Benevolent Fund. Annual Banquet. |
| Nov. 28—Dec. 6. | Paris. Commercial Motor Exhibition. |
| Dec. 7—11. | Smithfield Club Cattle Show, Royal Agricultural Hall, London. |

**Speeding up Canal Transport to the Midlands.** — A bridge, capable of carrying a load of sixty tons, a concrete road, and a warehouse with a ground floor space of 7,500 square feet, have just been constructed at the Brentford terminus of the Grand Union Canal. These form part of the comprehensive development and speeding-up scheme of the company, whose canals—240 miles in length—link London with the Midlands. The new warehouse is equipped with a three-ton electric crane which can be moved to any part of the building, and can be used either for loading or discharging or for transferring goods from one part of the warehouse to another. From the main structure a cantilever projects 30 ft. over the canal and enables barges to be filled or discharged under cover.

**Attractive "Albions."**—Albion Motors, Ltd., Scotstoun, Glasgow, are the manufacturers of the interesting vehicles illustrated. One photograph shows a 30/35 cwt. Albion van possessing considerable advertising value. It is used by Messrs. Ilford, Ltd., and whilst delivering the firm's products it features their new "Selo" fast film. Our other illustration shows a high capacity van on Albion low load line bonnet type chassis, and it is owned by Messrs. T. Grubb & Son, removers and furnishers, of Maidenhead. The internal dimensions of the main part of the body are 16 ft. by 7 ft. 2 in. by 7 ft. 2 in., and taking into account the extra space obtained over the cab, the cubic capacity is approximately 850 cubic feet.



LEFT: A HIGH CAPACITY VAN ON AN ALBION 30-60 H.P. PASSENGER CHASSIS. RIGHT: A 20-36 H.P. ALBION VAN FOR MESSRS. ILFORD, LTD.

**A.J.S. Passenger and Commercial Vehicles.**—We understand that the passenger vehicle side of the business of A. J. Stevens & Co. (1914), Ltd., Walsall Street, Wolverhampton, shows a marked improvement, and that a regular influx of orders is being received. Many repeat orders are coming in from users of A.J.S. vehicles.

**R.A.C. Tourist Trophy Race.**—Particulars and seating plan of the R.A.C. Grand Stand at the Tourist Trophy Race in Ulster on Saturday, August 22nd, have been issued by the Royal Automobile Club. The stand will be in the same position as last year and will accommodate 2,000 people. All seats will be numbered and reserved; the stand will be roofed and every seat will command an uninterrupted view of the replenishment pits, scoring boards, and nearly a mile of the course. Seatholders will also be entitled to use the enclosures behind the pits and at Quarry Corner respectively. Luncheon tents, buffets, bars, cloak room accommodation, post office, etc., will be provided at the rear of the Grand Stand and in the enclosure. Copies of the seating plan with application form and all information regarding the race may be obtained from the Secretary, R.A.C. (T.T. Booking Office), Pall Mall, London, S.W.1, or any R.A.C. Branch Office.

**B.A.I.F.R.** — Mon. T. Martens, 25, De Mayo, 267, Buenos Aires, has been elected a member of the British Association of International Furniture Removers.

**Rootes Developments in Buenos Aires.**—As already announced, Messrs. Rootes, Ltd., world exporters of Humber and Hillman cars and Commer commercial vehicles, regard the possibilities of the South American market as being so important that they have formed a new company—Rootes (Argentina), Ltd.—to handle sales and service in the Argentine and South America generally. This step was decided upon following the visit of Mr. R. C. Rootes to the Buenos Aires British Trade Exhibition last March. Handsome premises for showrooms and offices have been taken at Callao IIII, Buenos Aires, and these were formally opened on June 3rd. Thus launched, it is hoped that an important and useful future lies before Rootes (Argentina), Ltd., the Sales Director of which is Mr. R. W. H. Cook.

**Motor and Cycle Trades Benevolent Fund.**—H.R.H. Prince Arthur of Connaught has graciously consented to act as Patron of the Fifth Annual Motor Ball and Carnival in aid of the Motor and Cycle Trades Benevolent Fund. The Ball is to be held at Grosvenor House, Park Lane, London, on the Wednesday in Motor Show Week, October 21st. Sir George Beharrell is President of the Ball. Mr. E. M. C. Instone, who has been Chairman ever since the series started, has felt obliged to retire on his appointment as President of the Society of Motor Manufacturers and Traders; he has become Hon. Treasurer, while Mr. F. S. Bennett succeeds him as Chairman and Col. Sealy-Clarke is Chairman of the Finance Committee. The Secretary and Organiser, Mr. A. H. Dawson, 42, Bedford Row, London, W.C.1, will be glad to furnish full details to any of our readers who will apply.

Digitized by Google

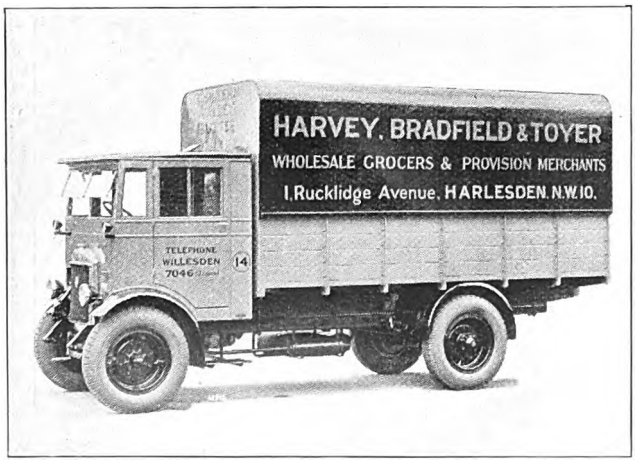
**Motor Hirers and Coach Services Association.**—From August 1st next the offices of the Motor Hirers and Coach Services Association will be transferred to 12, Spring Street, Paddington. The annual general meeting will be held during the Commercial Motor Vehicle Show at Olympia in November next.

**Karrier "Colt" for Coal Transport.**—A smart outfit—a "Colt" coal tipper—has recently been delivered by Karrier Motors, Limited, Karrier Works, Huddersfield, to Mr. G. W. Outhwaite, coal and coke merchant, of

A KARRIER "COLT" FOR COAL TRANSPORT.

Horbury, Yorks. The body, 7 ft. long by 5 ft. wide, has fixed sides 2 ft. 6 in. deep, and carries a ton of coal in each of two compartments divided by a swinging door, which can be removed when required. A telescopic tipping gear—hand operated—is fitted into the front portion of body, and being boarded-in, keeps the gear free from dirt and dust. The top boards, 6 in. deep, are loose, and drop into staples. Colour scheme is striking, the cowl and canopy being bright red, while the body itself is grey. Gold lettering suitably shaded, completes a very effective "ensemble." The "Colt" chassis is perfectly standard and the bodywork was constructed by Chas. Wensley & Sons, of Ings Road, Wakefield.

**A "Dennis" for Groceries.**—Our illustration shows a "Dennis" 30 cwt. forward control chassis, the bodywork of the tilt van being by Clement, Butler & Cross, Ltd.,



A SMART DENNIS 30-CWT. FORWARD CONTROL CHASSIS FOR WELL-KNOWN GROCERS.

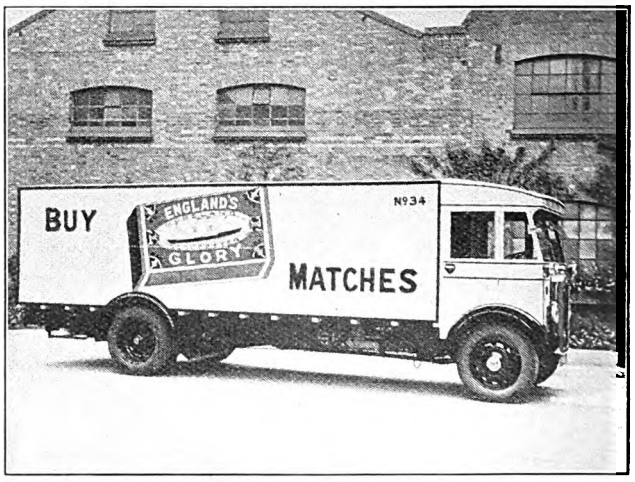
Glenhurst Road, Brentford. This attractive vehicle is the property of Harvey, Bradfield & Toyer, the well-known wholesale grocers of 1, Rucklidge Avenue, London, N.W.10.

**Continued R.A.C. Expansion.** — Another link in the chain of service provided by the R.A.C. has been forged by the opening last month of a new R.A.C. Office at Glasgow. The premises are conveniently situated on the ground floor of the Ocean Building, 190, West George Street, Glasgow (telephone number Douglas 5320, Telegraphic address "Raclubian, Glasgow."), and the office is under the control of Mr. D. H. Stewart. In Scotland the R.A.C. has now two Branch Offices—the other being at Edinburgh.

**An Amalgamation.**—In the interests of economy the "Chromaloid" and the "Chromettic" Chromium Plating Plants are now in the process of being merged into one at the Chromaloid Works, Cricklewood, N.W.2. The combined plants are undergoing many alterations and additions and the new company will be in the position to give better service, quicker delivery and improved quality. It is proposed that the amalgamation shall trade under the name of G. N. Higgs (Chromaloid), Ltd., and a Company of this title is in the course of formation. In the meantime all communications and goods should be addressed to:—G. N. Higgs, "Chromaloid Works," Oaklands Road, Cricklewood, N.W.2.

**F. W. & R. A. New Members.**—The following firms have been elected to membership of the Furniture Warehousemen and Removers' Association:—Messrs. I. and J. Ashford, Saxmundham, Suffolk; Messrs. Lawsons, 10, 13-21, Mill Street, Crewe; Mr. P. P. McNally, Bronte Street, Russell Street, Liverpool; Messrs. G. Penn, Ltd., 6, Kirkside Road, London, S.E.3.

**An Attractive Body on Morris-Commercial "Dictator" Chassis.**—The "Dictator" chassis, a product of Morris-Commercial Cars, Ltd., Soho, Birmingham, though built primarily for passenger carrying, is employed by S. J. Moreland & Sons, of Gloucester, for the transport of bulk loads of matches. This van, which we illustrate, shows the "Dictator" 18 feet wheelbase model with forward controls giving a body length of 21 feet. We



S. J. MORELAND & SONS MORRIS-COMMERCIAL "DICTATOR" VAN.

understand that the vehicle is being used with great success between Gloucester, Cardiff and Birmingham, and with its cream body and gigantic matchbox in colours it is proving a good advertisement.

**M.R.S., Ltd. Leeds Offices.** — The Leeds offices of M.R.S., Ltd., the well-known transport contractors, with head offices at Liverpool, have been moved to 237, Kirkstall Road, Leeds, and the telephone number changed to Leeds 38692. Arrangements have been made for the management of the Company's Yorkshire, North Lincolnshire and North East Coast business to be in the hands of Messrs. O.K. Carrier Co. at 237, Kirkstall Road, Leeds.

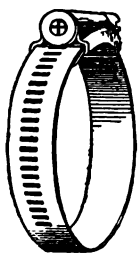
**Three Months in the United Kingdom. Home Office Concession to Foreign Visitors.**—The Travel Association of Great Britain and Ireland is officially informed that the period after landing during which a foreign visitor may remain in this country without being required to register with or report to the police is now extended from two to three months. The Home Office in making this concession is acting in accordance with recommendations made by the Travel Association. The offices of the Travel Association of Great Britain and Ireland are at Kinnaird House, 1, Pall Mall East, London, S.W.1.

**T.S. Oil-engined Passenger and Goods Chassis.**—In our last number we published an article dealing with various T.S. chassis recently produced by T.S. Motors, Ltd., 5, Iddesleigh House, Caxton Street, Westminster, S.W.1, formerly Tilling-Stevens Motors, Ltd. We have now received two new brochures dealing with the firm's latest oil-engined chassis referred to in our article. These brochures deal with the 26/32-seater low load omnibus

Digitized by Google

or coach chassis supplied with either 16 ft. or 17 ft. wheelbase and the 4-ton haulage chassis with 12 ft. 8 in. wheelbase supplied with either forward or normal steering. Both machines are equipped with 38/50 b.h.p. high speed diesel oil engines of the Gardner 2.L.2 type. Copies of these brochures may be had on application to the firm.

**"Jubilee" Worm Drive Clips.** — With a "Jubilee" Worm Drive Clip a joint can be made and re-made swiftly and easily. A direct pull is exerted on the steel ribbon by a worm with heavy square cut threads. It cannot be stripped and the clip gives an even pressure. It is easily fitted, and when removing it opens out automatically. It adjusts accurately, even on hose too large or pipe not round, and it can be tightened up again and again—a coin can be used if a screw-driver is not to hand. The clip is made of best quality steel, heavily galvanized, and is therefore non-rustable. It is made in the following standard sizes to fit outside diameter of hose:—Size No. 0—fits ⅝ in. to ⅞ in.; No. 1—fits ⅞ in. to 1½ in.; No. 2—fits 1½ in. to 2⅛ in.; No. 3—fits 2 in. to 2¾ in.; No. 4—fits 2¾ in. to 3¼ in.; and prices range from 10d. to 1s. 6d. each. The clip is suitable for air, oil, water hose, radiator joints, universal joint covers, etc. The manufacturers of Jubilee specialities are L. Robinson & Co., London Chambers, Gillingham, Kent.



THE "JUBILEE" WORM DRIVE CLIP.

**MERSEYSIDE.**

**Cartowners Cups for Horse Parade.**—Liverpool cartowners are expected to support the parade of horses in connection with the Royal Lancashire Show. These competitions are normally part of the Liverpool May Parade of Horses, but owing to the show being held in Liverpool, it was decided to make them a feature of the showground attractions. The horses will be judged on Saturday, August 1st.

**Re-elected.**—Mr. R. V. Edwards has been re-elected Chairman of the Transport Committee of the Liverpool Chamber of Commerce.

**Change in Title.**—P.L.P. Motor Carrying Co. (1923), Ltd., of Liverpool Road, Warrington, has changed its title to P.L.P. Motors, Ltd.

**MANCHESTER.**

**St. Helens Horse and Motor Parade.**—At the annual St. Helens horse parade the main prizewinners were:—Limited Companies' Heavy Horses: 1st, Holman, Michell & Co.; 2nd and 3rd, Greenall, Whitley & Co. Teams: St. Helens Collieries. Shire Horse Medal (Singles): Holman, Michell & Co. Shire Horse Medal (Doubles): St. Helens Collieries. Best Horse (other than Shire Horse Medal winners): Greenall, Whitley & Co. Best Light Horse: Mr. H. Done. Neatest Commercial Motor: 1st and 3rd, Mr. Alf Critchley; 2nd, St. Helens Collieries. Neatest Heavy Motor: 1st, Pilkington Bros.

**Cartage Tender Accepted.** — Manchester Corporation Paving Committee has accepted the tender of Mr. T. Lamb, of Manchester, for the loading and carting of granite chippings.

**Rochdale's Purchases.**—Rochdale Corporation Passenger Transport Committee has decided to purchase twelve more buses. Nine of the new vehicles are to be of the Crossley type and the other three Dennis type. Six of the Crossleys will be fitted with Diesel engines.

**Personal.**—Mr. J. B. Campbell is now the Manager of the Manchester branch of Anglo-Scottish Transports, Ltd., of Glasgow. Mr. R. Wild has been appointed Manager of the Manchester branch of National Road Services of Liverpool.

**NORTH-EAST COAST.**

**Newcastle Traffic Problems.**—Efforts by Newcastle City Council and their police advisers to alleviate some of the traffic problems in the heart of Newcastle met with a partial set-back when the Ministry of Transport held an inquiry in that city into applications for one-way traffic orders for St. Andrew's Street, High Bridge and Pudding Chare thoroughfares. No opposition was offered to the two first schemes, but there was a storm of protest against the Pudding Chare proposal, and the Ministry's Inspector (Lt.-Col. R. H. Tolerton) announced that "he would not feel justified in recommending that an order be made in respect of the Pudding Chare application."

**Tyne to Southend.**—A new summer holiday service has been established by the Tyne-Tees Steam Shipping Co., Ltd., and is already popular. The Company's passenger steamers, "Hadrian" and "Berning," are calling at Southend to land and embark passengers from and to Newcastle on their London journeys, the fares being fixed at popular rates.

**HULL.**

**Proposed Humber Bridge.**—The Bill authorising the construction of a bridge over the River Humber at a point about four miles above Hull has been approved by the Select Committee of the House of Commons. The hearing was a very protracted one, occupying 32 days and extending over a period of two months. This is by no means the end of the fight. It will be resumed with increased vigour by the Humber Conservancy Board, the Aire and Calder Navigation, the London and North Eastern Railway Company, the Urban Council and Chamber of Commerce of Goole, and other interests when it comes before the Committee of the House of Lords.

**SCOTLAND.**

**Pickfords, Ltd., Extend in Glasgow.**—Messrs. Pickfords, Ltd., are extending their transport activities in Scotland and have recently taken over the old-established business of Sloans, Ltd., Edinburgh, and commenced modernising the premises of the latter firm at South Street, and Andrew Street, Edinburgh. The Glasgow branch of Pickfords, Ltd., has obtained a new Leyland "Badger" removal van of 50 cwt. carrying capacity.

**Scottish Traffic Commissioners.**—Among the numerous problems of road passenger transport which the Commissioners in both the Northern and Southern areas of Scotland have had to face during the last month, the most outstanding has been the efforts made by the railway companies to prevent road operators expanding their long distance tours.

**NORTHERN IRELAND.**

**A Substitute for Petrol.**—The Chemical Research Department of the Belfast Gasworks, which are municipally owned, has succeeded, after a considerable time of experiment, in producing a coal tar oil substitute for petrol. The price mentioned for this spirit is fourpence per gallon, and tests have been carried out by the Belfast Omnibus Company with five of their machines which have shown that the spirit is satisfactory in use and gives a mileage of twelve to the gallon. The Belfast Gasworks expect to be able to produce about 500,000 gallons in the year. No inflammable is given off below a temperature of 180 degrees C. It will extinguish a lighted match that may be thrown into it. It is almost black in colour, and has a specific gravity of .936. The spirit, which is creosote washed and purified, is called "tar oil." A B.O.C. bus that has done 15,000 miles on the creosote fuel still shows no need for de-carbonising. As considerable heating of the induction pipe is required when the tar oil is used as fuel, the bus engine equipped for its use has a specially designed inlet and exhaust manifold, cast integrally. In order to provide for the starting of the engine, two carburettors are provided, one a horizontal Solex for the tar oil, the other a vertical one for petrol, which is used for starting purposes. Two accelerator pedals are provided, but when the tar oil one is used, the supply from the petrol carburettor is cut off. Petrol is only used until the exhaust pipe has become sufficiently hot to ensure complete vaporisation of the creosote. The experiments have shown that after a run of fifty yards the petrol supply is not needed. After stopping to pick up or set down passengers, the buses can be driven off on the creosote carburettor. The Belfast Corporation's motor buses are being converted with a view to the use of the new fuel, one bus already fitted having operated with thorough satisfaction.

**Double-Deckers.**—The Belfast Omnibus Company and H. M. S. Catherwood, Ltd., the two principal operators in Northern Ireland, have now introduced double-deck buses on rural routes.

**IRISH FREE STATE.**

**A Good Year for Bus Services in the Irish Free State.**—The present year is turning out to be a very good and satisfactory one for bus services in the Irish Free State, and so far, shows an improvement on 1930 in the matter of passengers traffic and receipts. During the first four months of 1931, the total number of passengers carried on buses in the Free State was 17,446,000, as compared with 15,633,000 during the first four months of 1930, while the receipts during the January-April period, 1931, were £248,285, as against £244,985 during the corresponding months in 1930. The receipts for the month of April alone were £68,866, as compared with £67,199 in April, 1930. A considerably extended mileage was also run by the buses during the first four months of the present year than for the corresponding period in 1930, and headway has been made all round in the operating of buses in the Free State from the very start of the present year.

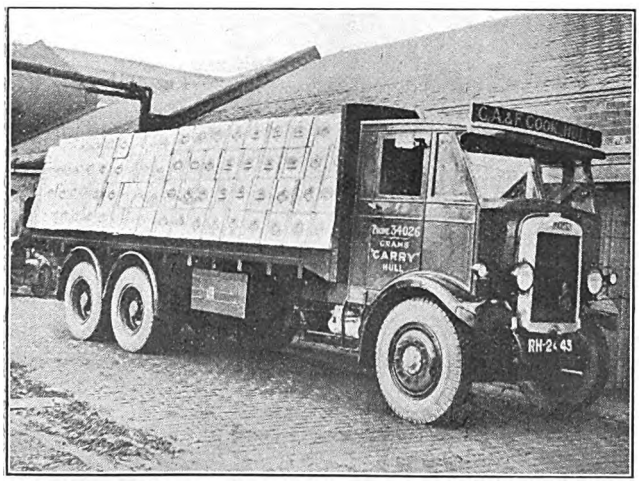
# Motor Notes.

**A Saurer for Fish Transport.**—Mr. F. Cook, of Hull, is the owner of the Saurer 6BLD 6-cylinder 7/8 ton heavy oil lorry shown in the photograph. The vehicle is used solely for the conveyance of fish from the Hull docks to various centres in the North. The vehicle travels a weekly average of about 1,700 miles. It supplies areas with fish which could not be supplied by other forms of transport.

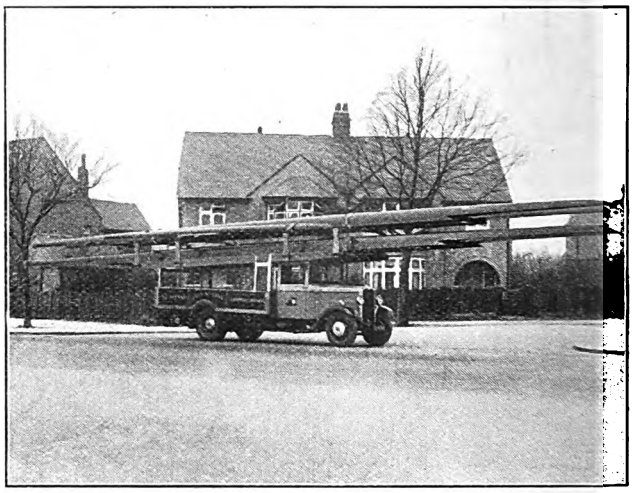
A 7-8 TON SAURER HEAVY OIL LORRY USED FOR FISH TRANSPORT.

**Interesting Leyland Sales.**—We have received three interesting photographs from Leyland Motors, Ltd., showing recent deliveries of their vehicles. One of these we reproduce, it being a "Hippo" 11-ton flat platform lorry owned by C. A. & F. Cook, of Hull. The second is a "Bull" 6-tonner owned by John Eastham & Sons, Ltd., carriers, of Bury, Lancashire. The "Bull" 6-tonner is a four wheeled vehicle. The third delivery is a "Hippo" six wheeler supplied to Mr. A. A. Taylor, of Victoria Garage, Earlstown, Lancashire.



A LEYLAND 11 TON "HIPPO" LORRY.

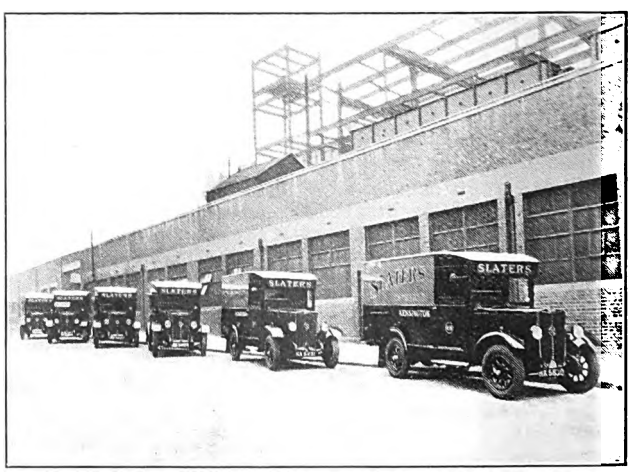
**T.S. Motors—Recent Orders.**—T.S. Motors, Ltd., the well-known commercial motor vehicle manufacturers, of Maidstone, have recently received orders for the following:—T.S. new 6-cylinder coach chassis has been taken by The Southdown Motor Services, Ltd.; Messrs. Alexandra Motor Coaches of Southsea; The Westcliff-on-Sea Motor Services, Ltd.; Messrs. Ardley Bros., of Tottenham; Holmes & Smith, Ltd., Westcliff-on-Sea, and London; Eastern Counties Road Car Co., Ltd., and the West Yorkshire Road Car Co., Ltd. The Derby Corporation have placed a repeat order for "Express" chassis as have also Mr. W. T. Jones of Express Motors, Bryncethin; A. R. Hargreaves, Burslem, Staffs.; B. & E. (Bentinck & Ensign) Motor Services, Doncaster; The Western Transport Co., Ltd., of Wrexham; "Scotts Greys" Luxurious Motor Coaches, Darlington, and The Eastern Counties Road Car Co., Ltd. The Turin Tramways have purchased from T.S. Motors, Ltd., the petrol-electric omnibus and trolley bus which was exhibited at the Scottish Show last year and which created so much attention amongst operators of trolley buses.



MR. H. C. BANHAM'S COMMER "INVADER" TRANSPORTING RACING EIGHTS.

**Boats by Road.**—Mr. Banham, the well-known boat builder of Cambridge, is the owner of the Commer "Invader" chassis shown in the picture. He uses it for the transport of boats to his various customers, those shown on the lorry being racing eights for the Cambridge University boat clubs, being transported from Cambridge to Putney.

**Beans for Caterers.**—Tankard & Smith, Ltd., of 226-232, High Road, Tottenham, N.15, have sent us the accompanying photograph showing a fleet of six "New Era"



"NEW ERA" BEAN VANS FOR SLATERS

Bean vans which they have recently supplied to Slater & Bodega, caterers, of Kensington. The bodies were built and supplied by the North London Engineering Co., Ltd.

**Four Trucks in One.**—The farm utility truck designed and built by Ford Motor Company can be used as a platform lorry without sides and tailboard or as a standard truck with hinged sides and small tailboard. To use it as a farm produce truck the hinged sides, small tailboard, side, front and rear cratches are fitted, and to convert it for use as a cattle truck it is only necessary to use the cratches, hoop sticks and long ramp all of which are included in the equipment. It is thus possible to use the truck, which is listed at £238, ex works, Manchester, with four different and equally useful bodies.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

Albt. Morris, 18, Chapel Lane, Wigan, Lancs., motor engineer and haulage contractor. £42/14/0. April 13th.
Robt. Walter Orwin, 56, Ruskin Road, Bull Farm, Mansfield, Notts., haulage contractors and fruiterers. £55/8/11. April 16th.

# Vehicle Lighting and Road Safety.

THE danger of the dazzling headlight increases in exact proportion to the number of vehicles taking the road. All manner of devices have been and are being tried to reduce the danger but with little or no noticeable result for the better. The time is indeed with us when a really practical move should be made to reduce if not entirely eliminate what is undoubtedly the greatest danger of the road. There can be little doubt as to what that move should be. It can be nothing else but the adequate lighting of our arterial roads. The powerful headlight on the motor vehicle is as anachronistic as now would be links or lanterns carried by pedestrians in the busy thoroughfares of cities. With reasonable care there is little or no danger in the use of headlights on lonely stretches of road. The average motorist in fact prefers to drive with sidelights only if the natural visibility is reasonably good. With the car well under control this can be done with complete safety on thousands upon thousands of miles of roads. It is only on the heavily trafficked roads that the danger is very real in spite of the utmost care and therefore the mileage of arterial roads on which public lighting would be justified would not be so great as to make the cost prohibitive. Furthermore, the electricity distribution scheme now in course of development will simplify matters. On such roads the driver of a car dare not cause his vehicle to be less conspicious than the vehicles of other drivers, with the result that a multitude of headlights leads to confusion and disaster. The danger would be almost entirely eliminated by the substitution of road lighting for car lighting. It is, we imagine, a matter in which the Ministry of Transport should make the first move, in order to bring about the re-adjustment of public lighting regulations, the limitations of which make them quite inadequate for the need of our time. The Ministry of Transport is the one government department which is most concerned with the safety of the roads and therefore is the one to make the first move. The dazzle headlight problem seems to us to be much on a par with the dust and mud nuisance of the past and its solution lies in exactly the same direction. In this journal, some years ago, we ridiculed the efforts of certain representative bodies of motorists who attempted to encourage the design of vehicles which would not raise dust, and of fittings to be carried on vehicles to prevent mud splashing. Obviously it was the roads that needed attention and not the vehicles. In exactly the same way the dazzle headlight nuisance can only be removed or mitigated by the provision of adequate road lighting. It is the one and only solution of the problem and the sooner the necessary machinery to bring about so desirable a road improvement is put in motion the better. Another matter which should be much more universal practice than it is which would add greatly to the safety of the road is that of whitening kerbs. It is inexpensive and, as a guide to motorists, the white kerb is of infinitely greater value than the white line, which latter, though no doubt of great assistance in the day time, is not of half so much value at night. There are thousands of miles of road on which the colour of the carriageway and that of the verges blend so harmoniously together in the light of the motor lamps that it is difficult for the motorist to know whether he is close to the verge or a couple of yards away from it. The difficulties and danger of such blind driving are obvious. The whitened kerb is the remedy for this or in the absence of a kerb a substitute could easily be adopted.

## Charing Cross Bridge Fiasco.

The scheme for removing Charing Cross Railway Station to the south side of the river is dead, killed by the Government, which a short time back professed to attach the greatest importance to the proposal. Mr. Herbert Morrison, the Minister of Transport, in announcing the decision of the Government not to renew the offer of a 75 per cent. grant from the Road Fund towards the cost of the Bridge, gave as the reason that after having most carefully reviewed the position in the light of all the circumstances of the case, including the present serious economical situation, the Government had come to the decision above recorded. We do not think there will be many tears shed over the death of the project and we hope the last has been heard of any proposals of such a retrograde character. In these days business men are urging upon those in authority the need for increased facilities in every direction and the removal of the railway station to the south side of the river would have the certain result of reducing travel facilities for the many thousands who make Charing Cross their terminus and who would have to find some other means of crossing the river if the scheme had gone through. If it is necessary to provide another road for traffic from the south side to the north then the suggestions made for a road bridge alongside the railway bridge should have due consideration. We, however, are not satisfied that there is the need for another bridge. Sir Arthur Stanley, President of the Institute of Transport, who in his position as Treasurer of St. Thomas' Hospital lives on Westminster Bridge for a large part of the year, stated as his considered opinion that there was no bridge problem and that the present bridges were equal to the traffic requirements. A great deal of valuable time and money has been spent in considering schemes and taking Parliamentary action since the Royal Commission on Thames Bridges was appointed in 1926. There is no doubt that opposition to the scheme has been growing, particularly in the important district for which Charing Cross is the natural terminus. We can only hope that the Southern Railway Company will now be allowed to make whatever improvements are necessary in strengthening the bridge and improving the station in order to bring it up to date and make it the important terminus it should be.

## Transport Education.

In our last issue we wrote something about the work of the Institute of Transport in connection with technical education for transport men. We are glad, therefore, to be able to draw attention in this issue to the new syllabuses for examinations to be held in April, 1932, for those seeking Membership of the Institute of Transport, either in the Graduate or Associate Membership Section. The syllabuses set forth all the information required by candidates who desire to take part in the examinations, and all who are ambitious to improve their positions should take steps to prepare for the examinations and thus fit themselves for more important work. In this issue also there is an advertisement of the new session of the City of Birmingham Commercial College (Department of Transport). This College has made a special feature of technical transport education and its classes of lectures should be of very great value to young transport men in the Midlands. We heartily commend the work of the Institute of Transport and all Universities who are helping in this important work, not only to young transport men, but also to those who have spent a lifetime in transport and who are anxious to help the members of their staffs to fit themselves for more responsibility and better service.

## The Prince at the Royal.

Photo] [World's Carriers.

H.R.H. THE PRINCE OF WALES INSPECTS THE EAGLE ENGINEERING CO.'S EXHIBITS AND IS SEEN TALKING TO MR. R. G. PALMER, MANAGING DIRECTOR.

## Personal Notes.

**Mr. Ashton Davies, M.B.E.**—It is announced in another part of this issue that Mr. Ashton Davies, M.B.E., General Superintendent (Passenger Commercial), London, Midland and Scottish Railway, has been appointed Passenger Manager and will be in charge of the Company's reorganised Commercial Department when this has been completed in October next. Mr. Ashton Davies joined the Lancashire and Yorkshire Railway Company in 1890 in the Telegraph Department, being transferred later to the Passenger Superintendent's office and subsequently he became Personal Assistant to the Passenger Superintendent. He held this position during the term of office of four superintendents, and in 1919 he was appointed Superintendent of the Line, and on the amalgamation of the London and North Western and Lancashire and Yorkshire Railways in 1922 he became Divisional General Superintendent, Northern Division, London and North Western Railway. As from January 1st, 1923, on the formation of the L.M.S.R. Mr. Ashton Davies held the position of General Superintendent, Western Division. In January, 1924, he was appointed General Superintendent (freight services), and in August, 1924, he was appointed General Superintendent (passenger commercial).

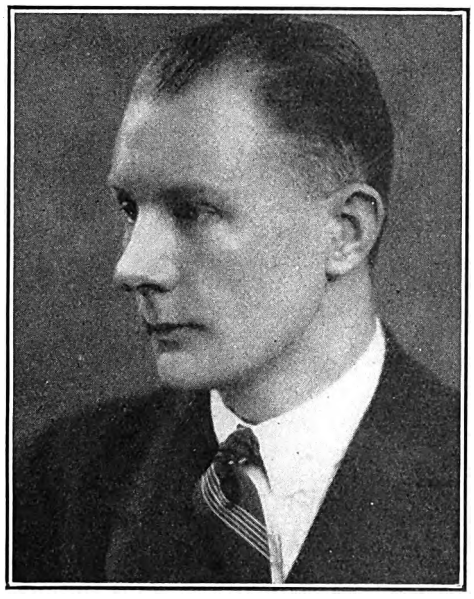
MR. ASHTON DAVIES, M.B.E.

**L.N.E.R. Appointments.** — The L.N.E.R. officially announce that the following appointments have been made with effect from October 1st:—Mr. L. Ballan, Assistant to Superintendent (Trains), North Eastern Area, to be District Superintendent, Sunderland, in succession to Mr. R. P. Lewis, who is retiring from the service on grounds of ill health at 30th September next. Mr. H. G. Sayers, to be Assistant District Superintendent, Sunderland. Mr. H. Arnott, Assistant District Superintendent, Hull, to be Assistant to Superintendent (Trains), North Eastern Area.

Digitized by Google

**L.M.S.R. Appointments.**—The following appointments have been approved by the Directors of the London, Midland and Scottish Railway:—Chief Goods Manager's Department: Mr. M. Hewitt, Goods Agent, Leicester, to be Goods Agent, Broad Street. Mr. H. J. Bloxham, Goods Agent, Hinckley, to be Goods Agent, Leicester. Mr. C. Nixon, Goods Agent, Commercial Road, to be Goods Agent, Camden. Mr. A. W. G. Collins, Goods Agent, Bow and Old Ford, to be Goods Agent, Willesden.

**General Sales Manager—Armstrong-Saurer Commercial Vehicles, Ltd.** — Mr. W. A. Smith, A.M.I.Mech.E., F.Inst.F., F.Inst.P.I., has been appointed General Sales Manager of Armstrong-Saurer Commercial Vehicles, Ltd. Mr. Smith was formerly Managing Director and General Manager of Pneumatic Conveyance and Extraction (1929), Ltd. He was with His Majesty's forces during the war,



MR. W. A. SMITH.

his service extending over a period of five years. After the war Mr. Smith joined the Lea Recorder Co., of Manchester, and later was responsible for the inception of Smith and Yates, consulting engineers, of Manchester. The sales department of Armstrong-Saurer Commercial Vehicles, Ltd., is now at Broadway Buildings, Westminster, London, S.W.1. The service department remains at Augustus Street, Albany Street, London, N.W.1.

**Appointments at Leyland Motors, Ltd.**—We are very interested to learn of the appointment of Mr. M. R. Pease as Sales Manager of Leyland Motors, Limited, to fill the vacancy caused by the death of Mr. A. W. Windsor. Mr. Pease has been connected with Leyland since leaving the Army after the war. He first joined the Company as Production Manager, but for the past ten years he has held the position of Service Manager and, as such, was well-known throughout the trade. Mr. Pease will be succeeded as Service Manager by Mr. G. Finch who has also been with Leyland Motors over ten years.

**Mr. R. H. Comley appointed Sales Executive Secretary of Avon India Rubber Company, Ltd.**—The Avon India Rubber Company, Ltd., of Melksham, Wilts., announce that Mr. R. H. Comley has been appointed Sales Executive Secretary. Mr. Comley started his business career in 1906 with the old Sirdar Rubber Co., Ltd., of Bradford-on-Avon which company, early in 1915, was taken over by the Avon India Rubber Co., Ltd., to which Company Mr. Comley's services were transferred. The Great War was then being waged and Mr. Comley served with the Northumberland Fusiliers. In 1919 he became Manager of the Avon depot in Newcastle and in 1923 several of the Company's West of England depots came under his managership. Later Mr. Comley became Sales Manager of the Avon Company's Tyre Department and subsequently Assistant General Sales Manager. As Sales Executive Secretary Mr. Comley now becomes Head of the Sales organisation of the Avon India Rubber Co., Ltd.

**Singer's New Sales Manager.**—Mr. Richard Hungerford, well-known in motoring circles as the former Assistant Sales Manager in control of Vauxhall sales at General Motors, Ltd., and who previously officiated in a like capacity for a considerable period at Vauxhall Motors, Ltd., Luton, has been appointed Sales Manager of Singer & Co., Ltd., of Coventry. It is understood that Mr Hungerford, when giving effect to his plans for the promotion of Singer interests, proposes to avoid revolutionary methods of trade development and to endeavour to stabilise the existing organisation by establishing and putting into practice a policy of sustained co-operative effort.

**Tees Appointment.** — The Minister of Transport has appointed Mr. R. Wilkinson, District Secretary of the Transporters' General Union, to represent him on the Tees Conservancy Commission in succession to the late Sir Hugh Bell.

**Belfast Transport Appointment.**—At a special meeting of the Tramways Committee of the Belfast Corporation it was decided to recommend the appointment of Major McCready, of Belfast, as the new tramways chief in succession to Mr. W. Chamberlain who is now Chairman of the Traffic Commissioners for the North Western Area.

MR. M. R. PEASE.

MR. R. H. COMLEY.

MR. RICHARD HUNGERFORD.

**Inquiry into Traffic Congestion.**—Manchester Corporation has appointed a special committee to inquire into traffic congestion in the city and a scheme for one-way traffic around Whitworth Street and the Central Fire Station.

**New "Austin" Garage.** — The premises in College Avenue, Newcastle, formerly owned by Messrs. Cawthorn, Ltd., have been acquired by Messrs. Murray & Charleton, Ltd., the Northern Austin distributors. They comprise 1,033 square yards.

# The "Pivot Section" of Large Traffic Areas.

(Specially Contributed.)

THE traffic area or zone of provincial towns and cities in Britain rarely extends to a distance of more than four or five miles and census figures obtained from various parts of the country show that as a general rule, and with few exceptions, there is a decided falling off in the tonnage per hour carried along roads outside the three mile radius. The density of vehicular traffic between the three and five mile radii is exceedingly light even during the busy hours of the day. It is within the interior parts of these traffic areas we must look for congestion and high density averages. There is one particular part which might be conveniently termed the "pivot" section, on the streets of which traffic attains its peak loads. The "pivot" section of a city generally embraces the principal commercial, shopping, and business quarters. When compared with the whole area it really occupies a surprisingly small space. If a ring having a radius of about half-a-mile was drawn on the street map of any large town, taking as the centre either the G.P.O. or the Royal Exchange, it would encompass the "pivot" section. Furthermore, if a series of observations on the general traffic movement were carried out systematically at various distances beyond the pivot section, as well as within it, the results would reveal a condition of vehicular motion along the streets which could be identified with conditions prevailing in any traffic area in the provinces. The only exception is the London traffic area.

There is another interesting feature relating to the "pivot" section. If we trace back the development of our large commercial and industrial centres, we shall find that over a given period of years the "pivot" section has gradually moved away from its former centres of activity. A close investigation of the subject leads one to look upon this nerve centre of the general traffic movement as being constant in one place for a comparatively short space of time. Probably from ten to fifteen years. In the early stages the transitional tendency is not easily detected, but once on the way the signs become unmistakably clear. The setting up of new industries, increasing population, and many other causes contribute to the forward trend of things. Town planning schemes have in themselves wrought tremendous changes exercising a pronounced influence over the conditions in the "pivot" section. It is now nearly twenty-two years since the first Town Planning Act was placed on the statute book in this country, and during the first four years the effects of the Act were most marked. By the end of 1913 there had been prepared and adopted no less than 33 schemes by 27 local authorities involving a total area of more than 50,000 acres, or over 78 square miles. During the war period building operations were brought to a standstill, but in the post-war years the work was pursued with accelerating rapidity while the demand for new houses was unprecedented. Every town in the country provides striking testimony to the amazing progress made in this direction. The green fields of a few years ago are now thickly populated suburban zones—embryonic traffic areas heralding future density increases in the "pivot" section of the larger traffic area. The larger towns and cities provide striking examples of what is taking place. Take the case of Liverpool and Glasgow. The former is rapidly extending northwards while the latter evinces a definite expansion in the west. These changes have been most marked during the past ten years and have considerable bearing on the respective traffic situations. Further they have a very pronounced effect upon the conditions on the streets in the pivot section.

A scientific investigation of the general traffic movement throughout these large traffic areas shows that the numerical preponderance of vehicles is intensified at an increasing ratio at every stage inwards resulting in a diminution of the mean effective traffic speed, the latter decreasing at a disproportionate rate. This process of intensification, and diminution of speed, culminates at a few points in the "pivot" section which is literally the nerve centre of the whole traffic movement.

The problematical conditions within the "pivot" section really constitute the much used phrase—the traffic problem.

In recent times, more particularly since the advent of road motor transport the traffic problem has jumped to the forefront, and many appear to regard the widening of roads as being the most effective remedy. There is no doubt that this is true in many cases, and there is ample room for improvement. But is the vital need of the moment the constructing of wide arterial roads and speedways in the open country? At the most they are simply connecting routes linking up, but not penetrating into the congested traffic areas. Where road space is most needed, not only for the present but at future times, is in the "pivot" section. Of course it would be futile to suggest an attempt at widening streets by pulling down costly buildings of comparatively recent construction, but in view of the fact that the tendency is for the "pivot" section to recede in one direction or another from its present position, those responsible for the planning of roads and streets should take this into account.

Housing schemes in course of erection at the present time in different parts of the country seem to denote a lack of vision on the part of the authorities concerned in regard to the traffic needs of the future. Thirty foot roads hemmed in on both sides with houses, shops, etc., are still being constructed, and yet, in another ten or twenty years there is every possibility that they will be main traffic centres.

When we consider the growth of vehicular traffic during the last quinquennial period, and the tendency for voluminous increases in the future the need for width as regards thoroughfares in the traffic area needs no emphasising. A point which is often lost sight of is that any general increase in numerical preponderance must result in a corresponding rise in the number of vehicles parking at the side of the street. And as far as housing schemes are concerned, the practice of delivering goods for domestic use by motor van is resorted to more and more as time goes on which means that parking cannot be avoided. Now on a thirty foot road there is not sufficient space to accommodate two lines of stationary traffic and at the same time offer adequate facilities to vehicles on the move. This is a very important matter. Any road or thoroughfare, along which the parking of commercial and private vehicles is bound to be a frequent occurrence, should be at least forty feet wide, even though it is not a main through thoroughfare. In designing roads it should always be remembered that the general traffic movement throughout the traffic area is retarded or facilitated according to the limitations imposed by the geometrical formation of the street surfaces over which it operates.

**New "United" Bus Garage.**—The new garage of United Automobile Services, Ltd., at the junction of Jesmond Road and Portland Terrace, Newcastle, which will house 150 buses and has an imposing Grecian pillared frontage, is now rapidly approaching completion.

**A Big Order for Morris Commercials.**—The L. & N.E. Railway Co. have placed an order with Messrs. Stewart & Ardern, Ltd, the Sole London Distributors, for 32 one-ton Morris-Commercial Chassis, fitted with special "ESandAY" Parcel Delivery Van Bodies.

# Transport and Education.

## Recent Developments.

*(Specially Contributed.)*

In past generations transport knowledge was gained in the hard school of experience—a very admirable school whose lessons are not easily forgotten but whose fees are rather high. Our experience, however, must be somewhat limited and is becoming rapidly more and more so. In these days of specialisation the opportunity for obtaining experience in more than a very few small branches of life comes only to the highly favoured (and we all know how small is the number in that class). The man who only has what knowledge he has acquired in the school of experience, therefore, tends to have a very restricted and narrow outlook which is neither good for his own mental development nor for the work upon which he is engaged. The only alternative known to us at present is to learn from books and oral teaching, or in other words to learn from the past experience of others which has been duly recorded for the purpose. This "theoretical" learning (which is after all nothing more than learning from other peoples' mistakes instead of from our own) is imparted by schools, colleges and universities throughout the kingdom. We have only recently begun to develop the theoretical form of learning on the vocational side and we are still only feeling our way.

Few people realise the importance of transport among the vocations nor its importance in present-day economy. It is only necessary to read the economic history of any of the Great Powers or of our own Empire during the last century and a half to see what influence the speeding up of communications has had in improving the standard of living and in altering our methods of production and ways of life. At the present day, or rather at the taking of the last census in 1921 about one person out of every twelve of the occupied population of England and Wales was engaged in "Transport and communications."

Transport should, therefore, be one of the first vocations for which vocational education is provided. There are, however, as yet very few educational institutions providing instruction in transport subjects on an organised basis. The London School of Economics has, it is true, provided courses in transport subjects for the staffs of the railway companies. Certain of the provincial universities have also, at the request of the railway companies provided occasional courses in railway subjects, but there has been no organised transport education apart from the railways. Since 1918 there has been a steadily growing demand for this facility. The Institute of Transport was formed very largely for the purpose of encouraging it. The Institute at first intended to provide the required education itself but soon came to the conclusion that the better way would be to encourage the educational institutions throughout the country to undertake the work. The Institute has therefore contented itself with drawing up syllabuses for examinations on the results of which the members of the staffs of transport undertakings are admitted to the various grades of membership of the Institute. Regular meetings and lectures are, of course, held by various branches of the Institute throughout the winter months, but these are not strictly in the nature of a continuous and organised course for educational purposes.

There are signs that education in transport has now become established thanks largely to the efforts of the Institute. Considerable interest has been shown in the Midlands where the City of Birmingham Commercial College is developing a transport department. A strong advisory committee composed of the leading men in all forms of transport has been formed and is functioning well. A full time lecturer was appointed some time ago and a number of courses on transport subjects conducted during last winter session. Students attend from all over the Midlands, some travelling as much as 40 or 50 miles for the purpose.

Until now one side of transport education has been almost entirely neglected. The transport industry is important because *all* industries have to make use of its services to a very considerable extent. It is just as important for the users to understand something about what they are using as it is for those who are providing the service to know what they are providing. In industry it has become the practice to hand over the management of the despatch or transport of goods to a specialised department or to a forwarding agent. It is these people for whom special educational facilities are needed, but have not so far been provided. They need to study the subject from a rather different angle than the operators, but they need to study it just the same.

The Midlands are alive to this aspect of the problem which is most acute in that area, and the City of Birmingham Commercial College has arranged a special diploma course in Industrial Traffic Management. The course will extend over three years at the end of which time those who have satisfactorily completed it will be awarded a diploma. Those who are unable to take the full course will be allowed to take individual subjects but will not obtain any certificate.

It can, therefore, be said that amid all the discussion that is taking place on educational matters transport is not being entirely forgotten although we do not hear much about that side of the question.

# Institute of Transport.

## Council 1931-1932.

The following gentlemen constitute the Council of the Institute of Transport for the year 1931-1932:—

**President:**
Frank Pick.

**Past-Presidents to serve on Council:**
Sir Henry P. Maybury, G.B.E., K.C.M.G., C.B.
Sir Joseph Nall, D.S.O., T.D., D.L.
Roger T. Smith.
Sir Josiah C. Stamp, G.B.E.
The Hon. Sir Arthur Stanley, G.B.E., C.B., M.V.O.

**Vice-Presidents:**
A. L. Barber.
R. Bell, C.B.E.
J. H. Follows, C.B.E., M.V.O.
R. J. Howley, C.B.E.
Maj.-Gen. S. S. Long, C.B.
Sir David J. Owen.

**Ordinary Members of Council:**
T. E. Argile.
A. W. Arthurton.
A. F. Bound.
F. G. Bristow.
F. Bustard, O.B.E.
A. L. Castleman.
A. W. A. Chivers.

# Organise Nationally.

A MEETING, convened by the Society of Motor Manufacturers and Traders, was held in London last month, to which various Associations whose members are interested in the operation of public service vehicles were invited to send delegates. The meeting was called to discuss the formation of a National body to guard the interests of the operators of passenger transport.

The desirability, indeed the necessity, for giving birth to such an organisation is, in our opinion, beyond question. Can such a body be formed and made to function satisfactorily? Undoubtedly it can if operators throughout the length and breadth of the land can be made to realise that the livelihood of one and all will soon depend upon the fight which a well organised National body can put up when other influences are at work with the object of handicapping, crippling, nay, to wipe out of existence road passenger facilities which the public need.

At the beginning of this year, about the time when the Traffic Commissioners were getting into the saddle, the Motor Hirers and Coach Services Association made great efforts to form a National Council for the industry. The attempt failed simply because local associations could not or would not see that legislation, passed in order to control the industry, was being administered on a National basis, and that only a voice which could speak for the operators throughout the country had any chance of being heard in opposition to proposed Orders and Regulations which might damage the industry.

To have in existence a National body ready at a moment of crisis to function effectively in the interests of operators as a whole, does not mean that local associations affiliated to the national body would lose their individual identity. Local associations would continue to deal with local problems, although, in view of the trend of recent legislation, we do not know that there are now any local problems apart from the question of the provision of parking places. The difficulties with which operators are now faced are national not parochial.

It is not easy to enumerate the many important steps that can be taken and no doubt successfully, by a National body pursuing a policy which has the combined support of all operators, but we do know some of the things that have been achieved by the Motor Hirers and Coach Services Association whilst playing an almost lone hand. The Association has obtained many important concessions in regard to the numerous Orders and Regulations the Minister of Transport has made under the Road Traffic Act, concessions which have benefited operators throughout the land, and we do not hesitate to say that the Association could have done much more if only its leaders could have pointed to the fact that it was a body representing *all* public service vehicle operators. The industry is indeed fortunate that despite a very heavy drain upon its finances in fighting for the bread and butter of the operators, the Motor Hirers and Coach Services Association is to-day more virile than ever. So far as we are aware this Association is the only one trying to protect the rights of motor coach owners in connection with the London Passenger Transport Bill against which they have lodged a petition. We cannot help wondering whether the provisions of this Bill, which may prove to be the seed of a vast scheme of transport nationalisation, are fully appreciated by operators as a whole. Perhaps the word "London" in the title has somewhat disarmed them.

With the exception of London, where operators have their own problems to fight out, it may be that, apart from the expense and trouble involved, operators are not too dissatisfied with the results of applications for licences made to the various Traffic Commissioners, but the Traffic Courts have been functioning up till now with the eyes of the travelling public focussed keenly upon them. That watchfulness may be relaxed as soon as coach patrons feel satisfied that the services they need are being supplied—if that should prove to be the case operators may find that when they next apply to the Commissioners for licences opposition against their being granted may be more intense and more successful.

Under the Road Traffic Act a road service licence cannot continue in force for a period exceeding twelve months, and in exercising their discretion to grant or refuse an application for a fresh licence the Traffic Commissioners are required to take into consideration any representations which may be made by persons who are already providing transport facilities along or near to any part of a proposed route.

Much valuable time has been lost already, but a National body set up immediately and to which all associations of public service vehicle operators become affiliated, can and will, undoubtedly, accomplish much. For instance, urgent problems which await handling by a completely representative National body include stabilisation of fares; testing the *locus standi* of the railways as objectors to the granting of licences; to arrange that conditions, etc., imposed shall have the same interpretation in all areas; effecting closer co-operation and co-ordination of services. These are but a few of the items demanding National attention.

A further meeting to consider the question of the formation of a National body is to be held in London shortly, and we can but hope that the efforts being made will be crowned with success. They will be, if operators remind themselves that under the Road Traffic Act the Minister of Transport is given wide powers and can, and no doubt will, do things in the way that seems to him best, whereas, there is no reason why he should not be asked to do them in the way most acceptable to operators and as expressed to the Minister by a national body speaking for the whole of the operators in the country.

Each operator has to choose, and now.

# New Safety Petrol.

ON July 14th a very interesting demonstration of the safety petrol "Fenier" took place at Croydon Aerodrome. In charge of the demonstration was Mons. H. Bardel, Chief Engineer of the Air Union, who had come over from Paris, assisted by Mr. Bamford, of the London Branch.

After giving a short account of the properties of this petrol, which has a flash point of 40° Centigrade and a density of 780 grammes per litre at 15°C., M. Bardel proceeded to show that it was practically impossible to ignite this petrol in its normal state. Pieces of metal, heated to a red heat in a hand forge, were thrown into a bucket of safety petrol, but with no effect. Sparks from a magneto were passed at the surface of the petrol, again with no result, and a cloth soaked in ordinary petrol was set alight and placed in the bucket but was put out by the safety petrol.

M. Bardel then explained the modifications which had been made to the Air Union freight aeroplane. The carburetter has been fitted with a small injection pump which works in parallel with the throttle control; whilst a special hotspot in the exhaust system has been made to heat the air supply. As the fuel is only slightly volatile, it cannot be introduced into the cylinders in a gaseous state, but only as a diffused mist which the compression of the pistons instantly vaporises. The combustion leaves no residue in the exhaust nor in the cylinders.

At the beginning of May last eight return trips, London-Paris-London, with full loads of freight, were made on an aeroplane fitted with two 260 h.p. Salmson water-cooled engines. The engines were started on ordinary petrol, then changed over to the safety petrol, and any excess ordinary petrol was discarded before the beginning of the flight. This machine was on view at the demonstration and took the air afterwards.

The advantages of this special petrol over ordinary petrol, in addition to its safety properties, are that it gives more miles per gallon, it produces the same power and can be produced much cheaper; whilst it is only very slightly heavier than ordinary petrol.

To show that it is also suitable for motor cars, M. Bardel fitted up a Renault motor car with the safety petrol; then, in spite of the fact that the carburetter was adjusted for ordinary petrol, the motor soon started up, using the electric starter, and was then driven round the buildings.

# Progress of Road Transport in Agriculture.

Transport is the pivot upon which successful agriculture turns in every part of the world. In this country the development of road transport in the industry has been phenomenal: indeed, it is true to say that the internal combustion engine in the car, lorry and tractor has revolutionised agricultural practice. On the purely transport side the work is divided between farmers themselves and various contractors and general carriers. Much agricultural produce is carried by rail but delivery to and from the actual farms must, of course, be made by road. The railway companies have done much towards meeting the needs of country people and new lorry delivery services are being continually opened. The Great Western Railway is very active in the West where the produce of the farms is of a mixed character and continuous in supply. In this district it does not pay many farmers to own a large lorry themselves, but taken in the aggregate the railways and motor transport contractors find more scope for general carrying than they do, say, in the eastern counties where large crops of one variety calls for transport services which many farmers prefer to conduct themselves.

The extent to which farmers do their own hauling depends upon the nature of the produce which in turn depends upon the part of the country with which we may be concerned. In the West the light lorry (25 cwt. or 30 cwt.) is the more popular as it is handy and reasonably cheap for general running about. In this area heavier work finds its way into the hands of the owner of big lorries such as road contractors and the railways. Some farmers own large heavier vehicles but on the whole it is found more profitable to hire. In the eastern counties farmers do more of their own hauling with big lorries, as the crops there are more specialised, using the smaller lorry for running about with light loads. Still much work is available for contractors and the railways, especially in dealing with the sugar beet and potato crops.

The introduction of sugar beet growing in most parts of this country has done much to stimulate the use of road transport, not only as a means for conveying the crop direct to the factory, but in conveying to the railway station. In this matter the railways have been active and provide vehicles for hauling the crop from farm to station at competitive rates.

Fruit and vegetable growing, which has made such enormous strides during the past ten years, calls for a great amount of what might be described as new transport. The railways come in for much of this and use their own lorries for collecting and delivering, but the grower is an important user of motor vehicles himself and recently there has come into being a new system of delivering produce direct from the grower to the retailer.

In no branch of farming has motor transport done so well as in the carrying of livestock. By the use of the rack-sided lorry equipped with a suitable tail-board which provides the means for loading up the stock where proper loading pens do not exist on the holding, the farmer is able to load up his animals and convey them either to the local market or to the buyer direct. Except on large farms the 30 cwt. or 40 cwt. lorry is found to be the most useful for this purpose.

The advantages of transporting livestock by road are many, the most important perhaps being the elimination of fatigue in animals arriving at market. Then the costs are less than by the old-fashioned method of walking them and there is less risk of loss or injury on the road.

Generally the farmer conveys his stock to market in his own vehicle, although haulage contractors sometimes do this, but apart from stock bought in the market to go back on the farms, animals are dealt with after they leave the market by contractors, including the railways. Quite a good business has grown up in the livestock raising areas, especially in Scotland and the North of England, among contractors in conveying animals from markets to the buyers destination. Heavy loads of pigs, sheep and cattle are often conveyed by this means, four ton lorries being mostly used for the purpose. In the sheep districts, too, the lorry is becoming very popular for transportation purposes and contractors in many parts provide valuable services for farmers in this respect often doing long journeys. Of course, some of this business is obtained at the expense of the railways, but much of it is concerned with extra service; that it to say, service that in the old days was not done by conveyance.

The above applies to commercial livestock. In the conveyance of pedigree cattle to shows, horses to race meetings and hounds and hunters to fox-hunting meets great developments have been made in the construction of body-work which enables the animals to be transported comfortably and to arrive at their destination quite fresh. Recently the small horse box has come into being and it is safe to say that before long every important breeder who does not have his work done by contract will own one, and the trailer horse box or cattle truck appears to meet with a fair amount of favour, too.

Undoubtedly the future of British farming will turn on transport. Better marketing methods are being devised as a result of the existence of improved transport facilities and as these methods develop the demands of transport will increase.

## Private Cars for Business Use.

The Automobile Association state that two cases at Cardiff defended by the A.A. where two motorists were charged with using their private cars for the conveyance of goods without having paid the higher tax applicable to goods carrying vehicles, raise a point of wide interest to all motor owners. (Brief reference is made to these cases in another part of this issue, Editor.)

It was contended by the A.A. solicitor that no offence was committed because, according to the Act of Parliament it was only when a motor vehicle is constructed or adapted in such a way as to bring it into the class of goods carrying vehicles that the higher rate of duty became payable. The Cardiff Stipendiary held that the offence was proved and imposed fines in each case.

The effect of this decision, if correct, is that it is an offence to carry parcels or even small articles in a private car, and in view of the serious importance of the matter to the general body of motorists The Automobile Association is appealing to the High Court on the ground that the decision is wrong in law.

## Road Traffic (Amendment) Act, 1931.

The Road Traffic (Amendment) Act, 1931, which has received the Royal Assent, repeals sub-section (3) of Section 61 of the Road Traffic Act, 1930, which provided that certain motor vehicles, such as lorries and vans, if used or allowed to be used without reward for carrying eight or more passengers, should be treated as contract carriages (i.e., a class of public service vehicle).

The effect of this amendment is that any vehicle conveying passengers, no matter for what purpose, will no longer require to be licensed as a public service vehicle, so long as passengers are not carried for hire or reward.

It should be noted that the amending Act does not extend to any case where any charge is made for the use of the vehicle for the conveyance of passengers and that it does not alter in any way the position with regard to Road Fund Licences.

# The 45-Tonner Articulated Eight-Wheel Scammell.

## Motive-Unit and Carrier.

THIS somewhat lengthy title epitomises the purpose and layout of a very interesting recent product by Scammell Lorries, Ltd., of Watford and High Holborn House, High Holborn, W.C. Messrs. Scammell have specialised for years in the tractor-trailer combination, or, to be precise, in that form of it which constitutes an articulated combination on six or eight wheels with a dropped frame, of a self-contained power plant unit and a turntable carrier on one (rear) axle.

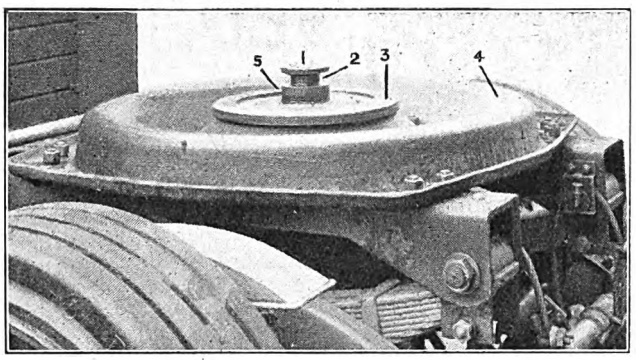

FIG. 1. THE TURNTABLE. LOWER HALF MOUNTED ON REAR OF MOTIVE UNIT CHASSIS.

(1). The pin which operates the four internal brakes of the carrier axle passes vertically through a hole in the centre of the king-pin. (2). A locking fork attached to the upper half of the turntable (fixed to the carrier) engages in this recess in the king-pin when the two units are in position. (3). The fabric ring on which the weight of the fore end of the carrier rests. (4). This outer ring serves as a steady for the carrier when cornering. (5) The king-pin projects 3⅝ in. above the turntable.

A modification of the Road Haulage Regulations has established the legality of the heavy transporter subject to a speed of 3 m.p.h. in towns and 5 m.p.h. in the open, and facilitated the transport of what are technically cited in the Regulations referred to as "Indivisible" Units, in bulk on the highways. By this means it is the increasing practice to transport by road large one-piece structures such as smaller locomotives, electrical plant, condensers, and heavy machinery which formerly could only be carried by rail or as "split parcels" even though bulky ones, by road.

The range of more recent Scammell articulated transport vehicles includes models to load 25, 45, 65 and 100 tons. Excepting the last named, the details are mainly similar and embody a well developed standardisation of parts and units, which means so much to users when repairs or replacements are necessary. The carrier portion of the 100-tonner would need a special review to itself, and is not referred to in the following analysis of the 45-tonner. Of this model two interesting examples were recently completed; we had the opportunity of inspecting them at the maker's works at Watford before delivery. They were built for Messrs. Norman E. Box, Ltd., Manchester, and Pickfords, Ltd., London, for the conveyance of heavy machinery. With the exception of a fold down hinged shield built over the rear wheels of Messrs. Pickfords' model, the vehicles are identical. The leading dimensions are as follows:—Overall length, 40 ft. 4 in.; overall width, 7 ft. 6 in.; overall height to top of cab, 8 ft. 6 in.; wheelbase of carrier (driving axle to carrier axle), 25 ft. 6 in.; wheelbase of motor unit, 10 ft.; overall wheelbase, 35 ft. 6 in.; platform length, 18 ft.; ground clearance (middle of carrier), 10 ins. The gross weight is 15¼ tons of which 5 tons 2½ cwt. is accounted for by the motive (tractor) unit. The addition of a winch, seen in one of the Figures increases the weight by about 1 ton. There is a maximum and minimum ground clearance of (approx.) 12 in. (front) and 6 in. (rear).

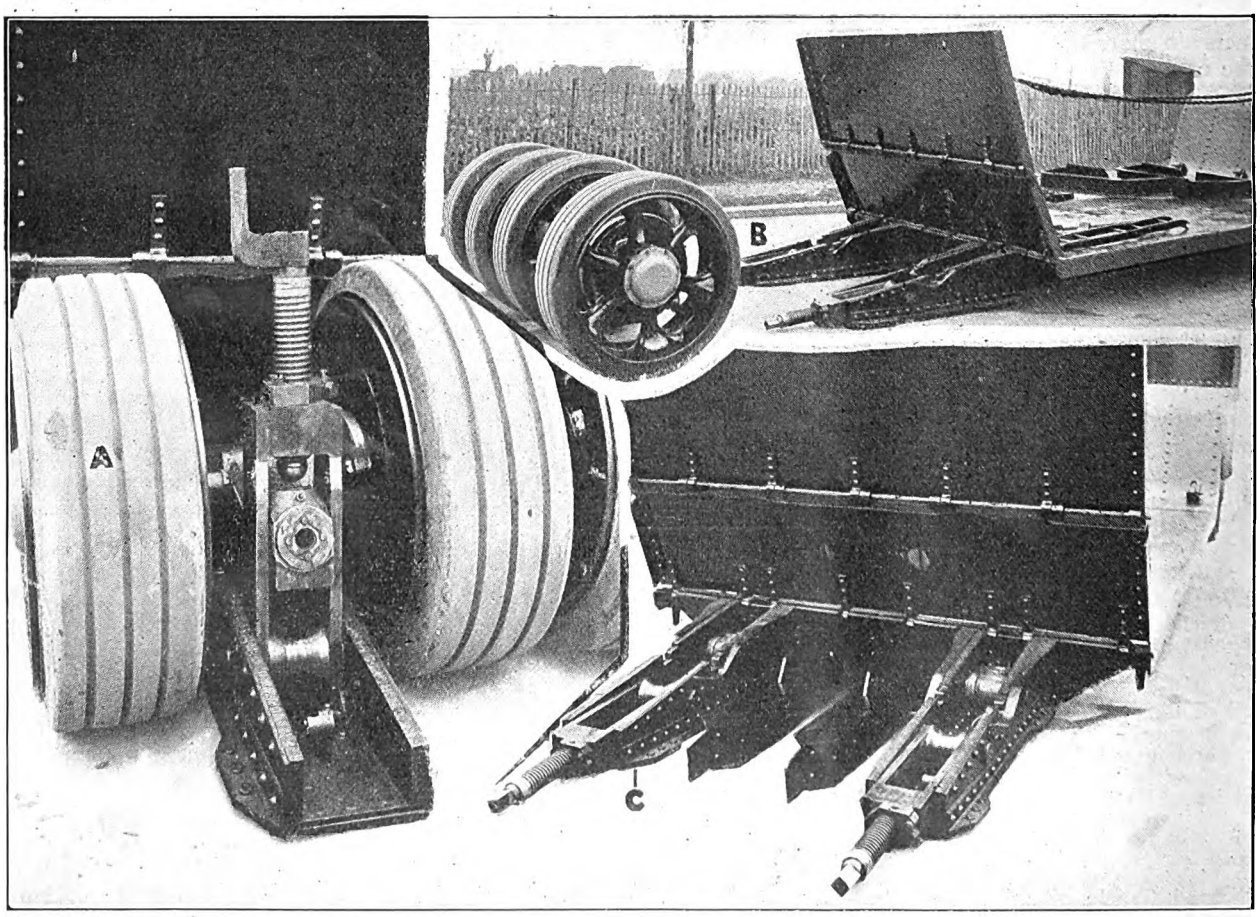

FIG. 2. THE AXLE ASSEMBLY OF THE 45 TON (LIVELOAD) CARRIER.

The hinged tailboard when dropped to the horizontal position serves as a ramp—see Fig. 3. A half hoop form of axle cover is an alternative—see Figs. 4 and 7. A. One of the half axle units showing the jack and trunnion in the free (disconnected) position. B. Complete axle removed and jacks folded horizontal. C. Tailboard (Type, Fig. 3) ready for dropping to position for ramp.

**The Four-Cylinder Engine of the Motive Unit.**

The engine is of a neat and simple design which has

Digitized by Google

been well tested and improved in detail. It develops a big range of power at a medium speed, and should wear well. Moreover, it is made with replaceable parts where wear after a long mileage, or in the event of neglect, may be expected. The cylinders are in pairs and have a bore and stroke of 5 ins. by 5½ ins. The output is 75 brake horse power at 1,700 revs., and approximately 80 b.h.p. at 1,800 revs. The Treasury rating is 40 h.p. and the compression ratio is 5 to 1. The valves are overhead and

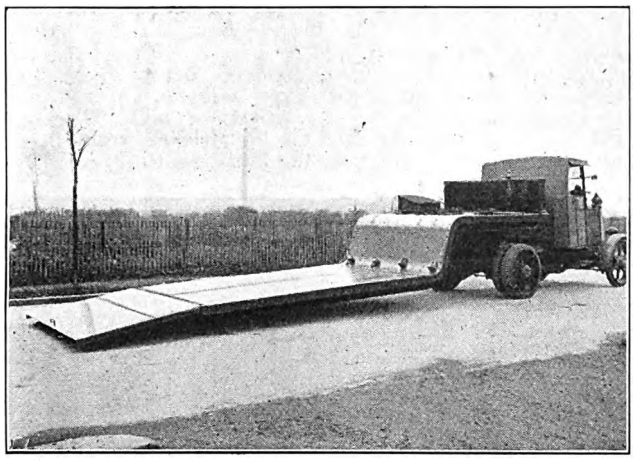

FIG. 3. MODEL WITH HINGED TAIL-BOARD-RAMP.

are operated by an internal cam-shaft through enclosed push rods and rockers.

**Transmission Layout.**

The engine with flywheel and clutch and four-speed gear-box is carried on a separate (internal) frame. The clutch is an inverted cone with a fabric facing.

There is a short shaft with large fabric disc coupling between the clutch and gear-box; a provision which simplifies attention to and dismantling of either clutch or gear-box. The latter is an aluminium-alloy casting of the usual box shape with a limited girth. It provides four speed changes forward and a reverse. The construction is specially robust and designed against gear hum and whip. The direct drive is taken as 1.00 to 1; the indirect drives being progressively 1.75 to 1 (third); 2.70 to 1 (second); 5.09 to 1 (first); and 6.67 to 1 (reverse). The change lever is central. The transmission rearwards is

FIG. 4. MODEL WITH HALF-HOOP DETACHABLE AXLE COVER.

through a differential counter-shaft with twin sprockets for Renold Duplex roller chains of 1½ in. pitch and 3 in. width. The foot brake drum is 11 in. diameter and is fitted with a callipers external fabric lined shoe brake with shoes of 4½ in. width. Adjustment of the chain and axle centres is by means of the Scammell Co.'s standard screw-adjustable distance radius rods.

The back-axle of the motive-unit is of high tensile nickel steel and has cambered ends to provide a full and uniform road contact for the twin-tyred wheels. It is 5½ in. section and is provided with saddle brackets to which are attached a pair of extra stout and special leaf springs for the carrier turntable. This part of the layout will be dealt with later.

The chassis of the motive or tractor unit is carried independently on four suspension springs of the usual semi-elliptical type; the rear pair being placed below the axle-beam and fitted with shackles at both ends (Fig. 6). The front springs of this chassis are as usual, above the axle. The driving axle ends carry neat fitting phosphor-bronze sleeves which form part of the Timken roller bearing assembly for the wheel hubs. This provision facilitates removal and replacement of wheels and bearings without having to re-adjust for end play.

The road-wheels are steel-castings and all are journalled on Timken roller bearings. Henley solid tyres are fitted; the respective sizes being as follows:—Front wheels of the motive unit (singles), 120 mm. (4.72 in.) by 771 mm. (30½ in.); rear wheels of the unit (twin), 8 in. by 30½ in., and rear wheels of the carrier, 12 in. by 30½ in. The front pair of tyres are air-cushioned; the rest being of the shallow section solid type.

The front axle assembly of the motive unit comprises a drop-forged I section beam axle with reversed Elliot swivel-pins in bronze bushed bearings, with ball thrust bearings. The steering gear is a worm and sector acting through a ball-journalled track rod. Both worm and gear shafts are journalled in plain bearings; the worm bearing having in addition heavy ball thrust bearings.

**Details of Carrier Chassis and Turntable.**

The carrier chassis is built of standard wrought steel scantlings, chiefly plates and angles, and is double rivetted throughout. The main fore and aft members are of box

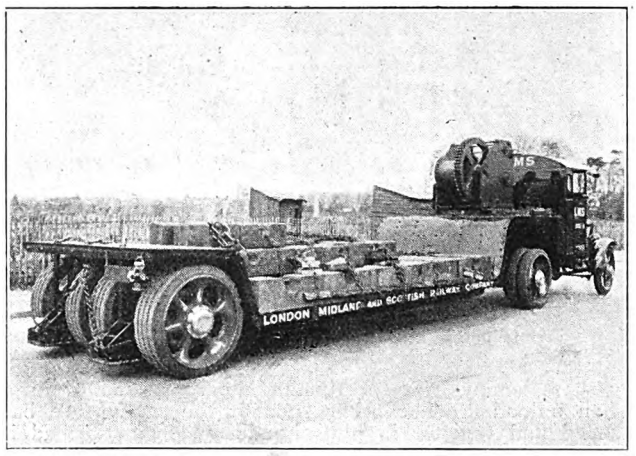

FIG. 5. A 45-70 TONNER UNDER TEST. NORMAL NETT WEIGHT 15 TONS 5 CWT., WITH A CRANE THE WEIGHT IS APPROXIMATELY 1 TON MORE.

girder section measuring (approx.) 12 in. by 12 in. Most of the structural details are similar for both models. The front of the frame is arched and the plated side members at this point measure 10½ in. deep by 16½ in. wide.

The fore-end of the carrier has attached to its under face a pair of stout channels to support the upper half of the turntable (Fig. 1). This is a stout, dished pressing nearly 3½ ft. diameter and 7/16th in. thick, and is reinforced by a welded flanged baseplate 5/16th in. thick. The centre or load plate is 15½ in. diameter (external) and 11½ in. (internal). It is faced with a specially treated graphited-asbestos fabric ring and is self-lubricated. Through the centre rises the hollow king-pin of 4 1/16th in. diameter, which projects 3 3/8th in. above the turntable and registers in a bearing in the centre of the corresponding member of the turntable assembly of the carrier. The king-pin, as noted in Fig. 1, carries the push-pin for operating the brake gear of the carrier and is recessed to 2½ in. diameter about mid-length. When assembled a sliding fork which is permanently attached to the turntable plate of the carrier registers in this recess, and is locked by a horizontal cross-spring pin. The details are partly shown in Fig. 6. The turntable of the motive unit is shown in detail in Fig. 1, and the suspension layout in Figs. 1 and 6. The turntable portion on the motive unit is bolted to a pair of deep channel section side members which are carired on a pair of longitudinal springs with .44 in. centres and leaves of 5 in. width. The springs are fixed to the dead axle of the motive unit and have Messrs. Scammell's patent form of sliding displacement and the maker's patent stiffened top plate anchorage. A limited amount of fore and aft pivotal movement is available to the turntable assembly to adapt

Digitized by Google

its position to the tilting requirements of the carrier. The load is centred on the inner circle (3 in Fig. 1) of the turntable; the outer ring face (4 in Fig. 1) acting as a steady.

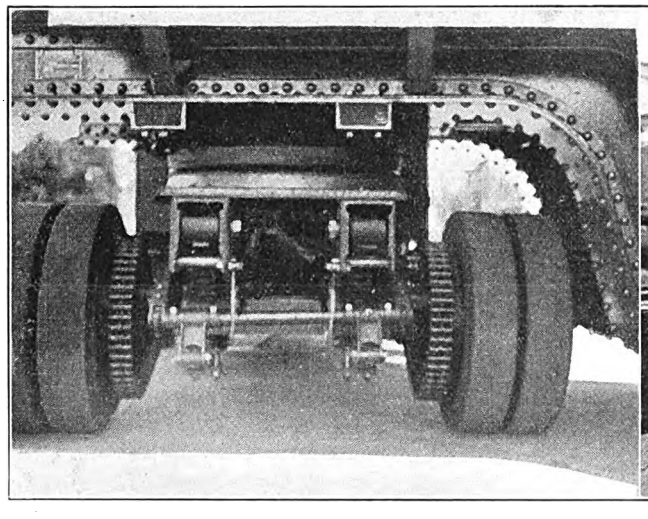
**Attachment and Removal of Carrier Axle Unit.**

The means of attaching and removing the rear axle assembly of the carrier are shown in composite Fig. 2. The four wheels have Timken roller hub bearings and sleeves and are carried in pairs in line on independent axle units. Between each pair is mounted a square threaded jack in a stirrup, the base of which is hinged to a pair of horns fixed to the rear of the chassis. The jacks serve to raise and lower the chassis and to lock the respective axle assemblies in position. The tops of the jack screws are squared to take a pair of ratchet levers operated by two men. The ratchet levers are replaced by short tommy bars for running the screws up or down when unloaded. The other ends of the screws are ball shaped and register in phosphor-bronze cups formed in the top of the respective trunnions. Attached to each axle unit is a cast-steel fulcrum block with a projecting shaft which slides in the trunnion. A recess is fashioned in each of these shafts to receive a pair of spring-held locking forks. A supplementary spring lock is provided at the side of the assembly.

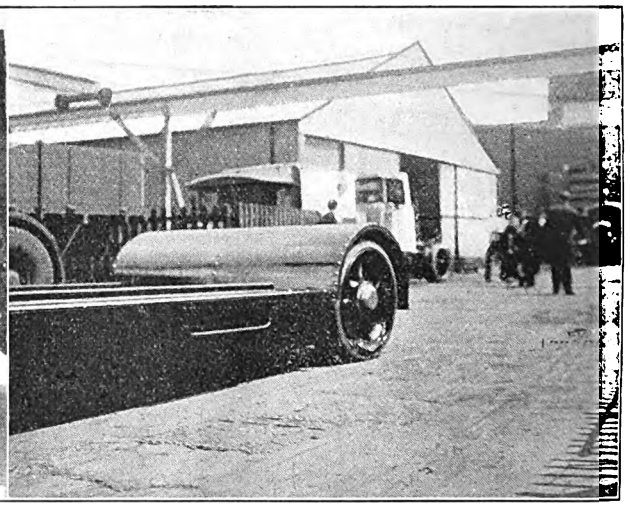
To remove the axle unit, the procedure may be described as follows:—Withdrawing two spring-pins which couple the two drag links of the respective twin brake assemblies; releasing the safety lock at the side of the structure; withdrawing a pair of spring-held short stout fork-pieces which register in corresponding slots in the respective twin shaft and trunnion assemblies; unscrewing the jacks; this movement lowering the frame until, when the load is freed from the axle assembly, the jacks can be hinged down as shown. The complete dismantling of an unladen carrier, as detailed, including also the removal of the cover over the axle assembly, as recently carried out in the writer's presence at the works, occupied 16 minutes by two men.

**The Triple Brakes.**

Besides the already noted foot-applied external shoe brake on the transmission drum, there are two independent groups of internal shoe brakes in drums attached to the driving wheels of the motive unit, and the axle of the carrier. The shoes and drums are interchangeable as regards dimensions; the diameter being 20 by 4 in. wide, and the control—by lever and tension rod with compensating drag links—is similar for both. The control levers are side-by-side on the driver's right in the cab; the one lever operating the brake on the tractor axle and the other controlling the twin brake (four wheel) assemblies of the carrier axle. The carrier-brake is operated by a hardened push-pin (see Fig. 1 indicated by 1) which has an up-and-down movement through the centre of the king-pin of the turntable. On applying the brake lever, the pin displaces upwards a bell-crank in the centre of the section of the turntable attached to the under face of the carrier, and exerts a pull on the brake tension gear. Being axially mounted this push-pin and bell-crank are unaffected either when disconnecting the carrier or when turning, at any position of the combined outfit. To connect or disconnect the two chassis it is necessary to raise the fore-end of the carrier about 4 in. to free the king-pin from its bearing in the turntable of the carrier. An auxiliary independent control is fitted for applying this brake on the carrier itself. The mechanism is a hand-wheel and screw which engages the tension members.



Photos] FIG. 6. REAR OF MOTIVE UNIT IN POSITION.



[World's Carriers. FIG. 7. A WORKS PICTURE OF THE REAR OF THE LATEST MODEL READY FOR DELIVERY.

**Fig. 6 shows the ample clearance between the units when at right-angles and this view shows, also, the independent suspension on semi-elliptical leaf-springs of (above) the turntable unit which is concentrated on the fixed axle of the motive chassis and (below) the underslung independent suspension of the motive chassis.**

## Anti-dazzle Demonstration.

THE date of the Demonstration of Anti-dazzle devices, to be organised by the Royal Automobile Club at Cambridge in connection with the International Illumination Congress, has now been definitely fixed for Thursday, September 17th next. It was originally intended to confine the Demonstration to lamps conforming to the Ministry of Transport Provisional Regulations. It has been decided, however, to extend the scope of the Demonstration so as to include:—(a) Lamps designed to meet the requirements of any particular foreign country; (b) those which would comply with the amendments proposed by the R.A.C. to the Ministry of Transport regulations; and (c) lamps which do not meet the requirements of any regulation, but which are claimed to be anti-dazzling.

A number of interesting entries have already been received, and the Demonstration will undoubtedly prove of the utmost value not only to motorists generally, but also to all those who are interested in arriving at a solution of the dazzle problem.

Entries for the Demonstration, which will be accepted without fee, should be sent to the Secretary, R.A.C. (Technical Department), Pall Mall, London, S.W.1.

## Obituary.

IN many circles the news of the death of Mr. B. F. Burford last month was received with great regret. Mr. Burford, who was 48 years of age, was the Chief Engineer of the East Surrey Traction Company, Ltd., whose service he entered about ten years ago.

* * * *

Mr. A. G. Buckland, senior representative of R. Cadisch and Sons, the well-known motor equipment dealers, died suddenly on August 3rd last. Mr. Buckland had represented the firm for the past thirty years and had a wonderful knowledge of the trade dating from the early days of motoring.

* * * *

Mr. James Henry Batty, a director of Pollexfen and Co., shipping agents and brokers, of 17, Brunswick Street, Liverpool, was killed in a motor accident at Knowsley on August 1st.

## Master Carriers' Association of Victoria, Australia.

THE annual meeting of the Master Carriers' Association of Victoria, was held at the Association office, Commerce House, Melbourne, Australia, June 25th, with Mr. E. W. Coulson, President, in the Chair. The annual report showed that there were 128 members. Reference was made in the report to the following matters:—The reduction of 12½ per cent. in the rates of cartage on April 1st, 1931, following on the 10 per cent. reduction in wages of carters and drivers, etc., made by the Federal Arbitration Court on March 31st, 1931, and the adjustment of wages rates under the Commonwealth Statistician's cost of living figures for the preceding quarter; the great disparity in the wages rates of the Federal Arbitration Court Award and the Carters' State Wages Board Determination, and the urgent necessity for the State rates to be made uniform with the Federal Award rates; the Ministry of Transport Bill which is being strongly opposed by the Association; the excessive number of trade picnic holidays, all of which seriously affect the carrying industry; the amended Factories and Shops Bill which it is considered is inopportune as existing conditions do not warrant any further restrictions being placed on trade and industry at the present time; and to the necessity for an amendment of the Motor Car Act to permit the registration fees of motor vehicles to be paid quarterly instead of yearly as at present, a request for which amendment is now under consideration by the State Government. The report also referred to the retirement from business of Mr. William Kidgell, the foundation President of the Association, and the presentation to him of a suitably inscribed gold watch and chain subscribed for by the members, and an illuminated address by the Committee, in appreciation of his valuable services to the Association since its inception in 1902. Sympathetic reference was made to the death of Mr. John Sullivan, Senr., who was a foundation member of the Association and a member of Committee for 22 years. Mr. H. Morley Kidgell, who had resigned from the Executive Committee during the year, was made a Life Member of the Association in recognition of his valuable services as a member of Committee for 17 years.

The Executive Committee for 1931/32 was elected as follows:—Messrs. L. Arthur, J. Caddy, E. W. Coulson, W. Creaton, C. Davis, J. Johnson, M. C. Peppard, L. A. Schumer, F. J. Skinner, M. Smith, T. J. Smith, J. A. Sullivan, P. Wallbridge and H. W. Wansley.

## Burnley Trams and Omnibuses.

Mr. Chas. H. Stafford, A.M.I.T., General Manager of the Burnley Corporation Tramways and Omnibuses, reports that during the year ending March 31st last the amount added to the capital account for buses, street improvements, and offices was £7,234 3s. 9d.

Tramway income from passengers and parcels amounted to £140,409 16s. 1d., and bus income totalled £36,898 9s. 9d. Sundry revenue totalled £336 15s. 3d., making a gross income of £177,645 1s. 1d. The working expenses amounted to £162,247 11s. 11d.—£121,275 13s. 5d. for the tramways, and £40,971 18s. 6d. for the buses. This left a net revenue of £15,397 9s. 2d.

Bus net revenue showed a debit balance of £4,073 8s. 9d. after debiting the omnibuses with £4,078 17s. 1d. for services rendered by the tramways department. Interest and sinking fund charges on buses totalled £4,603 0s. 6d.

Expenditure on permanent way renewals was £5,874 3s. 7d.

At the present time there is a scheme under consideration, and reports are in course of preparation by a financial expert and transport expert, with a view to forming a Joint Board to operate the undertakings at present owned by Burnley, Nelson and Colne.

A "Crawshaw" Colander has been purchased for the purpose of cleaning greasy parts of tramcars and buses whilst undergoing their inspection and overhaul, and has proved most satisfactory.

The policy of scrapping the obsolete type of bus and introducing the modern safety type has been adopted by the Department.

**Annual Railway Returns.**—The annual Railway Returns for the year 1930 have been published and copies (price 6/6d.) can be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C.2. The returns contain particulars of the capital, traffic, receipts, working expenses, and operating results of the railway companies in Great Britain.

## Our Australian Letter.

(FROM OUR OWN CORRESPONDENT.)

SINCE reference was made in the last Australian letter concerning the reorganisation of the management of transport services, a bill has been introduced into the N.S.W. Parliament by the Labour Government of that State which in short aims at bringing the whole of the transport services of the State, railways, tramways, motor transport services and main roads, under a Minister for Transport and a single Commissioner, with departmental heads to control the various services.

An interesting feature of the bill is a clause which empowers the Commissioner to control all motor traffic and to wipe out competition between privately owned enterprises and Government services.

Meanwhile the motor industry in Australia is awaiting the establishment of a motor manufacturing concern in the Commonwealth by Australian Made Motor Cars and Aeroplanes, Ltd.

Australia, with a population of over 6,000,000 has not one single manufacturer though it is true that quite a large body making industry has been built up in the Commonwealth. Yet Australia has the fifth greatest number of cars registered among the countries of the world. An Australian motor industry should have a potential market overseas embracing New Zealand, Fiji, Dutch East Indies, British Malaya, Phillipines, Indo China, Siam, India, South Africa, China and Japan. And furthermore Australia, with its vast mineral resources is the natural manufacturing centre for the whole of the East, being many days steam nearer than the other manufacturing centres of the world. The present registration of cars in this market is approximately 1,000,000 with a constantly growing demand as western education expands among the vast eastern population.

The company have secured an area near Sydney, 4,000 acres in extent, and its proposals to build up a model city centred around its enterprise are of interest. Preparations are in hand for the laying of the foundation stone of the factory. Australia is needful of such industries as that proposed and if Australian Made Motor Cars and Aeroplanes, Ltd., with a capital of £2,000,000, can do as they say they will, namely, put a first class six cylinder car on the market for £300, then the success of their enterprise is assured.

Recent events in Australia, involving the impoverishment of Governments has resulted in the development of a trend of opinion in favour of the toll system of financing public works In Queensland has this opinion developed mainly as witness the fact that when Mr. A. E. Ennis, Director of Construction on the Sydney Harbour Bridge left Australia recently for England he carried with him a proposal which emanated from the Queensland Government that his firm should erect a bridge over the Brisbane River in return for a franchise to collect a toll over a period of years. The scheme will involve the expenditure of £1,500,000.

## Rail v. Water.

LAST month the L.M. & S. Railway (Canvassing Department) entertained at their Cricklewood Ground a cricket team representing the shipping and forwarding companies of the City of London, amongst whom were representatives of the following companies:—Cunard S.S. Co., Ltd.; Nelson, Ltd.; General Steam Navigation Co., Ltd.; Thomas Potter Priestley, Ltd.; Thomas Trapp & Sons, Ltd.; Richards Longstaff & Co., Ltd.; Alglo-Italian Express; General Transport Co., Ltd.; Michaelis Hallenstein & Co., Ltd., and Henry Johnson, Sons & Co., Ltd.

After a keen game the representatives of the shipping and forwarding companies won the match by 33 runs.

During the tea interval, Mr. Lindeman (Chief Canvasser, representing Mr. Castleman), who presided, expressed regret at the unavoidable absence of Mr. Castleman, and on behalf of the L.M. & S., said how happy they were to once again meet the representatives of the City firms. Just as they played cricket on the field so the L.M. & S. always endeavoured to "play cricket" with their clients in their business dealings, and he hoped there would be many future occasions on which other matches would be played.

Mr. A. C. Johnson, of Henry Johnson, Sons & Co., Ltd., responded on behalf of the guests. He thanked Mr. Lindeman for his very kind remarks, and said they had all had a thoroughly enjoyable time and, although he hoped the best team would win, the shipping and forwarding companies would do their utmost to give the L.M. & S. a good beating.

After the match a smoking concert was held in the pavilion, and the party finally broke up at 10 p.m. after having spent a most enjoyable time.

# The Automobile Association.

## Annual Meeting.

The twenty-sixth Annual Meeting of The Automobile Association was held at the Savoy Hotel, on July 15th. Mr. Charles McWhirter, Chairman of the Committee of the Association, presided.

In presenting the Annual Report and Accounts, the Chairman stated that the past year had been a very difficult year with regard to membership, nevertheless the nett increase of members had been 18,038, which showed that the Association was giving members what they required. The total membership was 444,778.

A new scheme had been instituted whereby members could introduce their near relatives without paying an entrance fee. So far over 10,000 near relatives of members had joined under this scheme.

The road patrols were still the backbone of the services rendered to members. The patrols and staff cars had covered more than 27 million miles.

Local authorities had asked the Association to supply them with patrols, for which the Association would receive payment. A.A. patrols were paid, trained, equipped and controlled entirely by the A.A. for the service of A.A. members who subscribed for their assistance.

The Chairman referred to the new routes now being issued to members; on each page was a sketch map of the district indicating the road to take, also information covering the district for five miles on each side of the road. It had taken over two years to devise these new routes.

During the past year 700,000 routes in Great Britain had been issued to members; more than 2,000 a day for every day in the year.

The question of hotels was difficult, but the Association had obtained some advantages for motorists. Over 800 appointed hotels had agreed that baths should be included in the price of a bedroom.

The Aviation Department had been so popular that A.A. members had, during the year, "aviated" over a million miles.

The outstanding event had been the Road Traffic Act, which reached the Statute Book in August last. The new Act was intended to consolidate and amend the law, and the Minister of Transport was to be congratulated on the accomplishment of an enormous task. From the time that the Bill was introduced, the A.A. had been represented at every stage of the proceedings; there were frequent conferences with Members of Parliament and Government Departments concerned, and it had been possible to thresh out many points where the Association had been unable to see eye to eye with those in authority.

Regulations made during the past few years had been criticised, but many matters were better dealt with by regulation than by Statute. It was a very easy matter, by representation to a Government Department, to secure amendment of an objectional regulation; it was more difficult to persuade a House of Commons, already much behind with its work, to pass another Act of Parliament to remedy a defect which had only become apparent by experience.

The introduction of mobile police was another result of the Road Traffic Act. This new force was established mainly with the object of preventing dangerous driving and making our roads generally safe. The principle underlying the establishment of this force was sound; as to whether the object was being achieved, it was too early to express a definite opinion.

The difficult position of national finance had for years past been a serious obstacle to taxation reduction. Despite this, the Association had never wavered in its efforts to impress upon the Chancellor of the Exchequer and Parliament the great benefit to be gained, not only to motorists, but to the whole country, by reducing the burden of motor taxation.

The Income and Expenditure Account showed that the surplus of income over expenditure had been £13,381, and that subscriptions and entrance fees totalled £801,649.

The percentage of overhead expenses was barely 17 per cent., an exceedingly small amount; the bulk of the expenditure, £626,226, had been for road services.

A unanimous vote of thanks to the Chairman terminated the proceedings.

# The New Marshall Diesel Tractor.

Marshall, Sons & Co., Ltd., of Gainsborough, have produced a new diesel tractor which is shown in the two accompanying illustrations. The power unit consists of a single cylinder horizontal two-stroke cold starting engine built into the frame of the tractor. It has a bore 8 in. and a stroke of 10½ in. and an engine speed of 550 r.p.m., having a normal power of 27 h.p. on belt. Lubrication is automatic and the cylinder has a detachable liner of light construction. The fuel consumption is about .48 lb. per b.h.p. hour. There is a three speed gear box giving 5 m.p.h., 5.25 m.p.h. and 8.75 m.p.h. forward and a reverse speed giving 3.75 m.p.h. The hauling capacity is 15 tons in low gear on a 3 per cent. gradient or 10 tons in top gear on a similar gradient. The figures will vary according to road and other conditions. Power is transmitted to the engine through a cone clutch to the transmission gear which is totally enclosed and runs in oil bath and the shafts are mounted in ball and roller bearings. The transmission is carried in three castings, namely, the crankshaft and clutch in the engine bed, the middle casing carrying the change speed gears and their operating mechanism, the rear casing being the axle arms, housing the differential and final drive, the latter being through a large sized differential to a semi-floating axle. All wheels are disc, the rear wheels being fitted with twin solid rubber tyres each 5½ in. wide and the front wheels with a solid single rubber tyre 4¾ in. wide. Steering is worm and sector. Foot and hand brakes are fitted. The fuel tank has a capacity of 12 gallons. Cooling is by radiator with water circulating pump, and fan. A pulley 26¾ in. diameter and 7 in. wide is provided. Chassis lubrication is by grease gun nipples on all movable pins and points necessary. Lighting is by battery or no-battery generator equipment, whichever preferred. The overall length of the tractor is 10 ft., overall width 5 ft. 9 in., overall height 5 ft. 5 in., weight 3 tons 10 cwts.

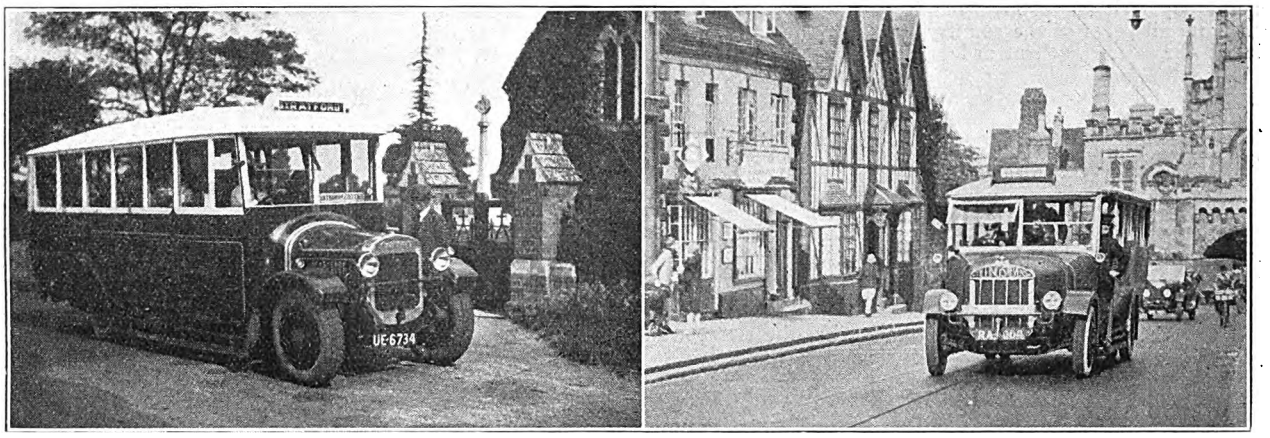
# Bus and Coach Enterprise in Shakespeare's Land.

*(Specially contributed.)*

STRATFORD-UPON-AVON is one of the most important centres for tourists, so that, as one may expect, bus and coach activity is very considerable. Though Stratford-upon-Avon is the home of Shakespeare, and the mecca of pilgrims from all parts of the world, we should not forget the daily doings of its inhabitants.

Stratford is also one of the most important market towns in the south of Warwickshire, there being two markets a week. Consequently, the daily passenger carrying business



LEFT: "THORNYCROFT" BUS ON STRATFORD SERVICES. RIGHT: T.S. BUS IN WARWICK—PORTION OF THE EAST GATE IN THE BACKGROUND.

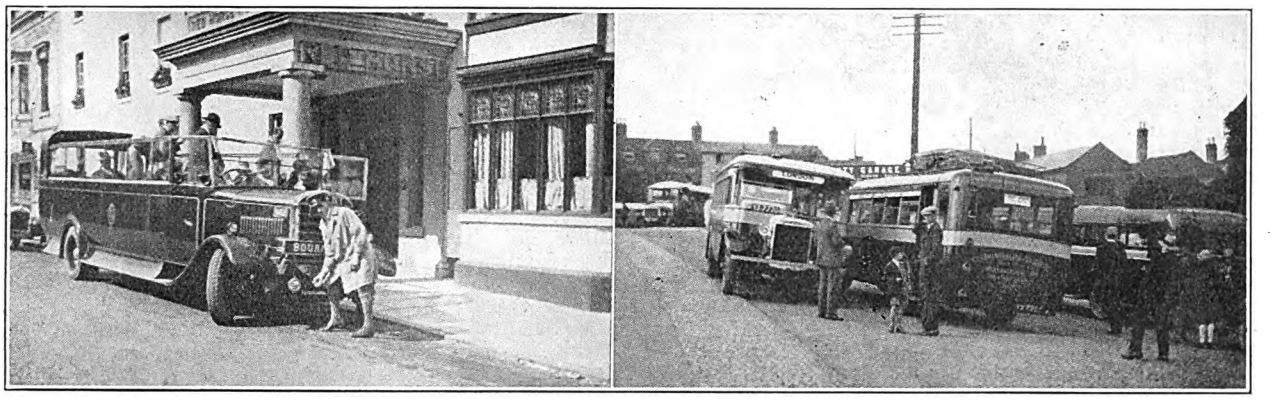
is considerable. There are no markets at Leamington, and those at Warwick are less frequent, so that the importance of Stratford as a market town is obvious.

The local omnibus services are operated mainly by three different companies. First in the number of vehicles on the road and the number of routes operated comes the Midland Red Company, and next the Stratford-upon-Avon Blue Motor Services, with offices at 28, Wood Street. The third company operating services in the district is the Reliance Bus Company, of Bidford-on-Avon. Both the Blue Services and the Reliance Bus Company employ a number of small buses for country service. These are very comfortable; Star chassis form the basis for the Reliance Co.'s larger vehicles.

The larger vehicles belonging to the Blue services are Thornycrofts, with both back and front side entrances. The Midland Red was the first company in the field and has operated services for many years. The Blue Company was formed in 1926. On behalf of the Midland Red it must be said that the Company established important services in the district and connected important centres, while others in the early days were looking after market day and other special traffic. The Blue Bus services have established routes where none existed before and its activities represent one more step in the direction of linking up the whole district.

A peculiarity of the Stratford-area is the very large number of carriers in the district. There are scores hailing from all parts of rural Warwickshire, south-east Worcestershire, Norton, and even Oxford. A very distinctive feature of the carriers' vehicle round here is the bold way in which the word "Carrier" and the owner's name are displayed. "John Jones, Carrier to Stratford and Birmingham," in big lettering, is the type of sign one sees. I remember some of them; "E. Povey, Carrier, Shipston-on-Stour" and "Leslie Garratt, Ilmington, Carrier to Stratford-on-Avon."

Some of the vehicles are merely covered lorries, used more for goods than passenger transport. Apart from this, the passenger vehicles are well constructed with the seating accommodation designed to ensure the full comfort of passengers. They all have a prosperous appearance with nothing of the ramshackle down-at-heel condition that was formerly so common of carriers' vehicles in some parts of the country. The majority comprise Morris chassis, one-ton Ford, and Chevrolet, but there are many Guy's and Albions comprising the bigger vehicles.



LEFT: A TRENT COACH WHICH HAS MADE A BREAK AT THE RED HORSE HOTEL, STRATFORD-UPON-AVON, ON THE RETURN JOURNEY TO BOURNEMOUTH. RIGHT: LONG DISTANCE COACHES BREAKING THE JOURNEY AT STRATFORD.

The Midland Red operate two local services daily, regular services of generally an hour's interval to and from Warwick, Leamington, Kenilworth and Coventry; to Birmingham via Henley-in-Arden, and about the same number to Shipston-on-Stour, and a direct service to Banbury. The Company operate market-day services, between Stratford and Broadway, Worcester, Malvern, Droitwich, Bromsgrove, Redditch, Studley, Bidford-on-Avon, Evesham, Cheltenham, etc.

The Blue Motor Services have a number of frequent daily local services. The bigger services of this company are

Digitized by Google

operated between Evesham, Bidford, Stratford, Warwick, Leamington, Kenilworth and Coventry, Stratford coming midway between Coventry and Evesham. Recently services have been extended from Evesham to Cheltenham and Malvern.

The Reliance Bus Company operates two very good services between Evesham and Stratford, and other services around Evesham.

In a general way the coaching activities of Stratford-on-Avon are similar to those of Leamington. Indeed, the primary object of much of the out-going coaching traffic from Leamington is Stratford-upon-Avon, ten miles. Many visitors come to Leamington by rail, and then by road to Stratford, and the Great Western run daily excursions from Paddington to Leamington between the beginning of July and the end of September for Stratford, the road part of the journey being carried out by the Midland Red Omnibus Company.

As a venue for coach traffic, Stratford stands high in general popularity, and large numbers of coaches are to be seen from all parts of the country, especially during the high tide of the season. Stratford is also a favourite stopping place for the long distance coaches that pass through on the way between London, Liverpool, Manchester and Birmingham.

### At Leamington and Warwick.

The distance between Leamington Spa and Warwick is about two miles, the towns being practically joined together.

The "Green" Motor Omnibus Service run by the tramway company (Leamington and Warwick Electrical Co., Ltd.) cover routes between Leamington and Warwick and very frequent services are run.

The "Blue" Bus Service between Leamington and Warwick is run in conjunction with Stratford-on-Avon Bus Co.'s services from Coventry to Stratford and Evesham. Some of these buses do the whole journey, serving the two towns *en route*. In other cases, buses operate between Leamington, Warwick and Stratford only.

Leamington Spa is a popular inland health and pleasure resort. This fact alone ensures a big call on local passenger transport means, but when it is considered that Leamington and Warwick form the centre of a lovely piece of country full of the richest historical interest right in the heart of England, with Stratford-on-Avon on the south and Kenilworth on the north, and that it is in comparatively close proximity to Coventry and Birmingham, the extent of the demands made, not merely upon the local transport, but on that covering a much wider area will be understood.

In addition to the local services, Leamington is the centre for Warwickshire of important services of buses, linking up the two towns with Coventry, Birmingham, Stratford-upon-Avon, Southam, Shipston-on-Stour, Banbury, Evesham, Rugby, Daventry, Northampton, and Leicester.

The Midland Red take the honour of having the largest number of services. The connection of long runs to Banbury, Northampton, Rugby and Daventry belong to that company besides long distance connections.

There are many country services that centre in Leamington as well as Warwick. Of these the Midland Red take by far the bigger share. This Company, as is well-known, is the principal bus proprietor in the Midlands, and it is only to be expected that most of the Warwickshire country running, in addition to the longer routes, would fall to its enterprise.

Leamington Spa is a popular coach resort for other towns far and wide, and the number of visitors actually residing there from spring to autumn make coaching quite an active business. The Midland Red take part in this side of the business also, and the proprietors of the Regent Coaches, and the Priory Coaches respectively, specialise in it.

Long distance road traffic between Birmingham and London is intercepted by Leamington.

For the benefit of coach proprietors taking visitors to the district, it may be said that there is a parking place at Mill Hill, Leamington Spa, Market Place, and Castle Hill, Warwick. No charge is made, and at Warwick there is an attendant.

## Round the Lancashire Associations.

### Joint Transport Council.

Lancashire and Cheshire Joint Road Transport Council, at its meeting on July 16th, discussed statements made at a recent railwaymen's conference on the subject of road transport. The Council passed the following resolution:—"That the Lancashire and Cheshire Joint Road Transport Council having observed the resolutions introduced, and the statements made, at a recent Railwaymen's Conference with reference to the Road Transport Industry, notes the bitter antagonism then displayed against the growth and development of the Road Transport Industry. In response to these statements it is desired to point out that:—(1) Both evidence and experience prove that the Road Traffic Act is being generally observed and is proving of immense value in the control and regulation of the industry. (2) That the wages and conditions in the Road Transport Industry are the subject of frequent negotiation between the Unions and the Employers concerned and that wages and conditions will compare favourably with comparative grades in the Railway Service. (3) That the Road Transport Industry is bearing far more than its fair share of Taxation. Taxation has been deliberately imposed to restrict its activities as a competitor with the Railways. (4) That during the period of bad trade through which we have been passing the employment provided by the manufacture of motor vehicles and accessories and the operation of Road Transport has contributed, in no small way, to the easing of the unemployed problem. Further, the huge contribution of the Industry to the Road Fund has also helped in this direction, in addition to providing large sums for road improvements in the general interests of the nation." The question of formulating a new agreement governing wages and conditions in Lancashire and Cheshire (excluding Merseyside) was reviewed and was referred to the Executive for consideration and a report. A long discussion took place on the subject of improving organisation within the industry and it was decided to refer this matter to the Executive Committee for investigation. A report will be submitted to the Council in due course.

### Manchester Transport Owners' Association.

The co-ordination scheme of the Motor Coach Section of the Manchester Transport (Owners') Association, of which Mr. Howard Robinson is secretary, has been further developed. As each set of applications for road service licences is submitted, a meeting of the operators directly concerned is called. Instead of each operator making arrangements to be individually represented at the meeting of Commissioners a solicitor or Mr. Howard Robinson is appointed to present the case for the whole of the members. Arrangements have also been made in many instances for the operators of principal services to apply for licences whilst other coachowners, whose own vehicles run less frequently to the area concerned, act as booking agents. Example:—There are ten operators of a certain tour, but four arrange journeys at irregular intervals according to the number of bookings. These four withdraw their applications for licences and agree to accept bookings and in return for a commission pass over the passengers to the other operators whose tours are more or less according to schedule. This method of working eliminates light running and is obviously beneficial to the members.

### Amalgamated Horse and Motor Owners.

A case in which the Amalgamated Horse and Motor Owners' Association, of Manchester, was interested was heard at Oldham on July 29th, when a motor haulage contractor of Chadderton was summoned for causing a motor driver to be employed for a continuous period of nine hours. According to the police statement, the driver began work at 7 a.m. on May 21st, when he collected at Trafford Park a load of cotton for Oldham. He was then instructed to collect machinery at Manchester and deliver it at Banwell, near Weston-super-Mare. The journey was 210 miles and he began it about 5 p.m. He had a half an hour for tea, after which he drove until 2 a.m. on Friday, when he pulled up at the roadside and went to sleep for about three hours. Subsequently he was involved in an accident involving the overturning of the lorry. The police alleged that between 7 a.m. on May 21st and 2 a.m. on May 22nd, the driver had been employed with only two breaks of half an hour each for dinner and tea. The driver, in evidence, said he was so tired that he did not know he was on the wrong road until he woke up. He denied that the sole reason for bringing the charge was revenge for being dismissed. Mr. G. C. Fripp, for defendant, said no instruction was given about the necessity of arriving at Weston-super-Mare at 2 a.m. The driver was given £2 and the trouble was that while the man was given money for bed and breakfast, he often enough preferred to sleep in his lorry and have the money himself. The lorry could do 15 miles to the gallon of petrol and would require about 28 gallons for the journey. As the tank contained about 11 gallons at the start £1 would cover the cost of fuel, leaving the driver sufficient for bed and breakfast and incidental expenses. The summons was dismissed.

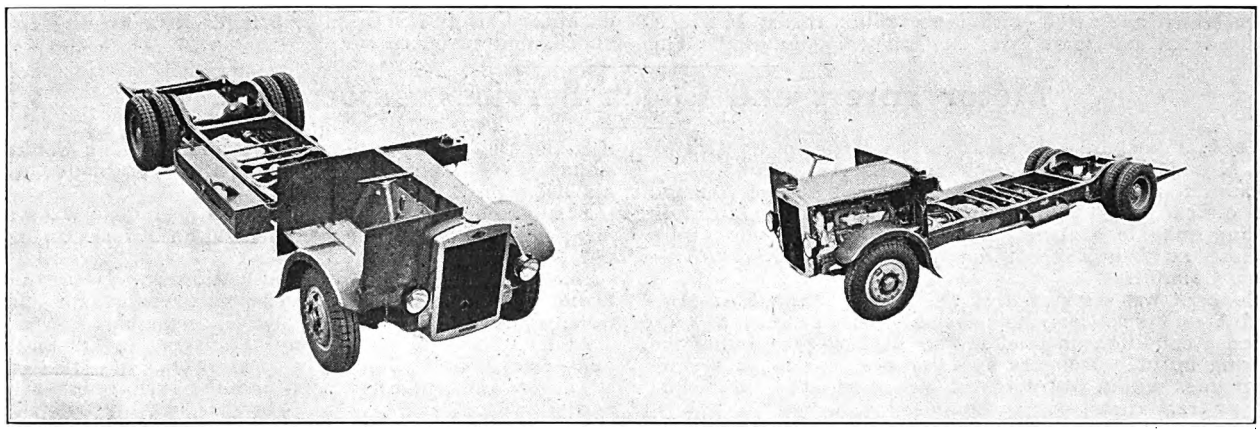
# The New T.S. Double-Deck Omnibus Chassis.

The well-known Maidstone firm of T.S. Motors, Ltd., have now put into production a new omnibus chassis for a useful load of 52 passengers, excluding the body for which 50 cwts. is allowed. By invitation of the firm we visited Maidstone recently and had the opportunity of inspecting this new production.

In the design of this chassis special attention has been paid to the springing and silence of running from the point of view of the passengers, whilst from that of the operator great care has been taken to see that all units requiring periodical adjustment are easily accessible.



LEFT: THE T.S. 6-CYL. BUS CHASSIS. RIGHT: NEAR SIDE VIEW OF CHASSIS.

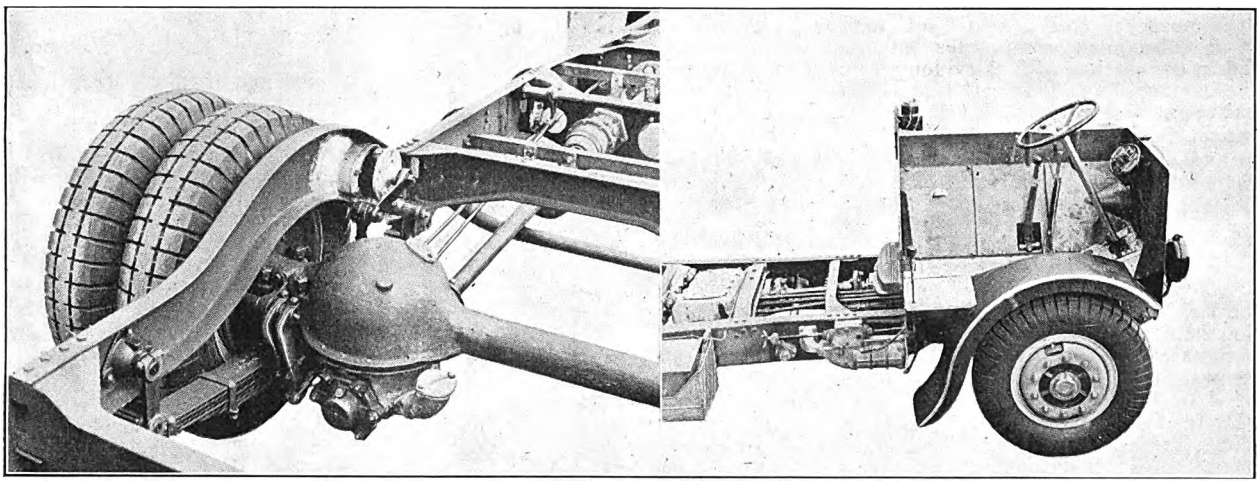
The chassis, which is of the forward control type, is fitted with a six-cylinder engine, R.A.C. rating 38.4 h.p., developing 50 h.p. at 1,000 r.p.m., 80 h.p. at 1,500 r.p.m. and 110 h.p. at 2,500 r.p.m. Bore 4 in. by stroke 5½ in. The cylinders are cast monobloc with detachable heads in pairs. The cylinder head and valve arrangement are of patented design. The crankshaft is very stout and has four main bearings. White metal liners are used for both main and connecting rod bearings. The camshaft is driven by a helical spur gear. Forced feed lubrication is assured by a gear type pump, in the bottom of the crankcase sump, driven by a skew gear from off the camshaft. An easily demountable filter is also fitted in the sump.

The radiator, of the "Still" type, is fitted with thermostatically controlled shutters and the fan is driven by an internal self tension chain from the crankshaft. Ignition is by high tension magneto, with cross drive from the rear of the engine. The magneto is on the near side whilst an impeller type water pump is fitted on the off side. The dynamo is placed on the off side and is driven by enclosed chain from the front of the engine.

Separate exhaust manifolds are provided for each group of three cylinders with a common union under the chassis. Large hot-spots with inlet manifold are provided and also a heater, in the circulating water system, just above the carburetter.

The engine is mounted on a subframe and the near side main member. All main and cross members are steel pressings. High tensile steel bolts, in place of rivets, are used throughout.

The clutch, of the single plate fabric faced type, is mounted immediately behind the engine, and a clutch stop is provided to facilitate gear changing. The gear box gives four speeds forward and reverse and is suspended at three points from two of the cross members. Gear changing is effected by selector rods which are carried forward to the change speed gate at the driver's left. A lock is provided in the gate so that it is impossible to engage more than one gear at a time and the lever moves against a leaf spring so that there is no vibration when the lever is engaged.



LEFT: FINAL WORM DRIVE AND NEW SHACKLE MOUNTINGS. RIGHT: ARRANGEMENT OF 4-SPEED GEAR BOX AND SERVO MECHANISM.

The coupling shaft joints between the clutch and the gear box are of the flexible type, as is that between the gear box and the spherical self aligning ball bearing at the end of the intermediary shaft. The drive is then taken to the back axle through a "Hook" coupling with plain bearings and another similar type of coupling and a splined shaft.

The back axle is of the underslung worm type, fully floating, with bevel type differential. The worm casing and transmission is offset to the near side to permit a low central gangway in the body. The case is a steel forging and takes the whole weight.

Semi-elliptic springs are fitted both front and rear, fitted with special clips, in place of centre bolts, which

Digitized by Google

register with the spring pads on the axles. The hardened steel shackle pins move in phosphor bronze bushes. The shackle supports for the rear springs are placed inside the main frame members so that the springs are underneath them, so giving a maximum possible width for the frame.

Brake shoes are operated on all four wheels by the foot pedal assisted by Servo mechanism. This mechanism is conveniently mounted on the outside of the off main member and all adjustment is done by means of a single winged nut. The hand lever operates an independent set of brakes acting on the rear wheel hubs. The shoes are arranged in pairs in each hub and are of the internal expanding type. Pressed steel wheels are bolted to the hubs which are fitted with taper roller thrust bearings.

The front axle is an "H" section steel stamping. The swivel pins have renewable phosphor bronze bushes. Marles type of steering. Tecalemit greasers are fitted throughout.

The general equipment includes Zenith carburetter; C.A.V. lighting set and illuminated instrument panel fitted with switch, speedometer, clock, oil gauge and amp. meter; 40 gallon petrol tank, mounted on off side, with magnetic type gauge; front mudguards; spare wheel, cover and tube; and tools; 38 in. by 8 in. Dunlop pneumatic tyres, single front and twin rear, are fitted as standard.

The dimensions are as follows:—Wheelbase, 16 ft. 1 in.; front track, 6 ft. 4 ins.; rear track, 5 ft. 10⅜ ins.; height of frame from ground, 2 ft.; overall length, 26 ft.; overall width, 7 ft. 5⅞ ins.; clearance under back axle, 6¼ ins.; dashboard to end of frame, 20 ft. 8⅝ ins.; turning circle, approximately 60 ft.

## Motor Hirers and Coach Services Association.

SEVERAL important questions are now being dealt with by the Motor Hirers and Coach Services Association.

Limitation of services under the Road Traffic Act and the difficulty experienced by motor coach operators in finding suitable parking accommodation in London were subjects raised at a recent meeting of the General Management Committee.

Concern was expressed at the action of the East Midland Area Traffic Commissioners who, it was stated, had imposed a condition on road service licences prohibiting the picking up of passengers by vehicles operated by private companies within 440 yards of a terminus of a municipal bus or tram route, or city boundary.

The meeting was informed that the condition had been attached to licences for routes in Leicester and Northampton and that one of the companies whose licences were so affected was the "Midland Red" Motor Services.

It was understood that the "Midland Red" would appeal in order to test the decision of the Commissioners.

It was agreed that the Association would co-operate with the Birmingham and Midland Motor Omnibus Co., Ltd. ("Midland Red") and should communicate with the Traffic Commissioners concerned, and with the Minister of Transport.

The question of parking facilities for coaches in London was also discussed, it being agreed that the difficulty was felt most acutely by the operators of contract carriages. It was decided to address a communication on the subject to the Commissioners of Police for the Metropolis and the City of London as well as to the London and Home Counties Traffic Advisory Committee, suggesting that a deputation from the Association should wait upon them for the purpose of discussing the matter.

At a subsequent meeting of the Committee it was stated in connection with the schedules of fares submitted to the Metropolitan Traffic Commissioner by (a) 17 individual companies; and (b) the Association, that the Commissioner had disposed of Schedule A as being incomplete and after making certain amendments and additions to Schedule B had conditionally approved such fares as reasonable minima. The Commissioner also intimated that the Chairman of the South-Eastern Traffic Commissioners agreed with, and would act in accordance with, his decision.

A sub-committee was appointed to promote "ways and means" for dealing with the stabilization of fares throughout the country.

An application from the South-Western Motor Coach Owners' and Operators' Association, of Calne, for affiliation to the M.H. and C.S.A., was accepted.

At a meeting of the General Management Committee, held on July 21st, the question of restricted streets in London was raised and the seriousness of the matter was stressed. The Secretary was instructed to make representations to the Minister of Transport on the matter, pointing out how serious the hardships, inflicted by the Restricted Streets Orders, were upon legitimate businesses, and respectfully requesting that modifications should be permitted in certain cases.

PRESENTATION TO MR. LOGETTE.

Mr. H. T. Rickards, President of the Association, presented to Mr. Logette an inscribed gold dress watch from members of the General Management Committee. Mr. Rickards referred to Mr. Logette's period of office as Chairman and commented upon his detailed knowledge of the various regulations, which was always available for the benefit of those who cared to enquire. He had given, quite freely, a great deal of his time to the affairs of the Association, to the detriment of his own business and health and he (Mr. Rickards) hoped that Mr. Logette would make a speedy recovery so that his long connection with the affairs of the Association might continue.

Mr. Flin rose in support of Mr. Rickards and a hearty vote of thanks was accorded Mr. Logette with prolonged acclamation.

Mr. Logette suitably replied and thanked Mr. Rickards for his kind references, remarking that he found it most difficult to convey his gratitude for the manner in which his colleagues had seen fit to record their appreciation of his services.

Messrs. Garner's District Hire Service, of Acton, were unanimously elected to membership.

## Leeds and District Motor and Horse Owners' Association.

The Leeds and District Motor & Horse Owners' Association held their annual outing on July 28th. Leaving City Square by motor coaches at 1.30 p.m. an enjoyable drive was taken via Barwick-in-Elmete, Aberford and Towton to Thorpe Arch where tea was served.

After tea there was a programme of sports, and a lady's handbag, presented by Mrs. Thos. Hargreaves, was won by Mrs. Pease who was first in the egg and spoon race. A walking test for ladies was won by Mrs. B. Lockwood who was presented with a glass jug and tumblers.

The Cup for the quoits handicap was won by Mr. Sam Stone (the runner-up last year) who competed with the President, Mr. J. I. Stonehouse. The game was full of thrills, both competitors throwing with such skill that at times games were decided by the small margin of half an inch. This Cup is known as the "Hargreaves Cup" and is competed for by members of the Association only. The cup was presented two years ago by Mrs. Thos. Hargreaves.

An amusing race for gentlemen was that in which each competitor had to run 100 yards, blow up a balloon until it burst and then run back to the starting post. This was won by Mr. Alf. Harrison, and the "Lemonade and Cake" race was won by Mr. Mather. This was great fun, as each competitor had to run 100 yards and then eat a piece of cake and drink a bottle of lemonade without touching either with the hand, the cake being held by a lady who poured lemonade into the mouth of the competitor.

After the sports the President in a short speech said how sorry they all were that Mr. and Mrs. Hargreaves were unable to attend, as they were on holiday. He was very pleased indeed to welcome Mr. G. T. Tuke, their Past-President, who he would ask to present the prizes.

Mr. Tuke said that it gave him great pleasure to renew old associations with the members, and he hoped to attend again next year.

The Secretary, Mr. Alf. Harrison, supported a vote of thanks to Mr. Tuke, and then a tired but happy party returned home.

**Liverpool Aerodrome.**—Liverpool City Council is recommended by the Finance Committee to proceed with the additional lay-out and equipment of the Speke aerodrome at a cost of between £35,000 and £50,000. It is proposed to construct two hangars, administrative offices, etc.

**Carlisle Not to Run Buses.**—Carlisle City Council has decided not to appeal to the Minister of Transport against the Northern Traffic Commissioners' refusal to grant the Corporation a licence to run municipal buses. The Corporation will now confer with local operators and present a scheme to the Commissioners.

# Road Passenger Transport Services.

## Recent Developments and the Outlook: Where Do We Stand?*

By J. M. Calder, A.M.I.E.E., A.M.I.Mech.E.

General Manager and Engineer, Reading Corporation Tramways and Motors.

It is not my purpose merely to re-introduce a discussion on the relative merits of "tramways versus motor omnibuses," nor of "tramways and motor omnibuses versus trolley omnibuses."

The conditions and circumstances of almost every traffic area present different traffic problems, and no one system may be able to answer all the requirements of urban and suburban passenger traffic, with its varying degrees of density of population, the nearness or remoteness of surrounding districts, of which the operating authority constitutes a natural centre, and other conditions which act and react upon one another.

The amount of accuracy and relevancy of the information available and the presence or absence of the essential factors for proper guidance to sound conclusions, which of themselves call for an experienced and skilled guide.

The existence of prejudice, often enough unconscious prejudice, from which few men are entirely free.

When we see the Members of this Association developing all three systems, and expending large sums of money upon them, notably tramways in the Metropolitan area, and in Leeds and Belfast; trolley omnibuses in Nottingham, and motor omnibuses in Birmingham, Manchester and other large centres of population, is it any evidence of prudence to pronounce an adverse judgment upon any one of them?

It is agreed, I think, that the tramcar is not considered to be the vehicle suitable for the expansive growth and development of passenger transport by road, notwithstanding the improvement of its comfort-travel qualities. It is enormously handicapped by financial burdens, mainly relating to road costs and local taxation, in comparison with every other vehicle. In these respects it is partnered with the light railway. It is, however, a giant in its own sphere.

It is agreed, I think, that as a road passenger vehicle in the field of modern transport, the motor omnibus occupies the first place. It stands unrivalled, and, in unfettered expansiveness, it threatens the very existence of railway travel, at least according to the statement recently made on behalf of one of the largest railway companies in the country at an Inquiry before the Traffic Commissioners.

In this type of passenger vehicle is embodied all those elements that go to produce what may be termed a really independent and effective unit. Being provided with its own source of power, it is capable of meeting its own requirements, and, consequently, it has an impressive and often decisive effect when considering which type of vehicle shall be used, especially for extra-urban and growing services. The combination of self-contained power and mobility is the most important feature of the motor omnibus, and, I believe, that it is owing to this fact that that vehicle has been lifted to a plane never before reached by any of the vehicels used for passenger conveyance by road. To go where you like and when you like, and to be easy of access, appeals to the public. It is a common experience that it appeals to the thing which we hear so much about, namely:—"the psychology of the man in the street." Further, it has, and has had the advantage of the application of many minds to its improvement and development, of which we do not yet know the ultimate outcome. It has the further advantage of mass production methods. There is no need on my part to stress the effect of the various designs produced by the intense rivalry of manufacturers, and the progress and speeding up which has rapidly followed, not only the demand, but also the opportunity afforded by quickly ascertaining all that is best and worst in the component parts of the vehicle. In passing, we must not overlook the possible effect of the introduction of the heavy-oil engine. It may be that we are on the threshold of a new era. At any rate, progress in that direction is being followed with unusual interest, and not without expectation.

In the Railway Companies (Road Transport) Acts of 1928, some protection was obtained for the transport services of local authorities in their own areas. Those Acts provide that if and so long as an adequate and satisfactory service of tramcars is provided along a tramway situate in a local area owned or worked by the local authority of such local area, or an adequate and satisfactory service of omnibuses is provided in pursuance of existing statutory powers in a local area by the local authority of such local area, the Company shall not, without the consent of the local authority of such local area, run, or enter into any agreement for the running of, any service of road vehicles in such local area in competition with any such service of tramcars or omnibuses, except for the purpose of serving any area beyond such local area, so long as no passenger conveyed by such service of road vehicles is, on any one journey, both taken up and set down on a route in such local area in competition with such service of tramcars or omnibuses.

In his speech on the second day's hearing of the Railway Companies (Road Transport) Bills, on April 27th, 1928, Mr. (now Lord) MacMillan, K.C., the leading Counsel for the Railway Companies, said:—

> "We recognise at once that a great deal of traffic now on the road cannot be recovered by us, and, as I say, probably ought not to be recovered by us. We have no business to shepherd the public on to the railways against their inclination and their convenience, and a considerable amount of our traffic, really rail traffic, must be accepted as having been permanently diverted on to the roads."

The direct outcome of modern competition has compelled the railway companies to come on the roads, and in a real sense to compete with themselves. The issue of that step no man can foresee. It throws light, however, upon their fight for life, which is now being waged before all the Traffic Commissioners in the country.

At present, we stand confronted by a formidable effort to narrow the range of municipal activity in this sphere. The year 1931 will be stamped upon all subsequent transport experience in this country. Much depends upon the conditions which the Traffic Commissioners will attach to road service licences. This year, we know the meaning of what has, for many years, been described as "the pegging out of claims." Against "jumping claims" the Minister of Transport warned the country at the last Conference of this Association. We are all now before the Traffic Commissioners, not only to retain our existing services, but if Part V means anything to local authorities, and gives effect to the intention of Parliament and the Minister, and the Traffic Commissioners give effect to those intentions, then to expand them, so as to meet all local necessities.

The greatest example of a merger is to be found in the London Passenger Transport Bill, which seeks to unify under one control all the passenger transport agencies in the Metropolitan area. That Bill is now before a Joint Committee of both Houses of Parliament. It is a problem of great magnitude, and let us not forget that the principle is capable of application to some parts of the provinces.

The Minister of Transport, in a public statement recently, said, that in this question "the public interest was paramount," and he appealed to the public "to realise that the Commissioners were absolutely independent in regard to their decisions and that the Minister was equally independent in the matter of appeals. The whole issue was what was the public interest in the matter?"

The conclusions at which I have arrived are:—

1.—It is not possible to face present-day bus competition by means of the tramcar alone;

2.—Municipalities should possess efficient fleets of buses to serve adequately outlying districts if they are to hold their own; and

3.—They must co-ordinate with the railway companies and large responsible omnibus companies wherever possible, and by these means, not only retain the systems they have built up over many years, but develop them to the fullest possible extent.

In conclusion, I should like to add that the problems which this difficult and complicated question raise cannot be solved by individuals alone. Only by the continual exertions of an organized body such as we are, can we hope to reach conclusions which will, in some measure at any rate, satisfy those we represent.

* Abstract of a paper read at the Annual Conference of the Municipal Tramways and Transport Association held at Southampton, June, 1931.

# Motor Coach and Bus Notes.

**Still Going Strong!**—Though only purchased in June and September of 1928, respectively, two 4 P.F. type Commer chassis, fitted with bus bodies and belonging to The Barton Transport, Ltd., of Beeston, Nottingham, have covered more than 150,000 miles and, we understand, are still giving excellent service.

**A Coach Town Index.**—Highways Guide, Ltd., of Argyle House, King's Cross, have published on behalf of the Central London and London Terminal Coaching Stations a pamphlet containing the names of about 1,000 towns and villages in the United Kingdom which are served direct from London by motor coach. The names of the companies operating coaches to the various localities are also given, together with their London telephone number for booking purposes.

**Liverpool Bus Costings.**—Details are given in the annual report of Mr. P. Priestly, the Liverpool Tramways and Motor Bus Manager, a copy of which we have just received, of the operating costs, etc., of the Corporation's fleet of 214 buses. The length of routes operated is 248 miles. Operating costs per bus mile:—Drivers and conductors wages, 4.47d.; other traffic employees, .46d.; cleaning and oiling, 1.32d.; fuel, light and water at sheds, .04d.; ticket check, .31d.; uniforms, badges, bells, etc., .12d.; licences, .87d.; miscellaneous traffic expenses, .30d.; general repairs, maintenance and tyres, 3.04d.; petrol, 3.63d.; general expenses, management, etc., .79d.; income tax, .01d.; interest and sinking fund, 3.18d.; total, 18.54d. Bus mile earnings, 13.13d. In the year the Corporation buses carried 23,972,854 passengers, travelled 3,203,337 miles, revenue £174,942. The average number of passengers per mile was 7.48. The percentage of operating costs to revenue was 114.9. The station to boat buses earned a revenue of 7s. 8.43d. per mile and the average passengers carried per bus mile was 27.74. Football buses enjoyed an income of 4s. 9.87d. per mile, and greyhoud track buses 2s. 7.59d. Losses are being incurred on about 20 services due, as Mr. Priestly points out, to the fact that the buses are only patronised in one direction during the peak loading hours. As a large number of buses are in use only for comparatively short periods, with consequently small mileage and excessive unproductive garage mileage, the operating cost and capital charges per mile run in service are very high.

**Motor Hirers and Coach Services Association. New Address.**—Motor coach operators are reminded that the address of the Motor Hirers and Coach Services Association is now 12, Spring Street, Paddington, London, W.2, telephone number Paddington 9101. The new office is taken as a temporary measure and the new address will hold good until further notice.

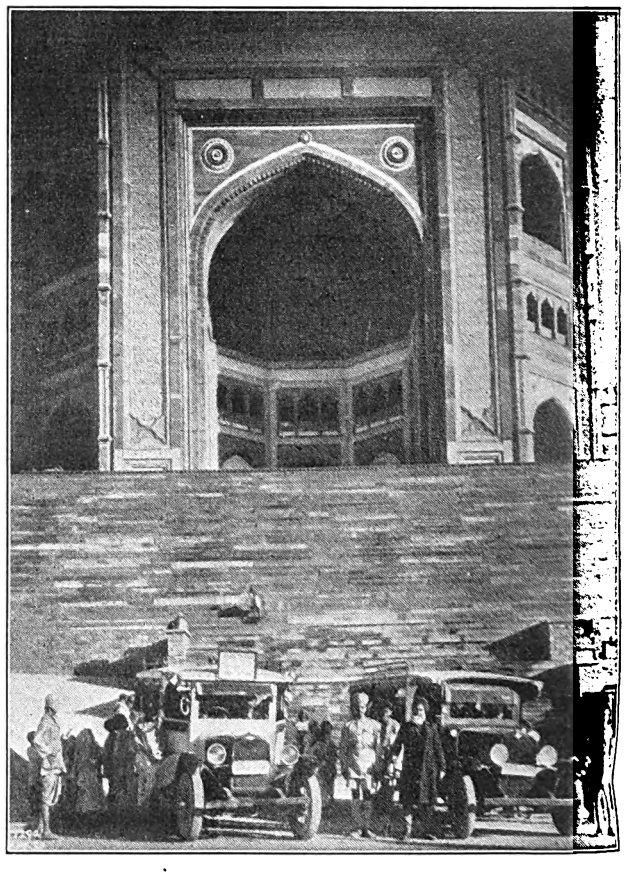
**New Co-ordination Plan.**—There is a possibility, if the suggestion of the Oldham Corporation is acted upon, of a vast scheme of co-ordination for the control of municipally owned passenger transport services. Oldham has made a proposition to the Manchester Corporation and the Secretary of the Lancashire and Cheshire Transport Association that a meeting be called of transport authorities in the Manchester area, with a view to investigating the possibilities of such a scheme.

**Ford Public Hire Vehicle.**—A genuine de-luxe public hire service vehicle has been designed by Ford Motor Company and is being marketed under the name "Fordalette." The body provides ample seating capacity for seven persons and is finished in royal blue pyroxylin cellulose with blue leather upholstery. Standard features include parcels net, luggage rails, sliding windows behind driver's seat, rooflight, ash-trays, arm-rests and a rear view mirror for passengers. In fine weather the folding back may be easily opened, and, as all six side windows are fitted with winders, the Fordalette can be quickly converted to an open car. It is listed at £335 ex works, Manchester.

**The T.S. Motors 6-Cylinder Chassis.** T.S. Motors, Ltd., of 5, Iddesleigh House, Caxton Street, Westminster, have sent us a copy of a new brochure dealing with their latest 6-Cylinder Engine Chassis suitable for taking single-deck omnibus and coach bodies with seating accommodation up to 36. The performance results of this machine in regard to economy and reliability are stated to be exceptional. The price of the chassis is £1,075. The engine is 38/109.5 h.p. of Ricardo design and from the wheelbase is 17 ft. It is equipped with a C.A.V. starter, it has 38 in. by 8.25 in. low pressure Dunlop tyres, Marles Steering and four wheel brakes. The brochure gives a specification and equipment in detail.

**Clayton Dewandre Not Trolley Bus Manufacturers.** Inadvertently in our answers to enquiries on page 437 of our July number the name Clayton Dewandre Co., Ltd., Titanic Works, Lincoln, was included in a list of Trolley Bus manufacturers. As a matter of fact the firm does not manufacture buses although the "Dewandre" braking system standardises on buses very extensively.

**Chevrolet Buses in a Metropolis of By-gone Splendour.**—The deserted city of Fatehpur-Sikri, ancient capital of the Mogul Empire in India, is celebrated for its well-preserved remains of magnificent architectural works which date from 1569. The great city of Fatehpur was built by the Emperor Akbar and his son, Jehangir. After the death of Jehangir the city was abandoned and the seat of power transferred to Agra. Chevrolet buses, however,



THE CHEVROLET BUSES REFERRED TO IN TEXT.

now do a thriving tourist trade in this metropolis of by-gone splendour.

**Public Service Vehicles—Southern Area, Scotland.**—Mr. T. E. B. Chalmers, the Certifying Officer for the Southern Area of Scotland, has addressed a letter to the owners of public service vehicles throughout his area regarding the certification of new vehicles. The letter points out that in view of the fact that there are many owners who desire to have new vehicles passed for a certificate of fitness with as little delay as possible, he has arranged to inspect such vehicles at the following centres until further notice:—Edinburgh, the first Monday of each month; Glasgow, the second Monday of each month; Dumfries, the third Monday of each month; Glasgow, the fourth Monday of each month. Any owner who desires to avail himself of these facilities should give Mr. Chalmers at least seven days clear notice to enable the necessary arrangements to be made. Such notice to be in addition to the forms of application Nos. P.S.V.1 and P.S.V.3. Owners in outlying districts and in the islands of the Area are strongly recommended to have their vehicles passed by him at one of the above centres before taking them to their own garages. Communications should be addressed to The Traffic Commissioners (Southern Area, Scotland), 44, Palmerston Place, Edinburgh.

# Institute of Transport.

## Results of Examinations, 1931.

The Institute of Transport examinations were held in London, Birmingham, Bristol, Bulawayo, Cape Town, Edinburgh, Johannesburg, Leeds, Manchester, and Port Elizabeth in April and May, 1931.

The names of the successful candidates are:—

### Graduateship Examination.

| *Name.* | *Employer.* |
|---|---|
| Bicks, E. C. | Mersey Docks and Harbour Board. |
| Blore, W. J. | South African Railways and Harbours. (*Distinction*: Elements of Traffic Working.) |
| Boyce, A. G. | Lever Brothers, Ltd. |
| Browne, H. E. | South African Railways and Harbours. |
| Cameron, H. A. | South African Railways and Harbours. |
| Cooper, H. | Manchester Corporation Transport Department. |
| Foot, W. O. | Southern Railway. |
| Gouws, J. J. | South African Railways and Harbours. |
| Hares, A. F. | Port of Bristol Authority. |
| Harrison, F. B. | Leeds Corporation Tramways. |
| Hepburn, A. | South African Railways and Harbours. |
| Hooley, H. J. | Stockport Corporation Tramways. |
| Kettle, W. H. | Lever Brothers, Ltd. |
| Lewis, W. A. | Cadbury and Fry Joint Transport Department. |
| Mahon, G. R. | London Underground Railways & L.G.O.C. Group. |
| Marshall, W. S. | London Midland and Scottish Railway. |
| Norman, A. G. | London and North Eastern Railway. |
| Oxley, J. E. | Aire and Calder Navigation. |
| Plummer, R. R. J. | Metropolitan Railway. |
| Quirke, J. H. B. | South African Railways and Harbours. |
| Rawsthorne, E. | Cunard Steam Ship Co., Ltd. |
| Revill, B. C. | Great Western Railway. |
| Rutherford G. N. R. | Rhodesia Railways. |
| Shaw, R. | Glasgow Corporation Tramways. (*Distinction*: Mathematics.) |
| Smith, A. G. | South African Railways and Harbours. |
| Terblanche, H. P. | South African Railways and Harbours. (*Distinction*: Elements of Traffic Working.) |
| Thomas, T. A. | Port of Bristol Authority. |
| Williams, B. Y. | Great Western Railway. (*Distinction*: Elements of Traffic Working; Economic Geography.) |

### Associate Membership Examination.

| | |
|---|---|
| Allen, J. H. | Rhodesia Railways. |
| Anderson, K. J. | Southern Railway. |
| Batten, G. S. | Cadbury and Fry Joint Transport Department. |
| Binstead, H. G. | Port of London Authority. |
| Boustead, J. C. | London Midland and Scottish Railway. (*Distinction*: Rights and Duties of Transport Undertakings; Law Relating to Transport.) |
| Bown, A. H. J. | Port of Bristol Authority. (*Distinction*: Rights and Duties of Transport Undertakings.) |
| Brian, A. V. | Southern Railway. (*Distinction*: Railway Operation.) |
| Buttery, F. A. | Port of London Authority. |
| Chapman, F. | London Midland and Scottish Railway. |
| Christie, L. L. | Birmingham and Midland Motor Omnibus Co., Ltd. |
| Clancy, R. | London and North Eastern Railway. |
| Clifton, A. B. | London Midland and Scottish Railway. |
| Collis, H. J. N. | Rhodesia Railways. |
| Cox, J. | South African Railways and Harbours. (*Distinction*: Rights and Duties of Transport Undertakings.) |
| Davies, A. E. | London Midland and Scottish Railway. |
| Davis, G. G. | Great Western Railway. |
| De Villiers, J. N. | South African Railways and Harbours. |
| Dyson, C. W. | London and North Eastern Railway. (*Distinction*: Rights and Duties of Transport Undertakings.) |
| Evans, C. H. | Imperial Chemical Industries, Ltd. |
| Everingham, J. A. | Port of Bristol Authority. |
| Germain, W. E. | Southern Railway. |
| Gilmour, E. W. | London Midland and Scottish Railway. (*Distinction*: Modern Railway Operation; Rights and Duties of Transport Undertakings.) |
| Gollop, A. E. | Port of London Authority. (*Distinction*: Law Relating to Transport.) |
| Grant, H. W. | London and North Eastern Railway. |
| Green, E. A. | South African Railways and Harbours. |
| Greenfield, S. G. | London and North Eastern Railway.) |
| Hamnett, C. | Great Western Railway. (*Distinction*: Economics of Railway Transport; Economic Development of the Great Powers.) |
| Haupt, C. B. | South African Railways and Harbours. |
| Headford, D. C. | Port of Bristol Authority. |
| Heckroodt, W. | South African Railways and Harbours. |
| Hemingway, J. H. | London United Tramways, Ltd. |
| Hider, R. C. | Metropolitan Railway. |
| Hunt, G. W. | London and North Eastern Railway. |
| Hutton, J. G. | London and North Eastern Railway. |
| Joll, R. R. | Southern Railway. |
| Lamb, D. A. | London and North Eastern Railway. (*Distinction*: Rights and Duties of Transport Undertakings.) |
| Leith, F. N. | South African Railways and Harbours. |
| Lindsay, A. W. | Port of London Authority. (*Distinction*: Modern Port and Inland Water Transport Operation.) |
| Lister, J. | London Midland and Scottish Railway. |
| Lyle, R. | South African Railways and Harbours. |
| Malcolm, J. D. | London Midland and Scottish Railway. |
| Mansfield F. Le V. | London and North Eastern Railway. |
| Marenbon, A. | R. A. Dyson and Co., Ltd. (*Distinction*: Economics of Road Transport; Modern Road Transport Operation; Rights and Duties of Transport Undertakings.) |
| McClelland, J. | London Midland and Scottish Railway. |
| Morris, P. G. | Great Western Railway. |
| Mounsdon, R. R. | London and North Eastern Railway. |
| Nash, A. W. R. | London Midland and Scottish Railway. |
| Nicholson, R. | London Midland and Scottish Railway. (*Distinction*: Law Relating to Transport.) |
| Parker, C. E. | London and North Eastern Railway. |
| Parry, E. H. | Port of Bristol Authority. |
| Patterson, R. | Rhodesia Railways. (*Distinction*: Modern Railway Operation.) |
| Pegrum, J. W. S. | Rhodesia Railways. (*Distinction*: Modern Railway Operation.) |
| Powell-Lee, K. B. | Trent Motor Traction Co., Ltd. |
| Razzell, A. J. | Southern Railway. (*Distinction*: Modern Railway Operation.) |
| Rudland, E. G. | London and North Eastern Railway. |
| Saville, R. St. C. | South African Railways and Harbours. |
| Shepherd, R. B. | Albion Motors, Ltd. (*Distinction*: Rights and Duties of Transport Undertakings; Law Relating to Transport.) |
| Small, J. R. | Consett Iron Co., Ltd. |
| Smith, C. C. | United Service Transport Co., Ltd. |
| Storey, W. | London Midland and Scottish Railway. |
| Takahira, R. R. | London Midland and Scottish Railway. |
| Walter, H. C. | Southern Railway. |
| Wilson, G. | Port of Bristol Authority. |

**Institute of Transport Examinations, 1932.**—The Graduateship and Associate Membership Examinations of the Institute of Transport will be held in London and other centres on Thursday, Friday and Saturday, April 28th, 29th and 30th, 1932. The latest date for the deposit of forms of entry, which can be obtained after October 1st, 1931, is February 1st, 1932 (January 1st if any exemptions are claimed). Full particulars and copies of previous question papers (price 1s. per set post free) may be obtained from Mr. A. Winter Gray, Secretary, The Institute of Transport, 15, Savoy Street, London, W.C.2.

**New Garage.**—Messrs. W. H. Reay & Co., motor engineers, Belfast, agents for Morris-Commercial vehicles, have opened an additional large garage on Ormeau Road.

**City of Birmingham Commercial College. Department of Transport.**—During the 1931-32 Session the following classes will be held in the Department:—Railway Economics, Railway Operating, Economics of Road Transport, Operation of Road Transport (Passenger and Goods), Railway Law and Practice, Rights and Duties of Transport Undertakings, Shipping Practice, Elements of Transport, Elements of Traffic Management, Elements of the Law of Inland Carriage, and Transport Research. These classes are open to all persons engaged in any branch of transport. Programmes and regulations containing full particulars regarding the classes, fees, prizes, etc., can be obtained at the College Offices, Suffolk Street, Birmingham.

# In Parliament.

**Motor Coach and Omnibus Fares.** Asked in how many cases the fares of public motor coach or motor omnibus services had been raised by order of the Traffic Commissioners; and whether he would give the circumstances of each such case? **Mr. Herbert Morrison** (Minister of Transport) said he had no information with regard to the matter. In so far as he dealt with these matters they came to him on appeal from a decision of the Traffic Commissioners, but he had no power to deal with them otherwise. **Mr. Smith:** Seeing that this is a matter of some importance, where people have to pay more for their journeys by coach, will the Right Hon. Gentleman look further into it? **Mr. Morrison:** So far as the matter comes before me, I will do so, but the Road Traffic Act deliberately provides that the Traffic Commissioners should have the right to review fares if, on the one hand, they are too low, or if, on the other hand, they are too high.

**Road Traffic Act. Mr. Perry** asked the Minister of Transport if his attention had been called to the increased charges now imposed upon omnibus owners under the operation of the Road Traffic Act; and if he would consider the adoption of some scheme under which the number of certificates, licences and registration plates to be obtained by each owner could be reduced? **Mr. Herbert Morrison** said that the certificates and licences required in respect of the operation of public service vehicles were laid down in the Road Traffic Act, 1930. In prescribing the fees to be paid for such certificates and licences he adopted the general principle that the scheme of control under Part IV. of the Act should, so far as practicable, be self-supporting, and the scale of fees was fixed with a view to attaining that end.

**Omnibus Licences and Owner-Drivers. Miss Picton-Turbervill** asked the Minister of Transport if owner-drivers of omnibuses who had not yet paid for their omnibuses and who could not secure a licence would receive compensation? **Mr. Herbert Morrison,** replying, said that no person is entitled either to a licence, or to the renewal of a licence, and no question of compensation can arise. The question whether the person owned the vehicle, or was in possession of it under a hire-purchase agreement, did not affect the position.

**Motor Omnibus Insurance. Colonel Howard-Bury** asked the Minister of Transport, seeing that a motor omnibus licensed to carry a certain number of passengers became an uninsured vehicle if it carried an extra passenger, that the Home Office had issued letters instructing that motor omnibuses may at certain rush hours carry standing passengers, and that this rendered the vehicle an uninsured one and liable to heavy penalties, whether he would take steps to rectify the position? **The Minister of Transport** (Mr. Herbert Morrison), replying, said that the carrying of a number of passengers on a public service vehicle in excess of the seating capacity of the vehicle was authorised in certain circumstances by the Public Service Vehicles (Equipment and Use) Provisional Regulations (No. 2), dated July 4th. He understood that the Secretary of State had drawn the attention of chief officers of police in the ordinary course to these regulations, but had not issued any instructions to the owners of public service vehicles in the matter. As he (Mr. Morrison) had said in reply to a question asked on May 20th, he understood that it was possible to obtain insurance policies which covered the carrying of additional passengers. It was incumbent on every owner of a motor vehicle to see that his policy of insurance, or the alternative security provided for in the Act, afforded the necessary cover in all circumstances in which the vehicle was used. He had no powers to make any exception in the case of the owner of a public service vehicle.

**Proposed Separate Road Tracks for Horse-Drawn Vehicles. Viscount Lymington** asked the Minister of Transport whether he had considered the representation sent to him from the Rural District Councils' Association that in all future improvements and widenings to classified roads the principle should be adopted, as in many other countries, of providing a metalled track suitable for motor traffic with 8 to 10 feet of gravelled roadway on one or both sides suitable for horses and horse-drawn vehicles; and whether he was prepared to give effect to this suggestion? **Mr. Herbert Morrison,** replying, said he could not trace any such representation from the Rural District Councils' Association. It was the aim of his Department to secure the provision of carriageways which would be suitable for use both by horse-drawn and mechanically-propelled vehicles, without incurring the largely increased expense of providing separate tracks.

**London Traffic. Mr. West** asked the Minister of Transport whether, in view of the congestion in London streets caused by private motor cars, carrying on the average less than two persons per vehicle, he would make Regulations imposing some restrictions on their use as far as the main routes were concerned? **Mr. Herbert Morrison** said that the only effective method of restricting the use of private cars in London would be to prohibit their use during prescribed hours in certain main streets or in a defined area. He was not satisfied that the time had arrived when such restrictions would be necessary or desirable. Standing vehicles caused more obstruction than moving vehicles, and he had recently given notice of his intention to make Regulations which would have the effect of prohibiting drivers of private cars from waiting in certain streets scheduled to the Regulations, except for so long as would enable persons to board or alight. Representations had been received with regard to the proposed Regulations and had been referred to the London Traffic Advisory Committee for consideration and report.

**Travel Association. Captain Crookshank** asked the Secretary to the Overseas Trade Department what progress he had made in his schemes for increasing the tourist traffic in Great Britain as an aid to relieving unemployment? **Mr. Gillett,** replying, said he presumed the reference was to the Travel Association of Great Britain and Ireland, which had the support of His Majesty's Government and of whose executive committee the Secretary of the Department of Overseas Trade was Chairman. This association had recently opened an office in Paris, supplementing its offices in New York and Buenos Aires, and in these centres and throughout the world the association had the support of His Majesty's representatives and the British chambers of commerce in the distribution of their numerous publications. At home the association was in consultation with Departments regarding Government regulations affecting visitors, and a number of concessions had already been made. He was hopeful that now that local authorities were empowered to support the association it would be possible to extend widely its very useful work.

**Motor Car Headlights.** Asked whether any anti-dazzle motor head-lamp had yet been discovered, not dependent upon dipping or swivelling, which satisfied the conditions recommended by the Departmental Committee in 1921? **Mr. Parkinson,** for the Minister of Transport, said that lamps had been constructed which complied with the recommendations referred to but had not proved adequate from the point of view of eliminating dazzle and at the same time providing a satisfactory driving light. The Minister had recently circulated for purposes of discussion draft regulations dealing with headlights.

**Classes of Traffic. Major Glyn** asked the Minister of Transport the principles which guided his Department in determining in the national interest for which classes of traffic transport by road, rail, or canal could best be utilised? **Mr. Herbert Morrison,** replying, said he had no power to determine for which classes of traffic transport by road, rail or canal could best be utilised. The Royal Commission on Transport referred to this matter in paragraph 500 of their final report, and also made a number of recommendations with a view to securing the employment of the available means of transport to the greatest public advantage. These recommendations were now under consideration.

**Oil Electric System of Traction. Lieut.-Commander Kenworthy** asked the Minister of Transport (1) whether in connection with the proposals for electrifying the main-line railways, his Department had considered the advantages of Diesel electric-traction working in conjunction with full electrification, and whether this system would be fully examined before a decision was arrived at; (2) whether he had reports on the working of the Diesel electric-traction system on a number of important railway systems abroad and in the British Dominions, including the Canadian railways, the Swiss Federal railways, and the Buenos Aires and Great Southern Railway system, the latter being British controlled and managed? **Mr. Parkinson,** who replied, said that the potentialities of the oil electric system of traction, particularly for use on lightly loaded branch lines, were discussed in the report of the Weir Committee which had information as to the working of the system on the Buenos Aires, Great Southern, Swiss Federal Railways, and elsewhere. Experience of the system was at present limited to certain special requirements, but he understood that the British railway companies were investigating it, and his Right Hon. Friend proposed to ask them for information as to the results of any experiments undertaken.

# Railways and Road Transport Competition in Central Europe.

**By Ludwig Weiss.**

**Managing Director of the International Federation of Forwarding Organisations.**

It may be well known to British Forwarding Agents, that Central-European railway companies have to fight a hard battle against the motor car, in which up to now the motor car has proved superior in almost every respect. Particularly certain classes of the local traffic are almost quite lost to the railway companies and have been acquired by the more and more increasing motor car traffic.

Railways have tried to stop the advance of the motor car by applying various measures, especially by a considerable reduction of the tariffs in the local traffic. They have established their own motor car services and are creating new institutions against the motor car competition, together with the forwarding agents who suffer from the motor car's attack as much as the railways themselves and who of course are the natural allies of railways in this fight.

One of these institutions, on which I shall deal fully, is the so called "door-to-door-tariff." This tariff contains uniform freight rates for the total forwarding from employer's to consignee's house, so that the freight contract is not current only from the railway station, but from the customer's office or house.

That is done in order to meet the convenience of the public and to offer them one of those advantages which they are enjoying when forwarding by motor car. Forwarding in this way will be executed with the greatest speed, generally by passenger trains running at night, so that goods can be delivered to consignee next day. Furthermore the forwarders will benefit by the liability of the railway regulations as they will not be liable for the transport to and from the station according to their own regulations but to those of railways.

At first freight rates of the house-to-house-tariff will be issued between Vienna and important places of Austria only. The extension of the tariff to include communication between other Austrian places will be taken in hand, when sufficient experience concerning the growth of the traffic with Vienna are to hand.

The fixing of the freight rate of the house-to-house-tariff will be made according to whether there is competition by motor car in a certain class or not. Should there exist any, the freight shares of the Railway will be correspondingly reduced. There will not be any difference between goods concerning their tariff calculation. The freight rates will be graduated. Goods can be forwarded by the door-to-door-traffic only in consignments from 20 to 2,000 kilos. The weight of one single piece may not exceed 200 kilos. Objects over 7 m. of length, also too heavy objects; highly inflammable goods or those where any danger of an explosion exists are excluded.

Then the forwarding methods for this traffic seem to be considerably simplified. Instead of the way-bill there will be used a much simpler forwarding bill which can be given, if wished by the customer, by the employee collecting the goods.

Concerning the organisation of transport to and from the station quite another way has been adopted by the Austrian Railway Company than in Germany; the German Railway Direction intended to sign a contract with one single firm, in which the latter undertakes the task of entrusting forwarding agents in each place with the transport to and from station. This intention has produced such a storm of indignation that the government has refused its consent. According to the arrangements decided upon in Austria, every reliable forwarding agent has the possibility of signing a contract direct with the Austrian Railway Company. In addition to forwarding agents the signing of the contract is possible in Vienna to the vehicle owners syndicate and to the carriage service by railways, and in the provinces to the forwarding agents, to the motor car companies and to the carriage service by railways. The names and phone numbers of contractors will be indicated in the tariff in order to simplify quick communication between customer and agent.

Of course all contractors are bound to observe every freight rate indicated in the tariff; there is, however, no inducement to transgress the duties fixed by the tariff or to charge extras.

Every customer has the right to select the firms indicated by the tariff.

Poidous are excluded from this traffic in order to avoid any loss of time. For the same reason cash advances are inadmissible, whereas reimbursements on receipt are permitted.

If one compares the motor car traffic and the newly created door-to-door-traffic, one finds that the latter offers more than the advantages of transport by motor car.

The contract to be signed by the forwarders participating in the house-to-house-traffic has been formulated in agreement between the representatives of the Commercial Direction of the Austrian Railway Company and those of the Central Federation of Forwarding Agents (Zentralverband der Spediteure). A bond must be given which will serve the Railway Company as a security for the money belonging to the Company to be collected by the carriage service at destination.

On May 15th, the new house-to-house-traffic came into operation. According to the contract forwarders have engaged themselves to forward goods announced in their office as being collected as fast as possible to the station. Goods announced in Vienna in the morning will be at the station at latest in the evening of the same day; goods announced in the afternoon must be transferred at the latest next morning. Goods arrived shall be advised to forwarders by the railway so that if possible the information shall be given till 9 o'clock a.m. Traffic in the house-to-house-contract can be forwarded only by forwarders who have signed the contract.

One cannot predict yet whether the new institution of the Austrian Railway Company will have the success desired. It is, however, delightful not only, that now the possibility exists of offering to customers in a great number of classes such a convenient, fast and secure kind of dispatch, that in any case the competition with the great number of motor car companies is made possible and the forwarders can win back customers for the Railway and for themselves, but also that the Railway Company has entered into arrangements with the Forwarding Agents' organisation. This development justifies the trust that the way taken by the Railway Company will be kept in future and that Railways and Forwarding Agents who are dependent on each other will collaborate also in every other respect in their own interest and in that of the total traffic.

## Port of London Authority.

**An Alteration. Cruises to London's Docks.**—The Port of London Authority announce that during August the weekly steamer cruises to the docks will take place on Friday afternoons instead of Wednesday afternoons. The cruises start from Tower Pier at 2.30 p.m. and return there at about 6.0 p.m.

**World's Record Coal Discharge.**—A world's record for the discharge of coal has recently been set up in the Port of London by the Collier "Corbridge" (Wm. Cory & Sons, Ltd.). She came alongside the Albert Dock Hoists at 12.45 p.m. and by 2.15 p.m. had completely discharged her cargo of 2,287 tons of coal.

**Bill to be Promoted in Parliament.**—The Port of London Authority announce that they have resolved to promote a Bill in the next session of Parliament to acquire the undertaking of the Proprietors of Hay's Wharf, Ltd., whose principal properties lie between London and Tower Bridges on the south side of the River.

**New Season's Tea.**—A record discharge in King George V. Dock last month of new season's tea from China ex the P. & O. liner "Burdwan" revives memories of the arrival at Blackwall of the famous tea clipper sailing ships of the middle nineteenth century. Out of 3,000 packages discharged after the s.s. "Burdwan" broke bulk at 8 a.m., delivery of nearly 2,000 packages was effected to the Port of London Authority's main tea depot at Commercial Road during the day, and the tea was available for merchants' inspection and sale within a few hours.

**Manchester Shipping and Forwarding Agents' Conference.**—Owing to the holidays no meeting of the Manchester Shipping and Forwarding Agents' Conference will be held this month. The next meeting will be held in September.

**"Travelling" for Quay Business.**—At a recent meeting of Newcastle Corporation's Trade and Commerce Committee, Councillor R. S. Dalgliesh, a prominent shipowner, suggested the appointment of an official to travel in quest of new business for Newcastle's quays.

# British Association of Shipping and Forwarding Agents.

The quarterly meeting of the Council of the British Association of Shipping and Forwarding Agents (Inc.) was held on July 16th last at the offices of the London Chamber of Commerce.

Mr. A. W. Heard (Jones, Heard & Co., Ltd., Newport, Mon), the Chairman of the Association, presided, and was supported by Mr. M. E. Duffett (J. D. Hewett & Co., Ltd., London) a Vice-Chairman of the Association. There were also present:—Mr. F. H. S. Rouse (Hon. Secretary and Treasurer) (American Express Co., Inc., London); Mr. John B. Bower (F. Bower & Co., Liverpool); Mr. W. O'Brien (G. W. Sheldon & Co., Ltd., London); Mr. E. W. Turvey (Nunzi & Co., Ltd., London); Mr. J. B. Taylor (Immediate Transportation Co., Ltd., London); Mr. T. Heyman (Morison, Pollexfen & Blair, Ltd., Birmingham), and Mr. G. W. Robertson (Robertson, Buckley & Co., Ltd., Liverpool). The Acting Secretary was in attendance.

Apologies for inability to be present were received from Mr. N. N. Bird (Herbert Watson & Co., Ltd., Manchester), a Vice-Chairman of the Association; Mr. F. J. Gerson (Rosenberg, Loewe & Co., Succrs., Ltd., London); Mr. A. Faulkner (Crowe & Co. (London), Ltd., Manchester); Mr. A. MacCulloch (MacCulloch, McLellan & Pollok, Glasgow), and Mr. C. E. Sanderson (Sanderson's Express, Ltd., Nottingham).

Following the adoption of the minutes of the last meeting a lengthy agenda was dealt with, the chief items of which may be summarised as follows:—

**International Federation of Forwarding Organisations.**

A full report, prepared by Mr. Frank J. Gerson, who represented the British Association of Shipping and Forwarding Agents at the meeting of the International Federation, held at Amsterdam on May 28th, was read and gave rise to an interesting discussion.

The members expressed their appreciation of the ample and lucid report made by Mr. Gerson, and also of his able representation of the Association at Amsterdam.

(A full report of the proceedings of this meeting was published in an earlier issue of this Journal).

**Certificates of Origin for Poland.**

The progress so far made in this matter was reported, but it was noted that the negotiations had not yet reached finality. Further action was decided upon, and the Secretary was instructed accordingly.

**Finance.**

An exhibit of the Association's Accounts to date, submitted by the Hon. Treasurer, was unanimously received and adopted.

**Correspondence.**

An interesting letter was read from the New York Freight Forwarders' and Brokers' Association, dated April 22nd last, replying to a communication sent by the British Association of Shipping and Forwarding Agents in regard to a suggestion recently observed in a New York paper that freight forwarders in the U.S.A. should come under State control. It was decided to circulate a copy of this letter, together with a copy of the interim reply sent to New York on May 26th, to all members of the Council.

Attention was drawn by a member to a circular letter issued by a Continental (non-member) firm of forwarding agents in Manchester, which was apparently being mailed en masse to principals in Manchester offering services for free house deliveries at exceptional rates, with special reference to the fact that being "unattached forwarding agents" they were not bound to any special rates and could therefore quote lower than the competition in Manchester. It was agreed that this matter should, in the first instance, receive the attention of the local association in Manchester, and that the position should be reported again at the next Council Meeting.

**Liens.**

In order to discuss in closer detail the possibilties of putting into effect the suggestions already made by the London Shipping and Forwarding Agents' Conference, it was unanimously decided that the Hull, Liverpool and Manchester Associations should be asked to consider the matter, and be invited to elect delegates from their districts to attend a subsequent joint conference with the British Association of Shipping and Forwarding Agents and the London Conference.

The Chairman expressed his thanks to the members for their attendance, and a hearty vote of thanks to the Chairman concluded the business of the meeting.

# The Port of Glasgow.

In common with all ports, trade on the Clyde has experienced a gradual falling off during the first six months of 1931. This has been due principally to the abnormal trade depression, particularly on the export side.

Whilst it would not be correct to say that the drop in the older established trades has been totally offset by the development of new trade. It is encouraging to learn that the activities of the Trade Development Department of the Clyde Navigation Trust have borne very fruitful results largely due to the indefatigable efforts of Mr. Harold M. Ford, Commercial Manager in charge of the department. Figures for the past six months are not yet to hand, but it is understood that there has been a very appreciable increase in the homeward trade from both Australia and New Zealand, and at the same time there is a feeling of confidence as to the possibilities of future development of trade with the Scottish markets and South Africa.

The liaison work of Mr. Ford and his department in bringing together importers and transport interests has not only been productive of increased shipping at the port but has shown that the development of industry in the immediate vicinity of the docks and quays is an attractive proposition. The saving in transport costs such as carting and rail expenses is an item of greater importance than rates and taxes to most industries, and it is expected that now the department has proved itself such a successful liaison unit as between overseas and home traders, it will not confine its attentions to the development of shipping trade solely. The setting up of new industries in the Clyde area is one which is commanding the attention of all industrialists in Scotland. The land owned by the Clyde Navigation Trust is admirably placed, both as regards railhead and dock facilities, for the building of factories, depots, works, etc., and there is a clear indication that the Port will be developed on very ambitious lines in the future.

Within the past half year there have been several visits from highly placed officials from the Dominions, each one of whom has met and conferred with the home traders and the results of these visits have been most successful. If the same success is achieved with those concerns who are on the lookout for suitable sites on which to erect new works and have an eye to Glasgow, then the future prosperity of the Port is assured.

The outstanding feature of the past month was, of course, the opening of the new Shieldhall Dock by Their Majesties The King and Queen. The site of the dock named "King George V. Dock" is between Shieldhall and Renfrew, the whole scheme extending to about 700 acres with a river frontage of about two miles. The new dock is the first of six such docks included in the Shieldhall extension scheme to be undertaken by the Clyde Navigation Trustees at a cost estimated at about ten million pounds. When the scheme is fully completed it will add about six miles of deep water berthage to the Glasgow harbour. The length of the new dock is about half a mile and provides berthage accommodation for nine large liners. The quay walls are designed to provide a depth of 32 feet below low water in the berths and 44 feet at high water. The quays are equipped with single storey goods sheds and there is ample service in the way of sidings connecting up with the main railhead.

The equipment of the dock includes the latest type of loading and unloading machinery for all types of trades on which ships coming to and from Glasgow are engaged.

The cost of the construction of the quay walls, with the dredging of the basin, and the provision of transport facilities, etc., is estimated at about £1,500,000.

**£80,000 Coal Staith.**—The Tyne Improvement Commission has approved in principle the scheme for a new coal staith in the Tyne for the Hartley Main Collieries, Ltd., which is estimated to cost £80,000 and is a joint enterprise between that concern and the Commission.

**Luxury Liner Visits Tyne.**—The 20,000 tons Cunard liner, "Caronia," visited the Tyne on July 30th to pick up passengers for a fortnight's cruise to the Norwegian fjords. Her stay was a brief one. The "Caronia" has accommodation for 350 passengers and is 675 ft. long.

# A Survey of World Tonnage.

THE ocean-going merchant marine fleets of the world were greater by 220 ships, of 2,000 gross tons and over, aggregating 1,732,452 gross tons, at the close of last year than at the close of 1929, according to a report recently completed by the United States Shipping Board. At the beginning of 1931, Great Britain maintained a commanding lead in volume of tonnage with more than 18,000,000 gross tons, while the United States remained in the second place with approximately half as much.

Owing to the scrapping programme of the United States Government, under which the Shipping Board is seeking to do away with vessels unlikely to be useful for active operation, the net total tonnage of the American fleets shrunk by 71 vessels of about 250,000 tons. The total volume of private American tonnage, however, was increased by 27 vessels and 240,000 tons during the year, these additions being accounted for largely by Government sales and vessels completed for mail lines operating in foreign trade.

Last year a total of 359 ocean-going vessels of 2,000 gross tons and over were placed in service by the principal maritime countries of the world. Of this number 139 were owned in Great Britain, 15 in the United States, 20 in Japan, 12 in France, 4 in Italy, 21 in The Netherlands, 71 in Norway, 13 in Germany, 12 in Sweden, 14 in Denmark, 5 in Spain, and 33 in other foreign countries. The 15 ships of the United States added 143,014 gross tons to her fleet, the number and gross tonnage being practically double the amounts added during the previous year, and exceeding in number and tonnage the new vessels constructed in any year since 1921.

Of the total world merchant fleet of 9,453 vessels aggregating 51,175,713 gross tons recorded as of January 1st, 1931, 8,338 were steamships with a total tonnage of 43,894,641 gross tons, the remaining 1,115 being motorships with a tonnage of 7,281,072 gross tons. More than 72.3 per cent. of the number and 62.2 per cent. of the tonnage of the ocean-going merchant fleets were cargo vessels, numbering 6,837 ships of 31,852,195 gross tons.

Combination passenger and freight vessels made up 14.8 per cent. of the number and 22.8 per cent. of the tonnage with 1,404 ships of 11,673,223 gross tons; and tankers accounted for 12.8 per cent. of the number and 14.8 per cent. of the tonnage, with 1,212 ships of 7,650,295 gross tons.

Net increases in merchant fleets by different countries were shown as follows: Great Britain, 16 vessels, 163,594 tons; Japan, 7 vessels, 128,889 tons; France, 15 vessels, 104,627 tons; Italy, 5 vessels, 63,335 tons; The Netherlands, 16 vessels, 157,204 tons; Norway 93 vessels, 633,344 tons; Germany, 13 vessels, 124,940 tons; Sweden, 9 vessels, 68,101 tons; Denmark, 14 vessels, 56,988 tons. Spain showed a decrease of two vessels but an increase of 12,640 tons; other countries increased by 105 vessels and 468,708 tons.

Great Britain's merchant marine exceeded all other countries on January 1st, 1931, both in number and tonnage, with 3,050 ocean-going vessels having a tonnage of 18,220,830 gross tons. The United States stood second with 1,624 vessels of 9,276,190 gross tons, while Japan was third in number with 631 vessels, and fourth in tonnage with 3,151,226 gross tons.

Norway was fourth in number with 575 ships and seventh in tonnage with 2,832,377 gross tons, Germany was fifth in number with 571 ships although third in tonnage with 3,286,542 gross tons, followed by France, Italy and The Netherlands in the order named with 542, 536 and 472 ships, respectively, and 2,838,023, 2,877,083 and 2,590,685 gross tons, respectively, while Spain, Sweden and Denmark complete the list of principal maritime countries with 205, 187 and 152 vessels, respectively, and tonnages of 801,504, 828,220 and 643,323 gross tons, respectively.

Only 14 of the 9,453 ships have a gross tonnage of 30,000 tons or more each, and these were owned by the five principal participants in the trans-Atlantic trade, the United States having 1, Great Britain 6, France 2, Italy 2, and Germany 3.

More than two-thirds of the total number, or 6,576 vessels, make a speed of less than 12 knots per hour, and only 42 are capable of 20 knots or more. Of the latter class 7 were owned in the United States, 17 in Great Britain, 2 in Japan, 5 in France, 6 in Italy, 4 in Germany, and 1 in The Netherlands.

About 20 per cent. of the total, or 1,815 vessels employed in ocean trade, were built prior to 1910, the United States owning but 87, Great Britain 354, Japan 147, France 111, Italy 238, Germany 116, The Netherlands 56, Norway 81.

Of the 8,338 steamships reported, 7,243 were propelled by reciprocating engines, 1,074 by turbines, and 21 by turbo-electrics. The motor vessels included 1,104 with Diesel motors and 11 motor-electrics. In addition to the 1,115 motor vessels, using oil for propulsion, there were 3,001 steamers using oil for fuel and 5,337 using coal.

The extent to which motor vessels are being utilized by the various foreign countries in their ocean trade is brought out in this report. Of the total of 1,115 ships of this type in service on January 1st, 1931, 327 were owned in Great Britain, 79 in the United States, 49 in Japan, 15 in France, 57 in Italy, 59 in The Netherlands, 238 in Norway, 75 in Germany, 77 in Sweden, 60 in Denmark, 16 in Spain, and 63 in other countries. Only three motor vessels of more than 25,000 gross tons were included, one of 32,650 tons being owned in Italy, one of 26,943 tons in Great Britain, one of 25,082 tons in France. The United States had no motor vessel of more than 15,000 gross tons.

A total of 604 motor vessels or about 54 per cent. were rated at speeds of less than 12 knots, and only three were reported as developing as much as 19 knots, all three being owned in Italy. Only 9, or less than one per cent. of the motor vessels in service were built prior to 1910, and 189 entered service during the year 1930. The latter group were owned 46 in Great Britain, 7 in the United States, 19 in Japan, 3 in Italy, 13 in The Netherlands, 65 in Norway, 12 in Sweden, 9 in Denmark, 5 in Spain, and 10 in other countries.

# News from the Ports.

**Port of Bristol. Trade with France.**—Following on the French Week held in Bristol in May, 1930, the Lord Mayor of Bristol, in company with the Chairman of the Port Authority and other leading representatives of the City of Bristol, recently paid a visit to Rouen and St. Malo, when opportunities were taken of discussing trade relationships with the shipping interests, and it is firmly believed that a great deal of good has been done. The liner connections between Bristol and France are the Worms Line with Havre and Paris, operated by Messrs. James & Hodder; the Hutchison Line with Bordeaux and Nantes, represented in Bristol by Messrs. Turner, Edwards & Co.; and the Ald Shipping Co. with the Channel Islands and St. Malo. The Head Office of the Port of Bristol Authority is at Queen Square, Bristol. The Acting General Manager is Mr. R. H. Jones, O.B.E., and Assistant General Manager Mr. Frank Brown.

**New Customs Regulations in Denmark.**—We call the attention of our readers to a letter appearing in our Correspondence columns from Messrs. E. A. Bendix & Co., of Copenhagen, dealing with the new Customs regulations which come into force in Denmark on September 1st.

**The 17,000 Tons Floating Dock,** built by Swan, Hunter, and Wigham Richardson, Ltd., for the Wellington Harbour Board, started from the Tyne on July 15th on its great adventure of a 13,500 miles voyage to New Zealand. It is being towed by two powerful tugs belonging to L. Smit & Co., of Rotterdam, who specialise in long-distance tows. The journey, which is via the Suez Canal and the Torres Straits, will be the longest on record, occupying several months. The total length of the dock is 584 ft. and it is 117½ ft. wide. Swan, Hunters have built more floating docks than any other firm in the world and have delivered them to all quarters of the globe.

**£500,000 Shipping Development.**—An important shipping development by the Tyne-Tees Steam Shipping Co., Ltd., was foreshadowed at Middlesbrough when a presentation luncheon was given to Mr. T. McDonald to mark his retirement from the position of manager of the Middlesbrough branch of that firm after 60 years' service. He was made the recipient of a gold watch, a mahogany bureau, and an illuminated testimonial from the Tees staff. Mr. F. Whitlock, Managing Director, of London, presiding in the absence of Sir Arthur M. Sutherland, Bt., said that the North East would benefit considerably as the result of an expenditure of half-a-million pounds on development work in London. The Clan Line had, he added, arranged to send its steamers to Middlesbrough regularly.

**Shipping, Engineering and Machinery Exhibition.**—The Shipping, Engineering and Machinery Exhibition will be held at Olympia from September 10th to 26th next.

Digitized by Google

**Trade Ship for South America.**—On July 29th last, in the shipyards of Messrs. Cammell, Laird & Co., Ltd., at Birkenhead, the Earl of Derby christened the exhibition ship, "British Exhibitor," which leaves for South America on November 1st next. The vessel, which has been reconditioned for exhibition purposes, will be on view to the public in London from the time of her arrival during the latter part of August, until she sails on November 1st. Sir Charles Allom, K.B.E., head of the well-known firm of architectural contractors, has joined the Advisory Council of the company responsible for "British Exhibitor." Among the other members of the Council are Viscount Chaplin, Sir Max Muspratt and Sir Ernest Thompson.

**Belfast Commissioners Entertain Cork Harbour Commissioners.** — The visit of the Cork Harbour Commissioners to Belfast where they were entertained by the Belfast Commissioners, was a very successful and happy event. The Belfast Commissioners were glad to return the hospitality shown them on their visit to Cork in the previous year. These friendly visits were the outcome of the visit of some of the Cork Commissioners to Belfast for the trial trip of a cross-channel steamer on the Cork service, completed by Harland and Wolff in 1929.

**New Motor Vessel for Elder, Dempster & Co.**—The twin-screw mail and passenger motor vessel, "Achimota," built for the West African service of Elder, Dempster & Co., Ltd., by Harland & Wolff, Belfast, will reach Liverpool this month after trials on the Clyde. Measuring 460 ft. by 63 ft., and with a tonnage of 10,000, the vessel will accommodate 236 first and 64 second-class passengers.

**Watching Charges; Liverpool Agents' View.** — The question of watching charges of goods lying on the Liverpool dock quays is one which has a particular interest for Liverpool shipping and forwarding agents who, whilst thoroughly sympathetic with every effort to bring down port and traffic charges, yet remain to be convinced that their clients want abolition of watching. The Chamber of Commerce has had this matter under review and the Chairman of the Transport Committee, Mr. R. V. Edwards, states that it seems to him impossible to do away with watching on the quays; it would be offering a premium for pilfering. Therefore, he thought, watching would have to continue. In an interview with the writer, Mr. G. C. Horton, of Messrs. E. H. Mundy & Co., Chairman of the Liverpool Shipping and Forwarding Agents' Association, said there were many aspects to this question of watching charges, and so far as agents and their clients were concerned he was not aware that they had much of which to complain. They could be avoided altogether if importers did not leave goods on the quays, but if that meant incurring warehousing, no advantage whatever would result. At Manchester, of course, where the conditions are quite different, if importers want their goods to be watched they had to say so and meet the cost. Liverpool master porters say they lose money on watching goods, but one peculiar thing which struck him was that in cases where losses did arise, unless it were proved these occurred whilst goods were in the custody of the master porter, the claim had to be made against the shipowner. That was owing to the difficulty of assessing responsibility.

**Liverpool Shipping and Forwarding Agents' Association.**—There will be no meeting of the Liverpool Shipping and Forwarding Agents' this month on account of the holidays, which reminds us of the fact that Mr. J. A. Eckes, of Messrs. Langstaff, Erembert & Co., who is also Chairman of the Liverpool Chamber of Commerce, strongly expressed himself against the creation of another bank holiday in October, a suggestion which has originated with the seaside towns. Liverpool shipping and forwarding agents continue to be troubled and disturbed by the rates which are quoted from east coast ports to the continent. As these are so much lower than those from the west coast, Liverpool interests have suffered rather severely. It is learned that the question of high charges made by coastwise steamship companies for passing customs entries on goods arriving in Liverpool from the Irish Free State, has been under discussion in local commercial circles. The matter has been brought to the notice of the Coastwise Section of the Liverpool Steamship Owners' Association.

**The Fall in Shipping Values** was alluded to by Sir Arthur M. Sutherland, Bt., presiding at the annual meeting of the Sutherland Steamship Co., Ltd., in Newcastle. The trading profit for the year was, he said, £2,675 compared with £6,383 in the previous year and £30,646 in 1929. Shipping property which cost them £533,724 was now standing at £132,725, or one-fourth of its cost.

**Southampton Docks.**—A freight of more than usual interest was dealt with at the docks recently from the Hudson's Bay Company's steamer, "Blue Peter." This vessel brought a cargo of approximately 800 tons Newfoundland frozen salmon, and the packages, kept in refrigerated accommodation on board, were landed direct into cold store before being railed to London, etc., in special container vans. This was the first consignment of such a nature to be handled at the docks and it is confidently expected that with the availability of facilities necessary to the successful working of such traffic further cargoes may follow. Progress in connection with the construction of the new mammoth graving dock is being satisfactorily maintained in accordance with the time schedule of the Docks Engineer which allows for the completion of the dock by the latter part of 1933 when the new 73,000 ton Cunarder will be accommodated. The construction of the banks and the driving of steel sheet piling around the site of the dock were completed by July 1st and the contractors are now proceeding with the pumping out of the enclosed area and the construction of the dock in the dry.

**Permanent International Association of Navigation Congresses.**—The Minister of Transport announces that by invitation of the Italian Government the Permanent International Association of Navigation Congresses will hold its Fifteenth Congress at the Doges' Palace in Venice at the beginning of September next under the patronage of His Majesty King Victor Emanuel III., the Hon. Presidency of His Royal Highness the Duke of Abruzzi, and the presidency of Signor Giovanni, Giuriati, President of the Chamber of Deputies. His Majesty's Government in the United Kingdom propose to accept the Italian Government's invitation to be officially represented at the Congress. The Italian Government have asked His Majesty's Government to cause the invitation to be brought to the knowledge of, and extended to, private bodies and individuals interested in matters relating to inland navigation, harbours, docks, lighthouses, shipbuilding and kindred subjects. At the Congress questions will be discussed and papers will be submitted on the latest results obtained in the construction of ports and in internal navigation works and on economic and commercial problems and questions connected with the working of ports and waterways. Copies of the provisional programme and information as to membership of the Association and participation in the Congress can be obtained on application to the General Secretary, Permanent International Association of Navigation Congresses, 38, Rue de Louvain, Brussels.

**Port of Bristol Authority. Record Net Revenue.**—The annual report of Mr. R. H. Jones, Acting General Manager to the Chairman and members of the Bristol Docks Committee, states that last year's net revenue of £277,058 was the highest amount of net revenue earned by the undertaking. "Notwithstanding the general depression which prevailed throughout the year and became very severe during the latter part," the report states, "the register tonnage of vessels arriving from foreign ports and the quantity of foreign imports each constitutes a record for the port. The increases are largely attributable to the increased imports of grain and petroleum products. On the other hand, the position with regard to the general merchandise traffic, which is accommodated at the city docks, and to some of the liner services trading to Avonmouth has been disappointing. Reference was made in the report for the previous year to the decline in the Canadian services, largely owing to the shortage of grain shipments from Canada, and unfortunately this state of affairs continued throughout the past year."

**England's Waterways "On Eve of Great Revival."**—"We are of opinion that the long neglected, but invaluable waterways of the country are on the eve of a great revival." This statement forms part of a report issued recently by the Trent Navigation Committee of the Nottingham Corporation. "Economic demand," says the Committee, "must necessarily find its fulfilment in the cheapest form of transport, which is undoubtedly by water. We have noted with satisfaction," the report adds, "the great scheme propounded by the Grand Union Canal Company, involving an expenditure of over £1,000,000."

**The Old and the New.**—The Isle of Man is a popular centre of attraction for holiday makers. Douglas, the principal town can boast a quaint mixture of transport. There are still in use, on the front, horse-drawn trams, but, when it comes to touring of the Island, a little more speed and comfort is indicated; consequently, one of the very latest Commer Invaders with a 20-seater coach body has recently been put into service by an enterprising concern, and is proving exceedingly popular. The Invader, during the present season, has gained a firm foothold in several new markets; so, too, has its "stable companion" the Commer Avenger, which is a larger chassis and mounts a 32-seater body.

# London, Midland & Scottish Railway.

## Commercial Re-organisation.

The London, Midland and Scottish Railway Company have carried out a re-arrangement of the Passenger and Goods Commercial Departments so that the travelling public and traders shall have increased facilities for obtaining information, and the settlement of many matters which previously it was necessary to refer to headquarters. This new organisation will come into being on October 1st next.

The re-arrangement involves alterations of the areas allotted to District Officers and the appointment of additional officers.

The Passenger Commercial work in the Chief General Superintendent's Department will continue under the control of Mr. Ashton Davies, who will be designated Passenger Manager, with a Divisional Passenger Manager at Glasgow. No change has been made with regard to the Chief Goods Manager's or Mineral Manager's functions.

In the case of District Management, the following are the points at which the officials are located, viz.:—

| District Passenger Managers. | District Goods Managers. | District Passenger & Goods Managers. |
|---|---|---|
| Birmingham | Birmingham | Abergavenny |
| Liverpool | Bolton | Barrow |
| London | Derby | Bristol |
| Manchester | Leeds | Chester |
| | Liverpool | Leicester |
| | London | Northampton |
| | Manchester | Stoke-on-Trent |
| | Sheffield | Swansea |
| | Warrington | Aberdeen |
| | Wolverhampton | Carlisle |
| | | Edinburgh |
| | | Inverness |
| | | Perth |

The following Commercial Officers deal with railway and steamship traffic, both passenger and goods:—

Irish Traffic Manager, Dublin.

Superintendent (Heysham Steamers), Belfast. (Traffic to and from Ireland.)

The Steamship Manager at Goole deals with steamship freight matters concerning traffic to and from the Continent via Goole.

The new arrangements will provide much more convenient access between the Railway Officers and the public by which information will be more readily obtained regarding all classes of transportation.

# Southern Railway Railhead Distribution Services.

"You need not send to the Station—the Station will send to you" is the new slogan of the Southern Railway to popularise the new Railhead Distribution Scheme and Freight Services Speed-up, which have been introduced by that Company. The Company have re-organised many of their arrangements for the conveyance of merchandise and goods traffic and introduced the very latest methods of transportation. These include, besides railhead distribution, "Container" services on a large scale, road motor horse boxes, and improved arrangements at the S.R. Thames wharves.

"The railhead distribution arrangement includes "a new rail and road service under which the Southern Railway will collect and deliver all descriptions of goods from and to your premises, or on to site if you are building, together with storage where required. Under the scheme a trader can send his goods in full truck loads by express freight trains at low rates, to be stored for a short or long period according to the circumstances, and then delivered to the local client by Southern Railway lorry as and when the sender instructs. In many cases a comprehensive charge is made."

The railhead distribution scheme gives a collection and delivery service from and to all places situated within a 10 mile radius of selected stations for full loads, such as grain in sacks, cake and meal for cattle and poultry feeding, fertilisers, etc., but it is applicable to almost any kind of article or commodity, though a small additional charge is made in the case of coal, coke, bricks, and materials requiring extra handling.

The new freight speed-up provides a service of quickly timed freight trains.

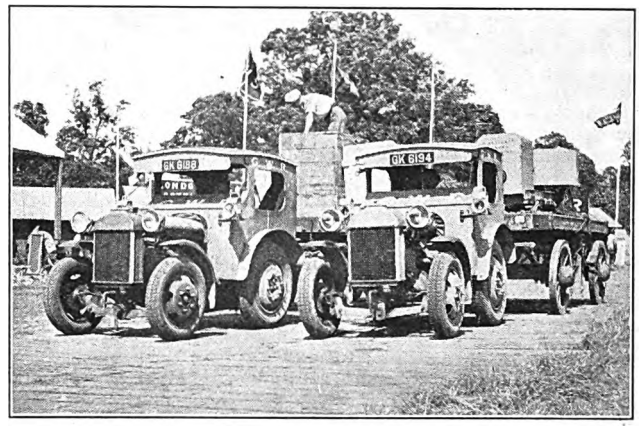
The Company has constructed many hundreds of special "Containers" which admit of all kinds of traffic being conveyed from door to door. Five types of "Containers" have been designed with carrying capacity varying from 2½ to 4 tons.

# Railway Notes and News.

**The Railway Barometer.**—The railway traffic receipts of the four group railway companies have now been published for the first 29 weeks of 1931 compared with the same period in 1930 and 1929, and are as under:—

| | 1931 £ | 1930 £ | 1929 £ |
|---|---|---|---|
| Passengers, etc. ... | 36,816,000 | 39,672,000 | 40,609,000 |
| Merchandise, etc. | 30,722,000 | 35,412,000 | 37,050,000 |
| Coal, coke, etc. ... | 18,048,000 | 19,236,000 | 20,313,000 |
| Total ... | 85,586,000 | 94,320;000 | 97,972,000 |

**Rail-Road Co-ordination. L.N.E.R. Development.**—An interesting feature is included in the L.N.E.R. all line time-table book for the Summer Services which commenced on July 20th. This consists of a small symbol (depicting a single decker bus) which has been inserted against the 380 different stations all over the L.N.E.R. system at which the railway services now make contact with one or more of the L.N.E.R. Associated omnibus companies' services, a complete list of which, together with the areas and districts served by road, are given in the back of the time-table. In placing the new symbol



**Fordson Tractors in the Service of the G.W.R.**—The Great Western Railway Co. use Fordson tractors for local haulage and the Company also had a large number in use at Warwick during the recent Royal Agricultural Show. Our picture shows two of them unloading in the showground.

in the time-table a contact station has been defined as a station which constitutes a terminus or point of call for an omnibus service, and where the joint rail-road service which is provided affords reasonable facilities for passengers to make through journeys. Arrangements have been made for the full road service time-tables and fares lists of the whole of the omnibus companies associated with the L.N.E.R. to be available at one hundred principal stations and town enquiry offices at the larger cities, towns and resorts where information as to co-ordinated services and necessary changes of vehicle can be obtained beforehand. The first rail-bus station in this country which has just been completed is at Norwich Thorpe, where the whole of the United Automobile Company's buses run to and from the L.N.E.R. station forecourt, a portion of which has been covered with a roof and fitted with a bus ticket office; bus passengers also have access to the station refreshment rooms, cloakrooms and waiting rooms just as train passengers.

**Linking up Farms and Villages.**—Hundreds of farms and villages, some as far distant as 10 miles from a rail depot, come within the scheme recently embarked upon by the L.M.S. Railway of providing 439 regular motor lorry services from 113 stations to out-of-the-way places. A fleet of powerfully built motor lorries, fitted with pneumatic tyres to avoid damage to conduits on farm buildings, is engaged upon this system of linking up farms and villages with the nearest L.M.S. Goods Depot.

**New Halt on the West Highland Line.**—The L.N.E.R. are to open a new halt at Fersit near Tulloch for the convenience of passengers.

# Speciality Brakes.

## Their Details explained and Maintenance described.

(*Continued from page 387.*)

## IV.—Lockheed Hydraulic Brake.

The Lockheed hydraulic brake is manufactured in Great Britain by the Lockheed Hydraulic Brake Co., Ltd., Leamington Spa, and Brock House, Langham Street, London, W.

### Layout of the Lockheed Brake.

The items comprising a Lockheed hydraulic brake set are: A master hydraulic cylinder within a supply reservoir of special fluid;

A set of small double-ended cylinders, one in each brake drum, and the shoes and yokes for coupling the free ends of the shoes to the piston rods of the brake cylinders; and

The necessary connections and special flexible pipes between the master cylinder and the brake cylinders.

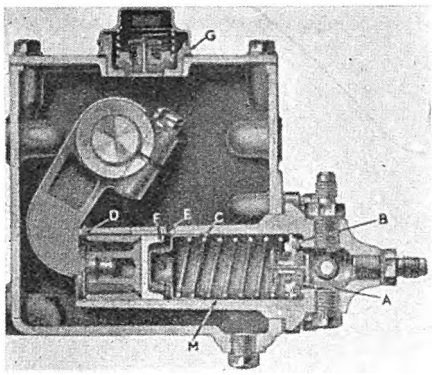

FIG. 1. INTERIOR OF MASTER CYLINDER AND FLUID RESERVOIR.

The master cylinder (M, Fig. 1) is within the supply tank upon which is mounted the pedal. The master cylinder is submerged in the fluid, thereby protecting the system at this point from any danger of taking in air, dirt or water.

Directly forward of the master piston cup (when in the "off" position) is a port hole, E, through the wall of the cylinder, and any rise in temperature causing the fluid in the braking system to expand, allows it to pass through the port to the supply tank. Any drop in temperature will cause the fluid to flow back through the port E.

The brake-pedal must be set so that the master piston cup is back or clear of the port when brakes are in the "off" position.

The return of the piston in the master cylinder to its "off" position is by a return spring, C, within the master cylinder. In the head of the master cylinder, held in place by a return spring C, is a combination inlet and outlet check valve.

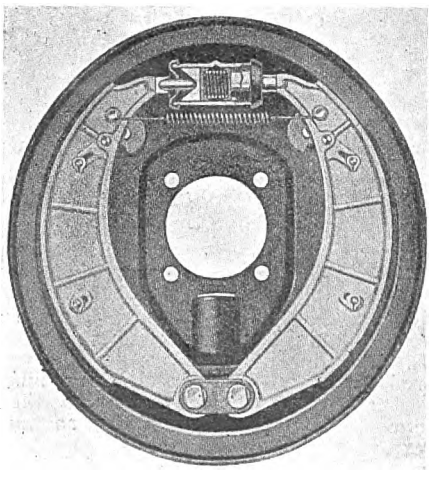

FIG. 2. BRAKE-DRUM INTERIOR SHOWING DOUBLE-PISTON HYDRO-CYLINDER, ETC.

When the brake pedal is applied, the master cylinder piston is pushed forward. This opens the outlet check valve A, and the fluid is forced through it into the system. When the brake pedal is released, the master piston return-spring forces the piston back to its "off" position against the stop D. Simultaneously the return springs in the brake drum cylinder are forcing the liquid back through the inlet check valve B until the fluid pressure balances the effort of the master cylinder return spring, when the inlet valve closes.

If the return of fluid be insufficient to equal the displacement caused by the return of the master piston, a vacuum is created in the master cylinder sufficient to cause the master piston cup F to turn in at the lip and allow fluid to by-pass from the supply tank into the master cylinder, through the 6 holes in the master piston. Any excess fluid by this means introduced into the system will pass freely into the supply tank through the port E, when the master cylinder piston returns to its "off" position.

The pipe line from the master cylinder to the brake drum is of stout gauge copper piping, and the unions for the piping and connections are of the flared-end type. Suitable flaring tools for them can be supplied.

The flexible connections (which provide for the steering movement and displacement of the suspension springs) are manufactured expressly for this purpose.

The brake cylinders are attached rigidly to each brake drum back plate (Fig. 2) and are fitted with opposed pistons, the stems of which are connected to the brake-shoe ends. The open ends of the cylinders are fitted with rubber boots to prevent the entry of dust and dirt. The fluid enters the cylinder between the opposed pistons. At the uppermost position and between the opposed pistons is a bleeder valve required for expelling all air when filling the system.

### How it Functions.

When pressure is applied to the brake-pedal, the piston within the master cylinder (Fig. 1) with which the pedal is mechanically connected is forced forward and causes a displacement of the fluid through the entire pipe line, which causes the shoes to come into contact with the drums with an equalised pressure on all four wheels.

When pressure on the pedal is released, the brake shoe return-springs force the brake pistons to their original "off" position, and the liquid is forced out of the cylinders and through the line back to the reservoir. (Fig. 1.)

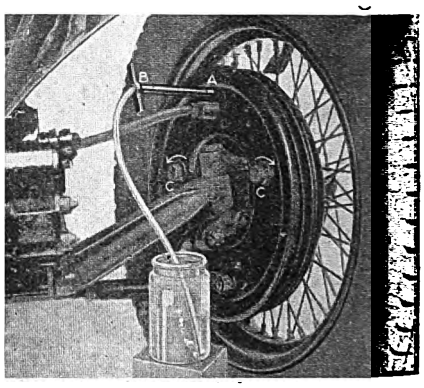

FIG. 3. SHOWING METHOD OF "BLEEDING" A LOCKHEED BRAKE UNIT.

### Maintenance Hints.

The supply tank of the master cylinder should be inspected once a month. If the fluid level is found to drop rapidly, it is an indication of a leak at some point in the system. It should be kept filled to within an inch of the top.

The system should be drained and the fluid filtered after, approximately, 10,000 miles service. If for any reason the fluid should appear to have become excessively dirty the system should be cleaned by pumping fresh fluid through the line and refilling with "Lockheed" brake fluid. A general external inspection of the whole system should be carried out also to ensure that no pipe lines have become displaced in the frame, also that the hose connections are in good condition and free from chafing marks caused by contact with the chassis.

If "Lockheed" brake fluid only is used, the rubber caps and valves throughout the system the makers claim will remain unaffected indefinitely. This fluid is supplied in sealed containers (with a distinctive orange label) holding a pint (3s. 6d.) and a quart (6s.).

Adjustment is only necessary periodically to compensate for wear of the brake lining.

Paint, grease, oil, or other foreign substance on the brake lining must be removed by cleaning the lining with petrol or alcohol, or, if dismantled, by the heat of a blow lamp, and roughening the surface with a file or wire brush. If the lining be so saturated with grease or oil that cleaning will not correct the unequal braking effect, it will be necessary to reline the brake, using the same make and quality of lining as on the other shoes. The toe and heel of the linings should be filed down for a distance of ⅛ in.

### How to Adjust the Brake Shoes.

When the shoe facings have worn to a point where the brake-pedal almost goes to the floorboard, it is necessary

Digitized by Google

to adjust the brake shoes into closer relation to the brake drums by rotating the cams provided for that purpose.

To do the job:—raise car on jack until wheels revolve freely. Place spanner in a horizontal position on adjustment bolt (C, Fig. 3), spin wheel, then pull on spanner towards the ground until the shoe is brought in contact with the drum. Now back off adjustment slightly by lifting spanner upwards until wheel revolves without any appreciable drag. Repeat the above operation on each wheel, doing each shoe separately. The adjustment bolts are frictionally held.

Use the same kind and thickness of lining on all four wheels.

**To Remove the Brake Shoes and Cylinders.**

Unhook the brake-shoe return springs and release brake shoe anchor pins, after which the shoes may be pulled off. In assembling, these operations are reversed.

To remove brake cylinders:—Disconnect copper tubing from hose union at the frame, then remove nut and lock washer, when hose union may be removed from bracket. Unhook brake shoe return spring. Removal of the set screws holding cylinder to brake dust shield allows cylinder with flexible hose attached to be withdrawn from shield. The same procedure applies to the rear brake cylinders, except that the copper tubing must be disconnected at the cylinder inlet.

**To Remove the Brake Cylinder Cups.**

The rubber boots on either end are first removed, the pistons are withdrawn followed by the cups. The spiral spring placed between the brake cylinder cups serves to keep the cups in contact with the pistons at all times.

**To Remove the Master Cylinder from Supply Tank.**

Take out the drain plug in the bottom of the supply tank and draw off the fluid. Disconnect the pipe line, remove the set screws holding the cylinder in place, and withdraw cylinder. Before assembling a cylinder the bore should be thoroughly cleaned and washed with alcohol or Brake Fluid, but not with paraffin, petrol, etc. The bore should be free from any score marks, rust, corrosion, or pits. It is advisable to use new cups when refitting a cylinder. Cup and piston should be dipped and cleaned in brake fluid before replacing the cylinder.

**To "Bleed" the System.**

"Bleeding" is necessary only when some part of the hydraulic mechanism has been disconnected. Following is the method for this job:—Remove the floorboard and unscrew the plug (G, Fig 1) in the top of the master cylinder supply tank, taking care to keep dirt from getting into the opening. Fill the supply tank with Lockheed brake fluid.

A bleeder screw or valve projects at a slight upward angle from the centre of each brake drum cylinder (A, Fig. 3), the outer end of which is provided with a hexagon shoulder to receive a wrench. The passage through this valve is threaded to receive a set-screw, the head of which is also hexagon shaped. Remove this set screw with wrench (B, Fig. 3) after which the nipple at the end of the rubber drain tube (which has already been passed through the bore of the wrench) may be screwed in place.

Open the valve (about three-quarters turn of the wrench) and allow the free end of the rubber tube to hang into a clean glass container. Depress the brake pedal by hand, allowing the return spring to return the pedal to its released or "off" position. Approximately ten strokes of the pedal will be necessary to bleed each cylinder.

Working the brake pedal gives a pumping action which forces fluid through the tubing and out at the wheel cylinders, carrying with it any air that may be present.

When bleeding, the *master cylinder supply tank* should be more than *half full of fluid, otherwise air will be drawn into the system* at this point, necessitating rebleeding. As each wheel cylinder is bled, the bleeder valve is to be shut off tightly with the wrench; the tube removed, and the set screw replaced. When the bleeding operation is completed, the supply tank should be refilled and filler plug replaced.

**Running Hints.**

Excessive travel of the brake pedal indicates that the brake shoes need adjusting closer to the brake drums. As a test operate the brake pedal three or four times quickly. A volume of fluid sufficient to take up the shoe clearance will be introduced quickly into the system and the pedal will return momentarily to its normal position. The remedy is: carefully adjust brakes as above detailed.

If the pedal when depressed travels beyond the normal with a certain "springiness," there is air present in the system. The system will require to be bled, when the customary solid feeling of the pedal will be regained.

If a leak has developed, it will be indicated if under sustained pressure the pedal descends slowly while still retaining its solidity. Examine the pipe line carefully for faulty connections, and tighten all nuts, etc., where necessary and examine all the brake cylinder cups for dirt or wear. If at all damaged, replace them.

Brakes remaining on when pedal is released if not due to misadjustment of the brake shoes or tight fitting shoe anchor pins, will be traced to the pedal, which will be found to be slightly "on," thereby not allowing the master cylinder cup to uncover the vent hole in the master cylinder barrel, so that the fluid, expanding under heat, and having no outlet, keeps the brake shoes in contact with the drums. The pedal should be adjusted to give (approx.) ½ in. of free movement at the pedal pad before any resistance is felt. The slot in the foot board must be kept well clear of the pedal in its "off" position.

If the master cylinder piston does not return after the foot pressure is released from the pedal, dismantle the unit. It may be found that the master cylinder cup has swollen considerably, but this condition can only arise because of foreign oils or spurious brake fluid having been used in the system at some time. All cups and valve rubbers should then be removed, the system thoroughly cleansed with brake fluid only (not paraffin or petrol) and new stock fitted.

Brakes "grabbing" or unequally pulling emanates from the brake shoe and drum equipment. Examine (a) the brake lining, which should be clean and free from oil and grease; (b) the rivets, which should be well sunk below the surface; and (c) the ends of the linings on all shoes, which should be relieved for at least ¾ in. with a file.

"Pulling to one side" often occurs with new or relined brakes if the linings have not been thoroughly bedded in.

Our next article will deal with the **Westinghouse Air-brake** in both forms.

## Liverpool Horse Parade.

LIVERPOOL'S annual parade of horses, most of them Shire horses working in the city, was this year part of the attractions at the Royal Lancashire Agricultural Show, held at Liverpool during the August Bank Holiday week-end. Usually the competitions are held in May. Here is a summary of the main results of particular interest to Merseyside cartage contractors.

Liverpool Cart & Motor Owners' Association, Ltd. Challenge Cup for the best team of two horses by cartowners plying for hire within a radius of six miles from the Liverpool Town Hall. 1st, Hobbs & Clark; 2nd and 3rd, Liverpool Cartage Company. W. Roberts & Son (Cup).

William Edwards Cup for the best mare or gelding; to be competed for by cartowners plying for hire within a radius of six miles from the Liverpool Town Hall. 1st, Liverpool Cartage Co.; 2nd and 3rd, Hobbs & Clark. J. West & Son (Cup).

The Liverpool Cartage Co., Ltd. Cup for the best mare or gelding working regularly in the city of Liverpool and borough of Bootle for five years and upwards in one continuous employ. W. Harper & Sons.

Peter Balmer & Sons Cup for the best mare or gelding to be competed for by owners of a stud of not more than 30 horses. Wm. Harper & Sons.

Chas. A. Still Cup for the best mare or gelding; to be competed for by cartowners entirely dependent upon plying for hire for a livelihood in the city of Liverpool and borough of Bootle, having a stud of not more than ten horses. H. Hughes.

F. Alderson, Ltd. Cup for the best group of ten horses (mares or geldings). Liverpool Cartage Company.

Smith & Bateson Cup for the best group of four horses. Hobbs & Clark.

Peter Walker & Son Cup for the best team of two horses. Peter Balmer & Sons.

Medals and Premiums presented by the Shire Horse Society. Silver medal for best single horse or mare, Liverpool Cartage Co. Silver medal for team of two horses (mares or geldings), Hobbs & Clark. Silver medal for reserve team of two horses (mares or geldings), Peter Balmer & Sons.

W. T. Roberts Silver Challenge Cup for the best two-wheeled turn-out (light horse over 15 hands). 1st, J. Winn, Smithdown Road. 2nd, E. Rushton Walton. 3rd, John Hogg, Parkfield Road.

**Meals for Bus Travellers.**—An ambitious scheme for establishing a series of canteens or cafés on the motor bus road between Glasgow, Newcastle and London, linked up one with another, is being mooted. The idea is to have meals ready to order, so saving valuable time en route.

**Liverpool's Fewer Stables.**—It may interest Liverpool cartowners to know that there has been a decline in the number of local stables by 660 in the last nine years. Stables now in use number 1,417. In 1921 the number of horses was 9,940; to-day it is about 7,200.

# Law Cases.

## THESE SPEED LIMITS.

When Herbert C. Scott, of Shrewsbury, was summoned at Frodsham for having driven a heavy motor lorry and trailer at a speed exceeding eight miles per hour, Mr. H. M. Bidgeon, of Liverpool, who appeared on his behalf, said the lorry had pneumatic tyres and the trailer had solid tyres, and there did not appear to be any speed stated in the schedule of the Road Traffic Act for a combination of these vehicles. It was laid down that vehicles with pneumatic tyres were permitted to travel 16 miles per hour, and those with solid tyres eight miles per hour. He suggested there should be some halfway measure provided for such a combination. The case was dismissed on payment of costs.

## FURNITURE DESTROYED.

In the Bow County Court, before Judge Higgins, K.C., Emanuel Kramer, of 48, Columbia Road, Hackney Road, E., cabinet manufacturer, sued Amy Miriam Hart and George Ernest Hart, of 36, St. Andrew's Road, Higham Hill, Walthamstow, to recover £96 12s. 6d. The plaintiff alleged that on February 5th, the male defendant agreed to carry a load of furniture to Newcastle and Sunderland for £6 10s., and it was part of the agreement that it should be safely delivered. The value of the furniture was £84 12s. 6d., and the balance of the claim was made up of expenses incurred after the motor van belonging to the female defendant was burnt out at a little past Grantham. It was suggested that the damage was caused through a lighted oil lamp being placed near the petrol tank when it was being filled, which caused the vapour to ignite. The male defendant, on the other hand, claimed that he was not acting for the female defendant as her agent, but for himself, and he counterclaimed for negligence on the part of the plaintiff in placing an oil lamp with a cracked glass close to the petrol tank, from which the stopper had been removed. He also claimed personal injuries for himself, the value of the lorry, £45, in all £100.

Mr. Franks appeared as counsel for the plaintiff, and Mr. Taylor, barrister, for the defence.

Counsel said that the parties had agreed that subject to liability, the value of the furniture in the van was £75.

Police-Sergt. Samuel Ellis, said that on February 7th, at 7.30 a.m., he was summoned by telephone to a spot just outside Grantham, and found a lorry upside down on the grass burned out. A brass oil lamp was found in the ashes at the rear of the engine. He arrived on the spot, and saw George Ernest Hart, who told him that he was a removal contractor and that he contracted with Kramer to carry five bedroom suites to Sunderland and Newcastle. He gave an account of the journey as far as Grantham and said that at 2.30 on the Saturday morning, he, with his mate Rawlings and the plaintiff Kramer, started out for Sunderland. A little later, the engine back-fired, and he thought petrol was needed. The petrol tank was underneath the seat, and he directed the two men to get out so that he could get at it; no one was smoking. He took hold of the spare drum of petrol and took the cap off the tank when there was an explosion which blew him into the ditch by the roadside, and the lorry was destroyed by fire. The witness went on to say that he was told by Harold Edward Rawlings, cabinet makers' improver, of 60, Milford Road, Buxton Road, Walthamstow, that Hart asked him to get the petrol from the back of the lorry, which he did. It was very dark, and Kramer suggested using one of the side lamps. Hart did so, and put the lamp on the seat over the petrol tank, and he thought some of the petrol must have splashed over the tank and started the fire.

The plaintiff gave evidence and said that at the time of the explosion the lamp was placed at the side of the petrol tank by Hart; he did nothing with it.

For the defence, Mr. Hart gave evidence and said that the plaintiff had on a previous occasion lifted a side lamp off, and placed it near the petrol, and he put it back. At the time of the explosion while he was filling the tank, plaintiff put the lamp at his side, and he had no time to move it, and this was corroborated by Rawlings, the mate of the lorry.

Judge Higgins stopped the case and entered judgment for the defendant on the claim, with costs, but also dismissed the counterclaim, with costs against the male defendant.

## COACH OWNERS SHOULD NOTE.

At the West London Police Court on June 23rd, before Mr. Bingley, Premier Line, Ltd., Leysfield Garage, Shepherd's Bush, were summoned for using a stage carriage—alternatively an express carriage—without a road service licence.

The summonses related to a journey made by one of the company's coaches on April 1st, from London to Sunbury Common, Middlesex.

Mr. E. B. Knight (for the police) said that, although the company applied for a road service licence for this service within the prescribed period, it was alleged by the prosecution that the service was not in operation on or before February 9th, and was not, therefore, provisionally protected pending the hearing of the application by the Traffic Commissioners.

Evidence was given by police officers who travelled on the coach on April 1st, and by two ticket inspectors employed by the London General Omnibus Co., Ltd., who stated that they first saw a Premier Line coach passing through Kingston-on-Thames en route to Sunbury Common on May 27th.

In cross-examination one of the inspectors agreed that Green Line coaches also worked the Sunbury Common route. He could not remember when the Green Line service started, but he believed it was in December.

Mr. Winfrey (defending) pointed out that there was no evidence that the Premier Line service was not in operation on or before February 9th. His main contention, however, was that the summonses must fail because the information had not been laid—as the Act provided—by a person specifically authorised to do so; and he recalled that a similar objection had already been upheld by another Metropolitan magistrate.

Mr. Bingley: I have the utmost respect for my colleague, but I am not bound by his views.

Continuing, counsel drew attention to the fact that the information on which the summonses were granted, bore the rubber-stamped signatures of the Superintendant of the Carriage Official and Assistant-Commissioner Elliott. He asserted that there was nothing to show that the prosecution was at the instance of any person specifically authorised, such as the Traffic Commissioners or the Commissioner of Police.

Mr. Knight observed that the information was on the ordinary printed form authorised by the Commissioner of Police for general use.

Mr. Winfrey: But the Act says that directions must be issued by the Commissioner himself.

The magistrate: I am against you.

Mr. Winfrey: Then I ask for a case to be stated.

The magistrate: Certainly. If I am wrong I shall be put right.

A penalty of £15 and five guineas costs was imposed on the summons relating to a stage carriage, the second summons being withdrawn.

---

**Those Licences Again.**—Despite the many notices that have been issued on the subject, the Royal Automobile Club is still defending a large number of motorists every week, who have been summoned for failing to sign their driving licences. Every driver, be he car, motor cycle or commercial vehicle, is now required by law to sign his driving licence as soon as it is issued.

CONSIGN SHIPMENTS FOR NORTHERN

INDIA

TO

# Publications Received.

The Law of Running-down Cases. By Edward Terrell, Barrister-at-Law (Butterworth & Co. (Publishers), Ltd., Bell Yard, Temple Bar, London. Price 15s. net.) As the author points out the critical reader might possibly take exception to the use of the phrase "running-down" in the title. It has, however, been uttered by so many judicial lips as to have become the legal expression for an accident case. This book is an exhaustive treatise upon the subject to which it is devoted. The Plaintiff's case is covered in Chapter I. In an action claiming damages for injuries suffered as a result of negligence it is the plaintiff who avers the negligence and therefore the burden of proof rests upon him and how he should set about doing this is dealt with fully by the author, and the judgments given in decided cases are explained. The author then proceeds to hold a brief for the defendant and here again one is told exactly what one should do and how the Courts have ruled on various points. Another chapter is devoted to the all important question of damages, and Chapter V deals with "Master and Servant and the principle of control." Other chapters deal with:—Carriers of Passengers; Contracting out of liability for negligence; Identification; The Preparation of a Road Accident Case; Lord Campbell's Act. The Road Traffic Act, 1930, is printed in full and the fourteen page index to this Act which is printed in the early part of the book enables one to find instantly any particular provision of this voluminous Act. The Highway Code is given in full with illustrations showing how the signals to be given by those regulating traffic as well as those to be given by drivers should be carried through.

Scrutton on Charterparties and Bills of Lading. By S. L. Porter, M.A. and W. L. McNair, LL.M. (Sweet & Maxwell, Ltd., 2 and 3, Chancery Lane, London, W.C.2. Price 33s. net.) This is the thirteenth edition of the publication bearing the title "The Contract of Affreightment as expressed in Charterparties and Bills of Lading," by Sir Thomas Edward Scrutton, one of the Lords Justices of His Majesty's Court of Appeal. The last edition of this work was completed by the present editors on February 13th, 1925, just six weeks after the Carriage of Goods by Sea Act, 1924, came into force. The effect of the Act, which could only be forecast at the beginning of 1925, has now been dealt with by the experience of its working over a period of five years. The present edition has been carefully revised throughout and the necessary additions and corrections made. Occasionally small portions of the work have been re-written when changes in or amplifications of the law have required it; e.g., that part of Article 89 in which the meaning of navigation and management of the ship is discussed. The contents of the book include a table of cases occupying 80 pages. Thereafter the contents are divided into 14 sections and 7 appendices. The following are the headings of the sections:—(I) Nature and Construction of the Contract; (II) Parties to the Contract; (III) Representations and Undertakings in the Contract; (IV) Performance of Contract: Loading; (V) The Bill of Lading as a Document of Title; (VI) Liability of Shipowner for Loss of, or Damage to, Goods Carried; (VII) The Performance of the Contract: The Voyage; (VIII) Performance of the Contract: Unloading; (IX) Demurrage; (X) Freight; (XI) Lien; (XII) Damages; (XIII) Jurisdiction; (XIV) The Commercial Court.

The Law of Transport by Rail. By J. D. I. Hughes, M.A., B.C.L., Barrister-at-Law. (Longmans, Green & Co., Ltd., 39, Paternoster Row, London, E.C.4. Price 5s.) It is stated by the author that the book is an attempt to state shortly the principles governing the law of transport by rail, with special reference to the modifications introduced by the Standard Terms and Conditions for the carriage of merchandise. He states he has attempted to give a reasoned exposition of the subject, which can be amplified wherever desired by anyone who is lecturing in this branch of the law, and he has written in the belief that if knowledge of law is spread beyond the confines of the profession the legal reasoning must not be shirked or supplanted by mere disjointed information however useful. The author acknowledges his indebtedness to Mr. J. W. P. Mosley, Barrister-at-Law, for his assistance in reading the proofs and for suggestions. The contents are divided into five parts preceded by an index to cases quoted. The first part is divided into seven chapters the subjects dealt with being as follows:—

Part 1. Carriage of Goods.

Introduction.
Chap. I. The extent of liability for the Carriage of goods (other than live stock and improperly packed goods) consigned at Company's risk.
Chap. II. Preservation of liabilities for safety of goods within the Carriers Act, 1830.
Chap. III. The extent of liability for the Carriage of goods (other than live stock or improperly packed goods) consigned at owner's risk.
Chap. IV. The extent of liability for delivery of goods (other than live stock and improperly packed goods).
Chap. V. The extent of liability in respect of live stock, damageable goods not properly protected by packing, and fuel.
Chap. VI. The legal relation between consignor, carrier, and consignee; and obligations of the consignor.
Chap. VII. The termination of transit and its effects.

Part. II. Statutory Control of Railways.

Chap. I. The Minister of Transport, the Railway and Canal Commission, and the Railway Rates Tribunal.
Chap. II. The Law applied on questions of Rates, Facilities, and undue preference.

Part III. Carriage of Passengers and their Luggage.
Part IV. The Principles Governing the Recovery of Damages.
Part V. Transport by Road and Air.

Index.

Road Traffic Law. By F. Llewellyn Jones, LL.B., M.P. (Sweet & Maxwell, Ltd., 2 and 3, Chancery Lane, London, W.C.2. Price 21s. net.) This is a publication which every user of the road should find of inestimable value. To the majority of us the Road Traffic Act, 1930, has been rather a source of confusion, than a simplification of the previous multitudinous laws and regulations governing the use and construction of vehicles, etc. Mr. Llewellyn Jones, who is a solicitor, H.M. Coroner and M.P. for the County of Flint, served on the standing committee of the House of Commons to which the Government Road Traffic Bill was referred; therefore, he had a unique opportunity of becoming familiar with every detail of the Bill and the Act as it now stands. He explains the delay in publishing the book as being due to the fact that it was deemed advisable to defer publication until all the regulations under the Act had been issued. Following an introduction, each of the six parts of the Act are dealt with, the text of each part being given together with notes, then there follow a list and text of regulations made by the Minister of Transport and there is a schedule of offences and punishments. It is an exceedingly useful book of reference and should be welcomed by the road carrying industry.

The History and Economics of Transport. By Adam W. Kirkaldy, M.A., B.Lit. (Oxon.), and A. Dudley Evans. (Sir Isaac Pitman & Sons, Ltd., Parker Street, Kingsway, London, W.C.2. Price 16s. net.) This book is divided into five parts and deals mainly with Railway, Canal, Shipping and Ocean transport and Civil Aviation which subjects occupy 387 pages and there are appendices which bring the total contents of the book up to 449 pages. It is said in the preface that the aim of the volume is to assist the study of transport and consequently much that has been written is elementary; that there is also much that, necessarily, is sketchy, because with a subject so comprehensive, it has been found impossible to deal in detail with every branch. This is obvious from the fact that road transport, which has become one of the major land transport systems, is, with the exception of a few brief references, entirely omitted. This new volume is the fifth edition, the first having been published in 1915. Concerning the fifth edition, the authors state that the demand for it has enabled them to bring the volume up to date, and this has been done by means of some additional sections and the inclusion of the most recent figures to tables and appendices. Among the interesting additions are those of the "American Railways Since the War" and "Recent Development in Aviation." It is stated in the preface that the purpose of the book is mainly for use in Universities and other teaching Institutions as well as for the business man whose daily affairs bring him into close contact with the problems of transport. In the introduction methods of transport and their development are dealt with, mainly historically. Part one deals with the Railways in the United Kingdom and Abroad and is divided into eight chapters. Chapter one traces the development from the period when George Stevenson successfully demonstrated the merits of his locomotive, the considerations which led up to the adoption of the 4 ft. 8½ in. gauge until the time when the latter was standardized in the year 1892 at which date the last of the old broad gauge disappeared. Chapter two deals with some of the initial difficulties such as amalgamations which were at that time discouraged by Parliament; the prejudice against all railways and the development of towns in consequence of canals and railways. Chapter three deals with the evolution of trunk lines. Chapter four with railway and canal and light railway commissions. Chapter five with working agreements between different railway companies. Chapter six with the final stage of amalgamation. Chapter seven deals with the railways of the United States and chapter eight with the European railways. Part (2), divided into eleven chapters deals with railway and canal economics. In this part the question of state ownership or private ownership is considered and railway statistics and account systems. Canal economics are considered separately and the subjects dealt with are capital revenue and traffic, difficulties of the canal system, advantages of water transport, recommendations of the Royal Commission (appointed March, 1906), and development since the Royal Commission's report. Part three, dealing with shipping and ocean transport, gives a historical sketch of the earliest shipping down to modern times. Part four deals with civil aviation and part five with railways and canals since 1927.

# News from all Parts.

**Highway Code Competition.** — The National "Safety First" Association (Inc.) announces that questions have been raised as to the legality of the competition which it organised for the purpose of directing attention to the principal safety provisions contained in the Highway Code. The Committee has therefore decided that, under all the circumstances, the wisest course is to abandon the competition forthwith, and to return to the competitors their entry fees. This will be done as soon as possible.

**Institute of the Motor Trade.**—The Twelfth Examination of the Institute of the Motor Trade will be held in London and the Provincial Centres on October 9th, 1931, commencing at 10 a.m. The Council are offering Gold, Silver and Bronze Medals for the three Candidates securing the highest number of marks in the 1931 Examinations (April and October). Candidates desirous of presenting themselves must give notice to the Secretary on or before September 11th next. Full particulars and entry forms can be obtained on application to the Secretary, The Institute of the Motor Trade (Inc.), 157, Great Portland Street, London, W.1.

**Ruston & Hornsby Engines.** — We understand that Ruston & Hornsby, Ltd., of Lincoln, have been favoured with instructions from the Metropolitan Water Board to supply a further vertical oil engine, five cylinder, for the Honor Oak Pumping Station. Two Ruston airless injection engines of 200 b.h.p. each were ordered in 1929 for the same station.

**Twenty Eagle Hygienic Refuse Collectors for Plymouth Corporation.**—The Eagle Engineering Co., Ltd., Eagle Works, Warwick, have now delivered twenty of their patent hygienic refuse collectors to the Plymouth Corporation, ten of these were mounted on Vulcan chassis, and ten on Karrier chassis. The capacity of the body is 10 cubic yards. The body is of all steel construction, fitted with pedal operated covers, which prevent the dust being blown about while loading. The taildoors are hinged vertically in two halves, and the body is tipped by an Eagle hydraulic tipping gear.

**FORTHCOMING EVENTS.**

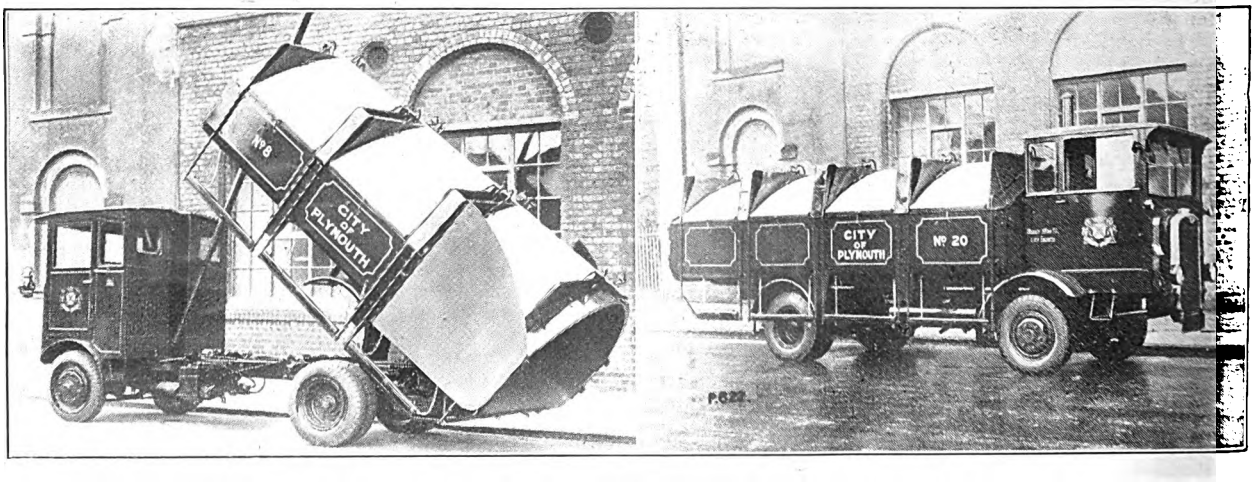
|---|---|
| Sept. 10—26. | Shipping and Engineering Exhibition, Olympia, London. |
| Nov. 5—14. | Commercial Motor Transport Exhibition, Olympia, London. |
| Nov. 16—21. | Public Works, Roads and Transport Congress and Exhibition, Royal Agricultural Hall, London. |
| Nov. 26. | The Motor and Cycle Trades' Benevolent Fund. Annual Banquet. |
| Nov. 28—Dec. 6. | Paris. Commercial Motor Exhibition. |
| Dec. 7—11. | Smithfield Club Cattle Show, Royal Agricultural Hall, London. |

**Motor Ball and Carnival. Motor and Cycle Trades Benevolent Fund.**—H.R.H. Prince Arthur of Connaught has graciously consented to act as Patron of the Fifth Annual Motor Ball and Carnival in aid of the Motor and Cycle Trades Benevolent Fund. The Ball is to be held at Grosvenor House, Park Lane, London, on the Wednesday in Motor Show Week, October 21st. Sir George Beharrell is President of the Ball. Prices of Boxes are as follows:—On the floor: boxes to hold four, £10 10s.; six, £15 15s.; eight, £21; twelve, £31 10s. In the balcony: boxes to hold four, £7 10s.; six, £10 10s.; eight, £15; twelve, £21. There will be three special boxes each holding approximately twelve persons at one end of the balcony. That in the centre has been booked by the President, Sir George Beharrell, and the other two will be sold to the highest bidder with a reserve price of twenty-five guineas on each. Bids should be sent without delay to the Secretary who will immediately advise all bidders of the progress of the auction. The Secretary and Organiser, Mr. A. H. Dawson, 42, Bedford Row, London, W.C.1, will be glad to furnish full details to any of our readers who will apply.

**Vehicle Exhibits at Royal Lancs. Show.**—Many firms of motor manufacturers were represented at the Royal Lancashire Agricultural Show, held at Liverpool July 30th to August 3rd. The principal transport stands were those of the following firms:—Messrs. W. Watson & Co., Ltd., Liverpool (Morris Commercials); A. W. Webb, Ltd., Liverpool (Fords); R. A. Dyson & Co., Ltd., Liverpool (trailers); Old Trafford Motor Engineering Co., Manchester (Dennis lorries); J. Pullan & Co., Ltd., Liverpool ("Manchester" and Willys commercial vehicles); Garlick, Burrell & Edwards, Ltd., Liverpool (farmers' wagons and cattle trucks); Fodens, Ltd. (steam wagons); West Coast Motor Co., Ltd., Liverpool (Dodge vans); J. Blake & Co., Liverpool (Fords and Fordsons); H. C. Slingsby, London (trucks); Merryweather & Sons, Ltd. (fire engines).



"EAGLE" HYGIENIC REFUSE COLLECTORS FOR PLYMOUTH.

**Argentine Chamber of Commerce in Great Britain.**—The President of the Argentine Chamber of Commerce in Great Britain advises us that the offices of this Chamber have recently been moved from its former address at Regent Street, London, to the present quarters at River Plate House, 12/13, South Place, E.C.2. Mr. W. S. Barclay, until late, General Secretary of the British Empire Trade Exhibition of 1931 in Buenos Aires, has been appointed General Manager of this Chamber.

**Tender Accepted.**—The Minister of Transport has accepted a tender submitted by Sir William Arrol and Company, of Glasgow, for the dismantling of the three existing bridges and the erection of three new swing bridges operated by petrol driven machinery at Fort Augustus, Aberchalder and Laggan on the Caledonian Canal.

**Flying to the T.T.**—The R.A.C announces that arrangements are being made for a special air liner to fly from London to Belfast for the R.A.C. Tourist Trophy Race on Saturday, August 22nd. The liner will be of the latest three-engine type and will call at Liverpool on both the out and home journeys. It will have accommodation for twenty passengers. The service is being organized by British Air Transport, Ltd., Central Hall, Croydon Aerodrome, to whom all enquiries should be addressed.

**Avon India Rubber Co., Ltd. A Correction.**—In our article in the July issue describing a visit to the Avon India Rubber Co., Ltd., at Melksham, we used a word which is liable to convey a wrong impression. There is no partnership between the Company and the Seiberling

Digitized by Google

Rubber Co., the two firms being absolutely independent, both as to capital and control. The Avon India Rubber Co., Ltd., have acquired the right to manufacture and sell Seiberling tyres in this country together with full access to the Seiberling Company's technical information, research, processes, specifications, etc. We take this opportunity of inserting this correction to avoid any misunderstanding.

**Morris-Commercial Breakdown Lorry.** — Our photograph shows the Morris-Commercial six-wheeler breakdown lorry, which was in attendance at the Shelsley

THE MORRIS-COMMERCIAL BREAKDOWN LORRY AT THE SHELSLEY WALSH HILL CLIMB.

Walsh Hill Climb last month. This vehicle is equipped for dealing with almost any emergency, its gear including a general duty salvage crane; towing ambulance with pole and distance bar; large and small jacks; breast drill stand; worm gear pulley blocks; davit; swivelling spot light; inspection lamp; bench and tool cupboards containing a comprehensive set of garage tools suitable for dealing with any breakdown. Over 400 tools are always kept on board.

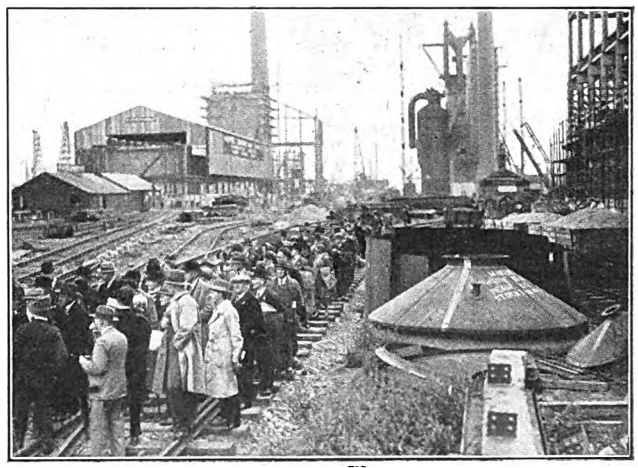
**The Exide Gala and Horticultural Show.**—The Chloride Electrical Storage Co., Ltd., the makers of the Exide Battery, held their 15th annual Gala and Horticultural Show at their well-equipped sports grounds at Clifton Junction, near Manchester, on July 18th. Amongst the numerous handicraft exhibits, sports, tennis tournaments and side shows, the large attendance found much to divide its attention. Great interest was shown in the Horticultural Section, where some very fine specimens of

THE EXIDE GALA.

greenhouse plants, flowers, fruit and vegetables, all grown by employees of the Exide Company, were exhibited. The crowd which watched the sports were treated to some keenly contested events during which the Pendlebury Prize Band played musical selections. A number of Exide officials were present and Mr. A. W. Browne, the Assistant General Manager, presented the sports and handicraft prizes to the winners. Dancing, which followed brought a most enjoyable day to a close.

**Change of Address.**—The Wilcot (Parent) Co., Ltd., makers of the Wefco spring cover, and its associated Company, Equipments, Ltd., have moved into a new building recently completed at the corner of Great Portland Street and Clipstone Street, London, W. The new London address of these Companies is 152-156, Great Portland Street, London, W.1, and the telephone numbers Museum 8601-2.

**Visit to Ford Works at Dagenham.**—We were interested in joining the large party of delegates to the First International Conference on Public Cleansing, which, by invitation of the Ford Motor Co., Ltd., paid a visit to Dagenham to see the wonderful industrial development which is taking place there. The delegates, numbering about 500, journeyed from Westminster Pier in four steamers which had been specially chartered, and on arrival at Dagenham were divided up into parties and were able to see what will, in a short space of time, become a veritable hive of industry. It is claimed that when completed the works will be the largest in Europe engaged in the making of motor cars and when in full capacity will employ more than 15,000 workers. We have previously given a description of this magnificent development, built on the Essex side of the River Thames on what was 500 acres of water-logged land. One of the biggest of the undertakings has been the work of driving piles to the number of 13,800 in order to make the land fit to withstand the enormous weight of concrete and steel buildings which will be close packed with machinery. Our illustration shows one of the groups of delegates being conducted round the works.



SOME OF THE DELEGATES TO THE PUBLIC CLEANSING CONFERENCE VISITING THE FORD WORKS AT DAGENHAM.

**F.W. and R.A. Trade Classes.**—The London Centre of the Furniture Warehousemen and Removers' Association has decided to hold Trade Classes during the coming autumn and winter months, and the Kinnaird Room at the Central Y.M.C.A., Tottenham Court Road, has been booked for the purpose. The programme contemplates a series of twelve lectures as a course primarily intended to fit young people in the trade to obtain the Estimators' Certificate, and also to make them competent to hold responsible positions. The programme of lectures is as follows:—22nd September, 1931—Introductory: survey of ground to be covered, organisation, estimator's place in relation to successful trading; 6th October—Removals by Rail; 20th October—Removals by Road; 3rd November—Overseas Removals; 17th November—Storage and its Problems; 1st December—Costing Systems—their value and importance; 15th December—Points of Law affecting the Trade: Carriers' Act, Contracts, Third-Party Claims, etc.; 12th January, 1932—Estimate Conditions; 26th January—Estimate Conditions; 9th February—Insurance; 23rd February—How to Sell Service; 8th March—Revision of work done and Students' problems answered. Great care is being taken in the selection of the lecturers. A grant towards expenses has been made by the London Centre so that the fee for the whole course can be kept at two shillings and sixpence. It is hoped further to stimulate the interest of students by means of periodical tests with a little inducement in the form of prizes for those who do the best and contributions for this purpose are invited from members of the Association who desire to demonstrate in a practical manner their support of the scheme. Intending students should send in their names, addresses and enrolment fees to Mr. Wm. C. Fuller, Bishop & Sons' Depositories, Ltd., 10 and 12, Belgrave Road, London, S.W.1.

**A Portable Daylight Talkie Cinema.**—A moveable daylight talkie cinema, gramophone and microphone all in one—such is the Lyons' Tea Talkie Car which is now travelling throughout England as a means of increasing the interest of the public in Lyons' tea and at the same time providing an excellent entertainment. Mounted on a Leyland lorry the complete outfit has an overall length of 26 feet. Enormous difficulties had to be overcome in the construction of the car. A soundproof compartment where current could be supplied for the sound system was built in, and room had to be allowed for the projector and other electrical apparatus. It is claimed that the pictures shown on the screen are as perfect as it is possible to obtain in ordinary outdoor daylight.

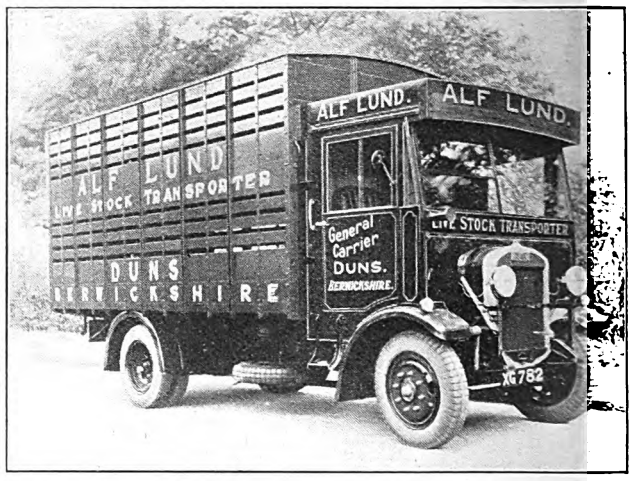
LYONS' TALKIE VAN TAKING PART IN THE POOLE CARNIVAL.

**A Correction.**—In our issue of July 15th, on page 434, when dealing with the Royal Show, we stated that the R.A.S.E. Silver Medal was awarded to the Garrett 6/7 ton lorry fitted with a Blackstone six-cylinder model injection engine. This was not the case. The medal was awarded to the Garrett high speed diesel tractor which is fitted with an Aveling "Invicta" oilage. It is interesting to note that the Prince of Wales visited Garrett's Stand and spent a considerable time examining the tractor which is similar to the one which recently broke the world's endurance record by ploughing 977 hours day and night without the engine being stopped.

**A New Development.**—Messrs. Stewart & Ardern, Ltd., the sole London distributors of Morris cars, have further extended the activities of their organisation by acquiring the well-known coachbuilding firm of The Cunard Motor & Carriage Co., Ltd., Chase Road, Willesden, N.W.10. The acquisition of these commodious and up-to-date works will greatly facilitate their bodybuilding and bodywork repairs service. The Cunard Motor & Carriage Co., Ltd., undertakes all types of motor bodybuilding, coachpainting, etc., and we understand that already their works are busy with many types of "ESandAY" bodies, including a large contract for parcel vans from the London & North Eastern Railway Co. The accompanying illustration gives an excellent idea of these extensive and modern works.

**Ford Telephone Numbers.** — The London telephone number of Ford Motor Company, Ltd., has been changed to Regent 7272. This alteration is also applicable to the Press Information Bureau whose extension is now No. 109 and Publicity Department.

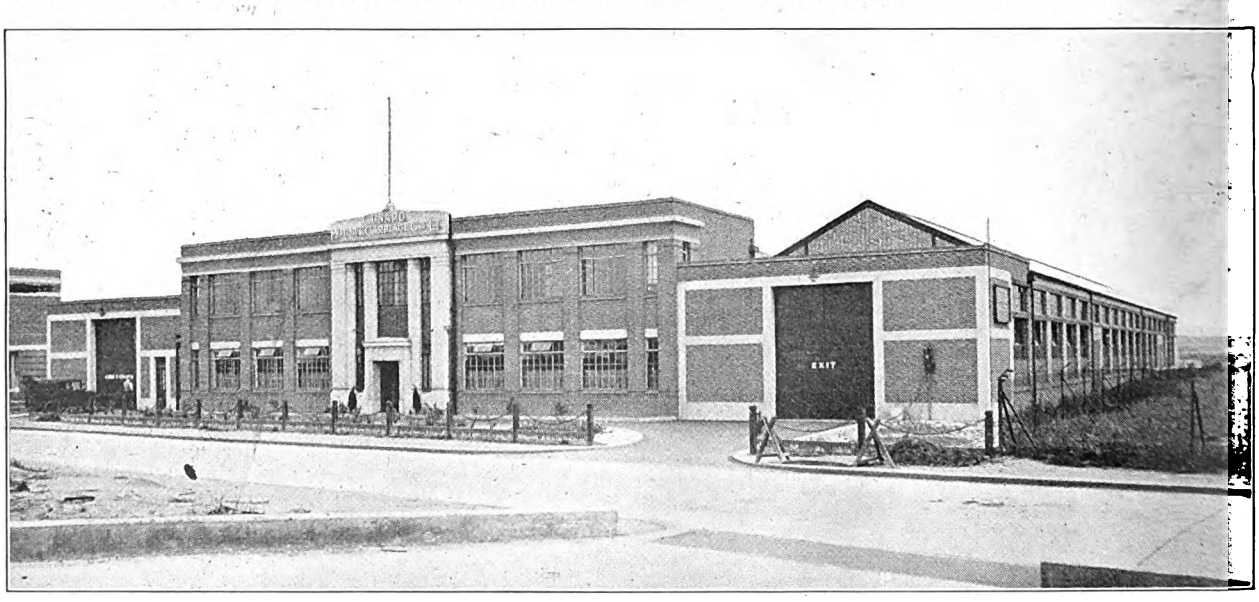
**A Useful Vehicle.**—Our illustration shows a livestock van mounted on a type A10 forward 2-ton "Thornycroft" chassis, recently supplied through the Newcastle Depot of



"THORNYCROFT" FOR LIVESTOCK.

John I. Thornycroft & Co., Ltd., Thornycroft House, Smith Square, London, S.W.1. This vehicle will accommodate 60 to 80 sheep according to size, and we understand the owner has recently carried a load of 12 sheep, 30 lambs and 3 bullocks to one of the North of England shows. The interior consists of two floors and the back forms a hinged ramp giving access to the former. Access to the upper deck is provided by letting down part of the upper floor which forms a continuation ramp. The interior can be divided off into sections as required for the separation of cattle, sheep or pigs, etc.

**Presentation to Mr. B. Thompson.**—An interesting function took place on July 23rd at the R.A.C., when Mr. B. Thompson, the retiring Chairman of the Accessory & Component Manufacturers' Section Committee of the Society of Motor Manufacturers and Traders, Ltd., was entertained to luncheon by his fellow members of the Committee. Mr. Thompson, who has been for so long the representative of Messrs. Allen-Liversidge, Ltd., on this Committee, has been Chairman for 5 years. He has now, however, to relinquish the position owing to changes



THESE COMMODIOUS AND UP-TO-DATE WORKS AT WILLESDEN HAVE BEEN ACQUIRED BY STEWART & ARDERN, LTD.

Digitized by Google

in his firm and owing to the step he has taken in identifying himself with International Oil Cleansers, Ltd. Mr. W. Shelley, the new Chairman of the Committee, and Mr. Instone, the President of the Society, bore testimony to Mr. Thompson's good work in the past, and wished him success in the future, and Mr. Thompson suitably replied. Mr. Thompson was then made the recipient of a present at the hands of his fellow members.

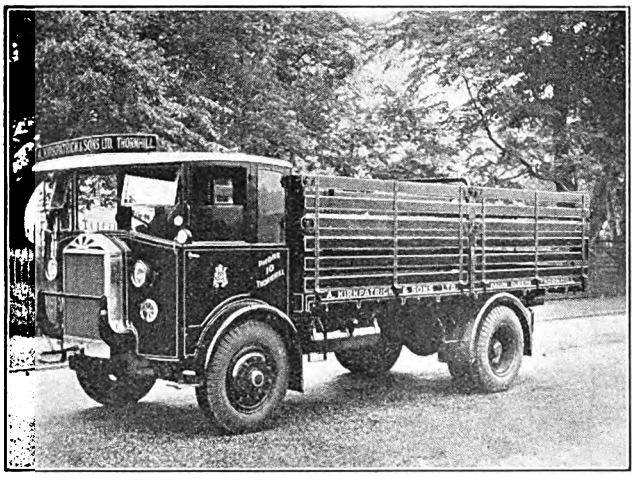
TWO LATIL TRACTORS HAULING A FISHY LOAD IN PARIS.

**Graf Zeppelin to Visit London.**—Arrangements have been made for the Airship "Graf Zeppelin" to make her postponed visit to the London Air Park, Hanworth, on her return from the Arctic. She is due to arrive at Hanworth on the evening of August 18th and will leave shortly afterwards for a 24 hour cruise round Britain. It will be remembered that the visit of the airship which had been arranged earlier in July had to be postponed owing to the crisis in Germany.

**A Handsome "Albion."**—The photograph, which we reproduce, shows the new Albion 6-tonner as supplied by Albion Motors, Ltd., Scotstoun, Glasgow, to Messrs. A. Kirkpatrick & Sons, Ltd., bacon curers, of Thornhill. The lorry is used for the transport of dead pigs which are



35/55 H.P. ALBION 6-TON LORRY SUPPLIED TO MESSRS. A. KIRKPATRICK & SONS, LTD., BACON CURERS, THORNHILL, DUMFRIESSHIRE.

carried not only on the main floor of the body but also on a second floor containing a detachable sparred section. The sides of the lorry are slatted so that adequate ventilation is ensured.

## MERSEYSIDE.

**Back to Red.**—Liverpool Corporation has abandoned the experiment of painting the municipal buses a grey colour. It was found that after a time the grey went a dirty shade. Consequently it has been decided to paint the buses the same colour as the trams.

**One Shilling Per Hour for Horse Hire.**—Some interesting information concerning the management of the Liverpool Corporation stud of 367 horses is given in the annual report of the Chief Veterinary Officer, Mr. T. Eaton Jones. For over 30 years the horse work of the Health Department has been operated on a commercial basis and under this system one shilling per hour is now charged for animals performing work for other municipal departments, but in some cases contracts are performed at a price per ton. The number of horse hirings in 1930-31 was 106,023, compared with 99,654 in 1929-30 and 97,484 in 1928. In addition and in order to cope with the demands for cartage, it was found necessary during the year to hire from outside owners, who supplied horses on 2,453 occasions, or about 400 fewer than in the previous year.

## MANCHESTER.

**New Bus Station.**—Permission has been given to several motor bus owners, subject to terms being arranged, to use one section of the new motor park at Gaythorne, Manchester, as a site for a bus station.

**Cartage Tenders Accepted.**—Tenders for twelve months cartage were recently invited by the Manchester Electricity Committee. The successful contractors were:—Messrs. J. H. Peck & Sons, Ltd., J. Wharton, T. Lamb, J. Bray, and H. Evers, Ltd., all of Manchester.

**Inter-available Tickets.**—Mr. Wilmur, the general manager of the North-Western Road Car Company, of Stockport, stated at a recent traffic court of the North Western Commissioners, that his company had an agreement drawn up awaiting the approval of the railway company, permitting anybody travelling by bus to a certain place to return by train with the same ticket. Unfortunately, he added, the Manchester Corporation had intervened and so a satisfactory conclusion had not been reached.

## NORTH-EAST COAST.

**Suggested New Tyne Bridge.**—The building of a new bridge across the Tyne from St. Anthony's to Pelaw, which is estimated to cost £928,000, is among the proposals in the report of the North Tyneside Joint Town Planning Committee, just issued. The subject is, however, admittedly, only in a preliminary stage.

**New Bridge at Morpeth.**—Morpeth Town Council has received formal sanction from the Ministry of Health to the proposed erection of a new bridge at Oldgate and the removal of the old bridge to the Low Stanners and to the borrowing of £1,450 for the cost of the work which is approved by the Unemployment Grants Committee as worthy of financial assistance.

**Film of Sydney Bridge.**—A 15,000 feet film showing the construction of the Sydney Harbour Bridge from beginning to end will be shown in Middlesbrough when the bridge is completed. This fact was revealed to the Middlesbrough Rotary Club at a recent luncheon by Mr. Lawrence Ennis, Director of Messrs. Dorman, Long & Co., who was in charge of the work in Australia. He addressed the club members on "The Romance of the Sydney Branch of Dorman, Long." He mentioned that he had stipulated that the film would be shown for the first time in Middlesbrough.

**Sunderland Trams.**—An increase of £3,015 in bus receipts and a decrease of £2,446 in tram fares is revealed in the annual report of the Sunderland Corporation transport service for the year ended March 31st. "The drop on the trams," states Mr. C. A. Hopkins, the General Manager, "is only attributable to bad trade, a number of early workmen's cars having been withdrawn." The joint services show a net balance of £5,612 on trams and £5,075 on buses.

## HULL.

**Proposed Humber Bridge.**—The constitution of the House of Lords Committee which will deal with the Humber Bridge Bill has now been announced. Viscount Chelmsford is to be the chairman and his colleagues will be Lords Gage, Addington, Fairlie and Marks. They will commence their sittings on Wednesday, November 11th, the commencement having been postponed a week in order not to interfere with Lord Mayor choosing day at Hull. The East Riding County Council and the Leeds City Corporation will not continue their opposition, but so far as the Humber Conservancy Board, the Aire and Calder Navigation, the London & North Eastern Railway and the other chief petitioners are concerned, the fight will be every bit as keen as it was before the Common's Committee. They are still convinced that the erection of the bridge would be fraught with considerable danger to the navigation of the Humber, and particularly between the bridge and the port of Goole. It is generally admitted that the erection of training walls would obviate the danger of the channel changing. During the hearing before the Common's Committee the chairman more than once emphasised the necessity of these walls, and it was expected that obligation would have been cast upon the promoters. Having regard to the vast cost involved such

Digitized by Google

a condition would, in all probability, have killed the scheme. The idea now seems to be that the Humber Conservancy Board and the Government should provide most of the money. The Board of Trade has been active in the matter, in conjunction with the Ministry of Transport, and called a private conference of interested parties, but if it was hoped to bring about a settlement then the conclave proved abortive.

### MIDLANDS.

**Holiday Traffic.**—Traffic during August holiday week-end was by far the heaviest of any holiday this year and in some instances records were created. Heavy traffic is recorded on road passenger vehicles and the railways during the week previous and the week succeeding the holiday week-end. Features were steadier road travel, increased rail travel and a record on the Corporation vehicles of Birmingham including trams, buses and trolley cars. The railways carried enormous crowds from Birmingham and the Black Country and outlying resorts such as Malvern, Evesham, Worcester, Bewdley, Stratford-on-Avon, Lichfield, etc., were crowded. As an example twenty special trains were run on the two railways (G.W.R. and L.M.S.) to Evesham. The exodus from the Potteries, Sheffield, Leicester and Nottingham was equally great.

### SOUTH WALES.

**Road Act Prosecutions.**—Business at the Cardiff Police Court has been much heavier since the Road Traffic Act came into operation. On July 29th, the Stipendiary Magistrate had to deal with a driver, who was fined 30s., for driving a motor bus into the city at a greater speed than 30 miles an hour, the defendant being told that he had the lives of 14 passengers under his care at the time. Defendant said he was so interested in his driving that he failed to notice his speedometer. It didn't seem 30 miles an hour. He was told to take more interest in his speedometer in future. Several motorists were fined 10s. to 20s. for using private cars for business purposes without a commercial licence. A fruiterer took home from Cardiff a full load of vegetables. Another defendant was seen using a car for the delivery of typewriters, and a draper had a car full of frocks hanging from the roof.

### SCOTLAND.

**Aerodrome for Falkirk.**—At a recent meeting of the Falkirk, Grangemouth, and East Stirlingshire Publicity and Development Association, it was announced that a company had been formed known as the Scottish Airways, Ltd., for the purpose of acquiring an extensive track of land situated on the main road between Falkirk and Grangemouth upon which to erect a super-aerodrome. The site is about half a mile from the centre of Falkirk and has a frontage of three-quarters of a mile, the entire extent being about 220 acres. One aim of the new company is the inauguration of regular air services between Falkirk and London utilising machines suitable for conveying passengers and freight. The layout and design of the terminus will be on similar lines to those of many Continental air stations. At the same meeting it was also stated that a company will be formed with a view to establishing a sailplane factory in the town of Falkirk. The gliders or sailplanes now in use in Scotland are practically all of German make and as there is a growing demand for aircraft of this type and Falkirk being admirably suited for the manufacture of these machines an early start on the project is expected.

### NORTHERN IRELAND.

**Belfast's Trams.**—During the holiday fortnight in Belfast—ending July 24th—the trams carried 3,985,325 passengers, or 108,982 more than in the same period last year; and the buses carried 307,702 passengers, 32,892 more. Tram receipts were £20,591 (increase £606), and bus receipts £2,437 (increase £252).

**Newry Canal.**—Work has been begun on the improvement scheme at Newry Canal.

### IRISH FREE STATE.

**Bus Passenger Traffic Expanding in the Irish Free State.**—The summer season started well for bus passenger traffic in the Irish Free State. May was much better than the corresponding month last year for receipts, mileage traversed, and number of passengers carried over the various traffic routes in the Free State counties.

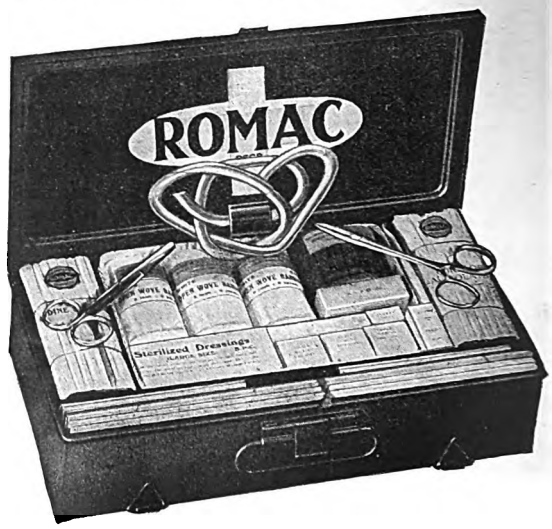
**Canal Traffic Between Dublin and Limerick.** — Canal traffic was resumed between Dublin and Limerick early in July. Waterway traffic direct from Dublin to Limerick was interrupted by the work required to be done on the Shannon electrification scheme, and canal service from the Limerick side remained suspended for a long while.

## Romac Public Service First-Aid Outfit.

To comply with Regulations made by the Minister of Transport, it will be necessary, as from August 1st, next, to carry upon every public service vehicle which is for the time being used as an express carriage or as a contract carriage a suitable receptacle containing first aid dressings and appliances as specified in the Regulations.

Romac Motor Accessories, Ltd., Romac Works, The Hyde, Edgware Road, London, N.W.9, have for the past ten years supplied their own "First-aid" outfits to the motor trade and have now put upon the market a new Public Service First Aid outfit which complies with the new Regulations mentioned above.

The contents of the outfit are packed in the way one would expect in the case of a firm of long experience in this field of activity, and the partitioned case is dust proof, solid, neat and compact, and should last for years.



ROMAC FIRST-AID OUTFIT.

Owing to the large number of First Aid outfits manufactured by Romac Motor Accessories, Ltd., the firm find it possible to supply this new outfit at the attractive price of 15s. each less quantity discounts.

## Correspondence.

*The Editor is not responsible for the views expressed in letters appearing under this heading. No letter will be inserted unless accompanied by the name and address of the writer, not necessarily for publication, but as evidence of good faith.*

### NEW CUSTOMS REGULATIONS IN DENMARK.

*To the Editor of* The World's Carriers.

Sir,—We beg to inform you that from 1st of September, 1931, new Customs regulations will be in force in Denmark.

These regulations require, that on all kinds of goods governed by higher tariff taxes the importer has to give an exact specification of the contents of the shipment, also stating the actual nett weight on the entry before examined by the Customs Officials, especially when such goods are entered "ad valorem," like silk and artificial silk as well as other kinds of dry goods.

It would therefore be necessary, when our British colleagues have goods to this country for delivery "duty paid," to furnish their correspondents here with invoice showing exact details of the shipment, also gross weight and nett weight in kilos., and of course value.

Yours truly,
E. A. Bendix & Co.

Forwarding, Steamship & Chartering Agents; Ship, Customs & Insurance Brokers; Warehousemen.

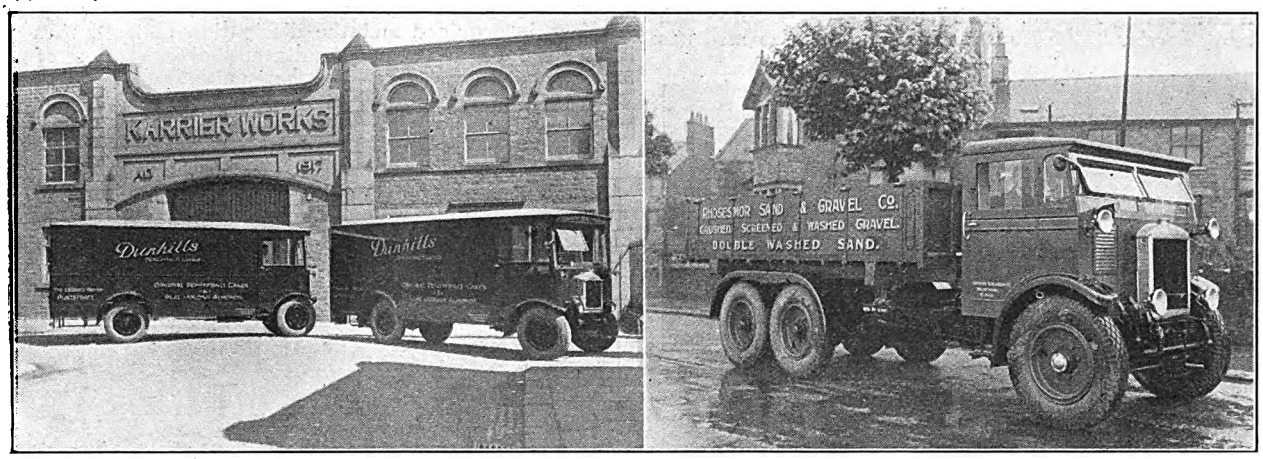
# Motor Notes.

**Large and Small Capacity "Karrier" Goods Vehicles.**—We illustrate examples of small and large capacity Karrier goods vehicles, i.e., "CY2" two-tonners and a "KWF6" type rigid frame six-wheel tipper carrying a nine-ton pay load. These vehicles were delivered recently by Karrier Motors, Limited, Karrier Works, Huddersfield. The two vans, supplied to J. Hardcastle & Sons, of 11, Stuart Street, Pontefract, transport contractors, are of 5 tonner delivered in 1920. The former has covered well over 100,000 miles, while the 5 tonner has about 70,000 miles to its credit. The latter was used constantly for a period of 3 years for journeys between the Liverpool and London factories, occasionally doing the round trip twice a week. This vehicle was totally dismantled a matter of 12 months ago and a few minor replacements made, but the only components of any importance that



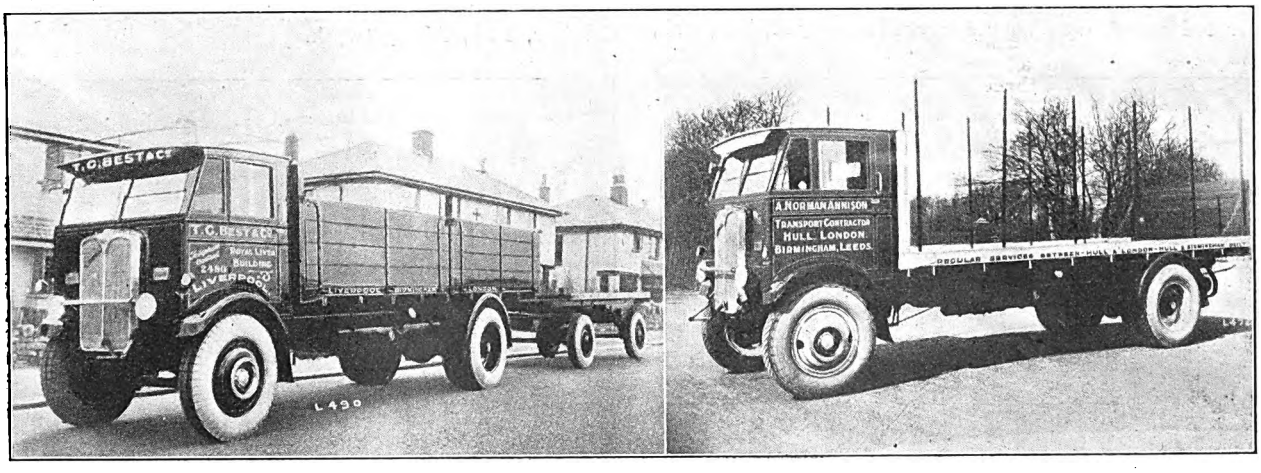
THE "KARRIER" VEHICLES REFERRED TO IN TEXT.

the forward drive type, and each has a cubic capacity of 500 cu. feet. A four-cylinder power unit of 31-47 is incorporated, and tyres are 34 in. by 7 in. single pneumatics. Six volt lighting sets are fitted and the vehicles are handsomely finished in dark green and gold. The six-wheeler supplied to the Rhosesmor Sand and Gravel Co., of Mold, North Wales, carries a steel-lined hydraulic three-way tipping body 16 ft. long by 7 ft. 6 in. wide by 2 ft. 6 in. deep. Sides and tailboard are hinged from top and the gear incorporated is a Bromilow and Edwards. Full-width driver's cab is fully enclosed and is exceptionally light and well ventilated. Colour scheme is in Post Office red with black mudguards and chassis, the latter being a standard production in every respect (60-82 h.p. engine, 14 ft. 6 in. wheelbase, 42 in. by 9 in. single pneumatics).

**Fords in German 10,000 km.**—In the gruelling 10,000 km. (about 6,250 miles) road race organised by the German Automobile Club, for standard touring cars, nine Fords participated and all survived the three-weeks' test. Eight premier awards were obtained, the remaining Ford entrant securing a second prize. Fords finished first in the most difficult sections of the race and the team prize, the highest award of the entire contest, was also secured.

**A Service that Satisfies.**—Messrs. J. A. Hunter & Co., of Liverpool, have in use two Commer lorries, one a 3/4 tonner which was purchased in 1916, and the other a showed wear were one or two of the gear box pinions. The lorry is now being converted to pneumatic tyres for still further service.

**Two Northern Deliveries.**—We illustrate two A.E.C. "Mammoth" heavy duty vehicles recently delivered by the A.E.C. Northern Distributors, Messrs. Oswald Tillotson (1929), Ltd. The lorry, supplied to T. G. Best & Co., of Liverpool, is of the standard high-sided type, the side boards being built in three sections, with detachable centre and rear stanchions. An interesting fitting (invisible in the photograph), is a front draw-bar which enables the trailer to be moved in and out of warehouses



LEFT: AN A.E.C. "MAMMOTH" LORRY WITH A RYBURN 6-TON TRAILER FOR T. G. BEST & CO., OF LIVERPOOL. RIGHT: ONE OF TWO A.E.C. "MAMMOTH" LORRIES SUPPLIED TO MR. A. NORMAN ANNISON, OF HULL.

where, owing to sharp corners, movement would be difficult with only a rear draw-bar available. The trailer is a Ryburn 6-ton model equipped with 36 x 8 ins. pneumatics. Our other photograph shows one of two similar type A.E.C. lorries delivered to Mr. A. Norman Annison, transport contractor of Hull. The flat platform body instead of having the usual chock rail, is built with angle iron girders. (These cannot be seen in the photograph because they are flush with the wooden sides of the body). Below the rail is a length of channel iron; this and the angle iron is slotted to take tall detachable stanchions. The tailboard is hinged and is lowered by means of chains.

**Thornycroft Repeat Orders.**—John I. Thornycroft & Co., Limited, Thornycroft House, Smith Square, London,

Digitized by Google

S.W.1, inform us that repeat orders continue to form a large proportion of their business in Thornycroft motor vehicles. Amongst those recently received are from the following:—The Belfast Co-operative Society and Boots Pure Drug Co., both of whom have ordered 3-ton six-wheelers; The Metropolitan Railway; The Talbot Serpell Transport Co., Ltd.; and Venture, Ltd., who have added to their fleet of Thornycroft passenger vehicles. The Haverfordwest Borough Council are a recent addition to the many municipal authorities who, within the last few months, have ordered Thornycroft low-loading refuse collectors.

**An Interesting Karrier "Cob" Outfit.**—Our photograph shows a Karrier "Cob" outfit which we are informed has

A KARRIER "COB" OUTFIT.

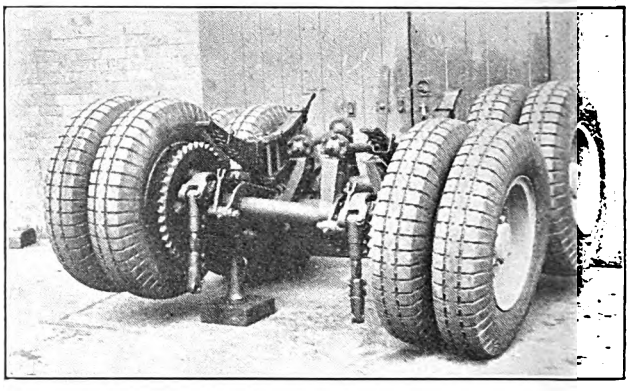
for some little time been operated most successfully by Messrs. Davenport, Ltd., of Birmingham. The picture is particularly interesting inasmuch as it shows a trailer which is not a conversion, but has been constructed entirely in the works of Karrier Motors, Limited, Karrier Works, Huddersfield. As will be seen, the design is such that the turntable of the trailer is equipped with a pair of swivelling wheels which are automatically raised from the ground by the action of coupling up to the tractor.

**Guy 3/4 tonner for John Bull Stores.**—The Guy 3/4 tonner illustrated has recently been delivered by Guy Motors, Ltd.,

A "GUY" FOR JOHN BULL STORES.

Fallings Park, Wolverhampton, to John Bull Stores, the large grocers in South Wales.

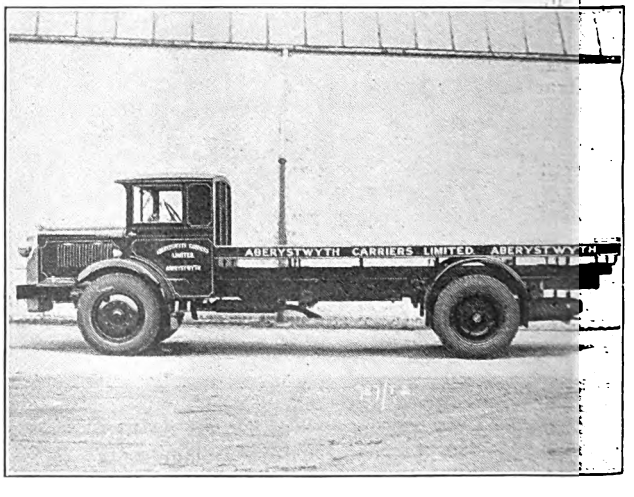
**The Rear Axle Bogie of the New Light "Sentinel" D.G.6. on Pneumatic Tyres.**—The twin axles are supported in spherical bearings in the bogie arms, which pivot on the centre axle on which attachment is provided for the springs. The chain drive from the engine is to the front pair of wheels on the bogie only. The four rear wheels run on taper roller bearings, the torque and braking reaction is transmitted through ball ended torque rods in the usual manner. The tyres are 40 in. by 9 in. and to ensure an even distribution of weight between the inner and outer of the twin tyres, the axles are arched so that on cambered roads there is an even distribution of weight between the tyres, thus eliminating a frequent cause of failure due to overloading of the inner of twin tyres. By fitting oversize tyres, distributing the pressure equally between the twin tyres and eliminating conduction of heat from the brakes, the tyres have an exceptionally long life. The twin axles provide a fully compensated bogie complying with the latest regulations for six-wheeled road vehicles and must not be confused with the system employed on some six-wheelers in which an additional axle provides partial compensation only. Very ample braking surface is provided and the dissipation of heat, to avoid distortion of the brake drums and deterioration of the tyres, is achieved by a number of deep circumferential fins cast on the outside of the drums themselves. Each



THE SENTINEL REAR AXLE BOGIE.

drum on the rear wheels contains four shoes working together in pairs, thus giving eight independent brakes on the four wheels. Four of these brakes are coupled together by compensating mechanism and are operated by a powerful ratchet lever at the driver's side. The other four pairs are applied by steam cylinders actuated by a pedal in the cab.

**A "Commer" for Aberystwyth Carriers.** — The G.6. (6 tons) flat platform lorry, which we illustrate, has recently been delivered by Commer Cars, Ltd., of Luton, through their Dealer organisation, to Aberystwyth Carriers, Ltd., Aberystwyth.



"COMMER" 6-TONS FLAT PLATFORM LORRY FOR ABERYSTWYTH CARRIERS, LTD.

**Story of the Tyre.**—Included in the exhibition held at Dublin recently in connection with the Two Hundredth Anniversary of the Royal Dublin Society was a comprehensive display of bicycles and tyres from the earliest to the most recent. The exhibit which was included in the historical industrial section was arranged as a graphic illustration of the development of the tyre industry with which Ireland is so closely related through John Boyd Dunlop the inventor of the pneumatic tyre. The organisation of the exhibit was carried through by the Dunlop Rubber Co., Ltd.

## County Court Judgments.

The following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

E. Blake, 15, Commercial Street, Sutton Road, Plymouth, horse and motor haulage contractor. £25/4/3. May 5th.

Chas. Green, East Creech, Dorset, haulage contractor. £35/17/4. April 10th.

Chas. Dennis Reader, Rose Valley, Kent View Road, Vange, Essex, haulage contractor. £81/14/7. May 11th.

F. S. Pedder, 186, East Barnet Road, East Barnet, Herts., cartage contractor. £79/13/6. May 16th.

— Richards, Gade Valley Cottages, Gt. Gaddesden, Herts., haulage contractor. £29/5/0. May 14th.

Harry Wood, 9, Carlton Terrace, Morecambe, Lancs., haulage contractor. £31/2/5. May 15th.

Thos. Westerman, Caravan, Littlefield Lane, Grimsby, transport worker. £26/3/1. May 13th.

Clark & Son, 16, Church Road, Teddington, Middlesex, haulage contractors. £26/13/2. May 5th.

Geo. Walters, 6, Cwm Rhos View, Tredegar, Monmouth, haulage contractor. £29/18/0. April 7th.

Wm. Clayton, Humphrey Street, Lower Gornal, Staffs., haulage contractor. £31/4/10. May 14th.

Arthur Jno. Marshall, 39, Florence Road, Smethwick, Staffs., haulier. £26/17/2. May 13th.

J. Proudlock, 24, Marston Road, Stafford, transport contractor. £34/9/6. May 8th.

Albt. Shore, 1, Canal Side, Etruria, Staffs., haulage contractor. £34/19/10. May 6th.

A. Grant, 33, Beacon Road, Holbrooks, Coventry, haulier. £26/8/10. May 6th.

Wm. Lay, Westrop, Highworth, Wilts., coal merchant and haulier. £44/12/5. May 14th.

Llewellan Owen, 168, Exeter Street, Bradford, Yorks., haulage contractor. £29/13/1. May 13th.

Thos. Warwick & Son, 396, York Road, Leeds, haulage contractors. £34/8/0. May 8th.

Edwin Greenslade, 30, Pwllcarn Terrace, Blaengarw, Glam., haulier. £35/11/1. May 15th.

Joseph Thorne, Old Mill, Coytrahen, Glam., haulier. £26/13/8. May 15th.

Robt. W. Hanks, 17, Stuart Road, Higher Tranmere, Cheshire, haulage contractor. £27/9/7. May 19th.

H. J. Tucker, St. Ive, Liskeard, Cornwall, haulier. £25/17/0. April 29th.

Walter Robinson, 35, Bradford Street, Accrington, Lancs., haulage contractor. £34/9/6. May 20th.

Ernest Light, Furnace Farm, Tintern, Monmouth, haulage contractor. £31/8/0. April 27th.

Harold Jackson, Clifford Avenue, Beeston, Notts., haulage contractor. £42/4/8. May 22nd.

S. G. Smalley & Son, 35, Blythe Street, Nottingham, haulage contractors. £36/5/1. May 20th.

S. J. Evans & Co., Gobowen, Salop, haulage contractors. £33/16/2. May 6th.

Frank Shaw, 25, Maple Road, Sutton, Coldfield, Warwick, haulier. £41/11/6. March 13th.

Fred Smith, Lloyd Street, Parkgate, near Rotherham, Yorks., haulage contractor. £33/8/3. May 18th.

H. C. France, 64, Banning Street, Greenwich, London, S.E., haulage contractor. £86/4/7. May 28th.

Walter Nelson Brotherton, Royce Road, Spalding, Lincs., haulage contractor. £82/9/2. April 20th.

Geo. Wm. Lomas, 209, Barnado Street, Stepney, London, E., haulage contractor. £47/4/1. June 2nd.

Wm. Geo. Berkeley, 47, Westfield Road, Yeovil, Somerset, coal merchant and haulier. £45/1/7. May 28th.

S. Clawson, 12a, Jamaica Road, Bermondsey, London, S.E., haulage contractor. £26/19/9. May 22nd.

W. A. Hughes, Bleakhouse, Bleakhouse Road, Warley, Worcs., haulier. £79/0/9. May 5th.

## The Gazette.

### Dissolutions of Partnership.

James Gwynne, Ivor James Gwynne, Roland William Thomas Gwynne, and Reginald Albert Gwynne, haulage contractors, Parkend, near Lydney, Gloucestershire, trading as Gwynne Bros. 15th June, 1931. All debts by Ivor James Gwynne and Rowland William Thomas Gwynne, who will continue as Gwynne Bros.

Harry Priestley and Fred Taylor Blackburn, haulage contractors, etc., Rosebud Walk, Leeds, trading as Priestley and Blackburn. 8th June, 1931. All debts by Harry Priestley, who will continue as Harry Priestley.

Charles Henry Mumby and George Henry Cutsforth, carting and forwarding agents, St. Andrew's Dock, Kingston-upon-Hull, trading as G. H. Cutsforth. 10th July, 1931. All debts by Charles Henry Mumby.

Charles Henry Chandler *and* Frederick Thomas Pearce, trading as H. Chandler & Son, 103, St. Paul's Avenue, Slough, and the Eagle Yard, Park Street, Slough. July 4th, 1931. All debts by Charles Henry Chandler, who will continue.

### The Bankruptcy Acts, 1914 and 1926.
### Bankruptcy Proceedings.

William Ernest Barker, 25, Petford Street, Old Hill, Staffordshire, coal haulier. Receiving order and order of adjudication, June 30th.

Harry William Thomas Furlonger, haulage contractor, etc., "Dereholm," Headley Road, Liphook, Hants. Receiving order and order of adjudication, July 2nd. Public examination, August 24th, at Portsmouth.

William John Brown, The Cottage, Exminster, Devonshire, formerly Cliff Cottage, Exminster, Devonshire, general haulier. Receiving order and order of adjudication, July 11th.

Thornton Drayton, 72, Hampton Road, Scarborough, Yorkshire, previously Reliance Garage, Hampton Road, Scarborough, garage proprietor and haulage contractor. Receiving order and order of adjudication, July 9th. Public examination, August 25th, at Scarborough.

Clarence Lucas Booth, Grimscote Mill, Cold Higham, Northamptonshire, haulage contractor. Receiving order and order of adjudication, July 15th. Public examination, October 2nd, at Northampton.

Harry Williams, "Char-Mont," 10, Burnham Road, Chingford, Essex, cartage contractor. Receiving order, July 15th.

George Williams, 18a, Perkins Beach, Minsterley, Salop, general haulier. Receiving order and order of adjudication, July 17th. Public examination, August 26th, at Newtown, Mont.

Alfred John Peters, West House, West Street, Havant, Hants., haulage contractor, etc. Receiving order and order of adjudication, July 20th. Public examination, October 5th, at Portsmouth.

### Amended Notice.

William Pinkney Nettleton, generally known as William Nettleton, 54, St. James' Street, Wetherby, haulage contractor. Order of adjudication, June 27th.

### Notices of Intended Dividend.

George Daley, Sen., 34, Wall Street, Ripley, Derbyshire, haulage contractor, etc. No. 41 of 1929. Claims to Leslie Arthur West, 22, Regent Street, Park Row, Nottingham, Official Receiver.

John William Taylor, trading as C. F. Taylor & Son, 1, Beauty Bank, Old Hill, Staffordshire, haulier. No. 18 of 1930. Claims to Andrew Martin Fairbairn, 1, Priory Street, Dudley, Official Receiver.

Ernest John Hills, 1, Primrose Cottage, Victoria Road, Upper Parkstone, Dorset, haulier. No. 38 of 1930. Claims to Frederick Harold Langmaid, Midland Bank Chambers, High Street, Southampton, Official Receiver.

### Notices of Dividend.

Squire Kirkham, Clwyd House, Crescent Road, Rhyl, Flintshire, carrier, etc. No. 38 of 1928. First and final of 8½d. in the £. Payable at the Official Receiver's Office, St. Peter's Churchyard, The Cross, Chester.

Frank Moore, William Street, Nelson, Lancashire, carrier. No. 14 of 1931. First and final of 2½d. in the £. Payable at the Official Receiver's Office, District Bank Chambers, Blackburn.

### Application for Discharge.

Francis William Wright, 9, London Road, Tetbury, Glos., haulage contractor, etc. August 19th, at Swindon.

# New Companies.

**Marston's (Garages), Limited.** (256,334).—Private company. Registered May 11th. Capital £1,000 in £1 shares. Objects: To acquire from A. C. Marston, F. J. Marston and H. Mackenzie the property known as 27/33, Bell Barn Road, Birmingham; and to carry on the business of garage keepers, haulage contractors, manufacturers of and dealers in motor cars and cycles, etc. The permanent directors are: A. C. Marston, F. J. Marston, H. Mackenzie. Secretary: H. Mackenzie. Registered office: 27/33, Bell Barn Road, Birmingham.

**Mac Carriers, Ltd.** (256,971).—Private company. Registered June 8th. Capital £10,000 in £1 shares. Objects: To acquire the business of haulage contractors, lorry owners and garage proprietors carried on by W. J. Mackeen and Mrs. E. A. Mackeen, trading as "Mac Carriers" at 3, Melville Road, Bournemouth. The permanent directors are: W. J. Mackeen, Mrs. E. A. Mackeen. Secretary: A. Hale, Waterloo Chambers, Firvale Road, Bournemouth.

**Border Roadways, Ltd.** (16,462).—Private company. Registered in Edinburgh June 10th. Capital £4,000 in £1 shares. Objects: To carry on the business of road transport contractors, etc. The directors are: Mrs. Mary I. J. Steedman, Lt.-Comdr. J. G. H. Steedman, F. C. Peirce, W. C. Dundas. Registered office: 6, Market Place, Selkirk.

**Holdsworth & Hansons, Ltd.** (257,033.)—Private company. Registered June 11th. Capital £2,000 in £1 shares. Objects: To carry on the business of haulage and removal contractors, carting agents, coal and corn merchants, salesmen and merchants of petrol, oil and kerosene, carriers of passengers or goods, etc. The first directors (to number not less than 2 nor more than 4) are: O. Holdsworth, C. Holdsworth, R. Hanson, D. Hanson. Registered office: 83, Maria Street, Shoreditch, E.C.

**George Wilson & Son (Pittenweem), Ltd.** (16,469).—Private company. Registered in Edinburgh on June 13th. Capital £3,000 in £1 shares. Objects: To acquire the business of haulage contractors now carried on by G. Wilson, Sen., and G. Wilson, Jnr., at Milton Road, Pittenweem. The directors are: G. Wilson, Jnr., J. Wilson. Registered office:—The Grange, Milton Road, Pittenweem, Fifeshire.

**Thos. P. Thomasson, Ltd.** (257,110).—Private company. Registered June 15th. Capital £1,500 in £1 shares. Objects: To acquire the business of haulage contractors, and coal, coke and breeze factors carried on by T. P. Thomasson and L. Thomasson at Greenside Lane, Droylsden, Lancs. The directors are: T. P. Thomasson, L. Thomasson (both permanent, subject to each holding 200 shares). Secretary: T. P. Thomasson.

**Tough and Henderson, Limited.** (257,148).—Private company. Registered June 16th. Capital £14,000 in 7,000 6 per cent. cumulative preference and 7,000 ordinary shares of £1. Objects: To acquire the business of a lighterman, tug and barge owner, as formerly carried on by the late R. N. Tough as "Tough & Henderson," at Blackfriars, Teddington, Brentford, Kingston and Woolwich. The directors are: H. S. Corney, A. W. Alchin, Bertha A. Tough, C. W. Pettitt (the two first named are managing directors). Secretary: H. S. Corney. Registered office: 53, Upper Ground Street, Blackfriars, S.E.1.

**North Star Omnibus and Coach Services, Ltd.** (257,143).—Private company. Registered June 16th. Capital £200 in £1 shares. Objects: To carry on the business of carriers of passengers and goods, etc. The directors are: W. T. Candler (chairman and managing director), A. W. Candler. Secretary: A. W. Candler. Registered office: 132, Letchmore Road, Stevenage, Herts.

**T. J. Metcalf & Sons, Limited.** (257,176).—Private company. Registered June 17th. Capital £500 in £1 shares. Objects: To adopt an agreement with T. J. Metcalf, Sen., and to carry on the business of ship and barge owners, lightermen, wharfingers, shipping agents, transport contractors, etc. The joint managing directors are: T. J. Metcalf (chairman), T. J. Metcalf, Jnr. Secretary: T. J. Metcalf, Jnr. Registered office: 370, Commercial Road, Stepney, E.1.

**Cowden Service, Ltd.** (257,150).—Private company. Registered June 17th. Capital £100 in £1 shares. Objects: To carry on the business of transport, haulage and cartage contractors, etc. The directors are: M. H. Baumer, J. L. Ford. Secretary: M. H. Baumer. Registered office: Goodtrees, Cowden, Kent.

**Carrington Haulage and Motor Company, Ltd.** (257,196).—Private company. Registered June 18th. Capital £3,000 in £1 shares. Objects: To acquire the business of haulage contractors and motor engineers carried on by F. McLeod and F. Wollen at Spalding, Lincs., as "The Carrington Haulage & Motor Company." The directors are: F. McLeod (permanent director and chairman), F. Wollen, Rachel McLeod and Mildred Wollen.

**Morris Transport Co., Ltd.** (257,284).—Private company. Registered June 22nd. Capital £1,000 in £1 shares. Objects: To acquire the business of a transport contractor now carried on by A. Morris at Church Road, Boldmere, Birmingham, including the motor lorries, motor cars, petrol pump tools and motor accessories used in connection therewith. The directors are: A. Morris, F. Morris, J. Morris. Registered office: Sycamore Saw Mills, Goosemoor Lane, Erdington.

**Tanganyika Transport Company, Ltd.** (257,286).—Private company. Registered June 22nd. Capital £4,000 in £1 shares (750 ordinary, 1,250 10 per cent. cumulative preference "A" and 2,000 6 per cent. cumulative preference "B"). Objects: To acquire the business now carried on at Lindi, Tunduru and Songea, Tanganyika Territory, E. Africa, as the Tanganyika Transport Co., to carry on the business of mechanical transport contractors, general carriers, railway and forwarding agents, etc. The first directors are C. W. Carnegie-Brown and G. M. Sibold.

**Tatnall Bros., Limited.** (257,334).—Private company. Registered June 24th. Capital £600 in £1 shares. Objects: To carry on the business of proprietors and letters on hire of motor omnibuses, motor cars, chars-a-banc, lorries, vans, etc. The directors are: E. Tatnall (permanent director and chairman), S. C. Tatnall. Secretary: E. Tatnall. Registered office: 182, High Street South, East Ham, E.6.

**Lewins, Knox, Prior, Ltd.** (257,327).—Private company. Registered June 24th. Capital £31,000 in £1 shares. Objects: To acquire the businesses of Lewins Brothers, Ltd.; Ralph Knox & Co., Ltd.; and J. M. Prior, and to carry on the business of haulage, transport and removal contractors, general carriers, transporters by land, air or water, etc. The permanent directors are: D. White, J. M. Prior, J. Lewins, jnr., T. Lewins, Caroline R. Knox, J. W. Adamson and N. H. Walton.

# Abolishing the Road Fund.

EVENTS have travelled so rapidly during the past few weeks that the report of the Committee on National Expenditure, known generally as the May report, is very largely overshadowed by more recent events, although at the same time it is continually cropping up as the last expression of the urgent need for drastic economy in all directions. Amongst the items scheduled by the Committee for serious reduction is that of the Road Fund and it is not a matter of surprise that this fund should have been included in the scheme put forward by the Committee and that it should have had meted out to it very drastic treatment. Put briefly, the Committee recommends that by means of postponing and slowing down of schemes and lowering of the present very high standard of maintenance the sum of £7,865,000 should be saved. In addition to this the Committee rceommends that the Road Fund should be abolished and the proceeds of all motor taxation should be left in the Exchequer and that all grants should be provided on annual parliamentary votes. This step would render necessary the re-consideration of extensive London schemes of Road development. Should these proposals be adopted it will mean the end of the Road Fund as such.

The Fund has had a chequered career and principally owing to the great success which it has attained it has been the victim of successive raids which have ended in crippling its activities and have destroyed its financial stability. The fund was formed in the first place, to provide money to be spent on the improvement of roads and as the monies were provided by means of a tax on motor vehicles, it was agreed by the Chancellor of the Exchequer in the Government, which passed the tax, and confirmed by subsequent Chancellors that the whole of the proceeds should be devoted to road improvement. This proviso was carried out for several years and large programmes of road development and improvement were put in hand by the Ministry of Transport. These schemes were spread over a number of years and it followed that although the commitments outstanding were very high, amounting in March, 1926, to over £30,000,000, at that date there was a cash balance belonging to the Road Fund of £19,512,000. The then Chancellor of the Exchequer looked with greedy eyes at this balance and in spite of protests decided to transfer £7,000,000 of the accumulated balance to the Exchequer in order to help him meet the large deficit on the year's budget. At the same time substantial changes in the finance of the Road Fund were made; duties were increased and a considerable proportion of the existing duties were permanently assigned to the Exchequer. The following year another and larger raid on the Fund was committed. The Chancellor of the Exchequer transferred the large sum of £12,000,000 leaving only a balance of £259,000 to the credit of the Fund, although the total commitments were then estimated at over £27,000,000. In doing so the Treasury undertook to make any necessary advances required to finance the Road Fund each year until its revenue came in. Further changes in the system of motor taxation were made in succeeding years, the most important being a duty of 4d. a gallon on petrol, later on increased to 6d. a gallon.

It will thus be seen that the Road Fund has been diverted from its original purpose and has now become a source of direct revenue to the Treasury.

Another factor which impressed the Committee was the fact that the Road Fund was being used primarily as a means of promoting large schemes for assisting to reduce unemployment, such schemes being adopted and put in operation without coming before the Treasury for sanction. It is well-known that many of the largest schemes have been carried out mainly from an unemployment point of view rather than from the need for new roads. The Labour Government had steadily increased the number of road works of this character and had in hand a five years programme, estimated to cost £27,500,000 and a trunk roads programme estimated to cost £21,000,000, in both cases these schemes to have grants from the Road Fund of 75 per cent. or more of the nett cost. The total commitments amounted on March 31st last, to roughly £60,000,000. The Committee drew the conclusion that by March, 1936, there would be a deficit of £30,000,000.

This being the position the Committee recommended as already mentioned, the abolution of the Fund and placing expenditure of Road grants on the annual votes of Parliament.

It is no use crying over spilt milk and the position of our national finances is so serious that we must expect

Digitized by Google

developments of all kinds to be suspended and every kind of undertaking specially investigated and if thought to be unessential to be terminated. The Road Fund has done exceedingly good work and it is to be regretted that while the growing requirements of the National Exchequer have forced the Chancellors of two Governments to take large sums from its resources, at the same time its legitimate work has been exceeded and a great deal of the money has been spent on schemes which should have been correctly ear-marked as unemployment schemes. It is incredible that the work of road improvement and road development should be stopped and although as a temporary measure some of the schemes may be dropped, yet it may in the long run have good results, if more care is taken to see that all monies expended are employed to good effect and with the utmost regard to economy.

**Co-operation between Rail and Air.**

IN this issue we give some interesting particulars of the agreement entered into earlier in the year between the railway companies of this country and Imperial Airways, Ltd., whereby the two methods of Transport would co-operate in sending freight from all parts of this country to other parts of the World. Any scheme of this kind must necessarily take a long time before it attains sufficient growth to make it a profitable undertaking, as the general and trading public is very slow to adopt new ideas, but the period which has elapsed has shown that there is room for such an organisation and it will undoubtedly grow year by year, as a means of transporting freight in the quickest possible time. The scheme is for the railways to bring over their systems, goods from all the big centres which they cover, to their London termini; these goods are then collected by Imperial Airways and taken by road to the air port at Croydon, where they are loaded into one of the aeroplanes carrying out services to all parts of the Continent and to other parts of the World. It is easy to visualise the organisation brought about by the collaboration of two systems, trains bringing goods from provincial centres to the metropolis, where motor vehicles are waiting to carry them with all speed to Croydon. Large freight-carrying aeroplanes are there waiting to be loaded up and proceed without delay on their journey by air to places overseas where the goods are at once trans-shipped either to road vehicles or to railways for delivery to destination. This is an instance where the two forms of transport can work in harmony, each covering its own special field without antagonism, and with goodwill on both sides the revenue should rapidly grow and at the same time foreign trade should be encouraged.

**Establishing the C.I. Engine.**

ON Thursday and Friday last week there were demonstrated in the Hyde Road Works of the Manchester Corporation Tramways Department, six different makes of compression ignition heavy oil engines, suitable for use as power units for motor buses and industrial transport generally. This is, as far as we are aware, the first exhibition of its kind and will undoubtedly do a great deal towards popularising this type of engine. It is not going to supplant the petrol engine all in a moment, but certainly the tendency is in that direction. For most power purposes the C.I. engine has long been established as a trustworthy and economical prime mover. It is only in cases where compactness and comparatively light weight are requisite, such as is the case with road and air transport vehicles, that the C.I. engine may be regarded as being still in its experimental stage. By "experimental stage" we do not mean that engines of this type at present on the market are unreliable, quite the contrary in fact, but their manufacturers are fully aware that there is much room for improvement. In this category also there falls the petrol engine, the manufacturers of which by no means despair of bringing it to a stage of efficiency showing economy in fuel equal to that of their new competitor. They are handicapped however, by the swinging tax on petrol now no less than 8d. per gallon, which in itself is greater by far than the cost of a gallon of fuel oil. It is not only in the cost per gallon of fuel, however, that the C.I. engine is favoured. A gallon of fuel oil provides a greater ton mileage than a gallon of motor spirit, therefore, the two combined economical advantages in favour of the C.I. engine are bound to add greatly to its popularity. In the early stages of development the C.I. motor engine was handicapped by its lack of ability to accelerate as efficiently as the petrol engine, and it was comparatively dirty, smelly and difficult to start. The first three of these adverse qualities have been eliminated to such a degree that one may ride in a C.I. engined vehicle and not be aware that the power unit is other than the ordinary petrol engine. The starting difficulty also is being overcome and though in some instances a starter petrol motor is carried, it is rapidly becoming an emergency provision rather than a necessity. The speed of development, or shall we say the speed of the adoption of the C.I. engine will depend to a great extent on the speed of development of "service." The entire country at the present time is splendidly equipped with garages and service stations, entirely devoted to the service of the petrol engine, and it will be necessary for the progenitors of the C.I. engine to persuade the proprietors of these service stations to extend their service to the C.I. engine. This will not be difficult because the main difference between the two types of engines lies in the fact that a pump, or battery of pumps, takes the place of the petrol carburetter, and the fuel combustion in the heavy oil engine is spontaneous instead of having to be ignited by an electric spark or otherwise. Therefore the matter of service development is a comparatively simple affair, needing only a little encouragement. Unless something very unlooked for occurs, such as some very remarkable discovery, rendering the petrol engine far more economical than is now the case, the C.I. engine will continue to grow in favour for commercial transport, and it is evident that all the leading heavy commercial motor manufacturers are preparing for such a change in fashion which the new additional petrol tax must, of necessity, accelerate.

**The Supplementary Budget.**

JUST as we go to press the Chancellor of the Exchequer has placed before the House of Commons his scheme for balancing the Budget and producing next year sufficient additional revenue, which, coupled with economies of various kinds, will enable the country to meet an estimated deficit of £170,000,000. The call for equality of sacrifice which has been on the lips of the Prime Minister since the crisis became acute is carried out in the new Budget, and all classes and all industries will feel the increased burden which has been placed upon them. Road transport, which is already taxed to an almost overwhelming extent, has to face an increase of 2d. per gallon in the duty on petrol, a serious additional charge on running costs. Road users will also feel the effect of the slowing down of road improvement schemes which will result from the considerable reduction in the amount to be expended on such schemes. These are specific items of the Budget which the transport industry will have to reckon with in addition to the general increased taxation which in common with all others it will have to share. If times were normal there would undoubtedly be a tremendous outcry at the fresh burdens placed on the shoulders of the transport industry, but in this time of national crisis we feel sure that the members of the trade will bear any taxes which are necessary to place the finances of this country on a firmer foundation.

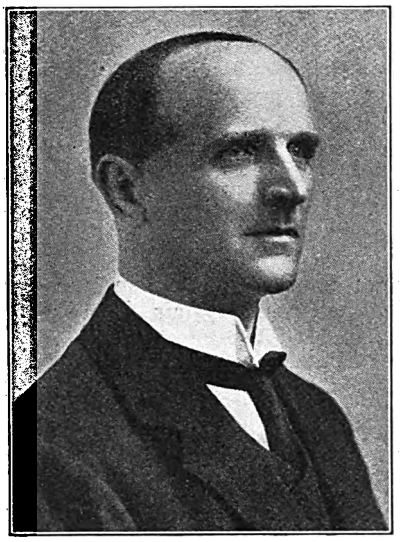
# Personal Notes.

**The New Minister of Transport.**—Mr. P. J. Pybus, C.B.E., M.P., has been appointed Minister of Transport in the National Government. The new Minister is Chairman of the Power and Traction Finance Co., Ltd.; Joint Deputy Chairman of Phœnix Assurance Co., Ltd.; Director, Times Publishing Co., Ltd.; Associated Portland Cement Manufacturers, Ltd., and English Electric Co., Ltd. Mr. Pybus is Liberal member for the Harwich Division of Essex. He has served on the Royal Commission on the Civil Service, Development Public (Utility) Advisory Committee, Committee of Education for Salesmanship, and Unemployment Grants Committee; Advisory Committee of Department of Overseas Trade and Committee on Industry and Trade.

**Mr. M. Hewitt's New Appointment.** — As announced briefly in our August issue, Mr. Mark Hewitt, L.M.S. Goods Agent at Leicester, has been appointed Goods Agent at Broad Street, London. Mr. Hewitt, who is a native of Mallerstang, has had a wide experience of all classes of goods station working. He served the old Midland Company at Colne, Lancashire, Derby, Manchester, etc., and prior to the amalgamation of the railways he was Parliamentary Clerk to the Chief Goods Manager at Derby, after which he was appointed Goods Agent at Camp Hill, Birmingham. Mr. Hewitt takes a keen interest in all phases of railway operation. He has been lecturer in economics and railway subjects to two educational authorities, and was one of the first members of the permanent committee set up by University College, Nottingham, to promote extra mural university education.

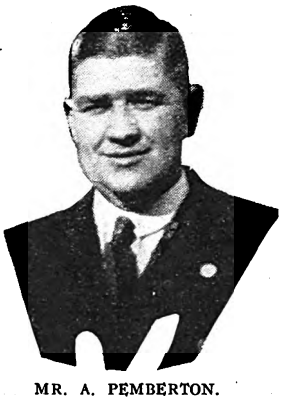


MR. MARK HEWITT.

**Worshipful Company of Coachmakers.**—At a recent meeting of the Court of the Worshipful Company of Coachmakers the following gentlemen were elected to office for the ensuing year:—Mr. Sydney Norris, F.I.B.C.M.—(Master); Mr. A. F. Farish—(Senior Warden); Mr. S. F. Connolly—(Renter Warden); Mr. J. D. Siddeley, C.B.E.—(Junior Warden).

**L.M.S. Appointments.**—Captain James White Harris, R.N.R. Marine Superintendent of the Booth Lines, Liverpool, has been appointed Chief Marine Superintendent of the London, Midland and Scottish Railway. Other appointments are:—Mr. J. H. Robinson, Assistant Divisional Superintendent of Operation, Crewe, to be District Passenger Manager, Liverpool; Mr. S. E. Parkhouse, District Controller, Willesden, to be Assistant Divisional Superintendent of Operation, Crewe; Mr. J. A. C. Picknell, District Controller, Rugby, to be District Controller, Willesden; Mr. G. R. Parker, District Controller, Patricroft, to be District Controller, Warrington; Mr. C. E. Fry, Passenger and Parcels Agent, Huddersfield, to be Station Master, Huddersfield; Mr. E. J. Trafford, Goods Agent, Penrith, to be Goods Agent, Lancaster; Mr. S. O. Cotton, District Engineer, Bradford, to be Divisional Engineer, Manchester; and Mr. J. Alexander, Assistant to Divisional Engineer, Manchester, to be District Engineer, Bradford.

**Avon's New London District Manager.**—Mr. A. Peake-Jones left the London offices of the Avon India Rubber Co., Ltd., at the end of last month to join another company after successful years as District Manager and Advertising specialist. He is succeeded as London District Manager by Mr. Arthur Pemberton, who has almost completed 21 years with the Company—he joined them in February, 1911. He has been Manchester and District Manager for the last five years, with duties taking him over several counties; previously he was Manager of Newcastle branch for four years, and prior to that was with Mr. Webster when the latter was Manchester District Manager. He has indeed played his part in the great progress made by Avon Tyres and other rubber products, and has found time for much valuable work—in connection with The Motor-Cycle & Cycle Trades Benevolent Fund; he was one of the Manufacturers' Group on the East Lancs. & Cheshire Division M.T.A. Committee; an officer of the Incorporated Sales Managers' Association, Manchester Branch. Highly esteemed all over the North for many reasons, he should be equally popular in his new sphere.



MR. A. PEMBERTON.

**Coventry Climax Developments.**—We are informed that Coventry Climax Engines, Ltd., Friars Road, Coventry, has arranged an extensive programme of development, involving the manufacture of engines for cars, goods vehicles and passenger vehicles, whilst a series of engines for industrial purposes is also included in the range. Several important contracts have, we understand, already been secured. In order to carry out this programme the works and staff have been re-arranged, and Mr. J. W. Mills, M.I.A.E., M.S.A.E., has been appointed General Manager, and Mr. W. P. Riley, Works Manager. Both these gentlemen have had a long association with the motor industry, and Mr. Mills has had long commercial-vehicle experience. Mr. H. D. Turner, who has been with the Company for a number of years, will continue as an active director and have control of sales. Mr. H. Hayward has resigned his position with the Company.

**Death of Mr. R. L. Horsfield.**—We deeply regret to announce the death of Mr. Robert Lund Horsfield, General Manager of the Leeds Corporation Tramways and Transport Services since 1928. Mr. Horsfield was for seventeen years Manager of Walsall Corporation Tramways, and for eight years prior to going to Leeds, General Manager of the Cardiff Tramways. In 1926 he was President of the Municipal Tramways and Transport Association.

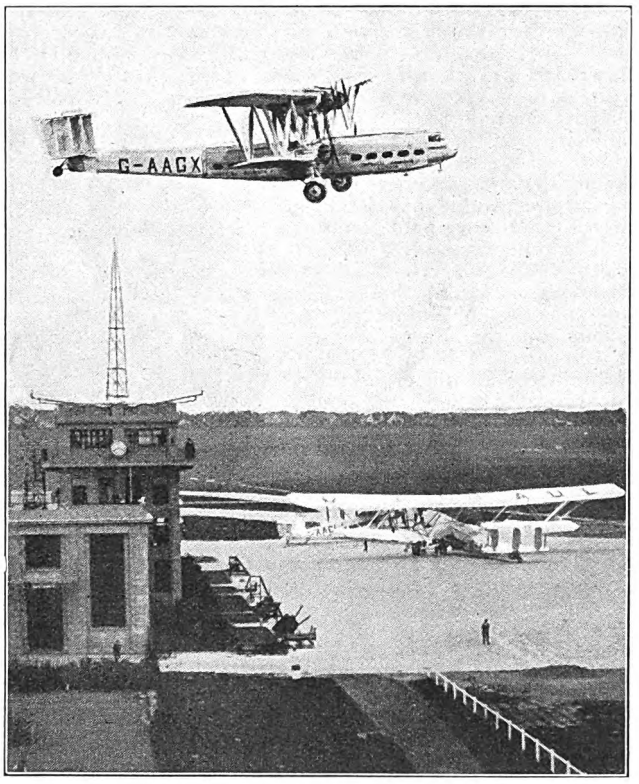
# Transport of Freight by Combined Rail and Air Services.

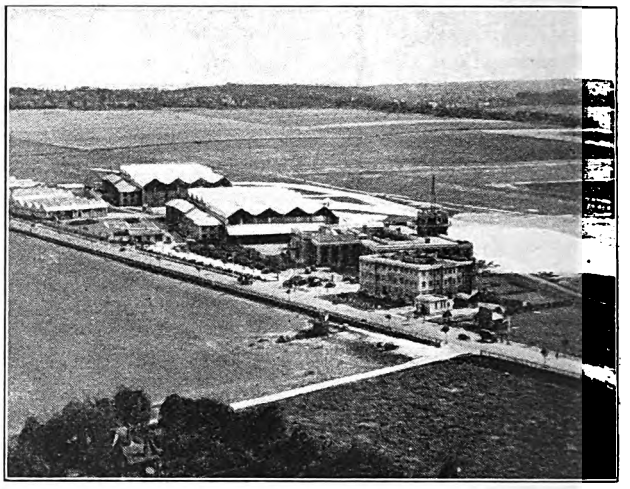
IN the early part of this year an agreement was made between the Railway Clearing House acting on behalf of the Great Western, London and North Eastern, London Midland and Scottish, Metropolitan, and Southern Railway Companies, and Imperial Airways, Ltd., for the transport of freight by combined rail and air services.

The scheme has, therefore, only been in operation for a very short time, but some particulars of the arrangements entered into will be of interest to our readers.



ONE OF IMPERIAL AIRWAYS FLEET "HANNIBAL" ABOUT TO LAND.

The railway companies are agents of Imperial Airways, Ltd., both for receiving from Imperial Airways, Ltd., and forwarding to destination, merchandise imported into Great Britain from abroad and for receiving merchandise for export and transferring it to Imperial Airways, Ltd. This means that the railway companies will act as collection and delivery agents for continental and foreign traffic from all parts of this country, transferring the freight to Imperial Airways, Ltd., for dispatch



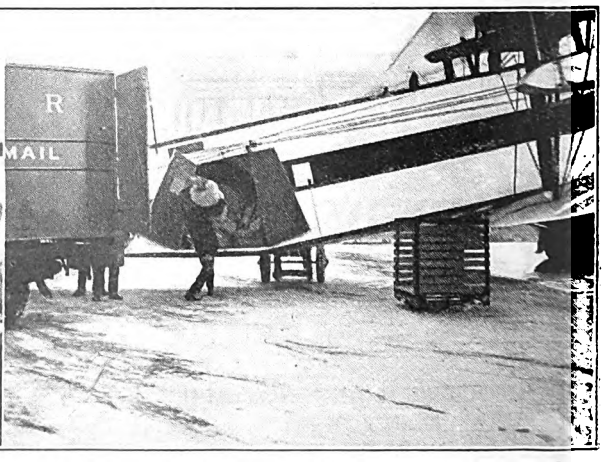
AERIAL VIEW OF CROYDON AIRPORT.

by air to destination abroad, or receiving from Imperial Airways, freight which has come by air from other countries.

LOADING SPECIAL FREIGHT AT CROYDON.

All freight carried partly by rail and partly by air will travel throughout its journey under the conditions of the International Air Traffic Association consignment

LIVE STOCK FOR ABROAD.



LOADING MAILS DIRECT FROM MOTOR VAN TO AEROPLANE.

Digitized by Google

note, and such note will be signed by the Consignor before the dispatch of the merchandise.

As the Air Port is at Croydon, Imperial Airways undertake to collect export traffic from and deliver import traffic to the London termini or Croydon, as the case may be.

A scale of Through Rail and Air Freight Rates has been agreed between the Railway Companies and Imperial Airways, Ltd. The arrangements for C.O.D. terms are that no consignment of merchandise will be accepted when the value of the C.O.D. exceeds £40. The insurance arrangements are made by Imperial Airways, Ltd., and will apply throughout the journey.

Freight arriving at Croydon consigned to provincial towns, whether carried by Imperial Airways or any other Air Company who wishes to come into this arrangement, will be cleared through Customs at Croydon by the carrying Company and then handed over to Imperial Airways' Freight Department for forwarding. The arrangement with the Railway Companies will be made by Imperial Airways, who, in their turn will deal with the other Air Companies. That is, the Railway Companies will only know Imperial Airways in the matter.

This arrangement between the Railway Companies and Imperial Airways, Ltd., is an exclusive one, Imperial Airways, Ltd., having undertaken not to enter into a similar scheme with the Road Transport interests.

# Institute of Transport.

## Forthcoming Meetings. Session 1931-32.

**Mr. Frank Pick** will deliver his Presidential Address at the Opening Meeting of the Institute of Transport to be held in London at 5.30 p.m., on Monday, October 12th, next.

Other Sessional arrangements are:—

ORDINARY MEETINGS.

*(Mondays at 5.30 p.m., unless otherwise stated, at the Institution of Electrical Engineers, London).*

1931.

Nov. 9th—Annual General Meeting to be followed by joint meeting with the Town Planning Institute.
"Liaison between Transport and Town Planning," by J. Paterson, M.C. (former Member of Council).

Dec. 14th—"English port ownership and control" by D. Ross-Johnson, C.B.E. (Member of Council).

1932.

Jan. 11th—"Mechanised marshalling yards; their development and effect on operating," by H. H. Mauldin (Member of Council).

Feb. 8th—"The problem of road finance in its relation to central and local government, and road users," by A. Hacking, D.S.O., M.C. (Member), and W. Rees Jeffreys.

March 14th—"Colour light signals in relation to multiple aspect and manual block signalling," by A. F. Bound (Member of Council). Joint meeting with the Institution of Railway Signal Engineers.

April 11th—"Classification of merchandise; origin and application," by G. H. Wheeler (Member).

LECTURES AND INFORMAL MEETINGS.

*(Tuesdays at 6 p.m., unless otherwise stated, at the Institution of Electrical Engineers, London).*

*Special Lecture for Metropolitan Transport Students.*

1932.

Feb. 16th—"The general principles of an efficient system of transport accounting," by Sir Arthur Lowes Dickinson, M.A., F.C.A.

LECTURES FOR GRADUATES AND STUDENTS.

1931.

Oct. 20th—"Transport of goods by railway: its present limitations," by H. W. Payne.

Dec. 15th—"Competition and co-ordination in transport," by Professor Arnold Plant (Associate).

1932.

April 19th—"Transport developments in 1931," by R. Bell, C.B.E. (a Vice-President).

INFORMAL MEETINGS.

1931.

Nov. 17th—"Bus traffic publicity," by W. H. Gaunt, O.B.E. (a former Vice-President).

1932.

Jan. 19th—"Railway freight rates, 1950," by G. J. Ponsonby (Associate).

March 15th—"Is the speed factor detrimental to the economic development of transport?" by F. Godin.

# Institute of Transport.

## Metropolitan Graduate and Student Society.

**Chairman:** A. G. Course, A.M.Inst.T., F.R.A.S., A.I.N.A. (P.L.A.).

**Honorary Auditors:** D. W. Aldred, A.M.Inst.T. (Met. Rly.); C. A. Butts, Grad.Inst.T. (S.R.).

**Programme. Session 1931/32.**

Oct. 27th, 1931. Inaugural Meeting. Address by the President of the Institute (Mr. Frank Pick).

Nov. 3rd, 1931. "International Traffic Arrangements" by A. H. Earley.

Dec. 1st, 1931. "The Development of Friendly Relations between the Public and the Railways" by F. L. Hick.

Jan. 5th, 1932. Discussion of Examination Questions. Mr. C. E. R. Sherrington in the Chair.

Feb. 2nd, 1932. "Organisation of an Industrial Transport Department" by G. Barker.

March 1st, 1932. Debate: "That the economic life of the Community would benefit by the extension of facilities for waterborne traffic as opposed to those of Land Transport." Chairman: R. E. Morley; Affirmative: F. Godin; Negative: E. E. Potter.

April 5th, 1932. "Railway Transport in Italy" by F. Oswald Waite.

May 3rd, 1932. Annual General Meeting.

Meetings are held at 6 p.m. at the Institution of Electrical Engineers, London.

# Irish Free State Road Traffic Bill.

THE text of the Irish Free State Road Traffic Bill, 1931, was issued on August 18th, by the Minister for Local Government. This Bill was introduced in Dail Eireann on July 17th, and is down for second reading when the Dail meets in October. The Bill is divided into eleven parts, each concerned with a separate section, such as the classification of mechanically propelled vehicles, licences to drive and control such vehicles on the public roads, speed limits, compulsory insurance, certificates of competency, regulation of control of public service vehicles, street service vehicles, the lighting of vehicles, and other matters relating to the using and operating of vehicular traffic, all vehicles for public hire in the Free State being included in the scope of the Bill. The regulations proposed in respect of the insurance of all vehicles, including third-party insurance, are an important feature of the Bill, and the licensing of drivers receives a considerable share of attention. In this connection it may be mentioned that in the Free State there are altogether some 67,000 drivers. The number of private motor cars in the Free State is 32,632; motor cycles, 7,039; commercial vehicles, 7,558; locomotives 603; omnibuses, 722: chars-a-banc, 42; and small hackney-cars, including taxi-cabs, 5,150. The Bill provides that no bus will be permitted to run except on an approved road suitable for such a vehicle, and that every vehicle with seating accommodation for more than fourteen persons, must carry a conductor, who must also be licensed as well as the driver.

# Proposal to Abolish the Road Fund.

## Committee on National Expenditure.

THE Report of the Committee on National Expenditure, presided over by Sir George May, contains the recommendation that the Road Fund should be abolished, the proceeds of all motor taxation being left in the Exchequer and all grants being provided on Annual Parliamentary Votes, and it is pointed out that the postponement and slowing down of schemes and lowering of the present very high standard of maintenance will result in a saving to the Exchequer in a full year of £7,865,000.

The Road Fund, or as it was first termed, the Road Improvement Fund, the Report states, was instituted to provide a continuing fund out of which grants might be made for the improvement of roads. It was fed by the produce of excise duties on car licences and a customs duty on petrol. In 1920 the Fund was reconstituted on a much wider basis. The petrol duty, which had during the war been transferred to the Exchequer, was abolished and the licence duties on motor cars were greatly increased, the scope of the Fund being at the same time widened to include the maintenance as well as the improvement of roads and certain ancillary services in addition.

The development of serious unemployment soon after the reconstitution of the Fund led to the launching of a series of special programmes of road works with assistance from the Fund to provide employment, and the revised estimates of the cost of these programmes to the Road Fund and the Exchequer up to March 31st, 1930, gave a total of £36,412,695. The total estimated cost of the schemes to which these contributions have been offered amounts to approximately £56,500,000 and the contribution from public funds is approximately £36,400,000, the balance being found by local authorities. The schemes included in these programmes did not differ in essential character from road work that was being aided under the normal operations of the Fund: the main difference lay in the magnitude of the schemes and in the high proportion of the cost met from the Road Fund. From 1925 to 1929 the practice of earmarking special schemes as unemployment works was discontinued but it has been resumed and greatly extended by the Labour Government.

The Budget of 1926 made substantial changes in the finance of the Fund. On the one hand the licence duties on certain types of vehicles were increased. On the other, one-third of the proceeds of the duties on private motor cars and cycles was permanently assigned to the Exchequer as being of the nature of luxury taxation, the two-thirds allocated to the Road Fund being regarded as an appropriate charge for road user. At the same time £7,000,000 of the accumulated balance was transferred to the Exchequer to assist in meeting the exceptional budget difficulties of the year and the Fund assumed the liability for grants that had been made for roads by the Unemployment Grants Committee, then roughly £1,000,000 per annum.

On the 31st March, 1927, the balance to the credit of the Fund stood at £12,259,000 with total commitments estimated at £27,187,000. Owing to the fact that roughly two-thirds of the revenue of the Fund is received in the last quarter of the financial year (i.e., the first quarter of the calendar year) a balance of this amount was not in excess of cash requirements. Nevertheless, Budget difficulties being still acute, a further £12,000,000 was transferred to the Exchequer, the Treasury undertaking at the same time to make any necessary advances required to finance the Fund each year until its revenue came in.

Still further breaches were to follow in the system under which motor taxation was to be applied towards meeting the cost of roads. In 1928 a Customs duty of 4d. a gallon was imposed on petrol in connection with the great scheme of rating reform of that year, the proceeds of the duty being allocated to the Exchequer to assist in meeting the heavy cost of the scheme. That scheme substituted a system of block grants for a number of the existing percentage grants, including the grants theretofore made from the Road Fund towards the maintenance of classified roads in London and the County Boroughs and non-classified roads in other areas. An amount equal to the discontinued grants was charged upon the Road Fund as a contribution towards the block grants and in addition the Fund was required to contribute £3,000,000 per annum towards the increased grants that were being made to local authorities to allow for the growth of the block granted services. The total amount so charged on the Road Fund is £6,475,000 per annum. Finally in the current year the Customs duty levied on petrol for general revenue purposes has been increased from 4d. to 6d. a gallon.

The Report continues:—

We have already referred to the revival by the present (i.e., Labour) Government of special unemployment programmes of road works. Two main programmes have been announced:—(i) Five years' programme of works costing £27,500,000; (ii) Trunk roads programme of works costing £21,000,000 with grants from the Road Fund in both cases usually of 75 per cent. or more of the net cost. These grants are additional to any liabilities that have been accepted in connection with London schemes, particularly for cross river traffic. The total commitments outstanding under all these various schemes amounted on 31st March last to roughly £60,000,000.

In view of the long recital of decisions almost without exception tending to impair the solvency of the Fund, it is not surprising to find its finances now in a most unsatisfactory state.

The Report then proceeds to refer to a table supplied by the Ministry of Transport showing the estimated position under existing policies over the five years 1931-1936, and the Committee points out that if provision for interest on the outstanding debt be included, every year of this quinquennium shows a deficit, the debt rising to over £30,000,000 and this includes nothing for the Charing Cross Bridge Scheme which with its approaches is estimated to cost the Road Fund over £10,000,000.

As it is now being administered, the Report states, this Fund has become a liability on the national finances and in the view of the Committee drastic action is necessary to remedy the position. First among the steps the Committee recommend is the abolition of the Fund and placing expenditure on road grants on the annual votes of Parliament. There is no longer any clear cut division between road finance and the general budget either on the revenue or on the expenditure side: the term "Self-supporting Service" is now clearly a misnomer: but what impresses the Committee most of all is the wholly inadequate financial control that is being exercised over road expenditure. It is far easier to get £1,000,000 spent on roads than £100,000 on any service requiring express Parliamentary sanction. The Committee do not blame the Treasury for this state of affairs, though Treasury sanction is necessary for all expenditure from the Road Fund. Rather do they regard it as the natural consequence of a system that allocated a rapidly expanding revenue to a particular service irrespective of the needs of the service and with no power reserved to Parliament to check its growth.

In recommending that expenditure on roads be brought under Parliamentary control the Committee say it is recognised that much of it is necessary expenditure required to provide for the economic development of the country, but they cannot shut their eyes to the evidence on every side of heavy outlay on what they have termed "amenity development," development largely serving the needs of pleasure traffic in so far as it is required at all by present traffic. But it is not enough merely to bring road finance under Parliamentary control: the budgetary position demands that that control should be rigidly exercised to eliminate unessential schemes where possible and in other cases to slow down the rate of expenditure to something more nearly approaching what we can afford. The estimated expenditure for 1932 is £34,340,000, including £6,475,000 for the contribution to the Block Grant. This £6,475,000 would, under the Committee's proposal, be voted in future as part of the General Exchequer Contributions to Local Revenue in Class X Votes 1 and 2 of the Civil Estimates. The Committee recommend that the balance of the Road Fund estimate, viz., £27,865,000 be reduced at least to £20,000,000 for each of the next two years.

A limitation of the Vote to £20,000,000 for the next two years will involve the postponement of many schemes already approved in principle and the slowing down of many others. It should also involve some lowering of the present very high standard of maintenance. As regards new commitments for the future the Committee recommends a very cautious policy, at any rate until existing liabilities are well on the way to being liquidated.

# C.I. Engine Chassis Demonstration.

THE Municipal Tramways and Transport Association (Incorporated) held its Annual Meeting of the Managers' Section at Manchester on September 10th and 11th. In connection with this meeting a Demonstration was held of different types of compression ignition engine chassis at the High Road Workshops of the Manchester Corporation Transport Department. The following firms took part in the Demonstration:—1. Associated Equipment Co., Ltd.; 2. Blackstone & Co., Ltd.; 3. Crossley Motors, Ltd.; 4. Leyland Motors, Ltd.; 5. Norris, Henty & Gardner, Ltd.; 6. T.S. Motors, Ltd.; 7. John I. Thornycroft & Co., Ltd.

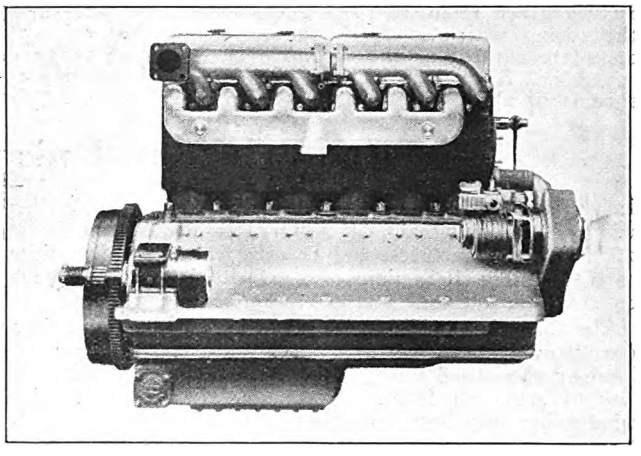
The following are brief particulars of the engines demonstrated:—

**Associated Equipment Co., Ltd.** This firm showed a chassis fitted with an A.E.C. Ricardo 130 h.p. high speed oil engine which is the result of over three years intensive research work on the part of members of the A.E.C. Technical Staff and many long duration service tests. It was thought to produce an engine to develop a range of speed equal to that of the petrol power unit. The firm claims that they have largely achieved their aim as this engine speed is up to 3,000 r.p.m. and for ordinary travelling speed 2,000 r.p.m. is normal. The further claim for this engine is that it is comparatively light. The engine is a six-cylinder unit, 115 mm. bore by 142 mm. stroke, giving a swept volume of 8.85 litres, and the weight complete with all accessories 1,400 lbs. In design the unit is similar to a modern high class petrol engine. The cylinder is a monobloc casting. There are two cylinder heads fitted, each covering three cylinders. The heads carry the valves and valve rockers and the combustion chamber. A single cylinder head cover is fitted over the two heads and incorporates the air intake manifold. The crankshaft has seven main bearings 85 mm. diameter and the crank pins 75 mm. diameter with webs of corresponding proportions and the shaft is dynamically balanced. The pistons are of heat treated aluminium alloy, and are provided with three pressure and two scraping rings. The connecting rods are of drop forged alloy steel of the usual section. Lubrication is by a gear type pump with a patented device for providing a supply of low pressure oil to the valve gear. The valves are operated through push rods and rockers to the camshaft which is inside the crankcase. The fuel pump and injectors are Standard Bosch and equipment and work at an injection pressure of 1,000 lbs. per sq. in. A special exhaust pump, driven at half engine speed in tandem with the fuel pump, is fitted for brake operation. The exhauster maintains a vacuum of 22-24 ins. mercury on a tank carried inside the frame, and thus does away with the necessity for throttling the engine intake and fuel cut-off when the brakes are applied. The electrical equipment consists of twin 24-volt generators driven in tandem and a C.A.V. Bosch electric starting motor. All auxiliaries are mounted on the near side of the engine.

**Blackstone & Co., Ltd.** This firm showed a six-cylinder crude oil engine developing 60 b.h.p. at 1,000 r.p.m. This was shown on a stand and there was a similar engine fitted to an old Leyland chassis. These Blackstone engines work on the "Spring Injection" system. By this method the fuel is introduced by a separate injector placed at the top of each cylinder, and it functions correctly irrespective of the engine speed. The full injection pressure is not applied until the charge of the fuel oil is imprisoned in the injector block thus avoiding the necessity for an external high pressure fuel system. Fuel is led to the injectors by means of a manifold situated in the cylinder heads and drainage from each injector is collected in a duplicate manifold and returned to the fuel tank. The engine has detachable cylinder heads and the cylinder case is monobloc casting. The cylinders are provided with liners and are easily and quickly replaced in case of necessity. Lubrication is carried out on the splash system. The engine is governed by a four ball centrifugal governor and it regulates at the stroke of the fuel injector plungers according to the load on the engine. It can be connected directly to the accelerator pedal and regulates in the same manner as the throttle on a petrol engine. Starting is either by an electric self-starter geared to the flywheel by the "Bendix" pinion or by an auxiliary petrol engine geared to the main engine by two trains of wheels which are disengaged when the main engine is running. When starting up, all compression is removed from the main engine and the starting gears are engaged. The main engine is given half a turn which starts the petrol engine. As speed is gained full compression is put on the main engine which takes up its firing and the petrol engine is disengaged, stopping automatically at the same time.

**Crossley Motors, Ltd.** The vehicles demonstrated were a Crossley oil engine double-decked 50-seater omnibus similar to those supplied to the Manchester and other corporations. There was also a Crossley oil engine suitably mounted which was running during the Conference. In addition the associated firm, Crossley Bros., Ltd., were exhibiting some very interesting engines, one being the six-cylinder six-crank 225 h.p. Diesel. These Crossley engines were exhibited in sequence so as to mark progress at different stages. Crossley's, being the pioneers in this country of the original atmospheric gas engine, built in 1869, this type of engine was built by them in powers of ¼, ½, 1 and 2 h.p. nominal. An actual example of this early development was shown in working operation. The speed developed was 80 r.p.m. The next engine was a 2 h.p. Crossley oil engine representative of the 1891 period. The third engine represents the present day engine and was, as stated above, a six-cylinder vertical compressorless diesel engine with normal rating of 225 b.h.p. at 500 r.p.m. It is cold starting and burns the cheapest grades of fuel oil.

The following is a brief description of the Crossley Motors, Ltd., heavy oil engine for double-deck omnibus



THE CROSSLEY 6-CYLINDER HEAVY OIL ENGINE.

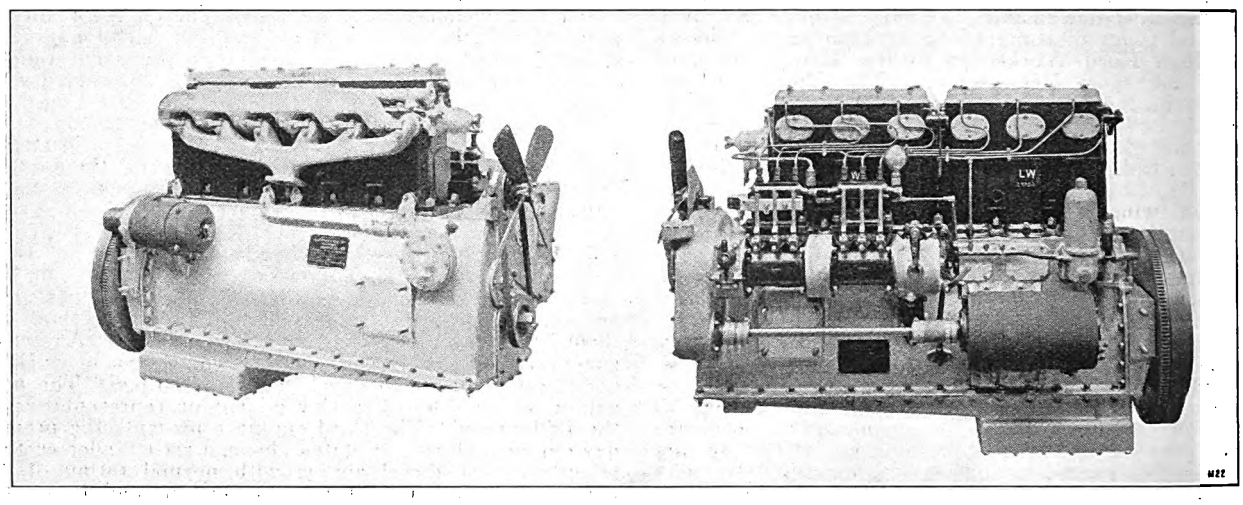
work. It is a six-cylinder model, bore 4¼ ins. x 6 ins. developing 60 h.p. at 1,000 r.p.m. and 100 h.p. at 2,500 r.p.m. Its capacity is 510.7 cubic inches or 8,368 c.c. It is fitted with a vibration damper at the front of the crankshaft. The cylinders are cast en bloc and are fitted with renewable liners. There are cylinder heads in two blocks of three, overhead valves and forced lubrication with relief valve. Two oil pumps are situated in the sump driven from the end of the camshaft, one for pressure to the bearings and one to maintain the dry sump. The main body of oil is retained in a separate chamber. Compression release for starting by lifting the exhaust valves. The engine is started by an electric motor heavy oil engine type with pinion to the gear ring on the flywheel. The fuel pumps are valveless constant stroke, single plunger per cylinder type provided with injection advance and retard device.

**Leyland Motors, Ltd.** This firm was exhibiting a Leyland experimental compression ignition engine chassis. This is as indicated at present in its experimental stage and was one of a batch being built for subjection to exhaustive road tests. The engine is of the direct ignition type interchangeable with the company's well-known "T" range of petrol engines, having its moving parts considerably strengthened. A complete description of this engine will appear in due course in this journal.

**Norris, Henty & Gardners, Ltd.** The Gardner six-cylinder engine, as exhibited, was a six-cylinder unit, bore 4½ ins., stroke 6 ins. The Gardner engine had detachable cylinder heads each cylinder head covering three cylinders. The valves are overhead push rod operated.

Digitized by Google

The crankshaft has seven main bearings. The connecting rods are of forged nickel alloy steel, drilled to carry lubrication under pressure, from the big ends to the floating gudgeon pins. The pistons are of aluminium alloy, fitted with 4 pressure and 2 scraper rings. Lubrication is fully forced feed to all working parts by gear type pump. Governing is effected by a powerful centrifugal governor which automatically controls the amount of the injected fuel so as to suit the load on the engine at any given moment. The accelerator pedal acts upon the spring which loads the governor, the latter having complete control of the engine over its whole range of speed, i.e., 350 r.p.m. to 1,700 r.p.m. The injection pressure is of about 2,000 lbs. per sq. in. at max. h.p. The sprayer is a simple piece of mechanism there being no adjustments to be made by the user, and the operation of removing the sprayer is as easy as removing a sparking plug. The weight of this engine complete with flywheel is 1,480 lbs. or approximately 14.5 lbs. per b.h.p. The engine is easily started cold by hand without the use of cartridges, electric heater plugs, or any auxiliary devices.



THE GARDNER 6-CYLINDER L.W. TYPE COMPRESSION IGNITION ENGINE.

**T.S. Motors, Ltd.** The chassis which was exhibited was a Standard 26/32-seater fitted with a Gardner 38/50 4L2 type high speed diesel oil engine which is similar to the Gardner engine described above except that it is a four-cylinder model instead of six. It develops 38 to 50 b.h.p. at 1,000 to 1,300 r.p.m.

## The Exhibition Policy of the Motor Industry.

In view of the prominence given to the desirability or otherwise of continuing annual Motor Exhibitions, the Society of Motor Manufacturers and Traders feel that their position, as representing all Sections of a great national industry, may be of public interest.

The Motor and Commercial Vehicle Exhibitions have, during over a quarter of a century, become of more than local or specialised interest, and the Society have of necessity to study all factors in deciding, from time to time, what policy may best meet the requirements of the Industry as such and, a matter of greater importance, the wishes of the public.

The Council of the Society, which represents every section of the Motor Trade, manufacturers of all forms of motor products, importers and the distributing trades, decides all questions of policy and, in the light of the many interests involved, questions upon which there must of necessity be differing individual, or even sectional, opinions are ventilated from every point of view, and seldom indeed is any decision of major policy taken without ultimately complete unanimity.

The general political situation, as an example, necessitated some consideration of Exhibition Policy, and the Management Committee of the Society have no hesitation in deciding that it is their duty to the public to proceed with their plans for both the Motor and Commercial Vehicle Exhibitions in October and November respectively, as some indication that the Motor Industry must spare no effort to keep the wheels of trade moving.

What Exhibition Policy may be contemplated in the future, will doubtless be considered in due course, but the public may rest assured that no reversal of a policy which in the past has undoubtedly proved to the benefit of the community, will be arrived at without the fullest possible consideration, in the light of all circumstances then prevailing.

## Overseas Trade Development Council.

Mr. G. M. Gillett, M.P., Secretary of the Department of Overseas Trade, announces that in accordance with the arrangement whereby membership of the Overseas Trade Development Council is reviewed annually, the Council has been reconstituted as follows, with effect from August 1st, 1931:—

Mr. G. M. Gillett, M.P. (Secretary, Department of Overseas Trade), (Chairman); Sir E. T. F. Crowe, K.C.M.G. (Comptroller-General, Department of Overseas Trade), (Vice-Chairman); Sir Alan Anderson, K.B.E. (Director, Anderson, Green & Co., Ltd. (Managers, Orient Line), Director, Bank of England, Suez Canal Company, and L.M. & S. Railway. Hon. President, International Chamber of Commerce); Sir Arthur Balfour, Bt., K.B.E. (Managing Director, Arthur Balfour & Co., Ltd., Past-President, Association of British Chambers of Commerce, etc.); Sir Francis Joseph, C.B.E., J.P. (Chairman and Managing Director, Settle, Speakman & Co., Ltd., Mossfield Colliery, Ltd., and Bignall Hill Colliery Co., Ltd. President, North Staffordshire Chamber of Commerce since 1923); Sir William Larke, K.B.E. (Director, National Federation of Iron and Steel Manufacturers); Mr. L. W. Matters, M.P. (Member of Parliament for the Kennington Division of Lambeth); Mr. W. Thow Munro (Director, Munro & Co., Ltd., Edinburgh); Mr. J. C. Nicholson (Director, Imperial Chemical Industries, Ltd.); Sir Gilbert Vyle (Managing Director, W. & T. Avery, Ltd., Past-President, Association of British Chambers of Commerce, and the British Engineers' Association, etc.); Official Representatives:—Sir Horace Wilson, K.C.B., C.B.E. (Chief Industrial Adviser to His Majesty's Government); Mr. P. W. L. Ashley, C.B. (Principal Assistant Secretary, Industries and Manufactures Department, Board of Trade); Mr. G. I. H. Lloyd (Director, Trades and Economic Division, Department of Overseas Trade); Mr. Louis Beale, C.B.E. (Special Commissioner to the Council); Mr. Arthur Mullins, C.B.E. (Secretary to the Council); Mr. C. M. Pickthall (Assistant Secretary to the Council). As in the past, special representatives of trade and industry will be invited to attend the meetings of the Council when particular trades, industries or markets are being reviewed. For this purpose there is a panel of representatives who will assist the work of the Council and will be available for informal consultations. The panel includes representatives of industry, of the Co-operative Societies, and of the Coal, Steel and Textile Trade Unions.

# Commercial Motor Transport Exhibition.

## Olympia, London, November 5th—14th, 1931.

THE tenth International Commercial Motor Transport Exhibition will be held at Olympia, London, from November 5th to 14th.

In the main the exhibits are divided into four sections, viz.: Commercial Vehicle and Body Work; Tyres; Accessories and Components; Service and Garage Equipment. The preliminary list of Exhibitors who will be staging specimens of their manufactures has been issued by the Society of Motor Manufacturers and Traders, and shows that, at the moment there are 101 firms exhibiting in the vehicle and body work section, 14 in the tyre section, 225 in the accessory and component section, and 46 in the service and garage equipment section.

This year's show promises to be as outstanding as any of its predecessors.

We print below in alphabetical order a full list, corrected to August 21st, of exhibitors in the commercial vehicle and body work section.

* * * *

**Commercial Vehicle and Body Work Section.**

| Stand No. | |

| 30 | Yorkshire Patent Steam Wagon Co., Ltd. |

# Gas Cylinders (Conveyance) Regulations, 1931.

UNDER the Gas Cylinders (Conveyance) Regulations, 1931, which came into force on September 1st, and applicable to the conveyance by road of vessels containing in a compressed state, air, argon, carbon monoxide, coal gas, hydrogen, methane, neon nitrogen and oxygen, it is laid down that cylinders shall be so conveyed as not to project beyond the sides or ends of the vehicle, and adequate means shall be taken to prevent cylinders falling off the vehicle. The regulations do not apply to a cylinder carried exclusively for the purposes of and attached to the vehicle, neither do they apply to a cylinder the capacity of which does not exceed 12 lbs. of water, or to any air receiver to be used in connection with the starting of an internal combustion engine or to any air receiver which forms part of a compressing plant.

The owner of a vehicle used for the conveyance of cylinders containing any compressed gas referred to above who employs any person in connection with each conveyance, shall take measures to ensure that any such person is acquainted with and carries out the Regulations.

**Ministry of Transport Appointments.**—The Minister of Transport, Mr. P. J. Pybus, M.P., has appointed Mr. Aubrey Clark to be his Private Secretary and Mr. Geoffrey Shakespeare, M.P., to be his Parliamentary Private Secretary (unpaid). The Parliamentary Secretary to the Ministry of Transport, Mr. G. M. Gillett, M.P., has appointed Mr. S. S. Wilson to be his Private Secretary.

**Armstrong-Saurer Commercial Vehicles, Ltd.** — All correspondence regarding Armstrong-Saurer and Saurer Commercial Vehicles, including matters relating to Sales and Service, should be addressed to The General Sales Department, Broadway Buildings, Broadway, Westminster, S.W.1.

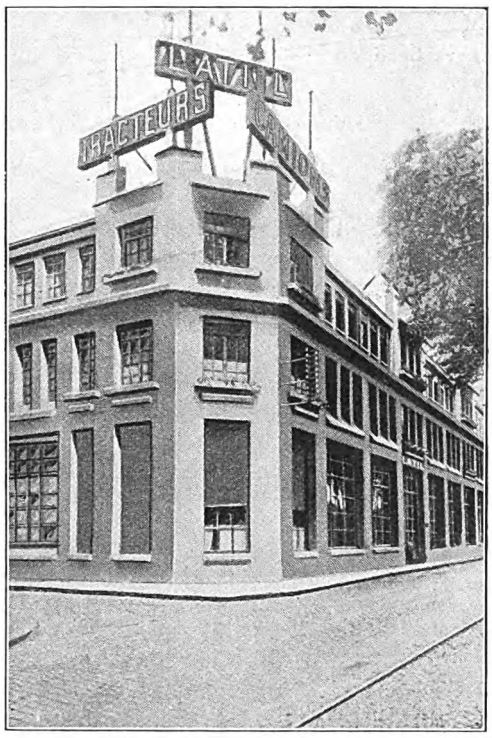
# A Visit to the Latil Works, Paris.

WE recently had the opportunity of visiting the Latil works which are situated at Suresnes, just outside Paris. They are very conveniently placed on the bank of the River Seine, with the State railway line running almost immediately behind, connecting it with two of the main Paris terminii.



VIEW OF MAIN BUILDING, SHOWING FRONT ENTRANCE.

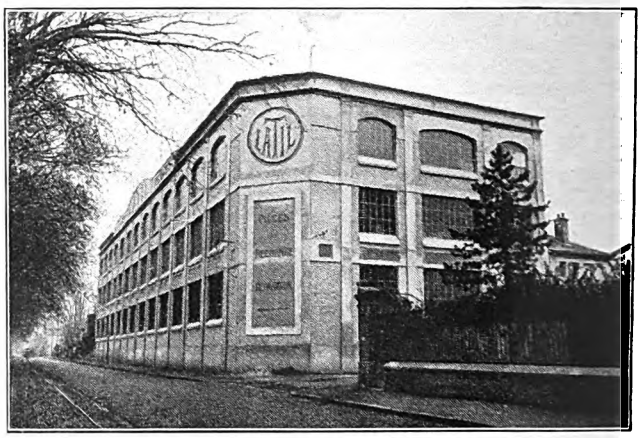
The foundry and forge are situated in the Ardennes and all parts are minutely examined on arrival at the works before being passed on into the machine shops. Samples are taken of all the steels delivered to the work, and tested in the laboratories.

The main shops are situated in a fine three-storey building. On the second floor are grouped all the light machine tools and gear cutting machines. After being cut and run in, the gear wheels for the gear boxes pass to the gear box assembly which is on the same floor. After assembly they are again run in, under careful observation to discover any defects in the materials or the workmanship.

On the first floor are grouped the heavier machine tools and the engine assembly. The engine test shop is situated on the ground floor immediately underneath the assembly shop. After being tested the engines are taken down, examined, repairs effected when necessary, and reassembled before being passed out to the chassis assembly. At the same time the gearboxes arrive and are fitted to the engine, forming one unit.

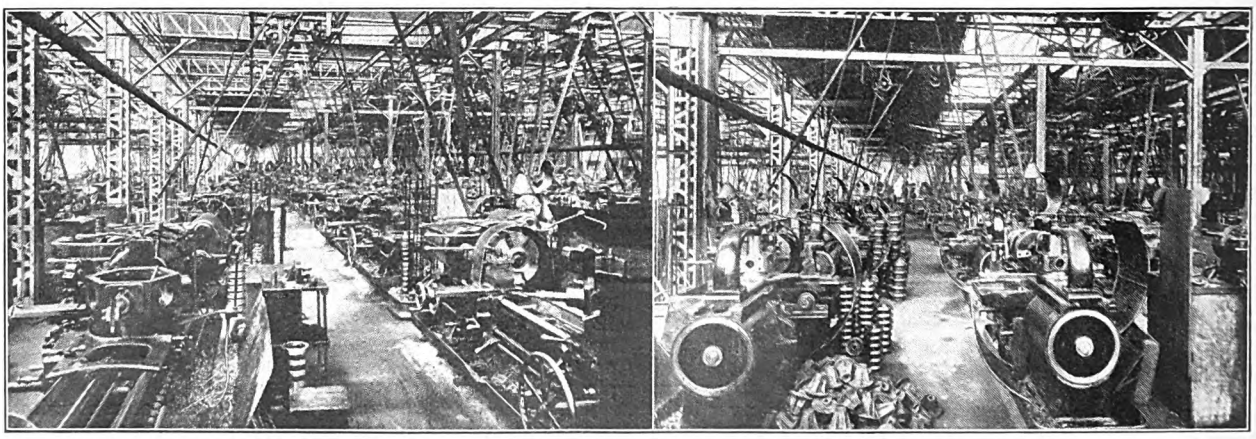
The other main component parts, front axles, back axles, steering gear, etc., are assembled on the ground floor ready to be fed to the main assembly shop as required. The chassis assembly shop is housed in a two bay building each provided with powerful overhead electric travelling cranes. The stores for feeding the assembly units are conveniently placed nearby.

Special departments such as the heat treatment shop and tool room are also on the ground floor. In the former there are two special electric furnaces, besides others, for the heat treatment of all the gear wheels, designed so as to reduce distortion during treatment to a minimum. The latter, which includes a special forge, is used for the production of new jigs and fixtures and for the modernisation of the shop plant whenever necessary.



NEW BUILDING, TESTING AND SERVICE DEPARTMENTS.

The new building is used exclusively as the spare part stores and for the testing and finishing of the chassis.



LEFT: GENERAL VIEW OF MACHINE TOOL SHOPS. RIGHT: TURRET LATHE BAY.

All types of roads are available in the surrounding district for testing purposes and the company has a special ground near Versailles for the testing of their tractors.

The company has standardized three sizes of engines, each of the four cylinder side valve type, of the following dimensions:—(1) Bore 85 mm., stroke 130 mm., rated horse power 17.9. (2) Bore 90 mm., stroke 130 mm., rated horse power 20.1. (3) Bore 105 mm., stroke 150 mm., rated

Digitized by Google

horse power 27.7. The first engine is incorporated in the 30-35 cwt. vehicle and the 10 ton four wheel drive and steering tractor which was so successful at the recent snow clearing trials held in the Pyrenees. The second engine is used in the 40-50 cwt. chassis and the 20-seater bus chassis; whilst the third engine is used in the normal and the front wheel drive low-loading 5 ton chassis, the 30-seater fast passenger chassis and the well-known 30 ton four wheel drive and steering tractor.

The London offices and showrooms of Latil Industrial Vehicles, Ltd., are at 11, Albert Embankment, London, S.E.11.

## Round the Lancashire Associations.

**Liverpool Transport Employers Conference.**

The agreement which had existed between the Liverpool and District Conference of Road Transport Employers and the Liverpool Carters' and Motormen's Union, governing rates of wages and conditions of labour, has been terminated, and employers are now free to make their own arrangements with the men they employ. The change-over to laissez faire conditions has not been accompanied by any untoward incidents. If any readjustments have actually been made in carters' and motormen's wages in the city they have not been disclosed publicly. All the Liverpool transport owners' associations are represented on the Liverpool Conference.

**Liverpool Cart and Motor Owners' Association.**

Some members of the Liverpool Cart and Motor Owners' Association, threatened with summonses for alleged breaches of the Motor Vehicle (Construction and Use) Regulations, 1931, have caused a careful study to be made of some sections of the Regulations. A summons was issued against one member, the owner of a steam vehicle fitted with solid tyres, whose alleged offence consisted in driving at a speed in excess of 8 m.p.h. The attention of the police authority was at once drawn to the fact that the Amendment Regulations allowed a speed up to 12 m.p.h. When the case came before the court both the Clerk to the Magistrates and the Chief Constable appeared uncertain as to whether the speed limit should be 8 m.p.h. or 12 m.p.h., and the summons was dismissed. Now Section 10 of the Act lays it down that a heavy motor car when drawing a trailer, all the wheels of which are not fitted with pneumatic tyres, is limited to 8 m.p.h. In the amended order it is stated that a vehicle registered before 1st January, 1932, may carry 14 tons, provided that the maximum speed, with or without the trailer, does not exceed 12 m.p.h.—but it does not specify how the vehicle must be tyred. The concession in regard to permissible loads was welcomed by all motor users, some of whom after poring over the Regulations and the amending order, are inclined to think that the letter of the law is more generous than the spirit of it. It would remove a misconception if the Ministry were to make it clear that the Motor Vehicles (Construction and Use) Amendment Provisional Regulations sanctioning a permissible total weight of 14 tons on heavy motor cars, and a speed limit of 12 m.p.h. applied only to vehicles fitted with pneumatic tyres.

**Liverpool C.M.U.A.**

Since the recent meetings of motor coach owners, organised by the Liverpool Area Committee of the Commercial Motor Users' Association, there has been a gratifying accession of new members, most of them motor coach owners. This revival of interest and keenness to organise is the direct result of difficulties which have been encountered since the passing of the Road Traffic Act.

**Wallasey Motor & Cart Owners' Association.**

Success has attended the efforts to organise the Wallasey cartage and motor haulage contractors, who have formed an association which is designated the Wallasey Motor and Cart Owners' Association. A meeting of members was held on Monday, August 31st, to discuss the question of rates of wages and working conditions. The Secretaries are Messrs. W. F. Ewbank & Co., of Dale Street, Liverpool.

**Bolton Transport Association.**

There has just been registered the Bolton and District Road Transport Association, Limited, 37, Mawdsley Street, Bolton, which has been formed to protect and advance the common interests of horse vehicle and motor owners generally, and all other transport users, etc. The directors are Messrs. F. J. Bentley, C. Wallwork, F. Chamberlain, W. Parker, J. Booth, J. Constantine, S. Partington.

## Institute of Transport.

THE following gentlemen have been elected to membership of the Institute of Transport:—

MEMBERS.

| | |
|---|---|
| Binks, Harris John | District Engineer (Salisbury), Rhodesia Railways. |
| Bottomley, Frederick Arthur | Local Director, Entre Rios Railways. |
| Braithwaite, Thomas Henry | Director, Houlder Bros. & Co. (Argentine), Ltd. |
| Burgess, Reginald | Chief Operating Superintendent, Carter, Paterson & Co., Ltd. |
| Edwards, Jason | Chief Accountant, Buenos Aires Western Railway and Buenos Aires Midland Railway. |
| Hays, Douglas Charles | General Manager and Director, Midland General Omnibus Co., Ltd. |
| St. Hill, Felix Perceval | Commissioner of the Tasmanian Government Railways. |
| Venables, Arthur Vincent | Chief Engineer, East Indian Railway. |
| Viljoen, Gerhardus Johannes | System Manager (Windhoek), South African Railways and Harbours. |
| Wortley, Harold | District Estate Agent (Newcastle-on-Tyne), London and North Eastern Railway. |
| Wright, Ratcliffe | Chief Electrical Engineer, Buenos Aires Western Railway. |

ASSOCIATE MEMBERS.

| | |
|---|---|
| Binns, Herbert | General Manager, Keighley Corporation Tramways. |
| Burton, William James | Chief of Revenue Audit Division, Accountant's Department, Buenos Aires Great Southern Railway. |
| Dunhill, Richard Everatt | Chief Engineer and Operating Manager, East Midland Motor Services, Ltd. |
| Holdsworth, Charles | Chairman and Managing Director, I. W. Holdsworth, Ltd. |
| Jerrett, Arthur | Transport Controller, Lewis's, Ltd. (Liverpool). |
| Jung, Hermann Francis | Assistant to General Manager Buenos Aires Western Railway. |
| Macdonald, James Rowntree | Operating Manager and Assistant to Managing Director, Northern Motor Utilities, Ltd. |
| Morris, Edward Noel | Chief of Revenue Audit Division, Buenos Aires Western Railway. |
| Roberts, Edward | Divisional Manager (Chester), Crosville Motor Services, Ltd. |
| Skidmore, Frederick | Traffic Manager, East Midland Motor Services, Ltd. |
| Smiles, Stephen Hudson | Marine Superintendent, Houlder Bros. & Co. (Argentine), Ltd. |

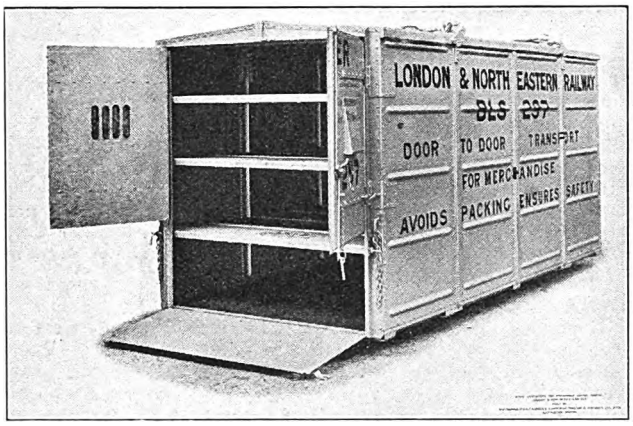
# Containers for Railway Goods Traffic.

THIS container is one of a large number built for the London & North Eastern Railway for perishable goods traffic and is constructed of pressed steel members with fluted panels and roof plates, all designed to give the maximum strength and rigidity with the minimum dead weight.



THE L.N.E.R. STEEL CONTAINER FOR PERISHABLE GOODS TRAFFIC.

Pressed steel supports are arranged on the underside to suit the road lorries on which they are transported.

For lifting, substantial straps and wire rope crane slings are supplied.

Ample ventilation is provided by means of two hood ventilators at each end, and a weatherproof space along each side at the eaves.

The doors, arranged for convenience of loading, are at one end only.

There are three tiers of narrow removable pressed steel shelves, covering the full area of the wagon, and intended for carrying bottled goods, dairy produce, vegetables, etc.

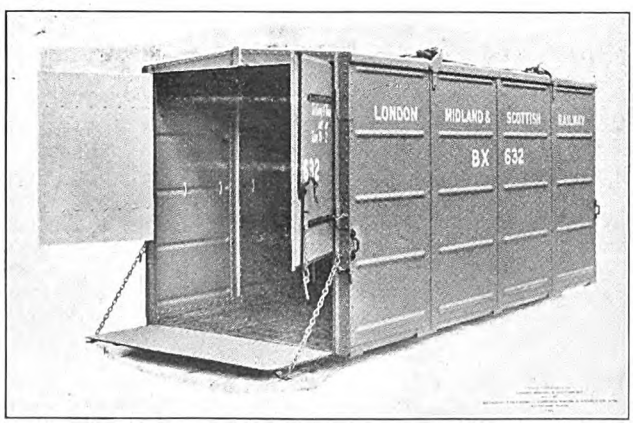
This type of container will carry a load of 4 tons, and the tare weight with shelves in position is 1 ton 8 cwts. 1 qr. and without shelves 1 ton 1 cwt. 1 qr.

As an extra protection against corrosion, all steel sheets, pressings, etc., could be supplied with a copper content of 0.25 to 0.35 per cent.

The container, illustrated below, built for the London, Midland & Scottish Railway, is of all-steel construction and has been supplied in large numbers to the railway company.

In order to obtain the lowest possible tare weight consistent with strength, the various members and plates are pressed and fluted as shown in the photograph.

They are provided on the underside with pressed steel supports designed to suit the road lorries on which they are transported.



THE L.M.S. STEEL CONTAINER.

Wire rope slings are used for lifting by cranes when necessary.

A weatherproof ventilation space is arranged along each side at the eaves.

Doors are provided at one end only.

If required, the containers can be lined with wood.

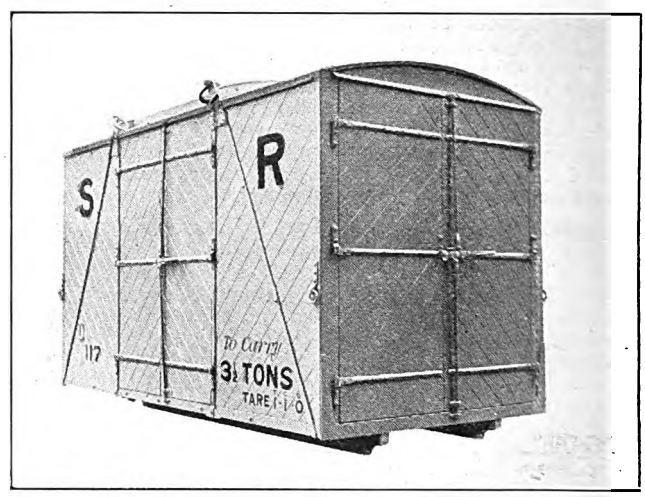
This type of container is designed to carry a load of 4 tons and has a tare weight of 19½ cwts. without wood lining.

As an extra protection against corrosion all steel sheets, pressings, etc., could be supplied with a copper content of 0.25 to 0.35 per cent.

The Southern Railway insulated meat container, of which a large number has been built, is of the lightest possible design in every detail. It is of wooden construction strongly reinforced with mild steel straps, plates and knees.

The side, end and roof insulation, is of slab cork, the floor being made up of two layers of boards with sheet asbestos between.

Hinged doors are provided on each side and at one end.



THE S.R. MEAT CONTAINER.

Timber supports are fixed on the underside to facilitate the loading of the container on to road lorries for transport.

For lifting, substantial straps and wire rope crane slings are provided.

These containers, being specially intended for the conveyance of meat, were required to be perfectly air tight, and to ensure this, were subjected to an exceptionally severe smoke test before delivery was made.

Each container carries a load of 3½ tons, the tare weight being 1 ton 1 cwt.

# Motor Transport and the Grain Harvest.

IN recent years motor transport has revolutionised the methods of dealing with grain in the harvest field. On the modern grain growing farm it is no longer necessary to cut the corn, leave it in stook for a week or more, rick it and then thresh it later in the year. All these operations are very laborious and expensive. The motor now cuts them all out, everything being for all practical purposes, done in the field. Cutting and threshing is done at one operation by the new combine tractor drawn harvester threasher while special type motor lorries haul the grain directly off the field to the mill or to the drying plant as the case may be.

A demonstration, continuing a series held in previous years, was organised by the Ministry of Agriculture at Elton, near Peterborough, during the last week of August. The units engaged were three in number with three haulage units. These were the "Caterpillar" outfit and tractor, "International" outfit and 22/36 tractor, "Massey-Harris" Machine and the new "Massey-Harris" four-wheel drive tractor.

These machines make corn growing a practical proposition again in this country. They have surpassed expectations in results.

The three vehicles engaged in the operation of hauling the threshed grain from the fields were the "Fordson" special tipping lorry, the "International" six-speed special farm lorry and the "Latil" special four-wheel drive tractor and trailer. The vehicle for this purpose must be capable of being operated on the land, which is sometimes very soft, with a load. This these vehicles demonstrated most convincingly their ability to do.

# Speciality Brakes.

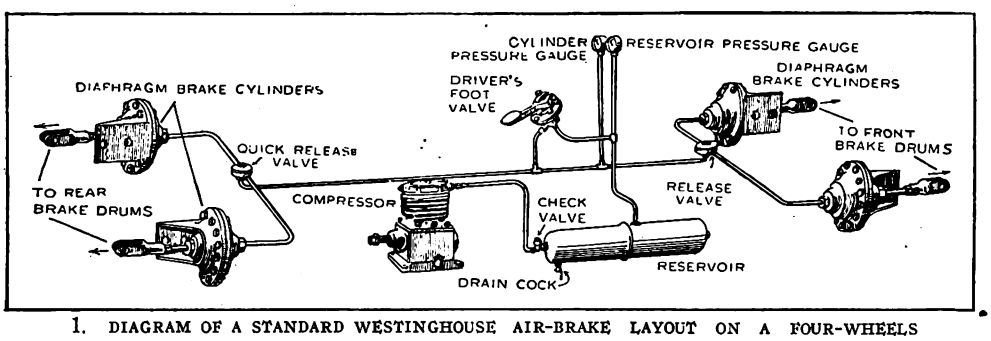
## Their Details explained and Maintenance described.

(*Continued from page* 483.)

## V.—The Westinghouse Air-Brake.

To deal fully with the Westinghouse Air Brake is not possible within the limits of this series. It is an alternative speciality of The Westinghouse Brake & Saxby Signal Co., Ltd., 82, York Road, King's Cross, N., and is available in two forms, differing chiefly in respect of the generating mechanism. In the one case an air compressor with a mechanical drive off the chassis is used to feed the storage tank; in the other, the pressure is derived from a shunt off the engine cylinders.

In both forms the Westinghouse air brake, like the Lockheed hydraulic brake previously dealt with, is *not* a servo-assisted brake, but a complete self-contained power brake controlled by a grading valve worked by a lever or a pedal.



1. DIAGRAM OF A STANDARD WESTINGHOUSE AIR-BRAKE LAYOUT ON A FOUR-WHEELS BRAKED CHASSIS.

The diagram (fig. 1) shows a standard four-wheel brake layout.

**Engine Charged Compressor.**

If the reservoir is kept charged by the engine, the details comprise:—(a) A twin pressure supply valve mounted, usually, on the dash-board, and piped to one of the engine cylinders by means of nipples. At every explosion in the engine cylinder concerned the valve takes a small puff of gas and passes it through (b) a twin check-valve into the storage reservoir (c) in which pressure accumulates until it approximates to that of the explosion in the engine; then the pressure supply valve and check valve cease to operate; a driver's control valve (d) operated by pedal or handle which allows the compressed air to flow to the brake cylinders (e) exerting pressure on their diaphragms and thrusting out the piston rods connected to the brake levers, and (f) a quick release valve which operates when the control pedal (or handle) is moved to the full release position.

Pressure gauges on the dash-board indicate to the driver the pressure (a) in the reservoir and (b) the brake cylinders respectively. There is a drain cock at the bottom of the reservoir.

**Separate Charging Layout.**

When a separate compressor is fitted, the pressure supply valve is not required, and a *single* check valve is used instead of the twin check valve. The compressor is driven off the chassis and is fitted with an automatic pressure unloader or safety valve. This is a twin vertical cylinder unit with a pair of poppet valves in each cylinder head. The compressor is intended to be run at 700-800 r.p.m. (maximum), and for a normal pressure of 70 lb. per square inch. The automatic pressure unloader or relief component is bolted to the head of the compressor cylinder.

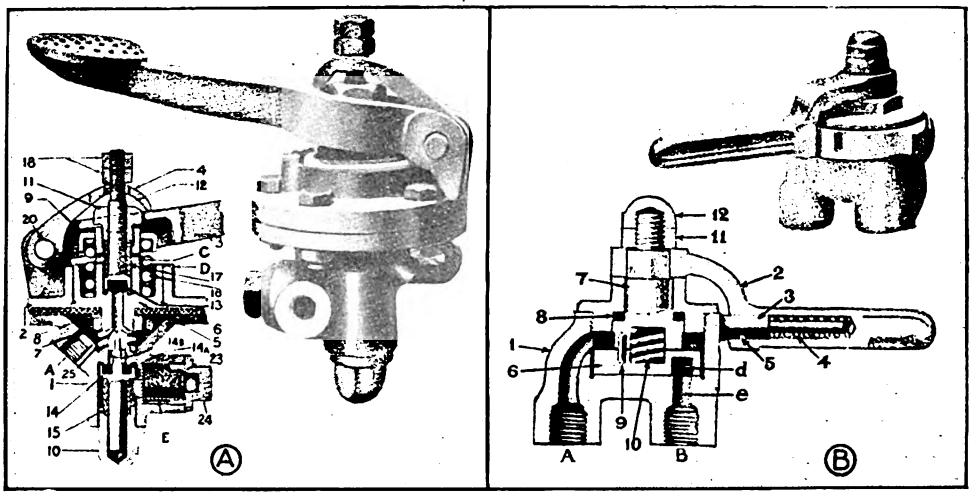
The check or non-return pressure valve is screwed into the reservoir. The latter is a steel drum tested to 400 lb. per sq. inch, and is furnished with a moisture drain cock, which should be used to expel any water at the end of each day's work while the reservoir is under pressure.

**The Foot (or Hand) Control Valve.**

Composite Fig. 2 shows the alternative types of driver's control valve. The one marked A in the Fig. is the *foot* type, and the details as shown in the section view are as follows:—

Chamber E is connected to an inlet pipe from the reservoir, so that all incoming air or gas must pass through strainer 23. A connection is also made at A to the brake pipe. In the normal, or release, position, the inlet valve 14 is closed and the exhaust valve 12 is open.

To *apply* the brake, the pedal (3) is pushed down. This releases link 4, which supports valve 12 by lock-nuts 18, and allows this valve to be closed by spring 17. Further movement of the pedal exercises pressure on washer 9, which, in turn, compresses spring 16, depressing piston 5 and diaphragm 6. The extremity of piston 5 presses against valve 14 and opens it, allowing compressed gas from the reservoir to pass into chamber B and thence to the brake cylinders by connection A. As soon as the pressure in the brake cylinders equals that exerted by spring 16 on diaphragm 6, the latter is pressed upwards, carrying with it piston 5, thus allowing valve 14 to be closed by spring 15. If a higher pressure is required in the brake cylinder, the pedal is further depressed, causing valve 14 to open, and allowing a further supply of gas to flow into the brake cylinders until the pressure therein equalises with that of spring 16.



2. ILLUSTRATING (A) CONTROL PEDAL VALVE; (B) CONTROL HAND VALVE.

To *release* the brake, the pedal is freed, and on approaching the upper end of its stroke again engages with link 4, which lifts valve 13 by means of lock nuts 18, and allows gas to escape to atmosphere by holes C. Gland 11, which holds spring 17 in position, is prevented from turning by the flats being in contact with the gap in the pedal. Stop D is so arranged that pedal 3 comes in contact with it as soon as the maximum pressure is reached in the brake cylinders.

Digitized by Google

**The Hand Valve.**—The layout of the *hand* valve control is shown in the composite section view B, Fig. 2. The valve is usually attached to the steering column underneath the right side of the steering wheel, but when that position is not available, to a separate bracket fixed to the dash or floor boards. Air from the reservoir enters the valve body at A and passes to the upper side of a rotary valve 6. The connection at B leads to the brake cylinders. Another opening, f, on the under side of the valve body leads direct to the atmosphere by a pipe carried below the floor boards.

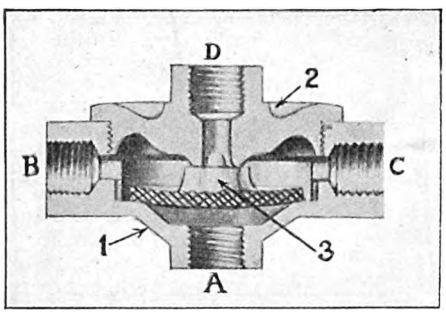
The rotary valve 6 has a port through it and a cavity, d, on its under side. The valve seat on the body has two ports, e and f, which lead, respectively, to the brake cylinders and to the atmosphere. The spring-loaded control handle 2 has three main positions, viz.:—Lap (or neutral); application and release.

**The Brake Cylinders.**

Within each brake cylinder is a diaphragm-piston comprising two dished plates and a diaphragm-piston. One side of the diaphragm is exposed to the air pressure from the reservoir through a port-connection from the driver's valve. On the other side of the diaphragm is a plate attached to a push rod connected to the tension members of the vehicle's brakes. The push rod has a traverse movement of but ¾ in. when the brakes are correctly adjusted and the linings are in good order.

**The Quick Release Valve.**

The position of this fitting (shown in section in Fig. 3) in a normal Westinghouse brake layout is shown in diagram fig. 1. When the handle of the brake valve is moved towards "Application" position, pressure from the reservoir flows through the driver's valve to port A in the quick release valve, and, feeding past the diaphragm 3, reaches the brake cylinders on either side of the vehicle through ports B and C respectively, port D communicating with the atmosphere being sealed by the diaphragm, which is held against its upper seat as long as there is pressure in the pipe leading from the driver's valve to the quick release valve.



3. SECTION OF QUICK RELEASE VALVE. FOR POSITION IN A NORMAL LAYOUT, SEE DIAGRAM (FIG. 1.).

When the handle of the driver's valve is moved to the "Release" position, the pressure in the pipe connecting the driver's valve to the quick release valve escapes to the atmosphere through the driver's valve, the result being that pressure from the brake cylinders flowing back through ports B and C across the upper face of the diaphragm forces it off its seat, and enables the air from the cylinders to pass direct to the atmosphere through port D, since port A is then sealed by the depressed diaphragm.

**Other Fittings.**

So far we have listed and dealt with all the standard fittings of a normal Westinghouse air brake layout in both of its types, viz., engine operated, or with a separate compressor. There are besides a few special fittings for less normal equipments. These comprise:—(a) An emergency or automatic valve for air-braked trailers; (b) a relief valve for use with the hand controller. (It acts as an audible warner in the event of a driver omitting to return the control valve); and (c) an air strainer or dust interceptor for use with the hand control system. It is inserted in the pipe leading from the reservoir to the hand control valve, and protects the valve and seating of the control valve from scoring by dust or grit.

**Six-Wheel Brake (Tractor-Trailer) Layout.**—For this layout the following further details are furnished:—(a) A coupling cock at the end of the branch (air) pipe on the vehicle; (b) a set of air hose couplings between the vehicle and trailer; and (c) brake cylinders with a quick release valve on the trailer. Provision is made for equipping the trailer with an automatic (independent) control, which takes effect in the event of the failure of the vehicle-trailer couplings. This mechanism, also, can be supplied for the vehicle independently, if required.

**Operating and Maintenance Hints.**

**Cleanliness of Working Parts.**—The pins and connections of the brake rigging should be kept well lubricated.

In the *foot* valve layout (A. Fig. 2) the inlet and exhaust valve seats must be kept free from dirt, and the strainer must be cleaned when required.

If the driver's hand valve (B. Fig. 2) works stiffly, the rotary valve should be taken out and cleaned with a soft cloth. Before replacing it smear not more than two or three drops of lubricating oil of good quality over the face.

The reservoir should be drained at the end of each day's work by opening the cock while the reservoir is under pressure.

**Faulty Pressure.** — An unusually large reduction of reservoir pressure when applying the brake indicates either an excessive travel of the brake cylinder push rods, or leakage in the piping between the driver's valve and the brake cylinders, or a leaking relief valve. Leaks can be traced by means of soap suds applied with a brush to the joints and any suspected parts. In bad cases the escape usually is audible.

If gas escapes from the quick release valve (Fig. 3) when the brakes are applied, it is probably caused by dirt on the top face of the diaphragm; this should be removed and cleaned.

If the usual reservoir pressure is not attained, first test the system for leakage when the engine gases are being used, and check the lift of the ball in the pressure supply valve. The correct lift is 1/50 in., and if the lift is excessive the usual reservoir pressure will not be obtained. Test the check valve by disconnecting the pipe leading from the pressure supply valve, and applying soap suds to the opening while the reservoir is charged.

A reduction of pressure in the brake cylinder pipe during an application of the brake, or while the driver's valve handle is in lap position, indicates leakage in that pipe or through the driver's valve, relief valve, or brake cylinders. These parts should be tested with soap suds to locate the leak, which should be stopped at once.

**Engine-Operated Model.**

In the engine-operated model the pipes between the engine nipples and pressure supply valves should be frequently (e.g., after two to three months' use) inspected and carbon deposit removed. This can be done by disconnecting the pipes, heating them, and blowing through with compressed air. If left too long, it becomes impossible to decarbonise the pipes.

If the brake application is sluggish, the strainer may be clogged, and should be examined and cleaned as before described. A clogged strainer indicates that an excessive amount of carbo[illegible]ering the brake system.

**Unloader Adjustment.**—The pressure at which the unloader operates can be regulated, but this job is be undertaken by a Service engineer.

**Supply Valve of Engine-Charged Model.**

The maximum pressure attainable in the reservoir varies from 100 to 200 lb. per sq. inch on different types of engine, and depends on the condition of the piston rings and inlet and exhaust valves. It also varies with the load on the engine; the heavier the load the higher the pressure. The lift of the ball valve should be as near 1/50 in. as possible, and can be adjusted as follows:—Release lock nut, and screw adjusting screw down solid against the ball, then back off the screw about 1/3rd turn. Hold the adjusting screw from turning and tighten lock nut. This adjustment is seldom required unless the vehicle is in very heavy service.

**Adjustment after Relining Shoes.**

To adjust the brakes after relining, both wheels of the axle concerned should be jacked-up, the rod leading to the hand brake lever or foot brake pedal disconnected, and the brake adjusted with reference to the Westinghouse brake push-rods. The brakes should be taken up evenly to the point where each wheel begins to drag with the Westinghouse brake push rod pressure plates at the beginning of their stroke and firmly seated against the diaphragm in the brake cylinders. This will protect the brake cylinder diaphragms from unnecessary wear, and will also prevent rattle and noise from the push rods. Apply the Westinghouse brake several times to compress the linings, and thereafter re-adjust if necessary. Then re-connect the hand or foot brake rod (to whichever of these the Westinghouse brake is connected) and adjust to bring it to the beginning of its stroke to correspond. The Westinghouse and foot or hand brake will then bear the correct relation to one another, and their relative adjustment should not be changed.

**Taking up Wear.**

Adjustment of the brakes to take up wear should, where possible, be made on the brake rods leading to the brake drums, and common to both the Westinghouse and the other brake.

Digitized by Google

On installations which have no brake rods common to both systems, the brakes should first be taken up by adjusting the hand or foot brake rods, and then the Westinghouse brake push rods should be adjusted to correspond. In any case it is very important that the Westinghouse brake cylinder pressure plates on an unloaded vehicle should not be more than ⅛ in. from the diaphragm when the brakes are released, to avoid vibrating the push rods and in order to have the full working stroke available.

**Checking Effect of Push Rods.**

After adjusting the brakes, apply the Westinghouse brake and measure the stroke of the push rods. The stroke of the push rods when adjusted should be ¾ in. or less, and the brakes should be re-adjusted before the stroke exceeds 1½ in. in the case of 5 in. and 7 in. dia. brake cylinders, 1¾ in. in the case of 9 in., and 3 in. in the case of 10½ in. and 12 in. cylinders.

When two brake cylinders are used, both push rods should have the same stroke.

**Using an Air Line for Filling Air Reservoir.**

If the reservoir is empty, air pressure for testing the brakes may be obtained by removing the reservoir drain cock, and connecting the reservoir to the garage air supply.

**[This concludes the Series].**

# Bid for Bigger Business.

## Attacking the Marine Engine Market.

AN active bid to capture for Great Britain a bigger share of the marine engine business of the world is to be made by the two British oil engine manufacturers, Messrs. Ruston & Hornsby, Ltd., of Lincoln, and Messrs. R. A. Lister & Co., Ltd., of Dursley. In order to attack a market in which, after an exhaustive survey, they both feel that Great Britain is at present too little represented, they have established jointly a new company, the Ruston Lister Marine Company, Ltd.

Two directors from each of the parent companies will be on the Board of the new company. Its registered offices are to be at Imperial House, Kingsway, London. The combined assets of the two firms behind the company are, with their associated companies, over £6,000,000.

Over a year ago Messrs. Ruston & Hornsby and Messrs. R. A. Lister & Co., came to an agreement to develop together the overseas markets in which they had previously been competing. The arrangement, which left each firm independent but gave it, at the same time, a call on the marketing resources of the other, has been of great value to both firms. The new company is a direct outcome of it.

The Marine Company will have behind it the resources of both its parent companies, and will enter the market with marine engines for all purposes, including motor boats, yachts, fishing smacks, trawlers, life-boats, pinnaces, pilot boats, and various types of mercantile vessels.

Samples from the new company's range of marine crude oil engines from 5 to 500 h.p. are on view for the first time at the Shipping, Engineering and Machinery Exhibition now being held at Olympia.

These engines are the result of long and arduous tests carried out under expert guidance, and it is expected that they will be of greatest interest to visitors to the Exhibition.

# Tar Oils for Use in Internal Combustion Engines.

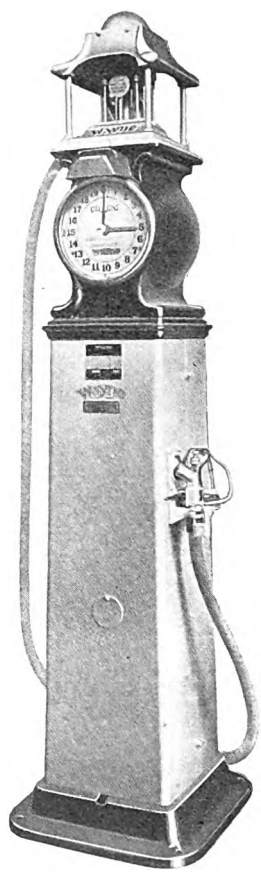
THE BELFAST OMNIBUS COMPANY, in conjunction with the Corporation Gas Works, have recently carried out trials on four of their buses running on fuel produced from Coal Tar Oils. The composition of the fuel is as follows:—90 per cent. Light Creosote Oil (washed), and 10 per cent. of 90-190°C. Water White Solvent Naphtha. It has a specific gravity of 0.951 and a flash point of 129°F. As it is necessary to heat the mixture so as to gasify it, before entering the cylinders, Messrs. Solex, Ltd. have designed an inlet and exhaust manifold, cast integrally, with a special hot-spot. It is also necessary to start the engine from cold on ordinary petrol for which purpose two carburettors are provided, but once the engine is running on the Creosote mixture the petrol carburettor and controls are automatically put out of action. After stopping for the purpose of picking up or setting down passengers the vehicles may be driven off each time using the creosote carburettor only. A thorough examination of the engine after 15,000 miles showed that there was practically negligible carbon deposit and that the wear on such parts as valves, pistons and cylinders was below normal. A decrease of 50 per cent. in the fuel consumption, as compared with that when using ordinary petrol, has been obtained and so satisfied are the Company with the results that they are equipping another six of their buses for use with this fuel.

**L.N.E.R. Contract.**—The L.N.E.R. report that a contract has been placed with Messrs. H. M. Murray & Co., 121, West Regent Street, Glasgow, for the widening of 1 mile 69 chains of line between Arbroath and Montrose.

# The Wayne Electrically Operated Meter Pump. Model 800.

THE Wayne meter pump comprises three essential features: (1) a motor driven pumping unit, which serves merely to pump petrol from the storage tank to the car; (2) a positive displacement type meter which measures accurately every drop of petrol; and (3) a clock-work recording mechanism which gives a visible indication and record of the quantity measured by the meter. The measuring containers of the Wayne meter are in the form of four horizontal cylinders in each of which slides a plunger. These plungers are fitted with leathers which are held against the cylinder walls by springs, so forming an absolute seal between the inlet and outlet sides.

The cylinders are arranged in pairs, horizontally opposed, and the plungers are coupled to a central crankshaft. The flow of petrol to and from the containers is controlled by a distributing valve carried on the revolving crankshaft. As the four cylinders are filled and emptied once during each revolution the recording mechanism is driven off the crankshaft. The pump is of the "rotary plunger" type and is driven by a ⅓ h.p. vapour proof electric motor. It is fitted with a by-pass valve which allows the pump to run when the hose nozzle is shut. Nozzle control is of the trigger type, fitted with a spring loaded check valve to ensure that the hose is always full of petrol. Further particulars of this very efficient pump may be had from the Wayne Tank & Pump Co., Ltd., 42, Newlands Park, London, S.E.



WAYNE ELECTRIC METER PUMP.

## A New Association.

THE Bolton and District Road Transport Association, Ltd., has been registered as a company limited by guarantee without share capital, with 100 members, each liable for £1 in the event of winding-up. The objects of the new body are to protect and advance the common interests of horse, vehicle and motor owners generally, etc. The directors are: F. J. Bentley, C. Wallwork, F. Chamberlain, W. Parker, J. Booth, J. Constantine, S. Partington, T. Atherton, W. Bullough, R. Rothwell, J. Maxfield, J. Shepley, J. Proctor, all of Bolton, and H. G. Orr, of Little Lever. The Secretary is Mr. J. Greenhalgh, and the registered offices are at 37, Mawdsley Street, Bolton.

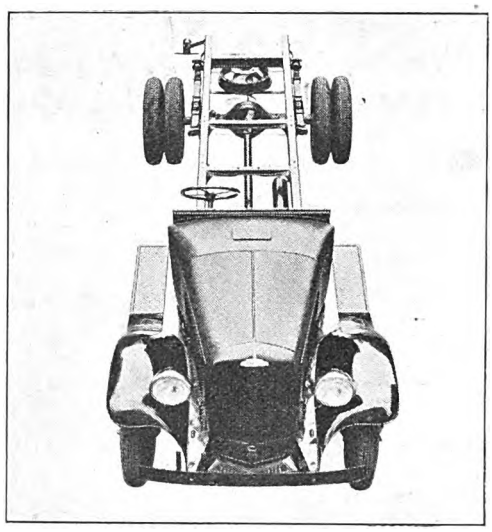
**L.U.T. Changes.**—Lancashire United Transport, Ltd., of Atherton, have substituted trackless trolley buses for trams in the Atherton to Swinton and Farndon routes. A 20 minutes service is provided before noon, and a 15 minutes service afterwards. Some 14 trolley buses are required to work the route.

Digitized by Google

# Four New Reo Chassis.

REO MOTORS (BRITAIN), LTD., Beavor Lane, Hammersmith, W.6, have recently placed on the market a series of four 35/40 cwt. chassis as follows:—

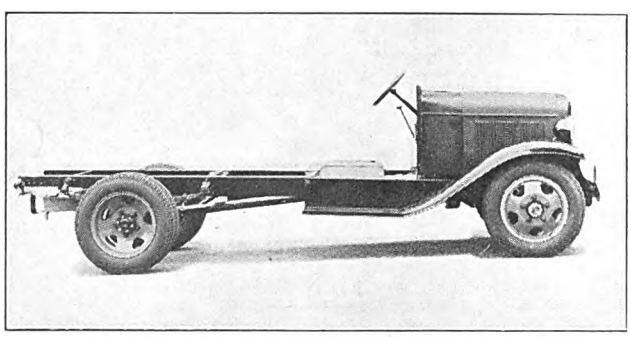
| Model | Engine | Wheelbase | Body Allowance cwt. | Chassis Weight cwt. | Loading Space behind driver | List Price |
|---|---|---|---|---|---|---|
| A. | 4 cyl. | 11 ft 4 in. | 11 | 28¾ | 9 ft. 6 in. | £249 |
| B. | 4 cyl. | 11 ft. 4 in. | 11 | 29¼ | 9 ft. 6 in. | £279 |
| C. | 4 cyl. | 13 ft. 4 in. | 12 | 29¾ | 11 ft. 6 in. | £267 |
| D. | 6 cyl. | 13 ft. 4 in. | 12 | 30¼ | 11 ft. 6 in. | £297 |



REO MODEL 1A U 35-40 CWT. 4-CYL. SHORT WHEELBASE.

The same specification applies to each model, the variations being that there are alternative wheelbases of 11 ft. 4 ins. and 13 ft. 4 ins. and each chassis may be fitted with either a four-cylinder or six-cylinder engine.

**Four-Cylinder Engine** has an R.A.C. rating of 23.3 h.p. Power developed is 51 h.p. at 2,500 r.p.m. The stroke is 4½ ins. and the bore 3 13/16th ins. Cubic capacity is 205 cubic ins. (3,360 c.c.). The engine is very sturdily constructed, designed as it is for heavy work. The cylinder block and the crankcase form a single unit. The crankshaft is of particularly sturdy build and is supported in five bearings and it is statically and dynamically balanced. The main bearings are 3 ins. in diameter and the bearing journals overlap which effectively prevents vibration and



ANOTHER VIEW OF THE REO MODEL 1A U 35-40 CWT. 4-CYL. SHORT WHEELBASE.

provides great rigidity to the crankshaft webs. The total main bearing surface area is 78.35 sq. ins. The shaft is made of strong alloy steel and the bearings themselves are bronze, white metal lined. The cylinder block is of chrome nickel iron, made to special Reo specification. The cylinder head is easily detachable. The valves are placed side by side; the inlet valves are of chrome nickel steel and the exhaust valves of silchrome steel. The valves are operated by mushroom head adjustable tappets, the latter mounted in two clusters of four each to facilitate removal. The lubrication of the engine is by full force feed, there being drilled passages in the crankshaft to convey the oil to the main and connecting rod bearings, and there is also a passage drilled in the connecting rods through which the oil is forced to the gudgeon pin. The oil pressure is provided by a gear type oil pump directly driven by the camshaft.

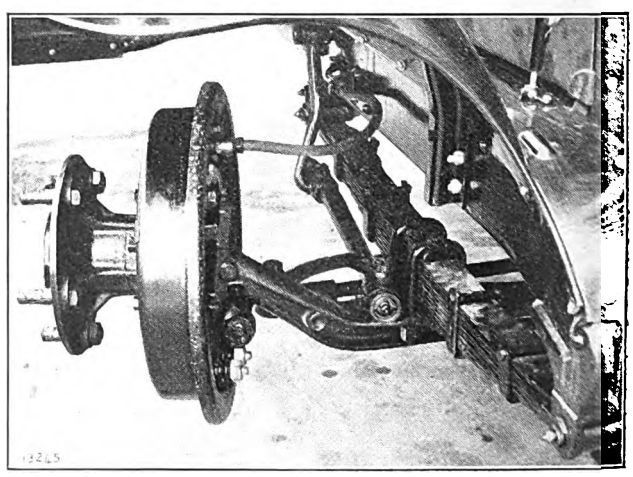
Cooling is effected by an improved cellular type radiator with centrifugal water pump, assisted by a fan driven by a rubber belt. Heat is controlled by a thermostat valve in the cylinder head and there is a heat indicator on the dash board. Ignition is the Delco-Remy battery type. The coil and distributor head are conveniently placed at the side of the engine. Ignition control is semi-automatic within the distributor, and there is additional control on the dash. The carburetter is a new American Zenith downdraft type fitted with a Hardy air cleaner. This carburetter is claimed to improve acceleration, power and smoothness by supplying uniform fuel distribution at all speeds. The carburetter is fed by an engine driven fuel pump. The inlet and exhaust units are cast in one.

**The Six-Cylinder Engine.** The above specification applies also to the six-cylinder engine, except that the rating is 27.34 h.p. and the power developed is 61 h.p. at 3,000 r.p.m. The stroke is 4 ins. and the bore 3 3/8th ins. Cubic capacity is 214.7 cubic ins. (3,518 c.c.). The crankshaft is supported in 7 bearings instead of five and its diameter is 2½ ins. as compared with 3 ins. in the four-cylinder model.

**Transmission.** Power is transmitted through a dry single plate clutch with multiple spring tension and four-speed gear box, unit construction with the engine. The gear control is centrally placed. The gear ratios are as follows:—1st, 6.6—1; 2nd, 3.52—1; 3rd, 1.73—1; 4th, direct; reverse, 7.88—1. The rear axle reduction is 5.6—1 standard, but optional ratios can be provided at small extra cost, of 5.1—1 and 6.75—1.

The propeller shaft is tubular steel with mechanical type universal joints, while the long wheelbase models have a two-piece propeller shaft, with a centre support consisting of a self-aligning ball race.

The rear axle is fully floating and the axle housing consists of an electric steel casting with alloy steel axle housing tubes. The drive is by spiral bevel with straddle mounted bevel pinion. The drive and torque are taken through the springs. The front axle is the reverse Elliott type with drop forged "I" beam of alloy steel. Robust steering arms carry the front wheels on large adjustable



VIEW OF FRONT AXLE SHOWING STEERING AND BRAKE CONTROL.

roller bearings. The swivel pins have renewable phosphor-bronze bushings, the load being taken on ball thrust bearings.

**Steering.** Steering is of the cam and lever type with provision for adjustments for wear.

**Brakes.** The foot brakes are Lockheed internal four-wheel hydraulic. The brake shoes in each wheel are operated by a small cylinder, whilst the master cylinder is carried beneath the bonnet and is connected with the brake pedal. This system of braking ensures equal pressure on all four brakes. There is an emergency brake of the contracting band type at the rear of the gear box.

Digitized by Google

**The Frame.** The frame is of channel steel 7 ins. deep and is strongly braced by cross members. The springs are semi-elliptic, the front springs being 40 ins. long by 2 ins. wide, and the rear springs 50 ins. long by 2½ ins. wide.

The wheels are of the disc type, singles front and twin rear, and the standard type equipment may be either 6½ ins. by 20 ins. balloon or 32 ins. by 6 ins. high pressure, the tyres used being either Goodyear or Firestone.

**Equipment.** The equipment includes a 6-volt battery of 84 ampere hour capacity, electric starter, generator and horn, two headlamps with twin filament bulbs, giving bright or dim lighting with dimmer switch on foot board. Two side lamps, tail and stop light and the usual equipment of tools. The capacity of the fuel tank is 12 gallons.

One of the special features of this chassis is the large loading space provided behind the driver's seat, 9 ft. 6 ins. in the case of the 11 ft. 4 ins. wheelbase model and 11 ft. 6 ins. in the case of the 13 ft. 4 in. model.

# Burnley Corporation Tramways and Omnibuses.

## New Tower Wagon.

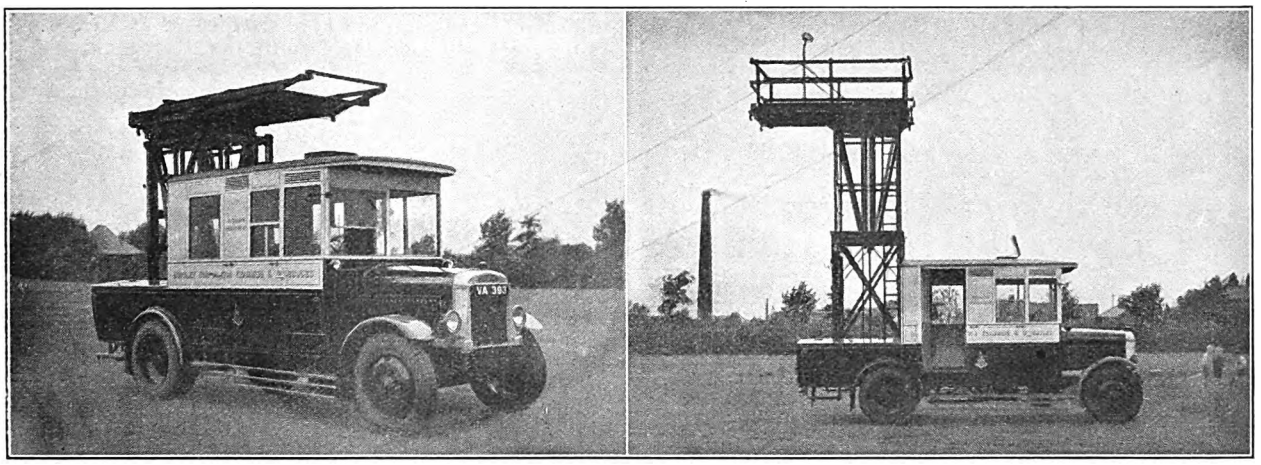
THE new tower wagon just built in the workshops of the Burnley Corporation Tramways and Omnibuses under the supervision of Mr. F. S. Whitaker, Rolling Stock Engineer, has several novel features.

Ample protection is provided for the crew by the commodious cabin, which is also fitted out as a workshop with bench, vice, tool cupboards, etc.

The tower, which is built of oak with slides lined with steel angles so as to reduce wear to a minimum, is raised by the usual screw but so arranged that the raising is operated by the engine, and the tower can be run up to its maximum height in half a minute. A special automatic "knock off" motion is fitted to prevent overwinding. Provision is also provided for raising by hand in case of emergency. The lowering is by gravity.

The working platform or table is of the usual revolving type but is provided with special rollers mounted on the underside of the platform, which run on the underside of the rack race to prevent the table from sagging when the men are working at the extreme outward end. The hand rail is of the collapsible type. Large lockers are fitted on each side and at the rear of the tower for storing the usual linesmen tools.

Electric light is provided by a C.A.V. Type M dynamo and 100 amp. hr. Nife Accumulator. In addition to the usual road lights (head, side and tail) the interior of the cabin and the work bench are well lighted by lamps fitted in the roof. A stand containing a bunch of four lamps with an enamelled reflector is provided for use on the top of the tower when working during the night. A suitably mounted mirror and a trap door in the roof enables the driver to see the men working on the tower and to hear any instructions they wish to give him. In addition to the regulation driving mirror another large mirror mounted inside enables the driver to have a good view of the rear of the machine on both sides.



BURNLEY'S NEW TOWER WAGON. THE MACHINE IS MOUNTED ON A LEYLAND CHASSIS (FORMERLY USED FOR BUS SERVICE) FITTED WITH PNEUMATIC TYRES.

In order that long articles, such as a bracket arm or tie rod, may be carried a trapdoor can be opened in the rear of the cabin so as to permit passing the article through into the cabin. Doors are arranged on each side to enable work to be brought to the bench.

The machine is mounted on a Leyland chassis (formerly used for bus service) fitted with pneumatic tyres.

# Trade "Barometer."

## Effect of Crisis on British Industries Fair.

A SIDE-LIGHT on the National crisis is contained in a statement made at the beginning of the month by Mr. C. Elliott, general manager of the British Industries Fair, Birmingham.

"The usual lull in the booking of space at the time of August Bank Holiday continued during the next three weeks," said Mr. Elliott, "and at the height of the economy crisis a few firms actually withdrew their applications.

"Then on August 24th, when a settlement was announced, there began one of the best weeks in the history of the Fair in Birmingham. The space booked during the week amounted to over 10,000 square feet with the result that 200,000 square feet in all is now definitely booked, leaving unlet only about 40,000 square feet of which a large amount is provisionally reserved.

"While the majority of the bookings are by firms which have exhibited for many years, a notable feature is the return of old exhibitors who have been missing recently. Their return, I think, is a sign of appreciation of the great improvements made in the Fair in Birmingham since they last exhibited. There are also a number of new exhibitors, both in the old sections and in those which have been formed this year.

"As a result of the announcement of the formation of a cycle and motor cycle section of the Fair in Birmingham, an inquiry has already been received by the Fair Management from Japan and has been passed on to intending exhibitors."

The Birmingham section of the Fair, which contains the exhibits of the hardware, engineering, electrical and gas industries, opens simultaneously with the London section on February 22nd, and closes one day later on March 4th. The main London section at Olympia closes on March 3rd and the new Textile section at the White City closes on March 5th.

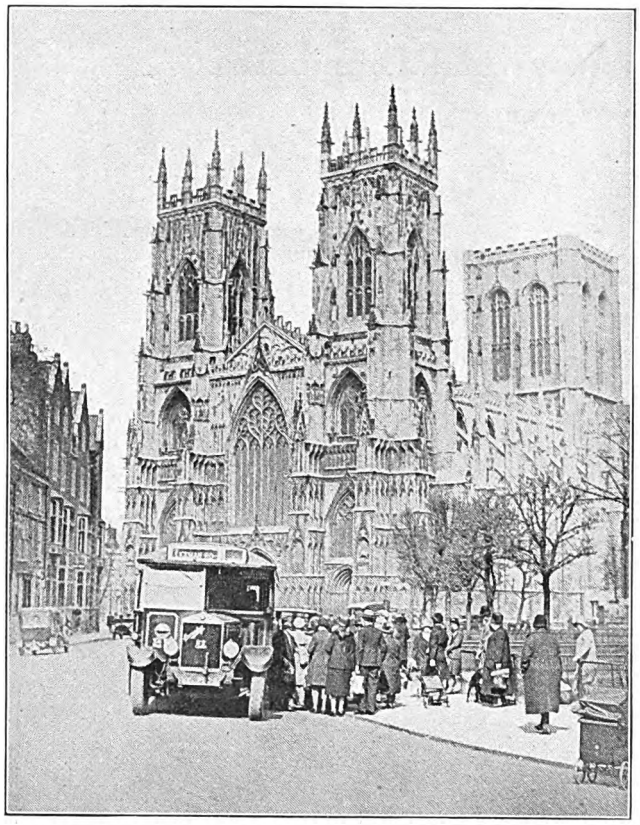
# Motor Coach and Bus Notes.

**New Bus Fares Ruling.**—The Northern Traffic Commissioners have decided that weekly or 12-journey omnibus tickets shall be issued at a standardised rate for the area of .66d. per mile travelled. This new rate of fare comes into force on October 1st.



ONE OF THE YORK CORPORATION'S FLEET OF "CROSSLEYS" IN FRONT OF THE FAMOUS YORK MINSTER.

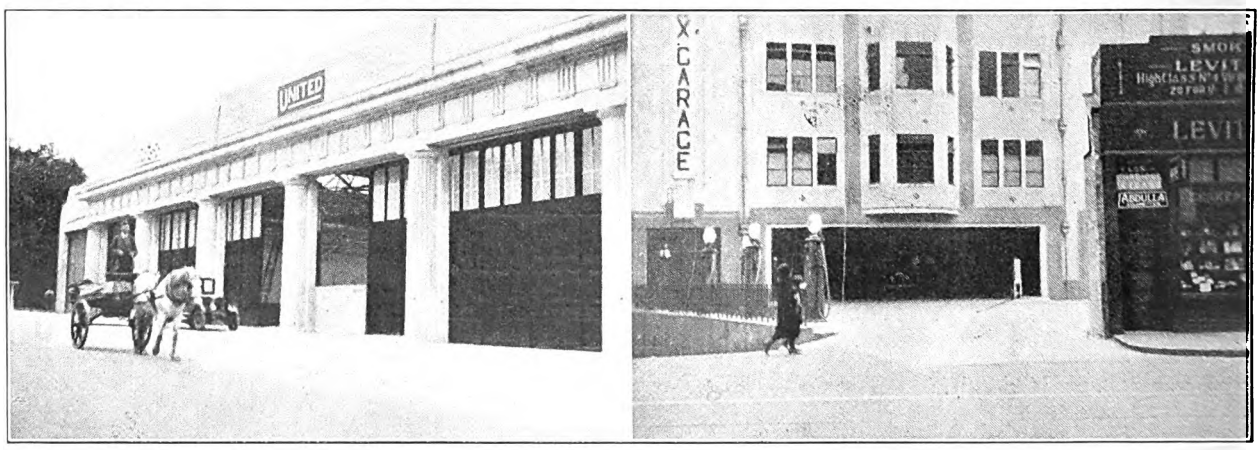
**"Crossleys" at York.**—Our illustration shows one of the York Corporation's fleet of Crossleys in front of the famous York Minster.

**New Garage of United Automobile Services, Ltd.**—The new home of the United Automobile Services, Ltd.'s buses at the corner of Jesmond and Portland Roads, Newcastle, is a striking example of beauty in industrial architecture. Its imposing facade, with seven fluted Doric columns, is in harmony with the leafy attractions of the district, and the garage is fitted with all the latest labour-saving and utility devices. It contains a large number of inspection and dock pits, washing machines, and a battery of electrically operated petrol pumps. A special type of oil-fired heating apparatus has been installed to obviate the disadvantages of coal or coke fuel; and there are large engineering, supervisory and clerical offices, stores, battery rooms, tyre service shops, etc., besides a canteen, billiard room, and other amenities for the employees. The roof is of the cantilever type, which eliminates the necessity for columns, and so leaves a clear floor space for the buses. The total cost of the steel used was about £5,000, and some 350 tons of cement-stone were utilised in the elevation. The architects were Messrs. Marshall & Tweedy, Newcastle; the general contractors being Messrs. Thos. Clements & Sons, Ltd., Newcastle, with structural steel work by Messrs. A. & J. Main & Co., Ltd., and "Esavian" folding and sliding doors.

**Appeals in Connection with Road Service Licences.**—The Minister of Transport has recently had under review certain appeals against the decisions of Traffic Commissioners in relation to Metropolitan suburban motor coach services where only a relatively small part of the route lay outside the Metropolitan Traffic Area, i.e., outside the Metropolitan Police District. In such cases, where the appeal is against the decision of provincial Traffic Commissioners, the Minister, after consideration of the appeals, which have already been before him, has reached the conclusion that the case in respect of such services cannot be fully presented until the Metropolitan Traffic Commissioner has heard the corresponding applications for road service licences or backings in respect of his area and has given his decisions thereon. It seems clear that the extent to which any proposed service of this nature is necessary or desirable in the public interest can only be determined in relation to the circumstances of the Metropolitan Traffic Area which is the area chiefly concerned. In these circumstances, the Minister has decided to withhold his decision on such appeals until the Metropolitan Traffic Commissioner has heard and reached a decision on the corresponding applications for road service licences or backings in that area.

**Booking Agents' Association of Great Britain.**—The Booking Agents' Association's first Annual Outing will take the form of a day spent at Eastbourne on September 24th next. Travel by road, a good lunch, nice tea, jolly companionship, etc., will be provided at the small cost of 6s. Members as well as non-members are invited to join in the trip. The Hon. Secretary of the Association is Mr. T. Morris, and the offices are at 40, Sherbrooke Road, Fulham, London, S.W.6.

**New Dex Garage.**—Our photograph shows the new Dex Garage in New Bridge Street, Newcastle, the latest contribution to the solution of transport difficulties in that busy city. A cigar shop, which negotiations up to the present have failed to remove, stands in the centre of the main entrance.



Photos] [World's Carriers.

LEFT: FRONTAGE TO NEW GARAGE OF UNITED AUTOMOBILE SERVICES, LTD., AT NEWCASTLE-ON-TYNE. RIGHT: ENTRANCE TO NEW DEX GARAGE, NEW BRIDGE STREET, NEWCASTLE-ON-TYNE.

**Crossley Compression Ignition Engined Buses.**—Manchester Corporation Transport Department have just ordered a further 30 Crossley heavy oil engined double-deckers. This is their third repeat order for this type of Crossley, the first being for one, the second for four and

Digitized by Google

now the latest order for thirty. Other Corporations who have recently ordered Crossley heavy oil engined buses are Rochdale Corporation, 6 machines, this being their second repeat order, Bury Corporation, Stockton Corporation, Liverpool Corporation, Portsmouth Corporation and Widnes Corporation. The vehicle for the last named Corporation is fitted with the Crossley patent "Automatic" gear change device.

**To Regularise Fares.**—North Western Traffic Commissioners have granted a series of applications by the Liverpool Corporation for permission to operate the bus services of the Merseyside Touring Company. The Chairman, Mr. W. Chamberlain, said next year the question of fares and stages and receipts per mile would be closely scrutinised, particularly with a view to the standardisation of the area. The Commissioners had found that, in some places, fares which were entirely unremunerative had been charged for the purpose of meeting competition. On the other hand, there had been over-charges on some routes to reimburse the operators for losses on others. As the Commissioners were granting licences which were in the nature of a control monopoly, they would see to it that there was an equalisation of fares, and that the vicious system he had mentioned was cut out.

**Bury's A.E.C. Buses.**—A.E.C. "Regal" single-deck, and "Regent" double-deck vehicles are among the latest additions to the Bury Corporation transport fleet. The former has accommodation for 30 passengers, and is provided with two double-door entrances on the near side. The cushions and seat backs are finished off in real leather and alternate seats are fitted with "Staybrite" grab

ONE OF BURY'S A.E.C. BUSES.

handles. A system of cant rail ventilation with perforated grids, supplemented by three roof ventilators provides the necessary change of air and three of the windows on each side of the bus are made to open. Twelve lamps provide the illumination for night work. One of the features of this vehicle is an emergency door fitted immediately behind the driver's cab, on the offside, and which can be opened either from the inside or the outside. The double entrance double-decker is designed to carry 48 passengers—22 in the lower and 26 in the upper saloon. It is fitted with an Allcock's patent front stair which extends partly through the front bulkhead, and has the safety advantage of terminating on the lower deck, away from the front entrance. Transverse seats are of the semi-bucket type covered with hand buffed leather. Five windows on each side in the upper, and two on each side in the lower saloon are made to open, the latter being fitted with glass louvres. Ventilation is provided in the lower saloon by a cant rail system and patent ventilators in the front bulkhead, and upstairs by adjustable cowl ventilators also in the front bulkhead. Eighteen interior lights, a "Numa" air bell with pushes on both decks, stanchions, hand poles and grab handles complete the interior fittings; these are all covered with Black Doverite. As in the case of the single-decker, an emergency door is fitted at the front end of the offside.

**New Bus Station at Whitehaven.** — Mr. W. H. T. Meageen, the T.T. rider, grandson of Mr. T. Meageen, Managing Director of the Cumberland Motor Services, Ltd., opened the firm's new bus station at Whitehaven by driving out the first bus of the daily service. The building, which is up-to-date in every particular, is identical in size with the Company's station at Workington.

**London-Newcastle Bus Fares.**—The Northern Traffic Commissioners have decided that the Newcastle-London bus fares should be fixed at 32s. 6d. return and 20s. single, with standardised fares for intervening stages in the Northern area. An application by the Northern Road Transport Owners' Association to fix the return fare at 35s. was dismissed. The Commissioners agreed, however, that "feeder" services serving London buses at Newcastle from outlying districts should charge for the local journey into and from the city at a rate of ⅜d. per mile.

**Increased Profits from Buses.**—Southport Corporation motor buses have yielded a profit of £2,814 on the year's working, an increase of £500. Fifteen new Vulcan D.D. buses, at a cost of £24,490, have been purchased during the year, and also £4,930 expended in connection with the new bus garage. The fleet of omnibuses consists of the following:—One 32-seater Vulcan single-deck bus, four 36-seater Vulcan single-deck buses, two 50-seater Leyland double-deck buses, fifteen 51-seater Vulcan double-deck buses.

**Merseyside Buses Being Withdrawn.** — Gradually the motor buses at present run by the Merseyside Touring Company, Ltd., between Liverpool, Bootle, Litherland, etc., are being superseded by vehicles belonging to the Liverpool Corporation. The long-distance motor coach services operated by the Merseyside Touring Company, Ltd., will not be interfered with, and will continue according to programme. The Liverpool Corporation has about 40 unlicensed motor buses which are temporarily laid up pending a traffic revival. The municipal fleet comprises 214 vehicles. Work will be found for nearly all buses in the course of a few weeks on Merseyside routes. It is expected that by the end of September the whole of the Merseyside Company's buses will be displaced by Corporation vehicles.

**In the Welsh Country.**—The long distance buses from Swansea and Cardiff to London and the Midlands are being used well by the public. The G.W.R. Express, the Black and White, and the Red and White services invariably carry full loads of passengers. The Nell Gwynne bus from Cardiff to Liverpool is becoming increasingly popular, and is being liberally patronised by holiday-makers between South and North Wales.

**Ribble Developments in the North.** — Ribble Motor Services, Ltd., of Preston, have purchased practically all the services operating in the city of Carlisle, and, in addition, have acquired some of the country routes. Approximately 40 buses are involved in the Ribble purchase, and, in addition, the company have acquired the Carlisle trams, owned by a private company. These developments will tend to secure that co-ordinated scheme for the city and district which the Traffic Commissioners desired when they refused the Carlisle Corporation licences for a municipal bus service. Carlisle Corporation has decided to support the Ribble Motor Services' scheme for the co-ordination of the transport services of the city, including the purchase of the tramways undertaking, and the Ribble's promise to pay £3,500 to the Corporation, towards road reinstatement after abandonment of the tramways. The Ribble Company has promised sympathetic consideration towards the present bus employees, the bulk of whom will be taken over on the transfer. The associated companies of Ribble Motor Services, Ltd., are the Caledonian Omnibus Company, Ltd., Cumberland Motor Services, Ltd., and United Automobile Services, Ltd.

**Thorough Training for Manchester Drivers.**—Manchester Corporation Transport Department has trained two hundred and fifty-eight men to drive buses in the last eighteen months. The training of drivers is undertaken in a very comprehensive way, states Mr. R. Stuart Pilcher, General Manager, in a report to the Transport Committee. The men are instructed in the use of the chassis, engine, etc., and are then taken out on the road by special instructors and obtain experience on every route in the city with different types of vehicles. Finally, they are not passed out until considered to be fully competent, but even with the most complete training it takes some months of actual driving before men become thoroughly skilful and efficient. It has been the policy of the department not to dispense with the services of tram drivers, but to train them as bus drivers.

**Agreement with Coachowners.**—St. Helens Corporation has entered into an agreement with certain motor coach owners of St. Helens in connection with the Corporation's application to the Traffic Commissioners for the North-Western Area for their consent to run certain excursions and tours. The Corporation gives an undertaking not to apply for the consent of the Traffic Commissioners to run other excursions and tours for a period of three years.

## Short Distance Hauliers' Alliance.

THE members of the Hauliers' and Concrete Aggregate Merchants' Alliance have agreed that the title be changed to "Short Distance Hauliers' Alliance" and the organisation is now known under its new title.

The head office of the Alliance remains at 6, Stamford Brook Road, London, W.6, and all communications should be sent to the Secretary at that address.

The Committee is constituted as follows:—Chairman, Mr. Frank F. Fowler (Murrell's Wharf, Ltd.); Vice-Chairman, Mr. H. Janes (Janes Bros. (Contractors), Ltd.); Mr. E. G. Gordon-Poggi (Gordon Transport Co., Ltd.); Mr. H. J. Greenham (H. J. Greenham (1929), Ltd.); Mr. J. Guyatt, Mr. H. Hands (Wm. Truckel, Ltd.); and Mr. T. R. Sanders.

The reason for the change of title is that the Alliance is so constituted as to include in its membership firms engaged in the haulage of any commodity and the Committee will welcome the support of all hauliers.

The membership of the Alliance is growing steadily and all short distance hauliers in their own interests are urged by the Committee to send to the Secretary for particulars of the activities of the Alliance.

Although the term "Short Distance Hauliers" is used it is not intended to limit the scope of the Alliance from a distance point of view but to prevent the Alliance being confused with any existing organisation.

## Motor Hirers and Coach Services Association.

THE Motor Hirers and Coach Services Association has been registered as a company limited by guarantee without share capital. The objects are to promote the interests of members in relation to their businesses of motor vehicle proprietors and, in particular, the National Advisory Council of Public Service Vehicle Owners' Association, etc. The management is vested in a council which includes Messrs. R. Baxter, R. W. Birch, G. Bown, C. Culverhouse, C. Dobbs, G. Dudley, J. H. Ewer, R. H. Favell, W. Featonby, F. A. Flin, W. F. French, A. L. Guilmant, E. W. Harris, J Hearn, L. G. Hillier, H. O. Jones, M. Logette, J. H. Lowe, E. A. Monkman, F. Nightingale, G. Nowell, H. E. E. Palin, H. T. Rickards and A. E. Tapper.

## London Coach Owners' Federation.

THE London Coach Owners' Federation, Ltd., was registered as a private company on August 31st, with a nominal capital of £100 in £1 shares. The objects are to investigate, examine, protect and develop all or any of the interests of members or non-members relating to road, water, air or any joint service of transport, to appear before any Court of Law or any authorised Commissioners or other authority for the purpose of protecting and/or developing the interests of any or all members or non-members, etc.

The directors are:—R. W. Birch (director of Birch Bros., Ltd.); J. H. Ewer (director Geo. Ewer & Co., Ltd.); W. F. French (director United Service Transport Co., Ltd.); L. A. Mitchell (director Blue Belle Motors, Ltd.); F. B. Monkman (director Keith & Boyle (London), Ltd.); W. A. Timpson (director A. Timpson & Sons, Ltd.).

The registered office is at 82, Clapham Road, London, S.W.9.

## Appointment of Agents Abroad.
### Supply of Trade Literature.

IT has come to the notice of the Department of Overseas Trade that its Overseas officers are frequently placed in no inconsiderable difficulty when endeavouring at the request of some United Kingdom firm, to interest a local firm in their productions, owing to the fact that the home firm fails to provide a sufficient supply of trade literature.

It will be realised that when only one set of a firm's literature is supplied on the occasion of a request for the name of a suitable agent, that it is not an easy matter to get catalogues, etc., returned expeditiously from firms approached, who find that they have no interest in the products put before them, with the result that other firms who might be interested, cannot be properly communicated with without considerable delay, if at all.

It is accordingly suggested that in order to facilitate the establishment of connections such requests should be accompanied by adequate literature, particulars of prices and terms together with details of the basis on which it is proposed business should be conducted.

## Thames Dock Development to Cope with Growing Trade.

To cope with the rapid growth of trade with the Continent, extensive improvements are being carried out at the Regent's Canal Dock at Limehouse.

Roland-Argo Wharves, Ltd., who already own three wharves in the dock, have acquired a fourth and are providing it with the most modern equipment. This includes powerful electric cranes which lift cargo straight from a steamer's hold over intervening buildings and on to motor lorries standing in the roadway or into barges ready to go along the Grand Union Canal.

This company deals with nearly 400 steamers a year and the total weight of cargo annually handled is about 300,000 tons. Expeditious handling enables steamers to run to a time schedule with the precision of express trains. This is of great advantage, not only to shipping companies, but also to the factories which line the banks of the canal and to which regularity of supplies is a matter of importance.

The Regent's Canal Dock forms a terminus of the Grand Union Canal, which links the Thames with the Trent and the Midlands, and is the only privately-owned dock in the Port of London.

## Illumination Congress.
### Anti-Dazzle Demonstration.

OVER ninety entries have been received by the R.A.C for the anti-dazzle demonstration which the Club is organising on September 17th at Cambridge in connection with the International Illumination Congress that is being held in this country during September. The demonstration will include (1) head lamps designed to meet the requirements of certain foreign countries; (2) those which would comply with the amendments proposed by the R.A.C. to the Ministry of Transport regulations, and (3) lamps which do not meet the requirements of any regulations, but which are claimed to be anti-dazzling.

The entry includes leading examples of French, German, Dutch, American and English devices, and it will be possible at the demonstration to compare the relative advantages of the movable beam such as is in common use in this country with the low top beam of the Continental type.

Considerable interest will attach also to the many entries which do not attempt to comply with any regulation, but which attack the dazzle problem by a variety of novel methods. These include coloured bulbs, diffused lights, screened reflectors, coloured glass screens, wire mesh light filters, hooded lamps, prismatic screens or lenses, devices to split the light beam, lamps following front wheel movement, bulbs withdrawn through the reflector, chemical treatment of glass, lenses filled with coloured water, a screen of glass wool immersed in oil, the light obscured by a quickly inflated bag or bladder containing a small circle of partially transparent material, a method of flood lighting the road from the top of the radiator dispensing with all lamps, the complete external illumination of the car thus enabling it to be distinguished under any conditions, and many others of equal ingenuity.

The demonstration will be divided into two parts. The cars will first be lined up so that spectators will be able to inspect the various devices in detail, after which the cars will be driven over a short route on the demonstration ground, each device as it approaches the spectators being shown with the car in motion.

## Denmark's Road Traffic Growing by 25 per cent. Annually.

ROAD traffic is steadily increasing year by year at an average rate of between twenty and twenty-five per cent. in Denmark. This remarkable growth is revealed in a report on a five-year traffic census which was conducted by the Danish Laboratory of Road Research. Copies of the report have just reached England.

The census was taken on an experimental stretch of road between Copenhagen and Roskilde, and tests were also made to discover the best surface material to withstand the growth of modern traffic. Surface-dressed macadam is recommended as best for this purpose.

Two types of vehicle, it is reported, are disappearing—horse-drawn traffic is decreasing steadily and solid-tyred vehicles rapidly. Much of the increase in traffic is due to the growth of Denmark as a touring ground.

# Legal Aspects of Lien.

## Possessory and Equitable Lien.

## Carriers and Forwarding Agents.

(BY A BARRISTER-AT-LAW.)

### A COMMON LAW LIEN.

IN its primary meaning lien may be described as a right in one person to retain that which is in his possession belonging to another until certain demands of the person so in possession have been satisfied. In this particular sense it is given by law and not by contract; because contract may supersede lien and limit the rights of the person claiming under contract to those contracted for. Such a lien does not as a rule arise until the possession of the property is obtained, but in exceptional cases possession is not essential to constitute a common law lien, as, for instance, in the cases of lien for Seamen's wages and bottomry bonds. Possessory liens may be distinguished in their division as either general or particular. A lien is a right of defence, and not a right of action, and therefore can be set up in respect of a statute-barred debt, but a lien does not, except in special circumstances, confer any right to sell the thing retained, nor can the lien itself be assigned. Consequently, a lien, being merely a personal right, which continues during the possession of the goods, cannot be taken in execution. In the case, of course, of perishable articles the party claiming the lien is bound to take reasonable care of such property. But, generally speaking, anyone having a lien on property who keeps it for the purpose of enforcing his lien cannot make any claim against the owner for so keeping that property. It need scarcely be said that possession must be rightful; it must not be for a particular purpose and it must be continuous. A debt in which a lien is claimed must be due and not accruing. These principles have been laid down by very learned authority, and it will be readily understood that a contract for a special method of future payment which precludes any implied contract for immediate payment does not give rise to a lien, notwithstanding that labour has been spent on the property in question. Whether the Contract for future payment is an express Contract or is implied from usage of trade is quite immaterial

### AN EQUITABLE LIEN.

It should be mentioned, perhaps, that an agreement which is void *ab initio* by reason of the absence of legal formalities cannot give rise to a lien; and that a lien in its secondary sense, according to distinguished authority, where the person claiming the lien has not got possession of the thing in respect of which the lien is claimed is either judicial or equitable. Judicial liens are obligations founded upon Judgments or Orders of the Court which bind the property, but give no right of possession. On the other hand equitable liens rest upon the consideration of a duty or implied intention on the part of the owner to make property answerable for a specific claim. It is more particularly to the latter that it may be desirable to devote the brief remarks required by the limits of a short article.

### FORWARDING AGENTS AND OTHERS.

Maritime law admits the validity of an equitable lien, and if reasonable diligence be used and the proceeding be *bona fide*, such lien will not be discharged by the sale of the Ship, but may be enforced against the Purchasers without notice. Without pursuing this question, however, some observations may be helpful in regard to engagements to ship frequently made by forwarding agents acting for Merchants inland or abroad; or by Vendors or buying agents shipping on behalf of English or foreign purchasers or principals; and a doubt sometimes arises whether the person who has thus made the engagement is personally responsible for it. Where the contract is not entered into expressly for someone else, or so as to indicate to the other party that he who makes it is only acting as agent in the matter, the person entering into it becomes responsible for its performance, though the principal for whose benefit it was in fact made may also be made liable, or may be entitled to claim the benefit of it. If the contract has expressly been made for another, the person making it does not become responsible for its performance, but he impliedly warrants that he has authority to make it for that other person, and is liable in damages if that is not the case. When an engagement of this kind has been made in England on behalf of a foreign purchaser or principal, the presumption seems to be that the Vendor or Agent contracts personally, and does not pledge the credit of the foreigner. But this presumption will not prevail where it is inconsistent with the terms of the Contract. It may be added that, generally, no question as to the right to stop goods in transit arises unless the property in the goods has passed from the Vendor. This should be borne in mind in considering the cases on the subject; for the two questions of the right of property and right to stop in transit are frequently confused with one another.

### RIGHTS DURING TRANSIT.

The Vendor does not, by stopping the goods, reclaim the property in them, nor does he thereby cancel the sale. In general, he merely recovers the right to hold possession until the price is paid; and, in the case of perishable goods, to resell after notice to the buyer and failure by him within a reasonable time to pay or tender the price. The unpaid Vendor may "stop," that is, retake possession by the carriers holding for him *in transitu,* that is to say, during the transit; but it is laid down by one eminent authority that he cannot demand actual possession during the transit against the will of the Carrier, or direct the Shipowner to deliver to him except at the contractual place of destination. The goods, as that authority points out, may be under other goods in the hold; the Ship may have contractual engagements to carry other goods to other ports; or policies of insurance may be affected by detention or delay. The Contract of sale as indicated, is not cancelled by stoppage *in transitu,* and, according to the authority referred to, neither is the Contract of Affreightment, except in so far as delivery at the port of destination to the consignee is stopped by the unpaid Vendor, and other delivery there is ordered by him.

### POSSESSORY LIENS OF CARRIERS AND OTHERS.

It is important to remember that the right spoken of is subject to the possessory liens of the Carrier, Warehousemen, or others, which have been acquired for charges in respect of the goods. But it is not subject to any general lien which the Carrier might have had, as against the consignee, in respect of freights due on other goods. Nor is it subject to a general lien of the consignee's factors into whose hands the goods had come as pledges. In one well-known case it was held that the Vendor's right was paramount to that of a creditor of the Vendor who had attached the goods, while in transit, by process of the Court. In this reference to the liens of Carriers, Warehousemen, and others, what has been said already as to the position of forwarding agents acting for merchants will of course, be distinguished, so as to avoid any confusion.

# News from the Ports.

**Quebec Harbour Commission.**—We have received information from the office of the High Commissioner of Canada, Canada House, Trafalgar Square, London, S.W.1, that the Quebec Harbour Commissioners have forwarded to the reference library at Canada House, their Report for the year 1930, giving up-to-date information relative to the facilities available for shipping in the port, and showing a further progress in the utilisation of the harbour accommodation during the 9 months of navigation last year. Navigation opened on March 8th and closed on December 23rd. The traffic decline reported in 1929 was slightly arrested last year, exports rising by 10 per cent. and imports showing also a slight improvement. The report can be consulted at Canada House.

**Fighting for New Industries.**—For the purpose of encouraging new industries in Lancashire, the Mersey Docks and Harbour Board has contributed £200, the Liverpool Organisation £100, and the Manchester Ship Canal Co. £50 to the funds of the Lancashire Industrial Development Committee.

**Manchester Association of Importers and Exporters,** in its annual report, states: "The main stream sweeping commerce along its downward course has been the policy deliberately and of set purpose pursued by Great Britain and America of curtailing the volume of the medium of exchange, especially during the period when all kinds of goods were beginning to be produced in rapidity and quantity unknown to previous generations." Mr. Harold A. Baerlein, President of the Association, at the annual meeting, said ample evidence existed that all overseas producers were constrained to send their surplus supplies to this island, and that most of them were not taking payment for their sales to us in British goods. The import and export trade of each of these countries should be examined separately and the reason for the buying from other countries rather than from us investigated.

**Great Western Railway Company's New Tender for Plymouth Ocean Liner Service.**—After successful trials delivery was taken recently at Plymouth of the s.s. "Sir Richard Grenville," the Great Western Railway Company's latest addition to their fleet of tenders, which will take her place in the tender service carrying passengers, baggage and mails between the liners calling in Plymouth Sound and the company's ocean passenger landing pier at the Millbay Docks. The vessel is built to Lloyd's Special Survey, and to comply with the latest Board of Trade requirements for a Passenger-carrying Tender. The principal dimensions are:—Length, 170 ft.; moulded breadth, 42 ft. 6 in.; moulded depth, 15 ft. 9 in.; with a mean draft of 11 ft. 9 in. With an indicated horse power of 1,700 she will have a good turn of speed. The new tender is also intended to assist with the popular excursions to the various delightful spots around Plymouth. The new vessel possesses great stability, the promenade deck being left as clear as possible for the stowage of mails and motor cars. On the main deck a saloon deck house, running the full length of the vessel, is being fitted out with a smoke-room complete with bar, ladies' lounge and a large roomy after-cabin, which will form a general lounge. There is also a dining saloon fitted out. The carrying capacity of the vessel will be 800 passengers. She is a twin-screw vessel, which gives her ample manœuvring powers for attending on the liners.

**Garston Docks: A Quick Discharge.**—A cargo consisting of 3,800 tons Pyrites recently arrived at Garston Docks, Lancs., and was discharged in the record time of 18 working hours. 2,650 tons were discharged in 8 hours by four recently erected 7-ton electric cranes fitted with the latest type of grabs, the residue of the cargo—1,280 tons—being discharged by tubs in 10 hours. Garston Docks are owned and worked by the L.M.S. Railway who have just completed a scheme for the modernisation of cranage and other equipment for the rapid handling of cargoes at the docks and on the dock estate thereby benefiting shipowners and merchants alike.

**Port Equipment at Cork.**—At a meeting of the Cork Harbour Board, Mr. Price, Harbour Engineer, reported that the new 25-ton transporter crane, erected by Messrs. Babcock & Wilcox, Ltd., had been thoroughly tested, and was found to be fully up to specification. The Chairman, Mr. R. Wallace, said that the Harbour Board could congratulate themselves on having such a splendid appliance, which was a very necessary port equipment, costing about £4,500.

**White Star Line Announce Cheaper Atlantic Travel.**—Important reductions in passenger fares, for sailings from October 1st onwards, are announced by the White Star Line. The cuts in rates are very substantial, and in the case of a first class suite on the "Majestic," the world's largest liner, the reduction amounts to as much as £200, whilst the cost of a room with bath on the same vessel is reduced by £50. Corresponding reductions are being made on the "Olympic" and "Homeric," as a result of which cuts amounting to as much as 36 per cent. will apply to the first class accommodation of the White Star Line's famous "Big Three" from Southampton to New York. Cabin and second class minimum rates remain unchanged but schedule rates are to be reduced and the minimum rate has been extended to include a greater range of accommodation. Tourist Third Cabin—in future to be designated "Tourist Class" thereby dropping the "Third" reference so obnoxious to many travellers—remains with unaltered rates, a fact which is not surprising when the many amenities and developments made by the White Star Line in this type of travel within the last few years are considered. Drastic reductions are also being made in the Third Class rates. With the introduction of these new rates it will be possible to cross the Atlantic in a monster White Star Liner for £43 first class, £30 5s. second, £21 15s. tourist, or £15 10s. third class, and rates will be at a lower point than they have been for many years.

**Liverpool Shipping and Forwarding Agents.**—No meetings of the Council of the Liverpool Shipping and Forwarding Agents' Association were held during the month of August. Arrangements are now being made by the Secretary, Mr. S. L. Jude, for Mr. B. H. M. Hewitt to address the members of the association at a special meeting on the outstanding features of the new Mersey Tunnel, which will be ready for use towards the end of next year. Mr. Hewitt was recently appointed General Manager of the tunnel. Probably next month, or maybe November, the annual general meeting of members of the Association will be held.

**Liverpool's Loss.**—Regret is felt throughout Mersey shipping and forwarding circles at the decision of the Anchor Line, Ltd., to close their Liverpool office. In future, the Liverpool work of the Anchor Line will be conducted by Messrs. T. and J. Brocklebank, Ltd., as Anchor Line agents.

**Fees for Passing of Customs Entries.** — Further consideration has been given at Liverpool to the question of high charges made by the coastwise steamship companies for passing customs entries on goods arriving at Liverpool from the Irish Free State. If shippers can forward their goods in larger consignments the probability is that trouble would be less pronounced. We understand that a committee of business men which has been investigating the complaint has come to the conclusion that the charges are reasonable—in principle. It is understood that the Committee of the British and Irish Railways and the Independent Steamship Companies have come to the conclusion that a reduction in charges cannot be entertained.

**Major J. A. Eckes, T.D.,** of Messrs. Langstaff, Erembert & Co., shipping and forwarding agents, of Liverpool, has been appointed one of the executive officers of the Lancashire Industrial Development Committee. Major Eckes is a member of the Council of the Liverpool Shipping and Forwarding Agents' Association, and is Deputy-Chairman of the Liverpool Chamber of Commerce.

**Decline in Ship Canal Traffic.**—Manchester Ship Canal Company in their monthly traffic return, report that approximate traffic receipts for the month of July totalled £92,814, a decrease of £15,258 on the corresponding period of last year.

**Economies at Liverpool.**—The sheds on the east side of the Toxteth and Harrington Docks, Liverpool, of which very modest use has been made lately, have been temporarily closed as a measure of economy. The adjoining water space is to be reserved for vessels lying up. Other sheds in the vicinity of these docks, including appropriated sheds, are unaffected by the closing order.

**Passing of Famous Old Firm.**—Messrs. Rankin, Gilmour and Co., the century old Liverpool shipping firm which originated at Glasgow in 1804, as Pollok, Gilmour and Co., has brought its activities to a close. At one time there were fourteen branch houses of the parent firm in Nova Scotia, New Brunswick, Canada and U.S.A. Their first steamer was launched in 1880 and eventually a fleet of fifteen to twenty modern steamers was built up to engage in world-wide trading. The directors have decided to liquidate the assets of the company.

Digitized by Google

**Consular Changes.** — Manchester has lost one of its consular links through the closing of the local office of the German Consulate. All business which has been attended to at the Manchester Office must now be addressed to the German Consulate, 28, Brunswick Street, Liverpool. Senhor Augusto Rat Potier has been appointed as assistant Portuguese Consul at Liverpool, to succeed Senhor Luiz Vieira Campos, who left the Liverpool Consulate some three months ago.

**Future of the Tyne.**—Mr. Richard Aughton, General Manager of the Tyne Improvement Commission, lectured before his fellow members of the Newcastle Rotary Club recently on "The Making of the Tyne." Describing himself as an optimist, he declared his belief that sooner or later the industrial tide would turn and that they would win through successfully.

**A Successful Year,** despite these difficult times, was reported at the annual meeting of the Tyne-Tees Steam Shipping Co., Ltd., held at Newcastle on August 31st, Sir Arthur Munro Sutherland, Bt., presiding. While the profits were practically £10,000 less than those of 1930, a dividend of 5 per cent. has been paid. New services have been started from Amsterdam and from Dordrecht, and the number of passengers from London has increased, while the new service to and from Southend promises well. The rebuilding of the Gateshead quay is nearly completed, and the Company's sheds will be re-erected some time next month. There will then be accommodation there for three steamers and ample space for dealing with goods. Mr. Henry Armstrong replaces the late Mr. R. J. Thompson on the Board and is succeeded as Secretary by Mr. Hubert B. Charlton.

**United States Lines Announce Reductions.**—Substantial revision in rates has been announced on all Atlantic liners sailing from New York. Revised rates for sailings from British and European ports will come into force on October 1st. First and Third Class passengers will benefit most from these reductions. One of the first of the low rate departures will be the United States liner, "Leviathan," from Southampton on October 3rd. The new minimum First Class fare coming into force with this sailing will be £49—19½ per cent. lower than the minimum for this steamer during August and September. In the case of superior accommodation the reductions will be considerably greater—the reduction on some accommodation between the September 14th and the October 3rd sailing of the "Leviathan" ranging as high as 68 per cent. Third Class fares have been reduced approximately 13 per cent. On cabin ships all rates above minimum have been considerably reduced. Popular aversion to the designation "Tourist Third Cabin" has brought about the change to "Tourist Class" which now applies to the class below Cabin Class on all liners of the United States Lines except the "Leviathan." On that vessel the Tourist Class now rates next to the First Class, the former Second Class being used for Tourist Class. The revised Third Class rate of £15 10s. by the liners "President Harding" and "President Roosevelt" sets a new low level in transportation charges to New York. The cost of a return ticket from Southampton to New York on these steamers is £28. The new Third Class rate on the s.s. "Leviathan" is £16 10s., and £16 on the "George Washington" and "America."

**Southampton Docks.**—Seasonal activity in the timber trade at the Docks this year has been quite up to the high level attained last year for, in addition to the shipments of softwoods from the Baltic, which, as usual, have been very heavy, a number of cargoes have arrived from the United States and North Pacific. Provision made in the way of extended accommodation for timber storage, etc., has been fully justified by the trend of traffic during the past few years. Following upon the establishment by Messrs. Elders & Fyffes of a weekly fruit service from the Canary Islands to Southampton several consignments of bananas have been dealt with here recently from their steamers engaged upon the Central American route. Approximately 20,000 bunches bananas comprised the initial shipment landed ex the s.s. "Tetela," and all the fruit was loaded direct to rail in special box wagons and disposed of most expeditiously. Good progress is being made with the reclamation of land on the site of the docks extension and on the first portion of the scheme foundation piles have been driven for two pairs of passenger and cargo sheds. By means of mechanical excavators, etc., the site of the new mammoth graving docks at Millbrook is being cleared of mud and the firmer materials below the surface so as to allow the construction of the dock itself to proceed at the earliest possible date.

# Mr. Albert de Ryckere Honoured by The King of the Belgians.

WE are sure all shipping and forwarding agents who are interested in the admirable work being done on their behalf by the International Federation of Forwarding Organisations will join with us in offering hearty congratulations to Mr. Albert de Ryckere, a Vice-President of the Federation, on being appointed by the King of the Belgians a Knight of the Order of Leopold (Chevalier de l'Ordre de Leopold). Mr. de Ryckere who is President of the Federation Nationale des Entrepreneurs de Transports de Belgique is well-known throughout the trade and takes a prominent part in all the activities of the International Federation of Forwarding Organisations, and the success of the recent congress held at Antwerp was due in no small measure to Mr. de Ryckere's excellent help and great popularity.

In honouring Mr. de Ryckere, King Albert has honoured the Federation.

# Port of London Authority.

## Twenty-second Annual Report.

THE twenty-second annual report of the Port of London Authority for the year ended 31st March, 1931, shows that the total net register tonnage of vessels that arrived and departed with cargoes and in ballast from and to foreign countries and British possessions and coastwise during the year ended 31st December, 1930, was 58,085,598 tons.

The values of the total Imports and Exports (excluding coastwise goods and transhipments under bond) of the United Kingdom and six principal ports for the year ended 31st December, 1930, were as follows:—

| | 1930. £ | 1929. £ | Percentage Decrease on 1929. |
|---|---|---|---|
| United Kingdom ... ... ... | 1,701,565,000 | 2,059,816,450 | 17.4 |
| London (including Queenborough) | 603,743,000 | 705,237,724 | 14.4 |
| Liverpool ... ... ... ... | 351,246,000 | 477,077,169 | 26.4 |
| Hull ... ... ... ... ... | 88,969,000 | 109,274,207 | 18.6 |
| Manchester (including Runcorn) | 76,289,000 | 99,886,967 | 23.6 |
| Southampton ... ... ... | 76,222,000 | 96,207,794 | 20.8 |
| Glasgow ... ... ... ... | 70,388,000 | 81,695,332 | 13.8 |

During the twelve months ended 31st March, 1931, the Authority landed or received 2,308,367 tons of import goods for warehousing or for immediate delivery, an increase of 1,434 tons, or 0.06 per cent., on the tonnage dealt with during the previous twelve months.

The stocks of goods at the end of March, 1931, in the warehouses directly controlled by the Authority amounted to 621,326 tons, as compared with 645,036 tons at the corresponding date in 1930, a decrease of 23,710 tons.

The export traffic handled on the dock quays during the twelve months amounted to 578,449 tons, being a decrease of 154,006 tons on the previous year's figure of 732,455 tons.

The following is a summary of the year's working:—

| | £ |
|---|---|
| Total Revenue ... ... ... ... ... ... | 5,828,658 |
| Total Expenditure ... ... ... ... ... | 4,463,606 |
| Balance of Revenue ... ... ... ... | 1,365,052 |
| Less— Interest on Port Stock and Temporary Loans, Sinking Fund Charges, etc., less Interest, etc., receivable ... ... ... ... | 1,404,783 |
| Deficit ... ... ... ... ... ... ... ... | 39,731 |
| Balance brought forward from 31st March, 1930 ... | 520,632 |
| Balance carried forward ... ... ... | £480,901 |

The amount of the Reserve Fund remains at £1,000,000, the statutory maximum prescribed by Section 107 (1) of the Port of London (Consolidation) Act, 1920, and is fully invested in Trustee securities which stand in the books at less than mean market prices at 31st March, 1931. The Fund reached the maximum during the year ended 31st March, 1922, from which date the interest on the investments has been credited to Net Revenue Account.

Substantial progress has been made during the year with the approved programme for bringing the Authority's Undertaking and its equipment into an adequate state of repair and up-to-date condition. Further authorisations in pursuance of this policy have been made for the ensuing year.

* * * *

**Tilbury's Record Week.**—A record number of ships and passengers used the Tilbury Landing Stage during the week ending August 15th. Sixteen vessels embarked and disembarked a total of 5,460 passengers.

**Oars for Thames Barges.**—More than 450 pairs of oars for use on Thames barges reached the Port of London from Gothenburg recently. There are over 9,000 barges or lighters in use in the Port.

**Cruises to London's Docks.** — During September the P.L.A. weekly steamer cruises to the docks will take place on Wednesday afternoons instead of Friday afternoons. The cruises start from Tower Pier at 2.30 p.m.

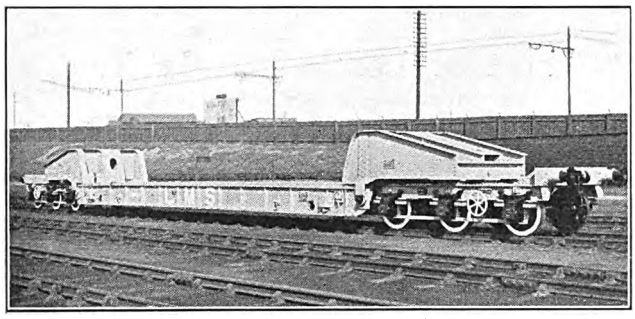
# Railway Notes and News.

**The Railway Barometer.**—The railway traffic receipts of the four group railway companies have now been published for the first 34 weeks of 1931 compared with the same period in 1930 and 1929, and are as under:—

| | 1931 | 1930 | 1929 |
|---|---|---|---|
| | £ | £ | £ |
| Passengers, etc. ... | 46,299,000 | 49,771,000 | 51,476,000 |
| Merchandise, etc. ... | 35,615,000 | 40,799,000 | 43,250,000 |
| Coal, coke, etc. ... | 20,692,000 | 22,267,000 | 23,544,000 |
| Total ... | 102,606,000 | 112,837,000 | 118,270,000 |



L.M.S. 65-TON TROLLEY REFERRED TO IN TEXT.

**65-Ton Trolley with Detachable Ends for the Conveyance of Locomotives.**—Two vehicles of this capacity have been constructed to the designs of Mr. E. J. H. Lemon, Chief Mechanical Engineer of the London, Midland and Scottish Railway, to enable the manufacturers of 3 ft., 3 ft. 6 in. metre and 5 ft. 6 in. gauge locomotives for India, South America, South Africa and other parts of the world to send locomotives up to 65 tons weight to the ports completed ready for shipment. On arrival at the port the locomotives are run off the trollies on to an accommodation siding where they stand until lifted off the dock side by the ship's derrick. This arrangement constitutes a considerable saving in time and cost over the old method which employed floating cranes to lift the locomotives from the trollies to the dock and from the dock into the ship's hold. The design which provides for this end off loading is unique in railway practice, and is in fact the first railway trolley of its type in the world. The trollies are built in detachable sections each comprising two six-wheeled bogies; two end cantilever sections and one main beams section. The bogies and end section are connected in the usual manner by steel centre castings and pins, and the end sections support the centre beams on high tensile steel hangers and connected through a steel pin at each corner of the well. The following are the principal dimensions:—Length over buffers 75 ft. 1 in.; length over headstocks 72 ft. 1 in.; centres of bogies 58 ft.; length of well 40 ft.; width over connecting pins 8 ft. 4 in.; width over side beams 7 ft. 6½ in.; height to top of side beams 2 ft. 10¾ in., height to top of centre beams 2 ft. 3¾ in., height to top of trolley rail 1 ft. 9⅞ in., height to underside of main beams 7¾ in. (loaded); diameter of wheels on tread 2 ft. 8½ in.; size of journals 11 in. by 5½ in. dia.; tare 49-8-2.

**"Holiday Return" tickets until November 1st.** — The issue of "Holiday Return" tickets, which has proved so popular among all classes of holiday makers, will be extended to November 1st on all four railway systems.

**L.N.E.R. Appointment.**—Mr. L. Ballan, who has been appointed District Superintendent at Sunderland for the L.N.E.R., has been in that Company's service since 1909. After serving as Chief Clerk in the District Goods Manager's office at Hull, he was Assistant District Goods Manager at Newcastle in 1923, returning to Hull as Controller of Mineral Traffic. He has lately been Trains Assistant Superintendent in charge of passenger and freight services in the North Eastern area.

**Exceptional Loads by Rail.**—The London and North Eastern Railway have just printed the second edition of a publication entitled "How the L.N.E.R. carries exceptional freight loads." The object of this interesting little 59 page booklet is to give information by means of illustrations, diagrams and tabular details of the leading classes of special wagons provided by the L.N.E.R. so as to assist traders in selecting and requisitioning the most suitable vehicles for the conveyance of articles of unusual dimensions or weight.

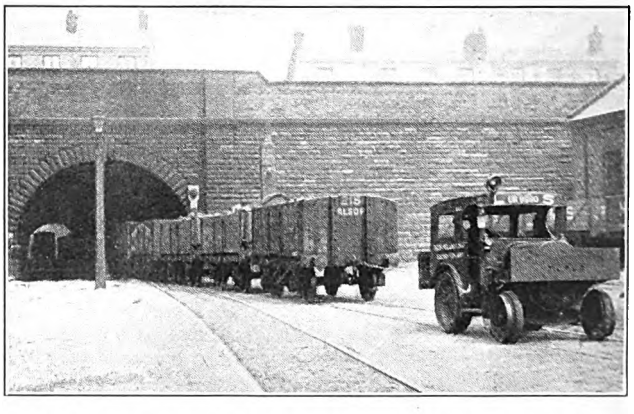
**University Lectures for Railwaymen.**—A series of lectures by University professors has been arranged by the L.N.E.R. during the coming winter. These lectures will deal with Railway Law, Railway Economics, Railway Geography, and Railway Operating and may be attended by any members of the Company's clerical staff on payment of a nominal fee.

**New Fish Market at Hull.**—The new fish market at the L.N.E.R. St. Andrew's Dock, Hull, which replaces the market destroyed by fire in August, 1929, was brought into use on August 4th. The work has been carried out in just a little over 12 months and has been completed two months ahead of the time allowed in the programme which, to meet the demands of the Fishing Industry, had been cut down to what was regarded as a minimum. The new market has been built by the Railway Company's own staff under the Chief Engineer for Docks. It is regarded by the Fishing Industry as one of the most up-to-date fish markets in the country.

**"Tell your Friends." L.M.S. Executive "Chats" with Staff.**—As part of the campaign they are running to popularise rail travel, the L.M.S. Railway are using their house organ, the "L.M.S. Magazine," as a means of bringing selling points to the notice of their staff. Each month a feature under the heading of "Tell your Friends," and compiled by the transport sales executives of the L.M.S., tells the staff in a chatty way, details of a few of the current facilities the railway has to offer. Mr. Ashton Davies, the Passenger Manager of the L.M.S. in an appeal he recently made to the staff claimed that there is a good deal to sell in rail travel and urged that L.M.S. employees should do their utmost to sell L.M.S. transport.

**World's Longest Non-Stop Train Run.**—The "Flying Scotsman" express is now, for the fourth year in succession, running non-stop in both directions between London (King's Cross) and Edinburgh (Waverley), a distance of 392¼ miles. This is the longest daily non-stop run which has ever been made by any train in the world. Facts about the run:—Time taken, 8¼ hours; coal required, 5 tons; water required, 13,000 gallons; weight of train, 400 tons; cost of engine and train, £42,000; type of engine, 4-6-2 (Pacific) with corridor tender.

**"International" Tractor with Buffer Equipment.**—Our illustration shows an International Tractor with buffer equipment operating for the London, Midland and Scottish



"INTERNATIONAL" TRACTOR WITH BUFFER EQUIPMENT.

Railway for shunting. The picture shows the site of the old Crown Street Station at Liverpool which, we believe, was the first passenger station on the Liverpool and Manchester Railway.

**Railway Congress Representation.** — Canadian representation on the Permanent Commission of the International Railway Congress Association has been increased by two members, one of whom is Mr. P. A. Clews, European Traffic Manager of the Canadian National Railways. Sir Henry Thornton, Chairman and President of the National System, is a member of the organisation, and the new nomination has been made to ensure Canadian representation at meetings held in Europe. This organisation is concerned with all matters of railway transportation, operation, equipment and safety devices.

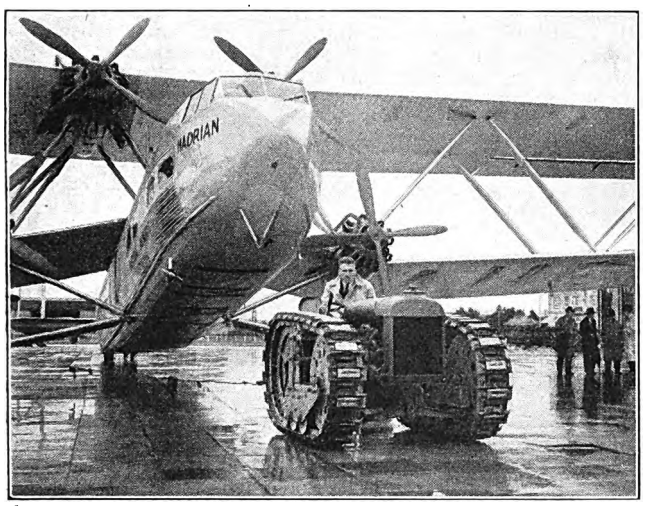
# Air Transport Notes.

**Midget "Manhandles" Giant.**—We reproduce an interesting picture of "Hadrian," "sister" ship to "Hannibal," the world's largest air liner, being towed by a Fordson tractor at Croydon Aerodrome. Though tiny by comparison the Fordson tackles the job in competent and workmanlike fashion.



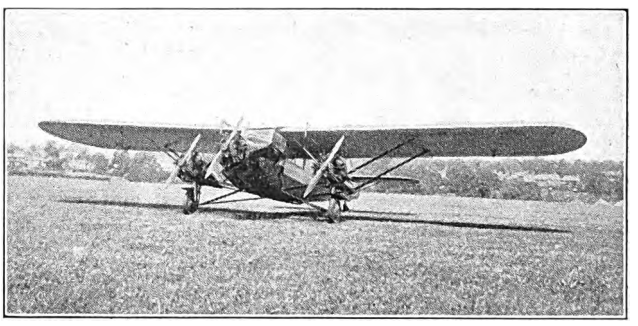
"HADRIAN" BECOMES ATTACHED TO THE FORDSON TRACTOR.

**"Junkers-Ju 52."**—Junkers-Flugzeugwerk A.G., Dessau, have sent us some interesting particulars of their latest carrier aircraft Ju 52. It is pointed out that like every other means of transport the aeroplane can only be made a source of profit when used for the carriage of freight, and the Junkers W 33, already well-known, was designed as a freight carrier. Now, however, the need for larger units has become manifest—for a larger cargo space which must be entirely unobstructed, i.e., without interference due to internal structure so that bulky and unwieldy goods can be carried and loading and unloading easily and rapidly carried out, and last, but not least, to provide a more favourable economic relation between pay load and running expenses, taking into account also, the initial costs. These requirements were kept in view in the design of the Ju 52, and in the case of both the W 33 and more particularly in the case of the Ju 52, the designers have succeeded in producing machines with a large cargo space and at the same time possessing excellent aerodynamical qualities. The Ju 52 is a single-engined, all-metal low-wing monoplane. The machine is constructed primarily as a freight carrier, but it can readily be transformed wholly or in part, as required, into a passenger machine, merely by providing the necessary fittings without reconstruction of any kind being necessary. The machine can also be easily adapted to meet other conditions or requirements. For instance, the same fuselage, control system, undercarriage, etc., can be retained and 3 engines fitted for night mail traffic, or purely for passenger transport.

**Pobjoy "R." Type Engine.**—The Pobjoy "R." type engine having recently passed the British Air Ministry Type Tests is now available for use in light aircraft with full certificate of airworthiness. Pobjoy Airmotors, Ltd., Hooton, Wirral, Cheshire, have produced this engine because they believe in the future of the privately-owned aeroplane. For an overall diameter of 647 mm. and a weight of only 130 lb., the engine develops a normal power of 75 b.h.p. at a speed of 3,000 r.p.m., while the reduction gearing reduces the corresponding propeller speed to 1.400 r.p.m. In a descriptive booklet issued by Pobjoy Airmotors, Ltd., the Company set out their grounds for claiming that this engine possesses all the qualities most desirable in a light aeroplane engine to a degree hitherto unapproached. Namely:—High power-weight ratio: 1.7 lb. per normal b.h.p. Fuel economy: .57 pints per b.h.p. hour. Low airscrew speed: 1,400 r.p.m. Small overall diameter: 25½ in. (647 mm.). Reliability and durability of the highest order. Perfect balance, smooth torque, and smooth reaction on mounting. Ease of starting. Good slow running. Ease of maintenance and overhaul. Silence and comfort. Ease of installation. Low first cost and low running cost.

**Royal Aeronautical Society. Wilbur Wright Memorial Lecture.**—The Wilbur Wright Memorial Lecture will be delivered by Mr. Glenn L. Martin on Wednesday, September 16th, at 9.15 p.m., in the Science Museum, South Kensington. The title of the lecture is "The Development of Aircraft Manufacturing." On the evening of the delivery of the lecture the Royal Aeronautical Society will hold a Conversazione in the Aeronautical Section of the Science Museum, by kind permission of Colonel Sir Henry Lyons. This date has been selected because at that time most of the foreign notabilities in the aeronautical world will be in England for the Schneider Trophy Contest and will be specially invited to attend the Conversazione, at which most of the leaders in British aviation will also be present. The programme for the evening is as follows:—8.30-9 p.m.—Reception by the President, Mr. C. R. Fairey, M.B.E., F.R.Ae.S., and the Council. 9.15-10 p.m.—Delivery of the Wilbur Wright Memorial Lecture by Mr. Glenn Martin. 10 p.m.-midnight.—Conversazione. By kind permission of the Air Council, the Band of H.M. Royal Air Force will play from 8.30-9 p.m. and 10 p.m.-11.45 p.m. A distinguished company will be present and it is hoped that there will be a large attendance of members and their guests. Evening dress with orders and decorations will be worn. The secretary of the Society is Captain J. Laurence Prichard, Hon.F.R.Ae.S., 7, Albemarle Street, Piccadilly, London, W.1.

**Handley Page "Hannibal."**—The Handley Page Hannibal has been running regularly on the London-Paris route for some time and a special party was arranged at Croydon Aerodrome recently at which the Hannibal acted as host and took for a flight a number of prominent people. Afterwards members of the party expressed themselves as delighted with their experience. The silence of the two cabins was particularly commented upon as well as the excellent view to be obtained from the large windows. The eight new Handley Page 42s have been given the following names:—Hannibal, Hadrian, Hanno, Horatius, Helena, Hecate, Heracles and Hestrides. The Handley Page 0/400 which inaugurated the London-Paris service in 1919 gave 40 cu. ft. to each of its passengers, an amount which at the time was extremely large. The 42 gives 76 cu. ft. to each of its passengers. The good ventilation of the cabins by means of the constant extractor system in the roof, the cool air apertures near the luggage rails and the controlled hot or cool air supply, enables the most pleasant living conditions to be maintained in the air, the feet of the passengers being kept warm and their heads cool. In safety the 42 also represents the culmination of a special study. The machine can carry a pay load of 8,500 lb. Eight of these machines, four of the Western type which seat 38 passengers with a crew of four, and four of the Eastern type which seat eighteen passengers and carry the rest of their load in freight, have been ordered. Some have been delivered and the remainder are in an advanced state of construction at the Handley Page works, Cricklewood, London.



WESTLAND "WESSEX" 3-ENGINED SIX-SEATER CABIN MONOPLANE.

**Belgian Air Lines (S.A.B.E.N.A.).**—In 1930 The Belgian Air Lines (S.A.B.E.N.A.), operating with 3-engined Fokker machines, type F.VIIb-3m, carried 9,445 passengers and 520,964 lb. of merchandise, while the weight of the mails carried was 49,094 lb. of letters and 36,311 lb. of postal parcels. The total distance covered by the Belgian Air Lines was 711,196 miles with a regularity of 98.1 per cent. The head office of the Belgian Air Lines is at Haren Aerodrome, Brussels, and the London office is at Airways House, Charles Street, Lower Regent Street, London, S.W.1.

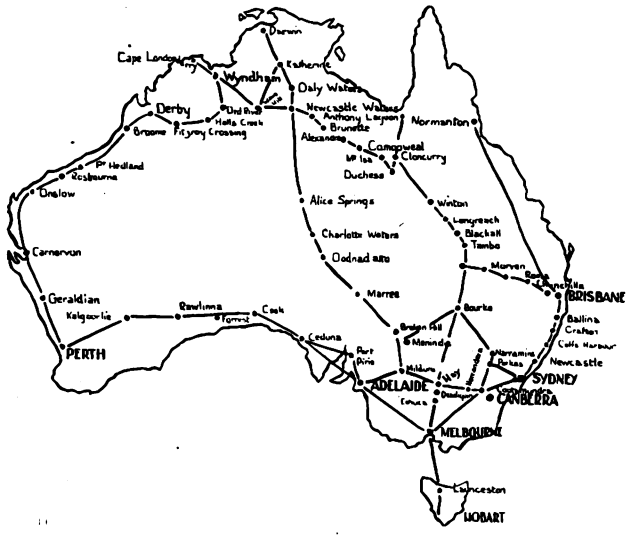
# Our Australian Letter.

FROM OUR OWN CORRESPONDENT.

UNDOUBTEDLY the most interesting and important development in the Australian transport field recently was the link of Australia with the Mother Country by air mail, and the arrival in Australia of a Dutch machine carrying mail. These flights were no doubt followed just as closely in England as in Australia and for that reason it would be superfluous to dilate further upon them in these notes. Australia, however, is proud of the fact that her services



MAP OF AUSTRALIA SHOWING CHARTED AIR ROUTES.

were not found wanting when called upon to step into a breach as the result of an unfortunate mishap to the "City of Cairo," and it is to be hoped that the success of the experimental flights will result in regular services being established in the near future. A suggestion has been put forward in Australia that an Australian company, possibly Australian National Airways founded by Air Commodore Kingsford Smith, could connect up with an Imperial Airways plane at Calcutta with a regular service. Such a scheme would require to be subsidised, and it does not appear that such a subsidy would be forthcoming because of the financial position of the Commonwealth. Therefore, if a regular service is to be established in the near future it is likely that it will be a Dutch service or an Imperial Airways service subsidised by the British Government until such time as the Commonwealth is in a position to contribute its share.

It is an unfortunate position, more particularly because of the remarkable progress that commercial aviation has made in Australia. A review of this progress is both interesting and enlightening.

The accompanying map shows clearly the charted air routes of the Commonwealth and of these the most important are those operating between Brisbane and Tasmania, between Adelaide and Perth, Brisbane and Darwen, and Perth and Darwen.

Of more interest still, however, is a service not shown on the map, namely, that operating between the coast and interior goldfields of New Guinea. This service is probably in many ways the most spectacular in the world. There is probably no service in the world that can say that after two years operation it was able to pay a dividend of 40 per cent. Of course, the company's opportunity was unique. The rich goldfields are almost inaccessible except by aeroplane, and the result is that freight to the extent of 150 tons is carried monthly. Recently a dredge weight, 4,000 tons, was transported in parts to the fields.

On the mainland of Australia probably the most interesting service is that of Australian National Airways, Ltd., organised by Kingsford Smith and C. P. T. Ulm, and run without subsidy. A daily service operates between Sydney and Brisbane and Sydney and Melbourne, whilst a weekly service has recently been established between Melbourne and Tasmania.

A matter of intense interest to British locomotive builders and manufacturers of road rollers is the enquiry just concluded into an application for increase in the duties on locomotives and road rollers to 65 per cent. British, 75 per cent. intermediate and 85 per cent. general. The present duties are 40 per cent., 50 per cent. and 55 per cent. respectively, though there has been a table submitted to Parliament which has yet to be ratified and which provides for rates of 55 per cent., 65 per cent. and 75 per cent. respectively.

# Winter Air-Mail Services on Empire Routes.

## Shorter Route to India.

PROGRESS in the construction of the great maritime port at Haifa, on the coast of Palestine, will make it possible for Imperial Airways to introduce experimentally, shortly, a faster and more direct winter air service between Britain and India.

At present the combined Indian and African air-mails leave London each Saturday and, after crossing Europe by way of France, Switzerland, and Italy, to the Mediterranean at Genoa, are carried on in big multi-engined flying boats via Naples, Corfu, Athens, and Crete to Egypt. Here the mail is divided, the Indian mail flying by way of Palestine to Baghdad, and the African mail travelling southward through the Sudan.

Beginning in the middle of October, arrangements have been made for two Empire air-mail services to leave London every week, one on Saturday as before, and the other each Wednesday.

The Saturday service will still carry the Indian air-mail, but after leaving Athens it will continue by flying-boat, via Cyprus, to the new port at Haifa (Palestine) instead of via Crete to Alexandria. At Haifa triple-screw land-planes will continue the journey direct across Palestine and Iraq to Baghdad, thus making the Indian route shorter and more direct, the air-mail arriving at Karachi (India) on the following Friday, less than six days after leaving London, this being the fastest winter schedule so far possible on the Indian route. The existing service between Palestine and Egypt will be retained, and will give through connections between Central Africa and India.

The new mid-week Empire service will carry the African air-mail and will travel via Brindisi and Athens to Alexandria, whence it will continue along the present route through the Sudan to Uganda, Kenya, and Tanganyika. This new arrangement will make the Indian and African air-mails independent of each other, and will provide a bi-weekly air service across the Mediterranean.

The London-bound mail from India will continue to arrive at Croydon each Tuesday, but the date of arrival in London of mails from Central Africa will be altered from Tuesday to Friday in each week.

In addition to increasing air travel facilities between Britain and the Near East, the new arrangements will also provide a direct air service between Britain and Palestine, while it will, in addition, be possible to fly from Kenya Colony to India, via Egypt, in only 8 days.

The time-tables for both these Indian and African winter services have been drawn up to allow ample time for the recipients of letters to reply to them by the next return mail, several days elapsing between the arrival of an incoming mail, and the departure of the next outgoing service, not only in Britain, but also at the terminals in India and Kenya Colony.

Another advantage offered by the new route will be a later departure from London. Instead of leaving Croydon at 8 a.m., as at present, the departure of both the Indian and African services will be scheduled for 12 noon, thus allowing travellers from provincial cities more time to travel to London to catch the Empire air services.

# Instruction in Road Transport.

AT the North Western Polytechnic, Prince of Wales Road, Kentish Town, London, N.W.5, and Kennington Commercial Institute, Kennington Road, London, S.E.11, the classes for the instruction of students of road transport which commenced last Autumn reopen this month. The courses of study are primarily intended to enable students to prepare for the graduateship and associate membership of the Institute of Transport but are also admirably adapted to be of use to employees in all or any branch of transport, whether for goods or passengers or whether on short or long-distance work. They include instruction in operation, in the economics of road transport and in accountancy and the law as applied to transport. The fees for a session amount to 30s. per student, subject to certain residential qualifications.

# Publications Received.

THIS MOTORING. By Stenson Cooke. London. Cassell & Co., Ltd. Price 3s. 6d. net. It is not often that the editor of a technical journal receives a book for review, which, while dealing with the subject in which he is particularly interested, is at the same time written in such a fascinating and racy way as to make it difficult to put it down until he has come to the last page. This, however, is the case with the book written by Mr. Stenson Cooke, the very popular and genial secretary of the Automobile Association. The book will be read with the utmost interest by all those who are old enough to remember the early days of motoring and the tremendous struggle which the new method of transport had to obtain a footing against opposing interests and deep-seated prejudice. To all these the book will appeal in a personal way, because the men who originally founded the Automobile Association and those who have guided its destinies for more than a quarter of a century are well-known and can easily be identified. The book will, however, appeal to a much wider field, to those who are now interested in motoring, but whose recollections cannot go back to those early and difficult days. To all these we commend this book most heartily, as it will give them a good idea of the difficulties any new development has to face and will help them to realise the enthusiasm, the determination, and the courage which animated motoring pioneers.

The book starts in August, 1905, when a small group of enthusiastic motor car owners had just decided that an organisation was required, with a paid secretary, to combat the injustice under which they were suffering. The prologue sets forth how the writer of the book applied for the position of secretary of the new association, numbering 90 members in all and with a sum of £100 in the bank. The vivid way in which this to him, momentous appointment was secured, sets the pace for the entire book and one no sooner finishes one chapter, where some difficulty has been successfully overcome, some new development has been commenced, and some additional service to the members has been suggested and adopted, than one feels compelled to go on to the next chapter to see what fresh ideas will be evolved and what further dangers the growing organisation will next have to face.

The history and development of the Automobile Association is naturally and inevitably an autobiography of Mr. Stenson Cooke, the writer of the book, so far as this portion of his life is concerned, and he is to be congratulated upon having published this most interesting and readable account of the progress of motoring as shown in the development of the Association.

Now that the speed limit for private motor cars has been abolished, it becomes increasingly difficult to realise that not so many years ago police traps were in operation all over the country and motorists were being summoned in hundreds, and even thousands, every week for driving over measured distances at something more than twenty miles an hour. How the Automobile Association, with its road patrols, fought against this persecution, is one of the most interesting chapters of the book, but it is only one of the ways in which the Automobile Association served the interest of its members. The clearest evidence of the success which has attended the work is shown in the membership, which in just over twenty-five years has risen from under one hundred to the gigantic figure of over 444,000. Mr. Stenson Cooke, with that enthusiasm which has been such a great factor in his success and in that of the Automobile Association, finishes his book with the determination to "go all out for the first half-million."

THE PAGEANT OF TRANSPORT THROUGH THE AGES. By W. H. Boulton, with an introduction by Sir Josiah Stamp, G.B.E. Price 12s. 6d. net. London. Sampson, Low, Marston & Co., Ltd. The author of this book presents the subject of Transport in a way which should appeal not only to the man engaged in Transport as a profession or business, but to the large body of men and women who realise the importance of Transport and are interested in knowing something of its development, although they are not concerned with the subject in its more technical aspect. This book lives up to its title and is a "Pageant of Transport," covering the enormous field of Transport by road, by canal, by railway, by water, and by air. It will be realised, therefore, as the author does from the start, that it is quite impossible to do more than deal with each branch of the subject in broad outline, as each different branch of Transport would require a large book to itself, and in fact there are already numerous books dealing with each of the various forms of Transport described in this interesting work.

The chief quality of this book to our mind is the way in which the subject is planned, so that it does not become a text book for the student but a readable book for the ordinary man or woman interested in knowing how Transport has evolved from the earliest days to the present time.

The first five chapters deal with roads and road traffic, emphasising once more our great indebtedness to the Romans for the magnificent roads which they built and which have lasted down to the present time. Days of the turnpike and the tolls which were exacted in order that a certain portion of the roads should be kept in some state of repair, show how far we have travelled since those days of not so many years ago. Next, the author deals with waterways and canals and his quotations throughout the book show how wide has been his reading and how thorough his research into ancient history. For instance, the canals of Babylon in the days of Nebuchadnezzar are referred to, as having been used for Transport purposes. The author next deals with sea and ocean Transport and manages to comprise in the next five or six chapters a great deal of interesting matter showing how our present magnificent steamships have been evolved from the first boats of which we have any knowledge. Here again the author goes back as far as history will allow for instances of sea Transport. It is customary to refer to Noah as the first man to built a ship, but although reference is made in the book to Noah, it is stated that modern discoveries lead to the conclusion that ships were in use ages before the days when the Flood did its work of devastation.

The coming of steam links up sea navigation with the coming of the railways and of steam traction on public roads and the early days of the railways, a fascinating subject, is dealt with in three or four chapters.

Then comes the introduction of the motor car and the internal combustion engine and in a comparatively brief space the subject is touched upon. Electricity as a means of Transport is dealt with briefly and then Air Transport, commencing with balloons and going on to the aeroplane and the airship, takes up two or three chapters. The book concludes with a chapter dealing with Transport and another on the Empire and recent developments and the outlook.

The book contains a large number of illustrations on art paper, these having been supplied from a large number of sources, credit being given in each case to those interested in various forms of Transport through whose courtesy the illustrations are given.

THE BOOK OF THE ROAD. Issued by the Transport and General Workers' Union, Transport House, Smith Square, Westminster, S.W. Price 1s. net. This is a handy little pocket book issued by the Transport and General Workers' Union for the service of its members. The book does not purport to be a legal treatise on the Road Traffic Act but is an endeavour to portray in simple language those sections of the Act, and regulations issued in connection therewith, which primarily concern the members of the Union employed in road transport. It is a publication which we consider essential, particularly to drivers and conductors of public service vehicles and goods transport vehicles as well as to users of the road generally. In the foreword, by Mr. Ernest Bevin, the General Secretary of the Union, there is contained an excellent account of the activities of the Union and all the benefits which it confers upon its members. A very important section, in our opinion, is that devoted to the conduct of drivers, conductors and passengers, commencing on page 39. The section consists of a summary of the regulations governing the actions of drivers and conductors of vehicles and their passengers. This section is followed by sectional maps of England, Scotland and Wales giving the traffic areas as defined in the Road Traffic Act, 1930, showing the particular towns and roads and the situation of the Union Offices and traffic area headquarters. In a separate section of the book there is a key to these maps, containing a complete list of the addresses and telephone numbers of the Union's Offices situate in each traffic area in order that any member who finds himself in difficulty whilst on the road may be in a position at once to establish contact with a responsible officer of the Union should the necessity arise. The book also contains a summary of the Road Traffic Act, 1930, and the regulations thereunder. This section alone is of the utmost value to the driver and his mate and in fact to any road user. The appendices include the following (1) Fair wages resolution of the House of Commons which deals with wages, hours and conditions applicable to service vehicles. (2) Limits of speed under the Road Traffic Act. (3) Variations of limits of time under clause 19 of the Road Traffic Act. (4) Regulations governing drivers' and conductors' licences. (5) The Highway Code.

## BARGE DAMAGED BY WASH.

IN the Bow County Court, before Judge Thompson, K.C., sitting with Nautical Assessors, Messrs. F. T. Everard & Sons, Ltd., of The Wharf, Greenhithe, E., barge owners, sued the Hull Steam Fishing & Ice Co., Ltd., of St. Andrew's Docks, Hull, Yorkshire, for £100, damage alleged to have been done to a barge, the "Compass," near Bugsbys Reach, on the River Thames, on April 15th of last year, owing to the negligence of the defendants. The damage to the barge was put at £72 10s., the detention of the barge during repairs, £16, detention to the barge during preliminary survey, to final survey, £8, surveyors fees and expenses, £6 6s. The plaintiffs abandoned all money in excess of £100. They claimed that the damage was due to the negligent navigation of the fishcutters, the "Dogger Bank" and the "Flamborough." The plaintiffs steam tug, the "F. T. Everard," with six barges in tow, of which the "Compass" was in the second rank, with a port tow-rope for the "Emerald" was proceeding up the Reach to the north of Mid-Channel, and making six knots over the ground, and the wind was north-westerly, and there was a strong breeze, the weather was clear, the tide was flood, with a force of about two knots. A good lookout was being kept on the "F. T. Everard." In these circumstances, the defendants fishcutters, if was alleged, were so negligently navigated when passing as to cause an excessive swell, which set the barges in violent motion and caused the forepart of the "Emerald" to strike the stern of the "Compass." The defendants denied that they had caused any damage or that they had contributed to it by any negligence on the part of the fishcutters. They further claimed that if any damage was done at all, it was through the negligent navigation of the "F. T. Everard," which must have been proceeding at an excessive speed, and failed to use or stop her engine in due time.

Mr. F. E. Raw appeared as counsel for the plaintiff, and Mr. Holman, barrister, for the defendants.

In opening the case, Mr. Raw said that it had been agreed that if there was any liability on the part of the defendants, the amount should be £100. He then went on to detail how the plaintiffs tug, the "F. T. Everard," gathered up the six barges to tow from Greenhithe to Fulham. The Master of the "F. T. Everard" saw the two fishcutters approaching; they were to the south of mid-Channel, and the leading one was approaching at a fair speed. Counsel went on to say that the "F. T. Everard" eased for the first fishcutter, and then the "Flamborough" came along at an excessive speed. The "Compass" was swamped, and the effect of the heavy seas was to lift the light barge "Emerald" on to the steel rudder of the "Compass," causing the damage they were now claiming. His evidence would be that the "Flamborough" was going the faster, and was trying to overtake the "Dogger Bank." At this place, there was a navigable space of 600 yards.

Henry Lazell, said he had been 35 years with the plaintiffs, and was an experienced Master. He agreed with the opening statement of counsel, and said the "Flamborough" caused the swell. Frederick Hallett, the lighterman in charge of the barge, "Compass," said it was the wash from the "Flamborough" that caused the light barge, "Emerald," to range forward, and this evidence was agreed to by John Duntall of the "Emerald."

For the defence, John Burton Liley, the pilot of the "Flamborough," said he remembered passing through Bugsbys Reach on the day in question, when he was doing 6½ knots, which would not cause any swell, and he knew of nothing in particular that occurred, and knew nothing of the tug and the barges.

The evidence in the case lasted the whole of the day, and at the conclusion, Judge Thompson had a conference with the two assessors, and then said he would find for the plaintiffs for the amount agreed upon, £100 damages. and costs. They found that the damage was done by the wash from the "Flamborough."

## LORRY SINKS IN GARAGE FLOOR.

IN the Willesden County Court, before Judge Higgins, a garage proprietor sued a firm of transport contractors to recover £13 6s. 6d. for petrol supplied and garage rent. There was a counterclaim for £15 12s. 10d. alleged damage done to a lorry whilst in the plaintiff's garage, owing to the alleged negligence of the plaintiff in not providing suitable garage accommodation.

Mr. Chapman appeared as counsel for the plaintiff, and said that the claim was admitted, and it was for the defendants to prove their counterclaim.

A member of the defendant firm said that while a lorry was standing in the plaintiff's garage it sank through the floor, doing damage to it to the extent of £15 12s. 10d.

Cross-examined he said that he inspected the garage before entering into a contract to garage his three lorries, and found it suitable. There were three other lorries in the garage. He agreed that it was mentioned that the lorries should not stand on the concrete as it was not suitable, but he denied that the accident was caused through the lorry being placed on to the concrete, but said that it sank into the ground just by the concrete. Nothing was ever said about not taking loaded lorries into the garage, and this lorry was loaded, its total weight being about 11 tons 5 cwts.

The secretary to the plaintiff company, in rebuttal, said that the defendants were told about garaging lorries on the concrete as it was not safe enough, and this lorry sank into the concrete.

Judge Higgins said there was an implied contract that the floor of a garage should not subside, and he would give judgment for the defendants on the counterclaim, with costs up to the date of admission, and judgment for the plaintiffs on the claim, with costs, such amounts to be set off against each other.

## RIGHT OF WAY CASE.

MESSRS. WILLIAM AND R. W. MARSHALL, motor coach proprietors, Blackpool, appealed at the Preston Quarter Sessions against a decision of the Blackpool Corporation refusing to sanction a crossing to their premises over a footpath at the corner of the promenade and St. Chad's Road, South Shore. The appeal was allowed with costs. The appellants owned the sole rights to one half of the highway, but the Corporation refused to allow them to cross the footway with any vehicle.

## DRIVER'S HOURS.

A PROSECUTION under the Road Traffic Act for an alleged breach of the section limiting the hours of motor drivers has taken place at Chester, where Abel Roberts, cattle transporter of Denbigh, was summoned for causing Edward Jenkins, also of Denbigh, to drive a cattle van for a continuous period of more than five and a half hours.

The driver in evidence said travelling at night with live cattle could not be helped. All the work of transport was done in the first three days of the week and for the remainder of the week there was practically nothing for him to do. He was satisfied with his employer.

The summons was dismissed.

CONSIGN SHIPMENTS FOR NORTHERN

INDIA

TO

THE EASTERN EXPRESS Co. LTD.

Forwarding, Shipping & Clearing Agents,

KARACHI

This Advertisement is inserted to bring before Forwarding Agents and Shippers in Great Britain and abroad the name of a Firm to whom shipments for any part of India should be consigned. Every description of merchandise cleared and forwarded to consignees. C.O.Ds. collected and remitted promptly.

# News from all Parts.

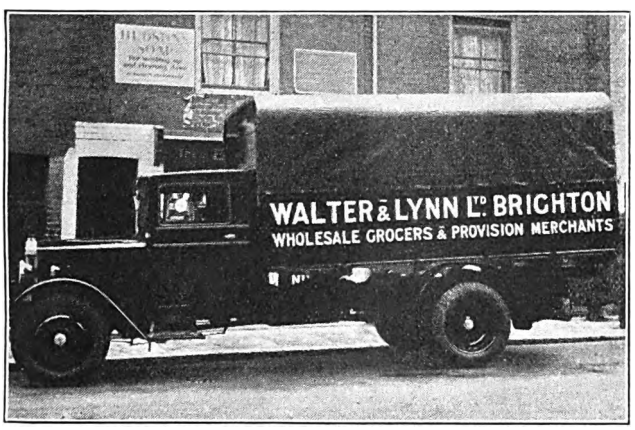
**The Motor & Cycle Trades Benevolent Fund.** — The summer number of the Journal of the Motor and Cycle Trades Benevolent Fund contains a symposium "Why I Believe in the Fund." Sir George Beharrell, this year's President, in the course of his message, says:—"Any Society having for its object the relief of distress and the care of the fatherless must command the sympathy of right-minded people. How much more, therefore, should our sympathies be aroused in support of a Society of our own industry which has these objects?" Mr. A. H. Dawson is the General Secretary of the Fund with offices at 42, Bedford Row, London, W.C.1.

**Air Compressors.** — Tilghman's Air Compressor Co., Broadheath, near Manchester, send us a leaflet containing illustrations of representative types of compressors manufactured by them from sizes ranging from 20 to 2,500 cubic feet per minute. Amongst these is a vertical high speed compressor of the two stage tandem type suitable for pressures up to 60 lbs. Another is a single-cylinder, single-stage compressor for pressures up to 100 lbs. The third is a single-acting, single-cylinder compressor with forced lubrication. Full particulars may be obtained upon application to the firm.

**FORTHCOMING EVENTS.**

| | |
|---|---|
| Sept. 10—26. | Shipping and Engineering Exhibition, Olympia, London. |
| Oct. 12. | Institute of Transport Opening Meeting of the 1931-32 session. Presidential Address by Mr. Frank Pick. |
| Oct. 27. | Institute of Transport Metropolitan Graduate and Student Society, Opening Meeting of the 1931-32 session. |
| Nov. 5—14. | Commercial Motor Transport Exhibition, Olympia, London. |
| Nov. 16—21. | Public Works, Roads and Transport Congress and Exhibition, Royal Agricultural Hall, London. |
| Nov. 26. | The Motor and Cycle Trades' Benevolent Fund. Annual Banquet. |
| Nov. 28—Dec. 6. | Paris, Commercial Motor Exhibition. |
| Dec. 7—11. | Smithfield Club Cattle Show, Royal Agricultural Hall, London. |

**London County Council Tramways.**—The surplus for the year 1930-31 on the operation of the London County Council tramways was £31,636 (against £128,803). Income was £4,363,566 (against £4,460,536 the year before); working expenses £3,599,667, leaving a surplus on working account of £765,971 (against £847,207). Various charges absorb £804,485, of which £761,799 is for debt, and there are other items totalling £70,151 (of which income-tax accounts for £49,797). These charges and deductions amount to £734,333, leaving a surplus as stated above of £31,636, which is £1,342 less than the revised estimated surplus and £57,774 below the original estimated surplus. The decrease in the surplus is largely the result of bad trade conditions and the prevalence of unemployment, traffic receipts being £90,227 9s. 7d. less than in 1929-30.



WILLYS "MANCHESTER" 50-CWT. VAN FOR PROVISION MERCHANTS.

**One of the first Willys Manchester 50 Cwt. Models.**—Our illustration shows one of the new Willys Manchester 2½ ton models supplied by Messrs. Sussex Motors, Ltd., of 1a Cromwell Road, Hove, to Messrs. Walter & Lynn, Ltd., of Jubilee Street, Brighton. We understand that this vehicle is one of the first 50 cwt. models supplied anywhere in this country. The manufacturers, of course, are Willys Overland Crossley, Ltd., Heaton Chapel, Stockport, and 151, Great Portland Street, London, W.1.

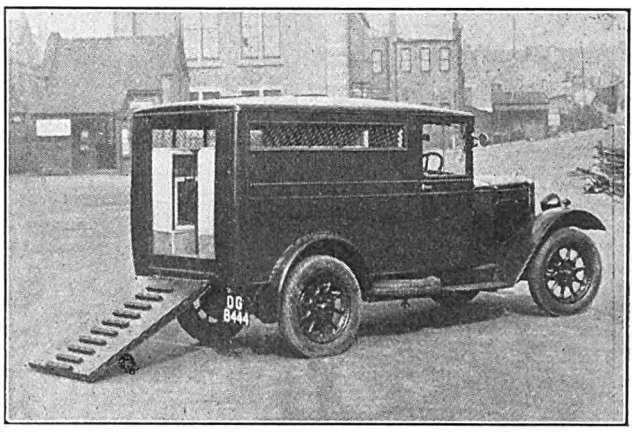
**Motorists and Road Accidents.**—The Automobile Association again emphasises that under the Road Traffic Act, a motorist who is concerned in an accident involving damage or injury to any person, vehicle or animal must stop immediately and, if requested by any person having reasonable grounds for requiring the information, give his name and address, also that of the owner of the car and the registration number. Failing this, the facts must be reported to a Police Station or to a Police Constable as soon as reasonably practicable, and in any event, within twenty-four hours.

**Institute of Transport Metropolitan Graduate and Student Society.**—The inaugural meeting of the 1931-32 session of the Institute of Transport Metropolitan Graduate and Student Society will be held on Tuesday, October 27th, 1931, at 6 p.m., at the Institution of Electrical Engineers, Savoy Place, London, W.C.2. Mr. Frank Pick, the President of the Institute, will receive the members and give an address; he will be supported by Members of Council. Light refreshments will be served during the Reception.

**Iraq—Memorandum on the Appointment of Agents.**—A confidential memorandum on the appointment of Agents in Iraq, prepared by the Consular Agent to His Excellency the High Commissioner, Iraq, has been received and issued by the Department of Overseas Trade to firms whose names are entered on its special register. British firms desirous of obtaining a copy of the memorandum together with particulars of the special register service of information should apply to the Department of Overseas Trade, 35, Old Queen Street, London, S.W.1. The reference number C.X. 3596 should be quoted.

**Examination Success.**—At the recent Final Examination held by the Chartered Institute of Patent Agents, Bertram Thomas King (younger son of Mr. B. T. King, the well-known patent agent) was successful. Mr. B. T. King (Senr.), Managing Director of King's Patent Agency, Limited, 146a, Queen Victoria Street, London, E.C.4, has been actively engaged in the professional work of patenting inventions and registration of trade marks for over 45 years.

**Nickel Steel Tools.** — In the August issue of "The Nickel Bulletin," published monthly by The Bureau of Information on Nickel, The Mond Nickel Company, Ltd., Imperial Chemical House, Millbank, London, S.W.1, there is a very interesting illustrated article entitled "Nickel Steel Tools in Engineering Construction and Maintenance."



15-CWT. MORRIS-COMMERCIAL VAN SPECIALLY FITTED FOR THE TRANSPORT OF STRAY DOGS.

**Collecting Stray Dogs.**—Stray dogs in a busy city become a nuisance to vehicular traffic and very often cause road accidents. So many dogs are found in Birmingham (the number runs into four figures annually) that it has been found desirable to order a special van to collect the animals and take them to a depository where, if not claimed, they are destroyed. The vehicle illustrated is a 15-cwt. Morris-Commercial van recently ordered for use by the police of Birmingham. It is fitted up inside with a number of compartments on each side of the central gangway, with a hinged tailboard for loading at the rear.

**Leeds Tramways.**—At a meeting of the Leeds Tramways Committee, called to consider the position in the management of the department consequent on the recent death of the Manager, Mr. R. L. Horsfield, it was decided to advertise the post.

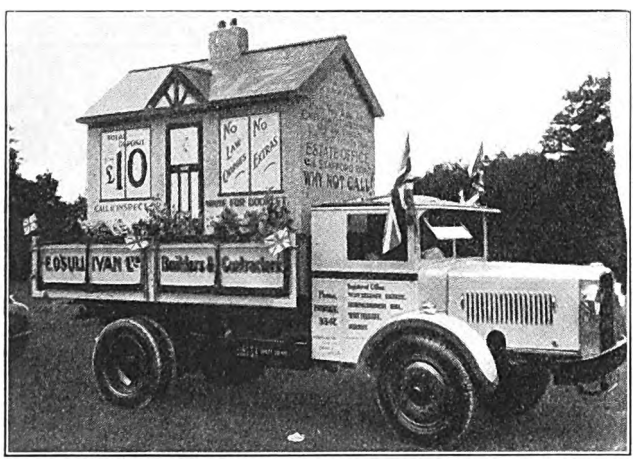
**Pels at the Shipping, Engineering and Machinery Exhibition.** — Henry Pels & Co., Ltd., 32-36, Osnaburgh Street, London, N.W.1, are demonstrating their latest types of machine tools at the Shipping, Engineering and Machinery Exhibition now in progress at Olympia, London. The stand is No. 1, Row "E," Main Hall, and the Exhibition closes on September 26th.

**American Road Builders' Association.—Annual Convention and Road Show.**—The 29th Annual Convention and Road Show of the American Road Builders' Association will be held in Detroit, Michigan, January 11th-15th, 1932. Detroit is the home of a large number of automobile manufacturers. The Road Show will be held in the Municipal Airport Building and the exhibits will consist of all types of materials and equipment used in the construction, maintenance and operation of highways. Also a very complete line of equipment for motor freight transportation. Reports on important highway subjects will be the theme of the Convention programme.

**Recent Orders for Thornycroft Vehicles.**—Amongst recent orders for Thornycroft vehicles received by John I. Thornycroft & Co., Ltd., have been included repeats from the following well-known companies:—The L.N.E.R. for 27 30-cwt. and 2-ton forward-control chassis; The Distillers Co., Ltd.; Alfred Button & Sons, Ltd.; Wholesale Grocers, of Uxbridge; Dorman Long & Co., Ltd.; Carter, Paterson & Co., Ltd.; W. D. & H. O. Wills, Ltd.; Needlers, Ltd.; Stratton Sons & Mead, Ltd.; Wholesale Grocers, of Marlborough, and Fowler Bros., the west country millers.

**Dennis Vehicles for Co-operative Societies.** — Dennis Brothers, Limited, the well-known commercial vehicle manufacturers, of Guildford, have recently supplied Dennis vehicles to the following Co-operative Societies:—Newcastle-on-Tyne C.W.S. (5); Towyn & District Society (1); Carnforth Society (1); Sheerness Society (1); Winsford Society (1); Lancaster Society (1); Cambridge Society (1); C.W.S. London (Traffic) (10); Buckfastleigh Society (1); South Suburban (1); Oldham Industrial Co-op. Society (1); Walkden Co-op Society (1); Chesham Society (1); Butt Lane Society (1); Nottingham Society (2); Watford Society (1); Leek & Moorlands Society (1); C.W.S. African Oil Mills (4); Colchester Society (1); C.W.S. Condensed Milk Factory, Fole (1); C.W.S. Basford Bridge (1).

**A "Commer" Carries a House.**—Our illustration shows a G.6. (6 ton) type Commer lorry decorated as it appeared in a carnival held on August Bank Holiday at Whyteleafe. The lorry belongs to Messrs. E. O. Sullivan, Ltd., builders and contractors, Hornchurch Hill, Whyteleafe, Surrey, who also run other Commer vehicles.



G.6. (6 TON) "COMMER" IN A CARNIVAL.

**A Big Order for Neate Trailer Brakes.**—The South African Railways have ordered seventy sets of Neate Patent Adjustable Controls for the brakes of the trailers of their road motor services. The suppliers are the Trailer Appliance Co., 44, Pall Mall, London, S.W.1.

**S.E. Car Washing Machines.**—Service Equipment Company, Limited, of Drayton House, 30, Gordon Street, and Euston Road, London, W.C.1, have recently supplied the Air Ministry with some of their S.E. Car Washing Machines.

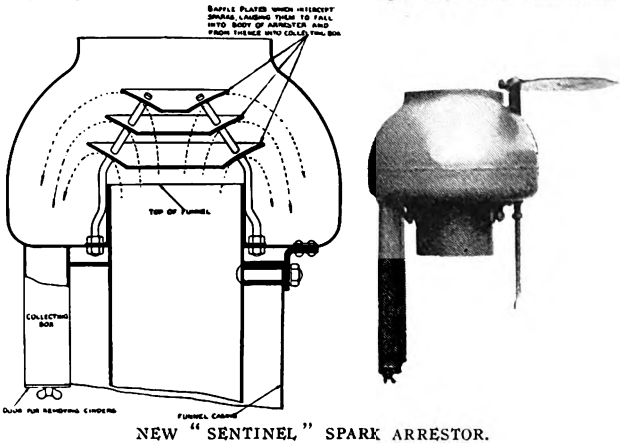
**The Ford Road Map.**—Ford Motor Company, Ltd., has issued a new Road Map of Great Britain and Ireland and the sectional road maps are clearly marked and easily followed. Under the heading "Reference to Maps" the classes of roads are indicated and golf courses, race courses, aerodromes, etc., are denoted by representative symbols. The map includes an explanatory article dealing with the Highway Code; signals as employed by traffic police and drivers; automatic and controlled signals, and much information invaluable to road users. At the back of the map is incorporated a twenty-four page list of Ford Dealers' Facilities Depots in Great Britain and Ireland indexed under the name of the town in which the Dealer's premises are situated. The name and address, telephone number, telegraphic address and map reference are given in each case. The Map costs one shilling and can be obtained from any authorised Ford Dealer. Where copies are required to be forwarded by post an additional 3d. should accompany the order.

**Gladder Tyres. New Process which Reduces Fatigue.**—Fifty machines for making tyre cord by a new process which gives much greater resistance to fatigue have been installed in the Dunlop cotton mills at Rochdale. "We have such faith in the process," said a Dunlop official in an interview, "that twenty per cent. of our total plant at Rochdale is now working on it and we intend eventually to introduce the system throughout the mills. The process, which puts two twists in the thread for each turn of the spindle instead of one, is not entirely a new discovery, but up to recently it could not be worked satisfactorily because it was impossible to prevent the spindle from oscillating. This difficulty has now been overcome, and the new process yields a better controlled yarn. There is no limit to the amount of twist that can be imparted to the yarn, and greater control of elongation is obtained. The production of tyre yarns by the new process is exclusive to Dunlop, and incidentally it gives more continuous employment to operatives since new stock can be continually added."

**United Motors, Limited. Change of Address.**—United Motors, Limited, have removed to larger premises in North London, and the Company's new address is North Road, Islington, London, N.7. Telephone North 3321 (6 lines). Telegrams "Unimocar, Holway, London."

**New Bus for Jersey.**—The Jersey Motor Transport Co., Ltd., has bought a Leyland "Titan" double-deck motor bus, to seat 48, for its St. Helier-St. Aubin service. More will doubtless follow.

**New "Sentinel" Spark Arrestor.**—We understand that all models of "Sentinel" road vehicles will in future be fitted with a very effective type of spark arrestor at the top of the funnel. This device is the outcome of a considerable amount of experimental work carried out by the "Sentinel" Waggon Works which has resulted in the production of a really efficient arrestor which, whilst stopping entirely the emission of sparks, does not interfere in the least with the draught in the funnel. As will be seen from our sectional illustration the device consists of a bulbous sheet steel outer casing attached to and forming part of the funnel and carrying the damper. Internally, three circular dished baffle plates of gradually decreasing size are fitted which divert the sparks and cause them to fall first into the bottom of the casing and eventually into the collecting box which forms part of it. From time to time, as may be required, the spent sparks are removed from the collecting box by opening the hinged door at the bottom.



NEW "SENTINEL" SPARK ARRESTOR.

**Selling British Goods Overseas.**—H.M. Consul-General, Philadelphia, has reported to the Department of Overseas Trade that enlarged photographs issued by the Travel Association of Great Britain and Ireland exhibited

Digitized by Google

in steamship and tourist offices and stores in that city during the past twelve months, have unquestionably served the purpose for which they were intended in attracting the attention of possible visitors to Great Britain, and retailers report that the display of these attractive and well-selected photographs stimulate the sale of British merchandise shown with them. These photographs, shown in groups of ten or a dozen at a time, are part of a series of 500 illustrating historic and beautiful places in Great Britain and Ireland now in process of exhibition in all parts of the world as a part of the general effort put forth by the Travel Association to bring more visitors to this country. The offices of the Travel Association of Great Britain and Ireland are at Kinnaird House, 1, Pall Mall East, London, S.W.1.

## MERSEYSIDE.

**Pierhead Traffic Troubles.**—Proposals have been put forward by the Liverpool transport interests to overcome the trouble that is caused during the morning and late afternoon rush hours by the hold-up of lorries at the Liverpool Pierhead. The suggestion is that all traffic should be regulated in such a way as to fill all the luggage boats available, before allowing any other vehicles to collect on the landing stage. By this means both the existing traffic lines on the floating roadway would be open for traffic arriving at Liverpool from the Cheshire side, one to be used by light vehicles and the other by heavy vehicles.

**Obituary.**—Mr. Thomas Ralph Nickson, of Wallasey, who died recently, shortly after his arrival in the Isle of Man, was head of the parcels delivery firm of T.R. Nickson, Borough Road, Wallasey.

**Crosville Statistics.** — Crosville Motor Services, Ltd., whose headquarters are at Chester, now operate 634 motor buses over 2,248 route miles and gives employment to 2,300 men. Approximately 99 per cent. of the motor omnibus traffic in North Wales is controlled by the company. It was stated at a recent court of the North Western Traffic Commissioners that 43 per cent. of the company's routes were run at cost or less and this, it was held, entitled them to operate without undue restrictions on the more profitable routes.

**Presentation.**—Mr. F. W. Lampitt, before leaving Liverpool to take up the position of assistant to the chief goods manager and development agent of the G.W.R., was entertained at a luncheon arranged by Merseyside traders to acknowledge his services as district goods manager of the Great Western Railway for the Liverpool district. He was presented with a tray of silver ware by the chairman, Mr. George B. Lissenden, traffic manager for Messrs. Lever Bros., on behalf of the traders on Merseyside.

## MANCHESTER.

**Cartage Tender Accepted.**—Manchester Paving Committee has accepted the offer of cartage by Mr. John Biesty, and motor lorries by Mr. T. Lamb, Mr. J. Biesty and Messrs. H. Evers, Ltd., all of Manchester.

**New Motor Coach Station.**—Messrs. Fingland, motor coach owners, have opened a new motor coach station in Great Bridgewater Street, Manchester, where all coaches for long distance tours are now loaded under cover. Many daily services are operated, the principal ones being to London, the east coast and south coast towns and Lancashire holiday resorts.

**Trafford Park Transport Trouble.**—Owing to the proposed closing of the Trafford Bridge, Trafford Park, Manchester, which necessitates road traffic making a big detour, a strong protest has been made to the Ministry of Transport. One firm who owns three or four motor vehicles states that with the additional mileage which their vehicles will have to travel four or five times a day to make deliveries in the Salford area, they will be put to an expenditure for petrol and additional running of about 25s. per vehicle per week. At a low estimate, there are 1,500 motor vehicles engaged in traffic from Trafford Park, and they now have to go into Hulme to get to the dock basin, or round by Barton Bridge. Lorries have at least an additional seven miles to travel each trip. There are frequently waits of 20 minutes at Barton Bridge and it has been suggested that a tunnel should be constructed to cope with the volume of traffic. The Manchester Ship Canal Company state that they are in no way associated with the responsibility for the closing of the bridge. It is intended to erect a temporary bridge.

**Horse Transport Costings.** — Investigations have been made by the Manchester Corporation with a view to arriving at an explanation of the difference in the cost of hired horse transport and the horse transport operated by the Corporation. The Cleansing Department have given the following horse-drawn cost per operation hour: —wages of drivers and stablemen, 1s. 5.7d.; provender and bedding, 3.94d.; farriery and saddlery, 1.51d.; repairs, 1.45d.; and sundries, .06d.; total, 2s. 0.66d. Assuming team labour can be hired at a cost of 16s. per day, giving 47 hours service per week, the cost works out at 1s. 9.96d. per hour. The Cleansing Department as the department most concerned is of the opinion that under conditions of hired transport there would be a loss of effective control and flexibility. The displacement of 400 men would be involved if there was a change over to the hired transport system. The Corporation Expenditure Special Committee which has thoroughly investigated the question of transport expresses the opinion that the rate of conversion to mechanical transport should be expedited to the utmost in view of the economies which, undoubtedly, can be effected.

## HULL.

**Transport Dispute.**—The dispute between the London & North Eastern Railway Company and some of the largest fish merchants at Hull respecting the carriage of fish traffic from the St. Andrew's Dock is becoming acute. A year ago the Company requested the fish merchants to sign agreements conforming to certain conditions and restrictions governing the use of road transport on and around the dock roads. The majority complied, but six of the largest refused to do so. Those who signed were given licences entitling them to use the dock roads. The dissident ones have continued to do so, sans permission. An endeavour to effect a compromise was unsuccessful. The Company have again revived the question. The merchants admit the dock is private property but argue that if they sign the agreement they will be giving away some of their rights. The dispute hinges on traffic destined for places away from Hull. Carriage by road, the merchants contend, is cheaper than by rail, and quicker. On the other hand it is admitted that as the dock dues are low, and no wharfage charges are made on the fish landed, the Company have to look to the rail traffic for the recoupment of their heavy expenditure on the dock, to say nothing of their profit. What makes the position worse from the Company's point of view is that some of the merchants operating the motor lorries are not content to carry their own fish only but act as carriers for others.

## NORTH-EAST COAST.

**Scrapping Trams.**—Middlesbrough Corporation Tramways Committee has made provisional preparations for the scrapping of the tramways system between North Ormesby and Stockton and the substitution of omnibuses. It has been agreed to buy four omnibuses at £1,685 each, fitted with safety glass at an additional cost. This decision was come to on August 28th, although it had been recommended that eight buses should be purchased, economy being the deciding factor.

**100 Hours Endurance Test.**—An endurance test of 100 hours has been successfully carried out through Lakeland with a Hillman Wizard and Rover Pilot Twelve Six by Stouts Garages, Ltd., of Whitehaven For four days and four nights the cars travelled a Lakeland circuit of 186 miles every 8 hours, and at the end each car made two ascents of Kirkstone Pass to complete the 100 hours test. The total mileage recorded by the cars during the four days was 2,350 each.

**Newcastle Corporation's Omnibus Fleet** consists of 108 vehicles, 64 of the single-deck type and 44 double-deck. The City Council has sanctioned the purchase of 15 new double-deck omnibuses, which will replace 15 of the older single-deck type. There was a net loss of £2,532 on the trams and a net profit of £17,664 on the buses for the year which ended on March 31st last. During the past five years, the tramway revenue has decreased from £494,712 to £439,146, whilst the bus traffic receipts have risen from £82,553 to £176,471. Passengers carried on the trams last year totalled 83,559,782, compared with 21,276,128 carried on the Corporation buses.

**Newcastle's Old Mansion House.**—Messrs. Currie & Co. (Newcastle), Ltd., the well-known transport contractors, of Cambridge Hall, Northumberland Road, Newcastle, have just published a delightfully illustrated and superbly printed volume entitled "Ye Olde Mansion House in Ye King's Town of Newcastle on Ye Tyne." This tells the story of the moving days of the old Mansion House on the Quayside, whose site is now occupied by one of this enterprising firm's huge warehouses. The social amenities of Newcastle riverside in those far distant times form a radiant chapter in the city's history; and the illustrations, mainly from old prints and paintings, help the reader to recapture the spirit of the past.

**New Chairman.**—Mr. Charles Mitchell, the new Chairman of Messrs. Dorman, Long & Co., Ltd., vice the late Sir Hugh Bell, Bt., is an engineer of repute who joined that firm some eight years ago and took a prominent

Digitized by Google

part in connection with the arrangements for the construction of the huge bridge across Sydney Harbour. In 1929 Mr. Mitchell was elected to the Board of Dorman, Long's and appointed Joint Managing Director with Mr. A. Dorman.

**Newcastle Garage Lifts.** — Messrs. Travers, Ltd., of Market Street, Newcastle, have installed in their garage two admirable labour saving devices in the form of hydraulic lifts manufactured by Messrs. Tangyes, each of which can raise the largest of cars with ease.

## MIDLANDS.

**An Iron Road.**—Worcester City Council on September 1st decided to experiment with the laying down of a section of iron road on Lowesmoor Bridge. Alderman Maund, Chairman of the Streets Committee, in submitting the proposal, said that if the experiment were a success it would revolutionise roadmaking and, besides providing roads with a life of 50 years or more without needing repair, it would give an impetus to the iron foundries. Members thought that the experiment should be made on a flat road where it would not offer difficulties to horses, but Alderman Maund said the Committee wanted the severest test possible. The Company were prepared to remove the plates and reconstruct the road if the Corporation were not satisfied. The cost would be about £1,200 for 1,200 yards.

**R.D.C. Supports Bus Company.** — Cirencester (Glos.) R.D.C. on August 24th unanimously approved of the objection of the Norton Motor Services to a proposed service by Swindon Corporation outside the municipal boundary over the route Cirencester, Poulton, Fairford and Lechlade. Messrs. Norton are pioneers and have been running buses over the route for ten years. Other motor buses are now running over the same route and it is contended that the needs of the public are being well supplied.

**New Midland Red Garage.** — The Midland Red on August 25th opened its new garage and offices at Evesham, the buildings having been under course of erection during the summer. Evesham is a flourishing centre and the need for such a garage has been apparent for some time. This company operates by far the largest number of routes in the district.

**Two New By-Pass Roads.**—Warwickshire is constructing two important by-pass roads. One scheme is at Coleshill providing for a by-pass road on Route AA446 between Leamington and Lichfield, commencing at the foot of Grimstock Hill and proceeding in a southerly direction over the River Cole and across the main Birmingham-Nuneaton road 500 yards west of Coleshill cross-roads. The other at Knowle will begin at Purnell's Brook in the Solihull side of Knowle, proceed easterly joining the Redditch-Knowle-Coventry road over canal bridge. Following the line of the existing road and the district road known as Watery Lane, it will cross the main Birmingham-Warwick road on the Warwick side of the King's Arms canal bridge, joining the main road again near the junction of Bakers Lane.

## SOUTH WALES.

**Goodyear Cup.** — Mr. G. H. Lockley, Cardiff headquarters of the Western Welsh Omnibuses, Ltd., journeyed to Pont Newydd on August 21st to present the Goodyear Cup to the Eastern Valleys team, which headed the Busmen's Football League last season.

**Western Welsh Omnibuses, Ltd.** — Consequent upon the decentralisation of the welfare scheme of the Western Welsh Omnibuses, Ltd., a triple presentation to old friends took place at the Bridgend Depot on August 21st, when Mr. S. B. Norris, Accountant, and Mr. E. G. Burgoyne, Chief Clerk at Bridgend, were presented with bureau desks, and Mr. Tom Rees, Traffic Assistant Superintendent at Bridgend, was given a gold watch. Mr. Emlyn Rees, the Bridgend Manager, presided, and specially welcomed Mr. A. Gray, A.M.Inst.T., the General Manager, who, he said, always interested himself in the activities of the Company, social and otherwise. Mr. Gray said he was glad of the opportunity of joining in the honour that was being paid to three of the finest men employed by any company. Mr. Norris was the original Hon. Secretary and Treasurer of the Welfare Club, and retained that office until the old South Wales Commercial Motors, Ltd., was merged with the Western Welsh Omnibuses, operating in six counties, and necessitating separate welfare schemes. Mr. Burgoyne, the Bridgend organiser, was also a prophet honoured in his own country—esteemed the more highly where he was best known. As for his friend, Mr. Tom Rees, the men only had to "play the game" to get a square deal from him.

## SCOTLAND.

**Wylie & Lochhead, Ltd., of Glasgow.**—This old-established Glasgow firm is rapidly extending its transport and removal activities. It has now a large fleet of vans and motor lorries ranging from 10 cwts. to 6 tons carrying capacity which are used daily on the Glasgow, Leith, and Edinburgh services and also the services from Glasgow to all the leading commercial towns in Fifeshire which run three times weekly. Some of the removal vans have a 1,200 cubic feet capacity and are fitted with pneumatic tyres. The firm takes great pride in its transport organisation and points out that all vehicles are manned by very competent men, and supervision is of the highest order.

**Glasgow Bus Area.**—The Road Traffic Commissioners for the Southern area of Scotland are tackling the problem of overcrowded bus routes between Glasgow and outlying towns and districts, and at a recent sitting intimated that they intended devising a co-ordinated timetable for these routes. It was agreed on all sides that there are too many buses plying on many routes and it was thought that the best way of solving the problem was by the institution of a properly co-ordinated and unified time-table.

## NORTHERN IRELAND.

**Preparing the Course for the Tourist Trophy Race.**—The Circuit, a length of 13½ miles of road in County Down, near Belfast, over which the last four Tourist Trophy races of the Royal Automobile Club have been run, is subjected to a severe test, not only during the race, when high powered cars race over it at great speed for six hours on end, but also during the fortnight preceding the race, and for some time after, when thousands of motor cars tour the course with sightseers. There are also two official practices before the race, when the cars entered for the race go round the course at speed for two hours. This year these practice days were wet. The course, however, stood up to all tests. The possibility of skid is reduced to a minimum. Colfix was used for the Dundonald-Newtownards leg which has an area of 79,000 sq. yds. Five hundred tons of chippings were used, and 13,000 gallons of bitumen emulsion. From Belfast to Comber (55,000 sq. yds.) 500 tons of chippings were used, 9,000 gallons of tar, and 4½ tons of powdered Cuban asphalt. On the Comber-Newtownards leg (45,000 sq. yds.) 400 tons of chippings were used, 7,500 gallons of tar, and 3¾ tons of powdered asphalt. This work was carried out under Mr. J. G. Wilkin, County Surveyor of Down, who, since this race was established in Ulster, has devoted special attention to this road. The course passes through the town of Newtownards, and there Mr. J. H. Thompson, Surveyor to the Urban Council, was responsible for the treatment of 25,000 sq. yds. of the circuit.

## IRISH FREE STATE.

**Twelve Months' Revenue from Motor Vehicles in the Irish Free State.**—The Irish Free State Revenue accounts for the year ended March 31st last were issued during the last week of August. From these returns it appeared that the duty paid on motor vehicles continues to be an increasing source of revenue for the Free State Government. For the financial year 1930-31 the road tax on motor vehicles amounted to £943,000, as compared with £868,000 for the financial year 1929-30. Customs duty on the imports of motor cars and vehicles, cycles, parts, and accessories, yielded £508,983 for the year ended March 31st last, and accordingly for that year the total taxation borne by the Free State motoring section of the public came up to the big sum of £1,451,983.

**The Future of Aviation in Ireland.**—A successful air pageant was brought off by the Irish Aero Club, at Baldonnel, on August 15th, and was witnessed by upwards of 15,000 spectators. The Irish Free State Governor-General attended the fete, and a flight of 15 planes, led by Miss Crossley, greeted and saluted his Excellency. Amongst the machines taking part in the pageant were:—Gipsy Moth, Brig.-Gen. A. C. Levin, London; Gipsy Moth, Miss F. Crossley, Heston; Sports Avian, J. C. Taylor, Heston; Avian, R. R. Bentley, London; Avian, W. H. Sutcliffe, Chief Instructor Midlands Aero Club, England; Puss Moth, Captain Cazalet, Heston; D.H. Moth, H. T. Willis, accompanied by R. R. Jackson, Birmingham; Cutty Sark, of Personal Flying Service, London, etc. In the course of a broadcast message of welcome to the visitors Colonel Russell said that the object of the Irish Aero Club was to see, that as a nation, Ireland would not lag behind in aviation, not for a sentimental reason, but because the carriage of passengers, mails, and appropriate freight by air must be an extremely lucrative business in the immediate future. The Club sought to urge upon everybody the importance of a comprehensive national air policy, to create in a fixed number of years and retain permanently, an efficient transport system, owned, manned, and controlled by their own people. The Lord Mayor of Dublin and other distinguished visitors were present.

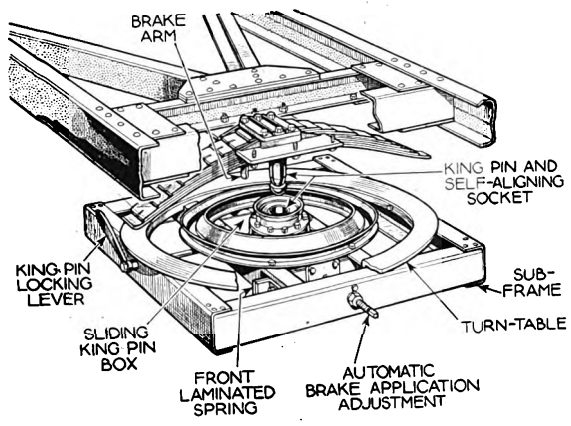
# Motor Notes.

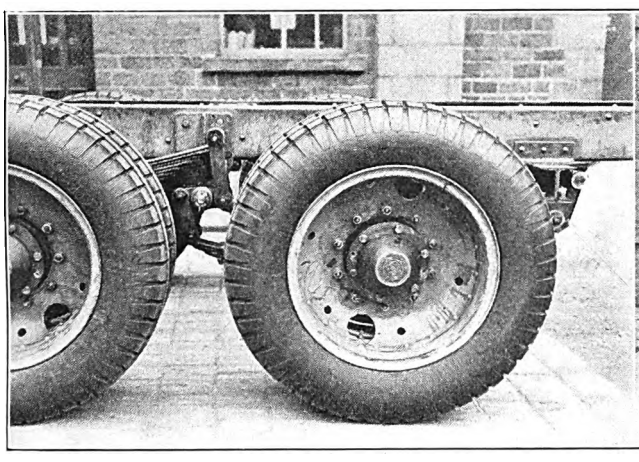
**The Myles 3-ton Articulated Trailer.**—This semi-trailer, which is produced by the Westminster Trailer and Tractor Company, 162, Grosvenor Road, Westminster, can be used with all types of 30 cwt. chassis so as to take a pay load of 3 tons. The trailer has a robust pressed steel frame. The king pin, 2 in. in diameter, is attached to the trailer frame in a cast steel housing and

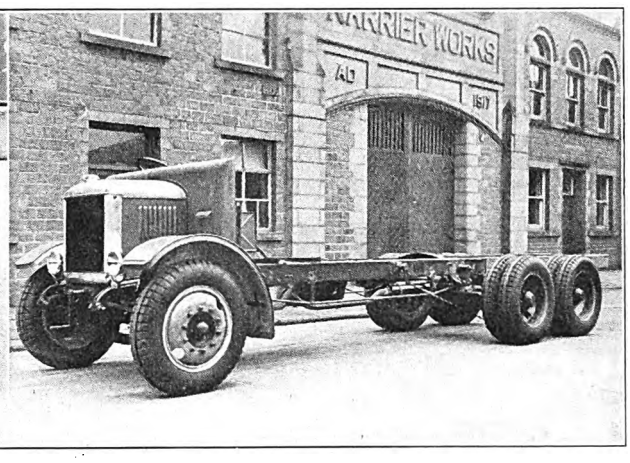


COUPLING DEVICE FOR MYLES DETACHABLE ARTICULATED TRAILER.

is supported by a semi-elliptic transverse spring acting on the turntable ring fitted to the motor chassis. The king pin is automatically locked to the tractor through a self-aligning roller bearing housed in a steel casting, which slides in a steel frame with half elliptic springs at each end to take up push and pull strains. The internal expanding brakes on the trailer are connected and operated automatically. A hand brake is also supplied. The trailer can easily be disconnected by lowering the jockey wheel to the ground, so lifting the trailer off the chassis.

**The Karrier K10 Six-Wheeler.**—Karrier Motors, Ltd., Huddersfield, have sent us a copy of a new brochure



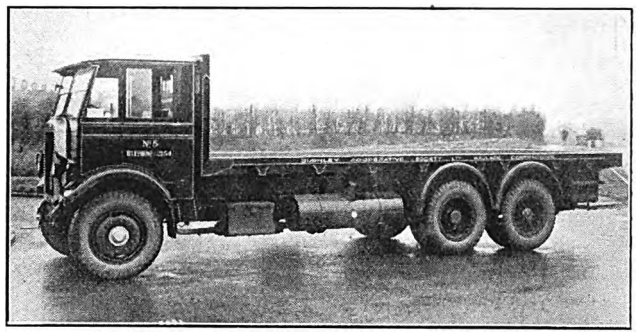


LEFT: SHOWING DETAIL OF REAR SPRINGING. RIGHT: THE KARRIER "K10" TYPE CHASSIS.

dealing with their latest six-wheeled vehicle. The chassis, which is designed to carry a paying load of 10 tons follows closely on the lines of the well established "K7" type chassis, with the exception that the frame is lengthened and stiffened, and an addition is made in the form of a non-driven trailing axle, the springs of which are coupled to those of the driven axle in a manner ensuring a correct proportioning of the load to each axle. Servo-assisted hand brake operates internal expanding shoes on all four rear wheels and also a foot operated transmission brake. The power unit is of the four cylinder side by side valve type developing 82 h.p. at 2,000 r.p.m. The gear box provides four forward speeds and reverse. The rear driven axle is of the bevel and spin reduction type. Detachable disc type road wheels fitted with 40 in. by 8 in. pneumatic tyres (twins on both rear axles).

**Carrimore Six Wheel Attachments.**—Carrimore Six Wheelers, Ltd., Great North Road, North Finchley, London, N.12, have sent us a copy of their latest Six-wheeler catalogue. It deals in a comprehensive manner with every form of articulated six wheeler attachments for all makes of chassis. This catalogue will be sent to any one on application.

**Another Leyland for the Burnley Co-op.**—The Burnley Co-operative Society have recently taken delivery of a



ANOTHER LEYLAND FOR THE BURNLEY CO-OPERATIVE SOCIETY.

Leyland "Hippo" six-wheeler, as shown in the photograph. This vehicle is to be used by the Haulage Contracting Department for this Society and is one of a considerable fleet used for long distance work.

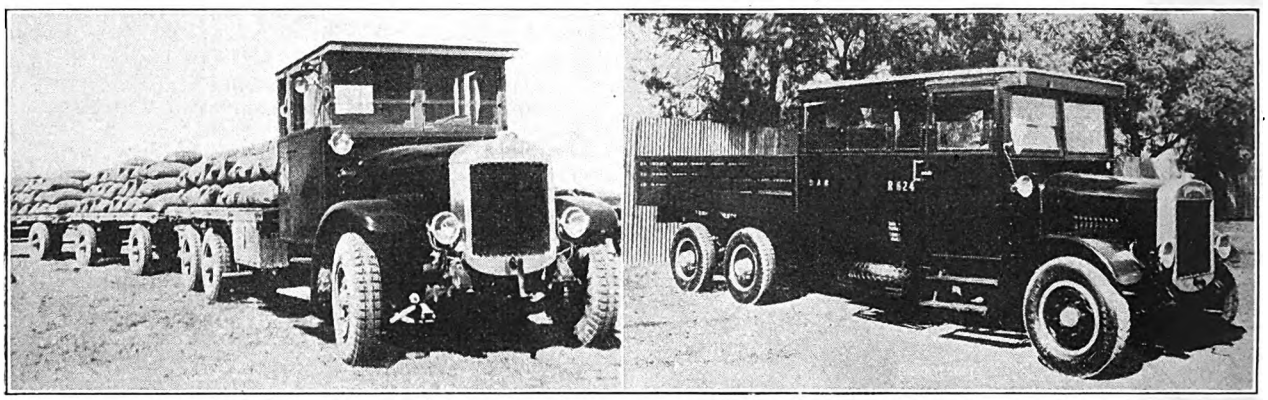
**Singer's New Programme.**—At a luncheon, attended by Singer agents, which was held recently at the Company's works, in Birmingham, on the occasion of the launching of their new programme for 1932, Mr. W. E. Bullock, Managing Director, said, in a speech, that in spite of the unpromising outlook, results would be all right if everyone did his best. He also mentioned that at the next General Meeting of the Company the Directors would recommend the formation of a Local Board of Works Directors.

**Hans Renold and Coventry Chains.**—The Associated Companies of Hans Renold, Ltd. and the Coventry Chain Co., Ltd. have sent us a copy of their 1931-32 combined catalogue of products for Industrial Applications which they will send to anyone interested. There are sections on Power Transmission, Conveying, Cutting Gear, and useful tables of metric dimensions. In the foreword they draw attention to the fact that Brampton components will continue to be manufactured by Brampton Bros., Ltd., but will be available under either the Renold or the Coventry mark and customers who have been in the habit of addressing their enquiries or orders to Messrs.

Digitized by Google

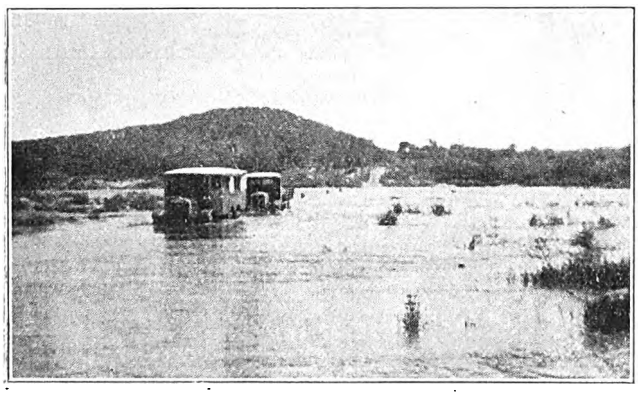
Brampton Bros. are asked to communicate in the future with Hans Renold, Ltd., Manchester, or The Coventry Chain Co., Ltd., Coventry.

**New Henley Tyres.**—We have received particulars of the Green Stripe giant pneumatic cord tyres manufactured by Henley's Tyre and Rubber Co., Ltd., 20-22, Christopher Street, Finsbury Square, London. A brochure giving details of recommended inflation pressures and loads per axle as well as the prices may be obtained from the manufacturers on application. The new tyres are built on the latest and most scientific principles. The tread is immensely tough and has a design which gives a minimum of rolling resistance with a maximum of resistance to skidding—either forward or lateral.



TWO "THORNYCROFTS" AT WORK IN SOUTH AFRICA.

**Thornycrofts in South Africa.**—The accompanying interesting photographs show various Thornycroft vehicles mounted with special bodies or provided with trailer equipment, for transport in South Africa. The dual purpose vehicle used by the South African Railways is one of approximately 150 similar vehicles owned by them. The photograph showing two of the South African Railway's Thornycrofts crossing the Usuto River in Swaziland, gives an excellent idea of the exacting requirements for transport vehicles in that country. The causeways or Irish bridges on which the vehicles cross the rivers are substitutes for the more expensive bridges.

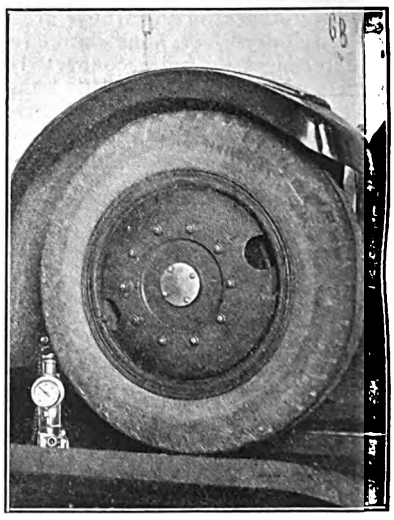


THORNYCROFT LORRIES CROSSING THE USUTO RIVER IN SWAZILAND.

A SMART ALBION VAN THE PROPERTY OF JOSEPH LUCAS, LTD.

**Recent Albion Deliveries.**—Our photograph shows a van of particularly smart appearance recently delivered by the Albion Motor Car Co., Ltd., of Glasgow, for service with Joseph Lucas, Ltd., at their Edinburgh Depot. The van is of 35 cwt. capacity.

**"Skyhi" Hydraulic Brake Tester.**—"Skyhi" Hydraulic Brake Tester manufactured by Henry Miller & Co., 186, Walmer Road, London, is designed to register the brake resistance of each individual wheel so that the correct balance of this resistance may be effected. The complete unit takes up practically no floor space, is portable and costs £16 16s. for ordinary car brake testing, and £18 18s. for commercial vehicles. The apparatus consists of a hydraulic pedal depressing unit which applies an amount of pressure to the foot pedal equal to that supplied by the driver's foot. A clamp is then placed around the circumference of the tyre and, with a hydraulic tester, the wheel is pushed round against the braking resistance and on the dial of this tester the amount of pressure offered by the brakes is immediately shown. The tester is then moved around to all four wheels and the brakes adjusted until a balance is obtained. It measures definitely the tractional resistance of the brakes. It not only shows the load which the mechanical brake applies but is also used to test the value of the self-energising system fitted. This is regarded as a most important point as it provides information upon a brake fitment which has hitherto been impossible to test separately from the mechanical brake.



THE "SKYHI" HYDRAULIC BRAKE TESTER.

## Answers to Inquiries.

**Question:**—We have a motor van hired to a firm on contract, and have been asked to carry their team of footballers to the ground each Saturday, the cost of the journey to be paid for by the footballers. Are we allowed under the present regulations to carry these men on a van not taxed and insured as a passenger carrying vehicle?

**Answer:**—If you use your van for carrying eleven footballers and are paid for the journey the vehicle would be treated as if it were a contract carriage and would have to comply with the new public-service vehicle law and regulations.

# County Court Judgments.

THE following returns from the Registry of County Courts' Judgments, Whitehall, have been received relating to judgments entered up in the respective County Courts of England and Wales. Publication does not imply inability to pay. Many judgments may have been settled between the parties or paid. Judgments settled otherwise than through the Court may appear unless "satisfaction" is entered up within twenty-one days from judgment or allocatur. Registered judgments are not necessarily for debts. They may be for damages or otherwise, they may relate to actions *bona fide* contested between the parties, or they may be against defendants, liable in a representative capacity, and not personally; but no distinction is made on the register. Judgments are not returned to registry if satisfied in Court books within twenty-one days.

T. Greenaway & Sons (a firm), The Paddocks, Chipping Sodbury, Glouc., haulage contractors. £40/7/2. June 9th.

# THE FOUNDATION OF SOUND TRANSPORT

As the foundation of sound transport is based on reliability and economical running costs there is no surer way of attaining this end than by the use of the T.S.M. 4-Ton Chassis which—amongst many other outstanding qualities—gives more mileage per gallon than any other 4-Ton Petrol Engine.

## CHASSIS PRICE £720 EX WORKS MAIDSTONE

This Chassis also supplied with the GARDNER Oil ENGINE, PRICE £903, EX WORKS, MAIDSTONE.

**MAIN FEATURES OF SPECIFICATION.**

29/70 h.p. Engine, Ricardo design.
4-speed Gearbox.
12' 8" Wheelbase.
Four-wheel Brakes.
Marles Steering.
Tyres, 38' x 7" Dunlops.
12-volt Lighting Set.
Complete Kit of Tools.

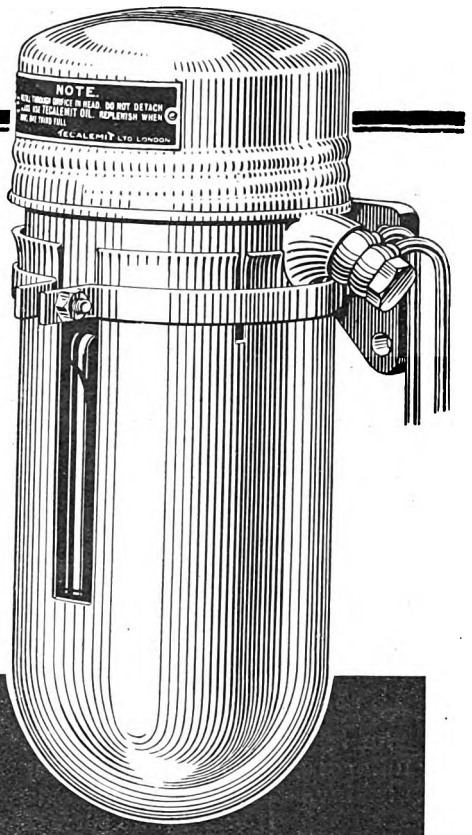
## AUTOMATIC CHASSIS LUBRICATION

### The Gilford 168-O.T.



A FINE example of advanced chassis design, the six-cylinder Gilford 168-O.T. is equipped with Tecalemit Automatic Chassis Lubrication. Both manufacturers and transport owners have proved the great practical value of this system—an efficient and economical method of forcing lubricant into the chassis bearings by a continuous automatic action. Full particulars will be sent on request.

# A Giant Tyre with a Giant's Strength

**Tyre-trouble is unthinkable once Firestone Giant Low Pressure Tyres are fitted. One glance at these mighty tyres with their tremendous tread reassures you. It is these special features which make the Firestone Giant leader of its class.**

## MILEAGE

**The Giant's generous all-round strength gives "most miles per shilling." Its gum-dipped plies ensure cool enduring wear, the patented Double Cord Breaker giving two extra plies under the tread—and correspondingly longer life.**

## ECONOMY

**The Giant transmits all engine-power without loss. It cuts out wheel-spin and reduces petrol bills. And its fine appearance adds to the attraction of vehicles thus equipped.**

## SAFETY

**The larger tread area means fuller road-grip, gives better braking, better pulling, no skidding. It sits to the surface without jumping.**

## COMFORT

**The lower air pressure means full absorption of road-shock and surface irregularities. This extra buoyancy gives comfort to passengers—whilst it spares the engine and chassis.**

**When ordering new Chassis specify Firestone. Let us convert your present vehicles—our engineers are doing these jobs every day.**

"If every 'bus on the road was as well lit as mine, there'd be fewer accidents!"

## The driver

The driver realised that driving behind good headlights gave him a feeling of assured safety as they sped along the quiet country roads—the conductor knew that the interior lights had greatly improved—since National Kathanode Batteries had been installed.

National Kathanode Batteries steadily flood the bus with inviting light, giving confidence to the driver and comfort to the passengers. National Kathanode Batteries are proving the ideal battery for bus illumination.

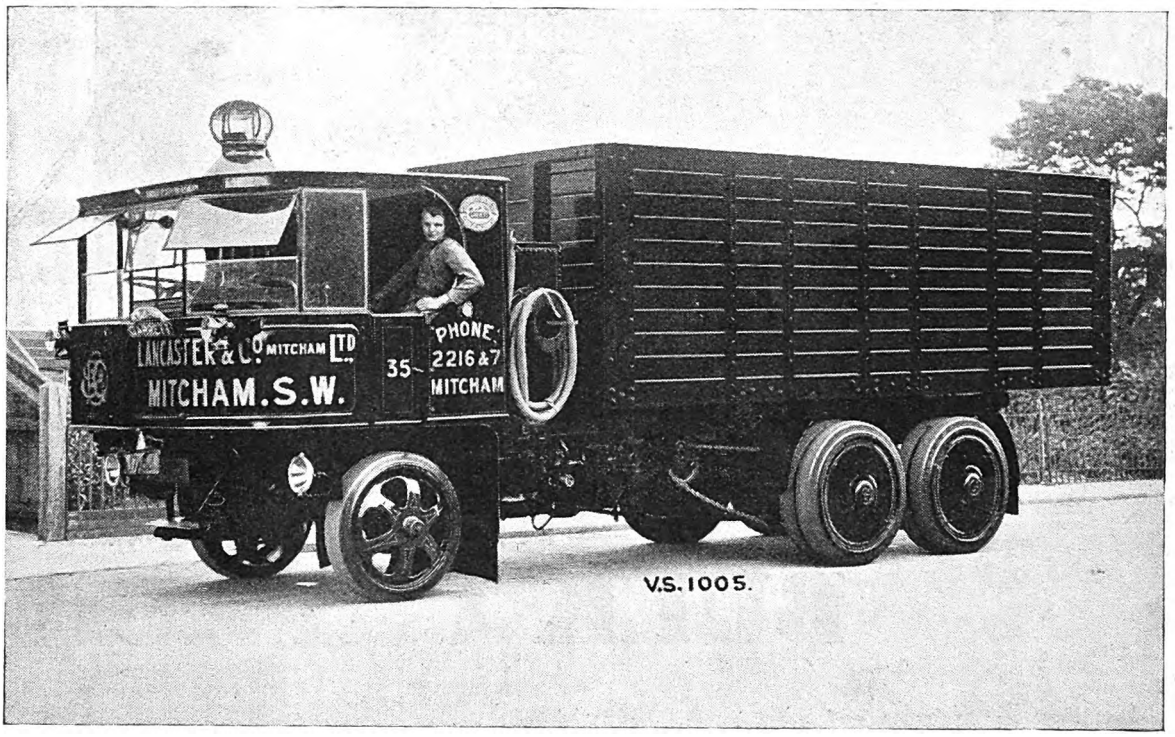
ALL ROADS TO THE GARRETT ARE SMOOTH ROADS

# Coal Merchants—
## favour the "GARRETT"



The "Garrett" has always been a favourite amongst Coal and Coke merchants, who appreciate that the large carrying capacity and exceptionally low operating cost put the Garrett four and six-wheeler in the "Front Rank" amongst commercial vehicles of the present day.

Our most recent delivery is a new rigid six-wheeler three-way tipping wagon fitted with specially designed deep sided body to the order of Messrs. Lancaster & Co., Ltd., the well-known Coal and Coke merchants of Benedict Wharf, Church Road, Mitcham.

Leyland Cub

# Proved — and Improved

Before offering the 'CUB' to the public at the satisfactory conclusion of its own tests, Leyland Motors Limited has followed its usual procedure, of placing a further batch of chassis in the hands of well-known users for final trial in actual service conditions.

This light chassis by Leyland, though new on the market, has therefore almost a year's actual service to its credit.

Leyland Motors Ltd

# OF IMPORTANCE TO KARRIER USERS

To increase the pay load of existing "K4," "K5" and "K7" type Karriers, we are now in a position to fit to either of these chassis an additional non-driven rear axle at prices ranging from £220 to £270 according to tyre equipment. The modifications—which include lengthening the frame and fitting servo-assisted brakes to the four rear wheels—allow a 21 ft. 6 in. body to be carried and increase the useful load carrying capacity to ten tons.

May we have your enquiries?

# Laden or Light...

WHETHER your service be for goods or passengers, whether time-table or load capacity is the dominant factor, your tyre problem is solved when you fit Avon-Seiberling Giants.

¶ These British-made tyres from a British-owned factory are giving wonderfully good and consistent results all over the country. Tread wear is slow, anti-skid efficiency high. Riding comfort much enhanced—chassis- and body-wear correspondingly reduced. These are not our opinions, but the **judgments** of users based on actual experience.
